Patient Guide: Tobacco Cessation Therapy NICOTINE LOZENGE 2mg, 4mg

Medication together with behavioral counseling gives you the best chance of quitting smoking

What does this medication do?

The lozenge has nicotine to help you quit smoking by decreasing withdrawal symptoms. Nicotine lozenge use is recommended along with a tobacco cessation program in order to provide you with additional support and educational materials.

How do I use it?

- Set a date when you intend to stop smoking (quit date).
- Begin using the lozenge on your quit date.
- ◆ Let the lozenge dissolve in your mouth near your cheek and gum.
- Rotate lozenge to different parts of the mouth.**
- Do not chew or swallow the lozenge.
- Do not eat or drink for 15 minutes before and during use. Doing so may prevent the lozenge from working correctly.
- Use throughout the day, this is not "as-needed" medication.
- First week: 1 lozenge every 1-2 hours. Use at least 8-9 lozenges to start.
- ◆ Do not use more than 20 lozenges per day.
- Each week: Self assess and slowly decrease use. You may use sugar-free gum or sugar-free lozenges to replace the nicotine lozenge.
- Goal: Decrease use over 2-3 months.
- If you slip up and smoke, continue using the lozenge and try not to smoke.
 - **One lozenge lasts 20-30 minutes (one mini lozenge lasts about 10-15 minutes).

What are the possible side effects?

- ◆ May cause indigestion, upset stomach, nausea, hiccups, headache, mouth irritation and difficulty sleeping.

 Proper lozenge use can help to avoid these side effects.
- If you have any intolerable side effects, please stop using and contact your provider.
