

Congress of the United States
Washington, DC 20515

November 20, 2015

Paul Ryan
Speaker of the House
H-232 The Capitol
Washington D.C. 20515

Kevin McCarthy
Majority Leader
H-107, The Capitol
Washington, D.C. 20515

Hal Rogers
Chairman
House Appropriations Committee
H-305 The Capitol
Washington, D.C. 20515

Tom Cole
Chairman
Labor, Health and Human Services
Subcommittee
2358-B Rayburn House Office Building
Washington, D.C. 20515

Speaker Ryan, Leader McCarthy, Chairman Rogers, and Chairman Cole:

As we work towards an Omnibus Appropriations Act ("Omnibus") to fund the government for Fiscal Year 2016, we write to stress the critical importance of funding for the National Institutes of Health (NIH). Earlier this year the House passed the 21st Century Cures Act ("Cures Act") by a margin of 344 to 77. This vote was truly bipartisan, with 170 Republicans and 174 Democrats supporting it, one of the strongest votes for any spending measure in Congress. The Cures Act, through a combination of mandatory and authorized discretionary funding, increased spending for NIH by \$3.25 Billion in FY 2016.

House Republicans supported such an increase because we see the funding of federal research an important facet of our positive agenda of addressing the needs of the American people. Cancer, Alzheimer's, Parkinson's, Heart Disease and many other diseases affect our constituents, our neighbors, even some of our close friends and family. Cancer alone will kill 600,000 Americans next year. In spite of our budget debates, these diseases march on, costing us millions of lives and trillions of dollars. Estimates peg the annual American cost of Alzheimer's in 2050 at over \$1 trillion.

Funding for federal research is critical to save American lives and to bend the cost curve of our federal health care expenditures. While our conference was and is torn over the breaking of the sequester budget caps, if we are going to increase domestic spending, we believe funding research to cure and prevent the diseases Americans face is a critical priority that should be at or near the top of our list.

With passage of the Bipartisan Budget Act, Congress has been authorized to increase non-defense discretionary spending by \$40 billion. **Of those increases, we respectfully urge you to support the House's position and fund a minimum of \$3 billion in new NIH spending in FY 2016, bringing total NIH spending to \$33.084 billion.** This is consistent with the vote of a large majority of our Conference on the Cures Act earlier this year, and consistent with our Republican values.
