

ANNUAL REPORT TO CONGRESS

*U.S. Department
of Commerce
Economic
Development
Administration*

Dear Mr. President and Mr. Speaker:

I am pleased to submit the annual report on the activities of the U.S. Economic Development Administration (EDA), U.S. Department of Commerce, for fiscal year 2011, in compliance with Section 603 of the Public Works and Economic Development Act of 1965, as amended (42 U.S.C. § 3213).

Over its 47-year history, EDA has invested in bottom-up regional innovation strategies to strengthen the nation's regions, leverage private investment, and help create jobs. The agency's smart investments support the Department of Commerce's efforts to bolster advanced manufacturing, increase U.S. exports, and attract more investment to help American businesses build it here and sell it everywhere.

Sincerely,

A handwritten signature in blue ink that reads "Rebecca M. Blank". The signature is fluid and cursive, with a long horizontal stroke at the end.

Rebecca M. Blank

 State Investment Summary

 Approved EDA Investments by State and Program

 Projected Private Sector Investment Ratio for FY 2011

Statement from the Acting U.S. Assistant Secretary of Commerce for Economic Development

I am pleased to report to Congress the accomplishments of the U.S. Department of Commerce Economic Development Administration (EDA) for fiscal year 2011.

As the only government agency with economic development as its sole mission, EDA plays an important role in strengthening regional economies so that we can out-innovate, out-build, and out-compete the rest of the world.

Building on the agency's 47-year history of supporting regionally-driven economic development strategies, in FY 2011 EDA focused on creating opportunities that encouraged regions to plan for their long-term stability, build on their unique assets, and create the conditions for the private sector to succeed and create jobs.

All of EDA's programs are making long-term investments that equip America's regions to compete in both the domestic and global marketplaces. A model of smart, lean government, EDA does more in a time of scarce resources. In FY 2011, EDA awarded investments that totaled approximately \$304.3 million. Of this amount, 62.9%, approximately \$191.5 million, funded construction projects that are expected to help create or retain approximately 51,064 jobs and generate nearly \$6.47 billion in private investment, according to grantee estimates at the time of the award.

EDA's investments establish a foundation for sustainable job growth and the building of durable regional economies throughout the United States. Guided by the basic principle that communities must be empowered to develop and implement their own economic development and revitalization strategies, EDA works directly with local economic development officials to

support bottom up, regionally-owned economic development initiatives; serve as strategic, catalytic seed investments; attract and leverage private capital investment; and emphasize innovation, entrepreneurship, and regional competitiveness. This collaborative approach results in grant investments that are well defined, timely, and linked to a long term sustainable economic development strategy.

In FY 2011, EDA built stronger relationships with and leveraged funding from other federal agencies. This new, smarter government model leverages complementary resources, breaks down Washington silos, highlights best practices, and achieves greater impact and return on investment. While EDA has long practiced this model on a project-by-project basis whenever possible, FY 2011 witnessed a substantial increase in strategic multi-agency collaborations, including, for example, the Jobs and Innovation Accelerator Challenge and the i6 Challenge. Just as with all of EDA's grant programs, these challenges enable EDA and its partner agencies to act as a catalyst to the development of regional innovation clusters in both rural and urban areas.

This annual report provides a comprehensive overview of EDA's accomplishments during FY 2011. It shows that as regions and communities across the country continue to adapt to new economic realities, EDA is positioned to address economic development needs that are not met by other public and private sector resources. As EDA continues to work with its federal, state and local partners to accelerate long-term economic and job growth nationwide, it is helping to ensure that we create an America that is truly built from the ground up, that is built to last, and is ready to face the challenges of the 21st century economy.

Sincerely,

A handwritten signature in black ink, appearing to read 'Matthew S. Erskine', with a long horizontal line extending to the right.

Matthew S. Erskine
Acting Assistant Secretary of Commerce for Economic Development

Economic Development Administration Overview

Established under the Public Works and Economic Development Act of 1965, as amended (42 U.S.C. § 3121 et seq.) (PWEDA), the Economic Development Administration (EDA) has helped communities generate jobs, retain existing jobs, and stimulate industrial and commercial growth for 47 years.

As the only federal agency with economic development as its exclusive mission, EDA promotes the economic ecosystems in which jobs are created, through a wide range of technical, planning, public works, and innovation infrastructure investments. EDA strives to advance global competitiveness, foster the creation of high-paying jobs, and leverage public and private resources strategically.

EDA builds a foundation for sustainable job growth upon two key economic drivers—innovation and regional collaboration. Innovation is the key to global competitiveness, new and better jobs, a resilient economy, and the attainment of national economic goals. The new global economy is built on centers of excellence and competition. Those regions that work together to leverage resources and use strengths to overcome weaknesses will fare better against global competition than those that do not.

The American economy is in fact a collection of local and regional economies. The key to our national competitiveness is regional strength and competitiveness. EDA's flexible programs leverage private-public investments, support bottom-up strategies and build 21st-century infrastructure. Its investment decisions are guided by the belief that when the right partners in regional economic ecosystems come together and increase their level of interaction that good things happen—for job creation, increased investment, and improved prosperity.

Linking EDA's investments to a community's strategic economic development plan enables the Federal Government to better leverage public and private sector investments in order to achieve economic development goals. EDA's flexible programs and structure support investments in innovation and enable nimble responsiveness to changing economic needs and conditions faced

by our local and state government partners. EDA's economic development footprint is wide, and its toolbox is extensive. Its tools include construction assistance, technical assistance, post-disaster recovery assistance, trade adjustment support, strategic planning, feasibility studies, and research and evaluation support; thereby allowing the agency to offer the most effective investment to help communities succeed in our global economy.

EDA Highlights for Fiscal Year 2011

The New Economic Reality

Across the country today, American communities are looking for new ideas and new engines of job creation as they also recover from the deepest economic downturn this country has experienced in generations. It wasn't just a financial crisis that caused the recession. Trends that have been pressuring our communities for decades also contributed, such as lost manufacturing jobs, stagnant middle-class wages, increased cost competition from abroad, and mismatches between the jobs our workers were trained to do and the jobs companies wanted them to do.

To address these challenges, America's regions and communities are rethinking the way they approach economic development. They are forming new, innovative regional partnerships between business, institutions of higher education and research, and government.

From the coast of Maine, to the heart of the Great Plains, to the islands of Hawaii, companies are adding thousands of jobs in new and growing industries. Clean energy companies are taking off in Colorado, new electric car battery companies in Michigan, new robotics companies in Pennsylvania, agri-businesses in California, and biomedical devices in Arizona and Missouri.

Very little of this growth is happening by chance. Regions are adopting development strategies that recognize that entrepreneurs and businesses don't operate in a vacuum. They need a regional economic ecosystem in which businesses can thrive—one that provides the infrastructure, shared resources, networked relationships, and the access to capital that businesses need.

Efficiency and Return on Investment

EDA's projects illustrate how the agency—a model of smart, lean government—does more with scarce resources to generate real returns. EDA has regularly sought third-party reviews of its programs and their performance. Its return on investment is closely tracked to ensure that the public is getting the most out of its tax dollars. According to independent analysis by Rutgers

University and Grant Thornton of EDA's grants, every \$1 in EDA's construction investments leverages nearly \$10.08 of additional investment from private sources.

In deciding which projects to support, EDA makes merit-based competitive investments that enhance the competitiveness of America's regions, spur innovation, and create jobs. Starting in FY 2011, EDA implemented a new grant review process aimed at significantly reducing the time it takes to respond to each application while maintaining exemplary levels of customer service. Under these revised procedures, a quarterly competition of grant submissions is conducted by EDA's six regional offices, which are responsible for reviewing the eligibility and merit of applications. All applications receive standardized, transparent, and efficient review, and EDA's regional offices notify the applicant directly of a decision once the competitive process has been completed.

Regional Innovation Clusters

Building regional innovation strategies is important focus for regional economic growth; and therefore, is one of the funding priorities guiding investments in all of our programs. Regional Innovation Clusters (RICs)—regional centers of related industries that foster innovation and next-generation industries to enhance long-term economic growth—are central to this framework. RICs are geographic concentrations of firms and industries that do business with each other and have common needs for talent, technology, and infrastructure.

The cluster approach is very important: entrepreneurs and business leaders want to be around each other and feed off their shared creative energy. They want access to a shared talent pool, research, and access to capital. They want to build relationships. They want to be together. The synergies that develop from all those different elements coming together can make the whole greater than the sum of its parts.

Hundreds of millions of federal investment dollars have been used to support the development of successful RICs. These funds help build research parks, organize workforce attraction efforts,

support regional transportation projects tied to developing clusters, and bolster local job training programs.

Collaborative Approach

EDA continues to collaborate with other federal agencies to institute RIC-specific investments through its existing programs that support this investment approach. In 2011, for example, EDA led the \$37 million multi-agency Jobs and Innovation Accelerator Challenge (Jobs Accelerator) to support cluster development and the i6 Green Challenge to promote projects in green clusters across the country. These competitions involved the participation of more than a dozen federal agencies.

Through the i6 Green Challenge, an initiative to drive technology commercialization and entrepreneurship in support of a green innovation economy, increased U.S. competitiveness and new jobs, EDA awarded \$1 million to Louisiana Tech to support the creation of the Louisiana Tech Proof of Concept Center. With \$200,000 in supplemental funding from EPA and NSF, the “LA_i6” will partner with companies along the I-20 innovation corridor in Louisiana, Arkansas, Mississippi, and Texas to support and expedite the introduction of green technology innovations into the market and to optimize the environmental and economic impacts of those technologies. In addition to support for its federal partners, the University raised \$650,000 in matching funds committed by private partners across multiple sectors: manufacturing, R&D, finance, IT, transportation, energy, and construction.

In St. Louis, Missouri, two awards under both the Jobs Accelerator and i6 programs show how these investments can catalyze growth. The St. Louis Biosciences Jobs and Innovation Accelerator project, which was awarded more than \$1.8 million under Jobs Accelerator (including \$702,765 from EDA) in 2011 is already accelerating the growth of the St. Louis region’s biosciences cluster and spurring the formation of new companies and associated job creation. This award builds upon the winning 2010 i6 Green Challenge BioGenerator project. The BioGenerator has deployed and leveraged the \$1 million it received under the Challenge

with \$1 million in match from BioSTL to help create eight new bioscience companies in the past year.

Altogether, the 20 winning projects of Jobs Accelerator are expected to leverage approximately \$69 million in private capital according to grantee estimates at the time of award, which are expected to create more than 4,800 jobs and 300 new businesses, as well as retain another 2,400 jobs and train approximately 4,000 workers for careers in high-growth industries.

Some other successful Jobs Accelerator investments include:

- In Kansas, a \$2 million award to the Center for Innovation and Enterprise Engagement is supporting the south central Kansas region's efforts to jumpstart advanced manufacturing and create the jobs of the future.
- In Ohio, a \$2 million grant to the Speed-To-Market Accelerator is advancing production to get prototypes to market in the advanced energy and flexible electronics industry clusters in northeast Ohio.
- In New York's Finger Lakes region, a \$1.5 million investment is providing more R&D and tech transfer in the food processing cluster, which will bring significant benefits to small businesses and their workers across nine counties in upstate New York.

And to assist practitioners and policymakers in identifying and supporting RICs, and foster business and job creation more effectively, EDA is partnering with the Institute for Strategy and Competitiveness at Harvard Business School to develop a free, interactive map, registry, and data tools that will provide details on where clusters are located, highlight which clusters are driving the national economy, and provide historical trends on cluster performance.

Build It Here, Sell It Everywhere— Focus on Manufacturing, Exports, and Investment

Since his appointment by President Obama in 2011, Secretary of Commerce John Bryson charged the Department to focus on three areas that create more American jobs: supporting advanced manufacturing, helping U.S. companies increase exports, and encouraging more companies to invest in or expand operations in the U.S. Secretary Bryson’s message is clear: “build it here, sell it everywhere.”

EDA has taken its commitment to building the foundation that companies need to succeed very seriously. In 2011, EDA announced a \$3.975 million Public Works grant to the University of Virginia and Virginia Tech to build the Commonwealth Center for Advanced Manufacturing (CCAM) within Virginia’s Advanced Manufacturing Zone. By the end of Summer 2012, this applied research center, located near Petersburg, Virginia, will open its doors. CCAM will help bridge the gap from research to product development, while supporting the skills that workers need to get good jobs in advanced manufacturing. In addition, CCAM will form linkages to local community colleges to promote workforce training and high-skilled employment. Based on grantee estimates at the time of award, the project is expected to create 128 jobs, while at the same time strengthening advanced manufacturing in the immediate area, and generating \$22 million in private investment. This project marks an unprecedented public-private partnership between the federal government, the state government, four-year universities, a local community college, and a number of manufacturers— to directly translate academic research into job creation.

As an EDA University Center, the Advanced Manufacturing Institute (AMI) at Kansas State University's mission is simple: to advance technologies, people, and companies through collaborative engineering and business partnerships. To accomplish this, AMI’s consulting staff of students, technical, and business professionals help manufacturers in Kansas develop and refine their products and bring them to market. Through EDA’s investment, AMI is bringing research to market as businesses seek to build it here and sell it everywhere. Whatever the industry—be it bioscience, energy, transportation, environmental technology, or manufacturing — AMI’s expertise is helping companies grow, hire, and compete in the global marketplace.

In 2011, EDA awarded \$650,000 to support the Turabo Institute for Exports and Economic Development (TIEED) through the Ana G. Mendez University System's University of Turabo in Puerto Rico. TIEED will provide technical assistance for entrepreneurs in exports, with the goal of promoting from five to ten new export ventures during the second and third years, resulting in approximately 10 to 20 export ventures by the end of the project. TIEED's Exports Business Model will provide opportunities for new ventures in the region, potential innovation and the promotion of new business that can be integrated in the business incubator's facilities available in the region.

Investing in Competitiveness

Other new EDA investments are helping America's regions and businesses think strategically and invest in their long-term competitiveness.

Thanks to an EDA grant to the Council on Competitiveness, the National Digital Engineering and Manufacturing Consortium is helping develop software, purchase time on supercomputers, and train small and medium-sized manufacturers in the use of this technology, enabling them to design their own advanced manufacturing processes and products. This is being done in close collaboration with original equipment manufacturers (OEMs), thus ensuring that this cutting-edge technology will help both OEMs and their supply-chain partners in Ohio, Illinois, Indiana, and Michigan.

In May 2011, EDA launched the Regional Innovation Acceleration Network (RIAN) website in partnership with the State Science and Technology Institute. RIAN is designed to identify and link organizations supporting innovation through business and capital assistance—known as Venture Development Organizations (VDOs)—into networks spanning across the country, allowing them to share best practices and leverage resources to strengthen regional economic ecosystems. RIAN makes available an interactive map that is designed to help economic development practitioners identify their regional innovation colleagues, know where they operate, and give them a means for peer-to-peer sharing of information between existing and emerging VDOs.

Performance Goals and Results: Government Performance and Results Act

The Government Performance and Results Act of 1993 and the GPRA Modernization Act of 2010 (GPRA) requires Federal agencies to develop strategic plans, performance goals, and measures to report on their programs' performance. The Department of Commerce's overarching strategic goals and outcome-oriented objectives focus on the performance of its bureaus. EDA uses the GPRA review process to improve performance, enhance its programs and refine its measures.

It is crucial that the activities undertaken by EDA with public dollars demonstrate a return on investment through measurable, quantifiable performance outcomes. EDA primarily measures its performance against two goals, the bureau's ability to: 1) promote private enterprise and job creation in economically distressed communities; and 2) improve community capacity to achieve and sustain economic growth. Each goal has a series of quantifiable performance measures that are linked to the agency's strategic goals, its Balanced Scorecard, and the performance plans of senior executives. EDA's performance measures are also tied to its annual budget request and appropriations.

Beginning in FY 2010, EDA added a new, High Priority Performance Goal: Raise the percentage to 12 percent of construction projects involving buildings or structures funded under EDA's Economic Development Assistance Programs that are certified by the U.S. Green Building Council under the Leadership in Energy and Environmental Design (LEED) certification system or a comparable third-party certification program. This goal contributes to the Department of Commerce's Priority Goal focused on sustainable manufacturing and building practices.

EDA has adopted a set of investment priorities which direct agency funding toward projects that encourage environmentally-sustainable economic development, support emerging industrial clusters related to energy, foster cutting-edge environmental technologies, and support sustainable manufacturing practices. This approach has helped EDA successfully contribute to the Department of Commerce's Priority Goal focused on sustainable manufacturing and building

practices. In FY 2011, EDA exceeded this Priority Goal, ensuring that at least 14 percent of its infrastructure investments followed sustainable building practices. EDA views such investments in the green economy as essential to improving the Nation's competitiveness. These investments will help to build vibrant, regional innovation ecosystems that support job creation and economic growth.

Each goal has a series of quantifiable performance measures that are linked to the agency's strategic goals, its Balanced Scorecard, and the performance plans of senior executives. EDA's performance measures are also tied to its annual budget request and appropriations.

The results of EDA's economic development investments are often realized years later as they are transformed into jobs and private sector investments, thereby fueling economic growth that raises living standards and improves the quality of life. EDA recipients provide data for each grant investment at three-, six-, and nine-year intervals from the date of the grant award. EDA aggregates these data to report the actual results of investments using a formula-driven calculation to project investment targets for these measures. These formulas are dependent on the amount of funding appropriated to EDA within a defined fiscal year. In FY 2011, EDA met or nearly met all of its targets. Only three of EDA's targets were not met: (a) percentage of University Center clients taking action as a result of the University Center assistance; (b) percentage of Trade Adjustment Assistance Center (TAAC) clients taking action as a result of the assistance facilitated by the TAACs; and (c) percentage of District Organizations and Indian Tribes implementing economic development projects from the Comprehensive Economic Development Strategy (CEDS) process that leads to private investment and jobs.

PERFORMANCE GOAL ONE:

INCREASE PRIVATE ENTERPRISE AND JOB CREATION IN ECONOMICALLY DISTRESSED COMMUNITIES.

Goal One includes Public Works and Economic Development Assistance, Economic Adjustment Assistance, and the Revolving Loan Fund program. These critical investments enable

communities to attract new businesses or to support existing businesses that will generate new higher-skill, higher-wage jobs for unemployed and underemployed residents.

EDA GAUGES ITS PERFORMANCE UNDER GOAL ONE USING TWO RELATED MEASUREMENTS:

MEASUREMENT 1: Private-sector dollars invested in distressed communities as a result of EDA investments.

MEASUREMENT 2: Jobs created or retained in distressed communities as a result of EDA investments.

PERFORMANCE MEASURE	TARGET	ACTUAL	STATUS
Private investment leveraged – 9 year totals (in millions)	\$1,940	\$3,960	Exceeded
Private investment leveraged – 6 year totals (in millions)	\$674	\$1,617	Exceeded
Private investment leveraged – 3 year totals (in millions) (EDA)	\$245	\$1,475	Exceeded
Jobs created/retained – 9 year totals	57,800	56,058	Slightly Below
Jobs created/retained – 6 year totals	18,193	26,416	Exceeded
Jobs created/retained – 3 year totals	6,256	14,842	Exceeded

PERFORMANCE GOAL TWO:

IMPROVE COMMUNITY CAPACITY TO ACHIEVE AND SUSTAIN ECONOMIC GROWTH.

Goal Two includes investments under the Planning Assistance; Economic Adjustment Assistance (planning and technical assistance components); Local Technical Assistance, the University Center, Research and Evaluation, and Trade Adjustment Assistance for Firms programs.

EDA investments in the economic growth of distressed communities help lay the foundation for job creation and fuel economic growth, thus raising living standards and improving the quality of life. EDA’s optimal use of limited public funds relies on the economic leverage achieved from its strategic and focused investments in distressed communities.

PERFORMANCE MEASURE	TARGET	ACTUAL	STATUS
Percentage of Economic Development Districts (EDD) and Indian tribes implementing projects from the Comprehensive Economic Development Strategy (CEDDS) that lead to private investment and jobs	95%	86%	Not Met
Percentage of sub-state jurisdiction members actively participating in the Economic Development District program	89%	85%	Slightly Below
Percentage of University Center clients taking action as a result of the University Center assistance	75%	68%	Not Met
Percentage of those actions taken by University Center clients that achieve the expected results	80%	83%	Met
Percentage of Trade Adjustment Assistance Center (TAAC) clients taking action as a result of the assistance facilitated by the TAACs	90%	73%	Not Met
Percentage of those actions taken by Trade Adjustment Assistance Center clients that achieved the expected results	95%	100%	Met

Economic Development Assistance Programs

Public Works and Economic Development Assistance

EDA's Public Works and Economic Development Program help distressed communities revitalize, expand, and upgrade their physical infrastructure. This program enables communities to attract new industry; encourage business expansion; diversify local economies; and generate or retain long-term, private sector jobs and investment through the acquisition or development of land and infrastructure improvements needed for the successful establishment or expansion of industrial or commercial enterprises.

Public Works investments help facilitate the transition of communities from being distressed to becoming competitive in the worldwide economy by developing key public infrastructure, such as technology-based facilities that utilize distance learning networks, smart rooms, and smart buildings; multitenant manufacturing and other facilities; business and industrial parks with fiber optic cable; and telecommunications and development facilities. EDA continues to invest in its traditional Public Works projects, including water and sewer systems improvements, industrial parks, business incubator facilities, expansion of port and harbor facilities, skill-training facilities, and brownfields redevelopment.

Economic Adjustment Assistance

The Economic Adjustment Assistance (EAA) program uses a flexible set of tools to respond to the wide range of economic development challenges in communities and regions across the nation, including globalization, natural resource depletion, corporate restructuring, and natural disasters.

EAA is the most effective single program in EDA's arsenal to address areas impacted by globalization, especially manufacturing dependent communities that need to develop and implement regional strategies that will transform and diversify their economies and position them competitively in the global marketplace. EAA funds can be used to design the transition strategy, construct or upgrade public infrastructure, and capitalize locally or regionally

administered Revolving Loan Funds that directly assist innovative entrepreneurs in growing 21st century businesses.

Additionally, the EAA program, with its forward-looking imminent threat authority, allows EDA to initiate interventions before a community's economy bottoms out, when economic trends may clearly indicate the need for intervention but the trailing economic eligibility indicators employed in other programs may not provide adequate access to other assistance.

Revolving Loan Funds

As part of the Economic Adjustment Assistance Program, EDA's regional offices award competitive grants to establish Revolving Loan Funds (RLFs). EDA's RLF recipients, in turn, disburse money from the RLFs to make loans at interest rates that are at or below market rate to small businesses or to businesses that cannot otherwise borrow capital. As the loans are repaid, the grantees use a portion of the interest earned to pay administrative expenses and add principal and interest repayments to the RLF's capital base to make new loans. A well-managed RLF award actively makes loans to eligible businesses, continues to revolve loaned funds (interest and principal), and does not have a termination date.

As of April 2011, the RLF program encompassed 575 RLFs, with a combined capital base of \$862 million, which represents a 4% increase in the capital base over September 2010. The majority of these RLFs reported concentrating on making loans in the range of \$25,000 to \$175,000, although a number of RLF operators made much smaller (as little as \$1,000) or much larger (\$1 million+) loans.

Economic Development Planning Assistance

The Economic Development Planning Assistance program provides essential investment support to District Organizations, Native American organizations, states, sub-state planning regions, urban counties, cities and other eligible recipient to assist in planning. The two categories of the Planning Assistance program are: (a) Planning investments for District Organizations, Indian

Tribes and other eligible entities; and (b) Short-Term Planning investments to states, sub-state planning regions and urban areas. Eligible activities under this program include developing, maintaining and implementing a Comprehensive Economic Development Strategy (CEDS) and related short-term planning activities.

Technical Assistance

Under Section 207 of PWEDA (42 U.S.C. § 3147), EDA administers the University Center Economic Development, Local Technical Assistance Program, and National Technical Assistance Program. These programs help promote economic development and alleviate unemployment, underemployment, and out-migration in distressed regions by:

- Investing in institutions of higher education and consortia of institutions of higher education to establish and operate University Centers specifically focused on leveraging university assets to build regional economic ecosystems that support high-growth entrepreneurship;
- Supporting regional economic strategies through accelerated research and technology commercialization which target industry sectors that have the potential to generate high-skilled jobs;
- Disseminating information and collaborating with other EDA partners by providing resources to implement regional strategies that support job creation, the development of high-skilled regional talent pools, and business expansion in the region's innovation clusters; and
- Financing local feasibility studies, market research, economic impact analyses, and other projects leading to local economic development.

University Center Economic Development

Institutions of higher education have extensive resources, including specialized research, outreach and technology transfer and commercialization capabilities, as well as recognized faculty expertise and sophisticated laboratories. The EDA-supported University Center (UC) program is specifically designed to marshal the resources located within colleges and universities to support regional economic development strategies in regions of chronic and acute economic

distress. The UCs, which EDA considers long-term partners in economic development, are required to devote the majority of their funding to respond to technical assistance requests originating from organizations located in the economically distressed portions of their service regions.

The UCs have a long history of promoting and facilitating economic development in their service regions. They have been among the first to recognize emerging technical assistance needs. For example, as early as FY 1980, EDA-funded UCs recognized and responded to the needs of small- and medium-sized manufacturers and processors for technology transfer and commercialization assistance.

Most UCs focus their efforts on assisting units of local governments and nonprofit organizations in planning and implementing regional economic development strategies and projects. Typical activities provided by the UCs include targeted commercialization of research, workforce development, and business counseling services. Other UCs may focus their efforts on helping local organizations with conducting preliminary feasibility studies, analyzing data, and convening customized seminars and workshops on topics such as regional strategic planning and capital budgeting.

EDA began administering the University Center Economic Development Program on a competitive, multi-year basis in FY 2004, holding competitions each fiscal year in two of EDA's six regional offices. In FY 2011, EDA's regional offices in Chicago and Philadelphia held their third round of competitions. During this year, EDA invested \$7.5 million in 58 UCs, including second and third year funding awarded to University Centers selected in prior years.

Local Technical Assistance

Local Technical Assistance, one of EDA's smallest programs in terms of funding, is an extremely flexible and useful economic development tool. Projects analyze the feasibility of potential economic development projects, such as an industrial park or a high-technology

business incubator. Feasibility studies are an effective tool for determining whether the market will support a particular activity or site.

While Local Technical Assistance investments are typically small in size and scope, they can prevent costly mistakes and misguided investments, such as costly infrastructure improvements to support obsolete industries. Targeted market feasibility studies can help communities overcome these hurdles and identify tomorrow's higher-wage employers. Because of these feasibility studies, many communities have received funding under EDA's Public Works or Economic Development Assistance program and other federal- or state-funded programs to implement those projects.

National Technical Assistance

National Technical Assistance assists in formulating and implementing new economic development tools. These tools support local governments' efforts to partner with private industry and attract private investment to revitalize regions and local communities. Providing timely information on best practices in economic development is critical to practitioners' efforts to alleviate economic distress and promote economic development. This program identifies and funds the collection and dissemination of new knowledge, analysis and technical information, which helps communities assess their economic development opportunities and supports the overall EDA strategy of enhancing regional cooperation, fostering innovation, increasing productivity and developing industry clusters.

Research and Evaluation

Through the Research and Evaluation program, EDA builds the knowledge base for sound market-driven regional and local economic development. This work is critical to ensure that EDA's initiatives and investments are consistent with current best practices in economic development. Program evaluations ascertain EDA's impact on measures such as return on taxpayer investment, private capital investment leveraged and the creation of higher-skill, higher-wage jobs. Projects under the Research and Evaluation program may be carried out

through grants or cooperative agreements, as well as through studies conducted in-house, to maximize the impact of this modestly funded program.

Trade Adjustment Assistance for Firms (TAAF) Program

The goal of the TAAF program is to help economically distressed U.S. businesses develop strategies to compete in the global economy. Administered by EDA through a nationwide network of eleven EDA-funded Trade Adjustment Assistance Centers (TAACs), the program provides assistance to eligible firms in the development and implementation of customized business recovery plans.

The TAACs, which are either non-profits or university-affiliated, provide cost-sharing technical assistance to eligible businesses to create targeted business recovery plans called Adjustment Proposals (APs). Firms contribute a matching share to create the APs and implement the strategic projects using consultants or industry-specific experts. In FY 2011, the TAAF program certified 317 petitions for certification of eligibility, and approved 183 adjustment proposals. Through both the in-depth analysis of each firm and the execution of AP projects, distressed firms are given the opportunity to adjust to import pressures and become more competitive.

State	Economic Adjustment Assistance		Economic Development Planning Assistance		Global Climate Change Mitigation Incentive Fund		Public Works and Economic Development Assistance		Research and Evaluation		Technical Assistance		Trade Adjustment Assistance		Total
