Report post-test measurements in question 4A.

**SECTION VII - FUNCTIONAL LOSS AND ADDITIONAL LIMITATION OF ROM**

**NOTE:** The VA defines functional loss as the inability, due to damage or infection in parts of the system, to perform normal working movements of the body with normal excursion, strength, speed, coordination and/or endurance. As regards the joints, factors of disability reside in reductions of their normal excursion of movements in different planes.

Using information from the history and physical exam, select the factors below that contribute to functional loss or impairment (regardless of repetitive use) or to additional limitation of ROM after repetitive use for the joint or extremity being evaluated on this DBQ:

7A. CONTRIBUTING FACTORS OF DISABILITY (*check all that apply and indicate side affected*):

- Less movement than normal (*due to ankylosis, limitation or blocking, adhesions, tendon-tie-ups, contracted scars, etc.*)
- More movement than normal (*from flail joints, resections, nonunion of fractures, relaxation of ligaments, etc.*)
- Weakened movement (*due to muscle injury, disease or injury of peripheral nerves, divided or lengthened tendons, etc.*)
- Excess fatigability
- Incoordination, impaired ability to execute skilled movements smoothly
- Pain on movement
- Swelling
- Deformity
- Atrophy of disuse
- Instability of station
- Disturbance of locomotion
- Interference with sitting
- Interference with standing
- Other, describe:

**SECTION VII - FUNCTIONAL LOSS AND ADDITIONAL LIMITATION OF ROM (Continued)**

**NOTE:** If any of the above factors is/are associated with limitation of motion, the examiner must give an opinion on whether pain, weakness, fatigability, or incoordination could significantly limit functional ability during flare-ups or when the joint is *used repeatedly over a period of time* and that opinion, if feasible, should be expressed in terms of the degree of additional ROM loss due to pain on use or during flare-ups. The following section will assist you in providing this required opinion.

7B. ARE ANY OF THE ABOVE FACTORS ASSOCIATED WITH LIMITATION OF MOTION?

- YES (If yes, complete question 7C and 7D)  
 NO (If no, proceed to question 7D)

FOR EACH CHECKED EXTREMITY, IDENTIFY THE CONDITION CAUSING LOSS OF FUNCTION, DESCRIBE LOSS OF EFFECTIVE FUNCTION AND PROVIDE SPECIFIC EXAMPLES (brief summary):

**NOTE:** The intention of this section is to permit the examiner to quantify the level of remaining function; it is not intended to inquire whether the Veteran should undergo an amputation with fitting of a prosthesis. For example, if the functions of grasping (hand) or propulsion (foot) are as limited as if the Veteran had an amputation and prosthesis, the examiner should check "yes" and describe the diminished functioning. The question simply asks whether the functional loss is to the same degree as if there were an amputation of the affected limb.

**SECTION XVIII - DIAGNOSTIC TESTING**

**NOTE:** Testing listed below is not indicated for every condition. The diagnosis of degenerative arthritis (osteoarthritis) or traumatic arthritis must be confirmed by imaging studies. Once such arthritis has been documented, even if in the past, no further imaging studies are required by VA, even if arthritis has worsened. Imaging studies are not required to make the diagnosis of IVDS; Electromyography (EMG) studies are rarely required to diagnose radiculopathy in the appropriate clinical setting. For purposes of this examination, the diagnoses of IVDS and radiculopathy can be made by a history of characteristic radiating pain and/or sensory changes in the legs, and objective clinical findings, which may include the asymmetrical loss or decrease of reflexes, decreased strength and/or abnormal sensation.

18A. HAVE IMAGING STUDIES OF THE CERVICAL SPINE BEEN PERFORMED AND ARE THE RESULTS AVAILABLE?

YES  NO

IF YES, IS ARTHRITIS DOCUMENTED?

YES  NO

18B. DOES THE VETERAN HAVE A VERTEBRAL FRACTURE?

YES  NO IF YES, PROVIDE PERCENT OF LOSS OF VERTEBRAL BODY HEIGHT: \_\_\_\_\_ %

18C. ARE THERE ANY OTHER SIGNIFICANT DIAGNOSTIC TEST FINDINGS OR RESULTS?

YES  NO IF YES, PROVIDE TYPE OF TEST OR PROCEDURE, DATE AND RESULTS (*brief summary*):

18D. IF ANY TEST RESULTS ARE OTHER THAN NORMAL, INDICATE RELATIONSHIP OF ABNORMAL FINDINGS TO DIAGNOSED CONDITIONS:

**SECTION XIX - FUNCTIONAL IMPACT**

**NOTE:** Provide the impact of only the diagnosed condition(s), without consideration of the impact of other medical conditions or factors, such as age.

19. REGARDLESS OF THE VETERAN'S CURRENT EMPLOYMENT STATUS, DO THE CONDITION(S) LISTED IN THE DIAGNOSIS SECTION IMPACT HIS OR HER ABILITY TO PERFORM ANY TYPE OF OCCUPATIONAL TASK (*such as standing, walking, lifting, sitting, etc.*)?

YES  NO IF YES, DESCRIBE THE FUNCTIONAL IMPACT OF EACH CONDITION, PROVIDING ONE OR MORE EXAMPLES:

**SECTION XX - REMARKS**
