

Notes on the PMC Journal List CSV file

This CSV file, available from the Journal List page on the PMC site, <https://www.ncbi.nlm.nih.gov/pmc/journals/>, is a list of journals that currently deposit articles, or were depositing them in the past, under a Full Participation or NIH Portfolio (NIHP) model in PMC. It includes journals that are no longer in publication or no longer deposit material in PMC. It does not include journals that have only participated in PMC under a selective deposit model. See <https://www.ncbi.nlm.nih.gov/pmc/pub/pubinfo/#agree> for an explanation of PMC participation models.

For each journal, the list contains:

- **Journal title**
- **NLM TA:** the NLM journal title abbreviation, as used in PubMed citations.
- **pISSN:** the ISSN for the print version of the journal.
- **eISSN:** the ISSN for the electronic version of the journal.
- **Publisher**
- **LocatorPlus ID:** the unique ID for the journal title in the NLM catalog.
- **Latest issue:** the volume (issue, if applicable) and date of the most recent issue available in PMC.
- **Earliest volume:** the volume and date of the earliest material available in PMC.
- **Free access:** how soon after publication the journal makes issues (or individual articles) available in PMC.
- **Open access indicator:** indicates whether 'All,' 'Some,' or 'No' articles from this journal are included in the PMC Open Access Subset. (See <https://www.ncbi.nlm.nih.gov/pmc/tools/openftlist/>)
- **Participation level:** may be Full (the title deposits the complete contents of each issue in PMC); or NIHP (the title deposits all NIH-funded articles and possibly some others).
- **Deposit status:** applies only to journals that are not depositing current content under a Full Participation or NIHP model, but did so formerly. Status may be Predecessor (the title is no longer in publication and a later version of the title is also available in PMC); Now Select (the title has moved to a selective deposit model; in this case the 'Latest Issue' represents the most recent issue deposited under its former Full or NIHP participation); No New Content (the title no longer deposits material in PMC, but previously deposited articles are still available; the title may or may not be in publication currently).
- **PMC URL:** for a Full participation title, this is a link to a list of all issues of the journal in PMC. For an NIHP title, it is a link to a list of all articles in PMC from the journal.
