3 **SEC. 2. FINDINGS.**

4 Congress finds the following:

5 (1) Women in the United States and around
 6 the world are the linchpin of families and commu-
 7 nities and are often the first to feel the immediate
 8 and adverse effects of social, environmental, and eco-
 9 nomic stresses on their families and communities.

10 (2) The United Nations has recognized, as one
 11 of the central organizing principles for its work, that
 12 “no enduring solution to society’s most threatening
 13 social, economic and political problems can be found
 14 without the full participation, and the full empower-
 15 ment, of the world’s women”.

16 (3) The United Nations Development Pro-
 17 gramme 2013 Human Development Report has
 18 found that the number of people living in extreme

1 poverty could increase by up to 3,000,000,000 by
2 2050 unless environmental disasters are averted by
3 coordinated global action.

4 (4) Climate change is already forcing vulnerable
5 communities in developing countries to face unprece-
6 dented climate stress, including water scarcity and
7 drought, as well as severe weather events and floods,
8 which can lead to reduced agricultural productivity,
9 food insecurity, and increased disease.

10 (5) Climate change exacerbates issues of scar-
11 city and lack of accessibility to primary natural re-
12 sources, forest resources, and arable land for food
13 production, thereby contributing to increased conflict
14 and instability, as well as the workload and stresses
15 on women farmers, who are estimated to produce 60
16 to 80 percent of the food in most developing coun-
17 tries.

18 (6) Women will disproportionately face harmful
19 impacts from climate change, particularly in poor
20 and developing nations where women regularly as-
21 sume increased responsibility for growing the fam-
22 ily's food and collecting water, fuel, and other re-
23 sources.

24 (7) Epidemics, such as malaria and zika, are
25 expected to worsen and spread due to variations in

1 climate, putting women (especially pregnant mothers
2 and women who hope to become pregnant) and chil-
3 dren without access to prevention and medical serv-
4 ices at risk.

5 (8) The direct and indirect effects of climate
6 change have a disproportionate impact on
7 marginalized women such as refugee and displaced
8 persons, religious or ethnic minorities, adolescent
9 girls, and women and girls with disabilities and
10 those who are living with HIV.

11 (9) Conflict has a disproportionate impact on
12 the most vulnerable populations including women,
13 and is fueled in the world's poorest regions by
14 harsher climate, leading to migration, refugee crises,
15 and conflicts over scarce natural resources including
16 land and water.

17 (10) Displaced, refugee, and stateless women
18 and girls face extreme violence and threats, includ-
19 ing—

20 (A) being forced to exchange sex for food
21 and humanitarian supplies;

22 (B) being at increased risk of rape, sexual
23 exploitation and abuse; and

1 (C) being at increased risk for HIV, STIs,
2 unplanned pregnancy, and poor reproductive
3 health.

4 (11) It is predicted that climate change will
5 lead to increasing frequency and intensity of extreme
6 weather conditions, precipitating the occurrence of
7 natural disasters around the globe.

8 (12) The relocation and death of women, and
9 especially mothers, as a result of climate-related dis-
10 asters often has devastating impacts on social sup-
11 port networks, family ties, and the coping capacity
12 of families and communities.

13 (13) The ability of women to adapt to climate
14 change is constrained by a lack of economic free-
15 doms, property and inheritance rights, as well as ac-
16 cess to financial resources, education, family plan-
17 ning and reproductive health, and new tools, equip-
18 ment, and technology.

19 (14) Despite a unique capacity and knowledge
20 to promote and provide for adaptation to climate
21 change, women often have insufficient resources to
22 undertake such adaptation.

23 (15) Women are shown to have a multiplier ef-
24 fect by using their income and resources, when given
25 the necessary tools, to increase the well-being of

1 their children and families, and thus play a critical
2 role in reducing food insecurity, poverty, and socio-
3 economic effects of climate change.

4 (16) Women are often underrepresented in the
5 development and formulation of policy regarding
6 mitigation and adaptation to climate change, even
7 though they are often in the best position to provide
8 and consult on adaptive strategies.
