Evidence Report/Technology Assessment
Number 62

Diagnosis and Treatment of Worker-Related Musculoskeletal Disorders of the Upper Extremity

Agency for Healthcare Research and Quality

This report may be used, in whole or in part, as the basis for development of clinical practice guidelines and other quality enhancement tools, or as a basis for reimbursement and coverage policies. Endorsement by the Agency for Healthcare Research and Quality (AHRQ) or the U.S. Department of Health and Human Services (DHHS) of such derivative products may not be stated or implied.

AHRQ is the lead Federal agency charged with supporting research designed to improve the quality of health care, reduce its cost, address patient safety and medical errors, and broaden access to essential services. AHRQ sponsors and conducts research that provides evidence-based information on health care outcomes; quality; and cost, use, and access. The information helps heath care decisionmakers—patients and clinicians, health system leaders, and policymakers—make more informed decisions and improve the quality of health care services.

Contents

VOLUME 2

Chapter 3. Results (continued)
Cubital Tunnel Syndrome 1
Question #1: What are the appropriate methods and approaches for the early identification and diagnosis of cubital tunnel syndrome? 1
Question #2: What are the specific indications for surgery for cubital tunnel syndrome? 20
Question #3. What are the relative benefits and harms of surgery for persons with cubital tunnel syndrome? 33
Question #4. Is there a relationship between specific clinical findings and specific treatment outcomes among patients with cubital tunnel syndrome? 47
Question #5. Is there a relationship between duration of symptoms and specific treatment outcomes among patients with cubital tunnel syndrome? 54
Question #6. Is there a relationship between patient characteristics and specific treatment outcomes among patients with cubital tunnel syndrome? 58
Question #7: What are the surgical and nonsurgical costs or charges for treatment of cubital tunnel syndrome? 62
Question #8. For persons who have had surgery to treat cubital tunnel syndrome, what are the appropriate methods for preventing the recurrence of symptoms, and how does this vary depending on subject characteristics or other underlying health problems? 62
Question #9: What instruments, if any, can accurately assess functional limitations in an individual with cubital tunnel syndrome? 62
Question #10: What are the functional limitations for an individual with cubital tunnel syndrome before treatment? 62
Question #11: What are the functional limitations of an individual with cubital tunnel syndrome after treatment? 62
Epicondylitis 63
Question #1: What are the appropriate methods and approaches for the early identification and diagnosis of epicondylitis? 63
Question #2. What are the specific indications for surgery for epicondylitis? 76
Question #3. What are the relative benefits and harms of various surgical and nonsurgical interventions for persons with epicondylitis? 88
Question #4. Is there a correlation between specific clinical findings and specific treatment outcomes among patients with epicondylitis? 202
Question #5. Is there a correlation between duration of symptoms and specific treatment outcomes among patients with epicondylitis? 207
Question #6. Is there a relationship between patient characteristics and specific treatment outcomes among patients with epicondylitis? 212
Question #7: What are the surgical and nonsurgical costs or charges for treatment of epicondylitis? 216

Question #8. For persons who have had surgery to treat epicondylitis, what are the appropriate methods for preventing the recurrence of symptoms, and how does this vary depending on subject characteristics or other underlying health problems? 217
Question #9: What instruments, if any, can accurately assess functional limitations in an individual with epicondylitis? 218
Question #10: What are the functional limitations for an individual with epicondylitis before treatment? 225
Question #11: What are the functional limitations of an individual with epicondylitis after treatment? 229
DeQuervain's Disease 231
Question #1: What are the appropriate methods and approaches for the early identification and diagnosis of de Quervain's disease? 231
Question #2: What Are The Specific Indications For Surgery For de Quervain's Disease? 231
Question #3: What are the relative benefits and harms of various surgical and nonsurgical interventions for persons with de Quervain's disease? 234
Question #4: Is there a relationship between specific clinical findings and specific treatment outcomes among patients with de Quervain's disease? 239
Question #5: Is there a relationship between duration of symptoms and specific treatment outcomes among patients with de Quervain's disease? 241
Question #6: Is there a relationship between factors such as patients' age, gender, socioeconomic status and/or racial or ethnic grouping and specific treatment outcomes among patients with de Quervains's disease? 243

Question #7: What are the surgical and nonsurgical costs or charges for treatment of de Quervain's disease? 246
Question #8: For persons who have had surgery for de Quervain's disease, what are the most effective methods for preventing the recurrence of symptoms, and how does this vary depending on subject characteristics or other underlying health problems? 247
Question #9: What instruments, if any, can accurately assess functional limitations in an individual with de Quervain's disease? 247
Question #10: What are the functional limitations for an individual with de Quervain's disease before treatment? 247
Question #11: What are the functional limitations of an individual with de Quervain's disease after treatment? 247
Non-Treatment-Specific Questions 249
Question #12. What are the cumulative effects on functional abilities among individuals with more than one worker-related musculoskeletal disorder of the upper extremity in the same limb? 249
Question #13. What level of function can one expect to achieve in what period of time when one is required to change hand dominance as a result of injury to his or her dominant hand? 251

Chapter 4. Conclusions 257
Carpal Tunnel Syndrome 257
Cubital Tunnel Syndrome 260
Epicondylitis 261
DeQuervain's Disease 261

Chapter 5. Future Research 263
Gaps in Current Research 263
Optimal Study Designs 264
