

CEOSE

Committee on Equal Opportunities in Science and Engineering

2011-2012 Biennial Report to Congress

Broadening Participation in America's STEM Workforce

MISSION

The Committee on Equal Opportunities in Science and Engineering (CEOSE) advises the National Science Foundation (NSF) on policies and programs to encourage full participation by women, underrepresented minorities, and persons with disabilities within all levels of America's science, technology, engineering, and mathematics (STEM) enterprise.

BACKGROUND

The Committee on Equal Opportunities in Science and Engineering was established by the United States Congress through the Science and Engineering Equal Opportunities Act of 1980 to address the problems of growth and diversity in America's STEM workforce. The legislation specifically provides that:

There is established within the National Science Foundation a Committee on Equal Opportunities in Science and Engineering (hereinafter referred to as the "Committee"). The Committee shall provide advice to the Foundation concerning (1) the implementation of the provisions of sections 1885 and 1885d of this title and (2) other policies and activities of the Foundation to encourage full participation of women, minorities, and persons with disabilities in scientific, engineering, and professional fields [42 U.S.C. §1885(c)].

Every two years, the Committee shall prepare and transmit to the Director (of the Foundation) a report on its activities during the previous two years and proposed activities for the next two years. The Director shall transmit to Congress the report, unaltered, together with such comments as the Director deems appropriate [42 U.S.C. §1885(e)].

CEOSE is composed of 15 individuals from diverse STEM disciplines, drawn from diverse institutions in higher education, industry, government, and the non-profit sectors. Its membership also reflects the racial/ethnic and gender diversity of the country's citizenry and includes persons with disabilities. Members of the Committee typically serve a three-year term. A full committee meeting is held three times a year (usually winter, spring, and fall) to review and evaluate policies and program opportunities focused on the state of the participation and advancement of women, underrepresented minorities, and persons with disabilities in education, training, and science and engineering research. On the basis of its findings, the Committee makes recommendations to the Foundation for improving the levels of participation of underrepresented groups in STEM professions. Committee members also interact with other federal agencies, such as the Department of Defense, National Institutes of Health, Department of Energy, the National Aeronautics and Space Administration, and the National Oceanic and Atmospheric Administration in forging multi-agency collaborations to broaden participation by underrepresented groups in the Nation's STEM workforce.

CEOSE
Committee on Equal Opportunities in Science and Engineering
2011-2012 Biennial Report to Congress
Broadening Participation in America's STEM Workforce

CEOSE 13-01

July, 2013

ACKNOWLEDGMENTS

Members of the Committee on Equal Opportunities in Science and Engineering (CEOSE) are indebted to the following National Science Foundation officials for their technical consultation, collection of critical data, and review assistance and comments that enabled the completion of this Biennial Report to Congress: Dr. Cora B. Marrett, Acting Director and Deputy Director; Dr. Subra Suresh, Former NSF Director; Dr. Wanda E. Ward, Executive Liaison and Office Head (IIA); Claudia J. Postell, Esq. (ODI); Clifford J. Gabriel, Former Acting Office Head (OD); Dr. Myron P. Gutmann, Former Assistant Director (SBE); Dr. Tim Killeen, Former Assistant Director (GEO); Dr. Joan Ferrini-Mundy, Assistant Director (EHR); Dr. Farnam Jahanain, Assistant Director (CISE); Dr. Joann P. Roskoski, Deputy Assistant Director (BIO); Dr. Joanne Tornow, Deputy Assistant Director (SBE); Dr. Joan S. Burrelli, Science Resource Analyst (IIA); Dr. Lynda T. Carlson, Former NCSES Director; Dr. Sylvia James, Former Acting Division Director (EHR); Dr. Jermelina Tupas, Acting Division Director (EHR); Dr. Susan C. Kemnitzer, Deputy Division Director (ENG); Dr. Kelli Craig-Henderson, Deputy Division Director (SBE); Dr. Kelly Mack, Former CEOSE Executive Secretary; Dr. Jessie DeAro, Program Director (EHR); Dr. Steve Meacham, Senior Staff Associate (IIA); Dr. Candace O. Major, Program Director (GEO); Shawn Murray, Management Analyst (HRM); and Tracy Gorman, Staff Assistant (OD). We are very grateful to Dr. Walter V. Collier and Corinda Davis of Beyond the Bottom Line, Inc. for their assistance with review, analysis, and production of this report. We also give special thanks for the technical contributions and oversight role of Dr. Bernice T. Anderson, CEOSE Executive Secretary and Senior Advisor (IIA), the administrative coordination support of Victoria Fung, Program Analyst (IIA), and Steven Buhneing, IT Specialist (IIA).

EXECUTIVE SUMMARY

To retain the Nation's tradition of STEM leadership and to help solve America's competitiveness dilemma, the country must increase its efforts toward successfully educating those groups within the Nation that are not being sufficiently tapped for the STEM workforce, particularly African Americans, American Indians, Hispanics, women, and persons with disabilities. Tapping this pool of talent is urgent to the well being of our country! This message has been stated multiple times before by CEOSE and others, and repeated, persuasively, in the recent report *Expanding Underrepresented Minority Participation: America's Science and Technology Talent at the Crossroads*. The more time that passes without action, the more urgent the problem becomes.

Progress and Challenges

Over the past half-century, the numbers of women, minorities, and persons with disabilities earning science and engineering degrees and the numbers entering science and engineering employment have increased. This is progress, but not sufficient progress to redress the historic patterns of underrepresentation for these groups. Women have come closest to achieving parity, yet remain underrepresented in areas like engineering, physics, computer sciences as well as among the top academic ranks in all areas of science and engineering. African Americans, Hispanics, American Indians, and persons with disabilities remain woefully underrepresented in science and engineering. Only a small percentage of African Americans, Hispanics and American Indians complete college and earn bachelor's degrees in any field, even fewer complete advanced degrees, and they remain severely underrepresented among science and engineering faculty. Students with disabilities have greater college attrition than students without disabilities; they remain a small share of the science and engineering workforce, and they have lower employment rates than those without disabilities.

NSF Investment in Broadening Participation

NSF has invested in Broadening Participation (BP) efforts to increase the involvement of African Americans, Hispanics and Native Americans, women, and persons with disabilities in the academic community and in the STEM workforce through its grant making, through its staffing decisions, and through its engagement in outreach and related activities. The Foundation has implemented most of CEOSE's prior recommendations. A noteworthy exception is CEOSE's standing recommendation that NSF establish a Hispanic-Serving Institutions (HSI) program, as authorized in the America COMPETES Act. CEOSE remains committed to this recommendation.

In FY2011, the Foundation spent \$754.05 million dollars on broadening participation, and in FY2012 it spent \$911.90 million. The funding for NSF's flagship broadening participation programs, such as Increasing the Participation and Advancement of Women in Academic Science and Engineering Careers (ADVANCE), Historically Black Colleges and Universities Undergraduate Program (HBCU-UP), and Louis Stokes Alliances for Minority Participation (LSAMP), was \$190.6 million in FY 2010, 182.6 million in FY 2011 and 157.7 million in FY 2012. In addition to its funding of broadening participation programs, NSF's broader impacts criterion has fostered broadening participation activities by individual researchers not accounted for in official data. In addition to funding programs, NSF has striven to build a diverse and inclusive workforce within the agency. NSF directorates actively work to reduce implicit bias through training for staff and for proposal reviewers.

These commendable efforts have had positive impacts on the participation of women, African Americans, Hispanics, Native Americans, and persons with disabilities, but, as noted above, the

cumulative impact on the underrepresentation of these groups has been minimal. Award statistics offer further evidence of this underrepresentation. In FY 2012, when the Foundation made 11,524 awards, people of color from underrepresented groups in STEM were the PIs of 699 awards. In FY2012, female PIs of all races/ethnicities were 24 percent of awardees, Hispanics were 4 percent, African Americans were 2 percent, American Indians/Alaska Natives were 0.2 percent, and Native Hawaiians/other Pacific Islanders were less than 1 percent of awardees. Persons with disabilities received approximately 1 percent of awards.¹

CEOSE Activities and Future Plans

Given the urgent need for action, CEOSE devoted its activities in FY2011 and FY2012 to the identification of a strategy or combination of strategies that would have a large significant impact on broadening participation. At its five formal meetings, CEOSE held discussions with the NSF Director and Deputy Director, with NSF Staff, with liaisons from other Federal agencies as well as with outside experts with expertise in broadening participation programs. Key elements of these discussions included the need for systematic collection, analysis and dissemination of longitudinal data for use in identifying the most successful strategies, the success of partnerships between Minority-serving Institutions (MSIs) and Research 1 (R1) institutions and of multi-institutional partnerships such as the Louis Stokes Alliances for Minority Participation (LSAMP), and the need for institutional transformation at R1 institutions² such as the systemic changes achieved by the NSF ADVANCE program.

CEOSE's future activities will be guided by Vannevar Bush's goal of a fully inclusive, fully diverse workforce.³ More specifically, CEOSE plans to:

- Review the broadening participation efforts of NSF's Centers portfolio as well as the broadening participation data and strategic plans of NSF directorates.
- Continue engagement with Federal Liaisons for leveraging opportunities to coordinate and be more systemic in addressing diversity and equity issues in STEM.
- Continue CEOSE's emphasis on broadening participation accountability activities, including monitoring, assessment and evaluation.
- Explore and document the contributions of MSIs and programs in broadening participation to inform recommendations to NSF.
- Examine graduate admissions practices to inform recommendations for improved STEM graduate level workforce outcomes and for improved broadening participation of underrepresented groups in STEM graduate education and training.
- Explore the significance of financial wherewithal and student debt as factors influencing persistence to the doctoral degree in STEM fields.
- Investigate the potential uses of data-intensive scientific approaches and methods for better informing the Committee and its recommendations to NSF on the condition of underrepresented groups and identifying barriers to and potential strategies to enhance their

access, retention, completion and advancement, that is, pathways to meaningful careers and contributions to science and engineering.

- Explore with NSF and others about hosting mini-symposia or other similar broad expert discussions focused on the condition in STEM of Hispanics and Hispanic serving Institutions, their institutional mechanisms, strategies, approaches and programs, as well as their significance and roles within U.S. higher education for broadening participation of Hispanics and other minority groups, in order to inform recommendations to NSF.
- Work with NSF to explore hosting mini-symposia or other similar broad expert discussions on the science of broadening participation.

These planned activities are important, but an enhanced effort to broaden participation in science and engineering education and employment must begin now. To emphasize the urgency for bold action, CEOSE departs from its past practice and makes only one recommendation in the Biennial Report.

CEOSE's Recommendation for a Bold New Initiative at NSF

The changing nature of STEM, challenges to U.S. competitiveness, the creative advantages of achieving workforce diversity, concerns about global leadership and domestic security, and the drive to realize America's democratic principles by achieving America's promise of equal opportunity for all call for more innovative, transformative work, engaging scholars from multiple disciplines, in order to yield satisfactory inclusion of all Americans in STEM education and in the STEM workforce. To better address emerging challenges and the limited progress being made in improving broadening participation in STEM, as well as the findings in this report and other national reports, the Committee on Equal Opportunities in Science and Engineering recommends that

NSF implement a bold new initiative, focused on broadening participation of underrepresented groups in STEM, similar in concept and scale to NSF's centers, that emphasizes institutional transformation and system change; collects and makes accessible longitudinal data; defines clear benchmarks for success; supports the translation, replication and expansion of successful broadening participation efforts; and provides significant financial support to individuals who represent the very broadened participation that we seek.

Through both providing direct support for individuals (students, postdoctoral fellows, faculty, practitioners) and coupling dissemination of broadening participation efforts with catalyzing innovative adaptations of successful initiatives, NSF and the nation will significantly "move the needle" toward developing a strong, highly educated, and highly trained domestic STEM workforce that reflects and represents the U.S. population. Equally important will be research and training activities that shift the paradigm of broadening participation in global science. We seek game-changers to reach the interdisciplinary coordination needed for the seamless preK-20+ scope of broadening participation.

The "boldness" of this initiative rests in its focus on institutional transformation and systemic change in addition to basic research on broadening participation. The "boldness" comes from making a long-term commitment to sufficient resources, to new resources, to alter the current trajectory in STEM employment.

In sum, the nature of the economy has changed and is changing, and so have the demographics of our nation. A democratic society in which large and rapidly growing population subgroups are unable to participate and contribute to scientific and technological advances faces a grave economic, intellectual and scientific disadvantage in an increasingly globalized competition for talent and innovation. Corrective and effective action must be taken now.

1. INTRODUCTION

CEOSE joins members of Congress, the President, and other national leaders in the political, corporate, and academic communities in urgently warning that the American way of life is threatened, because we are falling behind other countries in science, technology, engineering, and mathematics (STEM).⁴ We are not adequately developing our next generation of scientists and engineers. To retain the Nation's tradition of STEM leadership and to help solve America's competitiveness dilemma, the country must increase its investments in STEM research and education and efforts toward successfully educating those groups within the Nation that are not being sufficiently tapped for the STEM workforce, particularly African Americans, American Indians, Hispanics, women, and persons with disabilities. Full utilization of this labor pool would address the need for greater numbers and preparation in STEM and eliminate the inequity of underrepresentation, and greater diversity in the STEM workforce would facilitate scientific and economic innovation (e.g., National Academy of Sciences, 2011; and Page, 2007). Tapping this pool of talent is *urgent* to the well being of our country! This message has been stated multiple times before, and repeated, persuasively, in the recent report *Expanding Underrepresented Minority Participation: America's Science and Technology Talent at the Crossroads*⁵. The more time that passes without taking action, the more urgent the problem becomes. CEOSE has delivered this message time and again, including in each of its last three *Biennial Reports to Congress*.⁶

An enhanced effort to broaden participation in science and engineering education and employment must begin now. The current financial climate is no excuse for not making a greater investment in this effort. If we fail to make a sufficient investment now, the economic problems of today will be perpetuated into the future.

The National Science Foundation (NSF) and other institutions have invested in efforts to increase the involvement of African Americans, Hispanics, Native Americans (American Indians, Alaska Natives, Native Hawaiians and other Pacific Islanders), women, and persons with disabilities in the academic community and in the broader STEM workforce; and NSF has implemented many of the recommendations that CEOSE has made in prior reports. However, as the data in *Women, Minorities, and Persons with Disabilities in Science and Engineering: 2013* show, the cumulative impact of these investments on the overall participation of minorities and persons with disabilities in STEM has been minimal. Clearly, we need to take bolder steps and make bigger investments to improve the national condition of diversity and inclusion in science and engineering.

So in section five of this report, in contrast to its past practice, CEOSE makes only one recommendation:

NSF should implement a bold new initiative, focused on broadening participation of underrepresented groups in STEM, similar in concept and scale to NSF's centers, that emphasizes institutional transformation and system change; collects and makes accessible longitudinal data; defines clear benchmarks for success; supports the translation, replication and expansion of successful broadening participation efforts; and provides significant financial support to individuals who represent the very broadened participation that we seek.

2. PROGRESS AND CHALLENGES

Efforts to broaden the participation of underrepresented groups in STEM are succeeding only to a limited extent, and for the most part they must be strengthened and expanded. There has been progress, especially with respect to the participation of women. *Figure 1* below reflects the rising trend in women attaining bachelor's, master's, and doctoral degrees in science and engineering.

Figure 1. Women as a percentage of science and engineering associate's, bachelor's, master's, and doctoral degrees: 1966 - 2011

Note: Data not shown for associate's degrees prior to 1976, because of changes in the survey form pertaining to associate's degrees and certificates make the data in the early 1970s not comparable to later data.

Source: National Center for Education Statistics, IPEDS Completions Survey.

As *Figure 2* shows, African Americans (Blacks) and Hispanics are earning an increasing share of doctoral degrees in science and engineering. This is progress. However, as *Figure 2* also shows, the share of STEM degrees earned by persons with disabilities is not growing. Yet, despite the achievements of individual programs, the collective impact on the aggregate statistics for African Americans, Hispanics, Native Americans, women of color, and persons with disabilities remains disheartening.

Figure 2. Science and engineering doctorate degrees, by race/ethnicity and disability status: 1985 - 2009

Despite some progress, each of the underrepresented demographic groups constitutes a smaller share of STEM employment than their U.S. populations at large. Women represented 51 percent of the U.S. population and 45 percent of employed scientists and engineers in 2010. African Americans, Hispanics, and American Indians as a combined group were about 28 percent of the U.S. population, but only 12 percent of employed scientists and engineers in 2010. Persons with disabilities were 19 percent of the U.S. population but less than 10 percent of employed scientists and engineers.

Women

- Women who represented 51 percent of the U.S. population in 2010 earned half or more of all bachelor's degrees in psychology (77 percent), biological sciences (60 percent), social sciences (54 percent), agricultural sciences (52 percent), and chemistry (49 percent). However, women remain underrepresented in engineering (19 percent), computer sciences (18 percent), physics (19 percent), and mathematics (43 percent).
- Fewer women than men, regardless of race/ethnicity, are full and associate professors. Even in fields where women earn half or more of all doctoral degrees, fewer than half of full-time associate and full professors are women. Issues such as the challenges of balancing career and the family and the persistence of gender bias continue to impede access to the top academic

positions (e.g., Mason, Goulen, and Frasch, 2010; Etkowitz, Kemelgor, and Uzzi, 1994; Marcus, 2013; and Moss-Racusin, Dovidio, Brescoll, Graham, and Handelsman, 2012).

African Americans, Hispanics, and Native Americans

- African Americans, Hispanics, and Native Americans as a group were about 28 percent of the U.S. population, but only 12 percent of employed scientists and engineers in 2010. Part of the reason some minorities are underrepresented in science and engineering is that these occupations typically require at least a bachelor's degree and members of underrepresented minority groups are less likely than Whites and Asians to attend or graduate from college with a bachelor's degree.
- The underrepresentation of African Americans, Hispanics, and American Indians in science and engineering employment is also the result of losses along STEM pathways, resulting in lower proportions of African Americans, Hispanics, and American Indians completing bachelor's degrees (DOC/ESA, 2011 and NSB, 2012). This is partly due to fewer completing high school and fewer completing at least some college; but the racial/ethnic gaps in educational attainment are greatest for completion of a bachelor's or higher degree. In 2011, 39 percent of White and 56 percent of Asian 25 to 29 years old had completed a bachelor's or higher degree compared to 20 percent of African American, 13 percent of Hispanic, and 17 percent of American Indian 25 to 29 years old (NCES, 2012a).
- Of those who attend college, African Americans, Hispanics, American Indians, and Pacific Islanders are more likely than Whites and Asians to leave without finishing a degree (NCES, 2012b). Financial reasons were given by about a third of postsecondary students leaving without completing a degree or certificate; family responsibilities accounted for another 21 percent and personal reasons accounted for 53 percent. Only 13 percent cited academic problems and eight percent cited scheduling problems. Hispanics (35 percent), Whites (30.7 percent), and African Americans (28.7 percent) are more likely to leave college for financial reasons, while Asians (18.6 percent) are least likely to leave because of finances. Asians (28.9 percent) and African Americans (24.7 percent) are more likely to leave for family reasons, while Whites (19.3 percent) and Hispanics (19.1 percent) are comparatively less likely to leave due to family matters. Hispanic students (26.0 percent) are more likely to leave college without finishing because of academic problems, compared to White (11.2 percent) and African American (10.3 percent) students (NCES, 2012b).⁷ Data on academic problems were not reported for Asians. These are self-reported data, and therefore do not show the full picture; such as the unintended negative effects of institutional policy and climate or built-in systematic bias, explicit or implicit.
- In addition to the non-completion of degrees, there are other factors that co-contribute to the underrepresentation of minorities in STEM; and these include lack of educational preparation, few visible role models, lack of mentors, poorly equipped elementary and secondary schools in science, as well as systemic racial/ethnic biases among others (e.g., *Expanding Underrepresented Minority Participation*, National Academies, 2011).

- Despite relatively small student bodies and limited financial resources, Historically Black Colleges and Universities (HBCUs) comprised the top ten producers of African American undergraduates who ultimately earned STEM PhDs between 2002 and 2011. One non-HBCU was included in these 10 and that was the University of Maryland-Baltimore County, which tied for tenth place (<http://www.nsf.gov/statistics/infbrief/nsf13323.pdf>). At the graduate level, minority-serving institutions (MSIs) are leaders in providing pathways to the PhD (<http://www.nsf.gov/statistics/wmpd/2013/pdf/tab7-16.pdf>).
- High Hispanic enrollment institutions eligible for Hispanic-Serving Institutions (HSIs) designation by the Department of Education are less than 10 percent of all institutions of higher education, but produce 30 percent of all Hispanic undergraduate science and engineering degrees (<http://www.nsf.gov/statistics/wmpd/2013/pdf/tab5-9.pdf>) and are among the top baccalaureate institutions for Hispanic science and engineering doctorate recipients (<http://www.nsf.gov/statistics/wmpd/2013/pdf/tab7-11.pdf>).
- While African Americans, Hispanics, and Native Americans are increasing among faculty in most STEM fields, they still remain an extremely small percentage of STEM faculty, especially in mathematics and computer sciences.

Persons with Disabilities

- Persons with disabilities are more underrepresented in science and engineering compared with the population as a whole. In 2010, they were a smaller proportion of all employed persons in the United States and of employed scientists and engineers than of their representation in the total population. In 2009, students with disabilities were only 1 percent of all science and engineering doctorate recipients.
- The proportion of undergraduates with disabilities who major in science and engineering fields (22 percent) is similar to the proportion of undergraduates without disabilities (23 percent) who major in these fields.
- The incidence of disability increases with age. But even among younger scientists and engineers, those with disabilities are still more likely than those without disabilities to be unemployed. For example, among those between the ages of 30 and 39, 15 percent of scientists and engineers with disabilities are unemployed or out of the labor force compared with 9 percent of those without disabilities.
- Although some improvements have been made, underreporting of data on persons with disabilities in STEM still remains a major challenge in determining the actual size of this underrepresented group and the types of interventions needed (CEOSE, 2007-2008). Another major challenge in regard to increasing and retaining more persons with disabilities in STEM is the dearth of good or even passable data on how and why students with disabilities do not advance as far as their peers without disabilities—especially in science and engineering (Bowman-James, Benson, and Mallouk, 2009). Also, a major problem faced by persons with

disabilities in science and engineering fields is how best to teach this group on the secondary and post-secondary levels, i.e., mainstreaming approaches versus more individualized and assisted approaches (Moon, Todd, Morton, and Ivey, 2012).

3. NSF INVESTMENT IN BROADENING PARTICIPATION

NSF has invested in Broadening Participation (BP) efforts to increase the involvement of underrepresented minorities, women, and persons with disabilities in the academic community and in the STEM workforce through its grant making, through its staffing decisions, and through its engagement in outreach and related activities. NSF's dedicated support for broadening participation within STEM has been reflected in its financial investments in a broad range of programs over the years. In FY2011, the Foundation spent \$754.05 million dollars on these programs, and in FY2012 it spent \$911.90 million on these programs. For FY 2013, the Foundation requested \$703.31 million in its budget request to Congress for a standard set of broadening participation programs, and requested \$962.62 million in its FY 2014 budget to Congress. (See Appendix for FY 2013 and FY 2014 budget requests to Congress.)

Funding of Broadening Participation within NSF

In 2012, the NSF reorganized the categories employed to classify broadening participation programs. The reclassification was performed to better enable tracking and to assess distribution of funds dedicated to broadening participation goals. Currently, the BP programs are sorted into one of three categories:

- ***Focused***—program has an explicit broadening participation goal and the majority of each award's budget goes to broadening participation activities [e.g., Increasing the Participation and Advancement of Women in Academic Science and Engineering (ADVANCE) or Louis Stokes Alliances for Minority Participation (LSAMP)];
- ***Emphasis***—program emphasizes broadening participation through components such as a project diversity plan and other components not necessarily related to diversity (e.g., Science and Technology Centers or Robert Noyce Scholarships) , but lacks an explicit BP goal; and
- ***Geographic***⁸—program has an explicit geographic diversity goal.⁹ This category is associated with the Experimental Program to Stimulate Competitive Research (EPSCoR).

Using these three program categories, the FY2012 BP investment was \$911.90 million. In 2012, the NSF supported 18 programs that *Focused* on broadening participation of women, underrepresented minorities, and persons with disabilities and 21 programs with an *Emphasis* on broadening participation of women, underrepresented minorities, and persons with disabilities. Additionally, 18 Dear Colleague Letters were active in 2012 that expressed interest in specific aspects of broadening participation. (See Appendix Tables 4, 5 and 6 for full listing of broadening participation opportunities that were posted on the NSF Broadening Participation website in 2012.)

The majority of funding in the *Focused* programs is explicitly dedicated to programs that are aligned with the CEOSE mandate of broadening participation of women, African Americans, Hispanics, Native Americans, and persons with disabilities. In contrast, the *Geographic* programs largely consist of other programs centered on NSF's more expansive definition of broadening participation to include strengthening research and education in science and engineering throughout the United States.

NSF has maintained a commitment to its flagship *Focused* programs. However, difficult budget times have resulted in a steady reduction in total funding for these programs since FY2010. (*Table 1* presents an 8 year trend.) For these long-standing programs, in FY2012, approximately 78 percent of the funds

were allocated to programs focusing on underrepresented racial/ethnic minorities, 18 percent targeted broadening participation of women, and the remaining 4 percent supported participation and inclusion of persons with disabilities in STEM fields.

Table 1. NSF Funding of Illustrative Focused Broadening Participation (BP) Programs (in millions)

Program	Focus	FY05	FY06	FY07	FY08	FY09	FY10	FY11	FY12
ADVANCE	Women	19.9	19.5	16.6	20.1	21.7	21.0	19.8	17.8
AGEP	URM	15.0	14.6	15.3	15.9	17.2	16.7	16.7	7.8

CREST	URM	15.6	17.8	18.8	25.0	35.4	30.3	30.4	24.2
HBCU-UP	URM	25.3	25.7	27.9	29.7	31.1	32.1	31.9	31.9
LSAMP	URM	35.6	36.1	38.1	40.5	42.5	44.6	45.6	45.5
RDE	Disab.	5.0	5.3	5.4	5.9	6.9	6.9	6.5	6.5
GSE	Women	9.9	9.7	9.9	10.1	11.4	11.6	10.4	10.6
TCUP	URM	9.2	10.8	10.4	12.8	13.4	13.4	13.3	13.4
TOTAL		139.2	153.7	155.9	174.0	193.6	190.6	182.6	157.7

Note: FY09 and FY10 include ARRA funding. URM refers to underrepresented minorities and Disab. refers to persons with disabilities.
Source: NSF Budget Requests to Congress, FY 2007-2014.

The impact of the NSF *Focused* programs is far greater than the summed dollar value of the individual awards. These flagship programs implicitly reflect the core values of the Foundation. For example, the NSF ADVANCE program for improving the inclusion of female faculty has been adapted and replicated far beyond the direct reach of NSF funds. Programs such as Alliances for Graduate Education and the Professoriate (AGEP) and LSAMP have raised awareness of the importance of including underrepresented minorities in postsecondary education; and best practices from these programs are being implemented for student recruitment and retention at institutions without links to AGEP or LSAMP funds.

The above reported expenditures represent a conservative estimate of NSF investments in broadening participation. Activities by grantees, fostered by the broader impacts criterion for project funding, may go unrecognized or unclassified. CEOSE encourages efforts to assemble a portfolio of broadening participation projects that reside outside of *Focused* and *Emphasis* programs. This would provide the opportunity to promote the most successful projects as models for replication. The NSF report, *Framework for Evaluating Impacts of Broadening Participation Programs: Report from NSF Workshop*, describes some of the challenges of capturing and evaluating these activities.

Programs with a primary focus or special emphasis on broadening participation can be found in every NSF directorate. NSF directorates also directly engage in other activities that aim to broaden participation. CEOSE routinely hears reports from the directorates about these activities. Examples of these activities include: implicit bias training for Program Officers (CISE); a working group to diversify staff and funded research scientists (BIO); a veterans’ science and engineering initiative to help address the development and use of STEM talent among the growing number of veterans with disabilities (ENG);¹⁰ projects to enhance outreach to minority-serving institutions (GEO, SBE, MPS); and core research support in EHR to provide funding in foundational research focused on synthesizing, building and expanding research foundations in STEM learning, STEM learning environments, workforce development, and broadening participation in STEM. Also, in response to a CEOSE recommendation,

NSF provides more guidance to the Committees of Visitors (COVs) on the assessment of broadening participation.

A significant new effort dealing with a major barrier to the advancement of both women and men in science and engineering, but especially women advancing in the academic ranks, is the Career-Life Balance (CLB) initiative, which was launched by NSF as part of a White House event in which the First Lady announced the new “Workforce Flexibility Policies to Support America’s Scientists and Their Families” on September 26, 2011. The CLB is aimed at reducing the number of women and men who depart from the STEM workforce due to family responsibilities, by expanding agency-wide family-friendly and other practices (e.g., flexible start dates for grants, no-cost extensions, and virtual panel participation) that are responsive to dependent care issues, such as birth, adoption, and elder care.¹¹

Broadening Participation and Proposal Review

The NSF seeks to create an environment free of bias during the review process. Each review panel is designed to be broadly inclusive of race, gender, and disability status to the extent possible, given the pool of subject experts. Prior to reviewing the proposals, the panel is provided with materials on identifying and eliminating ‘hidden biases’ in the review process.

NSF reviews submitted proposals on the basis of two criteria: Intellectual Merit and Broader Impacts. Broadening Participation is just one of the multiple facets NSF considers in reviewing the Broader Impacts of proposed projects. NSF does not make funding decisions based on the PI demographics. Using these merit review criteria, proposals are reviewed by a minimum of three independent reviewers of scientists, engineers, and educators who do not work at NSF or for the institutions that employ the proposing researchers. Approximately 37,969 individuals served on review panel, conducted a mail review for one or more proposals, or served in both functions in FY2012.

Most reviewers opt not to provide demographic information about themselves. During the period from FY2008 to FY2012, approximately 68 percent of reviewers did not report their gender; 90 percent did not report their race/ethnicity; and 98 percent did not report disability status (see *Table 2*). Of those who reported demographic information in FY2012, 68 percent identified as male and 32 percent as female; 8.2 percent reported being from an underrepresented minority group; and 1.8 percent reported having a disability.¹² Because reporting of demographic data by reviewers is voluntary, attempts to increase the low response rates have been challenging.

Table 2. Underrepresented Persons among NSF Proposal Reviewers: FY2008 - FY2012

	FY2008	FY2009	FY2010	FY2011	FY2012
Total Reviewers	42,035	41,911	46,055	42,343	37,969
Percent Reporting	30%	32%	34%	36%	36%
Female: Number (Percent)	n/r	4,091 (31%)	4,875 (31%)	4,811 (32%)	4,364 (32%)
Underrepresented Minorities: Number (Percent)	1,440 (4%)	1,383 (10%)	1,607 (10%)	1,584 (11%)	1,134 (8%)
American Indian/ Alaskan Native: Number (Percent)	n/r	71 (.5%)	72 (.5%)	52 (.3%)	51 (.4%)
Black/African American: Number (Percent)	n/r	518 (4%)	606 (4%)	595 (4%)	508 (4%)
Hispanic: Number (Percent)	n/r	781 (6%)	946 (6%)	945 (6%)	815 (6%)
Native Hawaiian/ Pacific Islander: Number (Percent)	n/r	13 (.1%)	9 (.1%)	10 (.1%)	7 (.1%)
Persons with Disabilities: Number (Percent)	n/r	253 (2%)	311 (2%)	297 (2%)	250 (2%)

Data Source: Merit Review Reports: NSB-09-43 (2008); NSB-10-27 (2009); NSB-11-41 (2010); NSB-12-28 (2011); and NSB-13-33 (2012). Note: n/r = not reported.

Demographic Diversity of Principal Investigators Submitting Proposals

As displayed in *Table 3*, the number of proposals submitted by women, African American, and Hispanic PIs increased significantly between FY2005 and FY2012. While the number of proposals submitted by Native Hawaiians/Pacific Islanders PIs also increased, the number of proposals remained much smaller than that of other racial/ethnic groups. The number of proposals submitted by American Indian/Alaskan Native PIs showed more inter-year decreases than increases. The number of proposals from PIs self-identifying as having a disability increased from FY2005 to FY2011 and decreased between FY2011 and FY2012. However, there are inherent difficulties in assessing the relative trends in proposal submissions from underrepresented groups: the proportion of principal investigators not reporting race, ethnicity, or gender has steadily increased over the last decade. In FY2012, 12 percent of PIs were of unreported gender and 13 percent did not report race or ethnicity.¹³ The majority of proposals submitted in FY2012 were not submitted by members of underrepresented groups in STEM: women (22 percent), Hispanic (4 percent), African American (2 percent), American Indian/Alaska Native (.2 percent), and persons with disabilities (1 percent). Overall and based on the PI demographic data available, the number of proposals from female, African American, and Hispanic PIs did increase over the eight years.

Table 3. Number of Principal Investigator (PI) Proposals to NSF, Awards and Funding Rates, by Gender, Race/Ethnicity and Disability Status: FY2005 - FY2012

Group		FY 05	FY 06	FY 07	FY 08	FY 09	FY 10	FY 11	FY 12

Source: Report to the National Science Board on the National Foundation's Merit Review Process Fiscal Year 2012 (May 2013).
 Figures in parentheses for FY 09 and FY 10 are included in the total awards figures.

The Foundation's overall funding rate ranged between 22 percent and 32 percent during the period from FY2005 to FY2012. The funding rates for women, African Americans, Hispanics, and persons with disabilities generally fall within this range. In FY2012, when the Foundation made 11,524 awards, PIs from underrepresented minority groups in STEM received 699 awards and women PIs received 2,775 awards. In FY2012, female PIs of all races/ethnicities were 24.1 percent of awardees, Hispanics were 3.6 percent, African Americans were 2.3 percent of the awardees, and American Indians/Alaska Natives and Native Hawaiians/other Pacific Islanders collectively accounted for less than 1 percent of the awardees. Persons with disabilities received 1.2 percent of the awards in FY2012. There is one notable exception to these statistics and that is in relation to NSF's premiere Graduate Research Fellowship Program (GRFP). In this program, applications rather than full research proposals are submitted for funding consideration and the award rates are higher for underrepresented groups in this program compared with other NSF programs. The following section is, therefore, presented to highlight this unique program.

The Graduate Research Fellowship Program

The Graduate Research Fellowship Program (GRFP) is the Foundation's flagship program for direct support to students pursuing graduate education in STEM. The program made 2000 awards each year from FY2010 to FY2012. The GRFP is an *Emphasis* program in that broadening participation is a key component but not the primary goal. It is a unique program in that reviewers are informed of the applicant's gender, race/ethnicity, and disability status during the review process, that is, should the applicant choose to disclose this information. The gender, race/ethnicity, and disability status may thus be considered by the reviewers as part of their broader impacts considerations. In the GRFP, underrepresented groups are funded at a slightly higher rate than majority applicants, with the exception of Pacific Islanders.

Table 4. Funding Rate (Percent) for NSF Graduate Research Fellowship Program (GRFP)

Group	FY08	FY09	FY10	FY11	FY12	5-Year Total
All	10.6	13.2	16.5	15.7	15.8	14.7
Female	12.6	16.0	18.4	18.1	18.1	16.9
American Indian	19.6	26.2	25.8	20.0	16.5	21.8
African American	12.2	14.1	17.9	17.3	18.3	16.3
Hispanic	14.4	17.1	19.6	20.7	22.0	19.4
Pacific Islander	5.0	12.0	21.4	13.6	15.0	13.9
Persons with Disabilities	12.2	11.8	15.5	16.4	17.0	14.9
% Female Applicants	45.3	45.9	43.9	44.9	44.4	44.8
% Awards to Females	53.7	55.5	48.9	51.7	51.0	51.6
% URM Applicants	11.9	12.4	12.6	13.2	14.0	12.9
% Awards to URM	14.6	15.9	14.8	16.6	18.2	16.2
% Disability Applicants	3.0	2.8	2.7	3.0	2.7	2.8
% Awards to Disability Group	3.4	2.5	2.6	3.2	2.9	2.9

* URM refers to underrepresented minorities.

From the perspective of broadening participation in STEM, the GRFP data offer a mixture of encouraging and disheartening trends. The percentage of applicants who are URM and the percentage of GRFP recipients who are URM have generally increased over the past 5 years averaging 12.9 percent and 16.2 percent, respectively. While the above 5-year average percentage of URM applicants (12.9 percent) is less than the 15.9 percent of URM U.S. citizen and permanent residents enrolled in STEM graduate school, the average percentage of URM awards (16.2 percent) is near proportional to the representation of URM in the U.S. population (NCES, 2010). But, the data show no evidence that students with disabilities receive a tangible benefit through the broadening participation considerations. Persons with disabilities constitute just under 3 percent of the applicant pool and awards received despite accounting for 12 percent of the U.S. citizens enrolled in STEM graduate school (ED, 2008).

Diversity within NSF Staff

The importance of broadening participation at NSF is reflected in the composition among the ranks of scientists and engineers at all levels of the Foundation’s grant-making process: grant policy, proposal review, approval, and post-award assessment. At each level, NSF staff or reviewers help shape the current and future demographics of practicing scientists and engineers across the United States and the world. To increase awareness of and sensitivity to the potential impact of gender and racial bias in their decision making, regular training sessions are provided by the Foundation for both staff and reviewers.

Table 5. Gender and Racial/Ethnic Diversity of NSF’s Scientists and Engineers: FY2004 - FY2012

	FY04	FY05	FY06	FY07	FY08	FY09	FY10	FY11	FY12
Total S&E Staff	(463)	(477)	(468)	(454)	(467)	(509)	(494)	(489)	(481)
African American:									
Female	17 (3.7%)	19 (4.3%)	18 (3.8%)	19 (4.2%)	22 (4.7%)	23 (4.5%)	22 (4.5%)	19 (3.9%)	18 (3.7%)
Male	12 (2.6%)	10 (2.2%)	12 (2.6%)	11 (2.4%)	7 (1.5%)	10 (2.0%)	10 (2.0%)	8 (1.6%)	8 (1.7%)
Amer. Indian:									
Female	0	0	0	0	1 (0.2%)	0	0	1 (0.2%)	1 (0.2%)
Male	2 (0.4%)	1 (0.2%)	1 (0.2%)	1 (0.2%)	1 (0.2%)	1 (0.2%)	1 (0.2%)	2 (0.4%)	1 (0.2%)
Asian:									
Female	14 (3.0%)	12 (2.7%)	12 (2.6%)	14 (3.1%)	16 (3.4%)	19 (3.7%)	20 (4.0%)	23 (4.7%)	25 (5.2%)
Male	25 (5.4%)	18 (4.0%)	29 (6.2%)	25 (5.5%)	26 (5.6%)	25 (4.9%)	24 (4.9%)	24 (4.9%)	23 (4.8%)
Hispanic:									
Female	6 (1.3%)	8 (1.8%)	9 (1.9%)	10 (2.2%)	9 (1.9%)	10 (2.0%)	12 (2.4%)	10 (2.0%)	11 (2.3%)
Male	11 (2.4%)	11 (2.5%)	9 (1.9%)	8 (1.8%)	10 (2.1%)	12 (2.4%)	10 (2.0%)	10 (2.9%)	14 (2.9%)

Source: NSF Division of Human Resources Management. Data represent permanent staff only.

Over the period FY2004 - FY2012, NSF staff became more diverse through net increases in staff scientists and engineers from certain demographic groups. Several directorates contributed to this increase — notably BIO, CISE, MPS and GEO. The proportion of those who are Asian females and Hispanic males and females increased. However, the percentage of scientists and engineers who are African American females remained virtually unchanged; and the percentage of those who are African American males declined between FY2004 and FY2012. For most of the period under analysis, the proportion of American Indian/Alaska Native scientists and engineers at the Foundation remained woefully low, with only 1 female and 1 male as of FY2012. The percentage of NSF’s scientists and engineers who are White males decreased over the period FY2004 - FY2012 and that for White females increased (see *Table 5*).

Table 6. Number of NSF Scientists and Engineers with Disabilities: FY2004 - FY2012

	FY04	FY05	FY06	FY07	FY08	FY09	FY10	FY11	FY12
Number	38	46	45	47	49	51	48	48	53
Percent	8.2	10.3	9.6	10.4	10.5	10.0	9.7	9.8	11.0

Finally, as shown in *Table 6*, the percentage of NSF scientists and engineers with disabilities increased during the period from FY2004 to FY2012. Data were not available on the types of disabilities experienced by these staff members.

4. CEOSE Activities, Outcomes, and Plans for the Future

Updates for 2009 - 10 CEOSE Recommendations

CEOSE requested updates or improvements to NSF's responses to the Committee's 2009 - 2010 recommendations. Appendix Table 3 summarizes the recommendations and outcomes. Selected outcomes from these recommendations are presented below:

- In its 2009 - 2010 Biennial Report, CEOSE requested that NSF address recommendations from the Mini-Symposium on Women of Color in STEM. The ADVANCE program has taken major responsibility for addressing these recommendations with some support from Historically Black Colleges and Universities Undergraduate Program (HBCU-UP). For example, NSF is supporting the STEM Women of Color Conclave, a national forum in which women of color in institutions of higher education can form the collective intelligence necessary for building a national network, harness a centralized body of knowledge and best practices related to women of color and promote the personal and professional development of women of color in the STEM academy. The participants at the annual conclave have the opportunity to address the unique challenges facing women of color in the academy in STEM fields where they are underrepresented at every faculty level.¹⁴
- CEOSE has long pushed for a study of the Science of Broadening Participation (SBP) that would inform the Committee, NSF and other agencies, and the broader community about this approach, perspective and discipline specialty. Today, the Science of Broadening Participation has gained attention throughout NSF. SBE released a Dear Colleague Letter: Stimulating Research Related to the Science of Broadening Participation (NSF 11-023 and NSF 12-037). Representatives from SBE have kept CEOSE updated on the progress being made in developing SBP and funding opportunities for research. CEOSE had planned to hold a Mini-Symposium on the Science of Broadening Participation in November 2012. Unfortunately, the mini-symposium had to be postponed due to lack of funds.
- CEOSE recommended to NSF that it establish a HSI program, as authorized in the America COMPETES Act. Although a separate program has not been established, a Dear Colleague Letter Announcement of Efforts to Increase Hispanic Participation in STEM Fields (NSF 12-081) was issued, albeit with no specific funding for HSIs.
- CEOSE has emphasized the role of MSIs in helping to solve the problems of underrepresentation. CEOSE was among a number of key stakeholders who recommended that funding for HBCU-UP, Tribal Colleges and Universities Program (TCUP) and LSAMP be augmented and not consolidated. The Congressional response was not to consolidate these programs and NSF has been able to maintain steady support for these programs. Funds were augmented in 2011 - 12 through co-funding by the EPSCoR program.

CEOSE ACTIVITIES 2011-2012

Five regularly scheduled meetings were convened by CEOSE at the National Science Foundation between February 2011 and October 2012. Highlights of presentations and discussions include the following:

- In 2011, the National Science Board completed its review, community-wide surveys, other data collection, and analysis of the merit review criteria and decision process. Unfortunately from the CEOSE's perspective, the Board decided not to make any specific recommendations regarding broadening participation, but did recommend that NSF better define the two criteria for the benefit of the science community. In so doing, the Board urged NSF to make clearer the meaning of the two review criteria and to connect these meanings to the core principles of the Foundation—one of which is to support broadening participation in the STEM fields.¹⁵
- In early 2011, CEOSE raised concerns about the consolidation of three programs to create the Comprehensive Broadening Participation Program. NSF received our concerns as well as the recommendations of the National Academies of Science report which stated that the NSF/HRD programs should not be combined. Further action was specified in the America COMPETES Reauthorization Act (H.R. 5116 on January 4, 2011) that the programs (LSAMP, HBCU-UP, and TCUP and the yet to be established HSI program) shall remain separate.
- The Office of Science and Technology Policy (OSTP) advises the President and others in the Executive Branch on the effects of science and technology on domestic and international affairs. One of the strategic goals of OSTP is to energize and nurture the processes by which government programs in science and technology are resourced, evaluated, and coordinated. In June 2011, CEOSE met with the staff of the OSTP Science Committee. Areas of mutual interest were development of a common language and definitions of broadening participation, development of metrics that are clearly understood and used across agencies, and strategies to manage how certain issues or targeted groups can be efficiently addressed through collaborative funding of programs.
- The National Science and Technology Council (NSTC) coordinates science and technology policy across the Federal research and development enterprise aimed at achieving national STEM goals. One of its five primary committees, the NSTC Committee on STEM Education (CoSTEM), focuses on education and workforce policy issues. CoSTEM was tasked to create an inventory of Federal STEM education activities and develop a five-year strategic Federal STEM education plan. At the February 27, 2012 CEOSE meeting, a representative from OSTP discussed the Federal STEM Education Inventory Initiative, which is a study of 11 STEM-related federal agencies and 252 educational programs. The findings were that (1) a total of \$3.4 billion dollars was spent in FY 2010 on these programs which amounted to less than 1 percent of the total annual funding for education in the US in FY2010; (2) one-third of the \$3.4 billion was spent on programs targeting underrepresented groups in STEM; (3) there was no duplication and only moderate overlap among the 252 investments; and (4) multiple methods have been employed to evaluate the programs, with pre-post methods being the most widely used.

- In addition, CEOSE has continued to strengthen its advisory role to promote inter-agency collaborations on broadening participation through the engagement of Federal Liaisons. CEOSE increasingly interacts with other federal agencies through its regular meetings. The number of agencies that participated in the CEOSE meetings grew from five in 2009-2010 to 12 in 2011-2012. The Federal Agency Liaisons who attended the CEOSE meetings regularly shared snapshots of their agencies' broadening participation programs and activities. Examples of these practices include online STEM courses/programs for teacher training (SI), early research/laboratory experiences (DOI), support for MSIs in STEM workforce development (ED, DHS, EPA), focused support for technician education in STEM (DOL), development of curriculum in agriculture for K-12 students (USDA), promoting partnerships between minority-serving institutions and universities receiving University Centers for Excellence awards (DHS), summer institute for middle school teachers in science (NIST), and a program that allows students from minority-serving institutions to complete their STEM studies and gain employment in the science and technology offices of the agency (NASA).
- Renewed interest in veterans' education in engineering and science occurred in 2009 when the Department of Veterans Affairs implemented new legislation to expand post-secondary educational benefits for veterans who served in the armed forces after 2001. The benefits created an opportunity to expand the U.S. technical workforce. In April of 2009, NSF's Engineering Directorate sponsored a workshop to facilitate collaborative efforts involving academia, business and government agencies to assist with the entry of veterans into the engineering and scientific fields (NSF, 2009). Significant numbers of U.S. veterans are underrepresented persons within science and engineering. Women comprise 15 percent of all veterans, and minorities, 30 percent. Not only do they encounter gender and racial/ethnic barriers in obtaining entry to STEM fields, but many experience disabilities due to their service and face these additional barriers. In early 2012, CEOSE had a presentation and updates about how NSF is providing support to veterans, and particularly, veterans with disabilities, since the 17 awards made in 2009 and 2010 to engage veterans in engineering degree programs. In a Dear Colleague letter issued in 2012, the Engineering Directorate announced the Engineering Research Experiences for Veterans (EREV), a pilot supplement program designed to support veterans attending universities under the GI Bill for education in engineering.¹⁶ There are other efforts being undertaken by other directorates of NSF, including a grant to Virginia Tech to facilitate the recruitment, retention, and transition of veterans to successful careers; a research project to build a collaborative model for youth and veterans with disabilities at the University of Missouri; and a CISE Dear Colleague Letter: CISE Encourages Research Experiences for Veterans Through REU Supplements (NSF 13-080). Also, in 2011, NSF sponsored "Transition STEM: A Wounded Warriors Think Tank" that addressed transition issues and identified recommendations for improved programs, policy, and funding (http://www.nsf.gov/discoveries/discsumm.jsp?cntn_id=121660).
- CEOSE expressed concern about the transfer of the Foundation's Research on Gender in Science and Engineering (GSE) and Research in Disabilities Education (RDE) programs to the Division of Research on Learning and these programs' merger with the Research and Evaluation on Education in Science and Engineering (REESE) program in a new program, Research on Education and Learning (REAL). The rationale for the merger was to create a more diversified STEM education research portfolio. However, CEOSE is very concerned about potential loss of the

human resource development foci of the alliance component of the RDE program as the emphasis becomes more focused on STEM education research, which is a smaller component within the RDE award portfolio. The capacity building and implementation components of the RDE program should remain as the research and development coordination efforts move forward. Further, CEOSE is concerned that REAL's emphasis on research will diminish NSF's support for STEM implementation/intervention programs for girls and women, previously supported by GSE, that have had such strong and lasting impact over the years.

- As the National Center for Science and Engineering Statistics (NCSES) takes on increasing responsibilities as outlined in the America COMPETES Act, the Committee will continue to pursue concerns related to data suppression, confidentiality of survey respondents, changes in methodologies and terminology in data reporting, and the impact of such changes on the ability to conduct data trend analyses, to track federal resources to MSIs to determine the impact on the production of science and engineering professionals, and several other issues with implications for broadening participation. More specifically, CEOSE is concerned about the following changes: the Survey of Earned Doctorates (SED) data suppression in published tables, the inability to obtain data beyond 2006 on baccalaureate origins from WebCaspas, the removal of race, citizenship and gender data from webcaspar and the suppression of these data on the new SED tab engine, such that one cannot get data by detailed field (especially for joint gender and race) or by academic institution or baccalaureate origin. There are changes in the disability definition in the SED — in 2010 and again in 2012 that have destroyed the time trends. (CEOSE does understand that some of these changes are needed to protect confidentiality of respondents.)
- CEOSE held several discussions with the NSF Director and Deputy Director focused on identifying a strategy or combination of strategies that would “move the needle” on broadening participation. Key elements of this discussion included the following:
 - While NSF has funded a number of programs and individuals that have been successful in recruiting members of underrepresented groups to STEM, the specifics and degree of success remain unclear because of the lack of systematic collection, analysis and dissemination of longitudinal data.
 - Partnerships linking R1 institutions with leading Minority-serving institutions are crucial to leveraging both the research resources of the R1 partners and the expertise of the MSI partners in retention of underrepresented groups in STEM. One powerfully successful example is the Fisk-Vanderbilt Master's to PhD Bridge Program, which received funding from the former Innovation through Institutional Integration (I³) activity.
 - Multi-institutional alliances such as LSAMP have been successful in encouraging participants to pursue and complete graduate degrees (Clewell, Cosentino de Cohen, Tsui, and Deterding, 2006).
 - Research I institutions, which receive the bulk of financial support from NSF, must be transformed into inclusive educators of STEM undergraduates and future STEM scientists. The NSF ADVANCE program has had success in achieving demonstrable institutional transformations (<http://www.nsf.gov/crssprgm/advance/index.jsp>).

Future Directions

The ongoing and future work of CEOSE is guided by Vannevar Bush's goal of a fully inclusive, fully diverse STEM workforce and the goal delineated in the 2009 NSF GRPA Report:

"If ability, and not the circumstances of family fortune, determines who shall receive higher education in science, then we shall be assured of constantly improving quality at every level of scientific activity." (Science-The Endless Frontier, 1945 report to the President)

"The goal of broadening participation is not only an issue of fairness and equal opportunity, but is the means of bringing diversity and intellectual breadth to the transformation of science itself. ... Cultivating a world-class, broadly inclusive science and engineering workforce and expanding the scientific literacy of all citizens are crucial to the future of science and democracy itself." (NSF GRPA Report, 2009).

More specifically, in the next reporting cycle, CEOSE plans to:

- Review the broadening participation efforts of NSF's Centers portfolio as well as the broadening participation data and strategic plans of NSF directorates.
- Continue engagement with Federal Liaisons for leveraging opportunities to coordinate and be more systemic in addressing diversity and equity issues in STEM.
- Continue CEOSE's emphasis on broaden participation accountability activities, including monitoring, assessment and evaluation.
- Explore and document the contributions of minority-serving institutions and programs in broadening participation to inform recommendations to NSF.
- Examine graduate admissions practices to inform recommendations for improved STEM graduate level workforce outcomes and for improved broadening participation of underrepresented groups in STEM graduate education and training.
- Explore the significance of financial wherewithal and student debt as factors influencing persistence to the doctoral degree in STEM fields.
- Investigate the potential uses of data-intensive scientific approaches and methods for better informing the Committee and its recommendations to NSF on the condition of underrepresented groups and identifying barriers to and potential strategies to enhance their access, retention, completion, and advancement, that is, pathways to meaningful careers and contributions to science and engineering.
- Explore with NSF and others about hosting a mini-symposium, or other similar broad expert discussions, focused on the condition in STEM of Hispanics and Hispanic-serving Institutions, examining HSI's institutional mechanisms, strategies, approaches and programs, as well as, their

significance and roles within U.S. higher education for broadening participation of Hispanics and other minority groups, in order to inform recommendations to NSF.

- Work with NSF to explore hosting a mini-symposium or other similar broad expert discussions on the science of broadening participation.

5. Recommendation for a Bold New NSF Initiative for Broadening Participation

NSF should be commended for its outstanding leadership in broadening participation in STEM throughout the government and throughout America's scientific community, working toward full inclusion of persons from underrepresented racial and ethnic minority groups (African Americans, Hispanics, and Native Americans), persons with disabilities, and women. Indeed, broadening STEM participation constitutes an important thrust across the Foundation. Yet the changing nature of STEM, challenges to U.S. competitiveness, the creative advantages of achieving workforce diversity, concerns about global leadership and domestic security, and the drive to realize America's democratic principles by achieving America's promise of equal opportunity for all call for more innovative and transformative intellectual work, engaging scholars from multiple disciplines, in order to yield satisfactory inclusion of all Americans in STEM education and in the STEM workforce.

To better address emerging challenges and opportunities and the limited progress being made in improving broadening participation in STEM, the Committee on Equal Opportunities in Science and Engineering recommends that NSF implement a coordinated initiative that would create Centers, similar in concept and scale to the NSF's Science and Technology Centers, dedicated to transforming U.S. educational institutions into inclusive STEM institutions. These transformations will come from recognizing, adapting, and expanding successful strategies, coupled with stringent analysis and widespread dissemination of results. NSF could immediately leverage the existing Centers model¹⁷ as a way to (a) invest major, long-term support and (b) mandate connections across multiple tiers and stakeholders. Dissemination of results by NSF as well as by the awardees of this new initiative will create a feedback loop whereby both successes and failures educate NSF and the broader STEM communities, allowing the scaling of and further improvements to proven broadening participation strategies. Only through this positive feedback mechanism will the goals of diversity, inclusion and parity in STEM be achieved.

Critical features of this initiative would include:

1. An emphasis on institutional transformation and systemic change to address challenges cited in this report (e.g., poor graduation rates, low grant participation rates, human capital needs in the federal and academic STEM workforce).
2. Development of novel, innovative analysis mechanisms that will provide for ready access to longitudinal data and allow for recognition and reporting of successful broadening participation efforts.
3. Identification of clear benchmarks for success in all aspects of broadening participation.
4. Support for translation, replication, and expansion of successful broadening participation strategies.

This initiative might include several multisite, geographically-based, national experiments of foundational and implementation research involving universities, schools, and communities. The ongoing research experiments would be inclusive of all underrepresented populations and would be designed to significantly advance broadening participation across all levels of schooling, resulting in sustainable pathways preK-20+.

We envision this initiative as including direct support for individuals (students, postdoctoral fellows, faculty, practitioners) as investigators in broadening participation initiatives. Through coupling dissemination of broadening participation efforts with catalyzing innovative adaptations of successful initiatives, NSF and the nation will significantly “move the needle” toward developing a strong, highly educated, and highly trained domestic STEM workforce that reflects and represents the U.S. population. Equally important will be high-risk and transformative research and training activities that shift the paradigm of broadening participation in global science. We seek game-changers to reach the coordinated coherence and collaboration needed for a seamless preK-20+ scope of broadening participation.

Interagency and private sector partnerships will also be key to accomplishing transformative, positive change in STEM inclusion across the nation. NSF currently assumes and should continue a leadership role in sharing best practices in broadening STEM participation with other federal agencies, welcoming substantive participation by federal agency representatives at all CEOSE meetings.

The “boldness” of this initiative rests in its focus on institutional transformation and systemic change in addition to basic research on broadening participation. The “boldness” comes from making a long-term commitment to sufficient resources to alter the current trajectory in STEM employment.

In sum, the nature of the economy has changed and is changing, and so have the demographics of our nation.¹⁸ Effective action must be taken now to ensure that the large and rapidly growing population subgroups are empowered to participate and contribute to scientific and technological advances. If not, our democratic society faces a grave economic, intellectual and scientific disadvantage in an increasingly globalized competition for talent and innovation. So in this report, in contrast to its past practice, CEOSE makes only one main recommendation:

NSF should implement a bold new initiative, focused on broadening participation of underrepresented groups in STEM that emphasizes institutional transformation and system change; collects and makes accessible longitudinal data; defines clear benchmarks for success; supports the translation, replication and expansion of successful broadening participation efforts; and provides significant financial support to individuals who represent the very broadened participation that we seek.

Please note that this table displays a subset of the overall Broadening Participation portfolio. This list comprises the standard set of programs that have been historically tracked as Broadening Participation for budget purposes.

¹ In FY 2013, new program names are proposed: Advancing Informal STEM Learning (AISL), for Informal Science Education (ISE); Research on Education and Learning (REAL), for Research & Evaluation on Education in S&E (REESE), including Research on Disabilities in Education (RDE) and Research on Gender in Science and Engineering (GSE); and Alliances for Graduate Education and the Profession (AGEP), for Alliances for Graduate Education and the Professoriate (AGPEP).

² Alliances for Graduate Education and the Profession (AGEP) Graduate Research Supplements is a new MPS program beginning in FY 2012.

³ The Ocean Sciences Postdoctoral Fellowship is a new program beginning in FY 2012.

⁴ Ocean Sciences Research Initiation Grants is a new program beginning in FY 2012.

⁵ Partnerships in Astronomy and Astrophysics Research Education (PAARE) replaces Research Partnerships for Diversity (RPD).

⁶ Pre-Engineering Education Collaboratives (PEEC) replaces Tribal College Pathways in ENG.

⁷ Funding for Research in Disabilities Education (RDE) and Research on Gender in Science and Engineering (GSE) is proposed to reside in the Research on Education and Learning (REAL) program (formerly Research & Evaluation on Education in S&E (REESE) in EHR).

Appendix Table 2 (Continued)
NSF Programs to Broaden Participation
FY 2014 Request to Congress

Group/Program	Amount Funding Captured	FY 2012 Actual	FY 2012 Enacted/ Annualized FY 2013 CR	FY 2014 Request	Change Over FY 2012 Enacted	
					Amount	Percent
Geographic Diversity Program			\$150.85	\$150.90	\$163.58	\$12.68 8.4%
EPSCoR	100%	150.85	150.90	163.58	12.68	8.4%
Total, NSF			\$911.90	\$888.69	\$962.62	\$73.93 8.3%

Totals may not add due to rounding.

¹ The CI-TEAM program terminated and has no funding commitments in FY 2014.

² Research on Gender in Science and Engineering (GSE) and Research in Disabilities Education (RDE) are components of the Research on Education and Learning (REAL) program in EHR.

³ In FY 2014, Opportunities to Enhance Diversity in the Geosciences (OEDG), Geoscience Education, and the Science, Technology, Engineering and Math Talent Expansion Program (STEP) are consolidated into the new NSF-wide program Catalyzing Advances in Undergraduate STEM Education (CAUSE). The combined program does not meet the criteria for inclusion.

⁴ The Excellence Awards in Science and Engineering (EASE) program is comprised of both Presidential Awards for Excellence in Science, Math and Engineering Mentoring (PAESMEM) and Presidential Awards for Excellence in Mathematics and Science Teaching (PAEMST).

⁵ The COSEE program terminates in FY 2014.

⁶ NSF Scholarships in Science, Technology, Engineering, and Mathematics (S-STEM) and Innovative Technology Experiences for Students and Teachers (ITEST) are HIB Visa funded programs.

⁷ In FY 2014, Computing Education for the 21st Century (CE21) and Math Science Partnership (MSP) are merged into Science, Technology, Engineering and Mathematics and Computing Partnerships (STEM-C Partnerships).

Appendix Table 3
CEOSE 2009-2010 Recommendations and NSF Outcomes

Recommendation	Outcome
Augment support to HBCU-UP, LSAMP, and TCUP.	Co-funding from R&RAs has augmented HBCU-UP, LSAMP and TCUP support. For example, in FY 2011 and/or FY 2012, EPSCoR co-funded HBCU-UP, TCUP, and LSAMP awards (as well as awards in the CREST program).
Establish an HSI Program.	Although a separate HSI Program has not been established, a Dear Colleague Letter, NSF 12-081, <i>Announcement of Efforts to Increase Hispanic Participation in STEM Fields</i> , was issued.
Increase MSI/BP funding across the Foundation.	The NSF investment in programs to broaden participation, based on the summary table in annual budget request, increased from \$717.61M in 2009 to \$866.39M in FY 2012.
Provide better guidance to COVs on how to assess broadening participation.	Broadening participation is discussed during COV training of the COV monitors and more relevant diversity documentation is provided during COV orientation of individual programs. The template that CEOSE developed for the Directorate's BP presentation has contributed to the Foundation's response to this recommendation.
Develop a science of broadening participation program.	SBE released the <i>Dear Colleague Letter: Stimulating Research Related to the Science of Broadening Participation</i> (NSF 11-023 and NSF 12-037).
Commission the National Academies to conduct a study on the Science of Broadening Participation.	NSF was already supporting the Academy's study of the underrepresentation challenge of minority participation in science and technology. The report, <i>Expanding Underrepresented Minority Participation: America's Science and Technology Talent at the Crossroads</i> , was released in 2011.
Initiate collaboration among CISE, SBE and OCI on developments regarding the social aspects of computing.	In December 2012, NSF issued a relevant Dear Colleague Letter: <i>SaTC EAGERs Enabling New Collaboration Between Computer and Social Scientists</i> (NSF 13-037).
Provide additional resources to NCSES for data and analyses requested by CEOSE	OIIA has an expert who works closely with NCSES and HRM to respond directly to CEOSE's requests for data and BP-related analyses.

Appendix Table 3 (Continued)
CEOSE 2009-2010 Recommendations and NSF Outcomes

Recommendation	Outcome
Establish accountability goals and metrics for broadening participation in science and engineering.	BP programs that are also in the education and workforce development portfolio established program metrics and several programs have program-specific annual data collection systems. Most recently, CLB identified annual performance metrics and milestones.
Facilitate collaborative efforts to broaden participation with other agencies.	CEOSE Federal Liaisons continue to be actively engaged in CEOSE meetings. Interagency sharing of best practices is occurring with several interagency working groups, formally and informally.
Address the 10 recommendations from the Mini-Symposium on Women of Color in STEM	<p>The ADVANCE Program has taken major responsibility for addressing these recommendations with some support from HBCU-UP. Specific projects include:</p> <ul style="list-style-type: none"> -Creating a Mentoring-Focused Web Community for Women of Color in STEM -Women of Color in STEM Disciplines: Building on Success -STEM Women of Color Conclave -Howard University ADVANCE-IT: Women of Color Faculty in STEM as Change Agents. <p>Additionally, NSF addresses issues of women of color through the Career-Life Balance Initiative. Further, at least eight publications have resulted from the Mini-Symposium.</p>

NATIONAL SCIENCE FOUNDATION
COMMITTEE ON EQUAL OPPORTUNITIES IN SCIENCE AND ENGINEERING (CEOSE)
MEMBERSHIP 2011 – 2012

Dr. Cecilia A. Conrad *

CEOSE Chair
Vice President, MacArthur Fellows
Program
MacArthur Foundation
Chicago, IL 60603
Chair Term: 06/01/2012-01/31/2014
Co-Chair Term: 07/16/2011-05/31/2012
Terms: 02/01/2010-01/31/2013;
02/01/2013-01/31/2014

Dr. Alexander Ramirez *

CEOSE CoChair
Former Executive Director of Information
Technology Initiatives
HACU National Headquarters
San Antonio, TX 78229
Co-Chair Term: 06/01/2012-05/31/2014
Terms: 02/01/2009-01/31/2012;
02/01/2012-01/31/2015

Ms. Sandra BegayCampbell

Principal Member of the Technical Staff
Sandia National Laboratories
Albuquerque, NM 87123
1st Co-Chair Term: 06/29/2010-06/29/2011
Terms: 06/30/2005-06/29/2008;
06/30/2008-06/29/2011

Dr. Karl Booksh *

Professor of Chemistry
Department of Chemistry
University of Delaware
Newark, DE 19716
Term: 09/09/2011-09/08/2014

Dr. Gregory Cajete *

Director of Native American Studies
University of New Mexico
Albuquerque, NM 87131
Term: 06/01/2012-05/31/2015

Dr. Joseph Francisco

Associate Dean of Research and Graduate
Education, William E. Moore Distinguished
Professor of Earth and Atmospheric Sciences
and Chemistry
Purdue University
West Lafayette, IN 47907
Terms: 04/01/2006-03/31/2009; 01/01/2009-
03/31/2012

Dr. Evelyn Hammonds *

Barbara Gutmann Rosenkrantz, Professor of the History
of Science and Professor of African and African
American Studies
Harvard University
Cambridge, MA 02138
Terms: 02/01/2009-01/31/2012; 2/01/2012 -
01/31/2015

Dr. Ira Harkavy *

Associate Vice President and Founding Director
Netter Center for Community Partnerships
University of Pennsylvania
Philadelphia, PA 19104
Term: 06/01/2012-05/31/2015

Dr. Charles Isbell *

Professor and Associate Dean
Georgia Institute of Technology
Atlanta, GA 30332
Term: 06/01/2012-05/31/2015

Dr. Robert Jones *

President
University at Albany
Albany, NY 12222
Term: 06/01/2012-05/31/2015

Dr. Richard E. Ladner

Boeing Professor Department of Computer Science and
Engineering
University of Washington
Seattle, WA 98195
Chair Term: 06/01/2011-03/31/2012
2nd Co-Chair Term: 06/29/2010-05/31/2011
Term: 04/04/2006-03/31/2009; 04/01/2009-
03/31/2012

Dr. Marigold Linton

Director of American Indian Outreach
University of Kansas
Lawrence, KS 66045
Terms: 10/01/2006-09/30/2009; 10/01/2009-
09/30/2012

*2013 Current CEOSE Members

(as of July, 2013)

NATIONAL SCIENCE FOUNDATION
COMMITTEE ON EQUAL OPPORTUNITIES IN SCIENCE AND ENGINEERING (CEOSE)
MEMBERSHIP 2011 – 2012 (cont'd)

Dr. George Middendorf *

Graduate Professor
Department of Biology
Howard University
Washington, DC 20059
Terms: 02/01/2010-01/31/2013; 02/01/2013 -
01/31/2016

Ms. Lueny Morell

Program Director of Strategic Innovation and
Research Services Office
Hewlett Packard Laboratories
Aguadilla, PR 00918
Term: 02/01/2010-11/15/2012

Dr. Maria (Mia) Ong *

Principal Investigator
Education Research Collaborative
TERC
Cambridge, MA 02140
Terms: 02/01/2008-01/31/2011;
02/01/2011-01/31/2014

Dr. Eugenia Paulus

Professor of Chemistry
Department of Chemistry
North Hennepin Community College
Brooklyn Park, MN 55445
Term: 02/01/2010-01/31/2013

Dr. Muriel Poston

Dean of the Faculty
Skidmore College
Saratoga Springs, NY 12866
Chair Term: 06/29/2011-07/16/2011
Terms: 04/01/2006-03/31/2009; 04/01/2009-
07/16/2011

Dr. Ainissa Ramirez

Science Evangelist and Lecturer
Yale University
New Haven, CT 06520
Term: 09/09/2011-09/08/2012

Dr. Wendy Raymond *

Professor, Biology Associate Dean for Institutional
Diversity
Williams College
Williamstown, MA 01267
Terms: 02/01/2010-01/31/2013;
02/01/2013-01/31/2016

Dr. Keivan Gaudalupe Stassun *

Professor of Physics and Astronomy
Department of Physics & Astronomy
Vanderbilt University
Nashville, TN 37235
Term: 09/09/2011-09/08/2014

Dr. Joseph Whittaker *

Dean and Professor of School of Computer,
Mathematical & Natural Sciences
Morgan State University
Baltimore, MD 21251
Term: 09/09/2011-09/08/2014
