**DEPARTMENTS OF VETERANS AFFAIRS AND
HOUSING AND URBAN DEVELOPMENT AND
INDEPENDENT AGENCIES APPROPRIATIONS
FOR FISCAL YEAR 2001**

WEDNESDAY, MARCH 1, 2000

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 9:36 a.m., in room SD-138, Dirksen Senate Office Building, Christopher S. Bond (chairman) presiding.
Present: Senators Bond, Stevens, Mikulski, and Lautenberg.

FEDERAL EMERGENCY MANAGEMENT AGENCY

STATEMENT OF HON. JAMES LEE WITT, DIRECTOR

ACCOMPANIED BY GARY JOHNSON, CHIEF FINANCIAL OFFICER

OPENING STATEMENT OF SENATOR CHRISTOPHER S. BOND

Senator BOND. Good morning. The subcommittee will come to order. This is the first hearing of the VA-HUD subcommittee for the fiscal year 2001 budget. This morning we will hear testimony on the fiscal year 2001 budget request for the Federal Emergency Management Agency.

We welcome FEMA Director James Lee Witt and Gary Johnson, FEMA's Chief Financial Officer. Director Witt, we are very pleased that you brought your wife Lea-Ellen along today. We welcome her and really appreciate all the sacrifices and the dedicated effort she has made as you have conducted your duties at FEMA.

Mrs. Witt, I know the very active role that you have played in many of the Nation's disasters, helping out after the Northridge earthquake, the Oklahoma City bombing, and the tornado-related disaster in Oklahoma last year. As one who has visited an awful lot of disaster sites in my prior incarnation as a governor, I know how difficult and challenging it is to stay on the ground and help the people who are most in need, and your work and your role has been an inspiration to all of us. As a result, we will try not to be too rough on the Director today.

The President's budget proposal for the VA-HUD subcommittee totals about \$84 billion in budget authority, an increase of almost \$6 billion above the current year. While it appears that the caps imposed by the 1997 Budget Act would impose cuts that are too draconian and we must revisit the numbers, I warn all the agencies involved, do not pop any corks on any bottles yet.

There is a very strong commitment, which I share, to maintaining budget discipline, preserving the social security surplus for social security reform, and also taking care of absolutely essential items that we cannot control, which are going to increase, things like VA medical care and things like section 8.

FEMA's budget request totals \$971 million in on-budget funds, an increase of \$98 million over the current year, and an additional \$2.6 billion in disaster relief contingency funds. That is a sizable increase which I fear we will find it difficult to accommodate.

FEMA proposes some new programs and some significant programmatic increases. Included in the budget is a new \$25 million grant program for equipment for firefighters in distressed or needy communities. We have seen little detail on the program and I have to tell you we are concerned about initiating a new program under the tight budget constraints that we face.

FEMA is also requesting almost \$24 million to begin the process of relocating its headquarters. This is an initiative that is aimed at improving security and enhancing FEMA's capacity to conduct disaster operations. I need to understand the costs better and the needs associated with the request.

In addition, the budget calls for an increase of \$30 million for the emergency food and shelter program, 27 percent over fiscal year 2000. While the program seems to be functioning effectively and meeting a tremendous need for food and shelter, an increase of this magnitude again will be difficult to accommodate.

With respect to the disaster relief fund, it appears there is plenty of money currently in the FEMA bank to manage disaster costs for the rest of this year so long as we do not have any truly catastrophic events this year. Including contingency funds, FEMA estimates approximately \$2.4 billion currently unobligated in the disaster relief fund. While there have been some really awful disasters this year, such as the tornadoes in Georgia and the avalanches in Alaska, the scale of disaster activity has been far less than usual so far this year, and we can only hope and pray that our luck holds for the rest of the year.

FEMA's budget proposes two new set-asides within the disaster relief fund which would set new precedents of using the fund for other activities: \$50 million for the repetitive loss initiative aimed at eliminating those properties with significant repeat claims posing the biggest drain on the flood insurance fund; and \$30 million for the flood map modernization fund to update and digitize FEMA flood maps, in addition to a new fee proposal projected to generate about \$100 million in revenues next year.

While I would certainly acknowledge the need for funding in both of these areas, there are strong concerns first about earmarking disaster relief funds for activities not specifically authorized in the Stafford Act.

In addition to these fiscal year 2001 budget proposals, the administration has proposed a fiscal year 2000 supplemental request of \$77 million for additional buyouts in Hurricane Floyd-affected States. These funds would be in addition to the \$215 million provided already for buyouts in Hurricane Floyd States. Again, I express my concern and skepticism about the proposal since as we understand it none of the \$215 million has been allocated to date

and there does not seem to be any basis as far as we can tell for requesting another \$77 million.

We have asked the Inspector General and the IG has been looking at estimates of eligible properties for buyouts, and preliminary information that we have received is that eligible properties will be just a small percentage of the original estimate and that buying out eligible properties in Hurricane Floyd States likely will cost less than the \$215 million already appropriated. In addition, much of North Carolina's projected costs appear inflated and inconsistent with the historic costs of buyouts in other States.

Also, I am worried that this program is not authorized. As we have discussed before, there has been no debate on what the appropriate Federal role should be in buyouts of substantially damaged properties, and I am not confident yet that a system has been set up to ensure that the most needy individuals and the most at-risk properties will be assisted. I will have a number of questions on that later on.

Turning to Stafford Act issues, I continue to have problems about the escalation of disaster relief costs. I was cast in the unfamiliar role of a skunk at a garden party a few weeks ago when the Environment and Public Works Committee marked up S. 1691, the disaster mitigation bill. There were many feel-good thoughts and lots of talk about how we need to spend more money, and I would assure you that I understand investing in certain projects could lessen future disaster losses. It is a good policy which I support.

I really fail to see the attention and commitment needed to tightening up the Stafford Act to provide better accountability and to assure that we are spending money only where it is most needed. Our guess is at this point that the bill in its current form would increase the cost of the disaster relief funds without providing savings in the near term and, as you and I know, in our part of the world, Mr. Director, as they say, that dog won't hunt.

As you know, the Inspector General made recommendations to improve the bill which would result in savings. I will be looking to amend the bill when it gets to the floor to improve the integrity and accountability of the disaster relief fund and to underscore the Stafford Act principle that Federal disaster aid is to be reserved for those events which exceed State and local capacity.

If the bill does not result in near-term cost savings or at least no net cost to the disaster relief fund, I would not be able to support it and would urge my colleagues not to as well.

Mr. Director, you have done much administratively to clean up disaster relief programs over the past several years. I congratulate and commend you on your recent efforts to develop a public buildings insurance rule. It is tremendously important to improve accountability for disaster costs and I urge you to stay on course to do all you can to finalize the rule before the end of the year.

But as we both know, there is only so much that can be done without changes in the law. We have an opportunity to legislate some much-needed improvements to the Stafford Act and implement some of the recommendations made over the years by the GAO and the IG. We look forward to your continued help and cooperation in those efforts.

Turning to another critical issue, we continue to worry about the intergovernmental antiterrorism/counterterrorism program. There does not appear to be a strategic approach administration-wide on this issue, and the roles of FEMA, DOD, and the Department of Justice remain confusing, at least to me and I am afraid to a lot of other people as well.

We are, I think justly, committing tremendous resources in this area. A total of about \$10 billion in the current year is being expended, up from \$6.5 billion in fiscal year 1998, and I know there are additional increases sought for fiscal year 2001.

According to September 1999 GAO testimony:

“A government-wide strategy that includes a defined end-state and priorities is needed, along with soundly established program requirements based on assessments of the threat and risk of terrorist attack. In addition, a comprehensive inventory of existing Federal, State, and local capabilities that could be leveraged or built upon is warranted before adding or expanding Federal response assets. Without these fundamental program elements, there can be little or no assurance that the Nation is focusing its investments in the right programs and in the right amounts and that programs are efficiently and effectively designed and implemented.”

As you well know, Senators Stevens, Mikulski, Byrd and I last year asked the GAO to conduct some additional work on this issue, with special attention to first responder training issues and a look at how other countries organize their antiterrorism efforts. We are anticipating some results from the GAO by the end of April.

While FEMA has only a small piece of the intergovernmental antiterrorism effort, it is a very important one. FEMA has strong ties to State emergency responders and the first responder community which will be a critical link in this program, which I think will warrant FEMA playing a very important lead role.

Director Witt, I am very pleased to learn that you brought in our old friend John Magaw to head up FEMA's antiterrorism efforts, but I am really worried that the program seems to have been downgraded at the Department of Justice and the new DOJ National Domestic Preparedness Office seems to us to be floundering. We would like your advice on how to improve this program to ensure we are investing our resources in the best possible way.

That concludes my opening statement. Senator Mikulski, are you ready?

STATEMENT OF SENATOR BARBARA A. MIKULSKI

Senator MIKULSKI. I sure am. I was listening to every word. Just we are going so many places today.

Senator BOND. Yes, it is one of those days.

Senator MIKULSKI. Good morning, Mr. Chairman.

Senator BOND. Good morning.

Senator MIKULSKI. First of all, I want to welcome our FEMA Director James Lee Witt and his Chief Financial Officer Gary Johnson and the entire FEMA staff. Mr. Witt, you are the longest serving Director in FEMA history, and this morning marks the eighth time that you have come before this subcommittee to discuss your budget request. I would like to thank you for your service to the Nation because I truly believe under your leadership FEMA has reformed itself and went through a transition from a cold war agency with an often confusing domestic policy to where we are now.

But we know behind every great man is a surprised mother-in-law. I really got that joke from Connie Morella.

But I really want to—I think, one, not only your management ability, but the way that you responded to America's disasters, that being on the scene, to be able to work with the governor, the local FEMA directors. So we are very grateful. You truly were the 911 for America's disaster relief.

But in all sincerity, all those times when you had to leave home, be away, often during holidays, for extensive periods of times, we know that you had the support of a loving family. So on behalf of the Senate, I would like to thank Lea-Ellen Witt for her service to the Nation, because had it not been for her support I do not think you would have been able to support the United States of America in its time of need. So I would really like to give you a round of applause.

I would hope that as we go through this appropriations we would look at how to institutionalize the reforms that have been made on a bipartisan basis working with you and President Bill Clinton. When you came—well, actually, after Hurricane Andrew when FEMA's response was so disastrous and our President George Bush sent in Andrew Carr, his Secretary of Transportation, because of his skilled management ability, I said to Bill Clinton when he was running: You know, I do not ask for promises, but I am going to ask for one; I need a good FEMA director; we need to reform FEMA and we need to focus on the three R's. We need to make sure that the Federal Government in every State is ready, the readiness training; that we need to be able to respond when a disaster hits; and also we need to rehabilitate.

There have been lessons learned in all of those areas, and I hope that we are now on the path of truly institutionalizing those reforms. We have gone from rehab to really pre-disaster mitigation. We want to do prevention, and I am going to commend you for that role.

I know Senator Bond has concerns about how this is being implemented, and I share some of those concerns. So what we really need to do is make sure that we have very clear guidelines and even, if necessary, regulations on how we can do the prevention without creating a whole new program that ends up squandering resources. We need clear lines to be able to do that.

The other I would hope that is also part of this, we take a look at the antiterrorism. I am concerned that the hard work—I am concerned that the hard work of FEMA and other Federal agencies may be squandered because of the absence of a coordinated Federal response program. I do not want to go into this here in this type of forum, but I believe we have too much talk, too much money being thrown around, and no clear lines of command and clear roles, command, control, and clear agency authority.

Our first responders in an event of any type of attack on the United States will be both FEMA and our local fire department and our ER's. So I want to be sure that we have this, and we look forward to working with you.

I understand you have brought out of retirement John Magaw, the former Director of the Secret Service and ATF. I think this is great. I think this heartens you, too, Senator Bond, that we really

have a plan. I think HHS has been inept in the way it has planned for terrorism. We have left a lot at the FBI, we have given you things, and then there is HHS. They are going to get real cranky when I say this, but they are wandering in the wilderness with no clear triggers about what goes into operation at one standpoint. So maybe we could get them, everybody between the same white lines.

We also want to look at the emergency food and shelter grants. I know in my own home State it has meant a lot to poor people, many of whom have been facing horrendous situations. The new economy has not been a good economy for everybody. So we look forward to hearing more about this \$30 million increase and where to do it.

So what we are looking for is if we put the right money in the right place, but also institutionalize our reforms, because we are the only one-stop shop on FEMA. It is scattered through a lot of committees and so on. So we are your one-stop shop. But you have been our one-stop shop in disaster relief.

So we look forward to your testimony and always look forward to working with you, and in whatever you choose to do in what lies ahead I say, God bless and godspeed to both you and Lea-Ellen.

Thank you.

Senator BOND. Thank you very much, Senator Mikulski. As always, you are very candid and on point with your comments.

We are pleased to be joined by Senator Stevens.

Senator STEVENS. He was here first.

Senator BOND. All right. Actually, I was going to go back and forth. But at the chairman's direction, it is now my pleasure to call on Senator Lautenberg.

STATEMENT OF SENATOR FRANK R. LAUTENBERG

Senator LAUTENBERG. Thanks, Mr. Chairman.

Mr. Witt, it is a pleasure to see you in a non-disaster environment.

Senator BOND. The best way.

Senator LAUTENBERG. As I listen to the compliments given from my colleagues here, I thought that maybe you needed a song that "disasters become you." But I did not really think that that would be appropriate.

But I do want to say, Senator Mikulski noted your length of service here, and excellent service. I think it is fair to say that each one of us at this table has seen you in a circumstance that is not the most pleasant. But nevertheless you have been, as we say, Johnny on the spot. You have been there, you have gotten there quickly, you have handled yourself wonderfully in the public eye, as well as doing your level best to alleviate the problems and the suffering that people have endured as a result of natural disasters.

So I am delighted to see you here today and hear the comments of my colleagues on both sides of the political aisle who share an admiration for the agency and yourself as well.

You and I are now in the next graduating class out of here, and I am sure that you feel, as I do, satisfied that you have had an opportunity to do something significant and also with some nostalgia about leaving to go on to more peaceful lives, each of us.

We were last together under very unfortunate circumstances. Last September, Hurricane Floyd had cut a swath through my State and the heavy rainfall caused rivers, namely the Passaic and the Green Brook, to overflow, resulting in millions of dollars of devastation. We flew over Bound Brook in a helicopter, I remember, and viewed the devastation along the Green Brook. We toured the Borough of Lodi together, and witnessed the breakdown of our telephone system for several days, which was very difficult.

We visited with some of the besieged families and you pledged the full resources of FEMA to assist my constituents. I am pleased that in your budget request you ask for funds to complete the buyouts of homeowners in flood plains who want to relocate to higher ground.

I noted also in your comments that you view that prevention ought to be a significant part of the FEMA agenda. I just got back from a trip to Antarctica and the South Pole, and I am concerned about what the future may bring us in terms of weather disturbances. The ice melt is something that I think is alarming. We are still doing a lot of research before coming up with specific conclusions, but the fact is that we know from the early signs in this year that we might be seeing some very turbulent weather around the country.

So as I look at you and your agency, I can think of few that have such a direct face to face relationship with the public.

I would hope, colleagues, that along the way that communities and States will rethink their policies on building permits, on engaging people in debates about allowing them to build in places that bring tragedy with them. I think it is important that an agency like FEMA, where there is so much experience, is a significant part of that interface.

People who are flooded out are desperate and need to rebuild their lives. I had an incident in New Jersey where I went to a flooded area and met a woman whose husband was in the hospital, four kids, disaster all over the place. We entered on the second floor, which was filled with debris from the flooding.

She had just taken out flood insurance weeks earlier. A year later I met her, and I asked her where she moved. Oh, she said, we rebuilt in the same place. So I said: Why would you do that? She said: Because we could not find anything else for the price that we were able to pay. What we did is we put in a 16-foot foundation, so now our first floor is where our second floor used to be; and it is a few steps up, but it is something that we can afford.

So it is not simply just a question of covering people with insurance and saying go ahead and find a different place.

So I say that you have done an outstanding job for New Jersey and for the country, and we need to make sure that you have the means to continue to do the job when disaster strikes. My State just experienced another tragedy. As you may know, on January 19 there was a terrible fire in a principal university in our State, Seton Hall University in South Orange, New Jersey. This fire killed 3 freshmen and injured 54 students, 2 firefighters, and 2 police officers.

The dormitory was equipped with smoke detectors, but was not required to have a fire sprinkler system. Since FEMA oversees the

U.S. Fire Administration—and we are pleased to see that they sort of have been resurrected—the agency that is charged with working to reduce life and economic loss due to fire, at the appropriate time in this hearing I would like to ask you a few questions about the Fire Administration’s role in helping our learning institutions ensure that student housing is safe.

I thank you, Mr. Chairman, and look forward to hearing from the Director.

Senator BOND. Thank you very much, Senator Lautenberg.
Chairman Stevens.

STATEMENT OF SENATOR TED STEVENS

Senator STEVENS. Well, thank you very much.

Mr. Witt, James Lee if I can get personal, and Lea-Ellen, it is nice to see you here. I do not like the sounds that I have just heard, though, that indicate that people are ready to see you leave. I am working on a bill now that converts your office to one of those that is a 15-year term. No, I am serious. I think disasters are coming our way so often, experience is necessary and we ought to arrange something that gives you a little bit of financial incentive to stay another 7 years and get this thing really put together right.

You know, I am not sure the committee knows, our friendship started when you came up to the Miller’s Reach fire. People who live in the wilderness were able to get some assistance to live in town, but they wanted to live in their own places and rebuild them themselves, and with common sense you modified those regulations and they actually rebuilt their own houses and saved the Government money and had the lifestyle they wanted.

And we had the Kenai River flood, and now we have had I think the worst avalanches that our State has ever seen in one year, a train wreck. My own little town was isolated for several days, shut off from food and fuel and transportation. We are the most disaster-prone State in the country. Most people do not realize that.

But you have probably visited our State more than you want. But the one time you wanted to come up and go fishing with us, you got there and you had a disaster somewhere else and had to leave. We have still got the latchkey out there for you and Lea-Ellen whenever you want to come back and finish that fishing trip.

But I am really serious. I think you are getting to the point where you are modifying some of these things so that we are into prevention rather than disaster relief, disaster repair, and what Senator Lautenberg has mentioned about protecting the flood plain. I think that the provisions that allow people—that we are going to deal with, to allow people to sell their homes and move out of the flood plain, make a lot of sense. I hope that you will not mind if I try to put that into avalanche country, too. You know, there is no lesson in the second avalanche any more than the second flood. I do think that we have got to get sensible about moving some of these areas out of the disaster zones.

What you have done I think is given us the ability, I hope, in the future to limit some of the cost to the taxpayers by virtue of prudence and preparation for disasters.

I want to talk to you some more about trying to build into some of the public facilities the ability to take care of persons that are

suffering from disasters. When we look at the civil air fleet, we pay those who operate the civil airlines to put in modifications that would be required if we ever have to use them for troop carriers, the civil air reserve fleet.

There is no reason why we cannot find some way to pay some of these people to modify their church basements or their school basements or their schools so that they can take care of these people that come in, instead of having them live the way they do when they have to seek refuge from a disaster, to have some areas in every part of the country prepared for that.

I really believe that you are on the right course, and on a bipartisan basis we ought to not only thank you, but sort of say, what do you need to stay around a little longer, because I think you have got a good team and there are some things that we have to do to make changes that your experience would tell us whether they are right or wrong.

I do not remember us going against your advice, James Lee, and that is a real significant achievement. I also appreciate the fact you have been totally bipartisan in your operation. Disasters should not have any political consideration at all, and you have carried through in just an absolute way. I have followed you around the country in many places, as you know, to see how we have recovered from some of these disasters.

We had the country's worst disaster, I think, in recent history in the 1964 earthquake. You were not around there then and we had a tough time, but the laws have changed a lot since then and I think that we may need to round them out a little bit more to make sure that you have the flexibility of dealing with these things so that you can save money and prevent having to pay the same family twice for recovering from the same type of disaster. We ought to have some incentives to avoid that.

But I am really serious. I am here to tell you that I think Alaskans, as all other residents of this country, are indebted to you and your wife for you have done. You have been a team and you have got a good team around you. I too applaud you for getting back into Government service the former head of the Secret Service, and there is others out there.

I think we ought to give you the opportunity to waive some of the provisions of the retirement law and give some of those people that do have a lot of experience to get on board, because if we are right, if we are right in our predictions that we are going to be subject to some of these attacks from some of these chemical and biological weapons in the future, yours is the agency, along with the National Guard, that is going to face the brunt of those and I think we ought to be prepared.

So I do thank you.

Senator LAUTENBERG. I second the motion, Mr. Chairman.

Senator STEVENS. I think we ought to find some way to do this, and I will have to talk to you privately. Lea-Ellen may have another plan in mind for you, so we will have to tread lightly here.

But the concept of having something that goes beyond, someone that goes beyond the possible end of an administration and really is in a position to put in motion long-term solutions to these dis-

aster problems I think is one we have to explore very thoroughly in this Congress.

Thank you, Mr. Chairman.

Senator LAUTENBERG. With that, you do not have to say anything, Mr. Witt.

Senator BOND. Thank you, Mr. Chairman.

That is a real set-up. You really want to go ahead and say anything, or do you just want to quit with that?

We were supposed to have a vote at 10 o'clock, but, knowing that things never work exactly as they are scheduled, we will continue now and invite you to give your testimony.

STATEMENT OF JAMES LEE WITT

Mr. WITT. Thank you, Mr. Chairman, Senator Mikulski, Senator Lautenberg. Thank you for your accolades and your comments and your support. I want to thank the members of this subcommittee for the support that you have given FEMA's programs and for all the time that the members and the staff have provided in reviewing our programs. With your continued assistance in the fiscal year 2001 budget, we hope to institutionalize many of the things that we have been working so hard on to this point.

This morning I am accompanied by many of the senior officials from FEMA including, of course, Gary Johnson, who is sitting to my right. Gary deserves much of the credit for putting FEMA's financial house in order. His hard work and dedication, and the hard work of his staff have truly straightened FEMA's financial records out.

Last year, for the very first time at FEMA, the fiscal year 1998 consolidated financial statements were given a clean bill. Just yesterday I was pleased to find out that the IG gave us an unqualified opinion on the 1999 financial statements as well. We will provide this accountability report to you.

I also want to take the opportunity to present to you John Magaw and thank him publicly for coming into FEMA and taking on the challenges of the antiterrorism program. He is a great man. He has got a tremendous challenge before him, but I know he is capable of meeting that challenge. He is well respected throughout the country by law enforcement, the fire services, and the other Federal agencies. We are very pleased to have him.

Senator BOND. Mr. Director, excuse me. We have had our summons. We want you to continue. Senator Mikulski will stay here and I will be back as quickly as I can. We will see if I can do the running through the airport thing. If you do not mind, I have reviewed and will continue to review your statement. Excuse me.

Mr. WITT. Thank you.

As many of you here know, today most likely could be my very last budget appearance before you—but after what Senator Stevens said, I do not know.

I do want to reflect back very briefly on my career at FEMA and what FEMA should strive for in the future, I keep coming back to the principle of responsibility. Today I hope we can talk about responsibility, not only responsibility in the fiscal year 2001 budget, but far beyond that.

I want to tell you how important this budget is for FEMA's future and for the future of our partners, the States, the local governments, and fire services, and all those people out there that are our partners that continue to serve communities on the front line.

The fiscal year 2001 budget and other related legislative initiatives continue to move down the path of success. I ask your support during this next year as we try to institutionalize reforms that underscore responsibility. Before leaving today, I also want to thank the subcommittee staff members that have worked so diligently with us and have been very committed to doing the best that we can for the country and for the agency. We do not always agree on everything, but I think in the end there have always been good and positive outcomes.

So I want to thank Carrie, Jonathan, and Paul for their very dedicated work with Mike Malone and the Congressional Affairs staff.

I also thank Senator Mikulski for the guidance she has given me over the last 7 years. We are here to answer your questions and would be happy to start any time you are ready.

[The statement follows:]

PREPARED STATEMENT OF JAMES L. WITT

Good Morning Mr. Chairman, Senator Mikulski, and other Members of the Subcommittee. I appreciate the opportunity to appear before the Subcommittee today to present our budget proposal for fiscal year 2001.

I want to thank the Members of the Subcommittee for their support of FEMA's programs and for all the time that the Members and staff have provided in reviewing our programs. Without your guidance, leadership and assistance, FEMA would not have been able to accomplish all that we have these past seven years. With your continued assistance on the fiscal year 2001 budget, we should be able to institutionalize many of the things that we have been working on to this point.

This morning I am accompanied by many Senior officials from FEMA. FEMA is made up of people who entered public service to help others. At FEMA, we have the privilege of working in an agency whose daily work, whose enduring mission, is exactly that: helping others. Whether the moment is the aftermath of disaster—as a family finds a home destroyed—or the beginning of opportunity—as a community joins Project Impact—we make a difference in people's lives. When people praise FEMA, I say a great deal of the praise is due to the hard-working, dedicated staff.

Sitting next to me is Gary Johnson, FEMA's Chief Financial Officer, who deserves much of the credit for putting FEMA's financial house in order. Gary is an excellent example of the selflessness and dedication that FEMA employees possess. When I arrived at FEMA, the financial records were not in the best possible shape, to say the least. Although I don't think Gary sought out the CFO's position, he was willing, as a good public servant, to take on this assignment and give it his best effort. Through his hard work and dedication, and the hard work of his staff, FEMA's books have been straightened out and last year, for the first time ever, we had financial statements that were given a clean bill of health by the Inspector General. These improvements are tangible. They have given you and your staff a clearer picture of FEMA spending priorities and the historical financial records that support these positions. These are measurable accomplishments of which we can all be very proud.

I'd also like to take the opportunity to introduce a person who is a relatively new face at FEMA but certainly not a new name to you. We are excited to have had John Magaw, former Director of both the United States Secret Service and the Bureau of Alcohol, Tobacco and Firearms, join the FEMA staff. As a well-known and respected official in the law enforcement community, John is going to help us with our interagency coordination of terrorism-related efforts. We are pleased to have him with us today as well.

As many here today know, this very likely may be my last Senate Appropriations Subcommittee hearing as Director of FEMA. We've come a long way together. Twenty years ago, President Carter signed an Executive Order creating FEMA. He re-

cently told me that FEMA has finally become the agency that he envisioned twenty years ago.

Despite this recent success, it has not always been smooth sailing. Seven years ago, some people wanted to abolish FEMA. Today, with the help of President Clinton, Vice President Gore, you and our other friends in Congress, our dedicated staff, and our partners at the State and local levels, we have become a model of government success. The renewal of FEMA is studied in universities, emulated in other agencies—imitated and admired literally across the globe.

Seven years ago, many of our customers were unhappy and our partners were frustrated. Today, our customer satisfaction ratings have climbed steadily to impressive heights. Our partners are reaching out to us—and we are reaching out to them—in a nationwide network of people working to strengthen America.

Seven years ago, communities across the nation were locked in a deadly cycle—caught by disasters unprepared, too often rebuilding where they were almost certain to be struck again.

Today, Project Impact has placed mitigation and prevention at the center of emergency management in the United States. We have saved lives—enhanced communities—and prevented needless pain. We came this far together by being responsible—responsible to our customers, partners and taxpayers.

As I reflect on my career at FEMA and think about what FEMA should strive for in the future, I keep coming back to this principle of responsibility. Today, I want to talk with you about responsibility—not only responsibility in fiscal year 2001, but far beyond.

I believe that we have four key responsibilities that we must address in fiscal year 2001 to ensure that we are well positioned for the future.

- It is our responsibility to ensure that the impacts of future disasters are minimized as much as possible.
- It is our responsibility to ensure that wherever possible, people are moved out of harm's way.
- It is our responsibility to protect people who respond to disasters and events.
- It is our responsibility to ensure that people have the resources necessary to address emergency management needs and issues.

MITIGATION RESPONSIBILITIES

First, FEMA's fiscal year 2001 budget proposals are aimed at further institutionalizing our responsibilities associated with disaster mitigation. We know natural disasters are going to continue to occur. We also have learned, through mitigation success stories, that steps can be taken to mitigate the impacts of future disasters.

In this area, we need to continue programs that encourage individuals, communities and States to take responsibility for mitigation. Our Project Impact initiative, now entering its 4th year, has made significant progress in getting individuals to be responsible for protecting themselves. With very little seed money to get communities started, local citizens have taken significant steps to mitigate against the impacts of future disasters.

In addition to continuing to fund this program, we are very encouraged by the Senate's efforts to move forward with Stafford Act amendments which would permanently authorize a pre-disaster mitigation fund. It is my hope that the Congress' actions would institutionalize the pre-disaster mitigation concept which will save thousands of lives by encouraging people to responsibly prepare for disasters.

PROTECTION RESPONSIBILITIES

We also have a responsibility to ensure that wherever possible, people are out of harm's way. You made a significant investment in this area when you approved \$215 million that could be used to protect people who are most vulnerable to future floods like those associated with Hurricane Floyd. Despite this sizable investment in Hurricane Floyd-declared States, we've got a long way to go to responsibly address the needs of people who are at risk of flooding.

We know that needs still remain in North Carolina, New Jersey and other Floyd-declared States. That is why the President proposed an additional \$77 million for buyouts of homes that could flood again.

But I don't feel that it is responsible to only respond to victims after a flood. We already know that there are many people who are vulnerable to flooding beyond the Floyd-declared States. That is why the fiscal year 2001 budget contains an initiative that would allow us to buyout many of the properties that have had two or more claims on the National Flood Insurance Fund.

You may ask why such a significant investment on the Federal Government's part is a responsible course of action. First, I believe that protecting the most vulnerable

people and properties is certainly a responsible course of action for us to undertake. Second, an investment now will recoup significant savings to the Federal Government in the future if we can avoid future disasters from occurring. Finally, when we buyout properties, we ask the States and local communities to take responsibility as well. The States must be involved in providing the non-Federal share and in helping prioritize where the scarce resources will be deployed. Local communities also frequently have to provide assistance with the non-Federal share and we require them to permanently deed restrict any properties that are bought out. That way, communities take responsibility for keeping future development out of floodplains.

In addition to providing the funding, we hope that this Congress will give FEMA ongoing authority to buyout properties at risk of repetitive flooding. This authority is necessary to further institutionalize our responsibility to help people at risk of flooding.

We also need to protect people from the risks of fires. America's fire death rate is one of the highest per capita in the industrialized world. Fire kills more than 4,000 people and injures more than 25,000 people each year.

We will soon be completing the renewal of the United States Fire Administration. Twenty-five years ago, the USFA was created in the aftermath of a report called "America Burning." That landmark study found America was losing too much and suffering too terribly from fires that could be prevented. We have commissioned an updated "America Burning" study, and we will complete it this year. We will reinvigorate USFA, strengthening its roles in training, research and public education. We want to once again make the USFA an engine of innovation in fire prevention technology. We're working to prepare the National Fire Academy to be a leader in the 21st Century.

Other individuals at risk include the working poor, the elderly and the people in the roughest circumstances who are helped by the Emergency Food and Shelter Program. During fiscal year 2000 you acknowledged our responsibility to these individuals by providing increased funding for this program. However, despite the funding increase, significant shortfalls remain and thousands more meals and nights of shelter are needed to help those at-risk individuals.

The proposed increase of \$30 million brings the program up to \$140 million. Our partners in this program—the Salvation Army, Catholic Charities USA, the American Red Cross, the National Council of Churches, the Council of Jewish Federations and the United Way of America—have joined with us to be careful stewards of these funds. The Local Boards that administer these supplemental funds in 2,500 communities are models of local decision-making and local responsibility. And it is important to remember that the millions of extra meals and nights of shelter that come from this program are all delivered with an administrative expense share of just under 3 percent.

RESPONSIBILITIES TO EMERGENCY RESPONDERS

We also have a responsibility to train and protect the people who must respond to disasters and events. For fiscal year 2001, we are requesting funding for several initiatives that will help us protect emergency responders.

Despite our technological advancements and the nation's collective wealth, firefighters in the United States frequently fight fires without the benefit of the most advanced equipment available. To help address this problem, the President's budget proposes a new \$25 million pilot grant program that would provide funding to fire departments serving needy and distressed communities. We know that a disproportionate share of firefighter deaths and injuries occur in communities that can not afford to provide the most up-to-date firefighter life and safety equipment. This grant program would be a way to help protect those individuals who are willing to risk their lives for the members of their communities.

We also are responsible for protecting people from terrorist acts. Because emergency responders are likely to be the first officials to respond to an act of terrorism, it is essential that they receive proper training. In addition to continuing already-existing terrorism training opportunities, the President's budget proposes an additional \$3.9 million to further train six Urban Search and Rescue teams so that they will be prepared to respond to biological, chemical or nuclear events.

Finally, I feel strongly that we have a responsibility to provide FEMA employees with a headquarters facility that is safe, secure and that allows staff to respond to disasters that occur throughout the United States. The fiscal year 2001 budget contains a request for \$23.6 million to relocate FEMA's headquarters facility from the current location to another location in the Washington, DC area. The current facility does not meet Level 4 security standards and it is limited in its flexibility. We need

to upgrade our emergency operations center and the current building keeps us from optimizing our capabilities.

RESOURCE RESPONSIBILITIES

Finally, we have a responsibility to give people the resources necessary to continue to address emergency management needs and issues.

Last year, you allowed us to streamline the method by which grants are provided to our State partners. Instead of multiple grants that required separate administrative overhead, we worked with you and your staff to create an Emergency Management Performance Grant Program which reduced State grants to a single funding stream. Initial reports from our State partners indicate their support for continuing this grant mechanism. We believe that reducing the red tape for both FEMA and our State partners allows us to spend more time focusing our efforts on disaster response and mitigation.

For several years running, we have all agreed that there is a significant need to modernize FEMA's flood maps. The fiscal year 2001 budget contains two different proposals for funding the first year of our seven-year Map Modernization plan. Modernizing the current map inventory and creating new maps for unmapped communities will provide invaluable tools for emergency managers, floodplain managers, lenders, insurance agents and FEMA employees. Bringing the map inventories up-to-date will even reduce the number of cases in which Congressional offices are asked to get involved. Clearly this program would be a responsible investment that would pay dividends for the future.

The fiscal year 2001 budget also requests an increase for Salaries and Expenses. As I mentioned earlier, FEMA has a very hard working staff that is fully committed to helping others. It is our responsibility to ensure that the FEMA staff has the resources and facilities necessary to serve the American public. Without a safe and secure work environment, staff resources will be hampered. Without an up-to-date emergency operations capability, we will be limited in our response to disasters as they occur across the country.

I want to conclude by telling you how important this budget is for FEMA's future and for the future of all Americans.

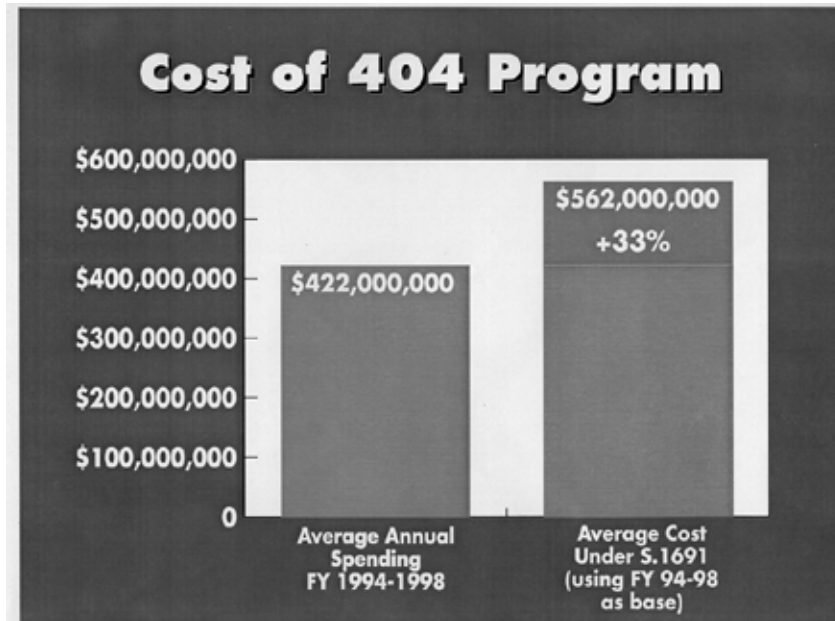

I've been fortunate in my career. I've met interesting people and traveled to fascinating places. I've had the privilege to serve a great President who is also a great friend. Together with a dedicated Congress and committed staff, we have been able to strengthen FEMA's programs and response capabilities.

Despite all of our work, the real measure of our success won't be realized for many more years. If ten years from now, all States and local governments take full responsibility for properly insuring or protecting their buildings, our efforts were successful. If twenty years from now we are working even harder to protect our emergency management responders, we created a lasting legacy. If thirty years from now, all citizens, States and local governments have taken steps to mitigate against the effects of future disasters, we will have succeeded in institutionalizing responsibility.

The fiscal year 2001 budget and other related legislative initiatives continue to move us down this path to success. I ask your support during this next year as we try to institutionalize responsibility.

Before leaving today, I also want to say "thank you" to the Subcommittee staff members with whom we have had the privilege of working. From working with your Subcommittee staff everyday, I'm sure you know the level of professionalism and commitment to public service that they bring to their work each day. FEMA has benefited greatly from their knowledge and expertise. So to Carrie Apostolou, Jon Kamarck, Paul Carliner and other Subcommittee staff with whom we have worked these past seven years, "thank you."

Thank you for the opportunity to appear before this Subcommittee and I am happy to answer any questions you may have.

Senator MIKULSKI [presiding]. Well, I think that this is a very good time perhaps for us to recess until we can go vote and then return.

Mr. WITT. Sure.

Senator MIKULSKI. So we thank you for your testimony. The committee is going to stand in recess subject to the return of either Senator Bond or myself. Before we do leave, I also wanted to acknowledge, because in my eagerness to talk about antiterrorism we did not talk about the U.S. Fire Administration in Emmitsburg, something that I am very preoccupied with, and also the implementation of the Blue Ribbon Commission. I think they are a very valued resource and we need to make highest and best use of what we have. So we look forward to continued conversation.

Thank you. This committee stands in recess until the return of Senator Bond or myself.

REQUEST FOR BUYOUTS

Senator BOND [presiding]. The hearing will reconvene. I thank our witnesses and guests for their indulgence.

Mr. Director, I will, as I said, review your full statement and I would like to ask a number of questions, a few things that are very important.

First on the buyouts, the \$77 million request, the Inspector General has suggested that only 2,200 properties in North Carolina would likely qualify for buyouts and the likely cost would be less than \$140 million, excluding the State costs here. I would like to know what the basis was for the request and whether the Inspector General's information was available at the time of the request, whether it was considered. Would you comment on that?

Mr. WITT. Sure. I believe that work by the Inspector General's office is ongoing. They developed an estimate—a preliminary estimate—and should be finishing that up soon. I think the important thing is to look at the information prepared by our inspectors and verifications of houses destroyed.

I am not saying all 3,144 homes that were destroyed were in the flood plain, but most of them were. Also, there were 7,469 owner-occupied homes just in North Carolina that had 2 to 5 feet of water in them, and 1,278 that had more than 5 feet of water in them. So I think it is important that the IG working with mitigation staff—identify and verify the structures substantially damaged and destroyed within the 100-year floodplain. Without that verification I cannot tell you, Mr. Chairman, whether the funds will be enough or not.

At the present time we have given you figures that we felt are appropriate.

BUYOUTS AFTER HURRICANE FRAN

Senator BOND. Well, obviously we are going to continue to work with you on this.

I was disturbed by an AP article earlier this month that indicated that there were some buyouts of upscale homes and perhaps second homes, vacation homes, that did not really meet the cost-benefit test. I wonder if FEMA has looked into this and what is being done to ensure that the at-risk properties, the needy individuals, are the ones who are given priority. Excuse me. It was Hurricane Fran.

Mr. WITT. Yes, I saw that article as well. We are very cautious about what we target for buyout. The most important and critical thing is if the property is within the 100-year flood plain and it is substantially damaged, it needs to be bought out. I have not seen too many of the houses in the \$400,000 range bought out at all. There may have been one or two in cases that I am not aware of, but we are very careful and we do look at these very closely and will continue to.

One thing I want to add, Mr. Chairman. When I was talking with your staff, the Inspector General's office, the State of North Carolina, other States and our mitigation directorate, we are going to prepared a monthly report that lists the properties for which offers have been made, the amount of that offer, the pre-disaster value of that property, and the cost-benefit ratio of anticipated savings.

We are going to require that every month so we can make sure that we are targeting the right properties, that the offers are accurate, and that there is a cost savings. We are going to do that monthly because we know the importance of this.

PROPERTIES WITH FLOOD INSURANCE

Senator BOND. I trust you are looking at the number of properties where they have had flood insurance, and it would seem to me that priority should be given to those people who are willing to help themselves. I would also appreciate your comments on the statement you made last year about the agency's support for re-

quiring homeowners who do not accept a buyout to pay actuarial rates in the flood insurance program. Is that still your position?

Mr. WITT. Yes, sir. I took a few arrows on that position, in some cases, but I feel very strongly about this. I feel that it is important that the responsibility reside at the local level and with individuals as well. We are responsible to meet their needs and requirements if there is a disaster, beyond their means. We have gone back and looked at the Federal insurance administration's data and see that 10,000 properties repetitive loss properties of which 1,300 have had two or more claims resulting in costs that exceed the value of the property.

It does not make sense to continue spending \$200 million annually in repetitive flood losses. Legislation has been introduced to address this and we are hoping that it will pass.

The insurance that has been paid out so far just in North Carolina is \$139 million on flood insurance claims. It probably will come close to \$200 million in flood insurance claims. I addressed this with Eric Tolbert, the State mitigation director of North Carolina, to ensure that they are tracking with our staff the properties that had flood insurance and making sure that, if that insured property is substantially damaged and within the 100-year floodplain, that the insurance is offset by the buyout amount.

PUBLIC BUILDINGS INSURANCE RULE

Senator BOND. Good.

Another aspect of insurance. As I indicated, I commend you on your work on the public buildings insurance rule. I have joined you in being the designated javelin catcher on that one. Nothing like having a specialty on the track team.

When do you expect to have a final rule? What is the estimate for how much this can save us? And what other problems do you see, and are you confident that you have addressed the procedural problems that the GAO identified in the development of the rule?

Mr. WITT. I think we have addressed the GAO problems in developing the rule. I think the advanced notice of the rule allowed 45 days for comments, the published rule 60 days, and then 90 days for a final rule.

I found out an interesting fact regarding my home county, Yell County, Arkansas, which is a very poor county. I called my son, who is the county judge there, our son, and I said: "Jimmy, are you buying insurance on your public buildings?" Two courthouses, two county libraries, two county hospitals, two county jails, and a general detention center. He said: "Why, yes, dad; we pay \$44,000 a year for insurance on our public buildings."

I received a letter from the California delegation—every member of the delegation signed it—opposing this. I talked to an insurance broker in California. It was interesting to learn that the requirements, the insurance on public buildings requirements that we are going forward with, it is interesting that 51 of 58 counties will already meet those requirements. Also, 1,500 communities in Texas will meet those requirements. One hundred and fifteen cities in the West will meet those requirements by being in this pool.

What my concern is, if we do not do something then all those counties and cities in the East, in the South—

Senator BOND. They are going to say why bother, yes; save \$44,000.

Mr. WITT. I think it is important that local governments and State governments have a pool from which to buy the insurance. If a lot of the communities are already meeting that requirement we should go on with it.

Senator BOND. That sounds good to me.

Senator Mikulski, thank you for joining us. Do you have some questions?

REFORMS AND PRIORITIES AT THE NATIONAL FIRE ACADEMY

Senator MIKULSKI. Yes, I do, Mr. Chairman. And I know our staffs will be cooperating.

Mr. Witt, my very first question really goes to the Fire Academy at Emmitsburg, which I believe is a national resource, but really had not been utilized to its full capacity, and there are a variety of—it was tattered in some ways. The Blue Ribbon Commission said that there were three areas that needed to be improved: leadership, resource management, and communication.

Could you share with us or perhaps even have your person heading the Academy speak to really what are truly the reforms going on at the academy; number two, what do you see are your priorities for the Fire Academy, particularly in education and training? Senator Lautenberg gave one. Fires are up in my State. Could we hear yours, and what resources you need?

Mr. WITT. Senator Mikulski, I think we are moving in the right direction for the USFA, in the sense that the blue ribbon panel that I asked to serve as a panel included every national fire association in America. These organizations came together, met, developed 34 requirements that they felt were important to be implemented at the USFA and the Fire Academy. To date, we have implemented 17 of the recommendations.

One of those was to recommission "America Burning." It is 25 years old. It needs to be brought up to date to reflect today's threats. Hopefully that will be completed in May. Also, we found that by reorganizing part of the Emmitsburg Fire Academy and putting in place a chief operating officer to facilitate the communications between our Fire Administrator, our advocate now for our policies and our programs for the firefighters, the academy has made a huge difference. Hopefully the rest of the reorganization will be completed by June.

Senator MIKULSKI. Excuse me. What is being completed in June, the reorganization?

Mr. WITT. Yes, and I am very pleased with what has been done so far. Some of the panel's recommendations such as the distant learning are very important. We have so many firefighters across the country that cannot afford to come to Emmitsburg, that we need to take the training to them.

You and I know there are over 53,000 fire injuries a year, there is an average of 100 firefighter deaths a year. Firefighting continues to be the most dangerous profession that we have in this country, and we are going to have to do more to reduce injuries and save lives for our firefighters. It is very important.

Senator MIKULSKI. Well, we want to hear more about that. You are recommissioning "America Burning"?

Mr. WITT. Yes.

Senator MIKULSKI. When does that start and when does that end?

Mr. WITT. It has already started and should be completed in May.

Senator MIKULSKI. May of this year?

Mr. WITT. Yes, ma'am.

Senator MIKULSKI. So then we will have a blueprint and a reorganization.

Mr. WITT. Yes, ma'am.

REFORMS AT FEMA IN THE LAST SEVEN YEARS

Senator MIKULSKI. Well, let us continue that further, but really there are more fires and more different kinds of fires, and because of the gallantry and efficiency of our local fire departments I believe America has gotten complacent. Therefore we need to be able to support them, not only with best technology and best training, but also we need to do, I think, public awareness. We look forward to those recommendations.

Let me go on to another topic that is very important to me, which is the institutionalizing of the reforms made at FEMA under your direction. Could you identify what we are doing in this appropriation to institutionalize those reforms? In the short time we have available, could you give us the highlights that you want to be sure that you have left as pillars for either you to continue to stand on or a new director to be able to stand on?

Mr. WITT. I think it is very important that the repetitive loss legislation gets passed and also that we look at the flood mapping issue in this country. The inventory of flood maps is in very serious condition. Looking at the repetitive flood losses and the flood mapping programs is critical if we are going to cut disaster costs. My goal is to strive to do that, because I know that dollars are so precious and so tight.

I believe that responsibility is important for locals and States and ourselves. By doing the things that we are doing now, we will, I hope, institutionalize responsibility for the future. The Stafford Act amendments, the repetitive loss legislation, and the flood insurance proposals are critical. We are working with OMB to try to get some agreements with them on other proposed legislation, particularly for the subsidized rates for secondary vacation homes. A lot of this has to be cleaned up.

If it is, then I think we will be in good shape going into the future by cutting costs and saving lives.

Senator MIKULSKI. Well, I thank you, Mr. Witt. I have other questions I will submit for the record. Conversations were amplified both with you and Mr. Magaw. Mr. Magaw, we really welcome you back and it is nice to see you again, because I think our conversations on terrorism are left for another forum.

Is Mr. Burris here from the Firefighting Academy?

Mr. WITT. Ken could not be here today. Ken Burris is the former fire chief of Marietta, Georgia. He has over 20 years of service, and is very, very talented. We are very fortunate to have him.

Senator MIKULSKI. We are looking forward to meeting him the next time we are in Emmitsburg, so thank you.

Mr. Chairman, I will submit other questions for the record.

Senator BOND. Thank you very much, Senator Mikulski. We will of course hold the record open for questions, and I will have quite a few to submit myself. Thank you very much for your participation.

Senator Lautenberg.

Senator MIKULSKI. And I am going to excuse myself to go to the elementary and secondary markup.

Senator BOND. We will understand. Thank you.

SPRINKLER SYSTEMS IN COLLEGE FACILITIES

Senator LAUTENBERG. Mr. Chairman, I will be brief.

I just have a couple of questions that I would like to ask you. They relate to the terrible accident at Seton Hall which I mentioned. Director Witt, what we find is that it is difficult to get accurate data about the extent to which all student housing is equipped with life-saving sprinkler systems. I note that there was a forum on college fire safety and they said that only—the report said that only 27 percent of the student housing had fire sprinkler systems.

It would be useful to get full information about this and be able to send copies to the various educational institutions. Could the Fire Administration undertake a study of that for us? That would be very helpful. And if the study included recommendations on the best way to encourage academic institutions to install fire sprinkler systems, all of the institutions, the facilities that are on the campuses, if we could do that. And I would like to work with you to begin such a study and hopefully be finished before at least I—I have a specific ticket to leave town. It seems that yours maybe rejected. I have not had that kind of groundswell. You had a groundswell of three persons here; that is pretty good.

Also, the Fire Administration produced a report on college fire safety that recommended the establishment of an information clearinghouse. I think that the Fire Administration would be an appropriate place for that as well. Would you agree?

Mr. WITT. Yes, sir.

PUBLIC AWARENESS OF FIRE DANGERS

Senator LAUTENBERG. The Fire Administration's report specifically cited a link between fires and the consumption of alcohol. The report recommended that by associating fire safety with alcohol consumption it may be possible to reduce some of these fire losses. Young people will be capricious and sometimes engage in things that look like they are fun and they are fun until something happens.

I have been a strong advocate of establishing a nationwide advertising campaign against underaged alcohol consumption. I wrote the law to raise the drinking age to 21. Could we get some help in getting a view from your people or getting a communications outlet through your department to see if we can just raise a caution there? I think it would be a good idea, because the consequence—we know what the consequence is of drinking and driving, but we are not certain that people are aware of the consequence of exces-

sive horseplay and so forth as a result of drinking that might lead to fire disasters on the campus.

If we can find anything about cause and effect there, that would also be helpful.

Mr. WITT. Our U.S. Fire Administrator, Ms. Carrye Brown, is with us today and I know that she has been working very, very hard on establishing a public awareness program. Also, we have developed videos and pamphlets that have been shared with the universities to help address some of the fire-related and alcohol-related fire deaths.

But, I think a study at the universities, particularly of the sprinkler systems, is absolutely critical. We know that across the country there are so many universities that are at risk for all-hazards. Under our disaster-resistant universities concept—the University of Berkeley is doing a study on this, and we will share that with you—we are looking at how universities can be better prepared before something happens. I think it will help save lives and save dollars in the future. So we will be happy to share that with you when it is completed.

Senator LAUTENBERG. Thank you.

Thanks, Mr. Chairman.

Senator BOND. Thank you very much, Senator Lautenberg.

Director Witt, we have a number of documents and information here from the GAO and their testimony a month ago and the May 1996 report. I think that everybody has that. I would like to make a copy of the February 15 letter from the Deputy Inspector General to our committee part of the record as we discuss S. 1691.

[The information follows:]

As requested, following are the issues that we discussed during our meeting on February 7, 2000, concerning Senate amendments to the Stafford Act (S. 1691).

Overall, the amendments have many positive features that we wholeheartedly endorse, such as the cost estimation procedures, the conditions for assistance for private nonprofit facilities, and the emphasis on mitigation. Our concerns are not so much with what the amendments include, but rather with what they exclude. The amendments do not go far enough, in our opinion, to control the Federal cost of disaster assistance and to ensure coordination between FEMA's various disaster preparedness, mitigation, and relief programs. Specifically:

Under Section 203, PREDISASTER HAZARD MITIGATION, the amendments do not make any reference to FEMA's Emergency Management Performance Grant (EMPG) Program. Yet the EMPG Program is the Agency's primary mechanism through which non-disaster funds are made available to States for mitigation planning and pre-disaster mitigation initiatives. Language should be added to this section that recognizes the EMPG program and its relationship to the technical and financial assistance envisioned under this section. Also, this section could be strengthened by (1) providing restrictions or parameters on the type of projects that this program will support, (2) defining what constitutes an "effective public-private natural disaster hazard mitigation partnership," and (3) describing how FEMA will deliver technical assistance to State and local communities, i.e., with FEMA staff, contracts, or grants.

Under Section 204, NATURAL DISASTER MITIGATION ZONES, add specific language that would address local community compliance with the National Flood Insurance Program's substantial damage rule. The substantial damage rule holds communities responsible for ensuring that mitigation action takes place whenever the cost of restoring a damaged structure to its pre-damaged condition is 50 percent or more of its market value. A legislative mandate, coupled with appropriate sanctions such as increased cost share or reduced assistance for communities that do not adequately enforce the substantial damage rule, would contribute significantly to increased compliance, resulting in more effective mitigation measures to reduce repetitive losses.

Under Section 204, NATURAL DISASTER MITIGATION ZONES, curtail the availability of assistance in specified coastal areas. Because of FEMA's disaster recovery and flood insurance programs, the Federal government has been criticized for its apparent public policy of encouraging development in high risk coastal areas. The Stafford Act Amendments provide a unique opportunity, in our opinion, to specify disincentives for development in those areas. For example, provisions could be included in the amendments that eliminate flood insurance rate subsidies for secondary homes in coastal areas.

Under Section 204(a)(3)(C), AVAILABILITY TO THE PUBLIC, stipulate that maps and services shall be made available to the public for a nominal fee to be established each year by the Director. These revenues would be invested in the Fund.

Under Section 404, HAZARD MITIGATION, add language that provides statutory guidance for property acquisition and relocation assistance, such as:

- funding limitations
- eligibility criteria
- cost/benefit requirements
- prohibition on rebuilding in a special flood hazard areas
- basis for amount to be paid to homeowner
- priority ranking system that ties in with eligibility criteria
- post buyout assessment of effectiveness

We believe the need for explicit statutory requirements for the buyout program is important because of its enormity (expenditures approaching \$1 billion) and the emphasis that has been placed on buyouts as an essential mitigation tool.

Under Section 404, HAZARD MITIGATION, either eliminate or reduce the 15 percent (20 percent under the amended version) that is set aside under this section for hazard mitigation measures. Under the current funding mechanism, the program has variable and unpredictable funding levels. Also, it does not ensure that public funds are being spent on the most pressing national priorities, nor does it ensure that public funds are being awarded to State or local governments that are genuinely committed to reducing damages from future disasters and supporting ongoing non-Federal hazard mitigation measures. Instead, we proposed that Congress should consider establishing under Section 203, PREDISASTER HAZARD MITIGATION, a discretionary grant program. The program would be funded through an annual appropriation that gives FEMA the discretion to determine, through a competitive process, which applicants are best suited to address the requirements and priorities of the Nation's pre-disaster hazard mitigation goals and objectives.

Under Section 406(c), LARGE IN-LIEU CONTRIBUTIONS, add language specifying that, to qualify for large in-lieu contributions, the cost to repair a public facility must exceed 75 percent of the pre-disaster value of the property. Currently, FEMA authorizes the construction of a new facility whenever the damages exceed 50 percent of the pre-disaster value of the property. The 75 percent threshold is more in line with national insurance standards for replacement of damaged facilities. Repairing a facility would be more cost effective than constructing a new one.

Under Section 406(e), ELIGIBLE COST, clarify the current language that stipulates eligible public assistance costs should be estimated in conformity with current applicable codes. It should be made clear that codes in effect at the time of the disaster are controlling.

Under Section 408, TEMPORARY HOUSING ASSISTANCE, require disaster victims who need home repairs in lieu of other types of temporary housing to seek loan assistance from the Small Business Administration before receiving grant assistance from FEMA. Home repairs would not be delayed since SBA processing time has been reduced to about 7-12 days for home loans. According to FEMA estimates, this would result in annual cost savings of about \$109 million.

Under Section 411, INDIVIDUAL AND FAMILY GRANT PROGRAMS, authorize FEMA, in consultation and coordination with the State, to provide direct financial assistance to individuals or families. The Federal share should be equal to 75 percent of the actual cost incurred and the remaining 25 percent of the cost should be paid from funds made available by the State. Also, since assistance for the IFG program will be provided directly by FEMA, there will be no need for providing the State a 5 percent administrative fee. According to FEMA projections, an annual cost savings of \$8,756,200 would be realized.

Repeal Section 417, COMMUNITY DISASTER LOANS. Based on our assessment of the this program in fiscal year 1995, we estimated that the default rate for these loans would be 97 percent and the rate for loans subject to the Credit Reform Act would be 100 percent. With these facts in mind, we believe a disaster grant would be a more prudent and cost effective means to assist State and local governments that suffer a substantial loss of tax or other revenues after a disaster and demonstrate a need for financial assistance to perform governmental functions. The

Credit Reform Act of 1990 imposes complex accounting and funding requirements for loans. Unlike a grant program, additional appropriations are required to cover the subsidy and administrative expenses associated with each loan. In fiscal year 1994, for example, these expenses exceeded \$11 million.

Under Section 705(c)(1), REBUTTAL OF PRESUMPTION OF RECORD MAINTENANCE, clarify the language that defines the binding nature of grant requirements. To eliminate any confusion about what constitutes the "binding nature of grant requirements," we suggest that this section be revised to read: "The payment was authorized by an approved grant agreement specifying the costs. FEMA's estimate of disaster costs as reflected in a Disaster Survey Report does not constitute an approved agreement."

Again, thank you for the opportunity to share our concerns with you regarding the Senate proposal to amend the Stafford Act. Should you have any questions or wish to discuss our comments in more detail, please contact me.

HAZARD MITIGATION PROPOSALS

Senator BOND. One of the things that has concerned me about S. 1691, is the average annual spending in the 404 program has been \$422 million, and as we interpret S. 1691 that would go to \$562 million, or a 33 percent increase. There have been a number of suggestions from the IG as well as from the GAO. I would like to know if you think there are any of them that are not practical or if you see any significant problems with them? Do you have any comments on the proposals in general?

Mr. WITT. I think some of the proposals are very good. Some of them I would probably not agree with. I think it is very important that some form of the 404 program continue to be in the disaster program because many times pre-disaster prevention may not address all of the problems after a disaster associated with rebuilding.

I think the concept that your staff talked to me about is very interesting as are the IG's recommendations.

Senator BOND. The competitive grant program?

Mr. WITT. Yes, sir. I did share that information with the NEMA when I visited with them. They agree to work with us and your staff in looking at this and seeing what the possibilities are.

WORKING WITH NASA DATA FOR FLOOD MAPPING

Senator BOND. On this and so many others, we would appreciate your discussion and obviously we will be in communication with you on that program and the other recommendations.

Let me turn to flood map modernization. Since this committee has the unique privilege of funding NASA as well, I am interested in the collaboration. We had some discussion about the ability of NASA to work with FEMA and I understand NASA recently flew a mission involving topographical mapping. How is your effort to utilize NASA's resources moving and can we lessen the costs, and have you encountered any roadblocks or problems in that relationship?

Mr. WITT. Money.

Senator BOND. They are charging too much? Is that what I am hearing you say?

Mr. WITT. Yes, sir. I think it could have possibilities to really, truly help us. I have seen a brief overview of the maps. I am going to go meet with Dan Goldin to look further at this. Some of their

information is classified and they are not going to be able to release it. But, a lot of it I think we could be using.

But I think also we need to work on the cost that is charged for this in order to save money. Federal agencies' administrative costs vary and some are higher than others.

Senator BOND. We will pursue that. I think we have two friendly agencies working together and we will want to encourage them to work more cooperatively.

Mr. WITT. Thank you.

LICENSING FEE FOR FLOOD MAPPING

Senator BOND. Talking about something, though, that has gone up the flagpole without any salutes, last year's settlement fee, and this year there is a new \$12 licensing fee proposed. Have you submitted it to the Banking Committee, and do you really think there is any chance of getting that enacted?

Mr. WITT. Mr. Chairman, I am always hopeful and we are always trying to come up with alternative solutions for funding this including sharing the costs with the people that use them so that it is not just a burden on the taxpayers. We have hopes for implementation of the fee, but I cannot guarantee that the Banking Committee will agree with the proposal that we put in the 2001 budget.

The proposal moves the process away from the bankers, and places it with map determination organizations using the regular tracking system that we have. I am hopeful, but I cannot guarantee it yet.

FEMA'S ROLE IN COUNTERTERRORISM

Senator BOND. All right. A final question. I would like your comments on the counterterrorism program. I mentioned concerns about whether we are focusing adequate attention on it. I would just like your general comments on how you think the program is focused, coordinated, what FEMA's role can be, and how well the concerns we have had for the last year or so have been addressed.

Mr. WITT. I am very concerned about this program. I am very concerned that the people out on the front line get exactly what they need. Attorney General Janet Reno and I talked this week, and I expressed my concern about the NDPO, including where it has been put. I feel that it should be elevated to the level of at least a director or deputy director's office in the FBI.

We have not come to agreement on that yet. I feel like that it is very important now, with John Magaw now heading up the consequence management side, to elevate the anti-terrorism office in FEMA to a co-chair level with the NDPO—especially when you look at what we do in the areas of planning, development, training, and exercises.

Our programs cost across all lines and involve over 15 or 16 partners. I feel strongly about this program and the importance of it. But I do not think we are where we should be yet.

Senator BOND. Mr. Director, I think it is safe to say this committee shares your concerns and we are going to do everything we can to work with you to address those concerns, because this is something that cannot be downgraded to an afterthought or an of-

office in the basement someplace. This has got to be able to bring together all those resources.

ADDITIONAL COMMITTEE QUESTIONS

With that, I would like to thank you for the cooperation and wish you well, and maybe if Senator Stevens is successful and Mrs. Witt does not veto it we may have a chance to see you back again. But we will be submitting questions for the record.

[The following questions were not asked at the hearing, but were submitted to the Agency for response subsequent to the hearing:]

QUESTIONS SUBMITTED BY SENATOR CHRISTOPHER S. BOND

BUYOUTS

Question. Please describe the basis for FEMA's \$77 million fiscal year 2000 supplemental request for additional Hurricane Floyd buyouts.

How will FEMA ensure that the most at-risk properties, and the most needy individuals, will be given priority in this program?

Answer. FEMA derived the \$77 million estimate for supplemental buyout funding needs by contacting the affected States in early January 2000. FEMA requested that the States identify the anticipated need for buyouts generally meeting the criteria as defined in the previous Supplemental for Floyd-related buyouts. States based their estimates on best available information, which in most cases involved letters of intent, pre-applications, other communication with affected communities, or information gathered by the State and/or FEMA region during applicant briefings and fieldwork.

FEMA is working closely with affected States to ensure that the funding will only go towards valid needs that meet the criteria of the appropriation law. FEMA is requesting the States to identify the most heavily impacted structures as candidates for this buyout program. States will receive funding allocations only after they demonstrate the number and value of properties that meet the program requirements. Our implementing regulation stressed to States that assisting low and moderate income families who suffered major disaster damage is a priority use for this funding. Also, based on information we have received so far, nearly all of the properties proposed for acquisition are relatively low in value for their respective areas. -

Question. Can you estimate how many of the buyout properties will have had flood insurance? Will priority be given to those properties?

Answer. At this time we do not yet know how many of the potential buyout candidates have flood insurance. We will better be able to provide this information as communities provide details about participating properties. Our estimates show flood insurance coverage in North Carolina to average approximately 34 percent in the Special Flood Hazard Area. While a significant number of these policies are in coastal areas, many buyout participants are expected to live in slightly inland riverine areas, rather than coastal. States and communities have the flexibility to determine which properties are the highest priority for assistance, among those that meet the stringent eligibility requirements.

Question. Last year you said FEMA supported requiring homeowners who do not accept a buyout to pay actuarial rates in the flood insurance program. Do you still support this, what is the status of this effort, and when will FEMA have a final rule?

Answer. FEMA is developing the program policy and guidance to support the implementation of the "Mitigation Offer". The Federal Insurance Administration (FIA) published a proposed rule on August 5, 1999 that would apply full-risk premiums for flood insurance coverage to target repetitive loss properties whose owners decline an offer of mitigation funding to acquire or elevate their structure. Target properties include those with four or more insured losses, as well as those structures that have had two or three losses that cumulatively exceed the building value. There are currently approximately 10,000 properties on this target list. FEMA has also drafted a Federal Register Notice that outlines the procedures necessary in making the official mitigation offer. This draft has been shared with our State partners, and we are incorporating their comments before publishing the Notice. We expect to be able to make official mitigation offers by this summer.

Question. The Inspector General has listed a number of options to improve S. 1691, the Disaster Mitigation bill, recently marked-up in the Environment and Public Works Committee. Please describe for each proposal whether FEMA supports the recommendation, and the rationale for FEMA's support or opposition.

Answer. Many of the Inspector General's recommendations warrant additional consideration. As we committed during the Senate Appropriations hearing, we will consult with our State partners through NEMA to discuss many of these proposals. The following is a recommendation-by-recommendation analysis:

—*Under Section 203, PREDISASTER HAZARD MITIGATION.*—We believe the recommendations made for this area are worthy of future consideration as Project Impact matures. At this time, we would like the communities, and the States that recommended their selection, to be given an opportunity to shape the program in ways that fit the individual community. Experience may dictate that we may want to limit some eligible activities as suggested, but at this stage of the program's growth we do not want to limit the approaches various communities may choose. Also, the connection to EMPG is something that may evolve as States gain experience with Project Impact, however, given the unique relationship between FEMA and the communities, that linkage is probably premature at this point.

—*Under Section 204, NATURAL DISASTER MITIGATION ZONES.*—FEMA supports the substantial damage rule and acknowledges that communities often do not adequately enforce this requirement. To combat this lack of enforcement, FEMA has developed a variety of mitigation tools to help communities better implement the substantial damage determinations and provides homeowners with Increased Cost of Compliance flood insurance coverage, as well as other forms of financial assistance. At the same time, there are sanctions currently in place for communities that fail to enforce this rule. Currently, a community that does not enforce the NFIP substantial damage rule can be placed on probation or even suspended from the program. While the merits of incentives versus disincentives may be debated for helping communities better comply with the substantial damage rule, it is clear that Section 204 is not the appropriate place in legislation for these measures. It is not the appropriate place because Section 204, as currently written, applies to individual buildings and not to communities; substantial damage determinations are made during the same period of time in which disaster obligations are made, making it difficult to change cost share for a particular disaster; and, consequences for not making substantial damage declarations should apply to all communities and not just those that contain Mitigation Zones.

—*Under Section 204, NATURAL DISASTER MITIGATION ZONES.*—FEMA is concerned about the increased development in high-risk coastal areas and the resulting potential for increased costs for disaster assistance in these areas. While disaster assistance is currently provided to rebuild infrastructure that existed before the disaster, FEMA is reviewing whether rebuilding this infrastructure contributes to a community's willingness to rebuild, and to make unwise investments in high-risk locations. If limitations are to be placed on disaster assistance, however, this should not be done in Section 204 which applies only to Mitigation Zones. The Inspector General also suggests that provisions could be included in the amendments that eliminate flood insurance rate subsidies for secondary homes in high-risk coastal areas. Because subsidies are only provided to buildings that were built prior to the NFIP and not for new construction, this would have little impact on the rate of new development. For fiscal reasons, however, FEMA agrees that it is desirable to reduce the subsidy for second homes and other buildings that are not primary residences. This would, however, be more appropriately handled as part of a more comprehensive legislative package of subsidy reduction proposals that would amend the National Flood Insurance Act. FEMA has proposed legislation, which is currently under OMB review, to phase out this subsidy over a seven-year period.

—*Under Section 204 (a) (3) (C), AVAILABILITY TO THE PUBLIC.*—The Inspector General recommended that maps and services shall be made available to the public for a nominal fee to be established each year by the Director. FEMA believes that this is a proposal worth considering.

—*Under Section 404, HAZARD MITIGATION.*—The Inspector General recommended that Section 404 of the Stafford Act be amended to give specific guidance on property acquisition and relocation projects. While we agree that amendment to the current language regarding property acquisition and relocation assistance may be desirable, we prefer that it be moved to Title II of the

Stafford Act. FEMA has provided the Committee with suggested language for Title II to create uniform property acquisition and relocation project guidelines for all FEMA programs regardless of funding source. This language addresses most of the guidance items provided by the Inspector General. We strongly believe uniform guidance for all programs is important to reduce confusion for participating homeowners and the States and communities that implement our programs.

Further, it is important that any of this type of guidance conform to already existing Hazard Mitigation Grant Program provisions. Being overly prescriptive could preclude other important and effective mitigation measures, such as elevation projects.

—*Under Section 404, HAZARD MITIGATION.*—The Inspector General recommended that the Stafford Act be amended to reduce or eliminate Section 404 hazard mitigation assistance in favor of pre-disaster mitigation funding authority only. FEMA believes that the IG's proposal requires careful review and analysis.

FEMA believes in a two-pronged approach to mitigation: (1) institutionalize preventative planning and measures into daily activities at the community level; and (2) take advantage of the opportunities disaster events provide to reconstruct to higher standards and in safer locations. FEMA is dedicated to focusing attention to mitigation and disaster prevention before disaster strikes. However, it is also critical to seize the opportunities in the post-disaster environment to assist communities in rebuilding stronger and smarter. Section 404 assistance provides these key resources to communities after the devastation of a disaster, enabling them to reconstruct in safer locations and in a sustainable manner.

We have made great strides in improving the effectiveness and efficiency of the Hazard Mitigation Grant Program. Through our coordination with both the Inspector General and General Accounting Office, we are better able to assess and manage program effectiveness on an ongoing basis. Through our Managing State pilot initiative, we are working with States to devolve more authority and responsibility to capable States. The Stafford Act amendments support this approach. With the Inspector General's assistance, we evaluated each of the three pilot States twice. All demonstrated a high level of capability and professional, effective program management.

—*Under Section 406(c), LARGE IN-LIEU CONTRIBUTIONS.*—We believe this is an incorrect citation. The Stafford Act amendments propose to reduce the Federal contribution for Large In Lieu Contributions from 90 percent of the Federal share to 75 percent. However, the provision which the IG is addressing is not in the statute but contained in the regulations at 206.226(d). This section provides that when damages to a facility are more than 50 percent of replacement cost, the facility is eligible for assistance for full replacement. The IG would like to see this threshold raised to 75 percent. The 50 percent threshold is consistent with the substantial damage threshold of the NFIP and is also the industry standard for code upgrades. Given that three-quarters of our disasters are flood disasters, it is important to maintain consistency among FEMA programs.

—*Under Section 406(e), ELIGIBLE COST.*—The IG proposal is to specify in law the meaning of current applicable codes . . . to mean those codes in effect at the time of the disaster. In as much as we have recently (February 1999) made the same provision in our regulations at 206.226(b)(3), we have no problem with this proposal.

—*Under Section 408, TEMPORARY HOUSING ASSISTANCE.*—The IG suggests amendments to the Stafford Act which are at variance from those proposed by the Administration and endorsed, with only slight differences, by the House in HR 707. The IG's proposal requires further review and analysis. We are concerned, however, that the proposal could lead to delays in disaster assistance.

Programmatic Comparison.—The IG recommends changing Section 411, to "authorize" FEMA to provide assistance directly to individuals or families. This would seem to create an approach in which FEMA would be spending State funds. All FEMA accounting, auditing and grant management systems are set up for the purpose of the Federal government to monitor and oversee state implementation of Federal grant programs. The concept of federalism in which Federal money is provided to States to spend is well established. This proposal runs counter to these accepted norms of federalism. In addition, since the IG program does not fundamentally change the structure and makeup of these programs, the existing problems of providing two checks through two separate eligibility determination processes remains.

The approach to modification of the individual assistance authorities proposed in the Administration bill is the result of a carefully crafted plan to rationalize these

programs, improve their effectiveness, and eliminate confusion and frustration on the part of disaster victims. One of the common concerns voiced by disaster victims is the confusion created by the array of programs and agencies they must deal with to access assistance. For example, in most cases a victim will deal with FEMA for housing assistance, and then be referred to either the State for IFG, or to SBA for a loan. Many people referred to SBA are subsequently referred to the State, if their loan application is rejected due to their economic means.

We believe that one of the most useful steps we can take to improve governmental services, and to reduce the stress on disaster victims created by this system is to reduce the number of agencies a victim has to deal with, and to reduce the number of different sets of rules under which governmental assistance is administered. Our solution is to combine the temporary housing program and the Individual and Family Grant program into one uniformly administered human needs program that covers uninsured real and personal property losses. This will allow all assistance decisions to be made simultaneously and expeditiously, and with no confusion as to which program will pay for what costs (as it is now, IFG can pay for personal property as well as some real property costs. An IFG eligible applicant, therefore, could get real property repair assistance from both programs, for different parts of the house.) A combined program would allow the creation of a uniform set of rules and eligibility criteria, and would allow applicants to get the sum of assistance for which they qualified in one payment.

Since the IFG program is currently based upon the lack of repayment ability for a low interest SBA loan, we determined that this concept should be carried over into the new combined program. We believed this would be possible because of the great strides that SBA has made in accelerating their loan approval and streamlining their application process. Our primary intent was to find a way to improve program delivery in a manner that was cost neutral. We believed that requiring those that can afford to repay a loan to take out a loan is good public policy, reserving grant assistance for those that truly cannot recover without it. We anticipated that this provision would offset the cost increases due to the elimination of state participation in funding of the IFG Program.

If the combination of these two authorities into a single, integrated human needs program were only cost neutral, we believe it would be a significant improvement over the current system. We believe firmly that it will result in measurable simplification of the process and measurable improvement in the speed of delivery and effectiveness of assistance to disaster victims.

The net effect of the Administration proposal is that, while the same amount of SBA disaster loan indebtedness will be created, it will be offset by improved effectiveness and efficiency of assistance for those victims that really need it and a reduction in cost to the State. The IG's proposal does nothing to improve service to disaster victims.

—*Repeal Section 417, COMMUNITY DISASTER LOANS.*—The Inspector General recommended repealing the Community Disaster Loans section of the Stafford Act and replacing it with a grant program. FEMA had proposed eliminating the program but agrees with the Senate that a \$5 million cap was more appropriate. The cap will allow the program to return to its purpose of helping small communities, through limited loans rather than uncapped grants, to recover their tax base while maintaining services. Under this limitation, recent loans such as those to the Grand Forks, ND School District would still be available.

STREAMLINING DISASTER FIELD OPERATIONS

Question. Director Witt, I understand you are looking at initiatives to streamline disaster field operations, including developing 3 levels of disasters, utilizing standardized staffing templates, and State management of small disasters. Can you describe this initiative in more detail, the cost-savings which could be achieved, whether legislation is needed, and your timeline for implementation?

Answer. During the past seven years since I joined FEMA, both FEMA and the States have been working hard to improve both our disaster response and recovery capabilities and our delivery of disaster assistance. While we can be proud of our increased capabilities to respond to disasters, we continually work toward streamlining disaster operations to achieve more cost-effective, timely service in all disasters. Each of the initiatives listed below are being performed within our current statutory authorities. Cost savings may be realized by the increased efficiency promoted with each of these initiatives.

Developing 3 Levels of Operational Responses to Disasters

FEMA is developing three levels of operational responses to disasters. In June 1998, FEMA published the "Disaster Levels, Classifications and Conditions Job

Aid”, which lays out our three levels of operational response. These levels of operational response are similar to how the U.S. Forest Service classifies incidents by the complexity of the response, such as Type 2 and Type 1. At FEMA, we have three levels of operational response. In order of complexity, from least to greatest, they are:

- Level III—Minor.*—An event/incident involving minimal levels of damage, which could result in a Presidential declaration of an emergency or a disaster. Some Federal involvement may be requested by State and local jurisdictions, and the request will be met by existing Federal regional resources.
- Level II—Moderate.*—An event/incident involving moderate levels of damage, which will likely result in a major Presidential disaster declaration, with moderate Federal assistance. Federal regional resources will be fully engaged, and it is possible that other Federal regional offices outside the affected area may be called upon to contribute resources. Select national resources may also be utilized.
- Level I—Massive.*—An event/incident involving massive levels of damage, with severe impact or multi-State scope. This level of event will result in a Presidential disaster declaration, with major Federal involvement and full engagement of Federal regional and national resources.

For the most part, categorizing the magnitude of an event and the resultant level of Federal operations is an evaluative tool that assists the Federal Government in preparedness activities, and aids in the evaluation and selection of appropriate resources during the disaster. The magnitude and impact of an event may change over time during the course of operations. As a result, the categorization of events and levels of operational response is a dynamic activity that occurs as part of the monitoring and assessment activities that occur continually during each emergency management phase.

Disaster Staffing Templates

The purpose of the Disaster Staffing Templates is to serve as a planning tool to aid disaster managers in staffing disaster operations more efficiently, by providing a baseline staffing range. The templates are based upon the three operational response levels, as well as the scenario in which FEMA is responding: for example, hurricanes, earthquakes, tornadoes, floods, and weapons of mass destruction. The templates will provide a baseline staffing range of numbers of employees by functional program area for the Emergency Response Team, Advance Element (ERT-A); the first 72 hours of initial operations; 24-hour operations, if required; and continuing operations until the functional program area reaches its peak staffing. These templates will assist managers in determining what baseline personnel resources they need to deploy, and then managers will be able to augment or deactivate personnel as the situation warrants.

State Management of Small Disasters

We believe that many States are capable of managing small public assistance disasters, and are now working with States to develop a concept of operations and an implementation plan. This initiative would allow States, not FEMA, to assume primary responsibility for managing their disaster recovery operations. Participation in the program will be voluntary. We do anticipate some savings to result from streamlined operations (fewer FEMA staff and lower administrative costs), though we would expect to pay the State for reasonable management costs. It is too early at this point to project exactly what the savings will be. We plan to pilot this initiative this summer, with full implementation targeted for October 1, 2000.

FLOOD MAP MODERNIZATION

Question. FEMA is proposing a new \$12 licensing fee to finance the flood map modernization initiative. Can you explain why this proposal is an improvement over the settlement fee that FEMA proposed last year? How and on whom will this \$12 fee be assessed, and does FEMA anticipate that it will be passed on in its entirety to the prospective homebuyer? Please provide the basis for the \$104 million estimate in revenue estimated for fiscal year 2001. What is FEMA’s current estimate for the modernization initiative, and what is the basis for that estimate? What is FEMA doing to collaborate with other agencies including NASA and the Corps of Engineers to maximize existing federal resources and reduce the total price tag for this effort? How will mapping activities be prioritized?

Answer. The new fee proposal differs from last year’s Mortgage Transaction Fee in three significant ways. First, this year’s fee is a true user fee to be imposed on an industry that depends on FEMA-generated flood maps. Unlike last year’s fee, the flood map license fee would charge the flood hazard determination industry, which

profits from the commercial use of FEMA's flood maps. Second, lenders would not need to establish an accounting mechanism to track the fee since the new fee would likely be added to the existing fee charged to lenders by map reading service providers. Third, the Map License Fee would apply to use of the standard flood zone determination form regardless of whether the mortgage is federally regulated. The Map License Fee will be assessed on the commercial use of the maps pursuant to the National Flood Insurance Act requirement for mandatory flood insurance determinations. Non-federally regulated mortgage transactions often involve completion of the standard flood zone determination form because these loans are often sold on the secondary market, which require flood zone determinations. Fourth, the Map License Fee proposal would likely limit the fee collection activity to those providing map reading services. Thus, the current proposal affects less than 300 firms, compared to the thousands of lenders that would have been impacted by the Mortgage Transaction Fee proposal. This should greatly reduce administrative expense overall, and make the collection process administratively less complex than last year's proposal. The changes reflected in the new proposal were made to address concerns raised by lenders over the Mortgage Transaction Fee proposal.

In addition, map reading service providers realize special benefits from the flood mapping program in that they use the maps for commercial purposes but only pay for a portion of reproduction and distribution costs, which amount to less than 2 percent of the cost of producing a flood map. Map modernization will allow service providers to do their jobs more precisely, consistently, and efficiently. It is uncertain whether the fee would be passed on in its entirety to the prospective homebuyer, but it seems likely that it would be, just as other expenses in the mortgage process are passed on to borrowers. Property owners significantly benefit from the use of accurate flood hazard data, because these data are used to make decisions on protecting the investment in a property.

The \$104 million in revenue estimated for fiscal year 2001 is based on Home Mortgage Disclosure Act data, available on the Federal Financial Institutions Examination Council Web site. These data indicate approximately 12.9 million loan originations in 1998 and 13.8 million in 1999. The percent change in housing starts for 1999, 2000 and 2001 was used to project the percent change in mortgage originations. This projection results in 11.3 million mortgage originations in 2001. This number was multiplied by an adjustment factor of 0.77 to account for some non-federally regulated lenders choosing not to require a flood hazard determination. Thus, the estimate of loan originations generating a license fee would be approximately 8.7 million. That number multiplied by \$12 yields a revenue estimate of approximately \$104.4 million.

The budget finances the \$134 million map modernization effort not only with the map license fee, but also with \$30 million in annual appropriations from the Disaster Relief Fund. This way the taxpayers will also support a mitigation program that benefits the general public through decreased disaster relief spending.

Our current estimate for the modernization initiative is for \$773 million over the period from 2001 to 2007. This figure derives from our projection of mapping needs based on community surveys conducted through July 1999. We project that 20,500 map panels (4,100 communities) need flood data updates; 60,800 map panels (12,150 communities) need routine map maintenance and digital conversion; and 13,700 map panels need to be created for approximately 2,700 unmapped flood-prone communities.

FEMA is cooperating with NASA's Jet Propulsion Laboratory, the National Imagery and Mapping Agency (NIMA) and the U.S. Army Corps of Engineers' Topographical Engineering Center (TEC) to develop new technologies for mapping the floodplains.

- FEMA is working closely with NASA and TEC in developing Light Detection And Ranging (LIDAR) and Interferometric Synthetic Aperture Radar (IFSAR) technologies.

- With NIMA, FEMA is cooperating in the development of vegetation penetrating IFSAR at two test sites.

- With U.S. Geological Survey (USGS), FEMA is jointly funding the purchase of digital orthophotos for use with floodplain maps.

FEMA is developing the first working specifications for LIDAR, IFSAR, and LIDAR/IFSAR data fusion. FEMA also maintains active participation in the Federal Geographic Data Committee (FGDC) where standards, processes, products, and technology are shared and leveraged. One example is that we use the USGS orthophoto quadrangles as our base maps.

Development of this type of topographic information and related engineering analyses account for approximately 60 percent of flood study costs. We expect these costs to decline as map modernization is implemented. In the map modernization cost es-

timate, FEMA modeled a declining cost base with a maximum decrease of 20 percent of the unit cost for these study elements beginning in 2005. Also, we reduced the long-term maintenance costs afforded by the remote-sensing technologies and by converting the maps to a digital format.

To inventory and prioritize map update needs, we are updating the Mapping Needs Update Support System (MNUSS) database to include a ranking module. This ranking is based primarily on a benefit/cost analysis, with the primary benefit being reduced flood losses for new structures by designing and siting new buildings based on updated flood data.

COUNTER-TERRORISM

Question. The Nunn-Lugar-Domenici program is a DOD program to train first responders how to address a terrorist CB attack. From its beginning, there was an understanding that this program would transfer to another agency, and it appears it will shift to the Department of Justice. Was there any consideration of FEMA taking over that program given its established expertise in working with state/local government to deliver training and planning on these topics? Should the program shift to FEMA?

Answer. Since the inception of the NLD activity, there has been the suggestion that FEMA would be the best agency to coordinate the overall domestic preparedness program. Under its authorities, FEMA provides grants to the States and eligible local jurisdictions and for the delivery of first responder and emergency management training programs to support their terrorism-related planning, training, and exercise requirements. FEMA could assume the program under certain circumstances, including adequate resources for both manpower and funding a clearly defined leadership role.

Question. In a May 1999 report, GAO was critical of FEMA's exercise program. GAO said that most of the FEMA-led exercises were tabletops that did not involve actual movement or employment of consequence management response elements. GAO also noted that interagency exercises generally did not simulate crisis management and consequence management concurrently, yet both would occur simultaneously in an incident. Have FEMA and the other agencies made progress in these areas?

Answer. In responding to a terrorism event, FEMA will use the structures of the Federal Response Plan to implement its lead agency responsibilities for consequence management. The Plan is used in real-world situations literally dozens of times a year, and many of the same capabilities and resources will be used in a terrorism response. FEMA-led exercises up to this point have emphasized the differences from the typical natural disaster situation and focused on tailoring the response to meet those needs.

FEMA has also participated in a number of interagency exercises where both crisis and consequence management issues have been addressed. With the upcoming TOPOFF exercise scheduled for May 2000, FEMA and other agencies will have another opportunity to exercise concurrent crisis and consequence management scenarios.

Question. FEMA's request represents an increase of \$5.9 million and 19 new workyears, for anti-terrorism/weapons of mass destruction (WMD) efforts. Please provide a detailed description for the record of how these new resources would be used.

Answer. With the increasing effort of the Federal government to help build and sustain a viable preparedness and response capability at the local, State and Federal levels of government, a total of (31) work-years are requested in fiscal year 2001 to support the Agency's terrorism-related programs and activities. This includes an increase in the level of effort of (19) work-years to fully support programs and activities at Headquarters and in the ten Regional Offices around the country. A list of the key activities to be accomplished with this increased level of effort includes the following:

FEMA Headquarters

Coordinate the overall FEMA involvement in terrorism-related preparedness and response activities in coordination with the Department of Justice, other Federal departments and agencies, the Congress, and the States.

Undertake terrorism-related planning and operational response enhancements under the interagency Federal Response Plan framework.

Support special events planning and preparedness, including support for the 2002 Winter Olympics in Salt Lake City, Utah.

Develop and implement the time-phased force package concept to provide expedited logistical support for the deployment of critical response resources.

Establish an initial group of six Urban Search and Rescue (US&R) Task Forces with the capability to operate in contaminated environments.

Update and maintain the Rapid Response Information System (RRIS).

Provide grants and guidance to the States to support terrorism-related planning, training and exercises.

Deliver and revise courses in the Emergency Response to Terrorism curriculum, develop terrorism scenarios for the Incident Simulations Lab and provide instructor training to support the delivery of terrorism-related courses for fire and emergency services.

Deliver and revise exercise-based courses, including the Integrated Emergency Management Course on the Consequences of Terrorism.

Support terrorism-related exercises, including a major consequence management exercise, conduct of tabletop exercises, and support for other Federal terrorism exercises.

Provide support for the development of terrorism-related materials to support Congressional and legislative affairs activity.

Conduct emergency public information planning activities to keep the public informed during a terrorism incident.

Develop and disseminate terrorism-related policy regarding terrorism-related programs and activities.

FEMA Regional Offices

Support terrorism-related planning, training and exercise activities in coordination with other regional-level offices of Federal departments and agencies.

Administer and manage the terrorism consequence management grant assistance program to the States in support of terrorism-related planning, training, and exercise activities.

Work with the States to help ensure that terrorism-related plans and capabilities are developed and available for response.

Serve as the primary FEMA conduit to the States to keep them informed of Federal initiatives and activities.

Support continuing implementation of the Nunn-Lugar-Domenici Domestic Preparedness Program activities.

Maintain an interagency forum to support Federal coordination of terrorism-related preparedness activities, in conjunction with other departments and agencies and the States.

FIREFIGHTER GRANT PROGRAM

Question. FEMA is requesting \$25 million for a new grant program for firefighter equipment in needy communities. What is the rationale for this program, and how does it relate Forest Service's fire assistance program that provides equipment to local fire departments? Was this program recommended by the Blue Ribbon Panel report of October 1998? Are there higher priority activities recommended by the Panel that FEMA has not implemented or requested funding for?

Answer. The rationale for the proposed \$25M Firefighter Health and Safety Grant Program is to enhance firefighter health and safety because fire fighting continues to be one of the nation's most dangerous professions. In 1999 alone, more than 100 firefighters lost their lives while on duty. In addition, approximately 90,000 firefighters are injured on the job each year. As fire departments are being called on to provide an ever expanding and more complex array of skills such as services related to hazardous materials, search and rescue, emergency medical, and counter terrorism, local governments and fire departments are encountering severe budget challenges. A federal firefighter health and safety grant program will allow financially challenged jurisdictions and fire departments to address issues that could contribute to a safer and more efficient working environment for the firefighter and safer communities for the American people.

We understand that the Forest Service Volunteer Fire Assistance (VFA) Program is available only to small rural communities, is focused on operational firefighting and includes a 50/50 matching fund requirement. The proposed FEMA program targets firefighter health and safety and is available to needy departments in communities of all sizes. In addition, the proposed program has a broad focus and is designed to include training, staffing, equipment and wellness programs. FEMA's United States Fire Administration will administer the program at the national level and grants will be made directly to the needy departments. The VFA program is managed through the State Foresters, and the criteria and administration may vary by State.

Recommendation #31 of the Blue Ribbon Panel of October 1998 report calls for ". . . the creation of a federal grant/local matching program to enable fire/EMS de-

partments to acquire training resources, new technology, specialized equipment and safety resources.” Since the fire problem in the United States is multifaceted, we are unable to determine if there are higher priority activities that should be addressed first. However, three major fire service organizations that were represented on the Blue Ribbon Panel have consulted on the development of the proposed grant program for 2001. These groups are the International Association of Fire Chiefs, the International Association of Fire Fighters, and the National Volunteer Fire Council.

DISASTER RELIEF FUND ESTIMATES

Question. Last year FEMA did not accurately identify existing funding needs for disaster relief, and it came to the Subcommittee’s attention in May that the agency had underestimated projected spend-out rates resulting in a shortfall of almost \$1 billion. The need for this supplemental funding was due in part to a problem with the budget methodology that FEMA was using, which did not take into account the fact that FEMA had been obligating disaster dollars at a much faster rate than it had been historically. What steps has FEMA taken to revise its budget methodology, and how is FEMA monitoring the needs associated with the Disaster Relief Fund to better ensure that it is using appropriate rates for estimating?

Answer. Around the 15th of each month, FEMA submits a report to the appropriations subcommittees on the status of the Disaster Relief Fund (DRF) as of the end of the previous month. This report shows availability, actual obligations, unmet requirements for disasters that have occurred to date as well as a projection for disasters in the remaining months, an estimate for obligations during the remainder of the fiscal year, and estimates for requirements and obligations in the next fiscal year. Prior to last April’s report (submitted on May 20), FEMA used one consolidated formula to predict obligations for the remainder of the fiscal year. This formula, based on 5-year averages with adjustments for Northridge, consisted of the following:

- 58 percent of total current year requirements, including the projection for disasters in remaining months, adjusted for obligations to date;
- 52 percent of total requirements as of the beginning of the fiscal year from all prior year disasters, adjusted for obligations to date and Northridge;
- estimated Northridge obligations for the remainder of the fiscal year; and
- unobligated funds budgeted for disaster support.

Starting with the April 30 report, FEMA decided to break out obligation estimates for the remainder of fiscal year 1999 into the various components in order to better reflect the activities of the disaster close out teams who were concentrating on those disasters that occurred prior to 1998. When this was done, it became very obvious that the amount forecast for 1999 obligations from all prior year disasters, particularly 1998 declarations, was inadequate and that the shortfall in projected obligations had been masked by using a single formula. FEMA then refined the methodology used for estimating obligations. In this April 30 report, the amount of obligations forecast for the remainder of the year for prior year disaster declarations was changed as follows:

- for 1989–1997, 95 percent of total requirements as of the beginning of the fiscal year, adjusted for obligations to date and Northridge; and
- for 1998, 65 percent of the total requirements as of the beginning of the fiscal year, adjusted for obligations to date. During the remainder of fiscal year 1999, obligations from the 1998 disaster declarations continued to increase at an unprecedented rate. Each month FEMA continued to increase the percentage for obligations from 1998 declarations until the percentage used in the August 31 report reached 86 percent.

For current year disasters, FEMA developed separate percentages for disasters that had occurred and estimates for disasters during the remainder of the year. These percentages were based on 1997 and 1998 actual obligations for declarations in each month versus total projected costs for those disasters. As each month of the fiscal year goes by, these percentages either remain the same or decrease. For the April 30 report, these percentages were as follows:

- 70 percent for disasters that had occurred to date; and
- 40 percent for estimated requirements for the remainder of the fiscal year.

For the fiscal year 2000 reports, FEMA added 1999 actual data into percentages used to project obligations from current year disasters on a monthly basis. In addition, FEMA revised percentages used for prior year data in the fiscal year 2001 section of the monthly report. The percentage used for obligations forecast from 2001 declarations remained at 58 percent of requirements in the first year of a disaster.

FEMA continues to monitor its estimates for obligations for reasonableness. However, forecasting disasters and projecting when obligations from these disasters will

occur remain inexact sciences, at best. One very real variable in the estimates continues to be the lack of a discernible pattern when disasters occur. FEMA projects remaining requirements for disasters based on the remaining weeks in the fiscal year pro rated against the five year average obligations for disasters. For both fiscal year 1998 and 1999, the bulk of requirements from disaster declarations did not occur until September. In other years, the big disaster or disasters have occurred earlier in the year (most notably the Northridge earthquake in January or even the Loma Prieta earthquake in October). Also, projections in the early stages of large disasters tend to vary, making it more difficult to forecast obligations. Nevertheless, FEMA continues to explore ways to improve its ability to forecast requirements and obligations from disasters.

ACCURACY OF DISASTER COST DATA

Question. GAO has found potential problems in the obligation data provided to FEMA's Regional Offices for use in preparing the Quarterly Disaster Financial Status Report. This report represents the ongoing record of the financial status of each major disaster by program. The quarterly reports get compiled into a national database which forms the basis for FEMA's estimate of total federal remaining costs for each open disaster, as well as FEMA's budget submissions and other congressional reports. Obligation data errors cause inaccurate calculations in a disaster's total estimated federal costs and the remaining costs. What steps has FEMA taken to identify the source(s) of data errors, and why did FEMA fail to correct these data errors when it first became aware of them? What actions has FEMA taken to ensure that future Disaster Financial Status Reports are correct? To what extent have errors in the Disaster Financial Status Reports impacted FEMA's budget submissions?

Answer. FEMA is taking a number of actions to ensure that obligation data, and the resulting projected and remaining cost data, are accurate. One of the first steps was to identify exactly why the obligations data used for the Disaster Financial Status Report (DFSR) did not always agree with data from other automated and manual systems. The cause of some of the reported differences was due to comparing data generated at different times (timing differences). The cause of the other discrepancies, however, was much more difficult to determine. Identifying which data was inaccurate (i.e., the data extracted from the Integrated Financial Management System (IFMIS) for the DFSR, or the data the regions use from various systems) was a time consuming and labor intensive task that required looking at transactions and records for over 500 major disaster declarations, 280 fire suppression agreements, and 60 emergencies totaling almost \$28 billion over 11 years and spread across nearly 200 object codes and 350 organization codes. We recently isolated the problem and began an extensive review of the methodology used to extract the obligation data from IFMIS. A new method was developed and is being rigorously tested. So far, it appears the new methodology is generating accurate obligation data.

Last summer FEMA began intensive work on a new system to collect projected costs. Recognizing the limitations of the electronic spreadsheets used for the current DFSR, FEMA began developing a new system using the Agency's standard Microsoft Access Database software. The new system will give regional personnel more time to review and analyze the validity of the data by freeing them from much of the data entry work, implement certain business rules to ensure the validity of data when it is entered rather than relying on subsequent reviewers to identify problems, and improve the timeliness of the data so that errors are more apparent.

As the new system is introduced to the regional offices, Office of Financial Management personnel from the Disaster Closeout Teams and the Disaster Finance Center will work side-by-side with regional personnel to reconcile any differences in the obligation data extracted from IFMIS with the various records maintained in the region. Any needed changes will be made to IFMIS or the regional systems. This process started in mid-March at FEMA's Philadelphia Regional Office. The differences that were identified were researched and, for the most part, will require making "adjusting" entries into the regional records. One discrepancy, appeared to be the result of a transaction being entered into the regional records, but not into IFMIS—a problem associated with managing the paper flow rather than the new methodology used to extract the data from IFMIS.

The introduction of the new DFSR will continue region by region and include centralized training at workshops or conferences to familiarize the largest possible number of personnel and further reinforce the importance of accurate data. We plan to visit FEMA's New York and Denton Regional Offices starting in April. After the new DFSR is fielded to all regions, the Disaster Closeout Teams will continue to work closely with the regions and the Disaster Finance Center to identify and resolve any subsequent discrepancies in obligations.

The extract report of obligations, provided to the regions on a quarterly basis, is just one of the tools that the regions use to develop the DFSR. Even though FEMA is still in the process of quantifying the effect of any identified problems in the extract report, the magnitude of errors found to date indicates that any effect on projections of remaining costs and the budget submission is about one percent.

PROBLEMS WITH FEMA'S INTEGRATED FINANCIAL MANAGEMENT INFORMATION SYSTEM

Question. FEMA's Office of Inspector General and the GAO reported on several occasions that FEMA's Integrated Financial Management Information System (IFMIS) lacks the ability to generate the reports necessary to properly manage the Disaster Relief Fund. The preliminary results of an ongoing GAO audit indicate that this shortcoming has contributed to the erroneous obligation data previously mentioned. Specifically, the auditors noted that because of this shortcoming, FEMA must extract and manually manipulate the IFMIS obligation data that the regional offices ultimately use to develop total estimated federal costs for individual disasters. What is FEMA doing to correct this shortcoming in the system's reporting capabilities?

Answer. FEMA acquired the Integrated Financial Management Information System (IFMIS) from the Digital Systems Group in fiscal year 1994, and began implementation in fiscal year 1995. It was selected from the mandated group of commercially available core financial management systems that had been approved by Treasury and the GSA for acquisition by Federal agencies. This approval was granted on the basis of demonstrated satisfaction of government requirements, including reporting requirements. IFMIS has been on the approved list every year since then, and has been approved by the JFMIP under its new process.

For the last six years, FEMA has received unqualified audit opinions on its annual financial statements of which the last two were consolidated Agency-wide statements, which include the Disaster Relief Fund. For the last four years, those statements have been produced based on reports from IFMIS. This suggests, at least, that the data in the system is reliable, even if the "canned" reports do not readily support different management approaches. While the statements on internal control do cite problems with the lack of reconciliations and oversight, the basic reports are not questioned.

IFMIS is a classical funds control and accounts payable system. This is largely acceptable because FEMA manages each appropriation that it controls as if it were a single fiscal year appropriation. That means that we issue new allocations covering only the current budget fiscal year, regardless of whether it is a single or multi-year appropriation. Therefore, the management of all funds is restricted to the current year, not a multi-year effort based on some other element of an accounting coding structure. This is fine for funds control purposes, but it does complicate our ability to report on a consolidated basis over a period of years.

When IFMIS was implemented for the Disaster Relief Fund (DRF), in April of 1996, data was converted from the predecessor systems at current unliquidated obligation balances. This is what was required to be able to assess available allocations, obligated balances and evaluate the propriety of additional payments, which was adequate for most of FEMA's appropriations. Even at that, several million transactions had to be converted to IFMIS. However, even this level of detail was insufficient to provide historical information required for reporting purposes from the DRF.

Over the years, we have refined our approach to capturing data to support the necessary Disaster Relief Fund reporting requirements. We have built history records in IFMIS to support the balances that were converted from the predecessor systems. We have had several task forces that attempted to reconcile all the varying sources of data used by Headquarters, the Regions, and others. However, we have not always modified our approaches to capturing data and reporting it for the DFSR. We feel that the "new" method for extraction of data mentioned above for the DFSR will satisfy the current requirements.

Data will continue to be extracted from the production IFMIS database in order to put it into an environment that allows for "what-if analysis" and projections for events that do not yet constitute accounting transactions. These activities are not appropriate for an official accounting environment. However, it is expected that the manual manipulation previously required to move obligations from one column to another for the DFSR will no longer be required. It occurred previously due to shifting definitions of object classes or the addition of new object classes that did not fit the previous columnar structure of the DFSR.

PROBLEMS WITH DATA TIMELINESS IN DRF

Question. Because FEMA information systems cannot provide data on the total estimated federal costs of each disaster, the agency must rely on its Regional Offices to update the Quarterly Disaster Financial Status Report with those estimates. Also, because FEMA information systems cannot provide data on obligations to date by program for each disaster, the data must be extracted and manipulated before it is forwarded to the Regional Offices. We understand that, as a result of the time needed to extract, manipulate, and ship that data to and from the Regions, the Disaster Financial Status Reports may contain obligation data that can be, at times, three months out of date. What actions can FEMA take to reduce this delay in order to obtain and report real time data?

Answer. The FEMA Chief Financial Officer (CFO) established the current Disaster Financial Status Report (DFSR) reporting process in December 1995. The quarterly submission dates were timed to provide a "snapshot" of the status of disaster funding estimates (projections) and remaining costs (projections less obligations "as of" the report period) at critical points in FEMA's budget development (e.g., submissions to OMB and Congress and for appropriations hearings). In order to reduce a reporting burden on the regions, and to allow for more in-depth analysis, the CFO determined that quarterly reports were sufficient for budget forecasting. However, the projections are updated with estimates for new declarations that occur between the quarterly reporting periods.

The regional disaster program officials, Federal Coordinating Officers, and Regional Directors are ultimately responsible for estimating what a given disaster will cost over the life of that disaster. No agency information system could automatically calculate those costs without field office input, and the input must come from the officials who manage the disaster. The regions maintain an ongoing record of their projection data using an Excel Spreadsheet, which they forward to Headquarters for compilation into a national database (i.e., DFSR) for reporting purposes. The obligations data sent from Headquarters is but one tool that the regions use to calculate their projections and remaining costs. The regions primarily use program data available to them to develop their cost estimates for the major disaster program activities, i.e., Public Assistance, Individual Assistance, Individual and Family Grant, and Hazard Mitigation programs. The CFO relies on the regional program expertise to develop the cost estimates, and the DFSR process provides the reporting mechanism for the regions to compile disaster estimates for all program and administrative costs.

Last summer, the CFO's office began an intensive effort to correct identified shortcomings in the current DFSR reporting process. The process is time-consuming and susceptible to human error. The agency has developed a user-friendly version of the DFSR using Microsoft Access. This new system will rely on a shared database extracted from IFMIS and maintained in a central location. The regions will be given password-protected access, based on need, to make modifications to the central database. The new system will allow the regions to utilize the tool at any given time, and will facilitate the reconciliation of any data discrepancies between the regions and headquarters. With the simplicity of the new system and improved analytical tools, the Agency plans to maintain the DFSR on a monthly basis, which will lead to a more frequent updating and analysis of disaster cost estimates. The Agency plans to field the new system, in a pilot status, with selected regions beginning in May 2000.

DRF SET-ASIDES PROPOSED

Question. FEMA proposes two new set-asides within the disaster relief fund: \$30 million for flood map modernization and \$50 million for repetitive loss property buyouts following disasters. Please describe the rationale and the authorization for these set-asides. Will the repetitive loss buyouts be limited to flood-insured properties?

Answer. Under FEMA's current Stafford Act authority, DRF money may be used only to generate flood recovery maps to support hazard mitigation activities following a flood. This includes collecting field data, conducting engineering analyses, and preparing flood maps for community use; it does not include updating the Flood Insurance Rate Maps (FIRMs).

We have asked that our authority under the Stafford Act be broadened to allow DRF monies to be used to develop up-to-date, modernized FIRMs, fully compliant with National Flood Insurance Program requirements, for areas affected by Presidentially declared disasters. Developing flood recovery data to support hazard mitigation activities within the present authority has a supplementary benefit in that these flood recovery data comprise a significant portion of the effort necessary to up-

date and modernize the FIRMs. The requested authority would allow the remainder of the work also to be completed under the DRF.

In the immediate aftermath of a flood, field data (e.g., high water marks, physical conditions) would be collected and engineering analyses prepared. These would be provided to the community so that rebuilding activities, and also future new development, could be based on the most accurate, up-to-date data. Further, it is imperative that higher flood elevations than those adopted by the community be formally acknowledged so that they can be incorporated into existing floodplain regulations. The information is also used to identify potential hazard mitigation projects and to conduct benefit/cost analyses for mitigation projects.

DRF funding, in addition to other funding sources, is appropriate because:

1. The flood recovery scenario provides a unique opportunity, outside the normal flood map update and prioritization process, to gather data that exist for only a short time after the floodwaters subside.

2. In the immediate recovery environment, those that have suffered property losses are anxious to rebuild their homes as quickly as possible. Thus, there is a limited window of opportunity to gather the data, provide these property owners with updated flood data and positively guide their rebuilding design decisions.

3. Existing funds cannot be reprogrammed quickly enough to respond to post-disaster needs. Planned contracts have already been funded, and the DRF will provide needed flexibility to develop data for disaster-affected areas.

Using DRF funding also makes funding of flood hazard data collection and analysis more equitable. Through DRF funding, all taxpayers will participate in the costs, which is appropriate because all taxpayers will benefit through the long-term reduction of disaster costs.

The \$50 million authorization to mitigate repetitive losses would be directed at National Flood Insurance Program (NFIP) insured properties following disaster declarations. FEMA has identified 10,000 repetitive loss buildings that have the greatest risk of flooding and which account for about \$65 million in NFIP claims annually. These properties have either four or more losses or have two to three losses that when added together exceed the building's value.

The \$50 million will fund the acquisition, relocation, elevation, of approximately 1,160 of the 10,000 repetitive loss buildings that FEMA has identified as having the greatest risk.

MITIGATION ISSUES

Question. Last August, GAO issued a report on opportunities for FEMA to improve cost-effectiveness determinations under the Hazard Mitigation Grant program. FEMA agreed with the report's recommendations and noted that they complement activities already under way at the agency. What specific actions have been taken to implement each of the recommendations in the GAO report? What is the status of the independent study the Subcommittee called for to assess the future savings resulting from the various types of mitigation activities?

Answer. The GAO report made three recommendations.

First, that "the Director of FEMA should establish an analytical basis supporting the cost-effectiveness of acquiring substantially damaged properties in the floodplain". This is related to the Agency's policy of exempting from benefit-cost analysis structures that meet certain criteria. In September 1999, FEMA completed a study of approximately 2,000 such structures nationwide, about ten percent of the total number of acquisitions the Agency has funded. Analysis of structures included in the study produced a benefit-cost ratio of 2.21. This means that, for the sample, an expenditure of one dollar is expected to produce \$2.21 in savings. The study found that some individual properties were not cost beneficial, but the projects in the aggregate were. Since the study was completed, FEMA has also issued a memorandum asking regional offices to provide data for all projects of 50 or more structures that meet the exemption criteria so that more studies can be done.

Second, the GAO recommended that FEMA conduct periodic reviews of projects after they have been implemented to determine if they are cost-effective. In response to this recommendation, FEMA has begun studies of projects funded in three categories of projects that are now exempt from benefit-cost analysis: those funded through the "5 percent Initiative" and the "Tornado" and "Planning" exemptions. One study includes the first two categories. It will be completed by the end of August 2000. The results will be provided to the GAO, Congressional oversight committees and the FEMA Inspector General.

For the "Planning" projects exemption, the FEMA Office of the Inspector General and the Mitigation Directorate are engaged in a joint study that will evaluate the overall effectiveness of local mitigation planning initiatives funded by the Hazard

Mitigation Grant Program (HMGP) and Flood Mitigation Assistance (FMA) program. This study will assess the quality of mitigation projects completed in the context of comprehensive mitigation plans, and determine how planning can contribute to the efficiency of disaster recovery operations. We expect this study to be completed by December, 2000.

Third, the GAO recommended that FEMA should “provide the best available data for analyzing the cost-effectiveness of proposed flood hazard mitigation projects” by conducting post-disaster hazard identification and by making the Agency’s data on past insurance claims more readily available to analysts. As noted in FEMA’s initial response to the recommendations (in the “60-day Letter”), the Agency has two initiatives underway in the area of hazard identification, the Map Modernization Program and the Cooperating Technical Communities (CTC). Both of these are ongoing, long-term projects. In the area of claims data, the Agency made the Federal Insurance Administration’s claims data available to FEMA employees on a web site in summer, 1999. The Headquarters Mitigation Directorate issued a memorandum to all its regional offices informing them about the web site. This was done in February, 2000.

SUBSTANTIAL DAMAGE RULE

Question. The IG reported in a September 1999 report that NFIP communities were not effectively identifying potentially substantially damaged structures. Only 106 structures were declared in a sample of 603 structures identified as substantially damaged using insurance claims data. As a result, mitigation efforts (e.g., the requirement to meet codes and standards) were not taking place. What is FEMA doing to help NFIP communities do a better job identifying substantially damaged properties and enforce the substantial damage requirement?

Answer. Along with providing ongoing technical assistance and monitoring NFIP community compliance both in the pre- and post-flood disaster environment, we have a variety of tools to improve enforcement of the 50 percent rule. The role of the community is critical to the enforcement of the 50 percent rule because the authority to regulate floodplain development rests with the local government. Claims data is just one tool that we offer communities to assist them in identifying possible substantially damaged buildings. There may be legitimate differences between what the communities determines as the cost of repairs and market value compared to claims data values.

Post-Disaster Guidance

FEMA’s regional staff undertake a multi-faceted, multi-phased response to provide technical assistance to NFIP communities to ensure they have the necessary tools and guidance to administer their floodplain management ordinance and to ensure that citizens with flood-damaged buildings are protected in the future. This assistance includes:

- Initial telephone contacts with local officials in the immediate disaster response period.
 - One-on-one meetings and/or workshops with local officials and workshops to provide detailed guidance and training on the substantial damage requirement.
 - Opening Disaster Recovery Centers to provide assistance to the general public on retrofitting techniques and on the available mitigation programs.
 - Locating Mitigation staff in the Disaster Field Office to provide ongoing technical assistance throughout much of the recovery period.
 - Extensive public outreach on our mitigation programs and on mitigation success stories to the general public through press releases, FEMA’s web site, and through special events including those sponsored by the State or communities.
- We have specialized tools that we provide to local officials and assist them in their use during the recovery period to help them identify substantially damaged buildings:
- Training on the use of the Residential Substantial Damage Estimator, a computerized program to help communities estimate building value and damages.
 - Preliminary Damage Assessment forms, completed by insurance adjusters during the initial adjustment process provide an estimate of building value and damages on individual buildings. We will be implementing procedures this spring to provide this information more efficiently to local officials.
 - Implementing this spring a “Quick Claims” process that will capture initial contacts from the insured about damages. While the information will not be as detailed as the Preliminary Damage Assessment form, it will provide preliminary information on damages earlier. This information will help communities identify areas that have been damaged.

Financial resources provide opportunities to communities to break the cycle of damage and repair:

- The Hazard Mitigation Grant Program (HMGP) available following a Presidentially declared disaster.
- The Flood Mitigation Assistance program which provides pre-disaster mitigation assistance.
- Since June 1997, the \$15,000 Increased Cost of Compliance (ICC) coverage for insured buildings that have been determined by the community to be substantially damaged. This past year we have been assessing this coverage and making appropriate adjustments, including increasing the amount of the coverage to \$20,000 effective May 1, 2000. We will be implementing several activities to improve training and education on ICC, outreach and marketing of ICC, especially to the policyholder, local officials, and the adjuster, and operational processes to ensure ICC is integrated into the disaster operation and used effectively to complement the HMGP.

Pre-Disaster Guidance

FEMA conducts extensive training on the NFIP floodplain management requirements, including the substantial damage requirement.

- NFIP week long course where over 150 local officials are trained each year.
- Numerous workshops for hundreds of local officials throughout the country.
- Recently deployed Independent Study course, which includes detailed guidance on making substantial damage determinations.

FEMA has published extensive guidance on the substantial damage requirement and on retrofitting flood damaged property including: “Answers to Questions about Substantially Damaged Buildings” and a new “Homeowners Guide to Retrofitting”.

FEMA and State Floodplain Management Coordinators also conduct hundreds of Community Assistance Visits (CAV) each year, which is a scheduled visit with individual communities to assess their floodplain management program and to provide guidance and assistance in implementing effective mitigation measures. A CAV is generally conducted in communities that experienced a flood disaster several months after the event to assess the community’s effectiveness in implementing its floodplain management program in response to the disaster and provide technical assistance if appropriate.

RULEMAKING IMPROVEMENTS NEEDED

Question. In reviewing the public buildings insurance rule, GAO found some significant shortcomings in FEMA’s internal rulemaking processes. For example, FEMA hadn’t designated a regulatory policy officer and its procedures governing the formulation of proposed rulemaking hadn’t been updated in a decade. What is FEMA doing to address these internal problems? Please describe for the record how FEMA will respond to each of GAO’s recommendations in the report “Issues Related to the Development of FEMA’s Insurance Requirements.”

Answer. The following are GAO’s recommendations and FEMA’s responses:

GAO Recommendation: The Director should designate a Regulatory Policy Officer as required under Executive Order 12866 and charge that individual with responsibility for being involved at each stage of the rulemaking process

Response: Director Witt appointed the General Counsel as the Regulatory Policy Officer for the Agency on February 29, 2000.

GAO Recommendation: FEMA should update its external regulations and internal written guidance and manuals governing the rulemaking process to reflect the current requirements contained in federal laws, executive orders and OMB guidance.

Response: FEMA’s Office of General Counsel has developed updated regulatory guidance. This guidance is in draft form and is being circulated within FEMA for comment.

GAO Recommendation: The Director should monitor FEMA’s compliance with relevant federal laws, executive orders and OMB guidance governing the rulemaking process.

Response: As a result of constructive dialogue with GAO and OMB, our Regulatory Policy Officer is working to ensure compliance with the relevant federal laws, executive orders and OMB guidance governing the rulemaking process.

NEW HEADQUARTERS LOCATION

Question. FEMA’s budget includes almost \$24 million to begin the process of relocating. Please provide a complete break-out of the budget request, as well as the fiscal year 2002 costs we may anticipate.

Answer. The following shows the breakdown of all the relocation costs (in thousands of dollars). All estimated costs are based upon the top range of square footage allowed, i.e., 339,247 rentable square feet. FEMA has worked closely with the General Services Administration (GSA) in developing these estimates:

Move costs	\$1,414
Office space (telecom) @ 6.94 per square foot (sq.ft.)	1,963
Customization allowance above Tier 3 (build out)	1,130
ADP/Special @ \$17.45 per sq. ft. for 55,150 sq. ft	962
National Interagency Emergency Operations Center (NIEOC)	15,048
Sensitive Compartmented Information Facility (SCIF) area @ \$120 per sq. ft. for 15,000 sq. ft	1,800
Level IV Security Requirements	1,500
Systems furniture (including installation)	5,566
GSA Administrative Fees (fiscal year 2002)	3,077
Total Relocation Project Costs	32,460
Basic security increase (Federal Protective Service) @ .16 per sq. ft. (\$54,280 for new space less \$40,367 for current space)	4
Projected rent increase (projected new rent costs, \$14,587,621 less fiscal year 2000 estimate of \$8,290,000 = \$6,298,000)	6,298
Net Cost of Move	38,772

Of the total costs listed above, the 2001 budget submission includes the following:

[In thousands of dollars]

Office Space (Telecom)	1,963
Systems Furniture/Installation	5,566
Customization Allowance	1,130
ADP/Special Space	962
NIEOC	10,000
NIEOC Furniture	707
SCIF Area	1,800
Level IV Security Requirements (initial)	1,500
Total	23,628

Estimated costs for fiscal year 2002 include the following:

[In thousands of dollars]

Move Costs	1,414
NIEOC Equipment	4,341
GSA Administrative Fee for Project	3,077

Total cost increases other than rent and security¹ 8,832

¹ Projected rent and security cost increases for the new facility total \$6,312,000. If FEMA remains at its current location, lease extension will undoubtedly be at a much higher rate than the current lease (GSA reports that sometimes the rent doubles). GSA suggested that FEMA estimate the lease extension at \$43.00 per sq. ft. for fiscal year 2002. Full year lease extension estimated costs could be as high as \$2,622,308 over current budget. All estimated costs are subject to the GSA procurement process, which could range from best case to worse case depending upon building procured and when the build out is completed.

Please note that the fiscal year 2002 costs are preliminary and may change prior to submission of the fiscal year 2002 budget.

SUBCOMMITTEE RECESS

Senator BOND. I will now recess the subcommittee meeting. Thank you.

[Whereupon, at 10:53 a.m., Wednesday, March 1, the subcommittee was recessed, to reconvene subject to the call of the Chair.]

**DEPARTMENTS OF VETERANS AFFAIRS AND
HOUSING AND URBAN DEVELOPMENT AND
INDEPENDENT AGENCIES APPROPRIATIONS
FOR FISCAL YEAR 2001**

THURSDAY, MARCH 23, 2000

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 9:39 a.m., in room SD-138, Dirksen Senate Office Building, Hon. Christopher S. Bond (chairman) presiding.

Present: Senators Bond, Stevens, Mikulski, Leahy, and Lautenberg.

ENVIRONMENTAL PROTECTION AGENCY

STATEMENT OF HON. CAROL BROWNER, ADMINISTRATOR

ACCOMPANIED BY:

**W. MICHAEL McCABE, ACTING DEPUTY ADMINISTRATOR
MICHAEL W.S. RYAN, ACTING CHIEF FINANCIAL OFFICER**

OPENING STATEMENT OF SENATOR CHRISTOPHER S. BOND

Senator BOND. Good morning. The Subcommittee on VA-HUD and Independent Agencies will come to order.

This morning we take testimony from the Environmental Protection Agency on the administration's fiscal year 2001 budget request, and it is a pleasure to welcome EPA Administrator Carol Browner, Acting Deputy Administrator Michael McCabe, Acting Chief Financial Officer Mike Ryan, and the rest of the EPA team.

We have a great number of issues to discuss this morning, many of which focus on our concern that the EPA is not attending to core management responsibilities.

There are votes at 11 o'clock. I have a feeling that we may not finish up by then, so be prepared to stay with us and we will try to get through as many of them as we can.

Early this month the Inspector General was unable to give EPA a clean opinion of its fiscal 1999 financial statements. According to the Inspector General, EPA failed to provide complete, accurate and reliable information by the agreed upon dates. Moreover, none of the recommendations made by the IG 1 year ago to improve financial management at EPA have been fully addressed.

What does that actually mean? It means the government auditors could not even issue a judgment on the condition of EPA's

books, as in how much money was spent, for what purpose, who spent it, what did it do.

I am very much concerned about the Agency's sloppy financial management practices and whether they exemplify a systemic problem where Agency leadership does not seem to rank sound management procedures very high. EPA's unwillingness to make a priority of critical management challenges, many of which have been cited by the Inspector General and GAO for years, such as protecting EPA's computer system from hackers, effective oversight of billions of dollars in grant funds, and improving the reliability of data information systems, raise significant questions about the Agency's accountability to the taxpayer and its stewardship of resources.

But equally disturbing is the finding of GAO that, contrary to the well-publicized statements by this administration, that reinvention has not cut the paperwork burden by more than 26 million hours per year, that in fact not only have the public claims been vastly overstated, but even using EPA's own flawed data and overstated savings that the actual burden imposed on the public has risen at least 10 million hours, from 109 million hours of paperwork burden in fiscal year 1995 to a total of 119 million hours in fiscal year 1998.

The true increase we now know must be even larger. One example tells the tale. The goal of the Office of Water regarding pollution discharge monitoring, the goal of reducing 4.7 million hours of paperwork burden, has over time transformed itself into an accomplishment, even though GAO now tells us that EPA officials admit the actual results were significantly less reduction, that in fact they could not even say how much, if at all, the burden was reduced.

Only in Washington could we have an agency confuse a goal with an accomplishment. It is like saying that the goal of my basketball team was to win the Final Four. Unfortunately, they got knocked out in the first round, but under this kind of accounting we would come back and say that next year, that they achieved their goal of winning the Final Four because that was the goal. It does not make sense to me or people in the real world.

Frankly, Madam Administrator, when just this one example is 25 percent of the claimed savings, the whole reinvention effort is beginning to look like an effort to reinvent the facts. We cannot accept that.

We cannot accept the fact that the EPA has been laggard in addressing computer security concerns raised by the IG and the GAO several years ago, leaving vulnerable to hackers confidential business information and putting at risk EPA's core financial systems. GAO in a recent review found EPA's information security program completely ineffective, with mission-related and financial programs riddled with security weaknesses. The GAO found many instances of hackers penetrating EPA's computer files without EPA even knowing about it.

Correcting this problem should not be rocket science. It takes some high level attention, a long-term commitment, and the use of resources now available. I understand that steps are being taken to implement proper firewalls and I congratulate you for that.

Ms. BROWNER. They are installed. They are in.

Senator BOND. That is good to know. It seems to have come about, however, only after the media attention initiated recently.

In addition, while EPA seems to be responding to the immediate crisis, there does not appear yet to be any plan for addressing and making a priority of long-term computer security challenges, such as putting in place an effective testing and monitoring program.

With respect to the issue of environmental data information systems generally, for the third year the Inspector General has listed this issue as a key management challenge. EPA's data systems have been criticized as providing data that is often inaccurate, inconsistent, and unreliable. While EPA did establish an Office of Environmental Information, EPA still does not have an action plan that would address specifically how they will deal with the myriad of information management issues that need attention. We were promised that plan 2 years ago.

An overarching vision of how we address the myriad of information management issues is critical. It seems very little has been accomplished in the last year other than reacting to the crises, as we saw when EPA shut down its web site a few weeks ago owing to the computer security fiasco.

Moving on to the issue of EPA staffing, as you know, the fact that EPA's staff has been growing while States have been picking up more and more of the responsibility for direct implementation of environmental requirements and while the rest of the Federal Government is downsizing led us last year to include in the appropriations bill a limitation on total EPA staffing and to request a GAO review.

GAO's preliminary findings, which will be included in testimony for the record today, are troubling. GAO found that EPA has no work force plan strategy to determine the number and types of people needed to carry out strategic goals and objectives. GAO says that EPA has not assessed changes in its work load resulting from factors such as productivity improvements and delegation of responsibility to States, and GAO further says that EPA has not made progress toward its stated goal of developing a process for continually monitoring and assessing its work force in light of changes in its internal and external environment.

GAO also tells us that we do not have reliable information as to what EPA's 18,000 employees are doing, raising the accountability question once again.

Now, EPA has toyed with this issue with attempts to gain a better understanding of the work force requirements, but, according to GAO, "They have not received the resources and senior management commitment needed to bring them to fruition and they have fallen short of their objectives."

One final example of continuing management problems. The Inspector General continues to raise serious concerns about EPA's oversight of grants, which amount to more than half of EPA's total budget. Back in 1996 the IG testified that EPA grantees too often did not provide the products and services specified in the grant agreements, meet the performance goals, or comply with procurement requirements. Today the problem has not gotten much better.

The IG has noted concerns about inadequate monitoring of grantees to ensure proper performance, noncompetitive grant awards, and grants being issued when contracts were more appropriate. A recent audit found that an EPA headquarters office and EPA regional office awarded grants with identical work plans to the same recipients. The offices expected different work products, but the grantee thought one grant supplemented the other and EPA offices did not respond to the grantee's requests for clarification. This means that the recipient received money twice for the same work and EPA did not receive the product expected.

The IG also found examples of grantees who did not complete the work promised, but still received all the funds. Now, that is a problem and that is not acceptable.

The IG's testimony before a House committee last fall sums up this situation: "Without determinations of cost reasonableness, the Agency cannot demonstrate that the level of funding provided to the grantee is appropriate for the work to be performed. Without monitoring performance, the Agency cannot determine whether grantees are successfully carrying out the purposes of the grants. By diverting grant funds to Agency responsibilities, fewer dollars are available to obtain the benefits of grantee performance. Without adequate justification for noncompetitive awards, the Agency appears to inappropriately favor a single recipient."

It should not be too much to ask that we know where the dollars are going, what the staff is doing, and whether we are accomplishing the goals which have been set forth.

Now, moving on to the budget request before us today, a \$7.3 billion request for fiscal year 2001, that represents a decrease below the current level, but I note with grave concern that the decrease is largely attributable to the administration's decision once again to slash the Clean Water State Revolving Fund. While cutting this critical program by 40 percent, EPA again proposes several new unauthorized boutique programs. I feel like I am experiencing *deja vu*.

This budget proposal does not seem to be a carefully crafted budget based on an analytical assessment of EPA programs yielding the most environmental and human health protections. Rather than initiating new unauthorized programs, I would hope EPA would be getting its house in order, focusing on key management challenges.

It is puzzling to me that EPA would propose new programs when it has not resolved longstanding material weaknesses, such as the backlog in the NPDES program. As I understand it, there has been virtually no progress in reducing the backlog in the last year and apparently it has grown. Rather than fixing the problem, EPA proposes tens of millions of dollars in new programs.

New programs include a proposed \$85 million Clean Air Partnership Fund, resurrected from last year's budget proposal, with no specific authorization, no specific criteria, no specific goals. EPA also proposes a \$50 million Great Lakes Grant Program without specific authorization or criteria. What precipitated the need at this time for a \$50 million program is unclear. If we are going to have a new Great Lakes Grant Program, why not a Chesapeake Bay, Lake Champlain, or Lake of the Ozarks Grant Program?

While EPA proposes to start these new activities, as I said, the Clean Water State Revolving Fund is slated to be cut by \$550 million or 40 percent. As we discussed last year, EPA itself has found at least a \$200 billion nationwide need for wastewater infrastructure financing, including replacement costs, and those replacement costs could be over \$100 billion.

In addition, EPA's proposed new rules for TMDL's would make further clean water infrastructure financing even more critical if States were forced to comply with the new standards. While I was unable to be at the EPW hearing in the Senate last month, I understand you cited clean water as one of the top three environmental programs, so I am very distressed that this authorized program with a proven track record and a demonstrated need would be slated for a cut. I think one of our highest priorities to the extent our allocation will allow should be restoring the cut to the Clean Water State Revolving Fund.

The administration has also dusted off the Better America Bonds Initiative. It would give EPA the authority to select proposals for \$2.15 billion in bonding authority aimed at creating open spaces and restoring open areas. A new twist this year, the proposal would earmark \$250 million for anthracite coal-related projects. Why anthracite coal projects have been singled out for special consideration is not explained in the budget documents.

Once again, the program is another example of EPA seeking to pursue new activities and boutique programs, without specific Congressional direction or authority, while we have other ongoing activities and management challenges not being addressed.

Again, the budget proposes a doubling of the Climate Change Technology Initiative. I do not believe this is a critical element in the mandate to address core environmental problems. The decision to increase this program really makes me wonder about the budget process which is supposed to be based on a scientific assessment of priorities and activities which yield the most protection to human health and the environment.

Finally, turning to what is probably the hottest environmental issue of the year, EPA's proposed Total Maximum Daily Load, or TMDL rule. The latest acronym in the Federal alphabet soup to receive notoriety, TMDL refers to EPA's proposal to require the States to set pollution budgets for impaired waters and establish implementation plans to bring these waters into compliance with water quality standards.

The proposal has generated tremendous controversy, as it seems EPA would require the regulation of certain non-point sources even while EPA has no authority to do so under the Clean Water Act. In addition, serious questions have been raised as to how States would come up with the resources needed and whether the States would even have the ability to implement the rule. There are also serious gaps in data, research, and monitoring to meet the requirements EPA has set forth.

As I traveled around my State, I have heard concerns that the rule represents a new unfunded Federal mandate, an expanded Federal role which would undermine EPA's relationship with the States, and basically a command-and-control approach.

The National Governors Association has said: “The regulations fail to properly respect President Clinton’s executive order on federalism, which notes that prescriptive, inflexible approaches to public policy problems can inhibit the creation of effective solutions.”

Madam Administrator, at a minimum EPA has many concerns it must address before it can finalize the rule on TMDL’s.

In closing, EPA has many challenges before it. We know the important role that the EPA must have in assuring that we continue to clean up our environment. I assure you that we on this committee are committed to doing everything we can to improve the environment and to see that the Agency meets the challenges to ensure a proper stewardship of the taxpayer’s dollar and the environment.

With that, I now turn to my distinguished ranking member, Senator Mikulski.

[The information follows:]

[General Accounting Office, March 23, 2000]

HUMAN CAPITAL: OBSERVATIONS ON EPA’S EFFORTS TO IMPLEMENT A WORKFORCE PLANNING STRATEGY

(By Peter F. Guerrero)

Mr. Chairman and Members of the Subcommittee: We appreciate the opportunity to present our observations on the Environmental Protection Agency’s (EPA) efforts to determine the workforce it needs to meet its strategic goals and objectives. During the past decade, when most federal agencies reduced their staffing, EPA’s workforce grew by about 18 percent, even though the states were assuming more responsibility for carrying out federal environmental programs and enforcement activities. EPA officials attribute much of the growth during this period to additional statutory responsibilities given the agency, such as the Clean Air Act Amendments of 1990. Concerned about such growth, the Congress, in its deliberations on EPA’s fiscal year 2000 budget request, expressed its expectation that the agency, while remaining flexible to meet its program requirements, would not exceed a personnel level of 18,000 full-time equivalents (FTE)¹ by the end of fiscal year 2001, a reduction of about 100 FTEs from EPA’s estimated level for fiscal year 2000.

This Subcommittee has also expressed concern that increases in EPA’s personnel levels may reflect incremental responses to meet the demands of new environmental initiatives, rather than the results of a workforce planning strategy linked to the agency’s strategic planning efforts. Such a strategy would identify EPA’s current and future human capital needs, including the size of the workforce, its deployment across the organization, and the competencies (knowledge, skills, and abilities) needed to meet the agency’s strategic goals and objectives. In response to the Subcommittee’s interest in EPA’s workforce planning, we reviewed (1) how EPA determines the number of employees and the competencies needed to carry out its strategic goals and objectives and (2) what actions, if any, EPA is taking to improve its workforce planning activities.

In summary, our findings are as follows:

—EPA does not now have a workforce planning strategy to determine the number of employees and competencies needed to carry out its strategic goals and objectives. In preparing the agency’s annual budget request, EPA assistant administrators, regional administrators, and other senior officials determine the increases or decreases in the FTEs requested by the agency. The senior officials make their decisions on the basis of information provided by program managers, who identify incremental changes in their needs from the prior year. However, EPA does not have the detailed workforce planning information it needs to inform such decisions, including (1) information on the linkage between the FTEs requested and the agency’s ability to meet its strategic goals and objectives and (2) any excesses or gaps in needed competencies within the agency’s

¹An FTE represents 2,080 work hours, the equivalent of one person working full time for 1 year.

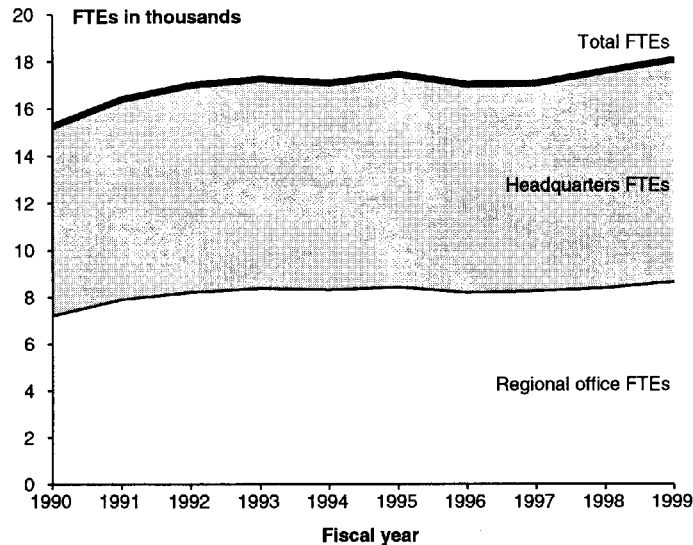

various headquarters and field components. Furthermore, EPA has not assessed the accuracy of its existing data to ensure that its employees are being used in ways that are consistent with the intent of its congressional appropriators. —Although EPA does not currently have a workforce planning strategy, it has taken steps to identify its current and future human capital needs, including the size and competencies of its workforce. In May 1999, EPA completed a study that identified (1) the competencies needed to meet the agency's current missions, (2) possible alternative missions that EPA may face in the future, and (3) new competencies that may be needed under each of the future mission scenarios. While a step in the right direction, the study was not detailed enough to identify in total or in individual organizational components the number of employees who need to possess the competencies identified. Furthermore, citing budget constraints, EPA discontinued its efforts to implement a workforce planning strategy, which was to include a continuous process to monitor and assess the agency's workforce in light of internal and external changes in its environment. Although EPA currently has no resources designated for implementing a workforce planning strategy, the agency recently prepared a draft human resources strategic plan. According to EPA officials, a workforce planning strategy would be developed and implemented as part of this plan. EPA officials plan to meet in April 2000 to consider whether to approve the draft plan.

We met with EPA officials, including the Associate Director of EPA's Annual Planning and Budgeting Division, Office of the Comptroller, to discuss this statement for the record. They told us that the information reported is a fair assessment of EPA's workforce planning activities. They provided several technical comments and clarifications, which we incorporated as appropriate.

BACKGROUND

EPA is organized into 13 major headquarters offices, located in Washington, D.C., that receive administrative, investigative, and laboratory support from various headquarters' field entities located throughout the country. EPA also maintains 10 regional offices to implement federal environmental statutes and to provide oversight of related state activities. While total federal employment was reduced by about 17 percent from fiscal year 1990 through fiscal year 1999, the FTEs available to EPA to carry out its programs grew from 15,277 to 18,078, an increase of about 18 percent. (See fig. 1.) Most of the growth occurred from fiscal year 1990 through fiscal year 1993, when the FTEs increased from 15,277 to 17,280, an increase of about 13 percent. Since then, EPA has grown at a more moderate rate, averaging less than 1 percent a year.

Figure 1: EPA's Total FTEs, Showing Headquarters and Regional FTEs, Fiscal Years 1990-99

Source: EPA.

EPA's employees possess a wide range of educational backgrounds and skills. Figure 2 shows the occupations that represent the largest part of the agency's workforce. EPA also makes extensive use of contractors to perform its work. The agency estimates that it would need an additional 11,000 to 15,000 employees if it did not receive appropriations to fund contractors. Thus, EPA's workforce must be adept both at delivering services directly and at effectively managing the cost and quality of mission- support services delivered by third parties on the government's behalf.

The Government Performance and Results Act of 1993 (the Results Act) requires EPA and other federal agencies to set goals, measure performance, and report on their accomplishments as a means of achieving results. Effective implementation of performance-based management, as envisioned in the Results Act, hinges on senior managers' willingness and ability to strategically manage all of the agency's resources—including human capital—to achieve missions and goals. Specifically, this requires aligning strategic and program planning systems with an explicit workforce planning strategy that includes (1) identifying the current and future competencies needed and any gaps, (2) developing a workforce action plan designed to address the gaps, and (3) monitoring and evaluating the workforce planning actions taken. Workforce planning is a key component of a human capital self-assessment checklist we published as a discussion draft last September.² (See attachment I.)

EPA DOES NOT NOW HAVE A WORKFORCE PLANNING STRATEGY TO ASSESS ITS HUMAN CAPITAL REQUIREMENTS

Although EPA's senior managers are closely involved in decisions concerning the agency's annual budget requests for staffing, the agency has not developed and implemented a workforce planning strategy to systematically and comprehensively assess its human capital requirements. Consequently, EPA cannot determine whether it has the appropriate number of people and competencies needed to effectively carry out its strategic goals and objectives. Furthermore, although EPA collects cost-accounting data on the amount of time its employees spend in carrying out the agency's strategic goals and objectives, it has not assessed the accuracy of the data. Thus, EPA lacks assurance that its employees are being used in ways that are consistent with the intent of its congressional appropriations legislation, which identifies the number of FTEs approved for each strategic goal and objective.

During most of the 1980s, EPA used a workload model for calculating the total number of FTEs needed and for allocating them among its various headquarters and regional offices. The model was based on studies of the amount of time required to perform key functions of the agency. The agency used the model to allocate its staff among its various organizational units but did not use it for determining the number of employees. An EPA official explained that the number of employees needed, according to the model, consistently exceeded the personnel ceilings established for the agency by the Office of Management and Budget. In 1987, EPA froze the workload model because it believed it was spending an inordinate amount of time each year negotiating the distribution of marginal staffing increases. Although the model continued to be used for allocating staff resource levels into the early 1990s, it was not updated to reflect new circumstances, became outdated, and was discontinued.

EPA's current process for preparing its budget request involves identifying funding and staffing increases, ("investments") in areas it considers to be priorities, which are usually offset by decreases, ("disinvestments") in areas of lower priority. For example, for fiscal year 2000, EPA identified investments totaling 311 FTEs and the same number of disinvestments. Increases were identified for program priorities such as clean air, climate change, information management, and children's health. To accommodate the increases, decreases were identified in other agency activities,

²Human Capital: A Self-Assessment Checklist for Agency Leaders (GAO/GGD-99-179, Sept. 1999.)

such as those for assessing chemical risks, enforcing clean water regulations, and cleaning up contaminated waste sites. Through such reallocations, EPA focuses on the number of staff available and does not consider the types of skills needed for program activities. We did not review the basis for EPA's decisions on the reallocations.

After the Congress reviews EPA's budget request and appropriates resources to the agency, senior officials allocate the available FTEs to EPA's organizational units. Because EPA does not have a system in place to assess its human capital requirements and to allocate resources accordingly, the allocations are based primarily on the number of FTEs that were allocated in previous years, with increases or decreases made incrementally to reflect the agency's "investments" and "disinvestments." However, an approach based on historical data may not accurately reflect the conditions facing EPA today and those likely to face it tomorrow. For example, over the past decade, technological changes have had a major impact on the skills and technical expertise needed to carry out federal programs. In addition, changes have occurred in EPA's regional environmental responsibilities as states have accepted more responsibility for the day-to-day implementation of federal environmental statutes. For example, in 1993, only eight states had accepted responsibility under EPA's delegation process for implementing provisions of the Safe Drinking Water Act. By 1998, 36 states had done so. The Environmental Council of the States, an association representing state environmental administrators, has pointed out that the states now assume responsibility for more than 75 percent of federal environmental programs. Such changes may reduce EPA's activities in some areas, such as carrying out inspections, but may in turn create the need for additional people and competencies in other areas, such as providing technical assistance and reviewing and measuring the effectiveness of state programs.

Fact-based human capital management requires data on how EPA's current workforce spends its time. However, the agency's efforts to account for the time spent to carry out its various tasks have been hampered by inaccuracies in existing data. For example, although each of EPA's regional employees is assigned to a specific work area, such as pollution prevention or groundwater protection, the employees may be directed to perform tasks in other areas. In a September 1996 report, EPA's Inspector General stated that in two regions reviewed, employees spent a significant amount of time working in areas unrelated to the program areas to which their time was charged. In October 1998, EPA modified its cost-accounting system to account for tasks related to its strategic goals and objectives. EPA officials told us that the accuracy of the data collected under the new system has not been assessed, although they said the agency recognizes the need to do so. Assessing the data is crucial for their use under the agency's plans to develop and implement a workforce planning strategy. For example, an official representing EPA's Office of Enforcement and Compliance Assurance, which relies extensively on regional employees to carry out its functions, told us that it is important that the office have an accurate system of accounting for time spent in order to determine appropriate personnel levels.

EPA HAS BEGUN TO DEVELOP AND IMPLEMENT A WORKFORCE PLANNING STRATEGY

EPA's decentralized organizational structure and the size and deployment of its workforce have long been issues of concern among outside reviewers of the agency. For example, in an April 1995 report to the Congress, the National Academy of Public Administration (NAPA)³ commented that EPA has little data to determine the day-to-day activities of its regional employees. NAPA recommended that EPA complete an analysis of the activities of the regional offices, determine their appropriate size, and add or reduce staff accordingly.

During the past decade, EPA has attempted to improve its workforce planning but has fallen short of implementing an effective strategy for doing so. As previously mentioned, EPA stopped using its workforce analysis model in the early 1990s, partly because the model required more resources than EPA considered appropriate to spend. For fiscal years 1995 through 1997, the agency conducted annual surveys to analyze the human capital needed to achieve its mission. Once each year, employees estimated the time they spent on various tasks for the first several months of the year and projected how they would spend their time during the remainder of the year. The purpose of the survey was to gain an understanding of where the workforce was deployed, ensure that the budget reflected this deployment, and make certain that resources were directed toward high-priority objectives and performance goals.

³NAPA is a nonprofit, nonpartisan, collegial organization chartered by the Congress to improve governance at all levels—federal, state, and local.

EPA officials told us that the survey was discontinued after fiscal year 1997 because of data collection flaws that caused EPA to lose confidence in the validity of the survey data. They said that the survey did not clearly define terms and reporting requirements, causing inconsistencies in the data reported by various employees and organizational components. In analyzing the results of the 1997 survey, EPA found that the workforce data differed substantially from the data reported to the Congress in EPA's fiscal year 1997 operating plan. For example, the survey data showed that the amount of time spent on activities of the Office of Enforcement and Compliance Assurance was 23 percent less than the amount reported by EPA in its operating plan, whereas the time spent on activities of the Office of Policy, Planning, and Evaluation was nearly three times the amount reported in the plan.

EPA has recently attempted to address the need for a more credible strategy to determine its workforce requirements. In June 1998, EPA initiated a project to assess and act upon the implications of strategic change for the agency's workforce. Through this project, which was completed in May 1999, EPA (1) developed a workforce profile identifying the competencies of the people employed by the agency and (2) estimated what competencies it would need in the future under various scenarios. By comparing the current workforce with estimated future needs, EPA identified potential gaps.

While the workforce assessment was a step in the right direction, it was a limited measure toward needed actions to implement a workforce planning strategy capable of meeting the agency's diverse goals and objectives. For example, the assessment focused on the competencies, such as communication and computer skills, needed to carry out EPA's missions. However, the study was not designed to determine how many employees needed such competencies or how employees should be deployed among strategic goals and objectives, across program areas, and in various areas of the country. Furthermore, although EPA has identified the competencies that it believes are vital and difficult to obtain and maintain, it has not used this information to develop an integrated workforce strategy for recruiting, developing, and maintaining needed competencies in its current and future workforce.

EPA had intended to build on its workforce assessment by developing and implementing a workforce planning strategy to (1) continually monitor and assess its workforce in light of internal and external environments and (2) monitor and evaluate workforce actions taken. Although EPA had contracted for the development of the strategy, EPA officials terminated this work in February 1999, citing budget constraints. Nevertheless, the director of EPA's Office of Planning, Analysis, and Accountability told us that, while the agency currently has no resources allocated for implementing a workforce planning strategy, it recognizes the need to complete the job. He said that EPA is considering linking a workforce planning initiative to its strategic planning efforts. However, little time remains for implementing a workforce planning strategy before EPA's current strategic plan is scheduled to be revised and issued by September 2000.

EPA officials told us that in terminating the contractor's work for the development of a workforce planning strategy, EPA decided to develop such a strategy itself. Such an initiative is being considered under the auspices of EPA's Human Resources Council, which consists of senior managers in EPA's headquarters and regional offices. At the direction of the Council, a multifunctional group of program office executives and representatives of EPA's Office of Human Resources and Organizational Services has prepared a draft strategic plan for human resources. The plan calls for securing essential competencies through a workforce planning strategy aimed at recruiting and developing staff and providing incentives to retain highly competent employees. EPA officials told us that this strategy in essence would continue the efforts that EPA had planned to do under the contract. The Human Resources Council is scheduled to meet in April 2000 to discuss the plan.

OBSERVATIONS

The growth in EPA's personnel levels during the past decade has been accompanied by substantial changes in the roles and responsibilities of the agency and its state partners. In addition, technological advances during this period have provided opportunities for efficiencies to carry out the agency's strategic goals and objectives. While EPA has implemented several initiatives during the past decade to gain a fuller understanding of the demands facing its workforce, these initiatives have not received the resources and senior management commitment needed to bring them to fruition, and they have fallen short of their objectives. Without a workforce planning strategy, EPA is not able to identify the size of its workforce and the competencies that need to be deployed among its organizational components to effectively and efficiently carry out its strategic goals and objectives.

EPA's current efforts to develop and implement a human resources strategic plan, including a workforce planning strategy that is focused on continually monitoring and assessing its workforce and evaluating the effectiveness of actions taken, is a step in the right direction. If the plan is adopted, its ultimate usefulness will depend largely on the extent to which EPA's senior management remains committed to and provides the resources needed to ensure its success. Furthermore, as part of its workforce planning strategy, EPA will need to ensure that it collects and analyzes accurate data on the amount of time being spent on various programs and activities. Without such data, EPA cannot accurately determine the costs of carrying out its strategic goals and objectives and ensure that its workforce is being used in ways that are consistent with the intent of its congressional appropriators. In addressing these concerns, it is important that EPA identify the resources that would be necessary to implement a workforce planning strategy and to assess the accuracy of its cost-accounting data on the amount of time employees spend in performing tasks related to the agency's strategic goals and objectives.

We performed our review from October 1999 through March 2000 in accordance with generally accepted government auditing standards. If you have any questions about this statement, please contact me on (202) 512-6111. Major contributors to this statement were Ed Kratzer, Bill Roach, Ken McDowell, and Rosemary Torres-Lerma.

ATTACHMENT I

THE HUMAN CAPITAL FRAMEWORK

We recognize that there is no single recipe for successful human capital management. But we have identified a number of human capital elements and underlying values that are common to high-performance organizations in the public and private sectors. The five parts of the human capital framework are as follows:

1. Strategic Planning: Establish the agency's mission, vision for the future, core values, goals, and strategies.
2. Organizational Alignment: Integrate human capital strategies with the agency's core business practices.
3. Leadership: Foster a committed leadership team and provide continuity through succession planning.
4. Talent: Recruit, hire, develop, and retain employees with the skills for mission accomplishment.
5. Performance Culture: Enable and motivate performance while ensuring accountability and fairness for all employees.

STATEMENT OF SENATOR BARBARA A. MIKULSKI

Senator MIKULSKI. Thank you very much, Mr. Chairman. Mr. Chairman, I know that it is about 5 of 10:00. I note that the chairman of the full committee is here, so I am going to ask unanimous consent that my full statement be included in the record and just make a few highlights because also other colleagues want to make a few statements and questions.

First of all, I really want to welcome Carol Browner and her team to this hearing. I know that for Ms. Browner this is her eighth appearance before this subcommittee, and I would like to thank you for your service to the Nation and all of the much help that you have given to my own State of Maryland, because in Maryland the environment really is tied to economic development. We feel good environment is good business in Maryland.

You have had to deal with the alligators in the Everglades and you have had to deal with the alligators in Congress and you have had to even deal with alligators at OMB. So I know alligators are an endangered species, but we really want to compliment you for that.

I think the chairman has laid out a road map that he would like to pursue, but I think when we have someone who has served the

Nation for 8 years—we have had continuity in leadership, therefore continuity in policy, and this is why we could get into those details.

I would like to thank you and President Clinton for what EPA has meant to the State of Maryland. The ongoing funding for the Chesapeake Bay, its cleanup, and all the aspects of it related to clean water and safe water are very much appreciated. It was begun by Senator Mac Mathias and now through President Carter, President Reagan, President Bush, and President Clinton. We want to say thank you.

We want to thank you for your help in issues related to smart growth, because we in Maryland believe in development, but we have very serious concerns about encroachment and what that means to the environment.

We also want to particularly acknowledge your role in working in a partnership with our governor and our mayor on the devastating effects of lead poisoning, which is really a killer. We have children within the very shadow of Johns Hopkins University that are so loaded with lead, one little boy on his way to school just lay down on the street and said: I am too sick to go any further. So we thank you for your relationship with our governor, with our mayor, and his health teams, because we believe in a couple of things: one, that there is a direct linkage between the environment and public health, and that our environmental policies should always be strengthening the public health of our community.

Second, environment tied to economic development. Certainly the Chesapeake Bay, other bay initiatives, and so on, where really our natural assets need to be preserved, which is why people want to live and work near there.

In addition to a good environment for economic development, it is really the brownfields issues, and I am going to talk about it. In my own home town there are 3,000 acres of brownfields surrounding the water, and when we clean them up it offers homes, commercial real estate, and we are now turning our Inner Harbor—everybody knows the glitz and the stadiums, but we are taking old factories and turning them into digital economic development parks. We are really digitalizing our harbor, where it is no longer appropriate to use for shipping.

These are some of the areas that I want to go over with you and talk with you in more detail, as well as the pfisteria research that caused problems. But again, many thanks. I personally am grateful to have you as a constituent in downtown Takoma Park, and I have been—really, I want to compliment you for your professional relationship certainly with me and I believe the Congress and your service to the Nation.

With that, I will submit my statement and wait for my time for my questions.

Senator BOND. Without objection, the statement will be accepted, and thank you very much, Senator Mikulski.

Now I turn to Chairman Stevens.

STATEMENT OF SENATOR TED STEVENS

Senator STEVENS. Well, thank you very much.

I do not have a prepared statement. I do greet the Administrator with thanks before I ask a couple of questions. I am not going to

ask them; I will submit them. I do thank you for the fact that the President's budget this year has a \$15 million request for Alaska sanitation problems in rural Alaska. I have been working on this now for a series of years and we have had earmarks in the past, and at this time we have got a request. I cannot guarantee you we will not try to increase it, but I do appreciate the request.

I do have some questions I would like to submit. Let me just outline two of them. One concerns the Red Dog Mine that is north of Kotzebui above the Arctic Circle, a very unique arrangement, owned by the Alaska Native people and operated by a very fine Canadian company. They have a unique arrangement for employment. At least two, perhaps three, people share one job. With a two-shift mine, it means that they have got two and a half times the employees of any other mine operating in similar circumstances.

They have asked for and received State approval to expand that mine through the use of an additional generator. Your section 10 reversed the State finding that this was the best available control technology, and I am just sort of appalled at that because in this region of the world I do not think your people have the capabilities that we have. Our State is probably the number one State in terms of protecting air quality.

It really has been a shock to the State. I know that you have talked to the governor. But I hope you will answer the questions I have got to submit. I cannot ask questions right now.

But the second one concerns the Fairbanks carbon monoxide problem. Fairbanks, again located the farthest north major city in our State, it has a national ambient air quality standard problem for carbon monoxide. It has tried its best to achieve that, but we note that the automobile manufacturers have not produced the cars that they were supposed to produce to reduce both the carbon monoxide emissions and other forms of pollution, and yet the cities now are being put in the position of sanctions because they cannot meet the goals that should have been attainable had the automobiles been modified as contemplated by the basic law.

I think that the clock is ticking. As I understand it, it runs out in April and our second largest city is going to face sanctions which will lead, strangely, to reduction in the use of automobiles in an area that you cannot walk and you cannot take buses and there are no other forms of transportation. We do not quite understand that.

I would urge you to take a look at that. In both instances, your Agency has reversed our State in areas where they had delegated authority under the law to make these decisions, and people made plans based on long, long conferences and working these things out with the State and now they cannot continue.

So again, I thank you for what you have done in the past, but I would urge you to take a look at this. I think in those two instances—I will tell you what. Why do you not send your people up and have them live in Fairbanks or in Kotzebui for a year, okay? In Fairbanks its 68 below, 70 below in Kotzebui. They work all year long. Your people come in the summer time and try to understand this. It is just not fair.

Thank you.

Ms. BROWNER. Mr. Chairman, I understand that Chairman Stevens will have to leave. If I might respond quickly before he leaves.

Senator STEVENS. I do have to leave. I am going to submit the questions.

Senator BOND. I think if you have got just a minute I would be happy to, if nobody objects, to allow her to respond.

Ms. BROWNER. I want to say something about the mining issue. I did have a very good meeting with your governor. Since that time we have been able to reach an agreement so that the construction schedule for the company can be taken into account. We are trying very hard to get this resolved as quickly as possible. I thought the meeting was very helpful.

Senator STEVENS. Good. That is good news.

Ms. BROWNER. I think we will be able to find the resolution.

Senator STEVENS. It has the highest level of unemployment of any area in the country.

Ms. BROWNER. Yes, I understand.

Senator STEVENS. Thank you very much.

Senator BOND. Thank you very much, Chairman Stevens.

Now I turn to Senator Leahy.

STATEMENT OF SENATOR PATRICK J. LEAHY

Senator LEAHY. Thank you, Mr. Chairman.

I am delighted to have Administrator Browner here. I am a big fan of hers and I think she has done a superb job in running the EPA. I also am pleased that she has had a number of occasions to come to Vermont.

I was going to try to talk to Senator Stevens about who gets colder weather, but the 70 degrees did kind of top our 45 degrees below zero this year and I realized I had lost all bragging rights and will stay away from that.

You have shown a great deal of leadership on environmental and public health issues, from lawsuits against dirty power plants to recommendations to Congress regarding toxic fuel additives. And you have done it even though you know that in some of those you would face from different special interests a lot of criticism.

But I think that, because you have been persistent in this, you have improved our environment and the public health. That helps not just us today, but it helps people like your own children, who will live most of their lives in this century, my grandchild who will, and others.

In my case—once in a great while we get parochial on this committee. I know that the Senator from Maryland is shocked to hear that, but it is true. And I have considered the environment, the unique environment of my own State of Vermont, preserving it to be one of my highest priorities. The funding that EPA has consistently requested for the Lake Champlain Basin program has allowed Vermonters to form some very long-term good commitments and programs and partnerships with our communities, our State agencies, nonprofit organizations, and it has helped all of us, because they have focused on pollution reduction and toxic hot spot cleanup, and have also benefited the hundreds of thousands, even millions, of people who during that time have visited that area from other parts of the country.

A lot remains to be done, but I think we can continue to protect precious water resources in Lake Champlain and throughout the State, from our lakes and our ponds, major watersheds like the Connecticut River.

I am pleased to see you sponsoring grants for smart growth pilot projects in urban and rural communities. In Vermont we have two of these pilot projects, one in a small city, one in a rural watershed. They are rapidly gaining attention. They integrate economic and natural resource data into web-based interactive tools for city planners. I think that I could see this, especially with the Internet spreading throughout our State, I think that you are going to see these kind of things promoting smart growth initiatives all over the country.

We have a unique project in Vermont on acid rain that monitors the on the ground ecological and human health effects of continuing acid deposition in the Northeast. We know there is a lot of transport of atmospheric pollutants from the Midwest to the Northeast, but we have to know what the long-term damage of that is, and I hope we can continue these kind of studies.

A final note. I want to go on record with my strong support of your recent announcement with Secretary Glickman that you want to significantly reduce or eliminate the use of the fuel additive MTBE and to increase use of safe, renewable alternatives. I strongly support that. I think it is something that will benefit all of us and it reinforces some legislative strategies promoted earlier this year by Vermont and seven other States in the Northeast. So I commend you.

I have to go to Judiciary and I will leave, with your permission, Mr. Chairman, a number of questions for the record. But I did want to highlight those areas.

Senator BOND. Thank you very much, Senator Leahy, for joining us. We will, of course, as usual have questions submitted for the record that we will forward to the Administrator. I think Senator Stevens had some, and we will ask that the Administrator and the Agency respond as quickly as possible. Thank you very much for being here.

Now we turn to Senator Lautenberg.

STATEMENT OF SENATOR FRANK R. LAUTENBERG

Senator LAUTENBERG. Thanks, Mr. Chairman. I start by congratulating you and Senator Mikulski for your work on the VA-HUD bill.

I also want to extend my congratulations to Carol Browner for her leadership on issues affecting public health and the environment. I congratulate you also, Madam Administrator, for creating an excellent team around you, for providing the kind of inspired devotion to duty that we see with the folks that all of us have occasion to work with at EPA.

I see a record of successes that I do not think are really matched, if we look over history, of an Agency that was taken over at a period of relatively troubled times, had been through defaults by leadership, programs not working, and what I see is that you have taken the broad authority given you to protect the public health,

to use it effectively to develop programs that clean the air and to respond to emergencies.

When I look at the list of things that have happened under your administration, the information that is provided through to the public through the web site is so valuable that we have heard complaints from both public and industry when you had to shut it down. You have used the opportunity to exercise leadership on so many fronts and that is respected. That is what I would have wanted of an executive when I ran a company and that is what I want of the head of a department in my role here with my public responsibility.

I look at the success of Superfund. Ninety-one percent of the sites listed on the NPL are undergoing cleanup, construction, or are deleted. I note that over the life of Superfund EPA has reached settlements with private parties of an estimated \$16 billion. So challenges to whether the polluters should pay or should not pay is really moot. The question is—the outcome is they pay. They have committed a sin that they have had to pay for, they have committed a public affront, and they pay for it.

We see brownfield successes: generated 1,580 cleanup programs, 4,300 redevelopment jobs, and leveraged \$1.6 billion in public and private investment. Clean water, increasing the public's right to know about health risks at beaches by completing a database of beach monitoring programs, a program close to my heart and my interests; and increased the number of communities to 11,000 that have programs in place to protect drinking water sources.

So Madam Administrator, I am proud of the work that you have done. I am proud of the work that this committee has done to support it, and I am delighted to see you in this, our mutual kind of swan song here.

In recent years the bill sent by the President has allocated scarce resources in a sensible manner, it has been relatively clean of controversial language, and it has moved through the process in a timely manner, and I appreciate this and hope that we will be able to work together to ensure that if any such language, restrictive language, is included that we are wary of that, but the language that permits us to balance the use of our resources will enjoy, I hope, bipartisan support, and I am confident the chairman will agree with that.

We welcome the opportunity to learn more about EPA's budget request. I remain particularly interested in providing adequate funding, though, for core EPA programs. There is a temptation to get attracted to new initiatives, but we dare not lose sight of the programs that are the backbone of the Agency. We have to continue to fund and support those.

Whether the issue is cleaning up Superfund sites, addressing the ongoing hazardous waste sites so that they do not become future Superfund sites, reviewing the safety of pesticides, setting standards for toxins in the air, EPA's core programs have proven over the years to be of tremendous benefit to the health and well being of our constituents, and we dare not ever lose sight of them.

In addition, I have been encouraged by the accomplishments of the EPA brownfields program, as I earlier mentioned. I want to as-

sure you that we will do everything we can, we want to, to foster those efforts.

Mr. Chairman, once again I do thank you for holding this hearing and look forward to the presentation from the longest serving Administrator in EPA history, one who did not go down with the ship, but took over the helm and did it masterfully.

Senator BOND. Thank you very much, Senator Lautenberg.

We have raised a lot of questions, so, Madam Administrator, we would be happy to give you 10 minutes for your opening statement and comments you want to make, and then obviously we will have, we hope to have a number of very productive rounds of questioning. Welcome.

STATEMENT OF CAROL BROWNER

Ms. BROWNER. Thank you, Mr. Chairman and Senator Mikulski, Senator Lautenberg, for the opportunity to appear again before this committee in my eighth year as Administrator of the country's Environmental Protection Agency. I am pleased to be here today to present the Clinton-Gore Administration's budget request for the EPA.

Accompanying me today are the Agency's senior managers, including Mike McCabe, our Acting Deputy Administrator, and Mike Ryan, our Acting Chief Financial Officer.

I would like to begin by saying, Mr. Chairman, Senator Mikulski, Senator Lautenberg, we look forward to working with all of you and the other members of this subcommittee to craft a budget that will allow us to meet the very important public health and environmental needs of the people of this country. I believe we have fostered a productive working relationship which has enabled us to meet the mutual goal of protecting public health and the environment. Together, once again, we have a great opportunity to work in partnership to provide the American people with strong public health and environmental protections that they want and that they have every right to demand of us and that they deserve.

The budget that we put forward achieves that goal. The President has presented a budget that maintains fiscal discipline while making essential investments in environmental priorities. This administration has repeatedly demonstrated that we can enjoy enormous economic prosperity, including the longest economic expansion in history, while aggressively cleaning up the air we breathe, the water we drink, the land we live on, the communities where we raise our families.

Over the past 7 years of unprecedented economic progress, this administration, working with this committee, has distinguished itself through unprecedented environmental protections. We have done it through common sense, cost-effective measures that emphasize partnerships and cooperation with businesses, State and local governments.

The 1996 amendments to the Safe Drinking Water Act are an example of what we can do together, bipartisan work on behalf of the American people to provide clean, safe water to drink. Working with this subcommittee, we have supplied the first ever funding, a \$3.2 billion loan program, for communities to upgrade their drinking water systems.

We set up the first public right to know program for ensuring that all consumers of tap water know the source and the quality of that water. We have announced new measures to protect the health of 140 million Americans by strengthening protections from emerging threats like cryptosporidia.

As a result of these efforts, efforts we have undertaken together, 89 percent of Americans now get tap water from drinking water systems that meet public health standards. That is an increase of 6 percent since the standards went into effect in 1994.

We have tripled the pace of cleaning up toxic wastes under the Superfund program. More toxic waste sites have been cleaned up and cleaned up more affordably in this administration than in all previous years combined. At the end of 1999, a total of 670 Superfund sites had been cleaned up. Of those sites, 515 were completed under this administration.

We have taken important steps to reduce emissions from autos and small trucks by up to 95 percent. For the first time ever we have ensured that the very popular sport utility vehicles, minivans, light duty trucks will meet the same stringent air quality standards as other passenger vehicles.

We have required reductions in sulfur levels in gasoline. We have cut toxic air pollution from municipal combusters and other important source categories by 90 percent or more, and we have unveiled new efforts to improve our air quality in 156 national parks and wilderness areas. As a result of these efforts, some 43 million Americans are breathing cleaner air.

At the same time, we have dramatically increased the public's right to know about toxic chemicals released into their local communities and into their neighborhoods. The Clinton-Gore Administration has nearly doubled the number of chemicals that must be reported to communities and required over 6,000 new facilities to report releases of their emissions. As a result, in the past decade toxic pollution has fallen by nearly 50 percent, partly as a result of simply arming local citizens with information about local pollution, about local conditions.

We have revitalized communities by accelerating the cleanup of brownfields, abandoned or contaminated property. Senator Mikulski, I visited one of those sites in Baltimore. DAP Company has moved into a wonderful old warehouse. It has been cleaned up and restored. Every time I am able to visit a brownfield site it just gives me—

Senator MIKULSKI. 400 jobs.

Ms. BROWNER. 400 jobs. A huge sense of accomplishment for the community and of a program that really is working on the ground to meet the needs of local communities.

Across the country, communities are gaining new hope with nearly \$70 million in seed grants awarded to over 300 brownfield projects. Senator Lautenberg, as you pointed out, this has leveraged new investments, over a billion dollars. It has created thousands of jobs. It has expanded the tax base for local communities and it has brought decaying areas of the cities back to vibrant life.

Working with Congress in a bipartisan manner, we also passed the new Food Quality Protection Act that for the first time sets pesticide safety standards that are clearly protective of our chil-

dren. We have taken action to reduce significantly special risks posed to children by limiting the use of two pesticides most widely used on foods found in the diets of our children.

While ensuring strong environmental protection, we have also re-invented government in innovative ways to achieve greater environmental results at less cost. We have vigorously pursued common sense, cost-effective solutions to today's environmental problems.

The budget before you requests \$7.3 billion for the Environmental Protection Agency. We are also requesting \$2.2 billion for the Better America Bonds Program. This builds on and continues 7 years of environmental achievement under this administration.

In terms of our core programs, and Senator Lautenberg, you spoke to this, the budget before you provides for an 11 percent increase in EPA's core programs. We do everything from setting air and water quality standards, drinking water standards, food safety, scientific research, and most importantly, we enforce the environmental and public health requirements. This is the single largest increase in our operating programs under this administration.

The administration's request provides for such programs as President Clinton's Clean Water Action Plan. It provides for a new initiative to protect and improve one of our Nation's greatest shared treasures, our Great Lakes. It provides for the President's program for cleaner waters across America, which for the first time targets individual waterways for cleanup plans tailored specifically to meet their needs.

This part of the budget gives States the flexibility that they need to fight polluted runoff. Again, Mr. Chairman, we are going to ask this committee for specific language to allow States the flexibility to set aside up to 19 percent of their Clean Water Revolving Fund to address the needs of polluted runoff. Not a requirement for the States, but an opportunity should they choose to address their water pollution problems in this way.

The President's budget provides the necessary funding for one of the administration's top environmental priorities, protecting our children. Senator Mikulski, you mentioned the very serious problem of lead. There is no reason why any child in this country should experience lead poisoning. It is a preventable disease, and we are investing in our ongoing efforts to prevent this very horrible disease. We are also seeking money in our children's program for asthma and for dangerous levels of pesticide residues in foods.

The President's budget does provide for a Creative Clean Air Partnership Fund. The partnership fund promotes early reduction in air pollution, and it fosters partnerships and flexibility between State and local governments to encourage new ideas for improving air quality. Some of the best ideas happen at the local level. This program is designed to encourage those local ideas, to give life to those ideas, to make them possible.

The budget calls for continuing to expand the public's right to know, including a new effort to develop a network for key environmental data with our State partners. The States are looking at modernizing their computer programs. It is part of everything from one-step permitting to better environmental management. We are asking for \$30 million to support the States in that effort.

We continue our commitment to Superfund cleanup.

Mr. Chairman, I see my time is up. Let me say in closing—
Senator BOND. If you need another minute or two, please.

Ms. BROWNER [continuing]. We are presenting a budget that builds on the work that we have been doing over the last 7 years, under the President and the Vice President's leadership, that prepares us to meet the emerging challenges. Unfortunately, in the work of public health and environmental protection, the job is not really done. As we solve one problem, a new problem emerges. This is a dynamic budget that allows us to speak to the ongoing problems, to resolve them, but also to meet the challenges of the future.

Thank you.

[The information follows:]

PREPARED STATEMENT OF CAROL M. BROWNER

Mr. Chairman and Members of the Committee, I am pleased to be here today to present the Clinton-Gore Administration's fiscal year 2001 budget request for the Environmental Protection Agency. Our \$7.3 billion request, and the \$2.15 billion Better America Bonds program, continue and strengthen the Administration's commitment to the environment and public health by providing our children, our communities with cleaner water, cleaner air and an improved quality of life.

I would like to express my pleasure to have worked with this distinguished Committee over these past seven few years. I believe we have fostered a productive working relationship, which has enabled us to work together towards our mutual goal of protecting public health and the environment. Although we may not have agreed on every issue and policy, the Agency has benefitted in many ways from the support given by this Subcommittee. For that, we are grateful to you, Mr. Chairman, Senator Mikulski, and the members of the Subcommittee. I again look forward to working with you this year, Mr. Chairman, and Senator Mikulski, as I know the strong bond between our Agency and this Committee will continue.

I am particularly proud of this budget request. Seven point three billion dollars will directly support our operating programs, air and water infrastructure, and the trust funds. Two billion, one hundred and fifty million dollars are for the Better America Bonds program, to help communities invest in green-space preservation, water quality improvements and brownfields cleanup. Most importantly, this budget includes an 11 percent increase, or \$384 million, for EPA's core environmental programs.

Once again, the President presents a budget that maintains fiscal discipline while making essential investments in environmental priorities. This Administration repeatedly has demonstrated that we can enjoy enormous prosperity—including the longest economic expansion in history and a plan that will eliminate our national debt for the first time since 1835—while implementing important environmental and public health protections. The American people know that our Nation does not have to choose between a strong economy and a healthy environment.

Over the past seven years of unprecedented economic progress, this Administration, working with this Committee, has distinguished itself through unprecedented environmental progress.

The 1996 amendments to the Safe Drinking Water Act, a fine example of what we can achieve when we work together, coupled with the President's Clean Water Action Plan, have contributed greatly to cleaning up the Nation's waters and to making drinkable, fishable and swimmable water a reality for all Americans.

We have set the tightest emissions standards ever for cars and the first such standards that apply equally to SUV's and minivans.

We have placed special emphasis on protecting our Nation's greatest resource—our children—through actions like working for, winning and implementing the Food Quality Protection Act, that for the first time puts emphasis on protecting the health of infants and children from pesticide risks.

We have provided communities with new access to more information about toxic chemicals released into their communities by greatly expanding the public's right-to-know.

Under this Administration, more than three times as many toxic waste site cleanups have been completed than were completed in the previous 12 years of the Superfund program.

And we have taken the unprecedented step of revitalizing communities by accelerating the cleanup of Brownfields and returning the land to productive use.

The budget we are announcing today preserves this record of success and builds on it.

As it has since the inception of the Clinton-Gore Administration, the EPA budget builds upon those core environmental programs that are the backbone of this agency. This includes: setting environmental standards; environmental enforcement and compliance; and direct implementation programs for the states.

In fiscal year 2001, the Clinton-Gore Administration is requesting an 11 percent increase, or \$384 million, over last year for core environmental programs, which allows the Agency to meet the American public's expectations for a safe and healthy environment. The increased is directed at programs for cleaner air and water, safer food and sound science.

For water, the President's fiscal year 2001 budget bolsters the successes we have achieved by providing \$495 million in Clean Water state grants, including a \$50 million increase to specifically address polluted runoff, the largest current threat to our Nation's water quality.

The Great Lakes, among our Nation's most revered and beautiful water resources, receive \$50 million in the President's Budget for a new initiative that will continue the progress we have made in their cleanup and restoration. Through this initiative, states and communities will be eligible for competitively-awarded matching funds to improve water quality through stormwater pollution control, wetlands restoration and remediation of contaminated sediment.

We are stepping up our efforts to identify and restore polluted waterways by providing an additional \$45 million in state grants for the Administration's new Cleaner Waters Across America program. The program is aimed at waterways still in need of improvements. Resources will be used to develop specific restoration plans for some 20,000 waterways across the Nation.

Consistent with our goal to provide sufficient capital so that, over the long-term, \$2 billion in average annual assistance will be available to localities, the President's Budget provides \$800 million for the Clean Water State Revolving Fund—a flexible funding mechanism designed to help communities provide clean, safe and healthy water. This year, we are requesting authority to give states the option of using 19 percent of their Clean Water SRF in the form of grants to fight polluted runoff. I am asking this Committee to join us in providing states with this additional flexibility to provide clean and safe water for the public.

The Administration has taken the most aggressive actions in history to provide cleaner, healthier air for all Americans, and this budget continues that effort.

The President's Budget is providing \$85 million for the Clean Air Partnership Fund—a fund that will provide resources to states, cities and tribes to help reduce air pollution. This initiative will foster public-private partnerships to help communities achieve their own clean air goals in ways that make the best sense for them.

In addition, to continue reducing the air pollution that contributes to global warming, \$227 million has been proposed for the third year of the Climate Change Technology Initiative. This program promotes voluntary measures that reduce energy use and bring down the energy bills of all Americans, while also reducing greenhouse gas emissions.

Furthermore, to continue to strengthen our relationships with our state and tribal partners, this budget provides \$215 million in state and tribal grants to help find solutions to air pollution. Of these resources, \$5 million will be granted to states and regional planning bodies specifically to combat the problem of regional haze—one of the most obvious effects of air pollution.

The Administration remains dedicated to improving children's health by providing \$68 million for the Children's Environmental Health Initiative. These funds go for critical programs that fight such threats as lead contamination and childhood asthma. We also are continuing our dedication to food safety through the Food Quality Protection Act by providing \$75 million for its implementation so that the American public will continue to enjoy one of the safest, most abundant, and most affordable food supplies in the world.

The President's Budget continues expanding the public's right-to-know about toxic releases in their local communities through several initiatives. One of those new efforts is a new environmental information system that will provide the public more critical environmental information than ever before. Under this Initiative, the Administration will provide \$30 million to work with the states to provide one of the Nation's greatest sources of shared, key environmental information.

To better protect America's communities, the Administration is again proposing the Better America Bonds Initiative. This Initiative, which has increased by more than a billion dollars over 5 years from last year's proposal, will help communities grow in ways that ensure sustainable economic growth by providing them the resources they need to address local smart-growth challenges like protecting water

sources and shrinking parklands as well as cleaning up brownfields. Through this initiative, the Administration will provide the authority to issue \$2.15 billion for investments by state, local, and tribal governments in 2001.

This budget provides almost \$1.45 billion to continue our progress in cleaning up the Nation's Superfund toxic waste sites. The Agency plans to complete construction at 75 sites for a total of 830 construction completions by the end of 2001. This will keep EPA on a path towards meeting the President's goal of 900 construction completions by 2002. In the Clinton-Gore Administration, about three times as many Superfund sites have been cleaned up as in the 12 previous years of the program. The new budget proposal will continue that progress. In addition, to help communities return their abandoned or idled industrial properties to productive use, the President has committed \$92 million for the extremely successful Brownfields redevelopment program.

The Clinton-Gore budget request for fiscal year 2001 protects public health and the environment by ensuring that we will be able to provide America with cleaner water, cleaner air, better protection of children, more protection for individual communities and a continuing cleanup of toxic wastes and restoration of Brownfields.

The Clinton-Gore Administration's budget protects the health and the environment of the American public. Last year, however, Congress "earmarked" from EPA's budget some \$470 million for more than 320 special projects in individual congressional districts. These earmarks direct money away from the Agency's core programs—the very programs that keep the environmental cops on the beat, use the best science to set standards to protect our children, and support the work of our partners, the states, tribes and local governments. That is why we have continued the Administration's policy to not carry over earmarks into the new budget, and that is why we will continue to oppose earmarks this year.

We also remain strongly opposed to any legislative riders that undermine our country's basic environmental laws. Our goal is to work with Congress to provide real protections for the Nation. I strongly believe that the authorizing committees, the traditional forum for discussing these issues, should again guide the process.

By providing our children and our communities with cleaner air, cleaner water and an improved quality of life, this budget maintains the Administration's dedication to the protection of public health and the environment. It ensures that the Environmental Protection Agency will have the funds to continue the seven years of unprecedented environmental progress built under the Clinton-Gore Administration.

These are the highlights of our fiscal year 2001 request. I look forward to discussing with you, as the year progresses, these initiatives and innovative financing mechanisms. I would be happy to answer your questions at this time.

ENVIRONMENTAL INFORMATION: DATA GAPS

Senator BOND. Thank you very much, Madam Administrator.

You may recall 2 years ago, then-Deputy Fred Hansen indicated that environmental information issues would be a high priority. I am disappointed in the progress to date. We still do not have any overarching plan. A comprehensive error correction process is still not in place, as we understand it. We still do not have an inventory of key data gaps.

What is the problem? Why have not these things been done? And what has been accomplished in the last year?

Ms. BROWNER. Mr. Chairman, this is a very high priority for the Agency, and we have been working on it. For example, we have created a new Office of Information Management. One of the challenges, and you understand this, that we face that we had historical databases of environmental information in a variety of areas within the Agency which were collected under a variety of statutes. We are now in the process of bringing all of that together into one program. We are also looking at how to modernize ongoing data collection and how to better make that available to all of the parties that need it, which would include the States.

It is not without its challenges; it is an enormous undertaking. I would hope that the committee could look very seriously at our request for funding for the States. We will be able to do all of this

information integration and management in a much better way if the States are able to move along.

The interesting thing, Mr. Chairman and other members of the committee, is that this is not an issue of simply States that we would all perceive to be with the older environmental agencies or the more sophisticated environmental programs. It is a variety of States that are already doing it. We are providing some modest funds. We are asking for money so that all of the States can begin this kind of information upgrade, this kind of computer systems upgrade, and allow us to better manage environmental information across the country.

Senator BOND. Certainly assisting the States is a very, very important part and something that we would be supportive of, sure. But we do not see the plan of how it is going to work, how this is going to fit in with your plan. In last year's committee report, we noted that several action items, including establishing an agenda of information products, published semiannually, that would identify information products EPA is preparing for the public, establishing procedures to engage the public in development of information products that it offers the public, and we asked for a report by March 1 on policies to protect confidential business information. What progress has been made on these items on page 80 of the report from last year?

Ms. BROWNER. We will provide a status of the report to you within the next week. And I apologize for our tardiness in doing that. We do have a number of actions underway. For example, we are working with NACEPT to develop a long-term action plan. We will, next month, be putting out a short-term action plan. The first step was to integrate the office, and now we are developing those plans.

We are also working with NACEPT to develop external guidance on how best to approach our data needs and gaps. We would be happy to provide for you a full list of all of the things we have underway.

[The information follows:]

REPORT ON CONFIDENTIAL BUSINESS INFORMATION

As we reported to Committee staff in the Quarterly report on appropriation requirements, submitted March 17, EPA is reviewing claims of confidentiality, including "those claims that are based on the argument that multiple pieces of publicly available data can be put together to form a 'mosaic' picture of trade secrets." EPA held discussions with stakeholders about the mosaic effect as part of the EPA/State Stakeholder Forum on Public Information Policies, in Chicago on November 15-16, 1999 (for summary see EPA's Web site at www.epa.gov/oei/issuepapers). No consensus was reached on whether the mosaic effect exists, how extensive or serious it is, or how EPA could address it; in fact, no examples of harm where EPA was involved were noted. This lack of consensus was also reflected in the General Accounting Office's June 1999 report, citing the range of views expressed by industry representatives and competitive intelligence professionals.

OEI is now in the process of examining the mosaic effect in the broader context of revising the confidential business information (CBI) regulations (40 CFR, Part 2, Subpart B). This review will strive to ensure that the regulations are up-to-date, adequate, and effective. The Agency will also examine how different program offices categorize and protect various types of sensitive information, including confidential information.

As part of this effort, EPA will examine its statutes, regulations, and policies to determine the extent to which they may limit CBI claims. We plan to publish an advance notice of proposed rulemaking in late spring that will seek public comment on possible CBI revisions, including potential mechanisms for addressing the mosaic effect. The Agency also will convene a public meeting in early summer to solicit fur-

ther stakeholder comment on its CBI regulations. We believe the Agency can best address the issues raised in the Senate Committee report (106-161) through these efforts.

INFORMATION MANAGEMENT ACTIVITIES

Following are descriptions of other specific information management activities EPA has underway.

AGENDA OF INFORMATION PRODUCTS

The Senate Subcommittee's request that EPA establish "an agenda of information products" was raised and discussed at our Forum. Forum participants agreed that providing advance notice of significant products in planning and development stages, as well as opportunities for public comment and stakeholder involvement, would be very beneficial. They were concerned, however, that EPA not delay product development unnecessarily by developing a process that was too complicated. As a result, the Agency and our State and tribal partners have committed to establish a workgroup to explore the concept of developing an "information products bulletin" that would report on significant upcoming information products and provide opportunity for public comment and stakeholder participation in our product development process. The workgroup has been tasked with finalizing its recommendations on the scope of such a "bulletin" by this Fall and making the first "bulletin" available in early 2001. In addition, to assure some opportunity for notice on significant information products currently underway, an interim products bulletin is planned for this Fall.

PROCEDURES TO ENGAGE THE PUBLIC IN THE DEVELOPMENT OF INFORMATION PRODUCTS AND ERROR CORRECTION

As part of the development of our information products bulletin, the workgroup will recommend the process and appropriate means for members of the interested public to participate in the development of significant information products. In fiscal year 2000, the Agency will implement a web-based error reporting and tracking process for use by the public, States, and other EPA data users. The process will allow data users to report suspected errors in EPA data to the Agency and will track the error resolution process from initial report through final resolution.

ENSURING INFORMATION SECURITY—FIREWALL, TRAINING, AND VERIFICATION

EPA has taken a number of steps to install a full firewall system to protect EPA information systems from unauthorized intrusion. On February 20, 2000, the third and final component of the Agency's full firewall system was installed. The first two components, the network gateway firewall and the public access firewall, were already operational. The third component separates the rest of the EPA Wide Area Network from the Internet and includes automated intrusion detection technologies, as well as logging and analysis of accepted inbound traffic.

EPA has completed additional measures to strengthen its information security and plans to continue to expand and improve upon these efforts. These efforts include increasing Agency training on information security and the dissemination of information security policies and procedures via an Intranet site, through all-hands memos, and by means of seminars and conferences. EPA also is conducting analyses of its network architecture and investment review process to ensure that information security is adequately addressed. Finally, the Agency has expanded its testing and verification of computer security measures, including the use of independent analyses.

ENVIRONMENTAL INFORMATION: BURDEN REDUCTION

Senator BOND. We are concerned about this, because we have been working on this for 2 years. I have a memo that is getting a little yellow with age here, talking about sharing high-quality environmental data. It is from back in April 1998. And we are anxious to see all of these good things come to fruition.

In an EPA memo just 1 year ago, called "The Framework for Early Action Projects for the New Information Office," reducing reporting burdens is listed as a priority activity. But, again, when we get the GAO report on the EPA, GAO says EPA has been playing

games with the numbers and that the paperwork burden has increased. So I have questions about how much has been accomplished in this area.

Ms. BROWNER. Mr. Chairman, one of the responsibilities we have as the Environmental Protection Agency is to not only streamline requirements. We also have a number of ongoing efforts underway which you are very familiar with. They are not things that are achieved overnight. In some instances, we have to look to the States to implement them on a daily basis. We have to wait for the permits to come through the process.

On the other hand, and I want to be clear about this, this administration has been very committed to reinvention and burden reduction. We have also been committed to setting tough standards, requiring new reductions in pollution, and expanding the public's right to know. Thus, so when you talk about increases, a large percentage of those increases are tied to the very aggressive work we have had, for example, in our air pollution program, under the Clean Air Act. This is a new statute that we are implementing.

Under the Safe Drinking Water Act, the Consumer Confidence Report, which we worked with this committee and members of Congress to develop, requires time and energy for water systems to report to their consumers the condition of drinking water.

We have also expanded the public's right to know, under TRI. You are right in some instances, the numbers have grown. However, we believe that is part of how we better do our job, by requiring facilities that perhaps did not need them previously to get permits, to reduce their pollution, and by answering the public's right to know.

At the same time, we remain absolutely committed, within existing and new programs, at looking at how to streamline any information requests, and burdens that may be put on reporting industries.

Senator BOND. We will continue on that later. I just would note that we had been advised that there was a reduction, a 27-million-hour reduction. That did not happen. There are many aspects to that. We will deal with them later on.

I will turn now for questions to Senator Mikulski.

CORE BUDGET ITEMS

Senator MIKULSKI. Thank you very much, Mr. Chairman.

Ms. Browner, this is your eighth appearance and we do not know if it will be your final appearance. It is conceivable that a Gore administration would ask you to continue in the outstanding job that you have done. And that will be up to President Gore and you to decide.

I know Chairman Bond might have an alternative viewpoint on this. But, either way, when we pass our appropriations for fiscal year 2001, it will be the final days of the Clinton administration. And I would like to ask you what would you say are the three top things that are the must-do in this budget, to be able to stay the course and all the way through the first year of a new Administrator? What core budget items would you really feel is a must-do, that we really look at and ensure adequate funding to be able to continue the important mission of the EPA and have the tools for

either you or the next Administrator to have? What would be your top three?

Ms. BROWNER. First is to honor the President's request for an increase for the EPA core programs. As I said previously, this is the nuts and bolts of public health and environmental protection. EPA core programs are where we do virtually everything that results in a cleaner environment and more public health protection. It is an 11-percent increase.

Second, we are asking for fairly significant increases in money to the States to manage various water pollution programs. An example is the non-point source programs, the Section 319 grants. States are good partners in this effort, but they need Federal financial assistance in running their day-to-day programs. We have significant increases in this budget.

Finally, we have been very pleased that over the last several years this has not happened and will not happen this year, to have a bill that is essentially rider-free. One that does not restrict how we might go about or how the next administration might go about doing its job of public health and environmental protection.

Senator MIKULSKI. Well, I appreciate those. Let me then go to some specific things. Let us go to the brownfield issue. You visited something called the American Can property.

Ms. BROWNER. Right.

BROWNFIELDS

Senator MIKULSKI. This was an old factory that made tin cans, really. We had a cannery row in Baltimore. That moved out of the community and eventually out of the State. This factory has been recycled into a digital building. And now, 400 people work in it. So we are pretty brownfields exuberant actually.

My question to you is, what should we be doing to, number one, stay the course on brownfields and what improvements would you recommend that we could do through the appropriations, both in funding and fine-tuning some of the directions? Because I believe not only in my own community—3,000 acres, 3,000 acres of waterfront property that could be recycled into what now are dead zones, into prosperity zones. And I wonder what your recommendations for that.

Ms. BROWNER. We strongly recommend that the committee maintain the split in funding that we are requesting. If you think about the brownfields program, there are three big pieces to it. There are the site assessment grants which is what was used at the American Can site that you mentioned. There are the showcase communities. We are preparing a second round of those and, we would like to be able to continue those activities. Showcase communities are brownfield sites where not just EPA works, but we bring in a whole host of Federal agencies that can be helpful.

Finally, Mr. Chairman, if I might just take a moment, because I think this will be a source of some discussion in your future meetings, the revolving loan program. What you are going to hear, and this is absolutely true, is that only a handful of loans have been made. It is a new program. It takes a little bit of time to get these loans up and out the door. But, we are up and running now. Once

we are running, the worst possible thing to have happen would be to miss a year of funding.

It would be extremely important, once Congress made that decision. We asked for several years before you made that decision to continue funding the revolving loan program. I think it is a half-million dollars that goes out to local communities. The communities then loan the money out to perhaps a developer who cannot find a bank in the initial phases. The developer pays back the loan and another developer can become eligible.

SAFE DRINKING WATER ACT

Senator MIKULSKI. In my last few minutes, we talked about local cooperation. That takes me to the Safe Drinking Water Act, which is so crucial for our communities. A significant component of that Act was the new State revolving fund for the Nation's drinking water needs. Could you share with us the experiences you have had in implementing that? How would you assess it? And what improvements do you think you could make?

Ms. BROWNER. We think it has been incredibly successful since its inception in fiscal year 1997. Working with Congress, we have provided \$3.6 billion in funding for the SRF program. And we really appreciate this committee's commitment and leadership on this issue. The States will soon make their one-thousandth loan under this program. In other words, 1,000 communities are benefitting from the work that we have been able to do together.

I think it is also important to understand that we are fulfilling the goals of the Safe Drinking Water Act with respect to assistance for small systems. Three-quarters of the loans made to date have gone to small water systems. These are systems that serve fewer than 10,000 people. It is not necessarily Baltimore which has the rate base and the expertise. It is the small systems where I think has been hugely successful. I just hope that we can continue to provide the funds to the States so that they can meet the needs of the smaller systems.

Probably the single greatest reason why we are seeing the upswing in the rate of compliance in drinking water systems across the country is the fact that these smaller systems have access to resources that they did not have previously.

Senator MIKULSKI. Thank you.

Senator BOND. Thank you, Senator Mikulski.

Senator Lautenberg.

KYOTO PROTOCOL: KNOLLENBERG LANGUAGE

Senator LAUTENBERG. Thanks Mr. Chairman.

Administrator Browner, it was nice to hear the testimony to you coming from both sides of the aisle, from the chairman of the committee, the chairman of the appropriations committee. So, be careful, it may cost you some money, but we have to take it whenever it comes.

EPA has been accused of kind of back-door implementation of the Kyoto Principles on Climate Change. Some people think the Agency is developing rules and regulations despite the fact that the Protocol has not been ratified. How do you respond to that?

Ms. BROWNER. We are absolutely in compliance with what I think is routinely referred to as the Knollenberg language. First of all, I think, as everyone knows, there is no Kyoto Protocol in effect in the United States. We are not doing anything at the Environmental Protection Agency to implement a protocol which is not in effect in the United States.

Having said that, we do believe that climate change is probably the most significant environmental challenge the world will ever face. We do have programs, many of them started under the Bush administration, where we work in partnership with the business community to help develop energy efficient products.

In fact, I was able to present awards to 25 new Energy Star partners, everybody from I think the State of New York to the private sector, who are investing in energy efficient technologies, which are good business, air pollution, and climate change decisions. This budget seeks an increase for those programs.

Senator LAUTENBERG. Thank you. If anybody has any doubts about the changes in the climate that we kind of see around us, I would suggest that all members of the Senate take the trip that I took just 2 months ago to go to the South Pole and see what is happening and watch the water run where ice used to be solid. And today they noted that an ice break was taking place that would result in an iceberg twice the size of Delaware floating in shipping channels out there. So keep up that focus.

Do we do anything to coerce developing countries into accepting the standards of the Kyoto Protocols? Because India and the President came to an understanding to protect the environment and develop clean energy resources. Is there anything that your Agency is doing?

Ms. BROWNER. No, absolutely not. We do work in partnership with countries around the world who are interested, for example, in exploring American technologies that may bring them clean air and clean water. But in no way do we have anything that "coerces". I cannot imagine how we would go about doing something like that. We do not.

BEACH PROTECTION LEGISLATION

Senator LAUTENBERG. You are aware of the fact that I have introduced legislation to improve water quality at our country's beaches. And we are working hard to pass a bill this year which would authorize funds for EPA, beginning in fiscal year 2001, to implement the legislation. How would the EPA go about implementing that if we were able to provide you with these funds?

Ms. BROWNER. We would be thrilled to accept the responsibility for implementing the program. One of the most important things I think that we can do is make sure, because of the way various States have handled beach monitoring, is to make sure there is some continuity, so that we can put in place what are the monitoring protocols and what are the reporting requirements. Your State is very successful and aggressive, but not all States are. We have a real disparity in the quality of the information. One of the first things we want to do is to put in place the requirements so that we are getting even information across the country.

You mentioned in your opening statement our web site. The effort is not because of any specific requirement that we are imposing, but rather through the public's right to know, to help local health departments or States really upgrade the quality of their information. We are starting to see some effect from that, but we certainly think your bill would be very helpful.

DOD'S APPROPRIATIONS BILL: ENVIRONMENTAL VIOLATIONS

Senator LAUTENBERG. There is a provision that was added to the conference report for fiscal year 2000 in the DOD appropriations bill. It said, "No funds appropriated may be used for the payment of a fine or a penalty imposed against the Department of Defense arising out of environmental violations."

Now, how has this worked in practice? I find it incredible to say that such an important part of our government, our Defense Department, our military installations, is exempt from monitoring and maintaining under environmental standards that we ask of everybody from the bakery shop, the cleaning store, on to giant industrial companies.

Ms. BROWNER. We share the concern. The Governors are equally concerned. The Governors feel it is extremely important that they have all of the tools available to them that the Federal laws give them under the Clean Air Act to enforce the environmental requirements and to collect penalties if there is a violation.

A Governor said to me recently, "It is just ridiculous"; we are out there enforcing against our cities and yet we cannot enforce against a DOD facility. They are very troubled.

The administration and the President, in signing the DOD appropriations bill last year, did so with objections to this provision. As I understand it, the administration has told DOD that they are to come to Congress and seek the authorization to pay the penalties, particularly where the States are asserting their rights to collect a penalty.

We strongly encourage Congress to reconsider the language. The administration has prided itself, and the President signed an executive order very early on, that Federal agencies would not be above environmental requirements. For example, under the President's leadership, for the first time ever, Federal facilities, including EPA, report under the Toxic Release Inventory.

We need to be good neighbors. Part of being good neighbors is honoring environmental requirements. If we fail to, then we should be subject to the penalties that any other business is subject to. Exempting DOD we think really flies in the face of that.

Senator LAUTENBERG. Mr. Chairman, thank you.

Thanks very much, Administrator Browner. I will miss you, even if you stay here with the Gore administration.

Ms. BROWNER. Well, I will certainly miss you. You have been a wonderful friend to the Agency.

Senator MIKULSKI. Mr. Chairman, if I could make some comment. I know that you are going to be at many other hearings on this subcommittee, but I would just like to acknowledge for the record the champion that Senator Lautenberg has been both on the authorizing and the appropriations for the environment, particularly his steadfast support for the SuperFund cleanup of toxic

waste and the innovative approach on brownfields. So, really, you very much are going to be missed. And I would like to personally and professionally thank you for your contribution.

Senator LAUTENBERG. Thank you.

Ms. BROWNER. Mr. Chairman, if I might just second that, and say to Senator Lautenberg, frequently over the years, when I have tried to understand why something is done at EPA, I will say, well, where did that come from? Who did that come from? More often than not, the answer would be, Senator Lautenberg's provision in this or that bill. You really have been a tremendous friend to the environment and to public health protections, particularly to the EPA. I thank you on behalf of all of my colleagues at the EPA.

Senator LAUTENBERG. Thank you.

Senator BOND. Thanks, everybody. I will miss Senator Lautenberg, too.

Senator LAUTENBERG. That is the sweetest thing you have ever said to me.

ENVIRONMENTAL INFORMATION INTEGRATION

Senator BOND. Madam Administrator, to come back to your last answer, you talked about the extensive information that you are getting in. And that is really why I am so concerned. Last year, we directed EPA to provide us with assurances, with verification from the I.G., that appropriate steps were being taken to install firewall systems, train staff and management on computer security, to test the integrity of the computer security measures on a periodic basis.

We need to be able to ensure good environmental information and we need to be able to protect from inappropriate disclosure the confidential business information that is reasonably disclosed to EPA. And when you have hackers getting in there and learning that information, perhaps changing or messing with the environmental information, we have got a problem. Clearly, according to the GAO testimony of last month, after more than 3 years, EPA has not fixed the critical problem of computer security.

And beyond dealing with the immediate crisis, we believe EPA needs a long-term plan for ensuring computer security. EPA must be on top of determining whether its intrusion detection systems are effective. The threats are changing very rapidly. The Office of Environmental Information, for example, must set standards and enforce them for computer security throughout the Agency.

I would like to know how we can be confident that EPA will put the staff and the contractors on board to address the problems. We need to know what assurances that you can give us. We know that EPA is requesting \$30 million for a new environmental information integration initiative, yet we have received few details about that. So I would also like to know how the funds will be allocated, what will be the accomplishments this year, and is this a multi-year funding requirement?

Ms. BROWNER. Let me answer the last question first and then go to your earlier point. On the issue for the States, I will come back to it. While a lot of money, \$30 million will not upgrade all of the States, it will take more resources.

Senator BOND. So it will take more. I just want to know, do you have a plan in place for how the first \$30 million will be spent?

Ms. BROWNER. Yes, we do. I do not know if your staff has participated in this planning, however, other staff on the Hill have participated. We have had some States that have already developed programs come in and do a presentation of these programs. We would be happy to do that again. They are quite significant and really quite remarkable. They bring with them burden reduction for the reporting community and better data quality. We would be happy to do that.

[The information follows:]

ENVIRONMENTAL INFORMATION INTEGRATION INITIATIVE

The Agency's integration effort is foremost a partnership effort with the States to create and sustain a national environmental information exchange network. The scope of the effort is great. The States and EPA currently operate with a vast array of individual data and information relationships. Building these individual relationships into an integrated whole will involve developing and implementing smaller components (i.e., individual data standards, program specific data models, etc.). While each of these components will have work plans with detailed milestones and assignments of responsibility, there will also be an overarching blueprint or road map that ensures consistency and cooperation among the individual efforts.

We are currently working with the States to develop that blueprint. A critical part of our active dialogue with the State (though the Information Management Workgroup under the auspices of the Environmental Council of the States) is to ensure that we are prepared to make meaningful progress toward the network in fiscal year 2001. Together, we have identified a number of key areas for fiscal year 2001 action, which the President's \$30M budget request will support: defining the functional and technical requirements of a data exchange network, jointly developing and implementing essential data standards—the core engine of information exchange and integration, developing the technical exchange protocols that allow web-based data exchanges across a variety of differing state and federal data systems. Even as we work on these foundation pieces, we will identify and pursue opportunities for establishing a number of State-EPA electronic data flows through a central exchange function. We anticipate that implementing the ever-advancing information technologies and the modernization efforts underway in a number of states will allow us to see a significant volume of data flowing in the emerging network in the next year. This approach, building the broad foundation even as we work with individual states on specific data exchanges will require us to provide resources to individual states (to take bold steps forward in electronic data exchange as well as to build capacity to participate in the network) as well as resources to broader collective efforts (like data standards and technical exchange protocols).

In order for EPA to be a full partner and equal peer in a State/EPA data exchange network, we will continue our efforts in fiscal year 2001 to modernize and integrate our internal information systems. EPA's role in this joint venture requires that our systems be integrated internally. Data contained in EPA's unlinked stove-piped information systems will not support a type of network that we and the States envision. In fiscal year 2001, we will build on efforts initiated in fiscal year 2000 to build a secure core of high quality integrated information. We will integrate across traditional program lines to allow multi-media geographic views of our information assets. The broad categories for this integration are: facility and place information, regulatory information (permitting, compliance and enforcement), chemical and pollutant information and ambient information. In fiscal year 2000 we brought together technical staff from EPA's programmatic information systems to define the requirements for an integrated system and plan for its creation. By bringing a diverse staff representing the Agency's main programs together, we have begun the important work of building Agency-wide support as well as identifying the priorities for integrating our internal information assets.

COMPUTER SECURITY

Senator BOND. We have had some summary briefings. We have not seen the plans. We would like to see the plans.

Ms. BROWNER. We will do that.

Mr. Chairman, on the issue of confidential business information and security, it is a fast-moving, dynamic world out there in the

Internet. Like many in government and the private sector, we are constantly looking at how to upgrade our systems. There were members of Congress aware of our plans. Specifically, they were aware of equipment to be installed, firewalls to be built, and the schedule for doing these. Unfortunately, after some statements made, we were advised that we had become a particular target for hackers and that the best thing we could do would be to bring our system down while we installed the firewalls. We were already planning to install these firewalls and had a schedule for installing and people were aware of that appropriately.

It was a difficult decision, because we do service a lot of people in industry, the public, and the States. But, we did make the decision.

I think it would be important to note here that we have no information, GAO has presented us with no information that I am aware of, that CBI information has been inappropriately accessed through our Web site. We are vigilant about that. We have to remain vigilant about it. We did have an issue with paper copies, and reported it several years. These were not in our Internet system.

Second, a number of the stories or reports about inappropriate access, or hackers as they are sometimes referred to, are situations which we ourselves found and disclosed to the GAO. That is the way it should work. It is not to say that we do not need external experts or external advice. We do have that.

Mr. Chairman, we would be happy, if we have not done so, to meet with your staff in a more private setting to go through with you a detailed description of the firewalls. There are reasons why that might be something we would not discuss publicly.

Senator BOND. Well, I think it is important. We certainly accept that opportunity. And it is important that we have, I think, the GAO and the I.G. involved, because they have done significant operations in this.

Ms. BROWNER. They have been involved.

Senator BOND. Three years ago, we said you have to have firewalls. And I am very disappointed that we are still—

Ms. BROWNER. We had firewalls, and we have been upgrading the firewalls. Mr. Chairman, as I am sure you know, this is a fast-moving world that we do this in. We have been upgrading our firewalls. We had a schedule to further upgrade them and those upgrades are now all in place.

Senator BOND. The other thing I understand from the GAO report is that you said there has been no access to confidential business information but, in reading the reports, I get the real sense that there is no means of detecting whether there has been unauthorized access. And that is one of the problems.

Ms. BROWNER. As far as I know, the GAO has not notified us that they are aware of access to CBI through our Internet. If they are, then it is news to me.

Senator BOND. Well, I am not saying that there is. I am saying that there is no means of determining whether there has been or not.

Ms. BROWNER. Part of the firewalls are enhanced intrusion devices. I do well to turn on my computer.

Senator BOND. I have to have help.

Ms. BROWNER. That is why I have a 12-year-old. He comes around to help.

Senator BOND. Let me turn to Senator Mikulski. Further questions?

Senator MIKULSKI. Mr. Chairman, I had to step outside for a minute. Were you going over the information security system?

Senator BOND. Yes.

Senator MIKULSKI. Do you feel that you have covered the ground that you needed to?

Ms. BROWNER. Pretty good.

Senator BOND. We are going to get together again.

Ms. BROWNER. We are going to have a private meeting on the firewalls.

Senator BOND. We are going to open some sodas and cook some hamburgers and talk at length about this.

Senator MIKULSKI. You better watch about those emissions when you do that killer grilling.

INTERNET SECURITY

I, too, am concerned about the information security aspects. First of all, we were glad that we got through Y2K. And I think while we are looking at what we need to really develop, I think it has really served the Nation well that we did not have the computer glitches that could have caused serious problems in our water supply and our waste water and so on had that not worked at the State and local level. And I know that you, as well as the President's task force, worked very hard with the Governors and FEMA on that. So that was very, very good news.

But I, too, am concerned about these security issues. More and more people are going to be turning to EPA and they are going to be wanting to go to your Web sites and so on. In many ways, that really can help a lot with the right to know. Then they can get back to you on the right to be heard. But, again, there are these security concerns. And when you have this private meeting, either I or my staff would like to participate in them.

Ms. BROWNER. Thank you.

PUBLIC HEALTH

Senator MIKULSKI. I would like to be able to go to the issues related to your interagency help. Because I am really tremendously interested in the public health linkages. EPA, in your strategic plan in 1997, found that there were over 25 Federal agencies that require greater integration and review of efforts in terms of public health. Could you tell me what you have been doing on the issues of asthma, and then, if we have time, on the issue of lead paint? Because this cuts across what EPA needs to be doing.

You are not meant to be a public health—I mean we have Dr. Satcher, who is the Surgeon General, but so much of this goes across community lines, I mean agency lines.

Ms. BROWNER. We agree. I think one of the real successes of this administration has been the increased work across agency lines. Two things that I will mention. One is regarding asthma. I co-chair the President's Kids' Health Task Force and many other agencies participate in. Together we have put forward a coordinated asthma

strategy, bringing together the expertise of the various agencies. We do seek funding in this year's budget for implementation of that strategy.

Second, we have developed a coordinated lead strategy. It goes beyond agencies you might even think would be part of a lead solution. Obviously HUD needs to be an important part. We work very closely with them in terms of enforcement. But we are also bringing in the Department of Energy. A lot of lead contamination in older housing is a product of opening and closing old windows. The dust comes down, the kids play in the dust, and they ingest it.

As you look at energy efficiency, as upgrades in these older housing stock, you can replace the window, resulting in increase energy efficiency and lead abatement. And we are continuing to expand our efforts with other agencies on lead abatement.

Senator MIKULSKI. What have you found to have been the major causes of asthma? And what has been the role of EPA in dealing with this? Asthma, particularly among children, and we see this both among the children of the poor, but as well as the children of the middle-class, that it has in many of our schools, reached epidemic proportions. Many of the children who require medication during school are asthma kids. The question is always, who can give the medication? Those are legal issues. But I am really worried about this, and our school system is really worried.

Ms. BROWNER. We have worked with Hopkins on the asthma issue. The role of the Environmental Protection Agency is in setting outdoor air quality standards. What the scientists and the public health experts tell us is that we do not necessarily know why one child is an asthmatic and another child is not an asthmatic. They cannot answer that question yet.

What they do know and the many studies that have looked at this, is for an asthmatic child, when the air pollution reaches certain levels, the quality of their attack will be worse. There are extensive studies involving what are called the summer camp kids in New Jersey, where it actually charts their breathing at any given moment. The air pollution goes up and the severity of their attack goes up.

This has been our primary focus. We recognize that it is a crisis and an epidemic. It is the single largest cause of childhood hospital admissions in the United States today. We are also working through our indoor air program and through our Tools for Schools Program, to provide some advice and some ideas on how to help reduce the children's attacks and some of the exposures beyond the work we do on outdoor air.

Senator MIKULSKI. Thank you.

Thank you, Mr. Chairman.

CLEAN WATER: GAP ANALYSIS

Senator BOND. Thank you, Senator Mikulski.

Madam Administrator, in our hearing last year, we talked about the gap analysis that EPA was working on for water infrastructure funding needs, which identified a \$200 billion need, excluding replacement costs and operation and maintenance. One year later, it still is not out. We have a copy of a presentation the EPA made recently on the gap analysis. It lays out a few critical facts: Waste

water capital investment is declining, but it needs to double; the annual gap in capital spending for waste water treatment is increasing; the amount paid by consumers in waste water treatment user fees has doubled in a little over a decade. It recommends increasing SRF authorizations and Federal grants.

In view of the funding gap for water infrastructure financing of at least \$200 billion, coupled with the prospect of new TMDL requirements, and your own analysis would suggest a larger Federal role is needed, why is the President's budget cutting, once again, the Clean Water SRF by 40 percent?

Ms. BROWNER. Mr. Chairman, we discussed this last year. We continue to believe that we have to modernize and reauthorize the Clean Water Act and then, with that, provide the appropriate funding. The administration made a commitment at the beginning of the administration to have the Clean Water SRF, which is one large and important part of solving water pollution challenges in this country, but it is not the only part.

We made a commitment to have that portion of it revolve at \$2 billion annually, in terms of loans going out annually, by the year 2002. We are going to be there before that. The money is moving at the rate that we promised the cities. We think it is now time to focus all of our efforts on modernizing the Clean Water Act. It has not been reauthorized in a significant period of time. We know a lot more about remaining water pollution problems and how to create a funding mechanism for States and local governments that speak to the whole host of remaining issues, from upgrading sewer plants to dealing with polluted runoff.

We have money in this budget request outside of the SRF for the dollars that go to States. As I mentioned in the previous answer, the Section 319 money gets increased as well as the TMDL money. TMDL is a base of \$115 million. We would increase that by \$45 million. Section 319, the non-point, or polluted, runoff money would get a 25-percent increase. It would go from a base of \$200 million to \$250 million.

We are asking for specific money for the States. You and I do not have a disagreement over the long-term infrastructure funding needs. We simply would request that that be done through a reauthorization process, to look at all of the issues.

Senator BOND. It is interesting that not having an authorization is given as a reason OMB has not submitted to us requests for adequate funding. At the same time, we get requests for funding for clean air partnerships and a host of other unauthorized programs. We have fought to raise the amount spent on the Clean Water Revolving Fund each year, and that is the only reason we are getting up close to \$2 billion. But even that \$2 billion fund, given the information that we have, is woefully inadequate.

Your own Agency officials have said the United States now spends about \$9.4 billion annually on waste water and wet weather infrastructure, but needs to spend \$15 billion. And by the year 2020, the annual investments needed will be \$21 billion to meet the projected waste water treatment needs alone. Are you saying that having a \$6 billion annual funding gap is acceptable in this?

Ms. BROWNER. No, we are not suggesting that. We want to work with Congress, to modernize the law and the funding programs.

I am not sure what copy you have. I think it may be a copy we provided to your staff of our initial gap analysis. We are finalizing that, as I promised you we would do. We will be back up in April to give you the final report. Hopefully, that can form a basis for working together, through this committee and the authorizing committee, to find the appropriate legislation and then the appropriate funding.

Senator BOND. Again, I would like to see the Clean Water law reauthorized. As far as I know, there are not any problems in the SRF's related to the authorization.

Senator Mikulski, do you have any further questions, or can we finish it up?

Senator MIKULSKI. No, Mr. Chairman. We can finish it up.

TMDL

Senator BOND. Okay, we will go very quickly, and I will try to summarize these things.

Senator MIKULSKI. Very good.

Senator BOND. We appreciate very much your participation.

Ms. Browner, you support flexible approaches to achieving environmental standards. Yet the EPA TMDL approach is the old style, command and control, one size fits all. As an example, concerns have been raised by experts that EPA's proposal discourages a cap-and-trade system for reducing nutrients in surface water. Is not a cap-and-trade system one of the most promising means for meeting water quality standards?

Ms. BROWNER. If someone has suggested that we are opposed to cap-and-trade and TMDL's, they are categorically wrong. We are not. They provide a huge opportunity for finding cost-effective solutions. I have been a big proponent of them in the air pollution programs where they are used to great success. We would like nothing better than to see States use them as a very efficient tool for addressing remaining water pollution problems.

Senator BOND. We had the testimony of Leonard Shabman and Kurt Stephenson, agricultural economists in Virginia Tech's Department of Agriculture and Applied Economics. They were the ones who said it would.

Ms. BROWNER. I do not think they work for EPA. EPA likes these programs.

Senator BOND. No. That is why I said experts, people who are looking at it from academia.

EPA determined the proposed rule does not contain a Federal mandate that would result in expenditures of \$100 million or more for State, local and tribal governments. Most of us here are absolutely astonished at that conclusion. The States have indicated to us that the estimate is at least \$600 million per year, based on the average cost of TMDL's developed to date.

What has been your experience with the TMDL's developed to date? Do you have a cost on that or do you want to get back to me with that?

Ms. BROWNER. Yes, I think we should do that.

One of the reasons, Mr. Chairman, just quickly, we had proposed this—well, there are many reasons in the Clean Water Act, of course.

But second, we are being sued. The cause of action, as created in the Clean Water Act lies against EPA not against the States, for failing to set these loads and developing sensible plans to achieve the load reductions. So one of the reasons we have come forward with a rule is to get out from under this litigation. What we have are judges saying, do it more quickly, do it in 7 years. We are proposing 15 years for the States.

So we have now done some of these. So we would be happy to give you a figure on what any individual one that we have done has cost.

[The information follows:]

ANALYSIS OF THE INCREMENTAL COST OF PROPOSED REVISIONS TO THE TMDL
PROGRAM REGULATIONS

INTRODUCTION

This report estimates the incremental costs of EPA's proposed revisions to the TMDL program regulations. The costs estimated here are the costs of the revised TMDL program beyond those that will be incurred for the base program—beyond those that would be necessary to meet the requirements of current regulations, consent decrees and State commitments. For the purpose of estimating incremental costs, the proposed regulatory revisions can be grouped into Five categories:

I. Changes affecting the listing program.—The changes clarify or revise the format and content of the State 303(d) submissions, and also require additional public participation. The proposed regulations also request comment on options that may alter the required frequency of submissions ranging from leaving the frequency at the current two years to reducing it to once every four or five years.

II. Changes affecting the development and content of TMDLs.—The proposed regulations specify elements that must be included in each TMDL, including an implementation plan. Enhanced public participation in developing TMDLs is also required. Most of the specified TMDL elements are already required by existing regulations. The new required elements for TMDLs do not mandate additional monitoring, data acquisition or analysis, but specify that existing information that must be obtained anyway for other ongoing water program purposes should be organized, formatted or reported in a new manner.

III. Changes affecting the schedule for completing TMDLs.—The proposed regulations specify that all required TMDLs must be developed within 15 years, and that TMDLs for high priority waterbodies must be developed first. For those few States that have not already committed to a schedule of 15 years or less, this requirement will mandate an acceleration of program effort.

IV. Changes affecting Agency effort.—The proposed changes in the listing program for States will result in increased EPA effort, and proposed changes in the content of TMDLs will increase the Agency's effort in reviewing TMDLs. The proposed regulations highlight an option for the public to petition EPA to take a desired action rather than proceeding directly to litigation. EPA also will propose to provide reasonable assurance for implementation of a TMDL when a State does not do so—the specific procedures are included in the proposed revisions to the Agency's permitting regulations, and a separate analysis addresses the incremental costs that may result.

V. Summary of the impact on the Agency's Information Collection Request.—The Agency is in the process of renewing its Information Collection Request for the 305(b) and 303(d) programs. The proposed regulations increase the level of effort estimated by the Agency for States and for EPA. However, the savings that can result from adopting an option to reduce the frequency of the required 303(d) lists could more than compensate for the increased burden from the other changes affecting the listing program.

In no case do any of these proposed revisions require any new monitoring or data collection. States are already collecting the needed information as part of this program or under other parts of the water program. In some cases, it may be necessary to accelerate the development of information that is already required. By and large, the intent of many of these requirements is to improve efficiency and national consistency by establishing uniform formats, eliminating ambiguities, encouraging prudent planning, improving information for public participation, and perhaps by extending the intervals between required 303(d) lists. However, we recognize that

States meeting these requirements for the first time will likely require additional effort in the near term, while the benefits will accrue in later years.

The remainder of this introduction summarizes the estimated costs of the proposed regulations and outlines the general procedures we used to develop the estimates. The remaining chapters of the report are organized according to the five categories described above. In each chapter, each proposed regulatory change is described in terms of its effect, its relation to the baseline, and its potential incremental cost.

SUMMARY OF ESTIMATED COSTS

The following summarizes the results of this analysis for those aspects of the proposed rule that are expected to result in incremental costs or savings to States and to the Agency. In addition, these incremental costs are placed into perspective by comparing them to the cost of ongoing State, Territorial and authorized Tribal programs for water quality.

Overall Summary

The following table summarizes the results of this analysis for those aspects of the proposed regulations that are expected to result in incremental costs or savings to States. As shown in the table, the proposed regulations are expected to increase the costs to States by approximately \$10.3–\$24.4 million annually from the present through 2015. As shown in the summary table, the bulk of the additional costs (\$10.1–\$23.8 million) are associated with the proposed requirements affecting the content and development of TMDLs. For the listing program, if the listing cycle is lengthened, then the resulting savings could offset the increased listing costs associated with the proposed regulations.

The Agency anticipates that its costs will increase significantly in the future, primarily as a result of the increased State activity for developing TMDLs that is expected to occur in the baseline. As reflected in the Agency's proposed Information Collection Request, the Agency anticipates that its annual burden for the 303(d) program will increase from about 600 hours annually to about 6,600 hours annually. The bulk of this increase (5,600 hours) is for increased Agency effort for approving or disapproving TMDLs that are developed by States—this burden will occur regardless of the proposed regulation. As already reflected in the EPA's proposed ICR for the period 3/1/99–22/28/01, the Agency anticipates that the proposed regulation will further increase its burden by about 450 hours annually at a cost of about \$18,000 annually. If the listing cycle is lengthened, then the savings that result to the Agency would offset the increased burden associated with the proposed regulation.

Perspective on the Magnitude of These Incremental Costs

The requirements of the proposed revisions will impose a relatively small additional cost to ongoing State, Territorial and authorized Tribal programs. In fiscal year 1999 States, Territories and authorized Tribes will receive \$200 million for nonpoint sources under section 319. This represents an increase of \$100 million dollars specifically targeted for implementation of the Clean Water Action Plan. Identifying impaired and threatened waterbodies and initiating activities designed to attain water quality standards is a key part of establishing TMDLs. In addition, States, Territories and authorized Tribes will receive \$105 million under section 106 for implementing their water quality management programs, including the development of lists of impaired and threatened waterbodies and establishment of TMDLs as required by section 303(d). Thus, the proposed regulation's incremental costs of \$10.3–\$24.4 million represent only 3–8 percent of the amount of support provided annually by the federal government for these programs, and undoubtedly a much smaller proportion of the total State spending for these activities.

The proposed regulation is expected to increase EPA's costs by \$18,000 annually. This is an insignificant increase compared to the overall annual cost of \$279 million budgeted by EPA for water quality program management.

As the number of waterbodies identified stabilizes and increasing numbers of TMDLs are established, the additional annual costs associated with the proposed regulation are expected to decrease. At the same time, water quality will improve as TMDLs lay the groundwork for more cost-effective and improved controls.

*Summary of the Incremental Costs and Savings To States Associated with the
Proposed Regulations*

[In millions of dollars]

<i>Proposed Revision</i>	<i>Annualized Cost</i>
Changes to the Listing Program:	
I.5. Listed waterbodies are grouped into 4 Parts. Only Part 1 waters require TMDLs. H/M/L priorities must be set for Part 1. (Additional public part. cost is included in 7)	0.02
I.6. A State's list must include a schedule for establishing each TMDL	0.01
I.7. Listing methodologies must be subject to public review and submitted to EPA by January 31 each year a list is due	0.19
I.8. A new format is prescribed for the listing methodology	0.01
Subtotal Annualized Cost	0.23
I.10. Option C: Changing to a 5-year cycle from a 2-year cycle after the 2000 listing	(0.32)
Subtotal Annualized Cost Including Option C	(0.09)
Changes Affecting the Content and Development of TMDLs:	
II.1. TMDLs must include specified elements (costs are for implementation plan)	5.3–14.3
II.2 Minimum required public participation in TMDL development ...	4.8–9.5
Subtotal Annualized Cost	10.1–23.8
Changes Affecting the Schedule for Completing TMDLs:	
III.2. TMDLs for all Part I waterbodies must be developed within 15 years of listing01–.4
Subtotal Annualized Cost01–.4
Total Annualized Cost (Excluding Savings from I.10. Option C)	10.3–24.4

METHODOLOGY—GENERAL PROCEDURES FOR DEVELOPING THE COST ESTIMATES

This section reviews several general elements of our cost estimating methodology. We use the approach described in this section to develop, in subsequent chapters, estimates for the costs of the individual provisions of the proposed regulations. This section covers the following topics:

- Definition of the Baseline
- Data Sources
- Time Period for Cost Estimates and Annualization Procedure
- The Number of TMDLs to Be Developed
- Labor Rates and Costs for Supervisory and Clerical Functions
- Affected Entities
- Costs When EPA Performs a Function Rather Than a State

Definition of the Baseline

Estimates of the incremental impact of some of the proposed revisions are sensitive to how the baseline of current program requirements is defined. The more that is said to be already required in the baseline, the less is the incremental burden of the proposed regulations. For this report, the baseline has been defined as the greater of:

1. The requirements of existing TMDL regulations, other existing water program regulations, and consent decrees affecting the program; and
2. Current State program practice, as reflected in the combination of recent State TMDL program performance and commitments the States have made regarding future performance.

Practices called for by EPA's TMDL program guidance materials—to the extent they go beyond existing regulatory requirements and to the extent State performance falls short of them—are therefore not included in the baseline.

Several examples will clarify the application of this definition. First are instances where State practice falls short of existing legal requirements:

—In some cases, existing Federal regulations require States to do something that they may not have done in practice. For example, existing regulations¹ require each State to describe the methodology it used to develop its 303(d) list. Despite the existing regulation, in some cases some States have not provided this description of their listing methodology. The proposed regulations restate and clarify the requirement to describe the listing methodology. Under our definition of the baseline, we attribute no incremental cost to this provision of the proposed regulations. States are required by existing regulations to describe their listing methodology. The cost of doing so is associated with the current program; it is not a cost of the proposed revisions.

—The proposed regulations go further to specify the format of the State's description of its listing methodology. This does not appear in existing regulations, and few if any States have described their listing methodology in this manner. In our view, this proposed requirement does impose incremental costs beyond the baseline. The incremental costs we estimate, however, are not the entire costs for a State to describe its listing methodology, but the added costs of describing the methodology in this particular manner. A description of the State's listing methodology and the on-going costs of preparing the description are part of the baseline. The costs of this proposed regulatory provision are whatever additional costs accrue in providing the description in this more specific format rather than in the less specific format that would suffice under the existing regulations. Further, the effort to reformat the description would only be a one-time cost.

In other cases, State practice exceeds what is called for by existing legal requirements (current regulations and existing consent decrees). Here we assume that States will continue their current practice, and the proposed regulations will impose costs only to the extent that they require more than what States are currently doing. Here are two examples:

—Existing Federal regulations do not explicitly require an implementation plan as a part of each TMDL. The consensus among TMDL practitioners, however, is that a thorough TMDL should include such a plan, describing how the TMDL decisions will be implemented and how progress will be monitored toward attainment of the water quality standards. Accordingly, many of the TMDLs that States have developed recently (perhaps roughly $\frac{1}{4}$ of them, as discussed in chapter II) have included an implementation plan, even though EPA regulations have not required these plans. The proposed regulations will now explicitly require implementation plans for all waters for which TMDLs will be developed. We assume in the baseline that States will not backtrack on their current practice of preparing these plans for about $\frac{1}{4}$ of the TMDLs. In the absence of the proposed regulations, States will continue to do this. We therefore estimate that the incremental cost of the proposed regulations requiring these plans will be roughly the average cost of preparing such plans for a typical TMDL multiplied by $\frac{3}{4}$ of the total number of TMDLs to be prepared.

—Existing Federal regulations do not specify the time by which a State must complete TMDLs for all its listed waters. Nevertheless, due to public pressures, legal action and other factors, most States have now committed to complete their TMDLs within some specified time frame. Eleven States have signed consent decrees committing to deadlines for completing all their TMDLs, and 40 additional States have made other deadline commitments to EPA. States have chosen a variety of time frames for completing their TMDLs, ranging from as little as three years to as many as twenty. The proposed regulations will now require all States to complete their TMDLs within 15 years after listing, thus effectively requiring that all TMDLs for waters listed in the year 2000 (the first list to which the new regulations would apply) must be completed by 2015. We assume the existing State commitments to be part of the baseline—we assume that State practice will match what they have committed to. All but 4 of the States have committed through consent decrees or otherwise to complete TMDLs for all their currently listed waters by 2015—3 states are in the process of making their commitments and one state planned on completing its TMDLs by 2018. Thus, the proposed regulations may have an incremental impact on these four States to the extent it requires them to accelerate their planned pace for completing their TMDLs.

To summarize, the baseline we define for purposes of incremental costing is the greater of existing legal requirements (regulations and consent decrees) and existing practice (recent State performance and commitments).

¹40 CFR 130.7(b)(6).

Data Sources

Most estimates of the amount of staff level of effort (LOE) needed to perform a new task required of States by the proposed regulations have been provided by a State representative. Estimates of the State LOE associated with the baseline 303(d) listing program have been drawn from EPA's analysis of the respondent burden for this program as reported in the Agency's most recent approved Information Collection Request (ICR) submission. Similarly, estimates of the Federal LOE required for tasks under the baseline listing program are also drawn from the ICR.

Other information is drawn from a review of State 303(d) list submissions, TMDLs submitted to the Agency, and a data base of listed waters prepared by Tetra Tech, Inc.² This information was current as of early December, 1998. It includes those State list submissions and TMDLs received by EPA Headquarters and entered into the data base as of this time. For most States, this means their 1998 lists, but for some States that had not yet submitted their final 1998 lists or for which data base entry was not yet complete, our information is based on their 1996 lists. This information can be updated as more 1998 lists are submitted and analyzed. The cost estimates will likely change slightly as this newer information is incorporated.

Time Period for Cost Estimates and Annualization Procedure

The first 303(d) lists to which the proposed regulations will be fully applicable will be the lists to be submitted in 2000. The proposed regulations will require TMDLs for all listed waters to be completed within 15 years, by 2015. We have chosen the time period for the cost analysis as extending from the beginning of 1999 through 2015 so as to encompass the full cycle of program activities for this set of waters—from initial work on the listing through completion of TMDLs for all these waters. We estimate the incremental costs associated with each provision of the proposed regulations over this 17 year period. Some of these costs will occur once during this period (such as the one-time costs associated with adopting a new format), some will occur several times (e.g., under one option proposed for the listing program, lists will be required to be submitted every 5 years, starting in 2000 and then in 2005, 2010 and 2015), and some will occur each of the thousands of times a TMDL is developed during this period. In each case, we estimate the amount of the cost and how often and when it will recur during this period. Projected costs are then summed for each year from 1999 through 2015 and discounted back to the beginning of 1999 using the OMB-recommended real discount rate of 7 percent annually. When discounting, we assume that all of the costs incurred in a year occur at the beginning of the year—this is a conservative assumption that tends to increase the present value cost of the proposed regulations. We then annualize this present value figure over the 17 year period of analysis. The result is the estimated annual cost of each proposed regulatory requirement.

The Number of TMDLs to be Developed

One of the most important data elements needed in estimating the costs of the proposed regulations is the number of TMDLs that will need to be developed over this time period. Some of the proposed regulatory requirements increase or accelerate the cost of developing a typical TMDL. The total cost of such requirements can generally be estimated by multiplying the cost increase for a typical TMDL by the number of TMDLs to be developed. Unfortunately, there are several unknowns in estimating the number of TMDLs to be completed.

The best initial indicator of the number of TMDLs is the number of waters listed by States in their 303(d) lists. By combining the most recent lists from each State, we estimate a current national inventory of some 20,198 listed waters. The ultimate number of TMDLs needing development will differ from this number for several reasons:

- Several sorts of waters must be included on States' 303(d) lists even though they will not in the future need TMDLs developed for them. These sorts include: (1) Waters that are impaired or threatened by pollution (e.g., flow alteration or exotic species) rather than pollutants and that are thus not amenable to TMDLs; (2) Waters that have already had TMDLs developed for them, but for which WQS have not yet been attained; and (3) Waters that are impaired, but for which planned activities other than TMDLs will bring them into attainment. Under the proposed regulations, these three sorts of listed waters not needing TMDLs would be classified in separate parts of a State's 303(d) list.
- Many additional currently listed waters will eventually prove not to need TMDLs. States often list waters on a conservative basis, choosing to list a water

² Kevin Kratt, Tetra Tech. "Updated memo on TMDL listing and development questions relating to EPA's new regulations." November 20, 1998.

even though the information suggesting that it is impaired is very limited. Subsequent monitoring may find that the water is not impaired and need not be listed.

—On the other hand, not all the waters that will eventually need TMDLs are currently known and listed. States have monitored or assessed only a fraction of their waters. As assessment and monitoring efforts expand to more of the Nation's waters, more impaired waters needing TMDLs will be found. The States' 303(d) lists submitted in 2000 will undoubtedly include some waters recently discovered to be impaired that were not on the 1998 lists. Similar additions will occur in the lists due in future years after 2000.

Some perspective on the likely balance between the factors tending over time to increase the number of listed waters and other factors decreasing it is provided by the change between 1996 and 1998 in the number of waters listed by States. For the 38 States for which 1998 list data has been tabulated, the 1998 lists in total are about 35 percent longer than the 1996 lists. This suggests that the discovery over time of new impaired waters that should be added to the lists has had a greater impact than the process of paring the lists down by eliminating waters that really do not need to be listed (in effect, that the third of the bulleted factors mentioned above has outweighed the second).

Additional factors complicate the relationship between the number of listed waters and the number of TMDLs that will need to be done:

—Many listed waters have more than one cause of impairment, and a TMDL may be needed to address each cause. For the 1998 303(d) lists, there are about twice as many causes of impairment as waters. If each cause were to require a separate TMDL, then about twice as many TMDLs would be required as there are waters. However, it is often possible to develop a single TMDL that simultaneously addresses multiple causes of impairment in a water.

—The geographic scale at which TMDLs are developed may not match the scale at which waters are listed. Some listed waters are very large, and multiple TMDLs will likely need to be developed for different portions of a single listed water. Conversely (and probably more commonly) some listed waters have water quality problems and potential solutions that are very closely related to those for adjoining listed waters, and a single TMDL can be developed on a watershed basis addressing a set of several listed waters.

In sum, there are large uncertainties about how many currently listed waters will not need TMDLs done for them, about how the number of listed waters will change over time, and about how many TMDLs will be needed per listed water. Assessing the combined impact of the various factors affecting the relationship between the number of currently listed waters and the number of TMDLs that will eventually need to be done through 2015 is extremely difficult. Our rough guesses are that:

—The three factors we cited initially—the three sorts of currently listed waters that will not need TMDLs, the deletion from the lists of waters that ultimately prove not to be impaired, and the addition to the lists of additional waters found to be impaired—on balance will result in a number of waters eventually needing TMDLs that is somewhat greater than the current number of listed waters.

—The “causes” information suggests that a minimum of 1 and a maximum of 2 TMDLs on average will need to be developed per listed water.

—The frequency of geographic consolidation of TMDLs (developing one TMDL on a watershed basis that covers several listed waters) will prove much greater than the frequency of geographic disaggregation (developing multiple TMDLs to cover disparate sections of a single listed water).

On balance, we will assume, we believe conservatively, that the roughly 20,000 currently listed waters will result in the need to develop between about 20,000 and about 40,000 TMDLs over the period from the present through the year 2015.

Labor Rates and Costs for Supervisory and Clerical Functions

A State representative provided an estimate of \$80,000 as the typical current fully loaded cost (including salary, all benefits and indirect costs) of a technical State FTE with typical qualifications for performing TMDL work. This is generally consistent with estimates made by states that have prepared workload estimates for their water quality and TMDL programs.³ By contrast, the cost of an EPA FTE

³For example, the Washington State Department of Ecology developed a detailed workload model for their TMDL program. For this model, they estimated that the current annual cost of an FTE is roughly \$80,000 per year. (Total Maximum Daily Loads Workload Model, Program Definition and Cost. Department of Ecology Publication #98-26, July 1998, page 9).

working on the 305(b) or the 303(d) program has been estimated to be somewhat higher, at \$83,971 per year.⁴

The State representative also expressed some concern that EPA's proposed TMDL program regulations might slightly increase the average quality of the State technical staff needed (e.g., the increased public participation requirements would increase the need for skilled public meeting facilitators) and increase States' needs for travel money and laptop computers. He suggested that, in order to be conservative in our cost estimates, we might want to assume that the additional State LOE required by the new regulations, with support, might cost slightly more than the \$80,000 figure for the fully loaded average cost of an FTE under the current program. In response to this suggestion, we have assumed that the additional State LOE required by the new regulations will cost as much as an EPA FTE, or \$83,971 per year. EPA's recent ICR makes the same assumption that State FTEs cost the same as EPA FTEs. On an hourly basis, this is the equivalent of a fully loaded cost of \$40.37 per hour. In this cost analysis, therefore, we assume that incremental State technical LOE required by the proposed regulations costs \$40.37 per hour.

This accounts for the cost of the incremental technical staff hours. To this we add the costs of clerical and supervisory support for the technical staff hours, as follows. The State representative cited the detailed study conducted by the State of Washington that found that one clerical worker was needed for every 8.5 technical staff and one supervisor was needed for every 7.7 technical staff. Together, clerical and supervisory personnel needs are thus approximately .25 FTE for every 1 technical FTE.⁵ We thus added a 25 percent factor for clerical and supervisory support to the estimates provided for the technical LOE needed to accomplish a task required by the proposed regulations. All the LOE estimates provided in this report include this 25 percent factor, they therefore include both the technical and the clerical/supervisory support needed to meet the requirements of the proposed regulations.

Affected Entities

In this document, we use the term "States" for convenience to include the 50 States plus the District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, Guam, and the Commonwealth of the Northern Marianas. When we refer to the cost for a typical State to perform an activity, we mean the average cost that will be incurred across these 56 entities. We will often then multiply this average cost by 56 to obtain a national cost estimate. In the future, Tribes may apply and be authorized to implement the TMDL program for their waters. If so, the average cost per "State" would need to be multiplied by more than 56 to obtain a national cost estimate.

Costs When EPA Performs a Function Rather Than a State

Many TMDL program activities must be performed by EPA in instances when a State fails to perform a required function. When this happens, it is likely that EPA's cost of performing these functions will be higher than the State's costs for several reasons: EPA's performance in stepping in for a State will likely be less efficient than the State's performance would have been; EPA personnel will be less familiar with the particular State context and because of increased travel needs, EPA's LOE would probably be greater than the State's would have been.

We have not estimated in this report the likely increased costs for EPA to perform a required TMDL program function when a State does not perform it. There are several reasons why we have not made such estimates:

- Most importantly, it is EPA's expectation that in virtually all cases the States will perform the functions that are being asked of them. Two primary purposes of the proposed regulations and supporting draft guidance are to clarify and bring consistency to the TMDL program and to provide States with the necessary information so that they will fully and successfully implement the program.
- Apart from the reasonable assurance issue, we have no reason to foresee any instances in which a State is unlikely to perform a required function, and no basis for estimating quantitatively how often States might not perform required functions.

However, in the case of the reasonable assurance requirement, States may occasionally be unable to meet a specific requirement of the proposed regulations. The

⁴ EPA's recent ICR for the 305(b) and 303(d) programs assumed that work was done by staff at an average salary level of Grade 10 Step 7, and applied an overhead rate of 110 percent. Using 1998 salary rates, this amounts to a loaded labor rate of \$83,971 per FTE.

⁵ 8.5 technical staff per 1 clerical staff means 118.5 or 0.1/8 clerical per technical. 7.7 technical staff per 1 supervisory staff means 1/7.7 or .130 supervisory per technical. Summing the two gives .248 clerical plus supervisory per one technical.

specific procedures for this requirement are included in the proposed revisions to the Agency's permitting regulation, and a separate analysis addresses the incremental costs that may result.

I. PROPOSED REVISIONS AFFECTING THE LISTING PROGRAM

The proposed revisions that alter the listing program in ways that might be thought to affect cost are:

1. Clarifying the definition of "threatened."
2. Codifying the scope of the lists to include waterbodies that are impaired or threatened by atmospheric deposition, and by all combinations of point and nonpoint sources (i.e., point sources only, nonpoint sources only, and a combination of point and nonpoint sources);
3. Expanding the scope of the lists to include waterbodies that are impaired or threatened by pollution (as well as pollutants);
4. Requiring that waterbodies remain listed until standards are attained (rather than only until TMDLs are approved);
5. Changing the format for specifying priorities by requiring that listed waterbodies be grouped into 4 categories (Parts 1 through 4, with TMDLs required for Part 1 waterbodies only), requiring that Part 1 waterbodies be prioritized into three groups (as either high, medium or low priority), and requiring that Part 1 waters with certain characteristics be assigned high priority;
6. Eliminating the requirement that states identify the TMDLs to be completed within 2 years, and replacing it with a requirement for comprehensive, TMDL-specific schedules as part of the listing;
7. Requiring that a State's listing methodology be subject to public review and submitted to EPA by January 31 prior to each submission;
8. Changing the format for a State's required description of its listing methodology; and
9. Changing the date by which lists must be submitted to EPA to October 1 from April 1.

The incremental impact of each of these revisions is discussed below in Sections I.1.–I.9. The combined incremental impact of these revisions is summarized at the conclusion of this chapter.

In addition, the proposed regulations ask for public comment on options for further altering the frequency with which lists must be submitted:

10. Options for altering the listing cycle, ranging from leaving it a 2-year cycle to changing it to a 4-year or 5-year cycle, either effective immediately or subsequent to the next listing due in the year 2000.

The incremental costs (which in this case amount to savings rather than costs) associated with some of these options are evaluated in Section I.10.

Some provisions in the proposed regulations affecting the listing program are not addressed in this chapter because they clearly have no or minimal incremental cost or savings associated with them. These include:

- Revising the definitions of TMDL, wasteload allocation and load allocation, as well as adding definitions for the terms pollution, pollutant, impaired waterbody, thermal discharge, and waterbody. These definitions are intended to clarify meaning rather than to change the substance of the definitions, and do not affect the listing program. To the extent that any of these revisions might affect the cost of developing TMDLs, they are discussed in the next chapter (II. Proposed Revisions Affecting the Development and Content of TMDLs.)
- Requiring a georeference for each listed waterbody does not affect incremental cost because EPA already has a program nearing completion that provides this capability at no cost to the States.
- Additional revisions that do not affect cost include:
 - Eliminating the existing regulatory provision that a rationale be provided for any decision not to use some existing and readily available data and information.
 - Clarifying that violation of a narrative criterion is a basis for placing a waterbody on the § 303(d) list.
 - Clarifying the steps and time frames for actions that EPA will take if the Agency disapproves a State submittal (list or TMDL).

This chapter focuses on the incremental costs or savings that States may realize due to the provisions of the proposed regulations. Chapter IV includes the impact of the proposed regulations on the Agency's workload.

I.1. The definition of “threatened” waterbody is clarified.

Requirement

The proposed regulations clarify “threatened” to mean that adverse declining trends for a waterbody currently meeting water quality standards indicate that standards will be exceeded by the next listing cycle.

Baseline

The existing regulations include the requirement to list threatened waterbodies, but do not define “threatened.”

Incremental Cost

The additional costs of this clarification are expected to be minimal for two reasons. First, no additional data or information are needed for States to apply this definition. Second, the time horizon specified in the definition only requires a very near-term focus (one listing cycle), and likely represents the minimum time horizon that States might use to comply with the existing requirement to list threatened waterbodies. Further, this clarification may reduce costs in those cases where States previously interpreted “threatened” to require a longer term assessment, such as projecting a decade ahead.

I.2. The scope of the lists is codified to include waterbodies that are impaired or threatened by atmospheric deposition, and by all combinations of point and nonpoint sources.

Requirement

The proposed rule codifies EPA’s existing policy that waterbodies impaired or threatened by atmospheric deposition be listed. The proposed regulations also codify the Agency’s long-standing interpretation that the §303(d) listing requirement applies to waterbodies that are impaired or threatened by any combination of point and nonpoint sources (i.e., point sources only, nonpoint sources only, or a combination of point and nonpoint sources).

Baseline

The proposed regulations are consistent with the Agency’s long-standing interpretation and policy regarding atmospheric deposition and combinations of point and nonpoint sources.

Incremental Impact

No additional costs are anticipated since the proposed regulations do not alter existing requirements.

I.3. Expanding the scope of the lists to include waterbodies that are impaired or threatened by pollution.

Requirement

This proposed revision requires States to use existing and readily available data and information to list waterbodies that are impaired or threatened by “pollution”, in contrast to only those impaired or threatened by “pollutants”. States are not required to obtain any new data or information to comply with this requirement. The revision adds cases where impairments or threats cannot be linked back to any specific substance or parameter added to the water (i.e., “pollutant”, including chemicals, sediment, BOD, bacteria, heat, etc.), such as for flow alterations. Waterbodies that are listed as impaired or threatened by pollution but not pollutants will be listed as Part 2 waterbodies (discussed further below in Section I.5.) and TMDLs are not required for them.

Baseline

Waterbodies impaired or threatened by pollution are already identified as part of the 305(b) reports that States provide. Many States have gone further and include on their 303(d) lists some of their waterbodies that are threatened by pollution. For example, during the 1996 listing cycle, 35 of the States’ lists identified at least one water listed because of a pollution cause, and 16 of these States’ lists identified many waterbodies listed due to pollution causes. From available information for the 1998 listing cycle for 38 States, at least an additional 6 States have identified pollution causes, of which 4 states identified many causes.

Incremental Cost

EPA does not anticipate that these proposed revisions will significantly increase the resources needed to prepare listings. States have already identified all impaired and threatened waterbodies in their 305(b) reports whether due to pollution or pol-

lutants. Further, States that have already listed many waterbodies that are impaired or threatened by pollution should be only minimally affected by this requirement.

As discussed above, at least 20 States have already listed many waterbodies for such causes. The 36 States that have not listed waterbodies for such causes previously, or who have done so only to a limited extent, may feel it appropriate to hold a public meeting regarding their new policy for listing waterbodies affected by pollution. This public meeting might be in addition to the public participation that already occurs as part of the State's listing process. If needed, this additional public participation effort would only occur once in support of the State's 2000 listing. However, as discussed below in Section I.7., the proposed regulations already require that all States hold an additional public meeting that could be appropriate for this purpose. The additional public participation cost that might be associated with this requirement has been included in the incremental cost estimated in Section I.7. below.

I.4. Waterbodies are listed until standards are attained.

Requirement

Currently, most States list waterbodies until TMDLs are approved, then drop them from their lists. The proposed revision requires that waterbodies remain listed until water quality standards are actually met. This only affects when waterbodies are removed from the list, and does not require the development of any information that wouldn't otherwise be available anyway. These waterbodies will be listed as Part 3 waterbodies, as discussed later in I.5.

Baseline

In most States, a water is removed from the list when all required TMDLs for that water are approved. However, the Agency's current guidance allows waterbodies to remain on a State's list until standards are attained. Some States, such as those in Region 10, have already been following this practice.

Incremental Cost

No additional costs are anticipated as a result of keeping waterbodies listed until standards are attained.

I.5. Waterbodies must be grouped into 4 Parts (1–4), with only Part 1 waterbodies requiring TMDLs and these must have high, medium and low priorities set for them. Part 1 waterbodies with certain characteristics must be classified as high priority.

Requirement

The proposed revision requires that waterbodies be grouped into 4 categories as follows:

Part 1: Waterbodies impaired or threatened by one or more pollutants requiring the development of TMDLs.

Part 2: Waterbodies impaired or threatened by pollution rather than pollutants. A TMDL is not required for waterbodies on this part of the list.

Part 3: Waterbodies for which EPA has approved or established a TMDL, but for which water quality standards have not yet been attained.

Part 4: Waterbodies that are impaired, but for which planned activities other than TMDLs will bring them into attainment. If such a waterbody does not attain water quality standards by the next listing cycle, the waterbody must be included in Part 1.

Only Part 1 waterbodies require TMDLs to be developed and priorities to be established. The proposed regulations further specify that, starting with the 2000 listing, Part 1 waterbodies must be grouped into three classes of priorities: high, medium and low. The proposed regulations specify that high priority Part 1 waterbodies must include all waterbodies for which the designated use is public drinking water supply or that contain or serve as habitat for endangered or threatened species under section 4 of the Endangered Species Act. The definition of medium and low priority is left to the States' discretion. High priority waterbodies must have TMDLs completed for them before low and medium priority waterbodies, and all of the Part 1 waterbodies must have TMDLs completed for them within 15 years of being listed as Part 1—the impact of requiring that TMDLs be developed within these specified time frames is evaluated in chapter III (III. TMDLs Must Be Completed Within Specific Time Periods).

Part 2 waterbodies were discussed earlier in Section I.3. and Part 3 waterbodies were discussed earlier in Section I.4.

The proposed regulations do not alter the current requirements for Part 4 waterbodies. The proposed regulations do clarify that the time horizon over which attainment must be achieved for these waterbodies is 15 years plus the length of one listing cycle.

Baseline

There is no current requirement to group waters. However, no new data or information is needed for States to group their waterbodies in accordance with the four categories (Parts 1–4) as now specified in the proposed revisions.

With regard to setting priorities, States are already required to set priorities for listed waterbodies under the current program. About 75 percent of the States in their 1996 lists assigned some type of priority to their impaired waterbodies, and an additional 10 percent assigned some type of priority in their 1998 lists. Some States assigned explicit high, medium and low priorities to each water. Some States separated their lists into several tiers (e.g., First, Second, Third) and waterbodies in each tier were assigned the same priorities. Some States actually ranked all their waterbodies or watersheds in numerical priority order. Some States set priorities using a rotating basin approach, planning to develop TMDLs at the same time for all waterbodies located in the same basin. Overall, about 10 of the 56 States used approaches for setting priorities that are essentially equivalent to high, medium and low priorities or that can readily be grouped in this manner.

Incremental Cost

Setting priorities is already a statutory requirement and an ongoing process under the current program. The cost of developing and applying approaches for setting priorities is part of the cost of the existing program, even for States that have not yet developed or applied approaches for setting priorities. Therefore, it is not appropriate to attribute any of the cost of this existing requirement to set priorities to the proposed revisions. The proposed regulations do specify the way that priorities must be set, adding modestly to the cost of setting priorities, as discussed below.

The proposed revisions require a change in the way that waterbodies and priorities are grouped. It is anticipated that the additional effort to group waterbodies into the 4 Parts would be small. Further, it is anticipated that there would not be much additional effort needed to identify the small number of high priority waterbodies (i.e., those for which the designated use is public drinking water supply or that contain or serve as habitat for endangered or threatened species).

States that are not already grouping waterbodies according to high, medium and low priorities may require an additional one-time effort to re-orient their approaches for setting priorities for Part 1 waterbodies. On average, about 100 hours of effort should be adequate for revising an existing priority setting system to meet the requirements of the proposed regulations. Since 10 of 56 States already employ approaches that provide the equivalent of high, medium and low priorities, perhaps 46 listings may require the additional 100 hours of effort to revise their priority setting systems. However, since the 10 states that already have appropriate priority setting systems may still wish to re-evaluate their systems in light of the proposed regulations, we conservatively assume that all 56 states will require, on average, an additional 100 hours of effort. This one-time effort amounts to an additional 5,600 hours (about 2.7 FTE) at \$40.37/hour for a total one-time cost of \$226,075 to be incurred in 1999. The present value of this cost is \$226,075⁶ and the annualized cost of this one-time effort through 2015 is \$21,641.

In addition, States that are substantially revising their priority setting systems as a result of the proposed regulations might wish to hold an additional one-time public meeting for this revision. This additional public participation has been included within the incremental cost for the new requirement for public participation discussed below in Section I.7.

Finally, it is not anticipated that the proposed regulations will result in additional costs for Part 4 waterbodies. Part 4 waterbodies are cases where States expect attainment of standards without TMDLs.

If a State's expectation for a waterbody proves wrong, the existing regulations would require the development of TMDLs. The proposed regulations' requirement to reclassify Part 4 waterbodies as Part 1 waterbodies if they fail to achieve attainment within one listing cycle only clarifies that there must be a reasonable time ho-

⁶As discussed previously in the methodology section, all costs are discounted to January 1, 1999 and all costs incurred in a year are conservatively assumed to occur at the beginning of the year. Thus, the present value of any costs incurred at any time in 1999 (\$226,075 in this case) is the same as the undiscounted cost (\$226,075). This is a conservative simplifying assumption because it maximizes the present value of any costs incurred.

hizon for the expectation that standards will be attained. This requirement limits the time horizon to one listing cycle plus 15 years (the time limit for completing TMDLs that are newly listed as Part 1 waterbodies). Thus, a waterbody that is classified as Part 4 in the 2000 listing, must achieve attainment by the next listing—2002 for the current two-year cycle, 2004 if a 4-year cycle is adopted and 2005 if a 5-year cycle is adopted; if the waterbody is not in attainment by then, it must then be classified as a Part 1 waterbody, and therefore it must either achieve attainment or have a TMDL developed for it within 15 years—2017 for the current two-year cycle, 2019 for a 4-year cycle, and 2020 for a 5-year cycle. The time frame that States currently apply when anticipating that waterbodies will achieve attainment without the need for TMDLs should be well within the 17–20 year time horizon as clarified by the proposed regulation.

1.6. A State's list must include a schedule for establishing each TMDL, replacing the existing requirement to target only those TMDLs that will be completed within 2 years.

Requirement

The proposed regulations require that States develop comprehensive schedules for developing TMDLs for all waterbodies included on Part 1 of the list. This requirement would replace the existing requirement to identify only those TMDLs to be developed within two years. Further, the workload for establishing TMDLs must be reasonably paced over the duration of the schedule. As time passes, States may alter the sequence of TMDL development from the original schedule as technical and analytic needs demand. Therefore, the comprehensive schedule commits States more to the overall pace of TMDL development, rather than to a rigid schedule for specific TMDLs.

Baseline

The proposed provision replaces the current requirement that States identify those waterbodies for which TMDLs will be developed over the next two years.

Past and ongoing litigation has and will likely continue to result in States preparing comprehensive schedules for developing TMDLs. 11 States representing about 30 percent of the national total of listed waterbodies have already developed comprehensive schedules as part of Consent Decrees. Plaintiffs have filed litigation for another 15 States, representing 33 percent of the national total of listed waterbodies; and notices of intent to sue have been filed in 5 additional States. Thus, it is likely that, due to current litigation, comprehensive schedules for developing TMDLs would be prepared in the baseline for perhaps half of the States, representing a substantial portion of the TMDLs.

About half of the States use a rotating basin or watershed approach to water quality management, in which States work sequentially through each of their basins on a five year cycle, and schedule all their activities in these basins or watersheds accordingly, including establishing TMDLs.

Incremental Cost

States with Consent Decrees already have comprehensive schedules for developing TMDLs. States that use a rotating basin or watershed approach to water quality management should be able to readily schedule TMDL development in accordance with their existing basin schedule of activities, especially given the flexibility in the regulations regarding the specific sequencing of TMDL development. States without Consent Decrees or States that do not use a rotating basin or watershed approach may require the most planning effort to develop realistic, comprehensive schedules.

For the purpose of estimating incremental cost, we conservatively assume that all 45 States without existing Consent Decrees will need to develop new comprehensive schedules. The task of developing a comprehensive schedule is simplified since all these States will already have developed high, medium and low priorities for Part 1 waterbodies (the incremental cost for this effort was included above in Section I.5.). The task is further simplified because the regulations emphasize primarily the pace of TMDL development rather than the precise sequence (the proposed regulations provide States with the flexibility to alter the sequence of the specific TMDLs that are to be developed). Thus, it is anticipated that the additional effort needed to develop a comprehensive schedule for each of the 45 States would be, on average, about 20 hours. The total effort for all 45 States for developing the initial comprehensive schedule would amount to 900 hours (.4 FTE) at \$40.37/hour for a total cost of \$36,333 to be incurred in 2000. However, it is anticipated that the schedule would also need to be reviewed with each listing cycle and revised as needed. These revisions might require perhaps half of the original effort or an average of about 10 hours per listing cycle per State for a total cost of \$18,167 in each subsequent

listing cycle. Across all the States, the present value cost of preparing the initial schedule and revising it through 2015 (8½ listing cycles under the existing regulations) would be \$108,764 and the annualized cost through 2015 would be \$10,411.

I.7. Requiring that the listing methodologies be subject to public review and submitted to EPA by January 31 for each submission.

Requirement

States' listing methodologies must be subject to public review and submitted to EPA eight months prior to the deadline for submission of the list (which the proposed regulations shift from April 1 to October 1 of the listing year as discussed later under Section I.9.).

Baseline

States currently must submit their listing methodologies to EPA for review. The current program requires public participation and review of all aspects of the listing submission, which would include the listing methodology. In compliance with the Paperwork Reduction Act, EPA has periodically prepared Information Requests (ICRs) for the National Water Quality Inventory Reports, which include the estimated burden associated with the TMDL listing process for respondents and for EPA. EPA's current approved ICR (in effect through 2/28/99) estimated the States' effort to conduct public participation for the 303(d) program. For EPA's current ICR, the total State effort for public participation (for the listing program) per listing cycle per State was estimated to be, on average, about 120 hours.

Incremental Cost

The requirement to submit the listing methodology to EPA eight months before submitting the list should not increase the level of effort needed by a State to develop the listing methodology. This requirement may result in the need for some States to shift forward their effort for developing or revising their listing methodology by a few months. Generally, it is not anticipated that the cost of developing the methodologies will be affected by this requirement.

However, separating the public review of the listing methodology from the State's public participation activities regarding the list itself by eight months would likely result in the need for States to increase their public participation effort. This additional effort for public participation would occur for every listing cycle. Further, as discussed previously (in Sections I.3., and I.5.), more extensive public participation would likely be required for the first listing cycle under the proposed regulations to review changes in the listing methodology regarding "pollution" causes, changes in the priority setting approach, and perhaps changes regarding how atmospheric deposition and combinations of point/nonpoint sources are covered. In addition, the proposed regulations emphasize the importance of public participation. Therefore, the resulting increased State effort for public participation is estimated as follows:

—For the first listing cycle under the proposed regulations (i.e., for the year 2000), we anticipate that the additional public participation effort for a State might range from 200–800 hours depending on the level of interest in the State and the extent of the revisions in the listing methodology. This is considered a conservative estimate, given the Agency's current estimate that the on-going State effort for all public participation for the listing program is on average about 120 hours per listing cycle per State. To estimate the national one-time cost for the first listing cycle, we conservatively assume that, on average, the increased level of effort across the 56 States and Territories would be 500 hours per State (i.e., over four times the estimated current average for all public participation activities), for a total increased effort of 28,000 hours or 13.5 FTE for the year 2000 listing cycle.

—For subsequent listing cycles, we anticipate that public participation would likely be more routine in nature and require far less effort than for the first listing cycle under the proposed rules. Nevertheless, to conservatively estimate national cost for subsequent listing cycles (beyond the year 2000), we assume that the average State effort for public participation will nearly double from current levels, with the average level of effort increasing by 100 hours for a total of 5,600 hours or 2.7 FTE per cycle subsequent to the year 2000 listing.

Therefore, the overall incremental cost for the additional State effort for public participation for the first listing cycle (January, 2000) would be \$1,130,373 and would drop to \$226,075 for subsequent cycles. The present value of this additional cost through 2015 (8½ listing cycles under the existing regulations) would be \$1,987,363 and the annualized incremental cost through 2015 would be \$190,239.

I.8. New format for the listing methodology.

Requirement

The proposed revision specifies a new format for describing the listing methodology. This new format will not affect the methodology that States use.

Baseline

The current regulations already require that the listing methodology be described. About 69 percent of the 1998 State lists explained their listing methodology (up from 56 percent for the 1996 listing cycle). Because the existing regulations require that the listing methodology be described, the cost of describing the listing methodology is considered to be part of the baseline, regardless of whether a State is currently complying with this requirement.

Incremental Cost

Describing the listing methodology is an on-going requirement of the current program. However, changing the format may result in some additional one-time effort to repackage and clarify the description of the listing methodology in accordance with the new format. An additional one-time effort of 40 hours in the year 2000 should be adequate for adopting the new format. For all 56 listings, the total additional level of effort would be 2,240 hours (1.18 FTE), amounting to a one-time cost of \$90,430 assumed to occur in the year 2000. The present value of this cost is \$84,514 and the annualized value over the period of analysis is \$8,090.

I.9. Changing the listing cycle so that lists must be submitted to EPA on October 1 instead of April 1.

Requirement

The proposed regulations will require States to submit their lists to EPA on October 1 instead of April 1 in each year that lists are due to be submitted.

Baseline

The current regulations require that States submit their § 305(b) water quality reports and § 303(d) lists on April 1 of every even-numbered year.

Incremental Cost

Shifting the due date for listing submissions by six months to October 1 is expected to ease any difficulties that States may have in completing both § 305(b) water quality reports and § 303(d) lists for submission at the same time. This revised due date is not expected to result in increased costs.

I.10. The proposed rule requests comment on options for changing the listing cycle from a 2-year cycle to a 4-year or 5-year cycle, either effective immediately or subsequent to the listing due in the year 2000.

Requirement

The proposed revision asks for comment on options for altering the listing cycle. These options include:

- Option A.*—Retain the current 2-year listing cycle,
- Option B.*—Adopt a 4-year or 5-year listing cycle immediately,
- Option C.*—Require that the first list submission under the new rule occur no later than October 1, 2000, with subsequent list submissions occurring every 4 or every 5 years.

If the listing cycle is lengthened (Option B or C, then fewer lists would need to be prepared and approved in the future. For example, the current listing cycle (Option A) would require 8½ lists to be prepared and approved through 2015, while switching to a 5-year cycle after the 2000 list (Option C) would require 4 lists. From a cost perspective, lengthening the listing cycle would result in savings for, both States and the Agency. Potential savings to States are evaluated in this section, while potential savings to the Agency are evaluated in chapter IV. For simplicity, we have only assessed the savings that States would realize from Option C where a listing is required for October, 2000 and subsequent listings are required every 5 years (instead of every 2 years as currently required).⁷

⁷ Generally speaking, the savings associated with a four-year cycle would be somewhat less than for a five year cycle—for Option C, for example, a four-year cycle through 2015 requires effort for 4¾ lists as opposed to the 4 lists needed for a five-year cycle. The savings associated with Option C would be somewhat less than for Option B—for example, for five-year cycles through 2015, Option C requires effort for 4 lists as opposed to the 3¾ lists needed for Option B.

Baseline

In compliance with the Paperwork Reduction Act, EPA has periodically prepared Information Collection Requests (ICRs) for the National Water Quality Inventory Reports, which include the estimated burden associated percent with the TMDL listing process for respondents and for EPA. EPA's current, approved ICR (in effect through 2/28/99) estimates the current respondents' burden of preparing a 303(d) listing, and is summarized in the following table. Over the time horizon for this analysis (1999–2015), the current program would require 8½ listings. At 25,424 hours per listing cycle, the Agency's total effort through 2015 would be 216,104 hours or 103.9 FTE. These estimates are also the basis for the Agency's submission to renew the existing ICR.

CURRENT STATE LISTING PROGRAM EFFORT PER LISTING AS ESTIMATED IN EPA'S INFORMATION COLLECTION REQUEST

ICR activity number	Description of activity	Effort per State (hours)	Effort all States (hours)
7	Identify waters needing TMDLs	215	12,040
8	Prioritize waters needing TMDLs	118	6,608
9	Conduct 303(d) participation	121	6,776
Total Hours		454	25,424

When analyzing the impact of Option B or Option C, it would appropriate to include the incremental effort associated with the proposed regulations as part of the baseline. As discussed in previous sections, the proposed regulations will likely result in increasing States' efforts as follows:

INCREMENTAL EFFORT FOR ALL STATES DUE TO THE PROPOSED REGULATIONS PER LISTING AS ESTIMATED IN THIS CHAPTER

Chapter I section number	Description of proposed regulatory revision	Total effort for all States	
		Year 2000 listing (hours)	Subsequent listings (hours)
1.5.	Revise the listing methodology	5,600
1.6.	Develop comprehensive schedules for TMDLs	900	450
1.7.	Provide additional public participation	28,000	5,600
1.8.	Revise the format for the listing methodology	2,240
Total Hours		36,740	6,050

Thus, over the time horizon for this analysis (1999–2015), the proposed regulations would increase the effort of the current listing program by 36,740 hours for the 2000 listing and by 6,050 hours for each subsequent listing.

The total listing effort for all States per listing cycle for both the current and proposed regulations is summarized in the following table:

TOTAL STATE LISTING PROGRAM EFFORT PER LISTING FOR ALL STATES DUE TO THE CURRENT AND PROPOSED REGULATIONS

Listing year	(Hours—all States)		
	Current program	Increment due to proposed regulations	Total resulting effort
2000 listing	25,424	36,740	62,164

TOTAL STATE LISTING PROGRAM EFFORT PER LISTING FOR ALL STATES DUE TO THE CURRENT AND PROPOSED REGULATIONS—Continued

Listing year	(Hours—all States)		
	Current program	Increment due to proposed regulations	Total resulting effort
Each subsequent listing	25,424	6,050	31,474

Thus, under the current 2-year listing cycle, the States' total listing effort through 2015 would be 62,164 hours for the year 2000 listing and 31,474 for each of the 7½ subsequent listings. The total effort through the year 2015 under the 2-year current listing cycle would amount to 298,219 hours or 143.4 FTE.

Incremental Cost

The current 2-year listing requirement would result in 8½ listings, occurring biennially starting in 2000 and continuing through 2015. As shown above, taking into account the requirements of the proposed regulations, the total effort under the current 2-year listing cycle would be 143.4 FTE.

Option C would lengthen the listing cycle to 5 years, requiring only 4 listings over the same period (i.e., for 2000, 2005, 2010 and 2015). It is not anticipated that a 5-year listing would require more effort than a 2-year listing. In addition, Option C does not affect the effort needed for the 2000 listing. Consequently, the total effort associated with Option C is 62,164 hours for the year 2000 listing and 31,474 for each of the subsequent 3 listings, for a total of 156,586 hours or 75.3 FTE.

Therefore, Option C results in substantial savings compared to the current 2-year listing cycle, as summarized in the following table:

SAVINGS TO STATES ASSOCIATED WITH OPTION C: LENGTHENING THE LISTING CYCLE TO 5 YEARS THROUGH 2015 FOR TWO CASES: (1) THE CURRENT PROGRAM ONLY AND (2) THE NEW PROGRAM

Applicable regulations	Total effort for all States through 2015		Savings through 2015—Option C: 5-year cycle over current cycle (hours—all States)
	(hours—all States)		
	2-year cycle	Option C: 5-year cycle	
Current Program	216,104	101,696	114,408
Including Proposal	298,219	156,586	141,633

Including the proposed regulations, Option C amounts to a savings over the baseline of 141,633 hours or 68.1 FTE. Furthermore, even with the increased effort that results from the requirements of the proposed regulations, the resulting effort of 156,586 hours is still less than the current effort of 216,104 hours under the existing regulations—this amounts to a savings through 2015 of 59,536 hours or a 27 percent reduction of effort.

The cost associated with the 31,474 hours for each list beyond the year 2000 is \$1,270,621. For the current 2-year listing cycle, the present value of completing the 7½ lists from 2002 through 2015 would be \$5,232,210. The present value for the Option C listing cycle for the three lists on 2005, 2010 and 2015 would be \$1,880,734. Therefore the present value of the savings associated with the 5-year cycle of Option C is \$3,351,476 and the annualized incremental savings through 2015 would be \$320,818.

1.11. Summary

The costs and savings associated with the proposed revisions discussed in this chapter are summarized in the table on the following page. As shown in the table, the proposed revisions affecting the listing program through 2015 are expected to amount to an annualized cost of about \$230,000.

If Option B or Option C for the listing cycle were selected, then a savings would result that would offset some or all of the additional listing program costs of the proposed regulation. Using Option C as an example, switching to a 5-year cycle after

the 2000 listing would save about \$320,000 annually, more than offsetting the additional listing program costs of the proposed regulation, and resulting in a net annual savings over this period of about \$90,000 per year.

Summary of the Incremental Costs and Savings Associated with the Proposed Revisions to the Listing Requirements

[In thousands of dollars]

<i>Proposed Revision</i>	<i>Annualized Cost</i>
I.1. Clarifying the definition of “threatened”	
I.2. Codifying the scope of lists to include waterbodies impaired or threatened by atmospheric deposition & all combinations of point and nonpoint sources	
I.3. Expanding the scope of the lists to include waterbodies impaired or threatened by pollution (as well as pollutants). (Additional public participation cost included in # 7)	
I.4. Requiring that waterbodies remain listed until standards are attained	
I.5. Listed waterbodies must be grouped into 4 Parts, with only Part 1 waterbodies requiring TMDLs. Part 1 waterbodies be prioritized into high, medium and low priorities. (Additional public participation cost is included in 7)	22
I.6. A State’s list must include a schedule for establishing each TMDL	10
I.7. Listing methodologies must be subject to public review and submitted to EPA on January 31 before each submission. (Includes public participation cost of 3 & 5)	190
I.8. New format for the listing methodology	8
I.9. Requiring, lists to be submitted October 1 instead of April 1	
Total Annualized Incremental Cost (19,98 \$)	230
I.10. Option C: Changing to a 5-year cycle from a 2-year cycle after the 2000 listing	(320)
Total, Annualized Cost (1998 \$) Including Option C (Net Savings)	(90)

II. PROPOSED REVISIONS AFFECTING THE DEVELOPMENT & CONTENT OF TMDLS

The proposed revisions affect how TMDLs are to be developed and what must be included, as follows:

1. All TMDLs must include each of the following elements: Waterbody name and geographic location; Target pollutant load; Deviation from the target; Sources, Wasteload allocation and load allocation; Margin of safety; Seasonal variation; Allowance for future growth; and Implementation plan.
2. States must meet minimum requirements for public participation in TMDL development.

These provisions potentially add to the tasks that are typically performed for each TMDL. We estimate the cost of these provisions by: (1) estimating the additional LOE needed to perform each new task for a typical TMDL; (2) converting this LOE into a corresponding cost; and (3) multiplying this unit cost by the projected number of TMDLs for which this task will have to be done.

The incremental impact of each of these revisions is discussed below. The combined incremental impact of these revisions is summarized at the conclusion of this section.

II.1. All TMDLs must include specified elements

Requirement

The proposed regulations require that a TMDL include: (1) identification of the name and geographic location of the waterbody; (2) identification of the pollutant load that may be present and still assure attainment and maintenance of water quality standards (WQS); (3) identification of the amount by which the current pollutant load deviates from this target; (4) identification of the source categories, sub-categories and individual sources of the pollutant; (5) WLAs for pollutants from point sources, and LAs for pollutants from nonpoint sources, including atmospheric deposition and natural background; (6) a margin of safety, expressed as unallocated assimilative capacity or conservative analytical assumptions used in calculating the TMDL; (7) seasonal variation such that WQS will be met during all seasons of the year; (8) an allowance for future growth that accounts for reasonably foreseeable increases in pollutant loads; and (9) an implementation plan, including 8 minimum elements described below.

Baseline

Items (1) through (7) in this list of required elements are explicitly required by existing regulations (40 CFR 130.2(i) and 130.7(c)(1)). Item (8) requires a State to reserve an amount for future growth in their allocation strategy that accounts for reasonably foreseeable increases in pollutant loads and explain this decision. This is not currently an explicit requirement for TMDLs, although many TMDLs have included such reserves for future growth. This new requirement is discussed further in section II.1a., below. Item (9), an implementation plan, represents another new requirement that many previous TMDLs have nevertheless included. It is discussed in section II.lb., below.

Incremental Cost

Each of the proposed required elements (1) through (7) represents a reiteration and clarification of existing regulatory requirements and common TMDL practice. As such, these proposed requirements add no incremental costs. The costs of the new requirements, items (8) and (9), are discussed below.

II.1a. All TMDLs must include an allowance for future growth that accounts for reasonably foreseeable increases in pollutant loads

Requirement

The proposed regulations require that a TMDL provide, in the allocation strategy, for foreseeable increases in pollutant loads. The State must document its decision-making process in determining the amount of this allowance for growth, and should explain to stakeholders the implications of the growth allocation decision.

Baseline

In developing TMDLs, States have pursued a variety of approaches with respect to projected future growth in pollution loads:

- In some cases, a portion of the target load is reserved—not allocated to any source or category of sources—for future growth. In these cases, the sum total of the WLAs, the LAs and the margin of safety is less than the target load that will assure attainment and maintenance of WQS.
- In other cases, the full target load is allocated across all sources and categories of sources, but the allocations to such categories as natural background, upstream loadings and air deposition reflect their projected load growth over time. In these cases, the allocations to the remaining sources and categories are sufficiently limited that WQS will be attained and maintained even when the projected future loadings growth from natural background, etc. occurs.
- In other cases, inadequate or no provision is made for growth. Sometimes likely growth in nonpoint source category loads is ignored, too much of the target loading is allocated to point sources, and the WLAs given to point sources eventually prove to be too high when growth in nonpoint source loads occurs.

The first two of these common approaches will be allowable under the proposed regulations, the third will not be. No information is available on the relative frequency with which recent TMDLs have employed one or another of these approaches.

Incremental Cost

The proposed provision requiring an allowance for foreseeable growth will necessitate changed practice only for the portion of TMDLs like the third category. In our view, the requirement to provide for foreseeable growth will result in cost savings for these TMDLs. A TMDL that does not properly account for likely growth will ultimately prove insufficient to attain and maintain WQS when the growth occurs, and the TMDL will need to be redone. Much of the TMDL process will need to be repeated, and the WLAs and/or LAs for some sources or categories will need to be ratcheted down. Sources will need to implement control measures to meet the original WLA or LA, and then to implement additional controls to meet the subsequent, tighter requirements. This two-step process that becomes necessary when growth is not properly accounted for will likely be more costly to both the State and to the sources than it would have been to account for likely growth and get the TMDL right the first time. We are unable to estimate the likely magnitude of this savings.

II.1b. States must develop an implementation plan for each TMDL, including 8 required elements

Requirement

The eight elements required in implementation plans include: (1) a description of the control actions and/or management measures needed to implement the TMDL; (2) a timeline for the implementation activities, including a schedule for revising

NPDES permits, implementation of BMPs, etc.; (3) reasonable assurance that the implementation activities will occur; (4) a description of the legal authorities under which implementation will occur; (5) an estimate of the time required to attain water quality standards; (6) a monitoring plan to determine the effectiveness of the implementation actions; (7) a description of milestones that will be used to measure progress in attaining WQS; and (8) a description of when failure to meet milestones will trigger a revision of the TMDL.

The proposed regulations will allow a State substantial flexibility regarding the scale at which these implementation-related components of a TMDL must be developed. In general, the scale at which an implementation plan is written should match the scale at which the TMDLs have been done. Thus, it may sometimes be appropriate for a State to develop an implementation plan for each particular TMDL for each specific water. Other times, it may be appropriate to develop a broader implementation plan that covers multiple waters in a watershed if all these waters had their TMDLs developed in an aggregated watershed-wide process or if all the waters suffered from similar problems caused by similar sources. In some cases, it might even be appropriate for the State to develop a single broadly applicable State-wide implementation plan if there was substantial similarity in how the State planned to implement the TMDLs in all the State's listed waters of some particular variety.

The proposed requirement that a State provide reasonable assurance that implementation activities will occur merits further explanation. A State must demonstrate with a high degree of confidence that WLAs and LAs will be implemented. For point sources, this means that NPDES permits must be revised consistent with any WLA contained in the TMDL. For nonpoint sources, reasonable assurance can be demonstrated if the planned nonpoint source controls are specific to the pollutant of concern, implemented according to an expeditious schedule, and supported by reliable delivery mechanisms and adequate funding. Examples of reasonable assurance for nonpoint sources might include State regulations or local ordinances, performance bonds, memoranda of understanding, contracts or similar arrangements.

Baseline

These proposed requirements are new in the sense that current regulations do not explicitly require TMDLs to include implementation plans. They are not new, however, in the sense that most of these elements have long been understood to be included in thorough TMDLs, and perhaps roughly $\frac{1}{4}$ of the TMDLs in fact have included them.⁸ Also, all of these elements are currently required to be addressed in State WQM plans, albeit on a more aggregated State-wide or basin-wide basis than would be required by the proposed regulations. In essence, States currently generate most or all of the information needed to prepare TMDL-specific implementation plans, but usually generate such plans at a higher level of aggregation.

With respect specifically to the required demonstration of reasonable assurance, States currently do so for all TMDLs involving point sources, but do not necessarily now do so for TMDLs involving nonpoint sources only. For TMDLs involving nonpoint sources only, the baseline of current State TMDL practice falls somewhat short of the proposed reasonable assurance requirement:

- For TMDLs involving point sources only. States currently demonstrate reasonable assurance regarding WLAs for point sources by providing the schedule by which NPDES permits for the relevant point sources will be revised to incorporate their WLAs. Existing regulations require NPDES permits to incorporate effluent limitations consistent with an applicable TMDL (40 CFR 122.44(d)).
- For TMDLs involving both point and nonpoint sources. EPA's 1991 TMDL program guidance provides that if a point source NPDES permit limit is based on a WLA that relies on nonpoint source load reductions, then the NPDES permit record must include (1) reasonable assurance that the needed nonpoint source controls will be implemented and maintained, or (2) a monitoring program to demonstrate the nonpoint source load reductions. NPDES permits must provide for more stringent limits on the point source if the expected nonpoint source load reductions are not demonstrated. In effect, reasonable assurance for implementation of an entire TMDL involving both point and nonpoint sources is provided by existing, mandatory regulatory controls over point sources.
- For TMDLs involving nonpoint sources only. Current regulations do not require States to have or demonstrate assured controls over nonpoint sources. In prac-

⁸Discussions with a State representative and consultants who have assisted in preparing a great many TMDLs for States suggest that perhaps roughly a quarter of the TMDLs that have been developed recently have included all eight required implementation plan components. This is consistent with the results of a recent review of a sample set of TMDLs received by the Agency, in which $\frac{1}{3}$ of the States that submitted TMDLs included "good" implementation plans.

tice, States have a wide variety of workable mechanisms for control of different sorts of nonpoint sources.⁹ For probably the majority of nonpoint source TMDL situations that arise, States likely have within this tool kit of mechanisms and authorities some that can provide reasonable assurance. States have developed many TMDLs that do include effective measures to assure achievement of LAs for nonpoint sources. However, the pattern of potential State authorities over nonpoint sources is widely varied, and there are undoubtedly TMDL situations that arise in one or another State where that State does not currently have an assured means of controlling the load from some category of nonpoint sources. For example, State authority to control air deposition to waters, particularly when the sources of the air emissions are dispersed or from other States, is limited. As another example, State mechanisms for control over agricultural nonpoint sources also often do not rise to the level of reasonable assurances.¹⁰

In short, for TMDLs involving nonpoint sources only, current State practice often falls short of the requirements of the proposed regulations. There are two reasons for this. First, most commonly, States often develop TMDLs without including an Implementation plan. In these cases, the issue of demonstrating reasonable assurance for nonpoint source controls never arises. Second, less commonly, for some nonpoint source TMDL situations, the State does not have an authority or mechanism for a relevant category of nonpoint sources that would be sufficiently effective as to constitute reasonable assurance. The first of these shortcomings relative to the requirements of the proposed regulations would obviously be easier for a State to rectify than the second.

Incremental Cost

For a typical TMDL that does not include an implementation plan, a State representative estimates the average additional LOE necessary to meet the requirements of the proposed regulation as:

- Preparing a monitoring plan—75 to 100 hours; and
- Preparing the remaining eight required elements of an implementation plan—75 to 100 more hours. Some of the remaining eight elements are prepared as a matter of course in developing TMDLs currently, including the description of planned control actions, reasonable assurances for point source controls, and at least a rough timeline, estimate of the time required to attain WQS, and set of milestones. Other elements, such as the required description of the legal authorities under which implementation will occur and reasonable assurance for nonpoint sources can typically be developed easily from existing materials in the State's WQM plan and section 319 plan. Other elements, such as the required description of when failure to meet milestones will trigger a revision of the TMDL, can rely largely on State-wide policy that needs only little tailoring for adaptation to a particular TMDL.

In total, the eight required elements of an implementation plan would add \$6,056 to \$8,074 (150 to 200 hours at a cost of \$40.37 per hour) to the cost of a typical TMDL that did not include them.

In addition, for some sorts of nonpoint source TMDLs in some States, no adequate authorities or mechanisms will exist allowing demonstration of reasonable assurance. In such instances, the State would have a choice between: (1) developing adequate authorities; or (2) developing a TMDL that does not include reasonable assurance and that is therefore not approvable by EPA. For these States, the first course would likely be difficult (the State would presumably need to establish new legal and enforcement authorities or find adequate funding to ensure compliance by the nonpoint sources with their LAs) and the outcome would be unpredictable (the State might not succeed in establishing the new authorities). Under the second course, in the absence of an approvable TMDL from the State, EPA would need to develop the TMDL itself. The proposed regulations include revisions to EPA's NPDES permitting rules that describe how EPA will proceed in such cases where EPA must de-

⁹See, for example, this summary: Environmental Law Institute. *Enforceable State Mechanisms for the Control of Nonpoint Source Water Pollution*. October, 1997.

¹⁰The Environmental Law Institute study cited above observes, for example:

"Agriculture is the most problematic area for enforceable mechanisms. Many laws of general applicability, as noted above, have exceptions for agriculture. Where state laws exist, they often defer to incentives, cost-sharing, and voluntary programs. Nevertheless, about a fifth of the states have some statewide sediment requirements applicable to agriculture, often administered by local governments or soil and water conservation districts. Even more states (about a fourth) authorize individual soil and water conservation districts, as a matter of local option, to adopt enforceable 'land use regulations' for the control of erosion and sedimentation, but most of these require approval by landowner referendum, with approval requiring a super-majority (ranging from 66 to 90 percent) in order for such regulations to become effective."

velop a TMDL because the State cannot provide reasonable assurances for implementation. For cost estimating purposes, we assume the second of these courses. We have no basis for estimating what the costs might be for States to develop the additional authorities necessary so they can provide reasonable assurance for implementation for all nonpoint source TMDLs. Instead, in the portion of the cost analysis addressing the proposed changes to the permitting rules, we estimate the costs for EPA in cases where States have inadequate authorities for reasonable assurance. That analysis is provided in a separate report. Thus, the incremental costs for meeting the reasonable assurance requirements of the proposed regulations are not covered in this chapter.

II.2. States must meet minimum requirements for public participation in TMDL development

Requirement

The proposed regulations require States to provide the public with at least 30 days to comment on TMDLs prior to their submission to EPA. In addition, the State must provide EPA with a written summary and response to public comments.

Baseline

Existing regulations (40 CFR 130.7(c)(1)(ii)) require “that calculations to establish TMDLs shall be subject to public review as defined in the State CPP”. EPA has long encouraged States to carry out full public participation in establishing TMDLs consistent with States’ administrative procedures requirements. All or nearly all States now routinely provide for public notice and comment and the opportunity for a hearing in their TMDL processes. It is not known how many States develop a written summary and response to public comments.

Incremental Cost

A State representative has estimated that providing for additional public participation consistent with the proposed regulations and beyond that which routinely occurs (i.e., developing a written summary and response to public comments, and increasing the proportion of TMDLs for which a public hearing is held) might require an average of 100 hours (or \$4,037 at \$40.37 per hour) per TMDL.

II.3. Scaling Up the Cost Estimates From a Single Typical TMDL to All TMDLs

In this section, we have estimated the following incremental costs for a typical TMDL to meet the additional requirements of the proposed regulations:

- 7 required elements of a TMDL—No cost
- Allowance for future growth—Savings, not estimated
- Implementation plan—\$6,056 to \$8,074 (150 to 200 hours)
- Reasonable assurance (some nonpoint source TMDLs)—EPA’s cost is estimated in the permit rule analysis
- Additional public participation—\$4,037 (100 hours)

These costs represent unit costs that must be scaled up by the number of TMDLs for which these additional elements will need to be developed.

In the Methodology section, we estimate that 20,000–40,000 TMDLs will need to be developed during the period of analysis. If we assume that implementation plans sufficient to meet the proposed new requirements are routinely developed now for about one quarter of all TMDLs and that this baseline practice will continue in the future, three quarters of all future TMDLs (roughly 15,000–30,000 of them) will face incremental costs for implementation plans under the proposed regulations. The estimated additional costs for enhanced public participation will apply to all 20,000–40,000 future TMDLs.

To the extent that the required implementation plan and public participation requirements are met on an aggregated watershed basis rather than individually for each TMDL, the number of instances in which these additional activities will need to occur will be less than shown above. We have no adequate basis for estimating the likely extent to which such geographic aggregation will occur and reduce the incremental workload. To be conservative, we will assume no geographic aggregation. We assume that the additional workload for implementation plans will be necessary for three quarters of all TMDLs (15,000 to 30,000 of them), and the additional workload for enhanced public participation will be necessary for all TMDLs (20,000 to 40,000 of them).

Multiplying these numbers of TMDLs needing additional work by the added cost for a typical TMDL and annualizing over the 17-year period of analysis, we estimate the cost of the proposed new requirements to be \$10.1–\$23.8 million per year.

II.4. Summary

The costs of the proposed revisions discussed in this chapter are summarized below:

Summary of the Incremental Costs Associated with the Proposed Revisions Affecting the Content of TMDLs

[In millions of dollars]

<i>Proposed revision</i>	<i>Annualized cost</i>
TMDLs must include 9 elements:	
7 elements	
Allowance for future growth	(1)
Implementation plan	5.3–14.3
.....	
<i>(Reasonable assurances)</i>	(2)
Minimum required public participation in TMDL development	4.8–9.5
 Total	 10.1–23.8

¹ Savings.

² Estimated elsewhere.

TMDLS MUST BE COMPLETED WITHIN SPECIFIC TIME PERIODS

As discussed previously in chapter I, the proposed regulations require that TMDLs be developed for Part 1 waterbodies and that States must determine the priority of these TMDLs as either high, medium or low priority. All Part 1 waterbodies must have TMDLs completed for them within 15 years as described below:

—TMDLs for high priority Part 1 waterbodies must be completed before low and medium priority waterbodies. When feasible, EPA encourages States to adopt a goal of completing the development of TMDLs for high priority waterbodies within 5 years. However, EPA recognizes that a 5-year time frame may not be feasible for all States.

—TMDLs for all Part 1 waterbodies must be completed within 15 years of being listed as Part 1 waterbodies. Thus, for example, waterbodies that are newly listed Part 1 waterbodies in the year 2000 must have completed TMDLs by 2015; similarly, TMDLs for waterbodies that are newly listed, for example, in 2010 must be completed by 2025.

Requiring that TMDLs for Part 1 waterbodies be developed within specific time periods might result in the acceleration of the development of some of these TMDLs relative to the pace that might have occurred in the baseline. Accelerating the development of a TMDL results in its cost of development being incurred sooner, and therefore increases the present value cost of TMDL development.

The potential cost impacts of accelerating the development of TMDLs that might have otherwise taken longer than required by the proposed regulations are estimated in this chapter for the following proposed requirements:

—Requiring that TMDLs for high priority Part 1 waterbodies be developed first, and requiring that high priority waterbodies include all those for which the designated use is public drinking water supply or that contain or serve as habitat for endangered or threatened species.

—Requiring that TMDLs for all Part 1 waterbodies, regardless of priority, be developed within 15 years of listing as Part 1.

The incremental costs of these requirements due to resulting changes in the listing process were covered in chapter I.

II.1. TMDLs for high priority Part 1 waterbodies must be developed first.

Requirement

The proposed regulations require that States identify all Part 1 waterbodies for which the designated use is public drinking water supply or that contain or serve as habitat for endangered or threatened species under section 4 of the Endangered Species Act. These must be classified as high priority, and TMDLs for these waterbodies must be completed first. States are encouraged to adopt a goal of completing TMDLs for high priority waterbodies within 5 years of being listed as a Part 1 waterbody.

Baseline

As discussed further in section III.2. below, nearly all States have committed to completing TMDLs for all of their Part 1 waterbodies within 15 years. Of these States, 21 States have committed to schedules of 10 years or less. To accomplish

any of these schedules, substantial portions of the States' TMDL workload would need to be completed within the first five to ten years in the baseline.

Incremental Cost

It is not anticipated that this proposed requirement will result in incremental costs to the States for several reasons.

- To the extent that States have waterbodies for which the designated use is public drinking water supply or that contain or serve as habitat for endangered or threatened species, the Agency believes that States would have scheduled prompt development of TMDLs for these waterbodies in the baseline anyway.
- The proposed regulation allows waterbodies which have endangered species present to be assigned a medium or low priority if the State has an approved Habitat Conservation Plan or other specific, enforceable mechanism developed in accordance with the Endangered Species Act.¹¹
- The goal of completing TMDLs for high priority waters within 5 years will likely be feasible for many States. Given the States' current commitments to complete their TMDLs within the next 10–15 years, States will generally be developing an appreciable fraction (perhaps $\frac{1}{4}$ – $\frac{1}{3}$) of their TMDLs within the next five years anyway. Therefore, it should not be difficult for many States to sequence TMDL development schedules to ensure that TMDLs for high priority waters be developed first, and completed within 5 years. EPA recognizes that this time frame may not be feasible for all States. Therefore, the 5-year completion time frame is only a goal, not a requirement.

Thus, the proposed regulations' requirement to complete TMDLs for high priority waterbodies first will not result in increased costs because the Agency believes that TMDLs for these waterbodies would likely have been scheduled for priority development by States anyway in the baseline; and if not, overall TMDL development schedules could readily be re-sequenced within the States' current commitments in the 1998 listing program to address the high priority TMDLs first. Finally, the goal of completing TMDLs for high priority waters within 5 years is a goal, not a requirement.

III.2. All Part 1 waterbodies must have TMDLs completed for them within 15 years.

Requirement

The proposed regulations require that TMDLs for all priority Part 1 waterbodies be developed within 15 years. This schedule will be required for all Part 1 waterbodies starting with the 2000 listing—TMDLs for these waterbodies must be completed by 2015. Waterbodies listed in 1998 actually have a 17-year maximum schedule, since the 15-year time-limit does not apply until the 2000 listing. In listings subsequent to 2000, TMDLs for newly listed Part 1 waterbodies will need to be completed within 15 years from their listing date. The following calculations focus on the cost of this requirement for the TMDLs that will need to be completed within the 17 years through 2015.

Baseline

Most States have already committed to completing TMDLs for their currently listed waterbodies prior to 2015—i.e., they will not be affected by the proposed revision. Based on EPA's December 11, 1998 "Status of 1998 303(d) Lists," 48 States have committed to schedules and sent them to EPA. Schedules are anticipated soon for the remaining 8 States. Draft schedules are available for 5 of these States. Therefore, at this point, we have a basis for estimating the TMDL completion schedules for 53 States, which represent 95 percent of the listed waterbodies. Over the next few months, the remaining 3 States will submit their schedules, eliminating the need for any assumptions regarding their schedules.

For the 53 States (having draft schedules or final schedules), commitments for completing TMDLs for their 1998 listed waterbodies range from 3 years to 20 years (i.e., completion by 2001 to 2018). Only two of these States have scheduled TMDLs to be completed past 2015: Missouri and New Mexico. However, New Mexico's Consent Decree specifically allows it to develop TMDLs for its 1996 listed waterbodies through 2018, and therefore New Mexico is not subject to the 15-year requirement of the proposed revision. Missouri has listed about 77 waterbodies. Assuming that Missouri will develop TMDLs uniformly through 2018, then TMDLs for about 12 waterbodies are currently scheduled to be developed past 2015.

It is more difficult to determine the baseline for the remaining 3 States whose schedules are still pending. Therefore, we provide a range of possibilities. Based on

¹¹This regulation, however, does not require consultation with the U.S. Fish and Wildlife Service.

the schedules for the 53 States, it would be reasonable to anticipate that all of the TMDLs for 1998 listed waterbodies for the remaining 3 States will be completed by 2015. This assumption provides the basis for our “low” estimate. To provide a “high” estimate we assumed that all of the remaining 3 States will complete their TMDLs by 2020 instead of by 2015, exceeding by two years the longest of any of the State schedules that have been submitted. This is a very conservative assumption since only 2 of the 53 States with schedules extend to even 2018. Assuming that these 3 States develop TMDLs uniformly through 2020, then under the “high” estimate, TMDLs for an additional 249 waterbodies are scheduled to be developed past 2015.

Thus, given current State commitments, at least 52 States will not be affected by the proposed revision requiring that TMDLs be developed by 2015 (51 States with current or expected schedules prior to 2015, and New Mexico). 1–4 States may need to accelerate the development of TMDLs for as many as 12–249 1998-listed waterbodies. This range should narrow over the next few months as States submit their schedules for developing TMDLs. The details of this baseline analysis of TMDL development are shown in Attachment 1, which provides State-by-State schedules and projected year-by-year TMDL development by State past 2015.

As discussed in the Methodology section, it is important to note that the number of listed waterbodies requiring TMDLs is only an indication of the number of waters needing TMDLs, not the actual number of TMDLs that will be done.

—To some extent, the number of 1998 listed waterbodies can overstate the number of waterbodies that will require TMDLs, because not all 1998-listed waterbodies will be considered to be Part 1 waterbodies. In the 2000 listing, some of these waterbodies will be classified as Part 2 waterbodies (which do not require TMDLs because they are not impaired due to pollutants), some will be classified as Part 3 waterbodies (for which a TMDL has been completed) and some will be classified as Part 4 waterbodies (which do not require TMDLs because other measures will address the problems). Therefore, since the 12–249 estimate of waterbodies for which TMDLs that might be developed past 2015 assumed that all 1998-listed waterbodies would be Part 1 waterbodies, it is likely that this estimate is overstated.

—On the other hand, most listed waterbodies have more than one cause of impairment and a TMDL may be needed to address each cause. For the 1996 listings there were slightly more than twice as many causes as waterbodies, and for the 1998 listings there were slightly less than twice as many causes as waterbodies. If each cause requires a TMDL, then about twice as many TMDLs would be required as waterbodies. However, TMDLs that handle multiple causes can be developed.

For this analysis, we have assumed that the number of TMDLs to be completed ranges from the number of listed waterbodies to twice this number of waterbodies. Thus, the number of TMDLs that in the baseline would be developed past 2015 would range from 12 to 499:¹²

—The low end of the range (12 TMDLs) assumes that all 3 States without schedules submitted yet will choose schedules completing TMDLs for their listed waterbodies prior to 2015. The low end of the range also assumes that the number of 1998 listed waterbodies likely significantly overstates the number that will eventually be categorized as Part 1. This also assumes that multiple causes for a listed water will not commonly necessitate multiple TMDLs for that water.

—The high end of the range (499 TMDLs) assumes that all 3 States will submit schedules that reflect even longer time frames than those that have been submitted to date (i.e., completion by 2020). It also assumes that separate TMDLs will generally be needed to address every cause.

This broad range provides the basis for analyzing the incremental cost of the acceleration of TMDL development caused by the proposed rule’s requirement that TMDLs must be completed within 15 years after a water is listed.

Incremental Cost

In the absence of the proposed rule, we assume that approximately 12–499 TMDLs would be developed (we assume at a steady rate) between 2016 and 2020. As a result of the proposed rule, the development of these TMDLs will need to be accelerated, and we assume they will be rescheduled to be developed at a steady rate between 1999 and 2015. The incremental cost of accelerating the development of these TMDLs is the time-value of incurring these expenditures sooner. This is just the difference between the present value of completing the TMDLs under the

¹²From Attachment 1, the low end is 11.6 waterbodies rounded up to 12, and the high end is $249.3 \times 2 = 498.6$ rounded up to 499.

baseline schedule versus the present value of completing the TMDLs under the new schedule required by the proposed rule.

Thus far, we have estimated the number of TMDLs and their alternate schedules. The remaining key element that is needed is the average cost of developing these TMDLs. Studies estimating the cost of TMDL development have shown a wide range of potential cost. For example, one study¹³ examined fourteen TMDL case studies in which the costs ranged from about \$4,000 to \$1,000,000. The costs for six of the TMDLs were under \$22,000 and the costs for the remaining eight were over \$145,000. The cost for a given TMDL can depend on a wide range of factors including the watershed size, the complexity of the analytic work needed, the number and type of pollutants addressed, and the level of public interest. There are reasons to expect that the average cost to develop a TMDL will be at the lower end of the range found in this study, and that the average cost will decline over time:

- The cost depends on the extent to which TMDLs for similar circumstances have been developed and on the extent of the State’s experience in developing TMDLs. The first TMDLs to be developed tend to be the most costly because staff is less experienced and many technical issues will be addressed for the first time. As more TMDLs are completed, staff will become more experienced and the work routine, so that the cost of developing TMDLs will tend to decline.
- Recent experience has shown that once a “template” is created for developing TMDLs for a pollutant, that approach can often be applied to other waterbodies at a relatively low cost.
- The technology for developing TMDLs has steadily improved over the years and its cost has declined.
- As States increasingly adopt a watershed approach, some costs, such as for public participation, can decrease dramatically on a per/TMDL basis. For example, a single public participation process at the watershed level, costing, say, \$50,000, might serve to take the place of similar efforts for perhaps ten TMDLs, resulting in a cost of \$5,000 per TMDL.

Thus, while the cost of developing a specific TMDL might be at the higher end of the range, the average cost of developing TMDLs across the program is expected to be at the lower end of the range.

For this report, the average cost of developing a TMDL is assumed to be \$25,000. This includes the increased costs that were identified in chapter II of this report as likely to result from the proposed regulations. Note that the cost estimates for accelerating the development of TMDLs depend directly on this assumption: if the assumed average cost of developing a TMDL were increased to \$50,000 the estimated incremental cost of accelerating TMDL development would double; if the assumed average cost of developing a TMDL were decreased to \$12,500, the estimated incremental cost of accelerating TMDL development would decline by 50 percent.

The detailed calculations for the cost of accelerating the development of 12–499 TMDLs so that they are completed by 2015 are shown in Attachment 2—Attachment 2 shows the step-by-step calculations that use the specific TMDL development patterns derived in Attachment 1. The results are summarized below:

- Low estimate.*—The total cost of developing the 12 TMDLs over the period 2016–2020 is about \$300,000 and its 1999 present value is about \$85,000. Developing these 12 TMDLs over 1999–2015 has the same total cost, but a 1999 present value of about \$175,000. Thus, the incremental cost of accelerating the development of these 12 TMDLs is about \$90,000. The annual cost of acceleration as annualized over 1999–2015 is about \$9,000.
- High estimate.*—The total cost of developing 499 TMDLs over the period 2016–2020 is about \$12.5 million and its 1999 present value is about \$3.5 million. Developing these 499 TMDLs over 1999–2015 has the same total cost but a 1999 present value of about \$7.7 million. Thus, the incremental cost of accelerating the development of these 499 TMDLs is about \$4.2 million. The annual cost of acceleration as annualized over 1999–2015 is about \$400,000.

In summary, given the assumptions made in this report, accelerating the development of 12–499 TMDLs from the period 2016–2020 to the period 1999–2015 results in an increased annualized cost ranging from about \$9,000 to about \$400,000 through 2015.¹⁴

¹³EPA, TMDL Development Cost Estimates: Case Studies of 14 TMDLs. EPA-R-96-001, May 1996.

¹⁴Note that the incremental cost of accelerating TMDL development from the period 2016–2020 to the period 1999–2015 roughly results in doubling the cost of TMDL development. For example, for the low estimate of 12 TMDLs, the 1999 present value cost is roughly doubled from about \$85,000 to about \$175,000, for an incremental cost of about \$90,500. This is not sur-

IV. INCREASED COSTS FOR EPA RESULTING FROM THE PROPOSED REGULATIONS

The proposed regulations alter the requirements for States for the listing program and for the content and development of TMDLs. These requirements have implications for the Agency as well:

- 1. Proposed revisions to the listing program and for the content of TMDLs will also result in increased costs to EPA for reviewing and approving lists and TMDLs.
- 2. Options for reduced frequency with which lists must be submitted will reduce the number of State lists EPA must review and approve and thereby reduce cost to EPA.
- 3. The suggestion that the public petition EPA for action to establish TMDLs rather than proceed directly to litigation will likely reduce costs for both EPA and the public.

Each of these proposed requirements is evaluated in this chapter.

This report does not evaluate the incremental costs to EPA in cases where EPA must develop portions of a TMDL if a State cannot provide reasonable assurance for implementation of the TMDL. The specific procedures for this are included in the proposed revisions to the Agency's permitting regulation, and a separate analysis addresses the incremental costs that may result.

IV.1. Proposed revisions to the listing program and for the content of TMDLs will also result in increased costs for EPA for reviewing and approving lists and TMDLs.

Requirement

EPA's new requirements under the proposed revisions (as described in chapters I, II and III) will result in changes in the content of list submissions as well as of TMDLs.

Baseline

The Agency's current activities regarding the listing program and for reviewing/approving lists are identified in the Agency's current approved Information Collection Request (in effect for the three year period ending 2/28/99). The Agency is in the process of renewing the ICR for the next period (ending 2/28/01) and has developed new estimates for the Agency burden associated with these activities. The estimates for the current ICR and its proposed renewal are shown in the following table.

The Agency has estimated that its burden will increase significantly over the next three years, primarily due to the increased pace for developing TMDLs that States have committed to in their 1998 lists. This increase in the expected Agency burden is part of the baseline—as detailed in chapter III, States have already committed in their 1998 list submissions (in the baseline) to increasing the pace of TMDL development, and the State schedules are consistent with the requirements of the proposed regulation for nearly all of the States. This factor accounts for the bulk of the expected increase in the Agency's effort as anticipated in the ICF, amounting to 5,580 hours (out of the total increase 6,032 hours). This expected increase also includes consideration of any increased effort that might be associated with the proposed regulation's new requirements for the content of TMDLs.

COMPARISON OF EPA'S CURRENT AND EXPECTED BURDEN FOR ACTIVITIES IDENTIFIED IN ITS INFORMATION COLLECTION REQUESTS FOR THE 303(D) PROGRAM

Description of activity and number	Fre- quency (years)	ICR burden esti- mate (annual hours)	
		Exist- ing (to 3/99)	Renewal (to 3/01)
8. Prepare 303(d) guidance	1	62	62
9. Provide technical assistance to States for 303(d)	1	96	236

prising, since on average, TMDL development is accelerated from about 2018 (the midpoint of the baseline period) to about 2007 (the midpoint of the accelerated development period), an average acceleration of about 11 years. At 7 percent annually, time-value doubles in ten years and increases to 210 percent in eleven years. Conversely, delaying TMDL development by 10 years halves its cost.

COMPARISON OF EPA'S CURRENT AND EXPECTED BURDEN FOR ACTIVITIES IDENTIFIED IN ITS
INFORMATION COLLECTION REQUESTS FOR THE 303(D) PROGRAM—Continued

Description of activity and number	Fre- quency (years)	ICR burden esti- mate (annual hours)	
		Exist- ing (to 3/99)	Renewal (to 3/01)
10. Review draft 303(d) lists	2	96	236
11. Send TMDL approval/disapproval notices to States	1	20	5,600
12. Review final 303(d) lists. Negotiate to resolve disapprovals	2	328	500
Total Annual Agency Burden		602	6,634
Expected Increase in Total Annual Agency Burden			6,032

Increment

The new estimates for the Agency's effort for 303(d) activities also take into account the provisions of the proposed regulation for the listing program. As shown in the following table, the Agency anticipates that its activities for preparing 303(d) guidance, providing technical assistance to States, reviewing draft lists, and reviewing final lists and negotiating to resolve disapprovals will increase by 452 hours annually—an increase of nearly 80 percent. At the average loaded hourly rate of \$40.37/hour used in the ICR to estimate the cost of the Federal burden, the increased effort is estimated to cost \$18,247 annually.

IV.2. Options for altering the listing cycle will affect EPA's workload by changing the number of lists EPA must evaluate.

Requirement

As discussed in Chapter I, the proposed revision asks for comment on options for the listing cycle. These options include:

- Option A—Retain the current 2-year listing cycle,
- Option B—Adopt a 4-year or 5-year listing cycle immediately,
- Option C—The first list submission under the new rule would occur no later than October 1, 2000, with subsequent list submissions occurring every 4 or every 5 years.

As shown in Chapter I, using Option C as an example, lengthening the listing cycle would result in savings for States because fewer lists would need to be prepared. This assessment of the corresponding savings to the Agency also focuses on Option C, where a listing is still required for October, 2000 and subsequent listings are required every 5 years.

Baseline

The current listing cycle requires the submission of lists every 2 years.

Incremental Cost

Altering the listing cycle would not be expected to affect the annual burden for EPA's activities for preparing 303(d) guidance, providing technical support to States, or sending TMDL approval/disapproval notices to States. Altering the listing cycle would affect the Agency's annual effort for reviewing draft and final 303(d) lists and negotiating to resolve disapprovals. The Agency's total effort for these activities for a list submission is 1,472 hours. Switching from the current 2-year cycle to a 5-year cycle would lower the Agency's annual effort from 736 hours to 295 hours annually, for a savings of 441 hours annually as shown in the following table.

COMPARISON OF EPA'S BURDEN FOR 303(D) PROGRAM ACTIVITIES FOR THE CURRENT 2-YEAR
CYCLE VERSUS A 5-YEAR CYCLE

Description of activity and number	Current fre- quency (years)	ICR burden es- timate (annual hours)	
		2-year cycle	5-year cycle
10. Review draft 303(d) Lists	2	236	95
12. Review final 303(d) lists. Negotiate to resolve disapprovals	2	500	200
Total Annual Agency Burden		736	295
Expected Decrease in Total Annual Agency Burden			441

This savings of 441 hours annually would essentially offset the increased annual burden of 452 hours identified in the previous section. The value of the undiscounted savings is \$17,803. However, since the bulk of these savings would be realized after the year 2000, the actual savings is slightly less as explained below.

Putting it another way, the current 2-year cycle through the year 2015 would require the Agency to provide 1,472 hours for 8½ listing cycles for a total effort of 12,512 hours. Option C, which maintains the 2000 listing but requires only an additional 3 listings through 2015 would result in a burden of 5,888 hours. Thus, switching from a 2-year to a 5-year cycle would save the Agency 6,624 hours after the 2000 listing through the year 2015. Taking into account the pattern of savings through 2015, the present value of the savings would be \$156,744 and the annualized savings over this period would be \$15,004.

IV.3. The proposed regulations suggest that the public petition EPA for action to establish TMDLs rather than proceed directly to litigation.

Requirement

The proposed regulation clarifies that the public must petition EPA prior to filing a lawsuit seeking to compel EPA to carry out TMDL program actions that States are directed to perform. The petition requirement applies only to discretionary EPA actions under CWA Section 303(d). The petition requirement does not apply to non-discretionary EPA actions under Section 303(d) (i.e., to approve or disapprove a TMDL or list after it is submitted by a State, or to establish a TMDL or list if EPA disapproves a State's submission). For non-discretionary EPA actions, no petition is necessary and a party seeking to compel EPA action may proceed directly to litigation.

The petition requirement will apply to discretionary EPA actions such as establishing TMDLs for a State in the alleged absence of State TMDL activity. Several groups objecting to what they view as slow State progress on TMDLs have filed lawsuits to compel EPA to step in and develop TMDLs or lists for a State. In such cases, EPA feels that litigation is premature because the Agency has not yet made a final decision whether or not to establish TMDLs or lists in place of the State. Absent a final Agency decision, EPA believes that courts lack a factual record to evaluate. If instead a party petitions EPA to take the desired discretionary action, EPA's response to the petition will constitute final Agency action and the record established by the Agency in responding to the petition will provide a record that is reviewable by courts in any subsequent litigation.

Baseline

Groups dissatisfied with State progress on TMDLs or lists have filed more than 40 cases involving about 34 States. High costs have been incurred by all litigants: plaintiffs in preparing and arguing the cases, and States and EPA in defending and settling them. EPA believes that petitions filed under the Administrative Procedures Act provide an opportunity to resolve many TMDL program issues in a less costly manner, without litigation.

Incremental Cost

EPA believes that compliance with this requirement will reduce costs for both the Agency and the public. Preparing and filing petitions will cost the public far less than preparing and filing lawsuits, and it is far less resource-intensive for the Agency to respond to petitions than to lawsuits. The Agency believes that many issues can be resolved through the petition process, avoiding litigation and the unneces-

sary expenses that all parties would otherwise incur. To the extent that petitions do not avoid lawsuits, the Agency believes that most of the effort to prepare and respond to petitions would have occurred anyway as part of the litigation process. The Agency acknowledges the possibility that the low cost of preparing petitions might result in more petitions being filed by parties that otherwise would have been deterred by the cost of litigation. Nevertheless, on balance, the Agency believes that compliance with this existing requirement would benefit all parties, and reduce the overall cost that otherwise would be incurred.

V. IMPACT ON THE AGENCY'S INFORMATION COLLECTION REQUEST

The Agency is proposing a revised Information Collection Request for certain activities under the 303(d) program to replace the existing 3-year ICR which expires on 3/1/99. As discussed in chapters I and IV, the Agency's ICR estimates the burden for States' preparation of 303(d) lists, and for the Agency's activities regarding the listing program as well as for reviewing and approving TMDLs. This chapter summarizes the information developed earlier in this report regarding the extent to which the proposed regulation affects the burden of both the States and the Agency for those activities identified in the proposed ICR, which covers the period from 3/1/99 to 2/28/01.

Estimated Change In State Burden

The next ICR will encompass the next listing which is currently due in the year 2000. As discussed extensively in chapter I, the proposed regulation increases the total State effort for the year 2000 listing by 36,740 hours. As estimated in the ICR, at a cost of \$40.37 per hour, this amounts to a total cost increase of nearly \$1.5 million for the period.

Since the next ICR covers the period ending 2/28/01, a portion of the increased effort for the next listing after the year 2000 listing should also be considered. However, this additional burden depends on whether the current 2-year listing cycle is continued, or whether a 4 or 5-year listing cycle is adopted instead:

—If the current 2-year listing cycle continues then half of the 2002 cycle would need to be included in the ICR as well. As discussed in chapter I, the proposed regulations increase the total State effort for listings subsequent to the year 2000 listing by 6,050 hours. If half of this effort occurs in 2001, then the proposed regulations increase the burden in the ICR by 3,025 hours or about \$122,000.

—If a 4 or 5-year listing cycle were adopted it does not seem likely that those activities that account for the increased burden due to the proposed regulations would take place as early as 2001. Therefore, an additional adjustment for an increased burden associated with the next cycle would be unnecessary.

Therefore, the total adjustments to the respondent burden as estimated in the Agency's ICR for the period ending 2/28/01 for the 303(d) program range from an additional 36,740 hours at \$1.5 million if the listing cycle is lengthened, to 39,765 hours at \$1.6 million if the current 2-year listing cycle is maintained.

However, for future ICRs, as discussed in chapter I, if the listing cycle is lengthened, savings that result from avoiding future listing cycles (i.e., under Option C, States would only be required to submit 4 lists instead of 8½ lists through 2015) would more than cover the increased burden to States that results in the near term from the proposed regulations. As summarized at the end of chapter I, through the year 2015, the proposed regulations would increase the States' annualized costs by \$230,000 but this would be more than offset by the \$320,000 annually that States would save if the listing cycle were lengthened. The net annualized savings would be about \$90,000 per year.

Estimated Change in Agency Burden.

As discussed in chapter IV, EPA's estimates of its ICR burden for the period ending 2/28/01 for, the 303(d) program already include consideration of both:

- 1. Increases in the States' baseline level of activity which results in an increased annual burden for the Agency of 5,580 hours, and
- 2. Increases in Agency activity that might result from the proposed regulations, amounting to an additional annual burden of 452 hours or \$18,247.

Altogether, the Agency has proposed to increase its burden estimate in the proposed ICR by a factor of 11 from the current ICF, representing an increase in burden from 602 hours annually to a total of 6,634 hours annually. Since the Agency's estimates already reflect expected changes in burden, no additional revisions to the estimates for the Agency's burden are needed to further reflect the proposed regulations.

However, as noted in chapter IV, if the listing cycle were lengthened, then the Agency would realize savings that would offset the increased burden associated with the proposed rule.

CURRENTLY LISTED WATERS SCHEDULED FOR TMDL DEVELOPMENT AFTER 2015¹—Continued

EPA region & State	Number listed waters	Schedule		Current commitments after 2015 ²					
		Years	End year	2016	2017	2018	2019	2020	Total
Washington	³ 631	15	2013
Totals	³ 20,198	(7)	(7)	51.4	51.4	51.4	47.5	47.5	249.3
		(8)	(8)	3.9	3.9	3.9	11.6

¹ Based on current commitments as reflected in the 1996 TMDL lists as of 12/11/98 and interim default assumption of a 22-year time frame where schedule is not available.

² Assuming proportionate development over the life of the schedule—estimates are shown to nearest 1/10.

³ Approximate.

⁴ Estimate based on draft schedule

⁵ Temporary and conservative default assumption of 22-year schedule ending 2020.

⁶ "Grandfathered"—Consent decree allows 20 years.

⁷ Including default.

⁸ Excluding default.

ATTACHMENT 2

ANALYSIS OF COST IMPACT OF TMDL ACCELERATION

For low-high assumptions for the TMDL development for States w/o schedules and low-high assumptions (1–2) for the number of TMDLs per water:

Discount rate (percent)	7
TMDL cost	\$25,000

TMDL'S THAT WILL BE ACCELERATED DUE TO THE PROPOSED REVISIONS¹

Assumption	2016	2017	2018	2019	2020	Total
High	102,791	102,791	102,791	95,091	95,091	498,555
Low	3,850	3,850	3,850	11,550

¹ The level of precision shown is not intended to indicate degree of accuracy, but rather to facilitate the ability of reviewers to check the calculations. No rounding was done for the projections from Attachment 1.

COST OF TMDL'S THAT WILL BE ACCELERATED DUE TO THE PROPOSED REVISIONS ASSUMING AN AVERAGE COST OF \$25,000 PER TMDL

Assumption	2016	2017	2018	2019	2020	Total
High	2,569,773	2,569,773	2,569,773	2,377,273	2,377,273	12,463,864
Low	96,250	96,250	96,250	288,750

1999 PRESENT VALUE FOR CURRENT SCHEDULE FOR POST–2015 TMDLS AT 7 PERCENT

Assumption	2016	2017	2018	2019	2020	Total
High	\$813,524	\$760,303	\$710,564	\$614,332	\$574,142	\$3,472,866
Low	30,470	28,477	26,614	85,561

YEARLY COST AND 1999 PRESENT VALUE COST OF DEVELOPING THESE TMDLS PRIOR TO 2015

	High	Low	
Uniform development starting in 1999 through 2015	29.3	0.7	TMDL/year.
Cost per year from 1999 through 2015	\$733,168	\$16,985	Yearly Cost.
1999 PV cost for TMDLs that have been accelerated	\$7,659,153	\$177,439	1998 PV.

INCREMENTAL PV AND ANNUALIZED COST OF ACCELERATING TMDL DEVELOPMENT

Assumption	PV current	PV accel	Incr PV Cost	Annualized
High	\$3,472,866	\$7,659,153	\$4,186,287	\$400,730
Low	85,561	477,439	91,878	8,795

Ms. BROWNER. The numbers that we looked at, Mr. Chairman, and we made public as part of the proposal, are the costs to the States of managing the program. It is the cost in terms of what the States have to do, the science they would do to set the load, and the work they would do within a community to actually develop the plan.

TMDL PROPOSAL VS. NPDES BACKLOG

Senator BOND. That is where the States are very much concerned. And I am also very much concerned with EPA and the States taking on the new requirement and, at the same time, we have a large and growing backlog in the NPDES program, is not this TMDL workload going to limit EPA's ability to eliminate this material weakness?

Ms. BROWNER. No. We are continuing our efforts to address the NPDES backlog. We agree we need to do a better job, as I said last year when I appeared. These are the most complicated permits, which is why we are stuck with them and why we are managing them. We are providing additional funds to the States. For example, the State of Texas had a very large backlog. We provided funds to them. We are addressing this program.

It is separate and apart from TMDL's. In fact, in the future, TMDL's will allow you to better manage our NPDES process where a State makes a choice to use that as a tool. It is not a requirement. We are not saying that permits for non-point source will be required to meet TMDL requirements. But some States may use portions of their NPDES permitting program.

TMDL PROPOSAL: NPS AND FORESTRY

Senator BOND. It seems rather apparent when you look at the statute that EPA does not have the authority to regulate the non-point source pollution. And I just wonder where you have that authority.

Ms. BROWNER. We have been very clear that when it comes to agriculture, we do not have authority to regulate non-point source pollution.

Senator BOND. And forestry as well?

Ms. BROWNER. The statute does not speak to forestry in the same manner. Well, in terms of non-point source, we do not have authority. In terms of agriculture, to require permits, we do not have authority.

It is sometimes the practice in the forestry community to divert water from their lands into for example, which culverts becomes a point source.

Having said that, Mr. Chairman, I want to be very clear about something. There are many forest companies that are engaged in good best management practices to address their water pollution

problems. I have been up here three times talking in committees about the fact that the TMDL proposal has created a lot of misunderstanding. I am the first to admit this is a problem for us.

One of the misunderstandings has been whether or not we would give credits, if you will, to a State program that relied on best management practices. The answer is yes. With reasonable assurances, absolutely, positively yes. Best management practices can be hugely successful.

Senator BOND. We still have a long way to go on this one. One of my particular areas of interest, we have funded research experiments on the use of agro-forestry buffer strips along stream banks, riverbanks, to use revenue-producing sources for farmers to capture the nutrients that they apply to the fields or that come from a livestock operation. So we are very much concerned. But I am also very much concerned about the TMDL proposal. And we will have further questions for the record.

Ms. BROWNER. If I can just say one thing, Mr. Chairman. It is not a one size fits all proposal. The point of TMDL's is to give the States 15 years to develop these plans and to give credit for the very kind of stream buffers you are talking about.

EPA STAFFING NEEDS

Senator BOND. We are reading just some of the comments you are getting. The comments that are coming in that we are seeing are that it is one size fits all, it is command and control. And there is a real lack of confidence in what the EPA is doing in the perceptions out there.

Let me just say that I will submit questions for the record. But we are concerned also about the GAO report, saying that EPA lacks assurance that its employees are being used consistent with the intent of congressional appropriations. The I.G. reported 3 years ago that in two regions it reviewed, 42 percent of the employees worked in areas unrelated to the program areas to which their time was charged. And we are concerned about that and how we know that the money is going to the programs for which it has been appropriated.

Finally, in making staffing decisions, EPA apparently has not taken into consideration whether the activities at the State level have altered EPA staffing requirements. States now assume responsibility for more than three-quarters of the Federal environmental programs, a much greater proportion than they did previously. Also, EPA does not consider whether technological advances have altered the EPA staffing needs. We see this as another concern with respect to staffing.

If you would like to take a minute to respond to that.

Ms. BROWNER. Very quickly. I think you made reference to an increase in FTE's from 1990 to 2001. I hope you can appreciate that the vast majority of that did not happen under this administration; it happened under Mr. Bush. There was a big growth at the end of the Bush administration at EPA.

Senator BOND. But it has continued to go up since then. Others are coming down.

Ms. BROWNER. That is because this President has said repeatedly that one of his priorities is strengthening environmental protection.

It is, in part, a response to the fact that this Congress has given us two new laws to implement, the Safe Drinking Water Act and the Food Quality Protection Act. I am not saying that it has gone down, but I am saying that the rate of growth over the last 10 years, the lion's share of it, has not been under this administration. We are doing more, effectively, with less.

Senator BOND. Thank you, Madam Administrator. Due to the press of the floor action, we now declare the hearing adjourned.

Ms. BROWNER. Thank you.

ADDITIONAL COMMITTEE QUESTIONS

Senator BOND. We will submit further questions for the record. [The following questions were not asked at the hearing, but were submitted to the Agency for response subsequent to the hearing:]

QUESTIONS SUBMITTED BY SENATOR CHRISTOPHER S. BOND

TOTAL MAXIMUM DAILY LOAD (TMDLS): WORK LOAD AND FUNDING REQUIREMENTS

Question. Is it true that one TMDL would need to be approved each workday for the next 15 years by each of the 10 EPA regional offices to complete all of them? If not, what is EPA's estimate, and will EPA be requesting a sufficient increase in funding to accomplish this requirement? What will this cost over the next 5 years?

Answer. Current state Section 303(d) lists would encompass about 40,000 TMDLs. Approving all these TMDLs over the next 15 years would on average translate into one TMDL being approved each workday in each EPA Regional office. This is a significant workload for EPA and is beyond what we are now devoting to the TMDL program. We are encouraging states to realize efficiencies by "bundling" TMDLs for segments on a watershed basis, thus reducing transaction costs associated with administrative processes and providing for more meaningful public involvement. These efficiencies can reduce EPA review and approval costs as well. The Agency analysis of its outyear resource requirement is ongoing.

TMDLS VS. NPDES PERMIT BACKLOG

Question. How will EPA and the states both take on this new requirement, as well as eliminate the large and growing backlog in the NPDES permit program?

Answer. The President's request includes a substantial increase (+\$45 million) explicitly to assist states in the development of TMDLs. This increase, coupled with the required state contributions for this increase, state flexibility to use up to 20 percent of their also increased Section 319 grant, and other available financial assistance would provide sufficient resources to allow states to substantially meet their TMDL obligations in 2001 based on the estimated cost of the new TMDL regulation proposed in August 1999. While earmarked for TMDL development, this increase in grant funding should allow states to reallocate existing base grant funds to their most significant priorities, including addressing their NPDES permit backlog. The President's 2001 request also includes an increase of \$5.3 million for the NPDES program, a portion of which should help to address the permit backlog. The Agency also provides substantial technical support for state TMDL development and NPDES permitting efforts in our operating programs. Resources are also used by the Agency to address the backlog of expired permits in non-delegated states and are instrumental to the development of state water quality standards which serve as the environmental endpoint to which TMDLs are geared.

TMDL EFFECT NPDES BACKLOG

Question. Won't the new TMDL workload limit EPA's ability to eliminate the backlog, an area which has been declared a material weakness and an area where no progress has been made in the last year?

Answer. EPA is committed to reducing the NPDES permit backlog as expeditiously as possible. For 2001, EPA has established a performance goal, under the Government Performance and Results Act, that the backlog of permits for major point sources will decrease from the current level of 28 percent to 10 percent. While striving to meet these targets, EPA and the states must ensure that permits are consistent with the core NPDES regulations, demonstrate that appropriate permit development procedures were followed and documented, and ensure permit condi-

tions are consistent with national policy and guidance. The fiscal year 2001 budget requests an additional \$5 million to address the broad range of NPDES program activities, including work to address the backlog.

TMDLS: ASWIPCA CONCERNS

Question. According to the Association of State and Interstate Water Pollution Control Administrators, “state program budgets and staffing levels are not sufficient to implement the regulation as it now stands and even with significant increases in funding they will not likely grow in order to meet an ambitious waterbody restoration agenda merely because an arcane federal regulation is changed.” How do you respond to that concern?

Answer. We appreciate that states face a significant workload to carry out the TMDL program. We are working with the states to determine overall state needs versus available resources to carry out all their Clean Water Act responsibilities, including TMDLs. States are now completing their accounting of what they are currently spending.

EPA wants states to succeed in implementing the TMDL program and is fully prepared to work with them to assure that all states are able to effectively carry out their responsibilities. EPA has proposed to substantially expand fiscal year 2001 funding for grants to states for water pollution control. The President’s Budget proposes increased funding of \$45 million for grants to states to identify and address the remaining polluted waters around the country. This increase, coupled with the required state contributions for this increase, state flexibility to use up to 20 percent of their also increased Section 319 grant, and other financial assistance would provide sufficient resources to allow states to substantially meet their TMDL obligations in 2001 based on the estimated cost of the new TMDL regulation proposed in August 1999.

TMDLS: NONPOINT SOURCE DATA

Question. GAO testified recently that only 3 states have a majority of the data they need to develop TMDLs for nonpoint sources. How will states get the information they need to develop TMDLs for Nonpoint sources?

Answer. EPA recognizes that state ambient monitoring activities have not always kept pace with growing data needs, including those for the TMDL program. We have requested a substantial increase in Section 106 funds in fiscal year 2001 [+ \$45 million] specifically for states to help improve their Section 303(d) lists and TMDL development. Also, with our requested \$250 million for Section 319 grants and our continued 319 grant policy allowing states to use up to 20 percent of their 319 funds for nonpoint source (NPS) program development activities including TMDLs, States will have the ability to use up to \$50 million of these funds to develop NPS TMDLs including necessary data collection.

We believe States can take needed actions based on the data they have collected. The proposal does not change what is already required in the existing TMDL regulation; namely, that listing of waterbodies and establishment of TMDLs be based on all readily available existing information. In addition, some widespread kinds of water quality impairments can be identified without sophisticated measurements, such as nutrient over-enrichment and sedimentation. The later and more complex steps of quantifying the extent to which these pollutants exceed the assimilative capacity of a listed water and apportioning load reductions needs to occur when a TMDL is developed—which under our proposal may be as long as 15 years after listing allowing sufficient time to obtain any necessary additional data.

NEPPS PROGRAM

Question. The TMDL proposal raises serious concerns about EPA’s commitment to working in partnership with the states. Concerns about the State-EPA relationship is reinforced in a recent independent analysis of the National Environmental Performance Partnership or NEPPS program. The analysis by Ross and Associates, a well-known and widely respected consulting firm, found that “progress to date falls substantially short of the overall promise and potential of NEPPS to improve the state/EPA partnership and enhance the achievement of environmental results.” They found continued disagreement about the role of EPA in enforcement and compliance, the level of necessary oversight, the types of data states should report to maintain accountability, and the amount of work sharing that should occur. EPA and the States signed the NEPPS partnership agreement in 1995, yet five years later major barriers continue to exist. Why?

Answer. With respect to your comment on the TMDL proposal, EPA and the states are close partners, as well as co-regulators, who ensure water quality stand-

ards are maintained throughout the country. EPA values its partnership with states and spends much time to foster it. For example, EPA has committed many hours and resources to working with the states on the TMDL proposal. In addition to numerous one-on-one discussions, EPA and states have had lengthy discussions of TMDLs at every meeting of both the Association of State and Interstate Water Pollution Control Administrators (ASIWPCA) and the Environmental Commissioners of the States (ECOS) for the past few years, both to help craft the proposed rule, and to discuss changes needed for the final rule. EPA also held a special two-day co-regulators TMDLs Forum with the states in December to discuss the proposed rule and the states' views on how it should be changed, and another one-day forum in March. While the 50 states have varied perspectives about, and resources to support, TMDLs, EPA has taken care to discuss each concern and is crafting the final rule to ensure it provides states the flexibility needed to implement the Rule to meet their particular conditions and ensure attainment of water quality. At the ECOS Spring meeting this past April, several State Commissioners were highly complimentary of EPA's partnership work with the states on TMDLs. We also note that EPA has been successful in acquiring additional resources for states to support their TMDL work: an additional \$5 million in fiscal year 1998–2000, and a Presidential request of an additional \$45 Million in fiscal year 2001.

With respect to your question on barriers to NEPPS, we are familiar with Ross and Associates' summary of NEPPS evaluations. In their summary, Ross and Associates conclude that both state and EPA staff believe that NEPPS has not reached its full potential, given underlying problems with NEPPS implementation. We agree with their conclusion, and continue to work closely with state agencies and ECOS to resolve those underlying problems. We would point out, however, that the quote you have cited does not reflect all of Ross and Associates' conclusions about NEPPS. Ross and Associates also concluded that:

“The majority of those interviewed for these reports supported the philosophy and objectives of NEPPS. All the reports found that participants in the NEPPS process believed that it had been beneficial and had improved the state-EPA relationship. In particular, the evaluations identified improved communications between EPA and the states, as well as greater senior management attention to program priorities and issues, as frequently cited NEPPS benefits.”

In addition, within the past month, both EPA and ECOS have reaffirmed their commitment to the principles of NEPPS. These reaffirmations signify the intention of EPA and states to build on the progress that NEPPS has fostered over the past five years. EPA has planned several activities for the next several months aimed at improving NEPPS. EPA's goal for NEPPS for the remainder of fiscal year 2000 and beyond is to build upon earlier successes by focusing on four objectives. These objectives are:

- continued improvement of Performance Partnership Agreements between regions and states;
- increasing use of Performance Partnership Grants to support NEPPS;
- reducing reporting burden on states; and
- greater use of results measures to manage programs.

By pursuing these objectives, EPA and the states will develop the institutional capacity for NEPPS that is necessary for further progress in performance partnerships. EPA and ECOS already have taken steps toward these objectives. In April 1999, the ECOS membership voted in favor of the fiscal year 2000 Core Performance Measures (CPMs). These latest CPMs, designed by joint EPA-state committees, include more results measures and fewer activity measures than ever before. EPA has planned further joint activities, such as training of EPA staff on NEPPS principles, that also will help us build the institutional capacity for NEPPS.

EPA RELATIONSHIP WITH STATES: ACHIEVEMENTS AND IMPROVEMENTS

Question. What specific examples can you cite of achievements and improvements vis-a-vis the state-EPA relationship in the five years?

Answer. In addition to working jointly with state agencies and the Environmental Council of the States (ECOS) on the National Environmental Performance Partnership System (NEPPS), EPA has several ongoing joint ventures with state agencies that demonstrate achievements and improvements in the state-EPA relationship. In 1998, EPA and ECOS created the State-EPA Information Management Workgroup. This workgroup developed a set of operating principles which now govern our data and information management activities. Recently, the Information Management Workgroup developed an agreement and charter for a Data Standards Council. Recently adopted by ECOS membership, the Data Standards Council is tasked to de-

velop data standards that will ensure that EPA and state environmental programs can share data electronically. EPA's Office of Enforcement and Compliance Assurance established a State-EPA Enforcement and Compliance Forum to involve the states in establishing priorities and to examine the effectiveness of new directions in these programs. States also participated on FACAs to advise the Agency on how to implement Title VI of the Civil Rights Act, and how to improve the TMDL program.

The Office of Air and Radiation provides an in-depth example of EPA's efforts to strengthen partnerships with the states. Highlights over the last year include the following:

- In September 1999, a workshop was held in Chicago on strategic directions for the National Air Program over the next 10 years. The joint planning session was attended by 27 senior managers from agencies charged with air quality management, including representatives from ECOS, State and Territorial Air Pollution Program Administrators (STAPPA), Association of Local Air Pollution Control Officials (ALAPCO), the Executive Committee of the National Tribal Environmental Council (NTEC) and EPA. The workshop's focus was on developing a collective national, strategic approach to the challenges facing air quality managers at all levels of government over the next 10 years. This collective agreement on the air program's vision and goals reached at the workshop has been used to inform revisions made to EPA's Strategic Plan to be published in the Fall of 2000. A document entitled "National Air Quality Program: Joint Statement on Vision and Goals" is in progress and will be published in the near future. The Chicago meeting and resulting Joint Statement are the first milestones in what is intended to be an ongoing strategic dialogue among the Nation's air quality management partners.

- In February 2000, the Office of Air and Radiation convened its first National State and Local Air Roundtable in Florida. The purpose of this forum is to bring together leaders in state and local air program administration three to four times per year to assess how we are working together to achieve air quality goals and to discuss issues of mutual concern.

Objectives of the Roundtable include: (1) creating a sounding board for early identification of and feedback on important issues; (2) promote early engagement of state and local air administrators as policies and programs develop and evolve; (3) encourage creative, collective problem-solving; and (4) enhance trust among Federal, state, and local partners. The next meeting is scheduled for June 2000.

FINANCIAL AUDIT: IG OPINION

Question. Why did the IG not give EPA's 1999 financial statements a clean opinion, and where are you in tracking down the funds which could not be accounted for?

Answer. Toward the end of the audit, the IG questioned amounts in two of our financial statements that could not be resolved and audited before the statutory due date of March 1. The issues in question did not relate to a loss or misappropriation of funds, but rather to the sources or composition of aggregated amounts. One of the questioned amounts was reflected in a footnote to our Statement of Changes in Net Position and the other in our Statement of Financing. KPMG, the accounting firm that assisted us in preparing our 1999 financial statements, has developed documentation to respond to concerns raised by the OIG on the Statement of Net Position. We also engaged a general ledger expert from the Treasury's Financial Management Service who confirmed our analysis of the amount questioned in our Statement of Financing.

FINANCIAL AUDIT: TIMELINE FOR IG RECOMMENDATIONS

Question. The Inspector General made a number of recommendations last year to improve financial systems at EPA. None of the recommendations have been implemented, the IG told my staff. Why, and what is the time for doing so?

Answer. We have taken important steps to address financial systems concerns raised by the IG. For example, we made significant improvements in the security plans for our major systems, as recommended by the IG; increased resources devoted to security; tested and updated disaster recovery plans for our agency-level financial system; reviewed, updated and re-certified user access to financial systems; improved coordination on security issues between various offices in EPA, including the offices that own systems with financial information, the new Office of Environmental Information, and others; and upgraded security awareness training for our system users.

We are now in the process of implementing an on-going risk assessment program based on the GAO model. We engaged the National Security Agency to assess our overall financial system security controls for compliance with Agency and federal security policy and to make specific recommendations for strengthening our controls. Almost concurrently with the completion of the NSA review, the General Accounting Office conducted a review of the Agency's computer security infrastructure and made constructive suggestions. We then had a follow-up meeting with GAO to discuss implementation of their risk assessment model for the Agency financial systems.

INTEGRATED FINANCIAL MANAGEMENT SYSTEM (IFMS) REPLACEMENT

Question. The I.G. indicates that EPA's Integrated Financial Management System is an outdated and inefficient system. The CFO had identified IFMS in its budget in previous years, but replacement has been put off for other operational priorities. They further indicated that EPA's financial systems costs were 38 percent more than other federal systems and 9 percent higher than the private sector. Why hasn't replacing IFMS been a priority, and what are the plans and timeline for replacement?

Answer. We agree that IFMS is an old system and it remains a priority for the Agency to begin looking at alternatives for modernizing or replacement. However, we delayed our replacement efforts in fiscal year 2000 until fiscal year 2001 to ensure we adequately address other key system challenges such as security, and successful resolution of the Y2K issue. We also took into consideration that there were new commercial off-the-shelf federal systems currently being introduced and tested by the Joint Financial Management Improvement Program. We thought our business case decisions would be better informed waiting for the results of the new system tests. And while IFMS is an old system, it currently performs our core functions in a reliable manner because of our continuous upgrades.

In addition, the financial systems cost figures cited by the IG should also be put in proper context. The figures were taken from a benchmarking study initiated by EPA Office of the Chief Financial Office through the governmentwide CFO Council. The study compared our financial processes to the processes of other government agencies and large corporations. The figures cited by the IG show only part of the story. In fact, EPA ranked significantly higher in most measures of the efficiency of financial operations and that our overall financial management costs are well in line with the average.

PEER REVIEW

Question. For quite some time there have been concerns about the adequacy of EPA peer review procedures, leading to potential questions about the reliability of EPA science. In 1997, GAO reported that implementation of EPA's peer review policy was uneven across the agency. In response, EPA put out some guidance to clarify the peer review requirements. But a September 1999 IG report identified problems where in some cases peer review leaders did not effectively attempt to determine whether conditions existed which would compromise an independent review. Why hasn't EPA made a higher priority of getting it right with its peer review procedures? Are you confident the problems identified by GAO and the IG have been corrected?

Answer. Consistent Agency-wide application of peer review policy and procedures has been an EPA priority for several years. Pursuant to the Administrator's June 7, 1994, Peer Review Policy statement, EPA in 1998 issued its Peer Review Handbook. The Handbook outlines peer review principles and procedures including issues raised in the 1997 GAO Report. GAO cites the Handbook in its 1999 report on peer review at federal agencies. The 1999 IG report notes that the Handbook "provides a format that offers all users a focused reference on peer review issues." The IG also notes that EPA's Program offices and Regions provided Handbook training to staff and managers in 1998.

The concerns in the IG's 1999 report focused on potential conflict-of-interests concerns of peer reviewer candidates, although the IG found no case of actual conflict of interest. The IG recommended that EPA's Office of Research and Development provide supplemental guidance directing contractors and peer review leaders to inquire whether a potential reviewer has or had a financial relationship with the Agency. The IG agreed with EPA that providing supplemental guidance, rather than revising its 1998 Peer Review Handbook, would be an effective way to address the IG's concerns.

EPA will currently drafting the supplemental guidance to address this issue, as well as other secondary issues. We are confident that these additional actions address GAO and the IG's concerns.

MEXICO BORDER: OBLIGATIONS AND PROJECTED END OF YEAR BALANCE

Question. How much of the funds appropriated for border infrastructure projects have been obligated, and what do you anticipate the year-end balance to be?

Answer. Of the \$475 million appropriated for border infrastructure projects since 1995, \$359.7 million has been obligated. EPA expects to obligate all of the current unobligated balance of \$115.3 million by year-end. Except for \$54 million awaiting Congressional action on the San Diego/Tijuana international wastewater treatment project spending cap, processing of grants/amendments to obligate all except \$2.2 million of this unobligated balance is under way.

MEXICO BORDER: FUNDED PROJECTS AND NEEDS

Question. Please provide a break-out of all projects funded under this program to date, and the remaining needs that have been identified (including funding requirements).

Answer. Since 1995, the border projects funded with EPA assistance to date, either through direct grants or through its Border Environment Infrastructure Fund (BEIF) grant to the North American Development Bank (NADBank), are shown in the attached table. In addition, the NADBank has estimated the project costs for work to be certified between June 2000 and the end of Year 2002 in which EPA is likely to participate. Those project costs total \$466.5 million of which the EPA share is anticipated to be \$233.8 million.

MEXICO BORDER: MEXICAN CONTRIBUTION

Question. What has been the Mexican contribution to projects already funded, and what is anticipated for future projects?

Answer. The Mexican government participates in those projects in Mexico listed in the attached table that are funded through the Border Environment Cooperation Commission (BECC) certification/NADBank funding system. That group, as shown in the attached chart, totals \$369.3 million. The Mexican share as reported by NADBank is approximately \$109.3 million, the EPA share \$106.8 million and the balance locally funded. EPA anticipates that it will continue its agreement to a one-for-one match of Mexico's federal and state grant shares, on a cumulative basis, for projects in which the U.S. has an interest. The grant amounts are arrived at after the local debt capacity of a community is reviewed by the NADBank.

MEXICO BORDER: FUNDED PROJECTS AND RESULTS

Question. What is the status of projects to date, and what environmental results have been produced?

Answer. Some of these projects are in operation, some under construction and some in the final design/procurement for construction stage. Any project that has been certified by the BECC has had its environmental review and financial package completed, so that preconstruction time has been minimized. All are for either municipal wastewater collection and treatment or public water supply and distribution, some are for both. Wastewater and drinking water infrastructure investments in the Mexico Border area will yield environmental and public health results. For example, operation of the international wastewater treatment plant (ITWP) in San Diego, that manages sewage from Tijuana, significantly reduced beach closures in Southern California last summer. Several other plants are about to come on-line. By the end of 2001, 600,000 more people (cumulative total of 11 million people) in the Mexico Border area will be protected from health risks because of adequate drinking water and wastewater sanitation systems funded through the Border Environmental Infrastructure Fund.

MEXICO BORDER: ADDRESSING GREATEST THREATS

Question. What assurances are there that EPA funds for border activities are directed at the greatest environmental threats?

Answer. EPA funds for water and wastewater infrastructure on the border are directed to those projects that have been developed to the level at which they are ready for final design and construction. All projects for EPA participation are screened under an EPA policy applying funding eligibility criteria, which includes an affordability index used to determine whether a community may be unable to provide the needed improvements without assistance. Finally, the BECC certifi-

cation and process is the mechanism to assure that, after public participation and input, only high priority projects relating to public health and the environment are brought online.

MEXICO BORDER: NADBANK

Question. It appears that EPA grants have provided the major source of assistance provided by NADBank. What efforts are underway to make the NADBank work independently of federal grants? What are the major impediments to a more successful NADBank and Border Projects?

Answer. The concept of the Border Environmental Infrastructure Fund (BEIF) grant is to make the project affordable for the community. By providing grant assistance as part of multi-agency funding package, a community is able to implement revenue sources, including user rates and reserves, that results in financial sustainability of its water and sewer services. Historically, EPA grant fund participation in a project using the BEIF has averaged about one-third of the costs for projects that meet out funding criteria. No commitment of EPA grant funds from the BEIF are made until the NADBank identifies funding commitments from all other sources and notifies EPA of the amount needed to complete the multi-agency funding package. EPA expects the rate of its participation to increase as additional projects in poorer communities as well as larger projects come to the forefront. Without EPA grant funds, most of these projects would simply not be completed.

DRINKING WATER SRF: STATE MATCH

Question. Have all states established and provided the requisite matching funds for DWSRFs? If not, which states have not?

Answer. All but two states, Rhode Island and Louisiana, have provided the required 20 percent match for Drinking Water State Revolving Fund (DWSRF) capitalization grant funds. Rhode Island, which had difficulty obtaining the match for its fiscal year 1997 and 1998 grants, is now having difficulty obtaining the match required for its fiscal year 1999 grant of \$7.5 million. The Regional Administrator for EPA's Region I office has communicated her concern to the Governor of Rhode Island that the State could lose the opportunity to fund important drinking water projects should it fail to provide the required match. Louisiana is having difficulty providing the match for its fiscal year 1998 and 1999 grants. Louisiana also does not have matching funds committed for its fiscal year 1999 grants that, to date, has not been awarded.

DRINKING WATER SRF: UNOBLIGATED BALANCE BY STATE

Question. What is the unobligated balance in this program, by state?

Answer. EPA obligates funds to the states through the award of capitalization grant funds. States have two years to apply for and receive a grant award from a specific annual appropriation. As of April 13, 2000, EPA had awarded \$2.4 billion of the \$3.6 billion appropriated to the program in fiscal years 1997, 1998, 1999 and 2000. Attached is a state by state breakout of this unobligated balance.

CLIMATE CHANGE TECHNOLOGY INITIATIVE

Question. How much of your appropriation for fiscal year 2000 and your request for fiscal year 2001 is targeted to publicizing the benefits of energy efficiency and how much is targeted to recruiting new participants?

Answer. The majority of EPA's fiscal year 2000 funding is used to deliver technical information to program participants so that organizations and consumers can choose energy efficient solutions that save money while reducing air pollution. EPA's appropriations are strategically focused on removing market barriers that impede organizations, businesses, governments and consumers from investing in cost-effective energy-efficient technology. EPA's appropriations are used to develop essential decision-making information and tools such as previously non-existent information on product performance, strategic plans for whole building upgrades, product specifications for energy efficient equipment, building performance assessment tools, and financial assessment tools. Less than 5 percent of our fiscal year 2000 funding is targeted to education and outreach on the benefits of energy efficiency. Also, less than 5 percent of our fiscal year 2000 funding is targeted to recruiting new participants. Similar portions of our fiscal year 2001 request would be targeted to these activities.

CCTI: EMISSION REDUCTIONS

Question. The budget justification states that in fiscal year 2000 your programs will achieve reductions of 58 million metric tons from projected levels. How do you know that participants are reporting reductions from their projected levels, rather than reductions from historic levels? Are participants in these programs required to report their net reductions in energy use and greenhouse gas emissions, as opposed to their gross reductions? To what extent do you verify reports independently by participating companies?

Answer. A variety of information and a number of factors are taken into account to determine the emissions reductions associated with EPA's programs. Taking Energy Star products as an example, emissions reductions are estimated directly from product sales data that are readily available for a range of products. Combined with regional emissions factors and operational data, EPA can estimate the savings and emissions reductions from the increased presence of more efficient equipment in our homes and buildings. These are net savings and emissions reductions that would not exist without the program. A number of the programs get information directly from reports from program participants. Estimates of net savings and emissions reductions are derived from these partner reports while taking account of other important factors such as free ridership (i.e., some organizations would have taken some action without the program) and free drivership (some organizations have benefitted from the information made available by the program without joining as a participant and reporting results). EPA expends considerable effort checking the reports that participants provide to ensure accuracy.

HIGH PRODUCTION VOLUME CHEMICAL TESTING

Question. This voluntary testing program will provide enormous amounts of information about chemical hazards. What process will EPA use and what money has the Agency set aside for using that information to evaluate the risks for those chemicals?

Answer. The screening level human health and environmental effects information being developed by industry sponsors under the High Production Volume (HPV) Challenge Program will be provided to the Agency in what is called "robust summary format," a format developed for the HPV Challenge Program and accepted for international data sharing by the Organization for Economic Cooperation and Development (OECD) in its HPV Screening Information Data Set (SIDS) Program. This information will be posted to the Internet for review and assessment by both Agency personnel and outside interested parties.

Once this basic hazard information is available on a chemical, it may be used to provide a platform to begin to address the question, "how safe is this chemical?" EPA has existing risk assessment guidelines to prepare and prioritize chemicals for risk assessment. It must be noted that the hazard information being provided through the HPV Challenge Program is screening level data intended only to support the initial stage of assessing chemical hazards. HPV data would not be sufficient on its own for the preparation of formal risk assessments; additional hazard data (e.g., carcinogenicity; neuro-toxicity; etc.) and exposure data would be needed to conduct risk assessments. The resources requested for of the Chemical Right-to-Know Initiative will be fully encumbered in collecting, managing, and disseminating the limited hazard screening data and will not be used to develop formal risk assessments on any HPV chemicals.

In fiscal year 2000, the Operating Plan for the CRtK Initiative is \$11.1 million, with approximately \$10 million directed at HPV chemicals and \$1.1M supporting the start-up of the program to address chemicals of special concern to children. EPA's fiscal year 2001 President's Budget Request contains a \$12.6 million request for the CRtK-HPV program. During the initial data collection phase of the HPV program, the bulk of these resources must be dedicated to managing and reviewing the incoming data. Public outreach efforts in these early years of the program will include a dialogue with stakeholders to determine how they will use the data in order to identify the most appropriate formats, tools, and vehicles for effective public hazard communication. Public outreach will assume a steadily higher profile as data actually become available and are reviewed, and as additional resources are provided.

HIGH PRODUCTION VOLUME CHEMICAL TESTING: COMMUNICATION

Question. Beyond simply "posting" the numbers and test results on the internet, what steps are you taking and resources are you allocating to ensure that the infor-

mation voluntarily provided by industry will be communicated to the public in a way that means something to them?

Answer. Using established risk assessment guidelines, EPA plans to use the toxicity data to produce plain English chemical information profiles, Chemical Advisory notices, website enhancements, and other information tools as appropriate on individual chemicals of concern. EPA will work with the Consumer Product Safety Commission, the Occupational Safety and Health Administration, and other agencies to distribute this information to workers, consumers, parents, teachers, community leaders, public interest groups, companies, and others. EPA intends to use the information and experience it has gained in other public safety and education projects to create and distribute simple and understandable messages to the public.

In addition, by classifying chemicals as presenting high, medium, or low hazard concerns, the Agency may be able to explain to the public the hazards of a chemical in simple and practical terms. In the future, this could then be combined with exposure information (e.g., chemical use profiles and exposure scenarios relevant to the specifics of individual chemicals) to assess, at a screening level, the potential risks presented by the chemical to people or the environment in various defined circumstances—for example, to workers, to users of consumer products, or to the environment. The hazard of a chemical is generally seen as an “intrinsic” aspect of the chemical, whereas uses and exposures can change and be “situational” depending on the particulars of a given commercial application. For this reason, clear and concise hazard information may be useful outputs of HPV screening to the public.

EPA realigned \$1.3 million of its fiscal year 1999 Enacted Operating Plan to initiate the Chemical Right-to-Know Initiative (CRtK). In fiscal year 2000, the Operating Plan for the CRtK Initiative is \$11.1 million, with approximately \$10 million directed at HPV chemicals and \$1.1 million supporting the start-up of the program to address chemicals of special concern to children. EPA’s fiscal year 2001 President’s Budget Request contains a \$12.6 million request for the CRtK–HPV program. During the initial data collection phase of the HPV program, the bulk of these resources must be dedicated to managing and reviewing the incoming data. Public outreach efforts will include a dialogue with stakeholders to determine how they will use the data in order to identify the most appropriate formats, tools, and vehicles for effective public hazard communication.

CHLOROFORM RULE: AGENCY RATIONALE

Question. In December 1998, EPA announced its decision to promulgate a national primary standard of zero for chloroform in drinking water. EPA decided to set a zero standard despite scientific evidence that the Agency’s existing “linear, no threshold” carcinogen policy was scientifically unjustified for chloroform. That policy, a “conservative default assumption,” assumes that any exposure to carcinogens poses some cancer risk, in contrast with the national policy for non-carcinogens which recognizes that below a specified level there is no risk of adverse effects. The Agency’s own scientists, along with leaders of the Society of Toxicology and many others, agreed that extensive scientific data on the “mode of action” by which chloroform causes cancer supported departure from the conservative default assumption and promulgation of a less-stringent standard of 300 parts per billion. Yet EPA chose to ignore the weight of the scientific evidence and, for seeming political reasons, to stick with its old default assumptions. That EPA decision raises significant concerns that no matter how much new scientific evidence is generated the Agency will ignore that science if it is inconsistent with its agenda. If so, why spend millions of dollars generating new data? Can you explain EPA’s rationale for this particular decision?

Answer. As part of a large-scale regulation promulgated in December 1998 under the Safe Drinking Water Act, EPA published a health-based goal for chloroform (the maximum contaminant level goal or MCLG) of zero. EPA provided new data and analyses concerning chloroform for public review and comment, including a different mode of action approach for estimating the cancer risk, but did not reach a conclusion on how to use that new information in establishing the final MCLG, pending further review by the Science Advisory Board (SAB). The zero MCLG was challenged by the Chlorine Chemistry Council and others in the Court of Appeals for the District of Columbia; the maximum contaminant level (MCL) for trihalomethanes, which includes chloroform, was not challenged.

After review of the SAB report, EPA concluded that it should withdraw the MCLG for chloroform and engage in further rulemaking proceedings on the MCLGs for the trihalomethanes and take additional regulatory actions consistent with all information available to the Agency, including the SAB report and other best available peer

reviewed science. The Court recently vacated the MCLG for chloroform and has indicated it will ask the parties to address further remedies.

IRIS DATABASE: ACCURACY OF DATA

Question. Many Federal and state environmental programs rely on EPA's IRIS (Integrated Risk Information System) database for making decisions. Concerns have been raised as to the currency and accuracy of the information in the database. What is the Agency doing to ensure that the IRIS database, on which many federal and state programs rely, contains the best available scientific information about the substances contained in the database?

Answer. Since 1995, EPA has taken several steps to ensure that the best available scientific information is included in IRIS assessments. On an annual basis, EPA announces the next set of chemicals to be considered in the IRIS program, either to update an older assessment, or to be added to the database. This announcement includes a request for all relevant information to be submitted to EPA for consideration in the assessments. In addition, all IRIS assessments go through an external peer review, which can include a public meeting permitting more notice of relevant information. All scientific questions and responses generated through the external reviews are available to the general public.

In addition, in its fiscal year 2000 Appropriations Committee Report, Congress directed EPA to "consult with the Science Advisory Board (SAB) on the design of a study that will (a) examine a representative sample of IRIS health assessments completed before the IRIS Pilot Project, as well as a representative sample of assessments completed under the project and (b) assess the extent to which these assessments document the range of uncertainty and variability of the data. The results of that study will be reviewed by the SAB and a copy of the study and the SAB's report on the study sent to the Congress within one year of enactment of this Act." EPA consulted with the SAB Nov. 29, 1999 and again on March 7, 2000 on an approach to this study. The study is now underway. Though not specifically addressing currency or accuracy, the study will determine whether IRIS assessments developed using a new process adequately presented and discussed the range of uncertainty and variability in the data used to develop the assessments.

IRIS DATABASE: AGENCY RESOURCES

Question. How much money is the agency allocating to improving the IRIS database?

Answer. For the fiscal year 2001 President's Budget Request, EPA requested a total of \$1.7 million to support the Integrated Risk Information System (IRIS) database. Some key areas of effort in 2001 will include producing, updating, and maintaining health assessments on IRIS, ensuring appropriate external peer review of IRIS summaries and support documents, facilitating Agency consensus and resolving issues in a timely manner, and maintaining a widely-accessible Internet version of IRIS, available at the local level to support community-based environmental protection.

Question. How many staff resources are allocated to this?

Answer. For the fiscal year 2001 President's Budget Request, EPA requested a total of 7.8 work years to support the IRIS database.

PROJECT XL: PROGRESS IN NEGOTIATING AGREEMENTS

Question. What is the cause of the slow progress in negotiating agreements with applicants in the XL program?

Answer. When Project XL was launched in 1995, there were no models to draw upon. The first few XL projects posed many challenges. EPA and others had concerns about how to test new approaches and yet still maintain the same level of protection that the current regulatory system provides. Predicated on experimentation, Project XL has evolved through continuous improvement, first in policy and procedures, and second in program structure and process.

In 1997, EPA announced new XL policy guidance. This Federal Register notice invited stakeholders to be co-sponsors of proposals and described changes made to streamline and improve the negotiation process, highlighting for the first time preproposal discussions as important to the building of good ideas, proposals, and relationships. Most importantly, it clarified three project selection criteria: superior environmental performance, regulatory flexibility, and stakeholder involvement. This guidance also set the stage for EPA's next task: reducing transaction costs.

Specific Concerns Addressed

In 1998, EPA—with industry representatives, environmental organizations, states, and other interest groups—worked together to streamline the proposal development and negotiation process by reducing transaction costs and improving stakeholder involvement. Through the reengineering process and ongoing experience, EPA continues to learn about how to run an innovative program like Project XL (e.g., we can now be more specific about what a quality proposal should contain, how decisions should be made, and what a reasonable process should entail).

The Agency also developed several tools to help project sponsors, EPA staff, and citizens create successful projects. For example, the Best Practices Guide for Proposal Development, written specifically for project sponsors, gives greater clarity in determining what makes a good proposal. The Stakeholder Involvement Guide shows project sponsors and stakeholders how to work effectively on XL projects. Technical assistance is now available to stakeholder groups participating in project negotiations. Finally, EPA contracts with professional facilitators to get stakeholder discussions and internal EPA teams off on the right track.

Results of the new process

We now expect this new process to yield agreements for most projects in six months to a year, compared to 24 months or longer under the old process. For example, the Atlantic Steel Redevelopment project, in Atlanta, Georgia, produced a signed project agreement for phase one, eight months after initial pre-proposal discussions. The Exxon Superfund project in Fairmont, West Virginia, also produced a signed agreement eight months after an initial pre-proposal was submitted.

EPA has signed 21 final XL agreements and is negotiating an additional 29 projects that are expected to be signed and implemented in fiscal year 2000.

PROJECT XL: EXAMPLES

Question. One of the key elements of the XL program is testing ideas for innovative approaches to environmental management. Please provide examples of where EPA has integrated into its normal operations an innovative approach that was found to be successful in an XL project.

Answer. In fiscal year 1999, EPA reported 30 innovations resulting from XL projects that have the potential to improve traditional regulatory programs. Overall, EPA and its partners have found that XL projects produce greater reductions in environmental releases than would have occurred under conventional regulatory approaches. At the same time, XL project participants reduce environmental management costs and improve their competitiveness as a result of expedited or consolidated permitting, reduced record-keeping and reporting requirements, and greater operational flexibility afforded by facility-wide emission caps.

Eight innovations are fully implemented, and the remaining innovations are in subsequent stages of testing or development prior to being incorporated into core Agency functions. The Agency is developing approaches to incorporate the remaining innovations into mainstream EPA activities. However, the time frames for executing these changes are tied to legislative requirements for rule-making and regulatory guidance that requires comprehensive analysis, and adequate opportunities for public review and comment. Likewise, some innovations are tied to experiments that are in the early stages of development and have not yet produced verifiable and replicable results.

Below are the eight XL innovations (5 regulatory and 3 institutional changes) that have been incorporated into a permanent regulatory change or adopted into Agency operations.

*Regulations:**Voluntary effluent discharge limitations*

Pulp and Paper Cluster Rule.—Voluntary effluent discharge limitations; participation in Voluntary Incentives Program allows additional time for MACT standards compliance.

The Pulp and Paper Cluster Rule was promulgated in April 1998. Compliance options available in the rule were part of the XL project for Weyerhaeuser Flint River Plant in Oglethorpe, Georgia. Specifically, the Water Effluent Limitations Guidelines and Standards portion of the rule requires more stringent reductions for toxic pollutants in the wastewater discharges during the bleaching process and in the final discharge from the mill. As part of its XL commitment and its Minimum Impact Manufacturing strategy underway at the plant, Weyerhaeuser has conducted a feasibility study of plant-wide effluent reductions through innovative technologies. The Effluent Guidelines Voluntary Advanced Technology Incentives Program, a

compliance option incorporated into the Cluster Rule, encourages bleach plant operators to install advanced technologies or make process changes that will reduce effluent discharges beyond the rule's limits. Weyerhaeuser's Flint River facility is participating in this program, but expects to exceed the requirements for this option. If a pulp and paper mill enrolls in this program and can meet the strict discharge limits through advanced technologies, the facility receives reduced monitoring and inspection opportunities, and additional time to comply with the air (e.g., NESHAP) portion of the Rule.

Condensate vent stream reductions

Pulp and Paper Cluster Rule.—Testing alternative compliance approaches for HAPs; developing a HAP emissions balance scheme for process vent controls.

Voluntarily reducing hazardous air emissions from process water streams is another compliance option for kraft-pulping operations that was incorporated under the Pulp and Paper Cluster Rule. The Clean Condensate Alternative Program focuses on reducing the hazardous air pollutant (HAP) emissions throughout the pulp mill by reducing the HAP mass in process water streams. The Weyerhaeuser Flint River Facility expects to exceed the requirements to comply with this option since they are going through a mill modernization program that will reduce condensate vent streams throughout the facility. The Flint River facility's willingness to redesign the mill with this option in mind was instrumental in creating this opportunity within the Cluster Rule requirements. By lowering the HAP mass loading in waste water streams, fewer HAPs will be volatilized to the atmosphere. Many of the pollutants that are ultimately emitted from production vents originate in the mill condensates that are recycled throughout the mill. If a mill can reduce these condensates instead of controlling individual specified vents, they achieve greater air emission reductions and reduce their compliance costs.

Modification of the NESHAP for Magnetic Tape Manufacturing Operations

The revised Magnetic Tape rule was effective in June 1999 and is expected to increase compliance with this regulation, enhance flexibility for affected entities and save companies money in compliance costs.

The 3M (Hutchinson, Minnesota) XL proposal did not reach final agreement. However, one of the flexibilities 3M had requested was used in revising the 1994 Magnetic Tape Manufacturing operations maximum achievable control technology (MACT) standard. Since the 1994 rule was issued, 3M provided EPA with data showing that HAP emissions from uncontrolled solvent storage tanks are very close (by volume) to HAP emissions from uncontrolled containers of mix preparation equipment. By balancing emissions from these uncontrolled sources against controlled sources in the process line, 3M was able to suggest alternative control options. EPA accepted 3M and other industrial data, and proceeded to amend the 1994 rule providing owners/operators with 25 options for "undercontrolling" tanks and/or mix equipment vessels based on the level of control they achieve on their coating lines. 3M developed this data in conjunction with a regulatory flexibility proposal submitted to Project XL.

Using pollution prevention technologies

The Pulp and Paper Cluster Rule also provides incentives for using pollution prevention technologies in kraft pulping operations. The MACT standards provide for an extension of up to eight years from promulgation for compliance if pollution prevention approaches that otherwise would not have been used are used.

Pulp and paper facilities will have the flexibility to demonstrate HAP emission reductions using innovative pollution prevention approaches in lieu of, or in addition to, end of pipe HAP controls. This extension is designed to encourage mills to install pollution prevention technology that will reduce HAP emissions from the pulping process, as well as both air and water pollutant discharges from the bleaching process. The Weyerhaeuser XL project will demonstrate pollution prevention approaches to reducing HAP emissions such as: reducing process condensate wash water HAP content; reducing bleach plant HAP emissions, and reducing oxygen delignification HAP emissions; and reducing cylinder mould decker and filtrate tank HAP emissions.

Limited Preapproval for Air Permits

The recent Pharmaceutical MACT standard regulations promulgated in September 1998 have incorporated lessons learned from the Merck final project agreement, allowing the limited preapproval of certain types of production changes without requiring permit revision for each modification.

Certain industries change their product lines and manufacturing processes frequently. Usually, such changes require a time-consuming preconstruction permit re-

view and approval process prior to implementation. By focusing on the total emissions of its facility, the Merck XL project is testing the use flexible air emission strategies under a facility-wide emission cap to allow modifications that would no longer require prior approval under either Federal or state NSR regulations. The Agency is formally considering further expanding this use of preapproval and “cap permits” as part of a wider application of these concepts in forthcoming NSR regulatory standards.

EPA Institutional Change:

Compliance Screening for XL's Voluntary Project Sponsors

EPA issued the “Guidance for Compliance Screening for Voluntary Programs,” the Agency’s comprehensive screening framework, applicable to all voluntary partnership programs.

EPA actively encourages a wide variety of public and private entities to participate in XL, but all sponsors must have a solid history of compliance with EPA regulations. While past record of compliance is not always an indicator of future performance, a potential sponsor’s overall compliance history is relevant to ensure the experimental XL approach will not pose undue risks to human health and the environment. Initially, XL project eligibility was determined through an EPA Office of Enforcement and Compliance (OECA) enforcement screen. As the XL process matured, compliance screening became more frequent and time-intensive. The screening process was also not well defined. To standardize compliance screening, OECA developed the Guidance for Compliance Screening for Project XL. This guidance specifies the scope, criteria and process for conducting enforcement screens, and indicates that compliance screens will be updated prior to high-visibility public events. XL has laid the groundwork for testing and establishing guidance for an increasing number of EPA voluntary programs requiring compliance screening. In addition to the XL screening guidelines, the Guidance for Compliance Screening for Voluntary Programs (August 1998) provides the comprehensive screening framework for all of the Agency’s voluntary partnership programs.

Senior Management Support and Involvement through the Reinvention Action Council

EPA established the Reinvention Action Council (RAC) to further senior management involvement in advancing innovative efforts. The RAC’s success in resolving problems in Project XL led to expanded responsibilities for the Council.

For projects to succeed and system change to occur, there is a need for active support from senior Agency management. For XL, this support includes championing projects, empowering staff, giving clear direction to teams and providing resources. In 1996, EPA established the RAC to assist in reaching the Agency’s goal of 50 XL projects. The RAC consists of senior Agency managers (Deputy Assistant Administrators and Deputy Regional Administrators) from each of the Headquarters and Regional offices. Originally, the RAC served as a resource to XL teams to resolve disagreements or difficult technical and policy issues. Since then, RAC members have committed to working directly with XL Coordinators within their offices to support quick decision-making and ensure that XL teams have suitable resources. Involving senior managers has proven to be effective in identifying and resolving problems for XL. In 1997, the Administrator expanded the RAC’s responsibilities to support the Agency’s overall commitment to reinventing environmental protection. To date, the RAC has taken a hard look at reinvention efforts throughout the Agency and has addressed a broad array of reinvention issues including incentives, permitting and environmental management systems, and continues to set new reinvention priorities.

Developing Capabilities to Conduct Experiments with State and Tribal Governments

The ECOS–EPA Innovations agreement, developed out of the XL experience, defines seven principles to guide innovations and a process that clarifies how EPA and the states will put innovations to the test. The prominent role of states in the XL process, along with the Innovations agreement, has advanced successful Federal-state partnerships in developing and managing innovation strategies for environmental protection.

Federal sharing of environmental responsibilities requires that each XL project have the support of the appropriate state or tribal government. For most projects, state and tribal governments are signatories. State and tribal governments are, and will continue to be, primary partners with EPA in both regulating human health and the environment, and designing innovative approaches. It is incumbent that EPA, states and tribal governments rectify any differences and produce agreements

that satisfy each entity. XL serves as testing ground for such a framework. The promise of more efficient and effective government has led several states to develop their own XL-like legislation to test innovative approaches to state environmental programs. To provide an additional vehicle, EPA and the Environmental Council of the States (ECOS) negotiated The ECOS–EPA Innovations agreement to guide innovations in the future. Project XL continues to influence states as they consider and develop their own programs.

Some Examples of Future Change:

In addition, below are two examples of innovations that EPA plans to incorporate into permanent regulatory changes in 2000.

Clean Air Act Emission Caps

In the near future, The Agency will announce the New Source Review Reform and Clean Air Act revisions. The approaches tested in the following three XL projects have provided fundamental information about the value and structure of flexible air permits that has been incorporated into these rules.

Three XL projects—Intel-Chandler, Weyerhaeuser-Flint River, and Merck-Elkton—are testing different versions of a facility-wide air emissions cap. The benefit of these caps is that they reduce and limit each facility's air emissions and allow them flexibility as to how to control or prevent future emissions to maintain these reduction levels. As long as the facilities operate within the cap limits, it also allows the facilities to make production changes without recurring permit modifications. Intel established its site-specific emissions cap as part of its minor New Source Review (NSR) Permit with Arizona and EPA. Intel is using a Plant Site Emission Limit (PSEL) for criteria pollutants and an Arizona Ambient Air Quality Guideline limit for HAPs to establish their facility caps. Intel has reduced its criteria emissions and hazardous air pollutants (HAPs) by more than 20 percent and 40 percent, respectively, below its earlier actual emissions baseline. Weyerhaeuser has modified its existing air quality permit (with Georgia and EPA) with a dual emissions cap for the two major sources of criteria air emissions at their facility and Merck has created its emissions cap as part of a new Prevention of Significant Deterioration (PSD) permit with Virginia and EPA. These projects are testing and confirming the potential for establishing caps that not only provide for the opportunity to reduce air emissions below allowable levels, but offer the flexibility to facilities to control or prevent emissions from exceeding these levels. These project flexibilities have been studied as part of a wider application of these concepts in forthcoming NSR regulatory standards.

Pretreatment Mass-based Compliance Standard

The mass-based approach used in the Steele County XL project is helping to inform the national pretreatment regulations streamlining process.

National Pretreatment Standards establish limits on pollutants in specific industrial categories, establishing pollutant limitations in different ways for different categories. Current regulations do not allow alternative mass-based limits to be developed when concentration-based limits are required. This can serve as a hurdle for industrial users that are attempting to minimize their water use. Water conservation efforts can increase the concentration of pollutants in a reduced volume of water even if the total mass of pollutants have decreased. Complying with a mass limit that is equivalent to or less than the total pollutant load from a concentration limit would not change and could even reduce total pollutant loading, even though effluent concentration might increase. In a rule proposed in July 1999, EPA seeks to streamline the general pretreatment regulations for existing and new sources of pollution. The proposed rule allows the Steele County (MN) Project XL sponsor facilities in Owatonna and Blooming Prairie the flexibility to use alternative mass-based limits. To enable and facilitate water conservation strategies, the local Control Authority can allow sponsor facilities in Owatonna to use equivalent mass limits in lieu of concentration limits for discharges to the wastewater treatment facility.

ENDOCRINE DISRUPTOR SCREENING PROGRAM: SCHEDULE FOR VALIDATION AND STANDARDIZATION

Question. What is EPA's schedule for completing the validation and standardization of the screens and tests in the proposed Endocrine Disruptor Screening and Program? Will the validation work for both screens and the corresponding tests for human health be completed at the same time? When will the test(s) for human health be validated for use?

Answer. The scientific screens and tests proposed for the Endocrine Disruptor Screening Program vary considerably in terms of their readiness for routine use in

regulatory programs. Because many of the endocrine disruptor screens and tests involve cutting-edge science, few of them have actually undergone the standardization and validation requirements necessary for pesticide and chemical regulation. Many of the tests proposed for the screening program have been used in research, but have never been formally standardized or validated through inter-laboratory comparisons. Standardization and validation is essential to establish the relevance, reliability, and reproducibility of methods. Therefore, EPA will validate all test systems to ensure that the tests are reliable and reproducible before implementing the testing phase of the program.

EPA formed a technical committee called the Endocrine Disruptor Standardization and Validation Task Force to provide the technical advice needed to develop, standardize, and validate the screens and tests proposed for the Endocrine Disruptor Screening Program. EPA is currently reconstituting the Task Force as an advisory committee under the Federal Advisory Committee Act. Although the Task Force's activities have been temporarily suspended, this does not affect the progress of the technical work, which is ongoing. EPA expects the advisory committee to resume its technical advisory functions in late Fall 2000.

Several years will be required to complete standardization and validation of the entire Tier 1 Screening and Tier 2 Testing batteries. However, EPA is moving as quickly as possible and anticipates implementing the screening program in phases, with initial emphasis on the legislatively mandated components of the Tier 1 Screening battery. Several screening tests have already entered the validation process, and we expect all the Tier 1 screens and one of the Tier 2 tests to be validated by 2003. The four remaining ecological tests require substantial development. One will be validated by 2003, two by 2004, and the last by 2005.

The standardization and validation process is being conducted using the general principles developed by the Interagency Coordinating Committee on the Validation of Alternative Methods (ICCVAM), as described in *Validation and Regulatory Acceptance of Toxicological Test Methods* (NIEHS 1997). However, there are also Senator Bond separate international standardization and validation efforts being conducted by the Organization for Economic Cooperation and Development (OECD). As these future tests are developed, EPA will examine their suitability for use and possible replacement of tests currently proposed for use in the screening and testing batteries.

The validation work for screens and tests relevant to human health will be completed by 2003.

ENDOCRINE DISRUPTOR SCREENING PROGRAM: PROCEDURAL RULE

Question. Is the Agency planning to propose a procedural rule for the EDSP?

Answer. Yes, the Agency is planning the development of a procedural rule for the Endocrine Disruptor Screening Program. The procedural rule will be proposed by 2002 and finalized before screening is required in 2003. The procedural rule will be detailed guidance on various aspects of policy for implementing the screening program. Included in this rule will be guidance on:

- the process the agency will use follow in setting priorities and ordering or issuing rules to require testing;
- who should pay for testing and how costs should be divided;
- the justification that must be made for skipping Tier 1 screening;
- the process to be followed to obtain an exemption or waiver from the testing requirements of screening programs; and
- the procedure for submitting data.

NATIONAL AIR TOXICS ASSESSMENTS: PUBLIC INVOLVEMENT

Question. My understanding is that the Agency has an ambitious project underway to develop a national air toxics assessment tool that will allow the Agency to characterize the potential health risks associated with exposure to air toxics. According to EPA's most recent schedule, next month (April 2000) you plan on a public release of a 1996 emissions inventory and modeled air quality results for every county in the country. Then in August 2000, you plan on a public release on the internet of exposure modeling results and estimates of the public's cumulative risk from 33 of the most prevalent air toxics in the country. How have you involved the public in building this tool?

Answer. Our National Air Toxics Assessments (NATA) build off of previous modeling and analysis, the Cumulative Exposure Project (CEP), which estimated ambient concentrations of air toxics for 1990. We worked with various stakeholder groups on the CEP, including state and local governments, environmental groups, and industry representatives. In updating this effort with 1996 data and expanding

our assessments to include exposure modeling, we have continued to involve the public and specific stakeholders. The main mechanism we have used to date for getting public input in the development of the National Air Toxics Screening Assessment (which includes both ambient and exposure modeling) has been through two public meetings in October 1999 in Washington, D.C., and continued updates through electronic mail with the participants of those meetings. At these meetings, we described in detail our plans for a national screening level assessment of air toxics risks and solicited input on example presentation formats for the results of the assessment. Participants, including people from state, city, and county offices, environmental groups, trade press, industry, and environmental justice representatives, provided recommendations on presentation formats as well as the assessment in general. We are actively involved with state and local air agencies in conducting reviews throughout the process. We have received additional input—written and through additional meetings with stakeholders—on various aspects of our assessments. Also, to inform the general public of our activities, we provide a description of our NATA activities on the EPA website.

NATIONAL AIR TOXICS ASSESSMENTS: REVIEW AND COMMENT

Question. Has the general public been able to review and comment on all specific elements of the NATA, including the emissions inventory, the proposed nation-wide application of the air dispersion model and exposure models, the IRIS values to be used, and the development of the microenvironment?

Answer. Plans for the NATA 1996 national-scale assessment were discussed at two public meetings held in Washington, DC in October 1999. As discussed at those meetings, the modeling approaches being used as part of the assessment are a mixture of previously peer-reviewed approaches and relatively new science which is undergoing peer review during the assessment process. We incorporated comments from these meetings on the analytical approaches being used and the methods being proposed to communicate the results into the assessment and the final documentation will reflect these changes.

The national-scale emissions inventory (the 1996 National Toxic Inventory) which drives the modeling process is largely a product of peer involvement. To develop this inventory, technical staff in the state and local air pollution agencies work together with EPA staff to pull together the best available information on air emissions of all the hazardous air pollutants (HAPs) for the year 1996. The methods for measuring, estimating, and calculating these emissions are all individual subjects of peer review, but the full inventory itself is not. This is consistent with the development of emissions inventories for all the criteria pollutants.

The air dispersion model being used for the assessment, the Assessment System for Population Exposure Nationwide (ASPEN), has been publicly peer-reviewed by the EPA's Science Advisory Board in the context of its use in the Cumulative Exposure Project. While the peer review identified some shortcomings of the model, it is still recognized as the most useful tool for this type of national-scale assessment for air toxics.

The air pathway exposure model, the Hazardous Air Pollutant Exposure Model (HAPEM4), has been previously subject to peer review in the context of its use for estimating exposures from mobile source pollutants. We have modified it from previous versions to account for the partitioning of the 33 urban HAPs between typical outdoor monitoring sites to indoor locations and multiple microenvironments. These modifications are currently undergoing internal and external peer review prior to their use in the assessment.

The cumulative risk approach (which uses IRIS values, among others) that we are using for the assessment is consistent with previously peer-reviewed Agency risk characterization methods. In addition, since this is a national-scale assessment, the approach is currently undergoing internal and external peer review, as is the overall assessment approach of integrating these various modeling results together for the full quantification of inhalation risks. Further, once the national-scale assessment results are completed, the entire assessment approach, the results, and the interpretation of those results will be documented and subjected to a full public peer review by the EPA's Science Advisory Board in the fall of 2000.

Throughout the process, EPA is sharing interim results with state and local agencies in an effort to ensure the quality and consistent interpretation of the results.

PEER REVIEW AND RELEASE OF NATA RESULTS

Question. Is it true that you plan to submit the NATA model and results for peer review at the same time the results will be available to the general public on the

Agency's web site? What is the reason for placing this information on the web before the NATA inputs, model and results have been subject to peer review?

Answer. It is the practice of the Science Advisory Board (SAB) that any technical product being peer reviewed by the SAB be made available to the public for inspection and review. To facilitate public access for such documents, the SAB asks that the Agency post them on the EPA web site. All products placed on the web site are marked as a "SAB Review Draft," making clear that they are not final Agency documents.

USING NATA TO MEASURE PROGRESS

Question. According to your budget justification, one of the stated purposes of NATA is to assist the Agency in determining the effectiveness of the nation's air toxics programs. Will NATA be used to measure EPA's progress toward meeting the statutory goal of a 75 percent reduction in cancer incidence, considering all emission reductions from stationary sources?

Answer. Yes, National Air Toxics Assessment (NATA) activities will be used to help us track progress toward meeting our overall national air toxics program goals, which include the statutory goal of a 75 percent reduction in cancer incidence attributable to hazardous air pollutants emitted by stationary sources. This is because NATA activities include such efforts as expanding air toxics monitoring; improving and periodically updating emissions inventories; periodically conducting national- and local-scale air quality, multimedia and exposure modeling; and characterizing risks associated with air toxics exposures. Specifically, we plan to use the results of both the current and future national screening assessments of air toxics, as well as monitoring and other data generated from the NATA activities to measure progress toward meeting the 75 percent reduction requirement.

CONTAMINATED SEDIMENTS: NAS WORKGROUP PROGRESS

Question. The National Academy of Sciences is developing a decision framework for evaluating ways to remediate sediments contaminated with PCBs. The NAS is looking at the efficacy and risks of remedial alternatives to provide a scientific basis for selecting remedies at these sites. The NAS expects to complete its report by October of this year. At the same time, EPA's Contaminated Aquatic Sediment Remedial Guidance Workgroup is developing guidance on essentially the same thing, although it is looking beyond PCBs. How far has the workgroup progressed in developing its guidance?

Answer. We plan to circulate a draft Superfund Contaminated Sediment Remedial Guidance (SCSRG) later this year. If the NAS study is released as expected, in October 2000, the recommendation of the NAS would help to shape revision of the draft guidance. The development of the SCSRG draft started before we realized that there would be another NAS study on contaminated sediments. We believe that EPA's guidance development effort is responsive to recommendations in the last NAS report and constitutes an important element in clarifying our approach to assessing contaminated sediments.

CONTAMINATED SEDIMENTS: AGENCY USE OF NAS FINDINGS

Question. Rather than developing the guidance in advance of the NAS report, wouldn't it be better to base the guidance on the report's findings? Once the report is issued, how will the findings be incorporated into EPA policy?

Answer. While EPA has made several presentations before the NAS committee and provided extensive materials for their information, EPA does not know what recommendations will come from the Committee. The NAS recommendations may require further work before they can be implemented as an agency policy. However, if the current study is released as expected in October 2000, the recommendations in this report would help to shape revision of our draft guidance. This NAS study will be the third NAS report on the management of contaminated sediment since 1989. We have reviewed the recommendations of the previously released NAS sediment reports to prepare materials for the guidance that we are currently drafting. We look forward to the final NAS report and intend to give it full consideration in the development (and if necessary, revision) of our Agency's sediment remediation guidance.

INFORMATION BURDEN: AGENCY CLAIMS TO SMALL BUSINESS COMMITTEE

Question. Why did staff of the Office of Environmental Information make these misleading claims to my staff on the Senate Small Business Committee?

Answer. The Office of Environmental Information staff did not intentionally make misleading claims to your staff on the Senate Small Business Committee. EPA believes that the General Accounting Office's (GAO) review underscores the complexity involved in communicating burden reduction. The annual Information Collection Budget (ICB) is the official accounting of agencies' information collection requirements. Under OMB's Office of Information and Regulatory Affairs burden measurement procedures, both program changes (e.g., the addition or elimination of a question on a form) and program adjustments (e.g., revisions of previous burden estimates such as the number of respondents) are used to estimate the burden associated with an Agency's information collections and both are reflected in the year-end estimates published in the ICB.

GAO found that EPA's estimate for hours of burden reduced, as reported in "Reinventing Environmental Protection" is misleading because it represents the sum of program change decreases and program adjustment decreases. We believe this finding does not represent the full range of burden reduction activities that EPA has pursued. EPA has acted aggressively to discuss reducing burden through a variety of activities that tend to make it easier for companies to comply with environmental regulations. EPA is not able to quantify the level of burden associated with these activities. They include: the establishment of compliance assistance centers; development of electronic reporting opportunities; creation of audit policy and regulatory compliance options; implementation of plain language regulations and guidance; and development of electronic tools such as TRIME (Toxic Release Inventory Made Easy) that help make our regulations and guidance more understandable and easier for the public to deal with. GAO's recent report on burden states that these efforts were outside the scope of their review of the agency's information collection requirements.

INFORMATION BURDEN: AGENCY CLAIMS TO HOUSE APPROPRIATIONS COMMITTEE

Question. Why, when GAO shared its findings of misleading EPA claims of burden reduction in February, 2000, did Administrator Browner repeat the same misleading claims to the House Appropriations Committee, Subcommittee on VA, HUD, and Independent Agencies in March, 2000?

Answer. EPA did not intentionally make misleading claims to the House Appropriations Committee, Subcommittee on VA, HUD, and Independent Agencies in March, 2000. The \$800 million estimate for cost savings due to burden reductions is a straightforward estimate of the cost of a reporter's hourly time (\$30.00 per hour) and the estimated hours of gross annual burden reduction (approximately 26.9 million hours). As we have previously stated, GAO's review underscores the complexities involved in communicating burden and burden reduction. We will work with GAO and OMB to address these complexities and the specific issues raised by GAO about EPA's application of OMB's guidance. We also believe that GAO's review is too narrowly focused and fails to fully acknowledge the Agency's burden reduction efforts. EPA has acted aggressively to discuss reducing burden through a variety of activities.

INFORMATION BURDEN: BUSINESS SAVINGS

Question. Why does EPA claim its efforts saved business over \$800 million dollars when GAO found that EPA's "math errors, erroneous assumptions, and conversion of burden hours to dollars on a form that the agency submits to OMB have no effect on businesses' or communities' paperwork requirements or their expenditures."

Answer. The \$807 million dollar figure was derived by multiplying the 26.9 million hour burden reduction estimate claimed by EPA and reported in the Information Collection Budget by \$30 per hour, an estimate of the cost of an employee's time for a company reporting to EPA. We intend to meet with GAO to ensure our understanding of their criticisms and concerns.

BURDEN REDUCTION: DISCHARGE MONITORING PROGRAM

Question. EPA's largest claimed paperwork burden reduction between fiscal years 1995 and 1998 of 4.7 million hours came from Office of Water (OW) program changes to the discharge monitoring program. But the 4.7 million hour reduction, according to OW, was a goal and a significantly less burden reduction was actually achieved. Why did EPA take credit for this reduction goal and not the actual reduction achieved?

Answer. The President's Regulatory Reinvention Initiative for the Environmental Protection Agency (EPA) established an interim goal of reducing reporting and monitoring burden by at least 25 percent. In response, in April 1996, EPA issued An Interim Guidance for Performance-Based Reductions of NPDES Permit Monitoring Frequencies. This document provides guidance to EPA permit writers and States on

how best to implement EPA's National Pollutant Elimination Discharge System (NPDES) regulations regarding appropriate monitoring requirements in permits. The ICR Amendment incorporating this guidance was approved by OMB in 1996. It was based on EPA's estimate that a 26 percent reduction in burden from previous levels for monitoring and reporting requirements would result from the implementation of the guidance. The document is not a regulation and cannot impose legally binding requirements on EPA, States, or the regulated community. It may not apply to a particular situation based upon the circumstances. Eligibility for reduced reporting frequencies depends on meeting specific criteria regarding facility enforcement history and parameter compliance and performance history. Some States establish their own baseline monitoring frequencies. The reduction reported in the ICR was EPA's best estimate of what could be achieved; EPA plans to reevaluate this estimate by examining actual implementation of the guidance as part of the process to renew the ICR in 2001.

BURDEN REDUCTION: DISCHARGE MONITORING PROGRAM ACTUAL REDUCTIONS

Question. How many paperwork burden hours were actually reduced between fiscal years 1995 and 1998 by OW changes to the discharge monitoring program?

Answer. EPA has no existing mechanism for collecting actual burden hours from permittees. However, there is data in EPA's Permit Compliance System (PCS) database for approximately one third of all NPDES permits regarding monitoring frequency. For fiscal year 1995 through fiscal year 1998, the percent of PCS reported permits reissued with reduced monitoring frequencies was 26 percent. The percent of parameters with reduced monitoring frequencies for those permits reported in PCS was 4 percent. The average monitoring reduction per reissued parameter with reduced monitoring frequency was 70.5 percent. For the average facility which reduced its monitoring frequency, this would mean that monitoring for these parameters would be reduced from once a week to once per month.

INFORMATION BURDEN: REINVENTION EFFORTS VS. NATURAL MATURATION OF PROGRAMS

Question. Four of EPA's largest claimed burden hour reductions occurred as a result of the natural maturation of the programs. EPA took credit for 5.2 million hours of reductions associated with Air Operating Permits, Agricultural Worker Protection Standards, OPA Facility Response Plans and Data Generation for Registration Activities. Why did EPA claim these reductions were due to its reinvention efforts when they actually resulted from completion of initial labor-intensive or start-up phases already part of each program?

Answer. The reinvention claims included both program changes and program adjustments. Program maturation, where a requirement is phased out over time, is considered a "Program Change" because burden is no longer imposed on the public after some period of time.

INFORMATION BURDEN: REINVENTION EFFORTS VS. REESTIMATION

Question. Another four of EPA's largest claimed burden reductions, each claimed to produce over 500,000 hours of savings, came as a result of EPA reestimating their initial burden hour estimates. In the case of conformity of federal actions to state implementation plans, the reestimation corrected an earlier collection error. Why did EPA claim these reductions were due to its reinvention efforts when they actually came from reestimates or corrections of errors?

Answer. Three of the four reductions were correctly calculated using the most recent OMB guidance on reestimates and "adjustments." The reduction claimed in the case of conformity of federal actions to state implementation plans was a correction to a previous error and should not have been included in the reduction total. We will inform OMB of this mistake and request that the ICB be amended.

INFORMATION BURDEN: REINVENTION EFFORTS VS. ECONOMIC CHANGES/INDUSTRY ACTIVITIES

Question. While two of EPA's largest claimed burden hour reductions concerning the underground storage tank program reported on actual reductions to the public, these reductions came as a result of changes in the economy or industry's own development of new less burdensome technologies. Why did EPA claim these reductions were due to its reinvention efforts when they actually came from changes in the economy or industry's own activities?

Answer. The reinvention claims included both program changes and program adjustments. These readjustments reflect reductions in the amount of paperwork burden borne by the affected public.

BURDEN REDUCTION: COMPLIANCE ASSISTANCE CENTERS CONTRIBUTIONS

Question. How many hours of paperwork burden did the compliance assistance centers reduce in fiscal year 1999?

Answer. The compliance assistance centers (Centers) have not evaluated the correlation between Center use and any net changes associated with the paperwork burden. Rather, Centers measurement activities have focused on: (1) Internet site activity; (2) user satisfaction of Center services; (3) behavioral changes associated with Center use; and (4) environmental improvements associated with Center use.

Businesses and local governments are using the Centers as a source of regulatory compliance assistance. In fact, the Centers' website experienced over 260,000 visits in 1999. Furthermore, the Centers' Website received over 890 visits on a daily basis in December 1999. More importantly, recent survey data demonstrate that Center users find the Centers very useful—and use improves environmental performance. Based on eight voluntary Internet surveys, over 70 percent of the company and local government respondents said they took one or more actions (e.g., changing the handling of waste, obtaining a permit, changing a production process, contacting a regulatory agency) as a result of Center use; where applicable, over 50 percent of these companies and local governments felt that they had a cost savings resulting from these actions. Furthermore, over 58 percent of company and local government respondents stated that they realized one or more environmental improvements as a result of using a Center (e.g. reduced air emissions, conserved water). Lastly, the survey responses demonstrate a high degree of satisfaction with Center services—in fact, 85 percent of the survey respondents rated the compliance assistance provided as either very useful or useful.

An additional study conducted by the Coordinating Committee for Automotive Repair (CAR) further demonstrates the Centers' success. In 1997 and 1999, the CAR conducted a survey of automotive service and repair shops throughout the United States. The results of the study show that the automotive industry made significant strides in their environmental compliance program between 1997 and 1999. In 1997, the study concluded that 25.9 percent of the shops reported that they cannot judge compliance from self-reported survey were at least 80 percent compliant with federal environmental requirements. In 1999, 55.8 percent of the shops reported that they were at least 80 percent compliant. The CAR study also demonstrated a significant increase in the regulated community's awareness of CAR and the CAR-run compliance assistance center, CAR-Greening®.

BURDEN REDUCTION: EFFECT OF COMPLIANCE ASSISTANCE CENTERS ON BURDEN

Question. If part of the goal of the compliance assistance centers is to educate the regulated community on their environmental obligations and help them meet those obligations, including completing paperwork and other reporting requirements, wouldn't the centers actually help increase paperwork burden?

Answer. The paperwork burden is established through the rule-making process and the regulated community is obligated to comply with those reporting and record-keeping requirements. Therefore, in no way can the compliance assistance centers (Centers) alter reporting and recording keeping requirements associated with environmental requirements. However, the Centers can help the regulated community more efficiently meet their environmental requirements. Through plain-language guides, assistance lines, training events, compliance fact sheets, etc., Center users can more efficiently understand and meet their regulatory obligations. Furthermore, the Centers provide pollution prevention tips and ideas, that may create opportunities for Center users to decrease their regulatory obligations and associated paperwork. For example, the Printers' National Environmental Assistance Center's Listserv helped a client replace a solvent used for a specialized screen printing application with a nontoxic vegetable-based alternative cleaner. Not only did this behavioral change result in an environmental improvement, but the activity is no longer subject to Resource Conservation and Recovery Act hazardous waste management and disposal regulations—and associated paperwork requirements. Lastly, voluntary Internet survey responses indicate that the Centers are in fact helping their users realize cost savings as a result, in whole or in part, of Center use.

BURDEN REDUCTION: EFFECT OF AUDIT POLICY

Question. How many hours of paperwork burden did EPA's audit policy reduce in fiscal year 1999?

Answer. EPA believes that it is generally more cost-effective for companies to resolve violations under the audit policy when compared to more traditional enforcement, but has no practical basis for estimating hours of paperwork either created or reduced by the audit policy.

BURDEN REDUCTION: AUDIT POLICY REDUCTIONS

Question. If the goal of EPA's audit policy is to provide an incentive to meet paperwork and reporting requirements, and EPA experience has shown that the majority of those taking advantage of the audit policy did so regarding potential violations of paperwork or reporting violations, doesn't the audit policy actually help increase paperwork burden?

Answer. EPA's audit policy is designed to encourage voluntary compliance with all federal statutes, including those that provide for the monitoring and reporting of pollution. Monitoring data is the key to determining compliance with emission standards, and reporting requirements provide the public with information about releases from nearby facilities. Violating these important requirements is certainly one way to reduce "paperwork burden," but EPA believes there are more effective and legal means to accomplish this goal that do not undermine federal law or put law abiding businesses at a disadvantage.

INFORMATION BURDEN: EFFECT OF INTEGRATED INFORMATION INITIATIVE (I-3)

Question. EPA has indicated that its Integrated Information Initiative (I-3) will reduce paperwork burden. Does the Agency plan to remove current reporting requirements when it implements I-3?

Answer. The I-3 will result in an information network that will establish a fundamentally new approach to integrating and managing environmental information. While EPA anticipates that I-3 will reduce burden and transaction costs for states, tribes, regulated businesses, and the general public, it is too early to discuss plans for removing current reporting requirements. As I-3 evolves, EPA is committed to look for opportunities to streamline and reduce burden as appropriate and will consider including components to I-3 that will facilitate those opportunities.

INFORMATION BURDEN: STEPS TO ENSURE ACCURACY OF ESTIMATES

Question. What steps will EPA take to correct its future paperwork burden hour estimates, set straight the record of misleading statements before the Congress and ensure the Agency does not take credit improperly for burden hour reductions?

Answer. EPA would like to meet with GAO to ensure that EPA understands the findings in the recent GAO report on the agency's burden reduction efforts. The purpose of this meeting will be to clarify burden reduction tabulations and statements, make changes where necessary and establish a process that will avoid similar findings in the future.

REINVENTING ENVIRONMENTAL INFORMATION MILESTONES

Question. For each milestone phase which EPA failed or expects to fail to reach by the planned date, provide a brief description for the delay or failure, any actions, strategies or efforts to achieve missed milestones or avert missing of milestones the Agency expects to miss.

Answer. From 1997 to 1999, EPA met all of the REI milestones and commitments stated in its REI Action Plan. During this period, REI project progress was tracked and reported through quarterly progress reports and project status meetings. In 1999, integrated work plans replaced quarterly reporting. These work plans integrated the various REI projects to reflect ongoing activities and milestones and deliverables across projects. The integrated work plans also showed the interdependencies and potential shared resources of the REI projects.

In fiscal year 2000, the Agency expanded the goals of REI by launching an effort that would leapfrog REI by working in close partnership with the states to build and support a national network of shared, integrated environmental information. The main components of REI—data standards, electronic reporting and state partnerships—are now the key components of this new effort. In organizing the integration effort, the Agency realized the critical need to step up our joint work with the states. We have increased our collaboration efforts through the Information Management Work Group of the Environmental Council of the States. We have also chartered, with the states and Tribes, a Data Standards Council to set priorities for and

ensure implementation of data standards. This new integration effort, and our greater partnership with the states, will require us to re-examine our future REI milestones to ensure that we represent the correct milestones for this broader initiative.

REINVENTING ENVIRONMENTAL INFORMATION NATIONAL SYSTEMS REQUIRING
REENGINEERING

Question. Identify the national systems the Agency has reengineered, is currently reengineering, or will reengineer before the Agency promulgates REI standards/protocols and estimate the cost in time and resources necessary to retrofit those systems to address completed REI standards/protocols.

Answer. Through EPA's Reinventing Environmental Information (REI) data standards process, EPA committed the 13 major national program systems (tagged the "REI" systems) to incorporate the six REI data standards by fiscal year 2003. The target date was purposely set this far out to allow programs to incorporate the six data standards during their next system enhancement effort. Combining the incorporation of the data standards with the revision of the data structures during system enhancement would avoid any direct costs associated with implementing the standards in the systems. Consequently, there were no studies conducted on the specific cost of implementation. The six data standards include: Facility Identification; Chemical Identification; Biological Identification; Industrial Classification Code; Latitude/Longitude; and Date. The 13 "REI" systems are:

- Permit Compliance System (PCS)
- National Compliance Data Base (NCDB)
- OECA Docket (Docket)
- RCRA Information System (RCRIS)
- Aerometric Information Retrieval System/Air Quality Subsystem (AQS)
- Aerometric Information Retrieval System/Facility Subsystem (AFS)
- Biennial Reporting System (BRS)
- CAA 112(r) Risk Management Plan Information System (RMP*INFO)
- CERCLA Information System (CERCLIS 3)
- Safe Drinking Water Information System (SDWIS)
- Toxic Release Inventory (TRI)
- Water Quality Information System (STORET)
- Envirofacts Data Warehouse (Envirofacts)

REINVENTING ENVIRONMENTAL INFORMATION: ASSESSMENT AND CURRENT EFFORTS
FOR DATA QUALITY IMPROVEMENT

Question. Provide the results of the REI assessment of current efforts to ensure the quality of environmental data through error correction, the options paper developed through REI for a comprehensive data program, and the status of any efforts to implement a more comprehensive data quality improvement program.

Answer. The options paper for a comprehensive data quality improvement program is provided as attachment 1, and is formally titled "Data Quality Strategic Plan", dated December 1998. The document was approved by the Agency in April 1999. EPA's strategy to address data quality encompasses four components: data standards, electronic reporting, State partnership, and error correction. These goals are articulated in OEI's Action Plan for fiscal year 2000, and the status of current efforts is provided below.

Data Standards

Data standards is a key piece of enhancing data quality. By September 2000, the Office of Environmental Information expects to complete the following data standards and associated business rules to implement the standards:

- Date
- Standard Industrial Classification/North American Industrial Classification
- Facility
- Chemical
- Biological/Taxonomical
- Latitude/Longitude

To facilitate the development, adoption, and implementation of additional data standards, the State/EPA Information Management Workgroup chartered the Environmental Data Standards Council in November, 1999. The Council's principle mission is: "to promote the efficient sharing of environmental information between EPA, States, Tribes and other parties through the development of data standards." The Council, made up of State, tribal and EPA representatives, is committed to the development and adoption of data standards for environmental information exchange.

The Council has begun to identify and prioritize the next set of data standards to be developed and implemented. We expect to be able to finalize this list within the next two months.

The One Stop program, a partnership program with 25 states, began in March 1995 as an effort to develop more efficient methods of providing meaningful environmental information. Through grants to state agencies, this program examined opportunities to reduce the reporting burden on industry, states and local governments, and to foster geographic and multi-media approaches to environmental problem-solving by increased integration of environmental data at the state level.

Integrated Error Correction Process

This Spring, OEI will implement a web-based error correction function. The goal of the error correction process is to provide an improved mechanism for data reporters and users to report errors they have been identified in our public data systems, and institute a management and accounting system. We will begin with those systems that reside in the Envirofacts data warehouse, and expect to have the error correction process implemented for these systems by the Fall of 2000.

Central Receiving

Another tool for enhancing data quality is central receiving. Central receiving will provide a centralized source for receipt and processing of data submitted to the Agency. We are beginning by establishing a limited production infrastructure to accommodate electronic reporting, including Electronic Data Interchange and other web-based data transmission formats. Electronic reporting supports data quality by providing error prevention measures through validation and edit routines that can be run at the point of data receipt. Data which do not pass these routines can be sent back to the submitter for correction before the data are accepted and loaded into a data system. At full implementation, central receiving will have the capability and capacity to receive and process data submitted in any media (paper and multiple electronic formats). We will begin implementation in fiscal year 2000 by receiving small sets of data for several EPA programs.

REINVENTING ENVIRONMENTAL INFORMATION

SUBCOMMITTEE RECOMMENDATIONS AND ESC IRM APPEALS

Question. Describe any early warnings by the REI Subcommittee of projects experiencing difficulties, significant policy and technical issues REI has identified for resolution, and any REI Subcommittee recommendations accepted by the Chief Information Officer but appealed by an Executive Steering Committee for Information Resources Management (ESC for IRM) principal to the entire ESC for IRM and the outcome of the appeal.

Answer. A strong project management program was in place to monitor the progress of REI. Comprehensive work plans, monthly program management meetings, regular work plan updates, and quarterly REI Subcommittee meetings were held to insure REI projects were being designed in support of the Agency's mission, in a timely manner, and within budget. Key policy issues were raised and addressed by the REI Subcommittee, which was chaired by the CIO. These included policy discussions about the approach to the Chemical Identification data standard, Facility Identification Registration, and Central Receiving. No appeal of REI outcomes or decisions were ever made to the CIO by a member of the ESC for IRM.

REINVENTING ENVIRONMENTAL INFORMATION: QUARTERLY REPORTS

Question. Provide the quarterly reports of each responsible party to the National REI Manager on the status of the policy work, efforts to incorporate REI standards into the national systems and to identify any issues requiring attention.

Answer. The fiscal year 1998 quarterly reports are provided as attachment 2, which is formally titled "Reinventing Environmental Information Quarterly Progress Reports for fiscal year 1998." In fiscal year 1999, a decision was made to produce integrated workplans, in lieu of quarterly reports. The integrated workplans reflected all on-going activities and status of each activity. All components of the REI initiative were incorporated into the core mission of the Office of Environmental Information when it was created in October 1999.

REINVENTING ENVIRONMENTAL INFORMATION 1999-2001 FUNDING

Question. Describe, by NPM, Goal, Objective, Sub-objective, Key Program, Office, and Activity, the level of resources including dollars and FTE devoted to REI efforts in fiscal year 1998, proposed in the fiscal year 1999 budget request, included in the

fiscal year 1999 operating plan, spent in fiscal year 1999, proposed in the fiscal year 2000 budget request, proposed in the fiscal year 2000 Operating Plan and proposed in the fiscal year 2001 budget request.

Answer. The attached table identifies this information from fiscal year 1998 through the fiscal year 2000 budget request. While some of the major milestones of the Agency's REI initiative were completed in fiscal year 1999, the remaining REI commitments, such as data standards and electronic reporting, have now been incorporated in the broader OEI program plan.

REI Efforts*

Fiscal Year	NPM	Objective	Sub-objective	Key Program	Office	Activity	Dollars (in thousands)	FTE
1998 Spent	OARM	Increase Quality/ Quantity of Education, Outreach, Data Availability	Public Access Strategy	Public Access	OIRM	Reinventing Environmental Regulations	\$15,648.6	3.0
		Ability of Public to reduce Exposure	Provide Information to the Community About Local Environment	Public Access	OIRM	Community Based Environmental Protection	\$2,750.0	0.0
1999 Budget Request	OARM	Increase Quality/ Quantity of Education, Outreach, Data Availability	Public Access Strategy	Public Access	OIRM	Reinventing Environmental Regulations	\$15,650.0	3.0
		Ability of Public to reduce Exposure	Provide Information to the Community About Local Environment	Public Access	OIRM	Community Based Environmental Protection	\$2,500.0	0.0
1999 Operating Plan	OARM	Increase Quality/ Quantity of Education, Outreach, Data Availability	Public Access Strategy	Public Access	OIRM	Reinventing Environmental Regulations	\$12,349.8	3.0
		Ability of Public to reduce Exposure	Provide Information to the Community About Local Environment	Public Access	OIRM	Community Based Environmental Protection	\$2,500.0	0.0

Fiscal Year	NPM	Objective	Sub-objective	Key Program	Office	Activity	Dollars (in thousands)	FTE

REINVENTING ENVIRONMENTAL INFORMATION—EXPLANATION FOR REDUCTIONS TO FUNDING

Question. For any REI activities which decreased from any budget request to its operating plan, or from operating plan levels to the following year's budget request, provide a brief explanation for the reduction.

Answer. The REI activity entitled Reinventing Environmental Regulations took a reduction in its fiscal year 1999 operating plan from the fiscal year 1999 budget request level. This decrease reflected the REI initiative's share of the Agency's overall reduction to its fiscal year 1999 budget request. As a general rule, given the importance of REI, we always tried to limit cuts to the program as much as possible.

REINVENTING ENVIRONMENTAL INFORMATION PERFORMANCE MEASURES

Question. Identify and describe the GPRA or Agency performance measures in fiscal year 1999 and fiscal year 2000 which incorporate REI commitments?

Answer. The Agency uses three Annual Performance Goals/Performance Measures in fiscal year 1999 and fiscal year 2000 to describe its REI commitments. These are:
 —Making a greater percentage of data reported to EPA available to the public through Electronic Data Interchange/Electronic Commerce;
 —Streamlining and improving the information reporting processed between state partners and EPA by increasing the number of state participants in the One Stop Reporting Program; and
 —Increasing facility identification (ID) data accuracy by establishing a National Facility ID file.

REINVENTING ENVIRONMENTAL INFORMATION

Question. Describe the degree to which REI has brought, to date, reduced confusion caused by multiple methods of representing the same information, and when and how much further reductions are anticipated to occur.

Answer. REI is a five year plan (1998–2003) and implementation of data standards in Agency information systems is just beginning. The initial focus on data standards was to get a number of them established. Four of the six are now final and the last two will be finished this fiscal year. The focus is now moving to enabling and accelerating implementation of the standards in Agency data systems. Implementation will encompass a compliance element—requiring written documenta-

tion from agency programs on their actions to implement data standards, a communication and outreach component to make sure system developers and system managers understand what they are being asked to do, and a technical assistance component alleviating the initial system retrofitting that will be required for at least two of the standards.

REINVENTING ENVIRONMENTAL INFORMATION

Question. Describe the degree, in terms of burden-hours, to which REI has directly reduced paper reporting, errors, time delays, and associated costs its first year and when and how much further reductions are anticipated to occur.

Answer. Burden hour reductions have not been quantified at this early stage since the effort thus far has been to establish an infrastructure. REI focuses on incorporating data standards and electronic reporting into thirteen of EPA's national information systems. Promulgation of all necessary standards, policies, and protocols are projected to occur by the end of fiscal year 2001. As each new data and reporting standard becomes ready for implementation, each national system is projected to incorporate it by the end of fiscal year 2003 either through retrofitting existing systems or including the standard in system reengineering efforts.

COMPLIANCE ASSISTANCE FORUM: AGENDA AND PARTICIPANTS

Question. Provide a description of the compliance assistance forum the Agency held in Atlanta in March including: list of participants, the agenda, and a brief description of the contents of each of the programs, meetings or breakout sections.

Answer. The Forum 2000—Building Compliance Assistance Partnerships was held in Atlanta, Georgia on March 1 and 2, 2000. The Forum was intended to provide an opportunity for compliance assistance providers to share information on compliance assistance needs and strategies, and to offer feedback on the Compliance Assistance Clearinghouse and the first EPA Annual Compliance Assistance Activity Plan. Discussions were also held to address several overarching issues such as integrating compliance assistance with enforcement, and developing a set of criteria to use in prioritizing compliance assistance needs. The Forum was also designed to foster a compliance assistance provider network.

The attached materials include the final Forum agenda, a list of speakers and breakout session topics, and the meeting summary, which includes a list of attendees. These materials are also posted on the web at www.seattle.battelle.org/epa-icaa.

OPPTS ASSISTANCE PROVIDERS—FOLLOW-UP

Question. Provide the results of Agency efforts to prepare and finalize recommendations and make assignments for implementing the OPPTS assistance providers national meeting results. If EPA has not completed this milestone, provide the status of the efforts and estimate of completion date.

Answer. On December 6–7, 1999, the EPA, along with the National Institute for Standards and Technology (NIST) and the U.S. Small Business Administration (SBA), hosted a national meeting in Dallas, Texas, of both state and federally-funded environmental and business assistance providers, in part as a response to the Senate Small Business Committee's April 1998 hearing on "Environmental Compliance Tools for Small Business." While the primary focus of that Senate hearing was on EPA's small-business compliance assistance programs, the larger goal, as articulated by Chairman Bond in his opening remarks, was to "address the various approaches to compliance assistance in the context of what is working for small business."

Several EPA programs, including its Offices of Prevention, Pesticides and Toxic Substances; Enforcement and Compliance Assurance; Policy, Economics and Innovation; and Air and Radiation, had begun coordinating about this time to develop more effective and efficient assistance delivery to the nation's small businesses and, along with other EPA offices, to inculcate sound environmental performance as part of standard good practices within the business culture. The Dallas meeting, a commitment in the Agency's *Aiming for Excellence* report of July 1999, has enhanced partnerships within the EPA and among the Federal agencies. It has also promoted the federal "wholesale" approach for compliance and technical assistance which utilizes other delivery agents which are closer to the customer and can sometimes better frame environmental approaches in a broader business context.

In terms of implementing some of the key commitments made in the Dallas meeting:

—NIST agreed to develop and maintain a dedicated list-server to facilitate a continuation of the dialogue among the interested parties that was begun at the

meeting. This was accomplished and is now being used to identify and discuss ideas.

—The providers agreed to work together to develop specific proposals for consideration by the Federal sponsors: EPA, SBA and NIST. One such draft proposal, a multi-state pilot effort with national support capabilities led by a number of Small Business Development Centers (SBDCs), was first mentioned at the Dallas meeting. Work is currently underway to formalize relationships and build support among the participating provider organizations on this proposal, which could be complete as early as late May 2000.

—The Federal sponsors agreed to host providers who wished to present specific proposals that had gained support from the larger assistance community. The sponsors could host such a meeting in late Spring 2000, depending upon the progress of the SBDC or other proposals—although an agreement to host a session on a specific proposal does not imply Federal support for it.

A longer summary of the Dallas meeting is available on EPA's web site at www.epa.gov/p2.

This national network effort is also being coordinated with a number of EPA projects, led by the EPA Office of Enforcement and Compliance Assurance, to improve the Agency's general compliance assistance activities.

ASSESSMENT OF SMALL BUSINESS ASSISTANCE SERVICES: CATALOG

Question. If the Agency has not done so already, provide the catalog of small business related services and products intended to be developed as part of the Aiming for Excellence initiative by November 1999. If EPA has not completed this milestone, provide the status of the effort, reason for delay, and an estimate of completion date.

Answer. Development of the catalog of small business-related services and products is nearly complete. EPA has a number of services and products that are targeted specifically for small businesses and others that apply to broader audiences, yet still may be applicable to small business. We are in the process of finalizing the catalog so that it best reflects this mix of services and products. We anticipate completion in June 2000.

“* * * present specific proposals that had gained support from the larger assistance community. The sponsors could host such a meeting in late Spring 2000, depending upon the progress of the SBDC or other proposals—although an agreement to host a session on a specific proposal does not imply Federal support for it.”

A longer summary of the Dallas meeting is available on EPA's web site at www.epa.gov/p2.

This national network effort is also being coordinated with a number of EPA projects, led by the EPA Office of Enforcement and Compliance Assurance, to improve the Agency's general compliance assistance activities.

ASSESSMENT OF SMALL BUSINESS ASSISTANCE SERVICES: SURVEY

Question. Provide a copy of the survey to small business consumers of EPA environmental assistance intended to be developed as part of the Aiming for Excellence initiative by March 2000. If EPA has not completed this milestone, provide the status of the effort and an estimate of completion date.

Answer. As we complete our catalogue of small business products and services, we will refine the set of questions for the survey of small business customers. Because we have been approved for a limited number of hours under our information collection request, we want to be sure that the questions we include in our survey tool will provide us with information that will best reflect the current state of small business satisfaction with our products and services. We anticipate commencing the survey in July 2000.

COMPLIANCE ASSISTANCE CLEARINGHOUSE: STATUS OF EFFORT

Question. Provide the status of efforts as part of the Aiming for Excellence initiative to design and develop a clearinghouse of compliance assistance materials and tools and whether the effort is on target to meet the September 2000 operational deadline.

Answer. The Compliance Assistance Clearinghouse (Clearinghouse) is on target to be fully operational in September 2000.

The goal of the Clearinghouse is to link existing networks of compliance assistance providers, facilitate the finding and the sharing of information, increase quality and speed of delivery of compliance assistance services, and increase the number of clients served. The Clearinghouse is a nationally accessible and searchable Web site that allows compliance assistance providers to link to existing networks to avoid du-

plication, find new tools/information, download existing tools and information, find experts, and exchange new ideas and information.

The Clearinghouse is intended to serve compliance assistance providers, such as Small Business Assistance Programs, technical assistance/pollution prevention providers, state and local governments, trade/professional associations, sector-based compliance assistance centers, EPA, other federal agencies (DOD, DOT, OSHA), and universities. The Clearinghouse will support the tasks that providers perform on a day-to-day basis, such as responding to frequently asked questions and identifying experts.

There are three main components of the clearinghouse. The first is a Providers' Directory, which will help identify providers with expertise in a specific area. The second is a searchable database that will have a user-friendly navigation system. The third component is a communications forum to foster communication among providers.

Throughout the design process, EPA has worked extensively to involve stakeholders in the development. These efforts have included outreach efforts to states, small business assistance providers, and industry compliance assistance providers. In addition, EPA created a multi-stakeholder advisory group, the Compliance Assistance Advisory Committee (CAAC) under the existing Federal Advisory Committee Act chartered National Advisory Council for Environmental Policy and Technology. One of the key activities of the CAAC is to provide input on the Clearinghouse development. The CAAC has been consulted on every aspect of the design and population of the Clearinghouse.

COMPLIANCE ASSISTANCE CLEARINGHOUSE: STAKEHOLDER

Question. Provide a summary of stakeholder input, organized by stakeholder, which EPA obtained at its March 2000 compliance assistance forum on the design of the clearinghouse.

Answer. The comments below, expressed at the March 2000 Forum, reflect different stakeholders' views about the content and the format of the Clearinghouse:

General Services Administration

1. The site needs to be well-connected to other Federal agencies. There is a need for information exchange on Environmental Management Systems. This should include tools for Federal workers—curriculum development, uniform statements of work for contracts, etc. GSA has a list of environmental services vendors that can be made available on-line to Federal Agencies.

Bureau of Land Management

2. Presenting a solution to implementing requirements and then having a link to a vendor who can help with the solution is very important for the user community.
3. The EPA regulatory link is useless. The system needs to mirror OSHA.

State

4. Contacts at the state level need to be at the working level. STAPPA/ALAPCO provides contacts and may be a good model.
5. State regulatory sites need to be linked.

Industry

6. Links to commercial sites would need a disclaimer.
7. You need some way to indicate the quality of the data you post from other sources. Possibly use a ranking system based on comments, etc.
8. To increase the number of providers in the directory you could use the log-in feature to add names to the directory.
9. Data editing of the Clearinghouse information needs to be a faster process to encourage folks to keep the material up to date.

Compliance Assistance Providers

10. Some EPA web sites have had problems with including .com sites. The Agriculture Center in particular has experienced this problem.
11. It is very important to keep the links "live." The three "tier" plan the CAAC has developed would be a good start.
12. Michigan has a pollution prevention (P2) network of providers that could be a good model for the directory.

General

13. Suggest using the "add a link" feature, which will pull in the meta-data tags from the site, thus decreasing the amount of data entry required.

14. When the comment field is used, it is important that the author include their name.

15. Marketing is extremely important for the success of the Clearinghouse. Presentations should be made at conferences. The Compliance Assistance Centers should also participate in the marketing.

COMPLIANCE ASSISTANCE TOOLS DISTRIBUTION: STATUS OF EFFORTS

Question. Provide the status of efforts under Task 5 of Action 4 under the Aiming for Excellence initiative to distribute and market compliance assistance tools to organizations that are likely to have contact with regulated groups.

Answer. The distribution of compliance assistance tools is handled primarily by the office and/or region that has the lead for developing the tool. Under the “Aiming for Excellence” report, the Agency committed to developing tools for economically significant rules. Of the ten rules identified by the Agency, two have been promulgated—the Office of Water’s national pollution discharge elimination system stormwater regulation and the Office of Environmental Information’s amendment for certain persistent and bioaccumulative toxic substances. The compliance assistance tool for the stormwater regulation has been completed and a plan for distribution is being developed. The tools for the other regulations require additional stakeholder input and should be completed this fall.

During the development of compliance assistance tools, the lead office and/or region developing the tool works with stakeholders interested in the regulation to ensure that the tool will be useful to the targeted audience and the user has access to the tool. Based on stakeholder input a plan is developed to distribute the tool to compliance assistance providers and/or the regulated community. The tool is also distributed to EPA regional counterparts and state contacts.

Tools are generally posted on the web site of the EPA office/region responsible for developing the tool. The tool is also made available through other internet resources such as the Small Business Gateway web site and, when appropriate, the ten industry-specific Compliance Assistance Centers developed by EPA. In many instances, brochures describing the tools and how to access them are developed, and distributed to appropriate stakeholders through mailings and meetings.

The implementation of the Compliance Assistance Clearinghouse will greatly enhance the Agency’s efforts to assure that the provider community has easy access, from one central web site, to all compliance assistance tools developed by EPA.

COMPLIANCE ASSISTANCE TOOLS DISTRIBUTION: COORDINATION

Question. Describe how the Agency coordinates between its offices the distribution or marketing of compliance assistance tools.

Answer. The distribution of compliance assistance tools is handled primarily by the EPA program office or Region that has the lead for developing the tool. EPA offices work with other internal Agency staff and the stakeholders interested in the regulation in the development and distribution of compliance assistance tools to ensure that the tool is useful and that potential users have access to the tool. We believe that the Compliance Assistance Clearinghouse will optimize the Agency’s ability to coordinate the distribution of materials to all parties that have an interest in them.

COMPLIANCE ASSISTANCE TOOLS DISTRIBUTION: AGENCY COMPLIANCE

Question. Describe how the Agency strategically identifies areas or sectors in need of compliance assistance tools and then distributes tools to meet those needs.

Answer. Currently each EPA program office and region develops individual program plans addressing their respective areas of responsibility. Through its own analyses of environmental and regulatory problems as well as discussions with external stakeholders, other governmental agencies and Congressional agencies and staff, each office sets priorities for the coming fiscal year(s) and then develops strategies and activities to address those priorities. These activities include a range of compliance assistance activities, such as outreach or technical assistance.

The distribution of compliance assistance tools is handled primarily by the office and/or region that has the lead for developing the tool. During the development of compliance assistance tools, the lead office and/or region developing the tool works with stakeholders impacted or interested in the regulation to ensure that the tool will be useful to the targeted audience and the user has access to the tool. Based on stakeholder input a plan is developed to distribute the tool to compliance assistance providers and/or the regulated community. The tool is also distributed to EPA regional counterparts and state contacts.

COMPLIANCE ASSISTANCE TOOLS DISTRIBUTION: MARKETING

Question. Describe how the Agency identifies the need for further marketing of its compliance assistance tools including how EPA assesses the effectiveness of its current marketing activities.

Answer. The Agency utilizes a range of techniques to develop and evaluate marketing approaches. Marketing approach depends on the type of tool developed and the audience for that tool. Generally, EPA continuously works with a wide range of stakeholders such as trade associations, state offices and facilities to ensure that the tool is accessible; and if not, they help us identify opportunities to enhance the tool's distribution to those that do not have access. This provides the Agency with insight into how well our marketing efforts are working and what additional distribution may be needed.

Some specific examples of how the Agency furthers its marketing approach:

- Many projects are put through a pilot process prior to large-scale distribution. The compliance assistance tools are distributed to a limited audience for their use. This distribution is followed by a survey to determine the usefulness and appropriateness of the materials for the targeted audience. This feedback is incorporated in finalizing the materials and the distribution of the documents.
- EPA increasingly utilizes voluntary surveys as a method to get feedback on the tools that are developed. This process has been done extensively with the small business community as well as in other programs. The Agency seeks feedback on the content and appropriateness of the materials for the audience.
- Monitoring of web site and hotline usage provides valuable information on how well the documents are reaching the regulated community. For example, the Compliance Assistance Centers Website activity growth has been quite pronounced. In fact, the Centers experienced over 260,000 visits in 1999, over 890 visits per day on average. Seventy per cent of those who responded to an on-line survey visit said they visit the site at least monthly while 30 percent visit on a weekly bases.

COMPLIANCE ASSISTANCE TOOLS DISTRIBUTION: SAFE DRINKING WATER MENTORING
"KITS"

Question. Describe efforts included under the Aiming for Excellence initiative to develop by January 2000, a "start-up" kit to make it easier for local and tribal governments to participate in safe drinking water mentoring.

Answer. The Safe Drinking Water Peer Review Program (Peer Program) began in 1996 as an effort in Georgia by EPA Region 4, along with local and state partners, to train volunteers from small drinking water systems so these operators could help themselves and other "peer" system operators achieve and remain in compliance with state and Federal drinking water regulations.

Training for the operators volunteering to participate as review team members is based on a modified version of the training for state and Federal inspectors. After completing training conducted by EPA and state regulators, these volunteers are listed in a directory along with areas of expertise so other small system operators can call upon them to conduct evaluations and reviews on site. Along with volunteer training, the other components of the Peer Program include self-assessments conducted by small system operators, and technical assistance and evaluations provided by the trained peer volunteers.

What began as a Georgia pilot has expanded rapidly. Local chapters of national organizations like the American Water Works Association and the Rural Water Association have assisted EPA Region 4 and other state and local partners to develop program implementation customized to the particular state or tribe. The Peer Program has been replicated in Kentucky, Iowa, Virginia, Mississippi and by the United South and Eastern Tribes (USET, representing 23 Indian tribes from Maine to Texas). As a result of "word of mouth" experiences of Peer Program participants, increased Program exposure at regional/national water association meetings, and numerous awards, the demand for creating additional Peer Programs has increased. Region 4 developed a web-based "tool kit" as a way to provide information to interested EPA regions, states and potential partners concerning starting a Peer Program.

The "tool kit" was developed to simplify as much as possible the creation of new state and tribal Peer Programs. It includes a description of the Peer Program, its components and sample forms which can be easily adjusted to recognize differences in varying state requirements. Forms include sample evaluations, a sample training agenda and a sample volunteer directory. Also included is a start-up flow chart which describes the various steps involved in creating the Program, as well as a detailed check list to make it easy for interested persons to develop a Peer Program.

The "tool kit" includes information on existing Programs and provides contacts and information relating to potential partnership opportunities. The "tool kit" is available from Region 4 EPA in a CD ROM format upon request and is also accessible through an EPA website, <http://www.epa.gov/region4/peerreview/toolbox.htm>.

SAFE DRINKING WATER INFORMATION SYSTEM

Question. Describe the status of efforts to convene by April 2000, representatives from all EPA regions for training on the development and implementation of safe drinking water information programs.

Answer. In September 1998, EPA launched a major review of the quality of data in the Safe Drinking Water Information System/Federal version, or SDWIS/FED. An EPA/stakeholder working group was established for this purpose. A data quality assessment, which included a review of three years of data verification audits covering 27 states, was conducted. Those audits identified significant gaps in the compliance data that states report through SDWIS. Based on this assessment, the working group developed a Data Reliability Action Plan, which sets a data quality goal, identifies activities to establish a quantitative and qualitative data quality baseline, and lists interim actions to improve data quality.

At the end of fiscal year 1999, the intensive data quality review was completed and the EPA/stakeholder workgroup identified priority actions to be implemented, i.e.,

- Conduct more training so states know how to interpret rules and report violations;
- Conduct more frequent data audits so states know not only their specific problems but also appropriate corrective measures;
- Reissue rule guidance to specify how rules may and may not be interpreted.

To implement the first recommendation regarding training, EPA is carrying out the following activities:

- During May 2000, five training courses in Philadelphia, Atlanta, Denver, San Francisco, and Seattle will be offered on implementation of the Lead and Copper Rule. The training will provide instruction on how to report violations to SDWIS/FED.
- EPA has already established a contract mechanism for states to obtain on-site technical assistance to resolve specific, ad hoc data entry problems.
- EPA is developing a generic SDWIS/FED data entry course as well as other rule specific compliance determination/reporting courses like the Lead and Copper Rule course.
- For states that adopt SDWIS/STATE (a state version of SDWIS/FED) as their state drinking water information management system, EPA provides training to state personnel on entering and retrieving data from SDWIS/STATE.

To implement the second recommendation regarding data audits, EPA is carrying out the following activities:

- EPA is planning to increase the frequency of audits of state data from once every three years to once every two years. Senator Bond
- The Agency is revising and clarifying protocols for data verification and self-audits and encouraging states to conduct their own audits on a regular and consistent schedule. This will strengthen overall data quality oversight.

To implement the third recommendation on reissuance of rule guidance, EPA is carrying out the following activities:

- During the data verification audits that have already taken place, the Agency identified issues regarding compliance and implementation inconsistencies and confusion.
- The Agency has worked with the states to develop clear and consistent guidance for these identified compliance and implementation issues, and will publish this in the Water Supply Guidance which is issued annually.

COMPLIANCE ASSISTANCE TOOLS DISTRIBUTION: MENTORING EFFORTS

Question. Describe whether and where these mentoring efforts under the safe drinking water program might serve as a model for other programs around the Agency.

Answer. The concept of utilizing peer review and self assessments to provide compliance assistance to rural communities is easily transferrable to environmental media programs other than drinking water programs. The initial Peer Program focusing on ground water drinking water systems was easily expanded to include surface water drinking water systems. Additionally, wastewater facility peer review programs are being developed in Georgia, and the United South and Eastern Tribes

(USET, representing 23 Indian tribes from Maine to Texas) plan to adopt this component in their program. Solid waste is another potential area for further expansion.

COMPLIANCE ASSISTANCE TOOLS FOR ECONOMICALLY SIGNIFICANT RULES: AIMING FOR EXCELLENCE—IDENTIFICATION OF ECONOMIC RULES

Question. The Aiming for Excellence report called for identification of economically significant rules under development for the purposes of developing compliance assistance tools for these rules. The report called for identification of the rules by June 1999. However, EPA did not release a draft of projected economically significant rules until the November 1999 FACA meeting. What was the reason for missing this milestone?

Answer. In May 1999, during development of the Aiming for Excellence Report, EPA developed a draft list of projected economically significant rules. The list was then reviewed for accuracy and completeness by all of EPA's media program offices, followed by a review conducted by the Agency's regulatory steering committee. The list was then provided to the Compliance Assistance Advisory Committee. EPA met its obligation to produce a timely and accurate list for use by the principal set of stakeholders.

COMPLIANCE ASSISTANCE TOOLS FOR ECONOMICALLY SIGNIFICANT RULES: AIMING FOR EXCELLENCE—FINAL

Question. The Aiming for Excellence report called for finalization by October 1999 of the initial set of rules for which compliance assistance materials will be developed. What was the reason for missing this milestone?

Answer. The list of economically significant rules for which compliance assistance material would be developed was finalized in October, 1999. Simultaneously, EPA established a stakeholder advisory group under the Federal Advisory Committee Act to meet the Agency's commitment (under the Aiming for Excellence Report) to work with stakeholders to identify potential regulations that may need compliance assistance. The advisory group, Compliance Assistance Advisory Committee (CAAC), held their first meeting on November 18–19, 1999. At this meeting, the list of economically significant rules was provided to the CAAC and any other interested stakeholder attending this meeting.

COMPLIANCE ASSISTANCE TOOLS FOR ECONOMICALLY SIGNIFICANT RULES: DRAFT FISCAL YEAR 2001 ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN

Question. The Draft Fiscal Year 2001 Annual Compliance Assistance Activity Plan contains an appendix listing the projected economically significant regulations. Does this represent the finalization of the initial set of rules or was the finalization accomplished with a different vehicle?

Answer. Appendix B of the March 1, 2000 Draft fiscal year 2001 Annual Compliance Assistance Activity Plan contains the complete list of projected economically significant regulations as of that date. The list of these regulations was finalized as described in the previous questions. However, it is possible that rulemakings will be removed or added to the list if there are changes in projected economic impact or the date of issuance for the rules.

COMPLIANCE ASSISTANCE TOOLS FOR ECONOMICALLY SIGNIFICANT RULES

Question. Provide the dollars and FTE each applicable program manager (NPM) has spent in the last three years to develop compliance assistance tools for economically significant rules. In meeting this request, organize the information by rule, NPM, fiscal year, appropriation, goal, objective, sub-objective, office or Region and activity.

Answer. The following provides dollars and FTE spent by the Office of Enforcement and Compliance Assurance (OECA), the Office of Air and Radiation and (OAR) and the Office of Water (OW) on developing compliance assistance tools for economically significant rules in fiscal year 1998, 1999 and 2000. The GPRA goal structure was not in place until fiscal year 1999.

The compliance assistance tools referred to in the OECA table address several activities and environmental requirements related to the specific economically significant rule. The full cost of developing the compliance assistance tool is shown because we are unable to isolate the cost attributable to explanation of the specific rule. Further, OECA supports other on-going sector-oriented compliance assistance mechanisms, notably ten Internet-based Compliance Assistance Centers, which help small and medium sized businesses, local governments and Federal facilities better understand and comply with Federal environmental requirements.

(Dollars in thousands)

¹In 1999, EPA established the Drinking Water Academy as a long-term training initiative with the primary goal of assisting EPA, states and Indian tribes to build program capability to successfully carry out the requirements of the Safe Drinking Water Act.

COMPLIANCE ASSISTANCE TOOLS FOR ECONOMICALLY SIGNIFICANT RULES—PLANNED FUTURE SPENDING

Question. Provide the dollars and FTE each applicable national program manager (NPM) plans to spend to develop compliance assistance tools for economically significant rules.

Answer. In the “Aiming for Excellence” report, EPA commits to develop compliance assistance information for new economically significant rules generally within 90 days of issuing each rule. The lead for developing this information rests with the office responsible for the rule-making. The following charts from the Office of Air and Radiation (OAR) and the Office of Water (OW) provides data on future spending plans for economically significant rules. The Office of Enforcement Compliance and Assurance will work with the media program offices to determine how best to meet this Agency commitment by assisting in the development of compliance assistance guides and self-audit/inspection checklists. The FTE support necessary from OECA is not known at this time.

[Dollars in thousands]

Appropriations: EPM		
Goal 01, Objective 02:		
National Emission Standards for Hazardous Air Pollutants (NESHAP) for Automobile and Light-Duty Truck Manufacturing (Surface coating), OAR-OAQPS	0.2	\$50
NESHAP for Industrial, Commercial, and Institutional Boilers, OAR-OAQPS	0.2	\$50
NESHAP for Chemical Recovery Combustion Sources at Kraft, Sulfite, and Stand Alone Semicheical Pulp Mills, OAR-OAQPS	0.2	\$50
NPM: National Air Program (OAR)		
Appropriations: S&T		
Goal 01, Objective 01: Compliance assistance tools to implement the Tier II Light-Duty Vehicle and Light-Duty Truck Emission Standards and Gasoline Sulfur Standards, OAR-OTAQ	1.0	\$87
NPM: National Water Program (OW)		
Appropriations: EPM		
Goal 01, Objective 01: Long term Enhanced Surface Water Treatment Rule and Stage 2 Disinfectants/Disinfection Byproducts Rule	6.0	\$100
Goal 2, Objective 3:		
NPDES Comprehensive Storm Water Phase II	0.5	\$350
NPDES requirements for Sanitary Sewer Overflows (SSOs)	0.8	\$450

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: FISCAL YEAR 2001 PLAN

Question. Describe the ways in which the fiscal year 2001 Plan identifies areas where compliance assistance is needed.

Answer. The draft fiscal year 2001 Plan is a comprehensive inventory of the compliance assistance activities proposed by EPA program offices for the upcoming fiscal year. To address various stakeholder needs, this inventory is organized by sector, statute, chemicals/pollutants of concern, geographic focus, target audience and type of compliance activity.

The activities included in the draft fiscal year 2001 Plan reflect decisions made by each program office in the Agency through their own planning and budgeting processes that establishes their offices' compliance assistance priorities (e.g., for new and economically significant regulations). By offering the draft Plan for comment at the March 1 and 2, 2000 Compliance Assistance Forum and through a Federal Register notice, stakeholders can provide their input on where compliance assistance tools or additional emphasis is needed. All comments received will be reviewed by the Agency's Compliance Assistance Advisory Committee established for providing advice on compliance assistance.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: COMPLIANCE ASSISTANCE NEEDS

Question. Describe the methods the fiscal year 2001 Plan categorizes, ranks or otherwise prioritizes compliance assistance needs.

Answer. The draft fiscal year 2001 Plan is an inventory of Agency compliance assistance activities. To address various stakeholder needs, this inventory is organized by sector, statute, chemicals/pollutants of concern, geographic focus, target audience and type of compliance activity. However, the draft plan does not categorize, rank or otherwise prioritize compliance assistance needs. The activities proceed from decisions made through the Agency's planning and budgeting process for fiscal year 2001 and are included in the Agency's budget submission/annual performance plan submitted to Congress in early February. Stakeholder comments will be taken into consideration as the Agency develops its fiscal year 2001 operating plan and its fiscal year 2002 President's budget.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: STRATEGIC ACTION

Question. Describe the ways the fiscal year 2001 Plan proposes strategic actions to meet the compliance assistance needs identified by the fiscal year 2001 Plan.

Answer. The draft fiscal year 2001 plan is an inventory of the Agency's compliance assistance activities. These activities reflect decisions made by EPA program offices during the Agency's planning and budgeting process for fiscal year 2001. Because these assistance activities address priorities developed by EPA and its program offices, the activities are consistent with EPA's strategic directions and meet important compliance assistance needs.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: EPA ORGANIZATIONS

Question. Describe the ways, and on what basis, the fiscal year 2001 Plan identifies the EPA organizations best suited to implement individual parts of the strategy developed to ensure the Agency meets compliance assistance needs identified in the fiscal year 2001 Plan.

Answer. The draft fiscal year 2001 Plan is an inventory of the compliance assistance activities proposed for the upcoming year based on individual EPA program office priorities, as developed through the Agency's planning and budgeting process for fiscal year 2001. The Plan lists the responsible EPA organizations for each activity, and the organizations were selected based on their expertise about specific regulatory requirements.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: RESOURCES

Question. Describe the ways, and on what basis, the fiscal year 2001 Plan directs Agency resources to individual EPA organizations to implement assigned parts of the strategy developed to ensure the Agency meets compliance assistance needs identified in the fiscal year 2001 Plan.

Answer. The fiscal year 2001 Plan lists the organization responsible for implementation of each activity. The responsible organization is best suited to the activity based on program expertise and capacity.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: CRITERIA

Question. Describe the criteria EPA will use to prioritize activities within the Plan among other competing Agency priorities.

Answer. Each program office in the Agency has an individual planning and budgeting process that establishes their offices' priorities. The items in the Plan were submitted by those offices as real compliance assistance needs. These needs will be

weighed against other projects in need of funds and will be funded as resources permit.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: RESOURCE NEEDS

Question. Describe how the resource needs identified in the fiscal year 2001 Plan and future Plans will be incorporated into the Agencies annual resource planning and budget request process.

Answer. Remaining fiscal year 2001 and future resource needs will be identified before or at the onset of the planning and budgeting cycle. For future Plans the Agency will adjust the schedule for seeking stakeholder input to ensure that the feed-back is available prior to the beginning of the planning and budget cycle.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: LEVEL OF FUNDING FOR ACTIVITIES

Question. Describe how, and on what basis, the Agency will decide the level of funding for activities within the Plan during the fiscal year 2001 Operating Plan process.

Answer. The level of funding for individual projects in the Plan will depend on Congress's final determination of Agency appropriations for fiscal year 2001, stakeholder feedback about compliance assistance needs, and projected costs associated with development and delivery of specific compliance assistance activities.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: IDENTIFICATION OF FUTURE COMPLIANCE ASSISTANCE NEEDS

Question. Describe the ways future compliance assistance plans will identify areas where compliance assistance is needed.

Answer. At the completion of the fiscal year 2001 Plan the Agency will evaluate the process used to develop the first plan, determine what improvements might be necessary, and implement those improvements which might help to focus compliance assistance resources where they are most needed. The Agency will work with the Compliance Assistance Advisory Committee and other stakeholders to accomplish this.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: FUTURE PRIORITIZATION METHODS

Question. Describe the methods future compliance assistance plans will categorize, rank or otherwise prioritize compliance assistance needs.

Answer. Currently each Office/Region individually establishes its project priorities. As a result of stakeholder input, EPA and the Compliance Assistance Advisory Committee are working to develop a set of prioritizing criteria related to compliance assistance which each office can incorporate into their planning process.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: FUTURE STRATEGIC ACTIONS

Question. Describe the ways future compliance assistance plans will propose strategic actions to meet the compliance assistance needs identified by future compliance assistance plans.

Answer. At the completion of the fiscal year 2001 Plan the Agency will evaluate the process used to meet the compliance assistance needs and will improve upon the approach. The Agency will work with the Compliance Assistance Advisory Committee and other stakeholders to accomplish this.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: FISCAL YEAR 2001 PLAN

Question. Describe the ways, and on what basis, future compliance assistance plans will identify the EPA organizations best suited to implement individual parts of the strategy developed to ensure the Agency meets compliance assistance needs identified in future compliance assistance plans.

Answer. An internal EPA workgroup will review all proposed projects that could be included in the Plan to determine if there are opportunities for consolidating resources between offices and to learn from previous efforts.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: RESOURCES TO IMPLEMENT ASSIGNED STRATEGY

Question. Describe the ways, and on what basis, future compliance assistance plans will direct agency resources to individual EPA organizations to implement assigned parts of the strategy developed to ensure the Agency meets compliance assistance needs identified in future compliance assistance plans.

Answer. For future Plans the Agency will adjust the schedule for seeking stakeholder input to ensure that the feed-back is available prior to the beginning of the planning and budget cycle. This will provide insight into where resources are most needed.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: FISCAL YEAR 2001 ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN RESOURCES

Question. Provide the dollars and FTE devoted by the Office of Enforcement and Compliance Assurance, Office of Prevention, Pesticides and Toxic Substances, Office of Solid Waste and Emergency Response, Office of Air and Radiation, and Office of Water to compliance assistance activities as defined by the fiscal year 2001 Annual Compliance Assistance Activity Plan. In meeting this request, provide information from the fiscal year 1999 budget request, fiscal year 1999 operating plan, fiscal year 1999 actuals, fiscal year 2000 budget request, proposed fiscal year 2000 operating plan and fiscal year 2001 budget request. Organize the information by NPM, Appropriation, Goal, Objective, Sub-objective, Office or Region, and activity.

Answer. The first annual Compliance Assistance Activity Plan (Plan) is a compilation of all of the compliance assistance activities planned, agency-wide for fiscal year 2001. The activities in the Plan reflect projects that each program office/region is envisioning for fiscal year 2001. These projects were identified as part of the planning and budget development process which began in the spring of 1999 and will be finalized once the Agency receives the fiscal year 2001 appropriations. Given the process of project identification, this first plan establishes a base-line of Agency activity.

The draft Plan is currently undergoing a public review and comment process. Stakeholders have been asked to provide their views on EPA's selection of priorities for the upcoming year. Once the stakeholder comments have been summarized, they will be shared with Agency management. Additionally, the summary will be provided to the Compliance Assistance Advisory Committee (CAAC), the multi-stakeholder group formed by the Agency under the existing National Advisory Council for Environmental Policy and Technology (NACEPT). The CAAC, in reviewing the comments will have the opportunity to develop formal recommendations to be submitted through the NACEPT to the Agency.

These formal recommendations will be considered by the Agency as it develops the fiscal year 2001 operating plan and the fiscal year 2002 President's Request. Thus, at this stage of the Plan development it is difficult to accurately identify specific FTE and dollar levels for the projects identified in the draft Plan.

The dollars and FTE for the Office of Enforcement and Compliance Assurance's compliance assistance program, however, is provided in the answer to question 186.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: STEPS IN SERVICE PROVIDING CHAIN

Question. The Agency has stated that it wished to limit its compliance assistance activities to that of a "wholesaler" in the service providing chain. For each compliance assistance need identified by the Agency, who has the Agency identified will provide the other steps in the chain, such as manufacturing, distributing, marketing or retailing?

Answer. The Agency has stated that it plans to shift to primarily fulfilling a wholesaler role with respect to compliance assistance. There will continue to be various circumstances in which the Agency will continue its direct provider role. Examples of the need for this direct assistance include working with Federal facilities, providing assistance related to Federally-run programs (e.g., CFCs), and providing assistance to facilities in states which have not been delegated program responsibilities.

EPA currently provides only a small part of the compliance assistance that is targeted to the regulated community. State, local and tribal governments, who are EPA's co-regulators, provide the bulk of these efforts. In positioning itself as a wholesaler, EPA is working closely with states and various provider organizations (i.e., Chemical Manufacturers Association, American Forest and Paper Associations, Graphic Arts Technical Foundation, and Silicon Valley Manufacturing Group) to discuss their appropriate roles and responsibilities within a comprehensive, yet flexible system for providing assistance.

ANNUAL COMPLIANCE ASSISTANCE ACTIVITY PLAN: SERVICE DELIVERY ROLE

Question. How has the Agency determined that each of the other identified entities in the compliance assistance providing chain will effectively carry-out its role in service delivery?

Answer. The Agency is currently evaluating how best to move into the wholesaler role where appropriate. It will however be critical that this shift include an evaluation component to assure that the delivery chain is working effectively. The Agency will address this issue as part of the ongoing discussions.

The Agency will rely on providers that have experience and/or capacity to deliver compliance assistance to the appropriate audience in the most efficient and effective way.

FIELD TESTING OF COMPLIANCE ASSISTANCE SOFTWARE TOOLS: APPROPRIATE REGULATIONS

Question. Describe the status of efforts included in the Aiming for Excellence report to identify regulations appropriate for compliance assistance software development.

Answer. The Agency has solicited stakeholder input to determine where software tools are most needed. As a result of this input, the Agency selected the Toxic Release Inventory as a rule for which this type of tool would be beneficial.

TRI-ME (Toxics Release Inventory Made Easy) is an interactive, intelligent, user-friendly software that guides the user through the reporting requirements for Section 313 of the Emergency Planning and Community Right-to-Know Act (EPCRA) of 1986 and Section 6607 of the Pollution Prevention Act (PPA) of 1990. This software prompts the user for specific information, which the software then uses to determine if the user's facility has satisfied the reporting requirements for Section 313 and, if so, the software aids the user in completing the appropriate reporting forms. The software includes almost all of the existing TRI guidance so that the vast majority of users will not have to consult any other documents to complete their TRI reporting obligation.

FIELD TESTING OF COMPLIANCE ASSISTANCE SOFTWARE TOOLS: STAFF

Question. Describe the status of efforts to identify appropriate staff to support software development.

Answer. The TRI Regulatory Development Branch in the Agency's Office of Environmental Information is presently managing the development of TRI-ME. This involves the oversight of both the information contained in the software (the script development) as well as the actual programming and software development. Contractors who are well-equipped to handle both aspects of this project have been retained.

FIELD TESTING OF COMPLIANCE ASSISTANCE SOFTWARE: SCHEDULE

Question. Describe the status of efforts to establish a schedule for developing and field testing software.

Answer. Script development for TRI-ME began in October 1999 and was finished in January 2000. The conversion of the script to software and the other database management aspects of the software commenced in January 2000 and are due to be completed by mid-May 2000. An abbreviated beta test (including industry participation) for the software will take place in late April 2000. In mid-May 2000 this first version of the TRI-ME software will be distributed to facilities in just three industry sectors subject to Section 313 reporting; chemical distributors, petroleum bulk storage, and foundries. These three industry sectors will be encouraged to use this software for TRI reports due by July 1, 2000 for reporting year 1999. Subsequent versions of TRI-ME will address and be distributed to additional industry sectors subject to the reporting requirements of Section 313 of EPCRA.

FIELD TESTING OF DRAFT REGULATIONS: PARTICIPATION IN FIELD TESTING

Question. Describe the status of efforts included in the Aiming for Excellence report to identify draft regulations and regulated entities to participate in field testing of draft regulations.

Answer. In May, EPA identified draft regulations for field testing which some regulated entities previously had recommended. Participants in the field test may include facilities ranging from municipalities to large electrical facilities.

FIELD TESTING OF DRAFT REGULATIONS: TRIAL APPLICATION

Question. Describe the status of efforts to conduct a simulated trial application with selected regulations.

Answer. In addition to identifying candidate draft regulations for field testing, the Agency is preparing guidance on how the field testing should be conducted. The likely approach would be to ask the regulated entities that volunteer to be part of the

project to read and comply with the draft regulations using only the proposed rule and preamble for guidance. We anticipate that EPA and company staff would work cooperatively to gain insights into real-world compliance issues.

FIELD TESTING OF DRAFT REGULATIONS: REGULATIONS TO BE USED FOR TESTING

Question. Which regulations has EPA chosen for field testing and which regulated entities have agreed to participate in this testing?

Answer. The Agency will determine which entities may participate in the field testing pilot after the draft regulations have been identified.

Question. When will it occur?

Answer. We plan to begin implementation of the field test by late July or early August.

FIELD TESTING OF DRAFT REGULATIONS: RESULTS OF DRAFT RULE

Question. How, and on what basis, will EPA evaluate the results of its trial application of a draft rule?

Answer. The Agency will include an evaluation requirement in its guidance for the simulated trial application. Once the Agency identifies draft proposed rules for field testing, we will develop an evaluation plan specific to each draft rule.

STRATEGIC USE OF COMPLIANCE ASSISTANCE, INCENTIVES, MONITORING AND ENFORCEMENT ACTIONS: FISCAL YEAR 2000–2001 NATIONAL ENFORCEMENT PRIORITY

Question. Describe the status of efforts included in the Aiming for Excellence Report to develop for strategic use compliance assistance, incentives, monitoring and enforcement actions for each fiscal year 2000–2001 national enforcement priority.

Answer. EPA is committed to expanding the use of integrated strategies that combine compliance assistance, compliance incentive, compliance monitoring, and enforcement activities. Our experiences (e.g., Telecommunications Initiative) have shown that this approach can be very effective in addressing enforcement and compliance assurance program priorities. In fulfilling this commitment, we will continue to pursue new approaches to maximizing environmental compliance (e.g., corporate-wide audit agreements). These efforts provide opportunities to build on our successes in addressing serious environmental problems and to improve compliance with environmental laws.

A draft proposal (“guidelines”) which will assist the Agency in fulfilling this commitment has been developed. EPA will commence implementing the appropriate guidelines this year. Additionally, the appropriate strategies for each fiscal year 2000/2001 priority area will be developed by June 30, 2000. The answer to the following question reviews more concrete actions to integrate the use of incentives, assistance and enforcement in specific initiatives.

STRATEGIC USE OF COMPLIANCE ASSISTANCE, INCENTIVES, MONITORING AND ENFORCEMENT ACTIONS: ACHIEVEMENTS

Question. Describe the past or current EPA efforts to use compliance assistance, incentives, monitoring and enforcement actions strategically to address chosen sectors or priorities. Provide quantitative and qualitative achievements including a differentiation of outcomes with specific environmental improvements versus compliance with paperwork or other reporting requirements.

Answer. Since the reorganization of OECA in 1994, we have put in place the principal building blocks of an integrated enforcement and compliance assurance strategy with encouraging results as described in each of OECA’s annual Accomplishments Reports. Your question, however, appears to be more directed to the use of integrated enforcement strategies. Current efforts to use integrated enforcement strategies that combine compliance assistance, incentives, monitoring, and enforcement activities are described briefly in the preceding response. Those efforts build upon our experiences, e.g., national sector strategies and initiatives.

Recent experiences show integrated enforcement efforts are effective in addressing program priorities while maximizing scarce resources:

—“Telecommunications Initiative”—EPA conducted extensive outreach efforts to heighten awareness of potential environmental requirements, including sending letters to 29 companies and approximately 40 trade associations and publishing an article in the trade press. In response to EPA’s efforts, telecommunications companies voluntarily disclosed under EPA’s Audit Policy and promptly corrected over 2,000 environmental violations occurring at over 600 facilities. The Agency waived over \$6 million in gravity based penalties and collected \$178,727 representing economic benefit gained from delayed compliance. At the same

- time, the Agency has pursued an enforcement action against a company based on a tip that was prompted by the publicity surrounding this initiative. The case settled for more than \$600,000, helping to assure voluntary participants that they would not be undercut by competitors who continue to violate the law.
- Region 5 “Mini-Mills Initiative”—Early in fiscal year 1997 EPA Region 5 encouraged 25 small mid-west steel mills (“mini-mills”)—part of the iron and steel sector—to conduct self-audits and disclose potential environmental violations. Several “mini-mills” voluntarily disclosed violations which will result in significant environmental benefits. For example, EPA settled an administrative action with Calumet Steel in 1999 that will lead to a reduction of approximately 100 tons per year of particulate matter to the air.
 - Other initiatives that reflect our integrated approach to national priorities included a compliance partnership program with the American Petroleum Institute to reduce emissions from petroleum storage tanks, a national audit agreement that provides incentives for pork producers to audit and correct violations of the Clean Water Act and a pilot program in Region 4 that has resulted in widespread auditing by municipalities to identify and eliminate sewer overflows.

In addition, EPA’s Office of Compliance (OC) and Office of Regulatory Enforcement (ORE) worked with EPA regions and states to develop and implement sector-based enforcement and compliance activities to enhance the regional commitments for the fiscal year 1998/1999 Memorandum of Agreement (MOA). OECA selected two national priority sectors (petroleum refining, primary nonferrous metals) and four significant sectors (agricultural practices/CAFOs, coal-fired power plants, chemical preparations, iron and steel) for coordinated national sector strategies in fiscal year 1998. The attached sections of the “Enforcement and Compliance Assurance fiscal year 1998 Accomplishments Report” contain detailed qualitative and quantitative information about the activities, accomplishments and strategic approach for each of the six sectors. OECA has achieved significant benefits in terms of protecting the public and the environment through these efforts. Preliminary data indicates we are continuing our successes:

- In fiscal year 2000 EPA settled its first enforcement action with Tampa Electric under EPA’s national coal-fired power plants priority for Clean Air Act violations. This action will result in reductions in sulfur dioxide of 60,000 tons per year, and in nitrogen oxide of 60,000 tons per year—the equivalent of taking 2.8 million automobiles off our highways.
- In the petroleum refining sector, EPA concluded a multimedia action against Marathon Ashland Petroleum, LLC in fiscal year 1999 including \$12 million to correct violations and \$14 million to perform Supplemental Environmental Projects which will reduce air emissions of sulfur dioxide and VOCs, and hydrocarbon leaks into the Mississippi River.
- In the primary nonferrous metals sector, EPA reached a judicial settlement with ASARCO and a subsidiary for multimedia violations in several EPA regions. The 1998 phase of the settlement included a \$3.386 million penalty for water and hazardous waste violations; the 1999 settlement included a \$5.5 million penalty, Supplemental Environmental Projects projected to cost \$14.7 million, and enhancing the Environmental Management System used at all ASARCO facilities.
- The fiscal year 1999 FMC Corporation, Inc. settlement—the largest civil penalty obtained under the Resource Conservation and Recovery Act (RCRA)—led EPA to include minerals processing as a Memorandum of Agreement priority for fiscal year 2000/2001. In addition, FMC Corporation Inc. committed to over a dozen Supplemental Environmental Projects with a capital cost of \$63 million, with benefits such as significantly improving air quality by reducing air pollution by approximately 436 tons of particulate matter per year.

EPA has used a sector-based approach—identifying key industry sectors—to provide a broad perspective of the compliance problems facing the sectors and to identify enforcement and compliance tools to address the problems. The factors considered in selecting a sector include: compliance history, Regional and state concerns, size of the sector, and potential environmental and human health risks posed by releases. The national enforcement and compliance goals, objectives, and priorities—including priority sectors—are set forth in the nationally written Memorandum of Agreement (MOA) Guidance document which the regions, States, and OECA’s other partners use in planning their annual activities and developing individual Memoranda of Agreement. These priorities ensure consistency of national targeting of environmental compliance issues that pose the greatest potential threat to human health and the environment.

STRATEGIC USE OF COMPLIANCE ASSISTANCE, INCENTIVES, MONITORING AND
ENFORCEMENT ACTIONS: VERTICAL SELECTION

Question. Has the strategic use of the entire vertical selection of enforcement and compliance assurance tools (i.e. compliance assistance, incentives, monitoring and enforcement actions) improved the compliance incentives program's relative inability to encourage reporting of environmental violations versus paperwork or other reporting requirements.

Answer. During the past two years, EPA has received voluntary disclosures of release—and degradation types of violations that it had not in the past. For example, we've received disclosures related to wetlands, air treatment technology under the New Source Review and Prevention of Significant Deterioration programs, maintenance of publicly owned treatment works (POTWs), and federal fuel standards. We believe those disclosures result from, in part, the presence of a strong enforcement program. Through such types of disclosures we expect to see additional improvements to human health and the environment. In a single Audit Policy settlement related to the improper use of certain fuels by an airline, EPA expects an elimination of nearly 700 tons of pollutants from the air annually—all the result of a voluntary disclosure. We believe that this is a result of EPA's strong enforcement program, and outreach and education provided through compliance assistance activities, such as workshops and newsletters.

OFFICE OF ENVIRONMENTAL INFORMATION STAFFING FTE CEILING

Question. What is the Full Time Equivalent (FTE) ceiling in the Office of Environmental Information (OEI)?

Answer. The FTE ceiling provided OEI in the fiscal year 2000 Enacted Operating Plan is a total of 544 FTE.

OFFICE OF ENVIRONMENTAL INFORMATION STAFFING LEVEL AT 3/1/2000

Question. At what FTE level was OEI staffed as of March 1, 2000?

Answer. As of March 1, 2000, OEI was staffed at a level of 481 FTE.

ENVIRONMENTAL INFORMATION STAFFING STATUS OF FTES

Question. If OEI was below its FTE ceiling, explain the reason for this situation?

Answer. OEI began its operations early in fiscal year 2000, but was not fully staffed at its inception due to vacant positions which transferred for LAN consolidation, TRI technical support, and new program management functions which hadn't previously existed. Many positions have already been filled, and most of the remaining jobs have active recruitment processes underway. OEI managers are working aggressively to fill all positions. OEI projects that it will have filled all positions in its authorized staffing level at the end of fiscal year 2000. Given the breadth of OEI's portfolio and scope of operations, filling all FTE slots is crucial to OEI being able to fulfill its base mission.

OFFICE OF ENVIRONMENTAL INFORMATION STAFFING

Question. Describe the role OEI played in the development of specific information management activities in the fiscal year 2001 budget request.

Answer. The fiscal year 2001 budget request was submitted to OMB in September 1999. OEI was not formally created until October 1999. However, one of OEI's predecessor organizations, the Office of Information Resources Management, determined the fiscal year 2001 investment review requirements and coordinated and reviewed Agency-wide investment proposals. The results of the OIRM-led review were presented to the Agency's Executive Steering Committee for IRM, which led to the Chief Information Officer's advice to the Chief Financial Officer on funding information proposals.

Question. Did OEI review fiscal year 2001 investment requests from the program offices and recommend or not recommend funding the investments?

Answer. OEI was not officially established until October 1999—after the submission of the 2001 budget request to OMB. However, the Executive Steering Committee for IRM, comprised of Agency senior managers, and supported by the Office of Information Resources Management, reviewed the fiscal year 2001 investment requests submitted by the program offices. Based on the advice of the ESC, the Chief Information Officer recommended investments for funding to the Chief Financial Officer. The ESC advised that additional work was needed on several proposals before investments could move forward.

With the creation of OEI in October 1999, OIRM was incorporated into the OEI structure, and the ESC became the Quality Information Council. Both OEI and the

Quality Information Council will have a role in reviewing and recommending investment proposals from the program offices for the fiscal year 2002 budget process.

Question. Did OEI generate its own fiscal year 2001 investment requests on behalf of program offices or the Agency?

Answer. Since OEI was not officially created until October 1999, it did not generate investment requests on behalf of the program offices as part of the fiscal year 2001 process. However, OEI's predecessor organizations, including both OIRM and OP, submitted investment requests that represented Agencywide information initiatives. In January 2000, OEI also submitted an investment request for the Information Integration Initiative as part of OMB's Exhibit 53.

Question. Did OEI review requests for disinvestments to the fiscal year 2001 budget request?

Answer. EPA's Executive Steering Committee for IRM, comprised of senior Agency managers, and supported by the Office of Information Resources Management, reviewed the fiscal year 2001 investment requests submitted by the program offices, and provided their advice to the Chief Information Officer. Program offices would have identified disinvestments to systems as part of the investment review process.

Question. Describe the role OEI played in developing the fiscal year 2000 Operating Plan, including specific actions on information management funding?

Answer. As OEI was a newly created organization at the time of the fiscal year 2000 Operating Plan development, it concentrated its efforts on sharing its vision of Agency information priorities with members of the Quality Information Council, and on establishing OEI's operating plan and priorities for fiscal year 2000. As part of its work with the Quality Information Council and its vision for the Integrated Information Initiative, EPA program offices are focused on information initiatives that will support integration within EPA and between EPA and the States.

Question. Describe the role OEI played in recommending for or against reductions to the fiscal year 2000 budget request as implemented through the fiscal year 2000 Operating Plan including specific actions across the Agency on information management funding?

Answer. OEI's predecessor organization, the Office of Information Resources Management, served as a staff office to the Executive Steering Committee in reviewing investment proposals for the fiscal year 2000 budget request. Based on the advice of the Executive Steering Committee, the Chief Information Officer advised the Chief Financial Officer of information investments that could be funded in the Operating Plan.

OEI PARTICIPATION IN RESOURCE DECISIONS

Question. How many times did the Quality Information Council meet?

Answer. To jump-start the contributions of senior Agency officials and their participation in the evolving information management agenda, the Acting Deputy Administrator convened EPA's senior officials in an executive forum four times during 1999 prior to the formal chartering of the Quality Information Council (QIC) in the Fall, 1999. Since its formal establishment in September, 1999, the QIC has met seven times to engage in a variety of information management priorities.

HUMAN HEALTH

Question. At what level, in terms of FTE and dollars, did the Agency fund the Human Health Research key program in the fiscal year 1999 budget request, fiscal year 1999 operating plan, fiscal year 1999 actuals, fiscal year 2000 budget request, fiscal year 2000 proposed operating plan, and fiscal year 2001 budget request. Provide the information by NPM, appropriation, goal, objective, office or region, and activity.

Answer. The information follows:

HUMAN HEALTH RESEARCH BUDGET—FISCAL YEAR 1999–2001

[Dollars in millions]

	Fiscal year 1999				Fiscal year 2000				Fiscal year 2001	
	President's budget		Enacted		President's budget		Enacted		President's budget	
	FTE	Total	FTE	Total	FTE	Total	FTE	Total	FTE	Total
S&T:										
Office of Research and Development:										
8.2 Human Health Research ¹	231.9	57.0	225.3	49.7	257.9	55.7	186.6	49.1	176.8	53.4
3.2 Research to Support New Regulatory Requirements Under FQPA			10.4	6.4	16.9	6.6	22.1	8.1	28.0	10.5
4.3 Safe Handling and Use of Commercial Chemicals and Micro ²	39.3	6.1	28.2	5.1	33.9	4.9	82.1	8.4	79.7	9.1
Superfund:

¹ Figures reflect the Human Health Objective of the Sound Science Goal [8.2].

² Figures reflect the human health portion of Objective 3 of the Safe Communities Goal [4]. They include direct human health research plus a proportion of human health/ecosystems infrastructure [e.g., operating expenses, salaries, travel].

³ Part of SF transfer S&T for fiscal year 1999 enacted.

HUMAN HEALTH: BUDGET REQUEST

Question. Analysis of the Agency's budget requests indicates that EPA reduced funding to the Human Health Research key program in the fiscal year 1999 operating plan and the fiscal year 2000 proposed operating plan from the higher levels contained in each year's budget request. Why did the Agency make reductions in Human Health Research from each of these budget requests to the following operating plans and what impact did it have on the activity levels of the program?

Answer. Fiscal year 1999 was the first year of formal implementation of the Government Performance and Results Act (GPRA). In implementing the Act's requirements, the Agency realigned its budget into the current goal/objective structure. During development of the enacted operating plan for fiscal year 1999, a review of the placement of certain key programs suggested that human health research directly supporting implementation of the Food Quality Protection Act (FQPA) of 1996 should be realigned from the core human health research program captured under the Sound Science goal (8.2) to Goal 3, which directly supports implementation of the Act.

Similarly, during development of the fiscal year 2000 proposed enacted budget, research directly supporting implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA) was realigned from the Sound Science goal to more directly support the Agency's efforts to improve community safety under Goal 4.

These funding realignments were the major influences on the changes to human health research under Goal 8 for the two years. While these changes did result in reductions to that goal, they did not impact the overall human health research program since they were made only to more clearly associate certain direct research efforts with the related regulatory programs under Goals 3 and 4.

In addition to the realignments mentioned above, there were reductions in fiscal year 1999 as part of the general reduction required to meet Congressionally appropriated levels. The area affected by the general reduction to human health research under Goal 8 was the Science to Achieve Results (STAR) grants program. As a result, the program was able to support 2-3 fewer new grant awards than would have been possible otherwise.

Funding for the total core human health research program under all three goals (3, 4, and 8) was \$61.1 million and 263.9 workyears in the fiscal year 1999 operating plan, and \$65.6 million and 290.8 workyears in the fiscal year 2000 proposed operating plan.

ENFORCEMENT ACCOMPLISHMENTS: FISCAL YEAR 1998 DECREASE

Question. Describe the extent to which the level of fiscal year 1998 decrease in enforcement activities may be within the natural variation of enforcement activity from year to year.

Answer. For fiscal year 1998, EPA issued 1,721 administrative compliance orders, 1,400 administrative penalty orders, and referred 411 civil cases to the Department of Justice, a total of 3,532 actions for the year. For the previous year, the total for the same categories was 3,557, a difference which was not of concern to EPA after reviewing the detailed data about fiscal year 1998 enforcement activities.

ENFORCEMENT ACCOMPLISHMENT: PERCENTAGE CHANGE FOR DECREASE/INCREASE

Question. At what level or percentage change does the Agency believe a decrease or increase in enforcement activities would be due to elements beyond the natural variation of enforcement activity from year to year?

Answer. It is expected that variations in enforcement outputs will occur due to the fact-specific nature of enforcement. Cases vary in terms of the entity involved, duration of violations, type of entity, litigations facts, and the severity of the violation, just to mention a few. In addition, the year to year enforcement outputs vary naturally as priorities change and the level of resources needed to handle individual activities associated with those priorities change. There are simply too many variables that create the total agency enforcement activities for each year to predict the dominant cause of the variation or a level or percentage change beyond the norm.

ENFORCEMENT ACCOMPLISHMENTS: MEASURE OF RESOURCES BY TIME, FTE AND DOLLARS

Question. How does the Agency measure the amount of resource intensiveness in terms of time, FTE or dollars associated with its enforcement cases including larger, more complex or time intensive cases or actions?

Answer. The Agency does not track the resource intensiveness of individual cases because our goal is to target our resources through our compliance monitoring program at the most significant environmental problems rather than to aim for a certain resource efficiency level for enforcement cases. If our targeting is successful and we address significant environmental problems through enforcement it is often the case that these cases are larger and more complex. OECA does analyze regional civil judicial and administrative outputs as compared to FTE resources on an annual basis so that the relative efficiency between regions can be compared.

ENFORCEMENT ACCOMPLISHMENTS: MEASURE OF ENVIRONMENTAL IMPACT

Question. How does the Agency measure the amount of environmental impact resulting from each of its enforcement actions?

Answer. The environmental impact from enforcement actions is measured by the estimated pollutants reduced from each enforcement case. This information allows the Agency to know the pounds of pollutants reduced as a direct result of single cases or categories of cases. In addition the Agency also measures actions taken by facilities (e.g., change in production process, etc.) as a result of enforcement.

ENFORCEMENT ACCOMPLISHMENTS: ENFORCEMENT ACTIONS VS. ENVIRONMENTAL IMPACT

Question. Has the Agency conducted a comparison of the amount of environmental impact resulting from each of its enforcement actions versus the degree of resource intensiveness of each action? If so, what are the results?

Answer. The Agency does not routinely compile information about the costs of each individual case. Therefore, we do not have the capacity to compare the amount of environmental impact versus resources expended for each enforcement case.

ENFORCEMENT ACCOMPLISHMENTS: COMPLEX CASES

Question. In general, has the agency found that larger, more complex or time intensive cases or actions produce greater relative levels of environmental impact?

Answer. We have found that complex cases can yield greater environmental impacts than the cumulative effects of a group of smaller actions for the same violations. Resolving many types of environmental problems requires complex investigations to find the extent and remedies for the problems. If we do not devote the time and resources to these cases, we would not otherwise be able to achieve the reductions in environmental releases many of our cases have achieved. The cases can yield larger Supplemental Environmental Projects that can achieve environmental benefits that could not be gained in smaller cases. Also, we have been able to use the leverage of combining multiple violations into one case to negotiate settlements with more comprehensive injunctive relief that may result in additional environmental impacts than would otherwise be agreed to by the respondent.

ENFORCEMENT ACCOMPLISHMENTS: EFFORTS TO MEASURE DETERRENT EFFECT

Question. What efforts has the Agency conducted, or is the Agency conducting, to measure the deterrent effect of their enforcement program? Does this include any studies, document reviews, contracts or other inquiries? What are the results?

Answer. The Agency's efforts to measure the deterrent effects of its enforcement program include: (1) the Office of Enforcement and Compliance Assurance's (OECA) Compliance Information Project; (2) OECA's implementation of its National Performance Measures Strategy (NPMS); (3) NPMS Compliance Measurement Cooperative Agreements; (4) an ongoing deterrence measurement project sponsored by EPA's Chief Financial Officer (CFO), (5) The Forum on Deterrence of Environmental Violations and Environmental Crime; and (6) Request for Proposals (RFP): Corporate Environmental Performance and the Effectiveness of Government Interventions. Specifics under each of these actions follows.

Compliance Information Project

The April 1999 Compliance Information Project (CIP) Literature Summaries report developed by OECA's Office of Planning and Policy Analysis (OPPA) contains brief reviews of seventeen pieces of compliance literature, plus appendices referencing over two hundred additional studies on a broad array of deterrence and motivational topics. The function of the CIP was to assemble and distribute these materials for followup use by federal and state compliance officials. Information on the CIP, and the full text of the Literature Summaries report, is posted on the OECA-OPPA website at <<http://www.epa/oeca/oppa>>.

National Performance Measures Strategy Implementation

The NPMS is a multi-year, high priority effort to identify, design, and implement an enhanced set of performance measures for EPA and the public to use to assess changes in the behavior and compliance status of regulated entities from a full range of enforcement and compliance activities. OECA is in the process of implementing twelve sets of NPMS measures referred to collectively as "the Performance Profile." The Profile consists of eight measures of environmental results caused by enforcement and compliance assurance activities ("outcomes"), plus four measures of program activity ("outputs"). Of the twelve sets in the Profile, three (sets 1, 6, and 7) may prove especially interesting to deterrence researchers. Set 1 requires EPA to determine statistically valid noncompliance rates for five regulated populations in fiscal year 2000. OECA and others will then be positioned to analyze impacts on those rates from government interventions and incentive policies. Sets 6 and 7 require EPA to determine the average duration of time significant violators take to return to compliance, and the percentage of significant violators with recurrent significant noncompliance within a two-year period, respectively. The sets will rely on the information in the databases to track trends in the duration of significant noncompliance (SNC) and recidivism by media program.

Compliance Measurement Cooperative Agreements

In connection with the NPMS, OECA is awarding \$1.8 million in cooperative agreement grants to fund a series of Compliance Measurement Cooperative Agreements with states to develop and implement potentially transferable outcome-based performance measures for their own enforcement and compliance assurance programs. Of particular interest to deterrence researchers, among the twelve projects selected for funding, is the Oregon-Department of Environmental Quality (DEQ) effort to document and measure the deterrent impacts of their enforcement activities. Oregon-DEQ intends to assess specific deterrence in its state by comparing data elements such as penalty amounts and recidivism, while qualitatively evaluating general deterrent effects via surveys and interviews with the regulated community. The surveys and interviews undertaken by Oregon will explore, among other things, the effectiveness of government efforts to communicate information on enforcement activities and penalties to the regulated community and the public. EPA hopes the results of the Oregon project will enhance its understanding of the relationship between how threats are communicated and received, the actual (objective) probability/severity of punishment, and subjects' perceptions of how visible or discoverable their noncompliance may be.

Deterrence Measurement Project

EPA's Chief Financial Officer and OECA are jointly sponsoring a project with the Eastern Research Group, Inc. (ERG) to develop a model for determining the impact of inspection and enforcement activity on firm behavior and environmental performance. The study is being led by Louis Nadeau of ERG, the author of *EPA Effectiveness at Reducing the Duration of Plant-Level Noncompliance*, 34 *J. ENVTL. ECON. & MGMT.* 54 (Sept. 1997). In that study, Nadeau, using data from 175 pulp and paper plants covering 41 reporting quarters from 1979 through 1989, found among other things that noncompliant plants that experienced a larger number of tests and inspections and/or enforcement actions during their periods of non-compliance tended to spend less time in violation. Nadeau determined, among other things, that a 10 percent increase in monitoring activity led to 4 percent or greater reductions in the average length of time facilities remained in noncompliance. The new ongoing ERG study focuses on the behavior of firms in two industrial sectors, petroleum refining and integrated iron and steel. The behavior under review consists of facility-level pollutant loadings regulated under the federal Clean Water Act. For the petroleum refining sector, the pollutants of concern are biological oxygen demand (BOD), total suspended solids (TSS), and ammonia nitrogen. The pollutants of concern for the integrated iron and steel sector are TSS, total zinc, and total lead. In its simplest form, Nadeau's model will test whether enforcement has a discernable effect on environmental quality by impacting the behavior of the regulated community. The goal of the model is to determine the statistical relationship between compliance monitoring and enforcement activities, and measurable environmental outcomes.

Forum on Deterrence of Environmental Violations and Environmental Crime

The Department of Justice's (DOJ) independent research arm, the National Institute of Justice (NIJ), together with DOJ's Environment and Natural Resources Division (ENRD) and OECA, held The Forum on Deterrence of Environmental Violations and Environmental Crime on July 12 and 13, 1999. The group of academic ex-

perts and senior federal, state, and local policy-makers and practitioners invited to the Forum participated in a roundtable discussion of the existing deterrence literature, and worked to generate research ideas and identify potential partners for conducting or sponsoring such research. While the Forum participants, consistent with Federal Advisory Committee Act (FACA) requirements, did not prioritize potential research topics or generate consensus recommendations, EPA considered their viewpoints in developing the RFP discussed in the following paragraph.

Request for Proposals (RFP): Corporate Environmental Performance and the Effectiveness of Government Interventions

On April 10, 2000, EPA published a Request for Proposals (RFP) entitled, "Corporate Environmental Performance and the Effectiveness of Government Interventions." This research solicitation is being sponsored by EPA's Office of Research and Development (ORD)-National Center for Environmental Research (NCER), in cooperation with the U.S. Department of Justice (DOJ)-National Institute of Justice (NIJ). The solicitation opened on April 10, 2000. The closing date for submitting grant proposals is July 24, 2000. The RFP may be accessed electronically at <<http://www.epa.gov/ncerqa/rfa/corpp00.html>>. Through the RFP, EPA anticipates making up to \$1 million available to address priority gaps in our understanding of the relationship between government interventions and the behavior of the regulated community, of which deterrence-related issues are a subset. The projected range for awards is \$50,000 to \$200,000 per research grant per year for durations of one to three years. Proposed research can be prospective or retrospective, with prospective field experiments, survey research, and multi-investigator projects more likely to justify higher funding levels. The results will be available to assist federal, state, tribal and local governments, industry associations, environmental groups, corporations, and private citizens to allocate their resources in order to achieve the greatest degree of environmental and health protection and improvement as efficiently as possible. EPA is also sponsoring a separate solicitation entitled, "Market Mechanisms and Incentives for Environmental Management (MM&I)" <<http://es.epa.gov/ncerqa/rfa/market2000.html>>. That RFP, dated November 2, 1999 with a closing date of February 2, 2000, focuses on alternatives or complements to traditional environmental regulation that rely specifically on market forces, financial mechanisms, or other instruments to encourage regulated entities to reduce emissions or improve environmental performance. Examples include pollution fees or taxes, pollution allowance trading, subsidies, and differing liability approaches.

ENFORCEMENT ACCOMPLISHMENTS: ADMINISTRATIVE ACTIONS

Question. According to the fiscal year 1998 Accomplishments Report, EPA initiated 17 percent fewer administrative actions per year from the period fiscal year 1993 to fiscal year 1998 than it did from fiscal year 1989 to fiscal year 1992. What is the reason for this decrease in activity?

Answer. There are two explanations for the decrease in administrative actions. First, states made greater use of administrative actions from fiscal year 1993 to fiscal year 1998, increasing such actions by 58 percent compared to their use in fiscal year 1989 to fiscal year 1992. Thus, states were taking more of the cases that EPA had previously addressed through administrative action. Second, during fiscal year 1993 to fiscal year 1998, EPA was expanding the tools it used to prevent or correct noncompliance to include voluntary self-disclosure cases handled informally and more focused compliance assistance. In addition, EPA has placed more emphasis during fiscal year 1993 to fiscal year 1998 on more complex judicial cases involving significant environmental harm.

ENFORCEMENT ACCOMPLISHMENTS: CIVIL REFERRALS

Question. According to the fiscal year 1998 Accomplishments Report, EPA made 6 percent fewer civil referrals to the Department of Justice per year from the period fiscal year 1993 to the fiscal year 1998 than it did from fiscal year 1989 to fiscal year 1992. What is the reason for this decrease in activity?

Answer. A review of the data from fiscal year 1993 to fiscal year 1998 shows that in 3 of the years during that period, the number of civil referrals was higher than any single year in the fiscal year 1989 to fiscal year 1992 period. For only two years, fiscal year 1995 and fiscal year 1996, were the number of referrals lower than in any single year in the period fiscal year 1989–1992. Further, the total for fiscal year 1999 (403) was also higher than during any year in the fiscal year 1989 to fiscal year 1992 period. Finally, the number of civil referrals in the last three years (fiscal years 1997–1999) have set a three-year consecutive all-time record.

RISK MANAGEMENT: FISCAL YEAR 1999, FISCAL YEAR 2000 AND FISCAL YEAR 2001
FUNDING LEVELS

Question. At what level, in terms of FTE and dollars, did the Agency fund the Risk Management Plans Assistance key program in the fiscal year 1999 budget request, fiscal year 1999 operating plan, fiscal year 1999 actuals, fiscal year 2000 budget request, fiscal year 2000 proposed operating plan, and fiscal year 2001 budget request. Provide the information by NPM, appropriation, goal, objective, sub-objective, office or region, and activity.

Answer. Response provided in the tables below.

(Dollars in thousands)

NPM: OSWER Appro: EPM Goal/Obj/Sub: 050202	Fiscal year 1999					
	Budget request		Op plan		Estimated actuals ¹	
	FTE	Amount	FTE	Amount	FTE	Amount
Risk Management Plans	28.5	\$11,870.9	28.5	\$7,254.9	28.5	\$7,254.9
HQ	10.0	\$10,308.8	10.0	\$5,692.8	10.0	\$5,692.8
Regions	18.5	\$1,562.1	18.5	\$1,562.1	18.5	\$1,562.1

¹ Since RMP activities are not specifically tracked in the Agency accounting system, an estimate was provided for fiscal year 1999 actual obligation.

(Dollars in thousands)

NPM: OSWER Appro: EPM Goal/Obj/S ub: 050202	Fiscal year 2000				Fiscal year 2001	
	Budget request		Op plan		Budget request	
	FTE	Amount	FTE	Amount	FTE	Amount
Risk Management Plans	28.5	\$11,804.6	28.6	\$7,242.8	28.6	\$7,913.5
HQ	10.0	\$10,152.9	10.0	\$5,727.7	10.0	\$6,297.2
Regions	8.5	\$1,651.7	18.6	\$1,515.1	18.6	\$1,616.3

RISK MANAGEMENT: REDUCTIONS IN FISCAL YEAR 1999, FISCAL YEAR 2000 BUDGET
REQUESTS

Question. Analysis of the Agency's budget requests indicates that EPA reduced funding to the Risk Management Plans Assistance key program in the fiscal year 1999 operating plan and the fiscal year 2000 proposed operating plan from the higher levels contained in each year's budget request. Why did the Agency make reductions in Risk Management Plans Assistance from each of these budget requests to the following operating plans and what impact did it have on the activity levels of the program?

Answer. The fiscal year 1999 and fiscal year 2000 budgets contained an increase in the risk management planning (RMP) activity to support a \$5.6 million grant initiative to encourage states to develop and manage their own RMP programs . The initiative was designed to provide states seed money (for up to two years) to develop their audit and inspection, technical assistance and outreach capabilities. It was also intended to help them establish the funding mechanisms needed to sustain the program. Reductions in the EPM appropriation in both years resulted in EPA removing the funding requested for this effort in order to meet higher priorities.

The impact of the reductions are not immediately visible since the Agency currently has 10 states in the pipeline that have committed to developing programs. To help keep these states on track, we are making a small amount of funding—\$300,000—available, as well as providing program support. To promote recruitment, we will emphasize flexibility in how states will be authorized to receive delegation.

Since fiscal year 1999, when implementation of the RMP program began, base resources have been redirected to EPA regions to carry out their responsibility as the implementing agency in lieu of states. Regions continue to work in securing agreements through their technical assistance and outreach activities, however, should regions fail, EPA must be prepared to operate the program long-term for about half of the 56 states and territories.

AUDIT POLICY: FISCAL YEAR 1998 CIVIL REFERRALS TO DOJ ELIGIBLE FOR RELIEF

Question. Many violations of emission or discharge standards are required to be identified by prescribed monitoring and thus violations encountered would not be eligible for relief under the Agency's audit policy and its requirement for voluntary audits. For each statute and section under which EPA made a civil referral to the Department of Justice in fiscal year 1998, identify whether a violation under that section would be eligible for relief under the audit policy and provide a short description of the reason.

Answer. Analysis of whether a certain violation-type is eligible for penalty relief under the Audit Policy varies depending upon several factors, primarily how the circumstances surrounding the violation relate to the nine conditions of the policy. Violation of a statutory requirement may be ineligible under certain circumstances and eligible under others. Therefore, EPA determining whether certain violation types identified in fiscal year 1998 enforcement cases would be eligible for the policy requires consideration of many different hypothetical scenarios. For example:

- How would the violation have been discovered?
- Would discovery of the violation have been required under an existing permit or prior settlement or court order?
- Had a state or local investigation begun?
- Would the discovery have occurred prior to the commencement of EPA's investigation?
- Had notice of a citizen suit been issued?
- Did the company have prior violations that would make the violation at issue a repeat violation?

Without reasonable access to this type of information about the cases, EPA's analysis would be difficult to conduct and would likely provide inaccurate responses.

Attached is a break-down of the various statutes represented in our fiscal year 1998 enforcement cases.

The Audit Policy provides that matters that are the subject of a federal investigation or inspection are not considered independent discoveries and are ineligible for penalty relief. It follows that all cases referred to the Department of Justice would be ineligible.

Violations discovered solely through monitoring that is required by law or through a permit are ineligible—although there could be case-specific circumstances that would warrant treatment of such violations under the policy. The key issue is whether an entity had a pre-existing obligation under statute or permit to look for a violation—i.e., was the discovery of the violation voluntary—not whether an entity had a pre-existing obligation to report to EPA any violations it discovers. Therefore, in the instance of an entity that did not conduct legally required monitoring, a disclosure that involves failure to monitor would be eligible under the policy.

The most prominent federal monitoring requirements are the Clean Water Act's NPDES daily monitoring requirements, as promulgated at 40 CFR 122.41; the Safe Drinking Water Act's Public Water Sewer Systems monitoring requirements, as promulgated at 40 CFR 141; the Resource Conservation and Recovery Act's hazardous waste leak detection monitoring requirements, as promulgated at 40 CFR 265.1063; and the Clean Air Act's Title V operating permit requirements, as promulgated at 40 CFR 70.5.

On September 30, 1999, EPA issued a memorandum to clarify that certain Clean Air Act violations discovered, disclosed and corrected by a company prior to issuance of a Title V permit are potentially eligible for the Audit Policy. That memorandum allows New Source Review (NSR) and Prevention of Significant Deterioration (PSD) violations discovered through extraordinary review of permitting history and meeting conditions 3 through 9 of the Audit Policy to receive penalty relief under the policy.

AUDIT POLICY: FISCAL YEAR 1998 ADMINISTRATIVE PENALTY ORDER AND ADMINISTRATIVE COMPLIANCE ORDER ELIGIBLE FOR RELIEF

Question. For each statute and section under which EPA issued an administrative penalty order or an administrative compliance order in fiscal year 1998, identify whether under that section would be eligible for relief under the audit policy and provide a short description of the reason.

Answer. See BOND 129 answer. Audit policy cases are resolved through three mechanisms: penalty orders; compliance orders; and unilateral determinations (often referred to as notices of determination). Therefore, fiscal year 1998 administrative orders include many of the cases resolved under the Audit Policy, as well as unrelated enforcement cases. We will provide an approximate break-out of the fiscal year 1998 administrative orders in two weeks.

The Audit Policy cases settled in fiscal year 1998 were resolved with the following distribution:

- 10 were resolved through an administrative penalty order (these are cases for which only partial (75 percent) credit under the policy was granted or for which an economic benefit was collected).
- 4 were resolved through a notice of noncompliance (NON) or notice of violation (NOV) under which no penalty was collected.
- 28 were resolved through a unilateral order (Notice of Determination) or Agency letter under which no penalty was collected.
- 31 were resolved through the use of administrative orders under which no penalties were collected.

Because of the several ways in which these cases can be resolved, we report audit policy cases collectively without breaking down the cases by settlement types. However, some audit policy cases may have had an ongoing correction or remedy (these would be a subset of the fourth category above) that warranted reporting as a compliance order. The same applies for audit policy cases for which some aspect of penalties were collected (first category above).

AUDIT POLICY: FISCAL YEAR 1998 ADMINISTRATIVE COMPLIANCE ORDER ELIGIBLE FOR RELIEF

Question. For each statute and section under which EPA issued an administrative compliance order in fiscal year 1998, identify whether under that section would be eligible for relief under the audit policy and provide a short description of the reason.

Answer. See BOND 129 answer. Audit policy cases are resolved through three mechanisms: penalty orders; compliance orders; and unilateral determinations (often referred to as notices of determination). Therefore, fiscal year 1998 administrative orders include many of the cases resolved under the Audit Policy, as well as unrelated enforcement cases. We will provide an approximate break-out of the fiscal year 1998 administrative orders in two weeks.

AUDIT POLICY: HUMAN HEALTH OR ENVIRONMENTAL IMPROVEMENTS

Question. EPA is committed to obtaining human health or environmental improvements from concluded environment actions but does not consider violations disclosed under the audit policy to be enforcement actions. So to the audit policy's emphasis on paperwork and record keeping violations, 84 percent of disclosures in the last evaluation, is in contrast to the enforcement program's goal of 75 percent of concluded actions requiring environmental or human health improvements. Is the goal of the audit policy not to require environmental or human health improvements? If so, why has the Agency structured the policy this way?

Answer. The Audit Policy has proven to be efficient for companies and EPA in resolving record-keeping and reporting violations. Record-keeping and reporting requirements provide the framework for public access to information, the structure for safe handling, and the use and discharge of hazardous substances, and are derived from federal laws enacted by Congress. The failure to submit emergency and chemical inventory forms, e.g., can have tragic consequences, such as the death of firefighters unaware of the presence of hazardous chemicals. As the greatest number of violations tend to involve monitoring and reporting requirements, it is not surprising that the majority of disclosures include violations of this type. EPA has undertaken several efforts over the past year to encourage the disclosure and correction of violations of emission and discharge limits. These include an agreement with a large manufacturer to audit and disclose violations of Clean Air Act permit and emission standards; a compliance partnership agreement to encourage controlling VOC emissions from petroleum storage tanks, an audit agreement with the National Pork Producers Council to reduce or eliminate penalties for disclosure and correction of Clean Water Act violations; 67 municipal audits conducted in response to an initiative from Region 4, which are expected to reduce sanitary sewer overflows by improving maintenance and expanding capacity; and voluntary audits by airlines of compliance with fuel standards.

AUDIT POLICY: VOLUNTARY NATURE VS GOAL OF ENFORCEMENT PROGRAM

Question. The voluntary nature of the audit is cited as a reason the audit policy does not induce more violations of environmental or health standards. If the goal of the enforcement program is to address environmental and human health problems with 75 percent of concluded enforcement actions requiring environmental or human health improvements, why does the Agency conclude the voluntary nature provision which runs counter to the goal of the enforcement program?

Answer. As explained in an answer to a similar question last year, the 75 percent goal applies to traditional enforcement actions, not voluntary disclosure and correction under the audit policy. The Agency's policy was designed to provide an incentive for voluntary actions to identify and correct violations. Violations identified through prescribed monitoring (e.g. daily monitoring reports) are already generally available to federal and state agencies. In addition, EPA believes that guaranteeing amnesty for all violations, regardless of how they are identified would provide an obvious disincentive to conduct good audits.

AUDIT POLICY: QUALITATIVE MEASURE OF SUCCESS

Question. EPA has cited quantitative measures of success for its audit policy such as the number of violations disclosures and corrections generated for facilities. Why does the Agency not measure the success of the Audit Policy in qualitative terms such as meeting the goals of requiring environmental or health improvements?

Answer. EPA reports successes of Audit Policy use in a quantitative measure, consistent with reporting requirements under the Government Performance and Results Act. For some cases, however, EPA is aware of the environmental and health improvements that result from the case. For example, EPA's settlement with American Airlines is expected to eliminate nearly 700 tons of pollutants from the air annually.

Because of the recent significant growth in the Audit Policy program and the Agency's interest in environmental and health improvements, EPA has begun to further develop capabilities for begin tracking such improvements made under the policy.

AUDIT POLICY: PENALTY RELATED CHANGES

Question. EPA considered and approved non-penalty related changes to the Audit policy to encourage additional quantities of disclosures. Why did the Agency not consider penalty related changes to increase the quality of disclosures in terms of meeting the goal of requiring environmental or human health improvements?

Answer. Recovering a violator's economic benefit from noncompliance is a cornerstone of EPA's civil penalty program. In addition, many federal statutes explicitly require EPA and the Federal courts to consider a violator's economic benefit in imposing a civil penalty. Although the Audit Policy is a voluntary program, EPA does not believe participants should gain an economic advantage over those regulated entities that have maintained compliance with federal environmental statutes. To encourage increases in the quantity and breadth of disclosures, EPA continues its attempts to raise the regulated community's awareness of the Audit Policy. During the past two years, EPA has received certain chemical release- and degradation-related disclosures that we had not before received. Through the use of sector-related Audit Policy initiatives and targeted marketing, EPA has recently received disclosures related to wetlands, air technology, publicly owned treatment works (POTWs) and federal fuel standards.

AUDIT POLICY: NUMBER OF VIOLATIONS DISCLOSED

Question. In fiscal year 1998, how many violations were disclosed under the state audit policies or statutes in each of the states with audit policies or statutes?

Answer. EPA does not have access to this information. To obtain such information, EPA would need to issue to states resource-intensive inquiries that would require clearance through OMB.

AUDIT POLICY: CASES SETTLED BY CORRECTING VIOLATIONS

Question. *Question.* Why did only 32 percent of companies disclosing potential violations in fiscal year 1998 under the Agency's audit policy settle those cases by correcting violations and taking steps to prevent their recurrence?

Answer. Many of these disclosures have yet to be resolved. EPA has tracked audit policy cases cumulatively by fiscal year so that the collective data does not distinguish when a resolved case was initially disclosed. The number of resolved cases in a given year may include a case that was disclosed that year or in another year. For example, a case may have been disclosed in the last month of a fiscal year and resolved in the subsequent year. That dynamic creates a rolling cycle of cases, for which the resolution time for each depending on the circumstances surrounding the disclosure.

AUDIT POLICY: FISCAL YEAR 1998 DISCLOSURE OF VIOLATIONS

Question. As of fiscal year 1998, why has the Agency granted relief to only 38 percent of the companies disclosing violations under the Agency's audit policy since inception of the policy?

Answer. As of fiscal year 1999, EPA had granted penalty relief to approximately half of the facilities disclosing violations under the Audit Policy since the policy's inception. Facilities that have not been granted penalty relief fall into one of several situations: the disclosure has not yet been resolved; the disclosure did not meet the conditions of the Audit Policy; upon further analysis, EPA determined that a violation did not occur; or the entity disclosed the identity of multiple facilities at the onset of a corporate-wide audit, but ultimately determined that violations occurred at fewer facilities.

Several factors influence the first category. One, a company may not disclose all information necessary to determine the nature of the violation it suspects occurred, or may disclose the information in subsequent communications. Two, EPA has received an increasing number of multi-facility disclosures that may involve many violations and more than one violation type. These multi-facility disclosures usually involve extended schedules for audits, which may not be completed for one year or longer. Three, EPA is receiving disclosures of violation types that require greater analysis than traditional record-keeping violations. Four, in fiscal year 1999 EPA provided Regions with additional tools and information resources in an effort to expedite case resolution time. The results of such efforts should be more apparent in fiscal year 2000.

Through fiscal year 1998, EPA granted penalty relief to an estimated 4 out of 5 facilities whose disclosure cases had been resolved. Of the remaining 20 percent, some included cases where the audit policy was inapplicable because no violation had occurred. The improvements we are making to the case tracking system for audit policy cases will allow us to provide more accurate and detailed information in the future. The Agency has recently lengthened the time for disclosure from 10 to 21 days, and more disclosures are being made under structured auditing agreements with terms identified in advance of factual disclosures, both of which should result in fewer policy denials in the future.

AUDIT POLICY: MEASURE OF UNFAIR BUSINESS ADVANTAGE

Question. The Agency has stated that penalty related changes to the audit policy would allow regulated entities to gain an unfair business advantage. However, the Agency structured the audit policy so that the overwhelming (84 percent) number of violations disclosed under the policy do not address environmental or human health improvements. How has the Agency measured and determined the gain to society in preventing a degree of unfair business advantage outweighs the environmental and human health improvements which would be achieved from allowing those advantage gains?

Answer. Congress, the General Accounting Office, and federal courts have all recognized that it is critical to recover economic benefit a company gains from violating federal laws. This principle is not at odds with EPA's goal of protecting human health and the environment, rather, it is fundamental to achieving that goal. Our commitment to recover economic benefit eliminates the incentive to violate the law by avoiding or postponing compliance. This deterrent effect assures more widespread compliance with the law, which offers obvious benefits to public health and the environment through reduced emissions. Finally, EPA does not agree that record-keeping and reporting requirements in statutes like the Emergency Planning and Community Right to Know Act, which was enacted by Congress in the wake of the Bhopal tragedy, provide no benefit to public health or the environment.

AUDIT POLICY: DETERRENT EFFECT

Question. The Agency fears that elimination of penalties in the audit policy would provide a disincentive for entities to be proactive in their environmental compliance attempts to address the future conduct of an entity. Does the Agency believe that the audit policy is also providing a deterrent effect on the behavior of regulated entities above and beyond the deterrent effect of a strong and vigorous enforcement program? What is the basis for this opinion?

Answer. A study by the National Council of State Legislatures found that more expansive amnesty laws in effect in some states had no effect on the overall level of auditing. EPA believes that the Audit Policy is one component of a multi-faceted approach to obtaining environmental compliance. As noted in the 1992 Price-Waterhouse study, concern for an enforcement action is a strong motivator for cor-

porate environmental auditing. Although EPA wishes to create an incentive for companies to voluntarily correct historical noncompliance, we do not believe it should be done at the cost of those companies that have historically complied with regulations, including those who've made significant capital expenditures to comply with federal law at the time it was required. To treat disclosers under the Audit Policy as if they were historical compliers would create a financial penalty for making prompt capital expenditures required by law.

AUDIT POLICY: PENALTY CHANGES AND ITS EFFECT ON DETERRENT

Question. To what degree would penalty changes to audit policy would materially diminish the deterrent effect of the Agency's strong and vigorous enforcement program? What is the basis for this option?

Answer. EPA has a limited number of resources. Together, a strong enforcement program and the Audit Policy provide a deterrent for noncompliance and an incentive for compliance. Elimination of all penalties under the Audit Policy would eliminate the incentive for compliance by providing a competitive advantage to those companies that do not comply with federal environmental requirements and then later elect to come into compliance without any penalty for the delay in compliance time.

EXISTING CHEMICALS: FISCAL YEAR 1999—FISCAL YEAR 2000 RESOURCES

Question. At what level, in terms of FTEs and dollars, did the agency fund the Existing Chemical Data, Screening, Testing and Management key program in the fiscal year 1999 budget request, fiscal year 1999 operating plan, fiscal year 1999 actuals, fiscal year 2000 budget request, fiscal year 2000 proposed operating plan, and fiscal year 2001 budget request. Provide the information by NPM, appropriation, goal, objective sub-objective, office or region, and activity.

Answer. The information requested is presented in the accompanying spreadsheet.

EXISTING CHEMICALS KEY PROGRAM

[Dollars in thousands]

Existing Chemicals key program Activities	Fiscal year 1999				Fiscal year 2000				Fiscal year 2000 Pres. budget	
	Pres. budget ¹		Operation plan ²		Pres. budget		Operating plan		FTE	Dollars
	FTE	Dollars	FTE	Dollars	FTE	Dollars	FTE	Dollars		
OPPTS total (EPM)	125.1	\$12,491.2	122.1	\$14,225.3	120.4	\$23,045.6	118.5	\$20,394.5	117.4	\$24,412.4
HQ Total	125.1	\$12,491.2	122.1	\$14,225.3	117.4	\$22,779.0	118.5	\$20,394.0	114.4	\$24,133.2
Chemical Right to Know				\$1,250.0	37.0	\$14,114.1	37.0	\$11,490.0	34.0	\$14,487.8
Other Existing Chemicals activities	125.1	\$12,491.2	122.1	\$12,975.3	80.4	\$8,664.9	81.5	\$8,904.0	80.4	\$9,645.4
Regions: Chemical Right to Know					3.0	\$266.6		\$0.5	3.0	\$279.2

¹ Fiscal year 1999 President's Budget key program totals as displayed in fiscal year 2000 President's Budget submission.

² Agency data not available at objective level for fiscal year 1999 actual.

Note: Key Program—Existing Chemicals.

EXISTING CHEMICALS FUNDING REDUCTIONS

Question. Analysis of the Agency's budget requests indicates that EPA reduced funding to the Existing Chemical Data, Screening, Testing and Management key program in the fiscal year 1999 operating plan and the fiscal year 2000 proposed operating plan from the higher levels contained in each year's budget request. Why did the Agency make reductions in Existing Chemical Data, Screening, Testing and Management from each of these budget requests to the following operating plans and what impact did it have on the activity levels of the program?

Answer. EPA found it necessary to make significant budget cuts in fiscal year 1999 as a result of across-the-board reductions made by Congress. The Congressional reductions led to cuts in a variety of programs, including the Existing Chemical Data, Screening, Testing and Management key program. The fiscal year 2000 requested and enacted amounts for Existing Chemicals was higher than in the previous year, primarily because the Agency requested \$14 million for the Chemical Right-to-Know initiative. Nevertheless, in fiscal year 2000, the Agency was constrained to reduce other parts of the Existing Chemical program, as well as the Chemical Right-to-Know Initiative, as a result of the general reductions in the appropriations.

The Agency attempted to reduce the impact of these cuts to the extent possible by analyzing its Existing Chemicals program using the principles of government reinvention to determine the most efficient, publicly responsive, and cost-effective way to proceed. The Agency concluded that the Chemical Right-to-Know (ChemRTK) Initiative offered both the best return on investment and the greatest promise of achieving the Existing Chemicals program's goals of protecting human health and the environment, and adjusted its program activities accordingly. The cooperative, voluntary nature of the program, especially the HPV Challenge Program segment, appeared to offer an excellent opportunity for government and industry to contribute as partners, working in concert with other stakeholders, in a program geared to providing near-term public access to a significant quantity of essential health and safety information, and for the Agency to gain data vital to its core risk assessment and risk management missions. The program offered tangible benefits in terms of both time and cost savings over attempting to use the traditional regulatory, adversarial process to achieve the same ends. The net result is that the core activities and mission of the Existing Chemicals program have benefitted from the investment of resources in ChemRTK.

Within ChemRTK and the HPV Challenge, the Agency adjusted the funding for specific activities according to their relative priority in time. Thus, risk assessment and risk management activities, which require the presence of data, were de-emphasized at the beginning of the project in order to focus more attention on data development and collection activities, which will provide the necessary information in order to conduct the risk assessment work.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: POLLUTANT REDUCTIONS

Question. An Agency performance goal for fiscal year 2001 is that 75 percent of concluded enforcement actions require environmental or human health improvements such as pollutant reduction. Why does the Agency's performance measure call for only 35 percent of concluded enforcement actions to identify pollutant reductions?

Answer. The Agency Performance Goal for 2001 says: 75 percent of concluded enforcement actions will require environmental or human health improvements, such as pollutant reductions and/or changes in practices at facilities. It is difficult to project in advance the percentage of cases which will produce pollutant reductions. The 35 percent measure is a reasonable projection based on performance in previous years.

ENFORCEMENT PERFORMANCE GOALS AND MEASURES: RISKS FACTORS TO DIFFERENT POLLUTANTS

Question. Does the Agency apply any relative risk factors to the different pollutants reduced by enforcement actions to determine the degree of environmental improvement achieved by weight of pollutant reduced? If so, how?

Answer. The Agency does not apply quantitative and/or relative risk factors to the pollutants reduced by enforcement actions. Over the past several years, EPA has recorded information on a range of environmental improvements, such as the expected pollutant reduction and modifications to industrial processes, resulting from Federal enforcement actions. Because EPA has included actions requiring pollutant reductions as an annual performance measure in fiscal year 2000 and fiscal year

2001, we have focused on improving the accuracy and completeness of pollutant information related to concluded enforcement actions. EPA plans to begin a project to address the manner in which quantitative pollutant reduction/controlled amounts are measured and reported for each media program, using standard pollutant names, calculation methods and units of measure.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: REGULATED POPULATIONS MEASURING COMPLIANCE

Question. For which selected regulated populations is EPA measuring compliance rates or other indicators of compliance?

Answer. EPA is currently completing its analyses of potential regulated populations, violations within those populations, and the number of random inspections needed to produce statistically valid compliance rates. This analysis will be completed by July 1, 2000.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: FISCAL YEAR 2000 BASELINE RATE OF COMPLIANCE

Question. What is the fiscal year 2000 baseline rate of compliance or other indicator of compliance for each of the selected regulated populations?

Answer. The Agency will use the first year of statistically valid compliance rates for each regulated population as a baseline against which subsequent years will be compared.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: FISCAL YEAR 1998, FISCAL YEAR 2000 AND FISCAL YEAR 2001 IMPROVEMENTS IN USE/HANDLING OF POLLUTANTS

Question. What was the number of concluded enforcement actions that resulted in improvements in the use or handling of pollutants in fiscal year 1998, fiscal year 2000 and expected in fiscal year 2001?

Answer. For fiscal year 1998 and fiscal year 1999, the percentage of settled enforcement cases requiring various improvements by facilities was 89 percent and 88 percent, respectively. Further, in fiscal year 1998 and fiscal year 1999 respectively, 27 percent and 22 percent of these complying actions required the defendants to perform either use reduction, industrial process changes, emission or disposal changes, remediations or removals. Our target for these types of improvements in fiscal year 2000 and fiscal year 2001 is 35 percent.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: POLLUTANT REDUCTIONS

Question. What was the number of concluded enforcement actions that resulted in improvements in facility management and information practices in fiscal year 1998, fiscal year 2000 and expected in fiscal year 2001.

Answer. For fiscal year 1998 and fiscal year 1999, the percentage of settled enforcement cases requiring improvements in facility management and information practices was 52 percent and 49 percent, respectively. (It should be noted that settled enforcement cases typically require multiple complying actions, so it would not be accurate to claim that about half the settled cases required only changes in facility management and information practices.) We have not set specific targets for this type of improvement in fiscal year 2000 and fiscal year 2001.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: LEVEL OF NON-COMPLIANCE

Question. What was the level of significant non-compliance recidivism in each of the CAA, CWA, and RCRA programs in fiscal year 1998, fiscal year 2000 and expected in fiscal year 2001?

Answer. The tracking of significant non-compliance (SNC) recidivism only began in fiscal year 1999; therefore the only data available for this measure is for fiscal year 1999. In the Clean Air Act program, of those SNCs that returned to compliance in fiscal year 1997, 30 percent were again SNCs within the next two years. In the Clean Water Act program, of those SNCs that returned to compliance in fiscal year 1997, 56 percent were again SNCs at some point within the next two years. In the RCRA program, of those SNCs that returned to compliance in fiscal year 1997, 17 percent were again SNCs at some point within the next two years. (For CAA and the RCRA program, this measure only looks at the inspected universe for the pool of potential repeat SNCs).

In fiscal year 2000, we will establish a firm baseline for this measure, and in fiscal year 2001 our target is reducing SNC recidivism in each program by 2 percentage points.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: FISCAL YEAR 1998, FISCAL YEAR 2000
AND EXPECTED FISCAL YEAR 2001 IN PHYSICAL COMPLIANCE

Question. What was the number of facilities that returned to full physical compliance in less than two years for each of the CAA, CWA, and RCRA programs in fiscal year 1998, fiscal year 2000 and expected in fiscal year 2001?

Answer. The tracking of significant non-complier (SNC) duration began in fiscal year 1999. In the Clean Air Act (CAA) program, of those SNCs (High Priority Violators) that returned to compliance in fiscal year 1999, 258 did so in more than two years; 278 did so in 1 to 2 years; 226 did so in 6 months to one year; and 417 did so in less than 6 months (In the CAA program, a facility loses its SNC status only when a formal order is issued and all penalties have been paid).

In the Clean Water Act (CWA) program, of those SNCs that returned to compliance in fiscal year 1999, 116 did so in more than two years; 129 did so in 1 to 2 years; 134 did so in 6 months to one year; and 570 did so in less than 6 months (In the CWA program in order to be considered a non-SNC a facility does not have to come into full physical compliance. A formal order can take a facility out of SNC).

In the RCRA program, of those SNCs that returned to compliance in fiscal year 1999 53 did so in more than 2 years; 53 did so in 1 to 2 years; 76 did so in 6 months to a year; 184 did so in less than 6 months (In RCRA, a facility is no longer considered a SNC if it has returned to full physical compliance or it is on a compliance schedule.).

In fiscal year 2000, we will establish a firm baseline for this measure, and in fiscal year 2001 our target is increasing the number of facilities in each program returning to full compliance by 2 percentage points.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: INSPECTIONS AND OUTPUT MEASURES

Question. All performance measures in the fiscal year 2001 congressional justification for inspections and investigations are output measures. Why is this still the case? What efforts are underway to develop outcome performance measures for inspections and investigation activities?

Answer. In developing an improved set of enforcement and compliance assurance performance measures, the Office of Enforcement and Compliance Assurance needed to limit the amount of new information reported by Regional offices to headquarters. Our first priority was to collect outcome information about compliance assistance, enforcement actions, and disclosures under the EPA audit policy. Outcome measures for inspections were viewed as a subsequent task. Through a number of pilots underway in Regional and headquarters-operated compliance inspection programs, the Agency is testing ways to collect information on the outcomes of inspection and investigation activities. EPA inspectors participating in these pilots are recording inspection-specific information related to compliance assistance, deficiencies observed, specific actions taken to respond to deficiencies, and other beneficial actions taken in response to the inspection. For example, based on one pilot involving 24 inspections:

- Compliance assistance was provided in 21 of the 24 inspections;
- Twenty-one inspections identified deficiencies;
- In seventeen inspections, corrective actions were taken by facility; and
- In eight inspections, other beneficial actions were taken by facility.

During fiscal year 2000 the Agency will continue to run the pilot projects to determine the value of collecting this type of information. In fiscal year 2001, the Agency will review the data and determine whether the data collection for inspection outcomes should be implemented on a national basis.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: INSPECTIONS CONTRIBUTES TO
IMPROVED RATES OF COMPLIANCE

Question. On what basis does the Agency believe its inspection presence contributes to improved rates of compliance and how did the Agency determine this belief including measure the degree of improvement?

Answer. The Agency believes that compliance monitoring inspections are an essential element of a compliance assurance program, along with compliance assistance, incentives for self-policing, and enforcement targeted toward important environmental risks and patterns of non-compliance.

It is not possible to isolate the effects of inspections (or any of the other elements) on rates of compliance. Instead, the Agency will rely on rates of compliance to measure the overall results of using all these elements. In addition, results from individual elements (e.g., pollutant reductions from enforcement cases) will also be used to measure program outcomes.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: INSPECTIONS IMPROVEMENTS AT FACILITIES

Question. On what basis does the Agency believe individual inspections result in changes and improvements at specific facilities and how did the Agency determine this belief including measure the degree of improvement?

Answer. The Agency believes that compliance inspections produce a broad range of changes and improvements at the specific facilities inspected and in the regulated community in general. Compliance inspections:

- identify potential risks to human health and the environment;
- lead to on-the-spot or subsequent correction of violations;
- provide a specific deterrent effect on inspected facilities;
- provide a general deterrent effect on other facilities in the same industry sector or geographic area; and
- complement citizen efforts to monitor compliance.

As mentioned in response to a previous question, the Agency has been conducting pilots to begin documenting outcomes and results from inspections, and may begin collecting this information on a national basis if resources permit.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: INSPECTION/INVESTIGATIONS—CHANGES IN ENVIRONMENTAL AND HUMAN HEALTH

Question. In what ways might the Agency measure how the number and manner of Agency inspections and investigations bring about environment and human health improvements?

Answer. Measuring how inspections and investigations “bring about environmental and human health improvements” can be done in two ways. First, by collecting information from inspectors about outcomes of inspections and investigations we may learn that pollutant reductions and other improvements are occurring. There are several pilot projects underway or planned to collect and analyze this kind of information. Second, by collecting information about improvements that result from enforcement actions, we are measuring how inspections and investigations bring about such improvements since cases are based on inspections and investigations.

For example, the compliance investigations that the Agency has conducted in the electric utility and petroleum refinery sectors have uncovered serious non-compliance. A number of major enforcement actions have resulted from these investigations and on-going investigations may uncover further non-compliance. Most of the non-compliance identified through the investigations should result in measurable environmental improvements, e.g., reduction of air pollutants such as nitrogen oxides, particulate matter, and sulphur dioxides.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: INSPECTIONS/INVESTIGATIONS—CHANGES IN BEHAVIOR

Question. In what ways might the Agency measure how the number and manner of Agency inspections and investigations bring about changes in behavior in the regulated community?

Answer. Measuring how inspections and investigations “bring about changes in behavior in the regulated community” can be done in two ways. First, by collecting information from inspectors about the outcomes of inspections and investigations, we may learn that behavior changes are occurring. There are several pilot projects underway or planned to collect and analyze this kind of information. Second, by collecting information about behavior changes resulting from enforcement actions, we are measuring how inspections and investigations bring about such changes since cases are based on inspections and investigations.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: STATUS OF REGION II PILOT PROJECT

Question. What is the status of the Region II pilot project to document results achieved through inspections? Will the Agency implement the pilot for the entire national program?

Answer. In fiscal year 2000, EPA Region II is piloting a tool to better manage inspection resources. The Region is currently collecting information on how inspections are targeted and the results of those inspections. The results of the pilot will be used by the Region to determine if there are more effective targeting strategies for compliance inspections and whether there is a more efficient way to manage the overall compliance inspection program.

In fiscal year 2001, EPA plans to review the results of the Region II pilot as well as the results of other pilot projects to collect inspection outcome data currently un-

derway in select Regional and Headquarters programs. A decision will then be made about whether to expand the use of the Region II targeting pilot and/or the other pilots designed to learn more about inspection outcomes.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: NUMBER OF QUALITY MANAGEMENT PLANS (QMS)

Question. How many Quality Management Plans (QMS) will the enforcement program develop and implement for major systems in fiscal year 2000, which major systems will have plans, and which major systems will still require plans?

Answer. In fiscal year 2000, no additional work will be undertaken on the Office of Enforcement and Compliance Assurance (OECA)'s Quality Management Plan (QMP) for its data systems. In fiscal year 1998, OECA initiated evaluations of its information systems under its Quality Management Plan. To date, OECA has completed a baseline data quality audit, data quality objectives, quality assurance project plans, and standard operating procedures for the National Compliance Data Base and the Resource Conservation and Recovery Information System, and data quality objectives for the Permit Compliance System. No work has been completed to date on the AIRS Facility System, the Enforcement Docket, and the Safe Drinking Water Information System.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: QMS DATA SYSTEMS COMPLETED IN FISCAL YEAR 2001

Question. For which systems will the enforcement program complete QMS in fiscal year 2001?

Answer. The Office of Enforcement and Compliance Assurance (OECA) will use its data modernization efforts to address and resolve the challenging problem of improving data quality. Work on additional portions of the OECA Quality Management Plan (QMP) in the fiscal year 2001 time frame will be considered in coordination with the effort to modernize OECA data systems and integrate enforcement and compliance data. Modernization and integration is being undertaken as a part of the Agency's Integrated Information Initiative. Additional work on the QMPs may well be delayed as resources are diverted to modernization in fiscal year 2001.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: ASSISTANCE AND TRAINING ACTIVITIES

Question. What outcome performance measures could the enforcement program develop for its capacity building activities to measure environmental improvements resulting from the assistance and training activities?

Answer. The capacity building measure was intentionally designed to only count outputs (i.e., training courses delivered, etc.). Measuring the outcomes or environmental results of capacity building efforts would require extensive new reporting by state, local, and tribal governments who use EPA training and other capacity building efforts to produce outcomes.

ENFORCEMENT PERFORMANCE GOALS/MEASURES: ENVIRONMENTAL IMPROVEMENTS FROM COMPLIANCE INCENTIVES

Question. While the performance measure for the compliance incentives program measures the behavior of the regulated community, there is no measurement for environmental or human health improvements. What performance measures could the enforcement program develop to determine the environmental improvements coming from the compliance incentives program.

Answer. OECA has recently started tracking environmental or human health improvements resulting from self disclosures in the same manner that such improvements are tracked for enforcement cases. We are still in the implementation stages of developing a reporting system and providing guidance to EPA Regional Offices. However, once the implementation process is complete, we will be able to provide full results from the self-disclosures similar to those currently reported for enforcement cases, such as pollutants reduced and changes in facility practices.

ENFORCEMENT PERFORMANCE GOALS/MEASURE: NUMBER OF ENTITIES VOLUNTARILY DISCLOSING VIOLATIONS

Question. Why does the Agency not include the number of entities voluntarily disclosing violations of environmental violations (other than paperwork or record keeping requirements)?

Answer. The Agency does currently report (e.g., in EPA's fiscal year 1999 Annual Performance Report) the number of entities which voluntarily elect to use EPA's audit policy to disclose and correct any or all violations disclosed under the policy.

ENFORCEMENT PERFORMANCE GOALS/MEASURE: 10 COMPLIANCE ASSISTANCE OUTCOME
MEASURES PROJECTS

Question. Describe the 10 compliance assistance outcome measurement projects for which information is being collected to assess the impacts of compliance assistance. What is the status of each of those efforts?

Answer. Below is a table that describes each project and provides the status. Each of these projects will collect data on OECA's compliance assistance outcome measures which fall into three categories: (1) improved awareness/understanding of regulatory requirements; (2) regulatory and non-regulatory behavioral changes (e.g. getting a permit, conducting an audit); (3) environmental and human health improvements. The various projects will collect the data for these measures through surveys, on-site revisits and database reviews.

Region	Project Summary	Measurement Methodology	Status
I	Evaluation of the New England Environmental Assistance Team's Auto Service Compliance Assistance Program, which consists of written assistance material, workshops and on-site assistance.	Mailed follow-up Survey to 14,000 recipients of auto service compliance assistance.	Survey sent out 1st Quarter fiscal year 2000 results currently being summarized.
II	Evaluation of the effectiveness of the Dry Cleaning Compliance Assistance Program.	1. Develop a baseline of the compliance rate and perc alternative use among dry cleaners in NYC using data from inspections and compliance assistance visits that were conducted in to date. 2. Follow-up surveys sent to those participating in compliance assistance program..	1. Baseline underway. 2. Follow-up by 3Q 2000.
III	Evaluation of Clean Air Act Risk Management Plan Compliance Assistance Workshops.	Phone Survey to 100 attendees of the workshop.	1. 40 percent response rate. 2. 68 percent of facilities made changes as a result of the workshop.
IV	NPMS Pilot Project: Charleston CBEP Project: Developing workshops/seminars/training and compliance guides and on-site visits. Bulk of assistance conducted by SC DHEC. Primary form of assistance is on site. Assistance is provided to primarily Auto Repair and Paint Body Shop businesses.	A. Compliance Baseline for 10 facilities (out of 150 total). B. Follow-Up to Baseline through on-site inspections after assistance provided. C. Interim Report on Results.	A. Done. B. Done. C. 3Q 2000.
V	SDWA Project with the Department of Interior: Source Water Assessments for groundwater sources on National Park Service Lands. Assist States of Minnesota, Indiana, and Wisconsin making susceptibility determinations for water supplies.	A. Letters sent to 3 National Parks to outline process for info gathering. B. Follow-up site visits that included providing assistance. C. Summary report on assessments that may be used to develop management education and outreach materials for other Federal Facility compliance assistance visits. D. Surveys to Park Service Lands visited.	A. Done. B. Done. C. End of 2nd Q. D. Mid-3rd Q
VI	NPMS Pilot: Educate Maquiladora industries through outreach seminars on their hazardous waste environmental management obligations. Seminars were conducted in July and August of 1998.	A. Compliance Manifest Baseline using RCRIS and HAZTRAKS. B. Survey seminar participants in mid-May of 1999. C. Section 3007 Request to determine changes in manifest baseline. (on hold due to contract problems) D. Final Report on Results.	Completed. 150 surveys mailed out, 26 response. 16 percent response rate. a. 96 percent felt more aware and 60 percent had a better understanding. b. 58 percent made changes in env. practices and 50 percent made a physical change. c. 42 percent reduced waste.

Region	Project Summary	Measurement Methodology	Status
VI	Offer compliance assistance to the Maritime industry at a conference in August 1998..	A. Compliance Baseline. Region has an existing baseline. B. Follow-up survey to industry that attended the conference C. Post-Compliance Assistance Baseline through follow-up inspections to an industry sample. (7 or 8 already underway, facilities that attended the workshop). D. Final Report on Results.	B. Completed. 123 surveys mailed out; 33 percent response rate. a. 93 percent felt more aware and 85 percent had a better understanding. b. 63 percent made changes in env. practices, 29 percent installed pollution control equipment, and 71 percent made a physical change. c. 24 percent reduced waste. C. Based on follow up inspections, noncompliance dropped from 33 percent to 12 percent.
VII	EPCRA/TRI Release Inventory Project. Conducted four workshops/seminars/training and provide compliance assistance materials. These one-day workshops were conducted in April, 1999 and were sponsored by EPA, Region 7 and cosponsored by Local Emergency Planning Committees. Primary assistance involves instruction on completing Form R as required under Section 313 of EPCRA. Assistance is provided to industries listed by certain Standard Industrial Code (SIC) code that meet reporting requirements of EPCRA, Section 313. Also includes seven new industry sectors.	A. Follow-up survey to industries that attended workshops. B. Follow-up survey to industries in specific SIC codes that did not attend workshops. C. Analysis of Post-Compliance Assistance Baseline through review of Form Rs filed. D. Final Report on Results.	A. 50 percent response rate. 58 percent of those responding felt that the workshops helped them to determine if their facility was subject to EPCRA reporting requirements. 52 percent felt the information they received helped improve the way they manage records and determine emissions estimates and off-site transfers of toxic substances when completing Form R. B. 1Q 2000 C. 3Q 2000 D. 3Q 2000.
VIII	The overall goal of this project is to identify, measure and compare the most effective and efficient approaches to motivating facilities to achieve or exceed compliance, and the result to the environment. This is to be accomplished by developing measures for the various activities of enforcement (pollution prevention, compliance assistance activities, and other "non-traditional activities) and incorporating these measures into the regional inspection case conclusion data sheets (CCDS).	The Region 8 project calls for taking Case Conclusion information and reporting it as environmental outputs and outcomes (in addition to the "traditional" enforcement activities). Region 8 is working with the State of Colorado to identify the specific media, measurements and reports that will most effectively present and reflect compliance assistance activities. The selected measures and facilities will need to take into consideration already scheduled inspections in Region 8 states.	1. Determination of media/sector/geographic area (2nd quarter 2000). 2. Ensure consistency/tie-in to NPMS measures (2nd quarter 2000). 3. Focus groups with inspectors to test ability to measure activities (2nd quarter 2000). 4. Incorporation into Region VIII CATS database.
IX	Compliance Assistance Outreach Materials for MACT degreaser standard.	A. Compliance assistance baseline from site visits by Bay Area Resources Board and compliance reports and permits submitted to BARD and EPA. B. On-site Pre-workshop "test of workshop participants current knowledge. C. On-site Post-workshop "test of knowledge gained during the workshop.	A. 1Q 2000. B. 1Q 2000. C. 3Q 2000.

Region	Project Summary	Measurement Methodology	Status
X	1. Evaluation of EPA 112(r) workshops.	1. Survey of workshop participants at completion of workshops.	1. Results in house 112(r) workshops found 98 percent more aware as result of workshop; 16 percent will reduce chemical inventories; 38 percent will increase p2; 62 percent will increase emergency response measures; 19 percent increase in # of risk management plans submitted.

ENFORCEMENT PERFORMANCE GOALS/MEASURE: STATUS OF NATIONAL PERFORMANCE MEASURES STRATEGY

Question. Describe the status of the National Performance Measures Strategy and implementation of any remaining measures.

Answer. Fiscal year 2000 will be the first year that OECA will be reporting results for all of the measures from the NPMS Profile. These results will be available in the second quarter of fiscal year 2001.

WETLANDS/CWAP: LEVEL OF FUNDING

Question. At what level, in terms of FTE and dollars, did the Agency fund the Wetlands (CWAP) key program in the fiscal year 1999 budget request, fiscal year 1999 operating plan, fiscal year 1999 actuals, fiscal year 2000 budget request, fiscal year 2000 proposed operating plan, and fiscal year 2001 budget request. Provide the information by NPM, appropriation, goal, objective, sub-objective, office or region, and activity.

Answer. Agency funding of the Wetlands key program is detailed below.

OFFICE OF WATER ¹

Fiscal year	Dollars	FTE
1999 Budget Request	\$17,489,400	158.6
1999 Operating Plan	\$15,694,900	150.5
2000 Budget Request	\$18,124,500	164.6
2000 Proposed Operating Plan	\$15,730,000	150.3
2001 Budget Request	\$17,315,200	149.1

¹ Appropriation: EPM; Goal 2: Clean and Safe Water; Objective 2: Conserve and Enhance Nation's Waters.

WETLANDS/CWAP: REDUCTIONS IN FISCAL YEAR 1999 OP AND FISCAL YEAR 2000 PROPOSED OP

Question. Analysis of the Agency's budget requests indicates that EPA reduced funding to the Wetlands (CWAP) key program in the fiscal year 1999 operating plan and the fiscal year 2000 proposed operating plan from the higher levels contained in each year's budget request. Why did the Agency make reductions in Wetlands (CWAP) from each of these budget requests to the following operating plans and what impact did it have on the activity levels of the program?

Answer. Reductions to wetlands activities resulted from the requirement to absorb the general reductions and congressional earmarks included in the fiscal year 1999 and fiscal year 2000 Environmental Programs and Management appropriation. Impacts of the wetlands cuts included diminished support for monitoring and assessment of the extent and health of the nation's wetlands; reduced funding for outreach and education on wetlands protection issues; and elimination of funding for the Five-Star Wetlands and Stream Corridor Assistance Grants.

GRANTS MANAGEMENT: NON-PROFIT RECIPIENTS

Question. How many different non-profit recipients received new non-construction grant awards in fiscal year 1999?

Answer. EPA issued new non-construction grant awards to 881 different non-profit recipients in fiscal year 1999.

GRANTS MANAGEMENT: DOLLAR AMOUNT OF NON-PROFIT AWARDS

Question. How many dollars did the Agency award to non-profit recipients in non-construction grants in fiscal year 1999?

Answer. The Agency awarded \$252,937,107 to nonprofit recipients in fiscal year 1999.

GRANTS MANAGEMENT: TOP 20 NON-PROFIT GRANT RECIPIENTS NUMBER OF AWARDS

Question. List the top twenty non-profit EPA grant recipients by number of awards in fiscal year 1999. Provide also the number of awards and total dollar amount awarded.

Answer. The following table contains the top twenty non-profit EPA grant recipients in fiscal year 1999 by the number of awards including the number of awards and total dollar amount awarded.

FISCAL YEAR 1999 TOP NON-PROFIT GRANT RECIPIENTS

[By Number of Awards]

Rank	Recipient	City/State	Dollars ¹	No. of Awards ¹
1	NATIONAL OLDER WORKER CAREER CENTER	WASHINGTON, DC	\$21,293,303	122
2	NATIONAL CAUCUS/CTR ON BLACK AGED, INC	WASHINGTON, DC	\$7,541,181	71

GRANTS MANAGEMENT: BENCH AND ON-SITE REVIEWS MEASUREMENT

Question. Why does the Agency not measure the number of bench reviews or on-site reviews conducted in order to gauge the activities of the grants management program?

Answer. As part of the Grantee Compliance Assistance Initiative, all Grants Management Offices are required to report quarterly the number of on-site reviews and bench reviews. (We assume the definition of “bench reviews” is the same as “desk reviews” which are an evaluation performed in-house at the Federal Grants Office largely, if not, entirely, from the desk. The Grants Management Office will perform an evaluation of the recipient’s procurement system, property, financial and general administrative system; communicate with the project officer and the recipient; and obtain documentation, as needed.) The Agency is currently expanding the Initiative to establish an Agency-wide overview of post-award management and outreach activities. In addition to the Grants Offices, Headquarters and Regional Program Offices will be required to identify and report on post-award activities. The Initiative will establish national goals; and identify and document post-award activities, namely on-site reviews. The Agency also will develop a database to track planned and actual grantee on-site visits performed by the Grants Management Offices to help avoid duplication and to help ensure adequate coordination across the Agency.

GRANTS MANAGEMENT: FISCAL YEAR 1999 BENCH REVIEWS BY REGION

Question. How many bench reviews did grants management offices conduct in fiscal year 1999? List by Region.

Answer. The Grants Administration Division is defining “bench reviews” as “desk reviews”. (We assume the definition of “bench reviews” is the same as “desk reviews” which are an evaluation performed in-house at the Federal Grants Office largely, if not, entirely, from the desk. The Grants Management Office will perform an evaluation of the recipient’s procurement system, property, financial and general administrative system; communicate with the project officer and the recipient; and obtain documentation, as needed.) The Grants Management Offices conducted a total of 21 desk reviews in fiscal year 1999. Please see the following chart for a list of fiscal year 1999 desk reviews by Region.

<i>Grants Management Office</i>	<i>Desk Reviews</i>
Region 1

TOTAL	21

Active grants management involves many types of activities, desk or “bench review” being just one of these activities (some Grants Management Offices, Regions 1 and 4, for example, allocate significant amounts of time providing pre and post award workshops and training for grantees. In fiscal year 1999 for example, the

Grants Management Offices nation-wide, conducted workshops and training sessions for 671 grantees).

GRANTS MANAGEMENT: FISCAL YEAR 1999 ON-SITE REVIEWS BY REGION

Question. How many on-site reviews did grants management offices conduct in fiscal year 1999? List by Region.

Answer. The following is a listing of on-site reviews conducted by grants management offices in fiscal year 1999.

<i>Grants Management Office</i>	<i>On-Site Reviews</i>
Region 1	26
Region 2	19
Region 3	6
Region 4	1

GRANTS MANAGEMENT: SINGLE AUDIT REPORTS

Question. How many Agency grants required single audit reports in fiscal year 1999 based on the level of funds received by EPA? On what does the Agency base this conclusion.

Answer. Approximately 608 grantees received over \$300,000 in grants from EPA in fiscal year 1999. This number is based on funds awarded in fiscal year 1999 and not the expenditures. Please note, the Single Audit Act requirement is based on total expenditures from all Federal Agencies and not award data from a single Agency.

GRANTS MANAGEMENT: SINGLE AUDIT REPORTS CONDUCTED BY GRANTEEES

Question. How many single audit reports were conducted by EPA grantees in fiscal year 1999? On what does the Agency base this conclusion?

Answer. Based on the Federal Audit Clearinghouse Data Query, to date, 325 reports were received on EPA grantees in fiscal year 1999. Under the Single Audit Act, the Bureau of Census is responsible for the collection of Single Audit Reports from recipients receiving Federal Assistance and for determining whether the reports are acceptable or unacceptable. Grantees are allowed six months after the close of the fiscal year to submit their Single Audit.

GRANTS MANAGEMENT: ASSISTANCE AGREEMENT AUDIT FISCAL YEAR 2001 FINDING

Question. Why is the Agency proposing reduced funding for the Assistance Agreement Audits key program in fiscal year 2001 when the number of assistance agreements awarded by the EPA has exploded over the last five years?

Answer. The decrease is attributed to: (1) the closeout of the OIG's construction grant strategy; (2) the completion of the first cycle of OIG's Clean Water State Revolving Fund (CWSRF) Strategy; and (3) the implementation of the OIG's Assistance Agreement Issue Area Plan. In fiscal year 1999, the OIG successfully completed its Construction Grant Audit Strategy. In March 1994, the OIG developed a strategy, using a risk-based approach, where we determined that 414 grants in the amount of \$6.5 billion would be subject to audit. As of January 2000, only 18 projects are still under consideration for audit.

The OIG CWSRF Audit Strategy included resources to review state financial statement audits conducted by other parties or to perform these audits ourselves. Several states plan to conduct these audits in the future rather than have the OIG conduct them, thus reducing the OIG resources requirement.

Finally, the OIG has initiated a major new audit effort of EPA's management and oversight of assistance agreements with its Assistance Agreement Issue Area Plan. This plan focuses on EPA's systems to manage and administer its assistance agreements and expands OIG audit coverage of \$2.4 billion awarded to state, local governments, tribes, universities, and non-profit organizations. Prior OIG audits focused on individual regions, programs and recipients. The implementation of our As-

sistance Agreement Issue Area Plan will result in evaluating issues nationally which also allows us to consolidate the OIG resource requirement.

GRANTS MANAGEMENT

Question. At last examination, fewer than two percent of non-profit grantees were subject to bench or on-site reviews conducting transaction testing. Do the Agency's auditors believe this rate of review is sufficient to ensure Agency funds are protected from mismanagement or misuse of funds? What rate of audit is sufficient to safeguard Agency funds?

Answer. Single Audits conducted in accordance with OMB Circular A-133 provide the primary assurance that Federal funds are protected from mismanagement or misuse. Non-Federal entities that expend \$300,000 or more in a year in Federal awards must have a single or program-specific audit conducted for that year in accordance with the provisions of OMB Circular No. A-133, Revised June 24, 1997, "Audits of States, Local Governments, and Non-Profit Organizations." An audit made in accordance with A-133 must be in lieu of any financial audit required under individual Federal awards. The scope of a Single Audit covers three areas: (1) financial statements; (2) internal controls; and (3) compliance with laws, regulations, and the provisions of contracts or grant agreements that may have a direct and material effect on each of its major programs. Any additional audits must be planned and performed in such a way as to build upon work performed by other auditors.

The OIG recently expanded this audit coverage of assistance agreements with a new audit effort. On March 31, 2000, we issued our Assistance Agreement Issue Area Plan. This plan outlines a series of audits designed to evaluate EPA's processes and systems to manage and administer its assistance agreements. This will allow us to identify systemic problems in both the financial and performance aspects of assistance agreements and develop solutions that affect the entire population of assistance agreements. Part of this issue area will assess non-profits and we have recently begun that survey. With a non-profit universe of more than 1700 agreements totaling more than \$600 million, we believe this approach offers more potential to identify and correct mismanagement and/or misuse than individually targeted assistance agreement audits.

The expansion of audit coverage for assistance agreements consists of single audits as well as Performance audits of EPA's Grants Management. There are three ongoing surveys which are Non-competitive grants, Oversight of non-profit grants, and Headquarters 40 Product Accomplishments. Each of these surveys have a different amount of non-profit grants that are being reviewed. They are as follow:

—Non-competitive Grants = 105 non-profit grant being reviewed
Oversight of non-profit grants = 50 non-profit grants being reviewed

—HQ 40 Product Accomplishments = 48 non-profit grants being reviewed

Additionally, during fiscal 2000, the Agency plans to increase its on-site reviews of assistance recipients. The headquarters Grants Administration Office (GAD) plans to perform 26 reviews of assistance recipients (about 75 per cent of the reviews are of non-profit organizations) of which seven have already been completed. The GAD selects the recipients for review based on four criteria: (1) total dollar value of EPA awards to the entity; (2) number of grants awarded to the entity; (3) known problems; and (4) discussions with the grant specialist. EPA's regional offices also perform on-site reviews of grant recipients. These reviews provide additional assurance that recipients are performing and federal funds are used appropriately.

LEAD RISK REDUCTION: FISCAL YEAR 1999—FISCAL YEAR 2000 RESOURCES

Question. At what level, in terms of FTEs and dollars, did the agency fund the Lead Risk Reduction key program in the fiscal year 1999 budget request, fiscal year 1999 operating plan, fiscal year 1999 actuals, fiscal year 2000 budget request, fiscal year 2000 proposed operating plan, and fiscal year 2001 budget request. Provide the information by NPM, appropriation, goal, objective sub-objective, office or region, and activity.

Answer. The information requested is presented in the accompanying spreadsheet.

FISCAL YEAR 2001 PRESIDENT'S BUDGET BY ACTIVITY—LEAD RISK REDUCTION KEY PROGRAM AND STATE GRANTS FOR LEAD RISK REDUCTION KEY PROGRAM

[Dollars in thousands]

² Agency data not available at objective level for fiscal year 1999 actual.

Note: Key Program—Lead Risk Reduction. Key Program—Grants to States for Lead Risk reduction.

LEAD RISK REDUCTION: FUNDING REDUCTIONS

Question. Analysis of the Agency's budget requests indicates that EPA reduced funding to the Lead Risk Reduction key program in the fiscal year 1999 operating plan and the fiscal year 2000 proposed operating plan from the higher levels contained in each year's budget request. Why did the Agency make reductions in Lead Risk Reduction from each of these budget requests to the following operating plans and what impact did it have on the activity levels of the program?

Answer. EPA's lead program reductions were the result of the following actions:

1. EPA found it necessary to make significant budget cuts in fiscal year 1999 as a result of across-the-board reductions made by Congress. The Congressional reductions led to cuts in a variety of programs, including lead risk reduction. The impacts of the lead program reductions were felt most keenly in the areas of regulatory development and program implementation.

2. EPA's policy is to not carry over Congressional Add-ons. Therefore, OPPTS funding for lead program outreach activities in fiscal year 2000 was reduced. The Agency was unable to continue funding a cooperative agreement with the National Safety Council for public education and outreach activities relating to lead risk reduction. Other activities that had to be curtailed included translation of existing outreach materials (English to Spanish), development of new outreach materials, printing activities and technical assessments.

3. As part of a review of FTE charging under EPA's new GPRA structure, we made adjustments to more accurately reflect where regional work is being performed. FTE included under the lead activity line were in fact performing work in areas such as asbestos and PCBs. This correction is noted in the fiscal year 2001 President's Budget. There are no performance implications resulting from this technical correction.

4. The remaining reductions in fiscal year 2000 result from an on-going effort to improve grants management. We reduced overall costs in 2000 with no impact to the program.

IMPROVED PERFORMANCE MEASURES

Question. How many annual planning goals did the Agency include in its fiscal year 2000 annual performance plan? How many of the annual planning goals were output goals? How many were outcomes? How many set goals to improve the environment or human health?

Answer. EPA has 74 Annual Performance Goals (APGs) in the Agency's fiscal year 2000 Annual Plan.

GAO in a report entitled "Managing for Results—EPA Faces Challenges in Developing Results Oriented Performance Goals and Measures," evaluated the 73 APGs contained in an earlier version of EPA's Annual Performance Plan that was released with the fiscal year Congressional Justification document in February, 1999.

GAO classified 44 of the 73 APGs as 'Outputs' and 29 as either 'End Outcomes' or 'Intermediate Outcomes'. End Outcomes are defined as the results of programs and activities compared to their intended purposes. Intermediate Outcomes show progress toward achieving end outcomes. The End Outcomes explicitly show measured improvements in the environment or human health. GAO classified 20 of the APGs as 'End Outcomes.'

Question. How many annual planning goals did the Agency include in its fiscal year 2001 annual performance plan? How many of the annual planning goals were output goals? How many were outcomes? How many set goals to improve the environment or human health?

Answer. EPA's fiscal year 2001 Annual Performance Plan contains 75 Annual Performance Goals (APGs). The Agency has just started the process of classifying its fiscal year 2001 Annual Performance Goals (APGs) according to end outcomes, intermediate outcomes, outputs. The process will include an internal peer review by the various Agency Goal Teams.

Question. How many performance measures did the Agency include in its fiscal year 2000 annual performance plan? How many of the performance measures measured outputs? How many measured outcomes? How many measured improvements in the environment or human health?

Answer. EPA has 166 Annual Performance Measures (APMs) in the Agency's fiscal year 2000 Annual Plan.

GAO in a report entitled "Managing for Results—EPA Faces Challenges in Developing Results Oriented Performance Goals and Measures," evaluated the 157 APMs contained in an earlier version of EPA's fiscal year 2000 Annual Performance Plan that was released with the fiscal year 2000 Congressional Justification document in February, 1999.

GAO classified 118 of the 157 APMs as 'Outputs' and 39 as either 'End Outcomes' or 'Intermediate Outcomes'. End Outcomes are defined as the results of programs and activities compared to their intended purposes. Intermediate Outcomes show progress toward achieving end outcomes. The End Outcomes explicitly show measured improvements in the environment or human health. GAO classified 30 of the APMs as 'End Outcomes.'

Question. How many performance measures did the Agency include in its fiscal year 2001 annual performance plan? How many of the performance measures measured outputs? How many measured outcomes? How many measured improvements in the environment or human health?

Answer. EPA's fiscal year 2001 Annual Performance Plan contains 163 Annual Performance Measures (APMs). The Agency has just started the process of classifying its fiscal year 2001 Annual Performance Measures according to end outcomes, intermediate outcomes, outputs. The process will include an internal peer review by the various Agency Goal Teams.

Question. What process is the Agency using to increase the number of outcome goals and measures? How are program offices held accountable for producing outcome goals and measures to be incorporated into the annual performance plan?

Answer. EPA is committed to increasing the outcome orientation of our performance measures and goals. While "activity" or "output" measures and goals are important for program management purposes, it is the programmatic, environmental, and human health results from EPA's activities, not the activities themselves, that matter most to public welfare.

In recognition of the Agency's need to increase the number of outcome or results-based goals and measures, EPA's Office of the Chief Financial Officer (OCFO) has established a Performance Measurement Improvement (PMI) Team. The primary objective of this team is to support EPA's program offices in their efforts to increase the general quality and outcome orientation of the Agency's performance goals and measures. OCFO's PMI Team is involved in efforts such as general workshop and training sessions, on-going analyses of annual goals and measures, and various other Goal-specific performance measurement improvement projects.

The lead within EPA for developing results-based performance measures and goals, however, rests with the program offices. Working with the States, Tribes, OCFO's PMI Team, and other partners, program offices have initiated various improvement projects such as improvement work teams, workshops, and special analyses to support development of more outcome-oriented measures and goals. Specific examples of program office performance measurement improvement initiatives include: the Office of Enforcement and Compliance Assurance's development of their National Performance Measurement Strategy, which includes a plan to develop more outcome-based performance measures and goals; the Office of International Activities formation of a "best practices" working group which has developed more outcome-oriented measures and goals; the Office of Research and Development's ongoing analysis to identify and learn from results-based, research-related measures and goals employed by other federal agencies; and the Office of Prevention, Pesticides, and Toxics Substances working group and cooperative agreement with Florida State University to develop more outcome-focused measures and goals.

EPA's Program offices are held accountable for improving the general quality and outcome orientation of their goals and measures. In accordance with Agency guidance for developing annual performance goals and measures, program offices must submit their annual goals and measures to OCFO for review each Summer in time for the OMB budget submission and each winter in time for the Congressional budget justification and Annual Plan submission. Also, EPA's "Goal Teams" meet each Spring with the Deputy Administrator to report on EPA's goals and measures, efforts to improve these goals and measures, and progress toward achieving EPA's goals. Specific topics to be addressed by EPA's Goal Teams this spring will likely include: development of better performance goals and measures using existing data, improvement of baseline descriptions and information, data needs for development of more outcome-oriented goals and measures, and plans to address data needs.

Performance measurement improvement is an ongoing and incremental pursuit at EPA. The rate of improvement progress is currently limited by data availability and quality. The state of our knowledge of environmental conditions, their dynamics, and the contribution of program interventions is a critical constraint in establishing realistic outcome-based performance measures and goals. The creation of EPA's new Office of Environmental Information will facilitate improvement of our national information base on environmental quality. As data gaps are filled, EPA will accelerate progress toward development of more outcome-based measures and goals.

IMPROVED PERFORMANCE MEASURES: NATIONAL PERFORMANCE MEASURES STRATEGY

Question. How is the Agency implementing the success of the National Performance Measures Strategy on an agency-wide basis?

Answer. The National Performance Measures Strategy was initiated in January of 1997 to develop and implement an enhanced set of performance measures for EPA's enforcement and compliance assurance program. The goals of the Measures Strategy included the adoption of the most effective combination of output, outcome and environmental indicator measures, within resource constraints. Furthermore, the Measures Strategy sought to develop performance measures that would improve EPA's ability to evaluate the effectiveness of its enforcement and compliance assurance program, manage that program more strategically, and achieve relevant Agency GPRA objectives.

As part of the development of the Measures Strategy, extensive consultation with stakeholders, regulatory partners, and internal managers and staff were held during the February-October 1997 timeframe to discuss issues and solicit ideas about development, use and implementation of enhanced performance measures. Through this effort, a framework of transparent, credible, feasible, functional and comprehensive output and outcome-based measures were identified and are referred to as the Performance Profile. Agency Workgroups facilitated the design phase which included developing definitions, identifying collection processes, and piloting certain measures.

To date, EPA's Office of Enforcement and Compliance Assurance has made great strides in implementing the Measures Strategy. Significant improvements have resulted in the form of numerous revised and new performance measures. However, it is important to note that the implementation of the Measures Strategy is not yet complete.

Although the measures developed through the Strategy were intended to apply only to EPA's enforcement and compliance assurance program, reports detailing the process undertaken have been widely disseminated throughout the Agency. Unfortunately, given the status of this effort as well as its limited applicability to other Agency programs, it is premature to attempt to assess the Agency's efforts in transferring the success of the Measures Strategy to other Agency programs.

COMPLIANCE ASSISTANCE FUNDING: FUNDING LEVEL DOLLARS AND FTES

Question. Provide the dollars and FTE under the Compliance Assistance and Centers key program in the Office of Enforcement and Compliance Assurance (OECA). In meeting this request, provide resource levels from the fiscal year 1999 budget request, fiscal year 1999 operating plan, fiscal year 1999 actuals, fiscal year 2000 budget request, proposed fiscal year 2000 operating plan, and fiscal year 2001 budget request. Organize the information by Appropriation, Goal, Objective, Sub-objective, Office or Region, and activity.

Answer. The attached spreadsheet provides resource information for OECA's compliance assistance key program. The information comes from the Agency's Budget Automation System (BAS). The resources requested for the fiscal year 1999 actuals and activity level information are not maintained in the Agency's key program data base.

* In FY 2001, resources in the Immediate Office support this key program. Working capital fund dollars will be allocated across all key programs to reflect the total resources that support these programs.

PESTICIDES REREGISTRATION: FUNDING LEVEL DOLLARS AND FTES

Question. At what level, in terms of FTE and dollars, did the Agency Fund the Pesticide Reregistration key program in the fiscal year 1999 budget request, fiscal year 1999 operating plan, fiscal year 1999 actuals, fiscal year 2000 budget request, fiscal year 2000 proposed operating plan and fiscal year 2001 budget request? Provide the information by NPM, appropriation, goal, objective, sub-objective, office or region, and activity.

Answer. This information is provided in the following table:

(Dollars in millions)

Approp/Goal/Obj	Fiscal year 1999				Fiscal year 2000				Fiscal year 2001 Request	
	Request		Op. Plan		Request		Op. Plan		FTE	Dollars
	FTE	Dollars	FTE	Dollars	FTE	Dollars	FTE	Dollars		
EPM:										
3.1	38.6	\$3.2	38.6	\$3.7	36.0	\$3.6	36.2	\$3.9	32.9	\$4.3

PESTICIDES REREGISTRATION: IMPACT OF FUNDING REDUCTION

Question. Analysis for the Agency's budget requests indicates that EPA reduced funding to the Pesticides Reregistration key program in the fiscal year 2000 proposed operating plan from the higher levels contained in the fiscal year 2000 budget request. Why did the Agency make this reduction and what impact did it have on the activity levels of the program?

Answer. EPA's fiscal year 2000 Operating Plan maintains the same level of program activity for reregistration as contained in the President's budget submission. The budget Congress enacted for EPA in fiscal year 2000 included a substantial General Reduction to the EPM account, including FTE reductions. At the same time, the implementation of the Food Quality Protection Act is one of EPA's top priorities and we tried to increase and protect resources and activities programmed to carry out the Act. The slightly reduced 'key program' resources are the result of on-going consolidation of the reregistration and FQPA's tolerance reassessment process, as well as a change in the schedule for setting up the registration review program. Moreover, we protected the primary components of FQPA, tolerance reassessments and the registration of safer substitutes and in fact these programs received more resources over fiscal year 1999 levels.

The Office of Prevention, Pesticides and Toxic Substances' (OPPTS) share of the general reduction was \$18.3 Million. Also, OPPTS had to project some staff reduction in the reregistration program to comply with Congressional directions to cut Agency staff levels to 18,000 FTE. OPPTS has been under a hiring freeze since the beginning of the fiscal year and has been unable to protect the staff support for the registration and reregistration programs. As vacancies occur, we have not backfilled, resulting in declining FTE levels. The nature of work in both these programs is very FTE intensive and the skills are very specialized; in some cases it is impossible to shift from within to replace lost personnel. However, OPPTS' proposed operating plan for fiscal year 2000 minimizes the program impact of the general reduction as much as possible and we project no change in outputs.

Beyond cuts in staff, OPPTS reduced the funds budgeted to set up the Registration Review Program, the new FQPA requirement to review pesticide registrations every 15 years. The regulations establishing this program are proceeding and the cuts will not affect the establishment of the Registration Review program. In addition, the incorporation of some special review work into the tolerance reassessment process has streamlined the Special Review process, resulting in cost savings. We do not expect any reduced outputs from the reduction to the Special Review Programs.

Altogether, Congress directed EPA to fund the registration and reregistration programs at \$68.9 Million. EPA's operating plan submitted to Congress funded these programs at \$65.8 Million, a small reduction of \$3.1 Million. This reduction resulted from the streamlinings and schedule changes described above. These revised levels also allowed us to lessen the impact of the general reductions on other critical EPA programs like the High Production Volume Chemical Challenge Program, which is collecting basic hazard information on chemicals the public routinely encounters.

EPA is confident that it fully carried out the intent of the Congressional directive to maintain a robust program to register, reregister and set food use tolerances using strict FQPA requirements. The fiscal year 2000 budget fully supports an aggressive effort to carry out these key programs.

QUALITY OF LAB DATA: CHICAGO CENTRAL REGIONAL LAB

Question. Why did EPA's initial responses to inquiries on the criminal investigation underway at the Chicago Central Regional Lab reveal that only 40 pollution cases were frozen because they may have been based, in part, on flawed lab test results when separate EPA court filings indicated that approximately 1,000 other cases . . . including judicial and administrative matters are being assessed for potential impact?

Answer. In the initial stage of our investigation, we estimated that we would have to review up to 1,000 cases to determine whether they involved analytical data generated or reviewed at the Central Regional Laboratory (CRL) by either Agency or contract personnel. That number represented the approximate number of open enforcement cases on the Region 5 docket. The Agency and the Department of Justice identified 43 cases on the DOJ "hot list" of active cases in which CRL involvement was verified or suspected and for which notice of such involvement has been provided to the court and the parties involved in the cases. At the same time, many of the other case files that had been examined did not reveal involvement on the part of the CRL Agency or contract staff under investigation. This review of open case files is an on-going process.

QUALITY OF LAB DATA: TESTS OF CONTAMINATED MATERIALS

Question. Why did the Agency downplay the role of the lab in public characterizations by saying that double-checks of materials analyzed by outside labs retained by polluters comprising 75 percent of the tests of contaminated materials from Midwest states were handled by Superfund staff and not the suspect lab? In reality court filings revealed the lab actually did validate analytical data from samples analyzed by outside laboratories.

Answer. More than 75 percent of Superfund cleanup activities are handled by Potentially Responsible Parties (PRPs), which includes any necessary laboratory analyses, which are carried out by the PRP's own contract laboratories. The data resulting from those analyses are neither reviewed nor validated by the CRL, except on a limited basis when requested by the Superfund program for oversight purposes. It is estimated that less than 1 percent of PRP data was reviewed or validated by CRL staff. In most matters not being carried out by PRPs, the Superfund program uses private laboratories that participate in the Contract Laboratory Program (CLP) to generate analytical data. These data are reviewed and validated by the Environmental Support and Analysis Team (ESAT) contractor with oversight by the Region 5 Superfund program office. This oversight consists of double checking the reviews conducted by the ESAT contractor to ensure that proper data validation procedures have been followed.

Data validation is a review of other laboratories' data to provide an opinion as to the usability of the data. The data validation process does not involve laboratory analytical work. It involves the review of a hard copy data package against an established set of Quality Assurance Criteria and Programmatic Data Objectives that are documented in a Quality Assurance Project Plan. Because the allegations which have been raised involve analytical work and not the expression of an opinion on another laboratory's work, the Agency does not believe that the reliability of such data has been impacted.

There is alleged misconduct in generating organic analytical data for certain types of chemical analyses within CRL. Typically, a hard copy results package for organic data does not contain electronic files for review. Electronic files of processed data are usually necessary to detect improper manipulation of data. Therefore, laboratory misconduct of this nature would have been detected through the data review or validation process for these packages. However, the Region will notify parties when one of the suspect analysts is identified as the data validator.

QUALITY OF LAB DATA—PROCESS TO IDENTIFY NON-ANALYSIS WORK PERFORMED

Question. Describe the process EPA is currently developing to identify those sites at which the lab or its contractor performed non-analytical work, and any results of the process to date.

Answer. EPA is relying on time charges submitted by the suspect analysts to determine the work they performed, including whether they were involved in non-analytical work which includes the review of outside laboratories' data (data validation work). The EPA employees were required to bill time to individual sites on which they worked. In addition, the CRL's receiving logs were used to track information regarding documents from outside laboratories. The information tracked included the site name, time received and the data set number assigned to the data from the outside lab. This process continued from about 1981 through 1990. By 1990, the Environmental Support and Analysis Team (ESAT) contractor had taken over the data validation work and EPA employees were not involved. Also information has been extracted from another tracking data base covering data review when it was performed by EPA employees. It identifies the review of data according to EPA employee initials. These different data bases will be used to determine which data sets were reviewed by the suspect analysts.

The ESAT time charges by employee have been summarized in data bases. The summaries provide information by site as to when the work took place, the name of the suspect analysts, hours charged, and the type of work involved. This information is being used to determine the involvement of the suspect contractor personnel.

Where the suspect analysts have worked on data validation, information on the site and work performed is to be provided to courts, parties, and identified potentially responsible parties. Notice is being provided to parties to ensure that there is no question as to the government's forthrightness in disclosures regarding this matter.

QUALITY OF LAB DATA: AGENCY REACTION TO NEWS REPORT ON LAB

Question. Why did EPA wait until newspaper stories publicized the criminal investigation underway at the Chicago lab before transferring the troubled lab's director?

Answer. The transfer of the Central Regional Laboratory (CRL) Director was independent of the timing of any publication of CRL-related stories in the press. Regional management decided to reassign the CRL Director to other duties once the corrective actions recommended by the Office of Inspector General and the Technical Audit Team were substantially completed. The reassignment became effective March 6 and the completion of the recommendations led to the CRL reopening March 16.

QUALITY OF LAB DATA

Question. EPA states that it is establishing new quality policies and providing training for staff to correct the lab's problems. But these steps don't seem to address the reason for the fraud, that being a desire to even-out busy spikes of workload. What is the Agency doing to deal with the actual cause of the problems?

Answer. The Regional laboratories have developed training on acceptable conduct in laboratories, including an emphasis on activities that are considered inappropriate behavior. The laboratories are also conducting detailed audits of their management processes and technical operations to ensure that proper systems are in place and are effective in ensuring that the analytical results are of known and documented quality. Management at all the laboratories are monitoring the analytical work at their laboratories and are taking steps to more closely control the workload and even-out workflow.

NPDES: FUNDING LEVEL DOLLARS AND FTES

Question. At what level, in terms of FTE and dollars, did the Agency fund the NPDES Program key program in the fiscal year 1999 budget request, fiscal year 1999 operating plan, fiscal year 1999 actuals, fiscal year 2000 budget request, fiscal year 2000 proposed operating plan, and fiscal year 2001 budget request. Provide the information by NPM, appropriation, goal, objective, sub-objective, office or region, and activity.

Answer. Agency funding of the NPDES key program is detailed below.

OFFICE OF WATER ¹

Fiscal year	Dollars	FTE
1999:		
Budget Request	\$43,408,500	338.0
Operating Plan	\$30,862,600	² 294.1
2000:		
Budget Request	\$46,338,800	350.5
Proposed Operating Plan	\$36,274,900	² 329.7
2001: Budget Request	\$41,592,000	² 327.5

¹ Appropriation: EPM; Goal 2: Clean and Safe Water; Objective 3: Reduce Loadings and Air Deposition.

² Reflects a realignment of Regional workyear distributions to reflect a more accurate depiction of the national water program workforce.

NPDES: EXPIRED PERMIT BACKLOG

Question. The Agency declared to the President that backlogs in the NPDES permitting program were a material management weakness and developed a plan to reduce the backlog down to 10 percent in December 2001. EPA recently disclosed that the backlog is instead increasing. Why is the backlog in expired permits in states and territories whose water programs are run by EPA increasing and forecast to reach to 44 percent in December 2001?

Answer. The Agency has identified the backlog of expired National Pollutant Discharge Elimination System (NPDES) permits as a material weakness under the Federal Managers Financial Integrity Act (FMFIA) and has established a goal of reducing the backlog of individual permits issued to major facilities to 10 percent, or less, by December 31, 2001.

Based on NPDES permit backlog data collected between November 1998 and March 2000, the national backlog of expired NPDES permits for major facilities (including both State- and EPA-issued permits) has increased from approximately 26 percent to 28 percent. The increase in the national backlog rate is due to an increase from 24 to 26 percent in the backlog of State-issued NPDES permits, which comprise approximately 90 percent of the permitted facilities. Over this same period, the backlog of permits for major facilities where EPA administers the NPDES program has decreased from 46 percent to 41 percent. These data, noting the increasing backlog trend at the national level, have been provided to House and Senate committees on a quarterly basis since March 1999. The Agency does not project a 44 percent backlog of EPA-issued permits in December 2001. Intensive efforts are currently underway at EPA Regional offices in support of achievement of our national target of 10 percent for December 2001.

NPDES: ACTIONS TO REDUCE BACKLOG

Question. Why have EPA's actions to reduce the backlog in programs run by EPA failed to produce reductions in the backlog?

Answer. Between November 1998 and March 2000, the backlog of National Pollutant Discharge Elimination System (NPDES) permits for major facilities where EPA is responsible for permit issuance has been reduced from 46 percent to 41 percent. While the backlog rate is falling, the Agency believes that it remains unacceptably high and has taken steps to reduce it to meet the 10 percent target over the next 20 months. The Agency's analysis of the causes of the permit backlog and our strategy for addressing the problem is presented in the Interim Framework to Ensure Issuance of Timely and High Quality NPDES Permits (Approaches for Reducing the NPDES Permit Backlog)—July 28, 1999. This document provides the Agency's vision for both short and long term strategic objectives for backlog reduction, and is available for downloading on our web site [www.epa.gov/owm/permits/backlog/backlog.htm].

NPDES: STATE COMPLIANCE TO REDUCE BACKLOG

Question. Why are only 15 states on track to meet the Agency's goal of reducing the NPDES permit backlog to 10 percent? Why have EPA's actions to reduce the backlog in delegated programs failed to produce reductions in the backlog?

Answer. While the Agency is directly responsible for National Pollutant Discharge Elimination System (NPDES) permit issuance in seven states and all U.S. Territories (except the U.S. Virgin Islands), this represents only about 10 percent of all NPDES permits issued. For the remaining ANPDES authorized states, EPA acts

only as an oversight authority. While some authorized states have been able to maintain successful permit issuance rates (i.e., below 10 percent backlog), the majority have encountered resource, technical, and administrative obstacles similar to EPA Regions.

The Agency has identified a variety of potential causes for the current backlog of expired NPDES permits, and for the increase in the backlog of State-issued permits for major facilities. Based on discussions with EPA Regional and State permitting managers, the following causes of the backlog were provided in our Interim Framework to Ensure Issuance of Timely and High Quality NPDES Permits (Approaches for Reducing the NPDES Permit Backlog)—July 28, 1999:

- The universe of facilities requiring NPDES permit coverage (e.g., storm water SSOs/CSOs, CAFOs) is expanding at the same time that previously issued permits are expiring.
- State environmental agencies are challenged by implementing other competing regulations (e.g., air, solid waste, drinking water).
- NPDES permits have become increasingly complex due to State adoption of numeric water quality standards and TMDL requirements. Effluent guidelines have been promulgated for industrial operations that are increasingly complex.
- In many cases, permit writers today need training in complex technical and regulatory matters to issue high quality permits. Due to decreasing permit resources and movement of staff to other program areas, it has been difficult for States and Regions to maintain technical experts on their permits staff.
- States have begun shifting to a watershed approach for permit issuance, which may increase backlogs for the first few years to allow alignment of five-year permit cycles within watershed boundaries.

To address these issues, the Agency's Acting Deputy Administrator, W. Michael McCabe, issued a memorandum on March 31, 2000, to each of the EPA Regional Administrators requesting State-specific backlog reduction plans for both authorized and non-authorized States and Territories. The intent of these plans, which are due by May 15, 2000, is to identify the actions that the Region or State must take to reduce the permit backlogs and meet the 2001 and 2004 backlog reduction targets. To adequately develop these plans, the Region must fully assess the backlog of both State and EPA-issued permits (for major and minor facilities) and actively engage authorized States in establishing permit issuance commitments.

NPDES: IMPACT OF FUNDING REDUCTION

Question. Analysis of the agency's budget requests indicates that EPA reduced funding to the NPDES program in the fiscal year 1999 operating plan and the fiscal year 2000 proposed operating plan from the higher levels contained in each year's budget request. Why did the Agency make reductions in NPDES program from each of these budget requests to the following operating plans and what impact did it have on the activity levels of the program?

Answer. Reductions to NPDES activities resulted from the requirement to absorb the general reductions included in the fiscal year 1999 and fiscal year 2000 Environmental Programs and Management appropriation. Resources devoted to reducing the NPDES permit backlog were not reduced during the development of either operating plan. Impacts of the NPDES cuts included eliminating funding for additional Clean Water Action Plan workyears; limiting guidance and support to states and communities implementing storm water controls; curtailing EPA efforts to work with other Federal and state agencies, tribes, and private entities to cleanup watersheds affected by mines; hampering implementation of the Animal Feeding Operation (AFO) Strategy and curtailing support for the development of guidance with USDA on how 450,000 AFOs should manage over 1.37 billion tons of animal waste; and hampering efforts to study the effectiveness of approaches to implementing best management practices (BMPs) for silviculture.

FINANCIAL STATEMENTS

Question. The Agency recently received a qualified opinion for its most recent financial statements. This follows the previous year where six months of assistance from the Office of Inspector General was required to get EPA's statements in a state to earn an unqualified opinion. What steps is the Agency taking to train its financial management staff to better perform the task of annually preparing financial statements?

Answer. For our prior year financial statements, the OIG did cooperate in giving the Agency additional time in completing its financial statements. The number of resources available to compile the statements was more of the contributing factor

then skill competency. The issues that caused the delay for our 1998 statements were addressed and were not the same contributing factors for 1999.

As indicated in our answer to an earlier question titled "FINANCIAL AUDIT: IG OPINION", the Inspector General qualified its opinion on the Agency's 1999 financial statements based on two technical accounting issues that were highlighted late in the audit process and consequently could not be resolved by the statutory due date of March 1. We have in place a plan to further improve our quality control process for producing our financial statements. This will include system and process changes. We also plan to use contractor support to supplement EPA staff in performing technical analyses as needed. In addition, we have had discussion with the OIG regarding the number and level of technical expertise that they have assigned to the audit to prevent delays in receiving audit feedback to allow for statement adjustments.

Our plan also includes staff training. We are committed to providing our staff with the tools and on-going training necessary to produce reliable and timely financial statements. We have sent key staff to financial statement and general ledger training, engaged an accounting expert from the Treasury Department to review our books and train our staff on analytical techniques, and plan to send key staff to project management training to help better plan and coordinate with the auditors.

FINANCIAL STATEMENTS: ACCOUNTING AND RECORDKEEPING PROCESS

Question. What steps is the Agency taking to change accounting, recordkeeping or other charging processes to enable the Agency to more accurately and quickly prepare sound financial statements?

Answer. We are implementing systemic solutions to streamline the preparation and audit of annual financial statements. We are changing how we record certain detailed transactions to a way that facilitates year-end reporting; we are also taking steps to increase the amount of effort devoted to ongoing review and analysis of our accounting records. We believe this additional focus on quality assurance can facilitate the preparation and audit of the year-end financial statements by resolving potential issues during the year, rather than late in the audit. Finally, we have implemented a new financial data warehouse reporting tool that makes a great deal of current and historical financial information available to EPA management on a near real-time interactive basis.

FINANCIAL STATEMENTS

Question. Why is the Agency reducing funding for the Financial Statement Audits key program in fiscal year 2001 if the Agency's financial statements have worsened over the last year?

Answer. The Office of the Inspector General (OIG) has audited EPA's financial statements since 1992. During that time, the OIG has spent considerable resources identifying areas for improvement in EPA's systems and controls and working with the Agency to improve the accuracy and timeliness of its financial information. Internal control and compliance issues identified by the OIG have existed for a number of years, and the OIG has worked extensively with the Agency to resolve these.

At this point, the OIG believes its role in identifying and recommending needed systems improvements is complete. It is incumbent upon the Agency to implement the OIG's recommended corrective actions, so that accurate data is available to prepare the annual financial statements and to manage the Agency's environmental program on an ongoing basis. Therefore, the funding request was slightly reduced and the OIG believes that this will maintain the resources necessary to perform the audit.

ROOT CAUSE ANALYSIS PILOT PROJECT: INDUSTRY-SPONSORED TRAINING ON "HOW CHEMICAL PLANTS WORK"

Question. Provide the status of any efforts to develop industry-sponsored training on "how chemical plants work" for staff of regulatory agencies as recommended in the EPA/CMA Root Cause Analysis Pilot Project.

Answer. Developing industry-sponsored training on "how chemical plants work" was not a formal recommendation of the Root Cause project. It was an idea offered by an industry representative on the project team. Although the Agency recognizes merit in such training, there are currently not resources available for such a project.

ROOT CAUSE ANALYSIS PILOT PROJECT: INDUSTRY-EPA PERSONNEL EXCHANGE PROGRAM

Question. Provide the status of any efforts to develop an industry-EPA personnel exchange program as recommended by the Root Cause project.

Answer. Developing an industry-EPA personnel exchange was not a formal recommendation of the Root Cause project. It was an idea offered by an industry representative on the project team. Although the Agency recognizes merit in such exchange programs, there are currently no resources available for such a program.

ROOT CAUSE ANALYSIS PILOT PROJECT: DEVELOPMENT OF INSPECTION PROGRAM

Question. Provide the status of any efforts to develop an inspection program under which technical assistance inspections are conducted routinely in advance of traditional enforcement inspections, particularly in the case of new rules as recommended by the Root Cause project.

Answer. Developing such an inspection program was not a formal recommendation of the Root Cause project. It was an idea offered by an industry representative on the project team.

Although EPA has no plans to develop the level of inspection program described in this question, EPA has often implemented compliance assistance activities in advance of enforcement initiatives. One recent example is the minimill initiative in Region V. Region V used an integrated sector-based approach to improve compliance among the minimills in its six states, focusing on Electric Arc Furnaces (EAFs). First, the Region identified relevant minimills, contacted industry groups and sent out a notification letter to the minimills concerning the initiative. Each mill had the opportunity to carry out a self-audit within a six-month period after being contacted. Any identified violations were to be handled using EPA's Audit Policy. During the six month period, the Region conducted compliance assistance activities including: a kick-off meeting, a web page on the Internet dedicated to the initiative, telephone and E-mail access to EPA staff, EPA presentations at two conferences, coordination with State agencies to assure consistency and correspondence and meetings with individual companies. Out of 22 minimills, ten minimills self-disclosed findings based on self-audits. One facility self-disclosed without submitting an audit. Most reported violations were minor and did not result in penalties. At the end of the 6 month period, Region V began investigations of the remaining minimills to pursue enforcement, if appropriate.

In addition, on-site compliance assistance is routinely provided to facilities through on-site compliance assistance visits and EPA inspectors. For example, inspectors routinely share standardized information and references with facilities during traditional inspections including: copies of requirements; guidance documents; manuals and technology transfer documents; information on other assistance providers; information on control practices and equipment used within a specific sector to comply with environmental regulations; pollution prevention literature; and suggestions on simple techniques and concepts to reduce or eliminate pollution. In some cases, inspectors may provide information on compliance status; information and insight into a facilities particular problem and what might be evaluated to remedy the problem; and technical assistance on recognized industry or sector-based practices and concepts to reduce or eliminate pollution. For more specific or technical information, inspectors are encouraged to refer facilities to appropriate technical assistance programs, including the Compliance Assistance Centers, Small Business Assistance Programs, and Manufacturing Extension Partnerships.

ROOT CAUSE ANALYSIS PILOT PROJECT: COMPLIANCE "GRACE PERIOD"

Question. What is the Agency's reaction to the Root Cause report recommendation to allow facilities a "grace period" for compliance with new regulations and does the Agency have any efforts underway to test, pilot or implement this recommendation?

Answer. Allowing facilities a "grace period" for compliance with new regulations was not a formal recommendation of the Root Cause project. It was an idea offered by an industry representative on the project team. While EPA does not generally offer a "grace period" for compliance with new regulations, for certain rules, the Agency has formally established a dedicated compliance assistance period before it undertakes enforcement, such as in the lead-based paint Sections 1018 and 406 programs.

In addition, EPA routinely provides ample opportunity for facilities to become familiar with and implement new regulatory requirements. In developing and implementing rules promulgated under the 1990 Clean Air Act Amendments (CAA), the agency has consistently been sensitive to providing the regulated community ample time to become familiar with the new regulatory requirements and make whatever operational adjustments are necessary to be in compliance. Sources which existed prior to the proposal of new CAA rules are given up to 3 years after the effective date to comply. Sources may also be granted an additional year to comply if additional time is necessary to install pollution control equipment.

The Agency has also focused considerable effort on the development of compliance assistance material to facilitate compliance with new rules. In particular, the Agency is committed to early development of compliance assistance tools to provide the regulated community the information it needs to comply with regulatory requirements. In fact, the Agency's Action Plan for Innovation commits EPA to issuing compliance assistance materials for new economically significant regulations typically within 90 days of final rule promulgation.

The Agency has also focused compliance assistance resources on rules that apply to small businesses. Even after the compliance date of a new regulation, the Agency continues to work proactively with the regulated community to ensure that small businesses understand their new regulatory requirements. EPA has also offered the regulated community opportunities through self disclosure and small business policies to disclose violations with, in most cases, no penalties and also provides small businesses with access to compliance assistance resources.

ROOT CAUSE ANALYSIS PILOT PROJECT: COORDINATION BETWEEN EPA AND FACILITY

Question. What is the Agency's reaction to the Root Cause report recommendation to designate a single EPA contact to work with each facility to coordinate EPA regulatory activities and provide assistance and does the Agency have any efforts underway to test, pilot or implement this recommendation?

Answer. Designating a single EPA contact to work with each facility to coordinate EPA regulatory activities and provide assistance was not a formal recommendation of the Root Cause project. It was an idea offered by an industry representative on the project team. Although resource levels limit the Agency's ability to designate individual staff to work with each regulated facility, EPA has undertaken many efforts in the last several years to provide more compliance assistance to regulated facilities and industries. For example, EPA has partnered with industry, academia, and nonprofit groups to launch the ten sector-specific compliance assistance centers to serve as the "first-stop-shop" for compliance assistance. In addition, the creation of the National Compliance Assistance Clearing House will enable regulated entities to easily identify and access available compliance assistance material.

ROOT CAUSE ANALYSIS PILOT PROJECT: TECHNICAL ASSISTANCE OR MITIGATION

Question. What is the Agency's reaction to the Root Cause report recommendation to allow and encourage EPA inspectors to (1) provide technical assistance and (2) mitigate or omit penalties for noncompliance events that are addressed in a timely manner and does the Agency have any efforts underway to test, pilot or implement this recommendation?

Answer. Encouraging inspectors to provide assistance and to mitigate or omit non-compliance was not a formal recommendation of the Root Cause project. It was an idea offered by an industry representative on the project team. Inspectors routinely share standardized information and references with facilities during traditional inspections. These materials include: copies of regulatory requirements; guidance documents; manuals and technology transfer documents; information on other assistance providers; information on control practices and equipment used within a specific sector to comply with environmental regulations; pollution prevention literature; and suggestions on simple techniques and concepts to reduce or eliminate pollution. In some cases, inspectors may also provide more facility- or industry-specific information such as: information on compliance status; information providing analysis of a facility's particular problem and what remedies might be appropriate; and technical assistance on recognized industry or sector-based practices and concepts to reduce or eliminate pollution. For more specific or technical information, inspectors are encouraged to refer facilities to appropriate technical assistance programs, including the Compliance Assistance Centers, Small Business Assistance Programs, and Manufacturing Extension Partnerships.

EPA's penalty policies do allow penalties to be mitigated based on a variety of factors, including:

- the degree of cooperation in remedying the noncompliance—in cases where violations are addressed immediately upon discovery, EPA's penalty policy allows for a substantial portion of the unadjusted gravity component to be reduced;
- the level of sophistication within the industry in dealing with the compliance issue; and
- ability to pay.

In addition, EPA's "Incentives for Self-Policing: Discovery, Disclosure, Correction and Prevention of Violations" and "Small Business Compliance Policy" offer facilities the opportunity to discover, disclose, and correct regulatory noncompliance. Both policies encourage companies and other regulated entities to voluntarily discover,

disclose, correct and prevent violations of Federal environmental requirements. Entities that meet policy conditions are eligible for penalty reductions (including penalty waivers) and other benefits. To date, over 750 entities have disclosed violations at over 2,750 facilities under the two self-disclosure policies.

ROOT CAUSE ANALYSIS PILOT PROJECT: COMPREHENSIVE VS. INDIVIDUAL EVALUATION

Question. What is the Agency's reaction to the Root Cause report recommendation to redirect inspectors from a focus on individual noncompliance events to a more comprehensive evaluation of the effectiveness of a facility's systems for protecting the environment and does the Agency have any efforts underway to test, pilot or implement this recommendation?

Answer. Shifting the focus of compliance inspectors was not a formal recommendation of the Root Cause project. It was an idea offered by an industry representative on the project team.

However, as resources and expertise allow, EPA has conducted Environmental Management Systems inspections and Environmental Management Reviews (EMR). For example, EPA's Federal Facility Enforcement Office (FFEO) conducted a 2-year pilot program of conducting environmental management Reviews (EMRs) at Federal facilities. An EMR is an on-site review of selected aspects of a facility's environmental management program and policies in accordance with the Code of Environmental management principles for Federal Agencies (CEMP), an EMS-based set of principles similar to ISO 14001. These EMRs are conducted by following the EMR Policy and Guidance which contains an Incidental Violations Response Policy which is a hybrid of the EPA Small Business and Audit Policies. During the 2-year pilot program, EPA Regions conducted 29 EMRs at facilities of 20 different federal agencies. Federal facilities have been very receptive to the EMRs and have made numerous management and good practice changes based on EMR report recommendations. FFEO has issued a national report on the pilot program and is currently conducting a follow-up study and facility survey to document improvements made as a result of these EMSs.

In July, 1999 EPA, after extensive consultations with a variety of outside stakeholders, released a major report from our Innovations Task Force, "Aiming for Excellence: Actions to Encourage Stewardship and Accelerate Environmental Progress." In this report EPA commits to promoting the use of environmental management systems. Specifically, the report states that EPA will:

- encourage organizations to adopt EMSs that improve compliance, prevent pollution, and use other measures of environmental performance;
- continue our efforts to learn more about how EMSs can complement existing environmental programs and policies; and
- evaluate how EMSs, in the long-term, might help bring about changes in public policy.

As a result, EPA has developed an EMS action plan (currently in draft) that sets out the steps EPA will take to fulfill this commitment. EPA has held meetings with various stakeholder groups to facilitate discussion of the plan and expects to have it finalized in the near future. The entire draft action plan can be located electronically at www.epa.gov/ems.

ROOT CAUSE ANALYSIS PILOT PROJECT: COORDINATION BETWEEN EPA AND STATES ON REGULATORY REQUIREMENTS

Question. What is the Agency's reaction to the Root Cause report recommendation to improve coordination between EPA and states regarding the interpretation of regulatory requirements and does the Agency have any efforts underway to test, pilot or implement this recommendation?

Answer. EPA routinely works with states to develop and distribute uniform guidance on individual rules and on categories of regulations. Through interaction between EPA program offices, state environmental agencies, and media-specific associations, interpretations issues are identified and addressed.

Several tools are also available to support consistent interpretation of regulatory requirements. Through Agency funded hotlines, federal regulatory determinations are easily accessed. In addition, EPA has created the Applicability Determination Index (ADI)—a searchable database of hundreds of Clean Air Act regulatory determinations. Lastly, the Agency is creating a national compliance assistance clearinghouse that will further facilitate coordination between EPA and the states.

Finally, state regulations and state contacts are easily accessible through the Compliance Assistance Centers. As part of the Centers program, the Environmental Council of States (ECOS) has actively partnered with the Local Government Envi-

ronmental Association Network (Center for local government officials) promoting interaction between the state, local and federal governments.

ROOT CAUSE ANALYSIS PILOT PROJECT: STAKEHOLDERS FOCUS GROUPS

Question. What is the Agency's reaction to the Root Cause report recommendation to create focus groups representing all stakeholders during early stages of revision of rules and does the Agency have any efforts underway to test, pilot or implement this recommendation?

Answer. Convening focus groups during early stages of rule revision was not a formal recommendation adopted in the Root Cause project. It was an idea offered by an industry representative on the project team. Early and interactive stakeholder involvement is a cornerstone of the Agency's sector program's approach and is also a cornerstone of the Agency's approach to regulatory development. For example, consultation with small business advisory panels and federal advisory committees are integral to the Agency's regulatory development process.

The Agency's sustainable industry program in particular is designed to build knowledge of stakeholder perspectives as a means of identifying worthwhile policy and programmatic changes in regulatory standards and other areas, to achieve better compliance, promote beyond-compliance stewardship, and to do so with minimum possible burden on the regulated community and regulators. For example, sector participation in the sustainable industry program has prompted regulatory changes for the metal finishing industry in RCRA, for chrome in the Clean Air Act (CAA), and for Metal Products & Machinery effluent guidelines. In addition, EPA is seeking public feedback on new regulatory projects such as the Persistent Bioaccumulative Toxics (PBT) initiative.

ROOT CAUSE ANALYSIS PILOT PROJECT: PILOT TEST PROGRAM

Question. What is the Agency's reaction to the recommendation recorded by the Root Cause report to pilot-test a program similar to OSHA's "Nationwide Quick-Fix Program", which offers reductions of penalties to employers that immediately abate hazardous identified during an OSHA inspection and does the Agency have any efforts underway to test, pilot or implement this recommendation?

Answer. Pilot-testing a "Quick Fix" program was not a formal recommendation adopted in the Root Cause project. It was an idea offered by an industry representative on the project team. In the response to a previous question, we noted that EPA's penalty policies allow penalties to be mitigated in certain situations, and we noted the factors that determine whether mitigation is appropriate in a particular situation. We also referenced the Agency's self-audit and small business policies. The Agency believes these initiatives offer appropriate types of flexibility. There are no plans to adopt the OSHA approach.

ROOT CAUSE ANALYSIS PILOT PROJECT: FEASIBILITY PILOT-TEST PROGRAM

Question. What is the Agency's reaction to the Root Cause report recommendation to work with industry to pilot-test the feasibility of new rule before the are promulgated and does the Agency have any efforts underway to test, pilot or implement this recommendation?

Answer. Pilot-testing of new rules was not a formal recommendation adopted in the Root Cause project. It was an idea offered by an industry representative on the project team. The Agency has committed to field testing certain draft regulations prior to promulgation in its "Aiming for Excellence" report. The field testing will be conducted through a simulated trial application of a draft rule with one or more regulated entities, with opportunity for public involvement.

Furthermore, on-going Agency activities do allow industry pilot-testing to affect regulatory requirements. For example, the Agency's metal finishing sector program tested low cost pollution prevention technologies to reduce chrome emissions in a project that was defined and validated by an early focus group. The results of a successful research and development test may lead to changes in the Chrome Clean Air Act MACT standards and allow the use of the tested technology. In essence, this initiative road tested an approach that identified what, if any, regulatory change was appropriate.

Similarly, the sustainable industry sectors approach discussed above: (1) develops a base of knowledge and stakeholder understanding; (2) determines which ideas should be tested; and then (3) defines, if any, appropriate programmatic and/or regulatory changes. This approach has worked well in the metal finishing sector, and it is being implemented in other sectors.

ENFORCEMENT TARGETING

Question. How are EPA's efforts to strategically target its enforcement and compliance activities allowing the Agency to address the most significant risks to human health and the environment and to address disproportionate burden on certain populations?

Answer. The Office of Enforcement and Compliance Assurance (OECA) has developed several tools for strategic targeting of enforcement and compliance resources by headquarters and regional programs to address human health and environmental risks and areas which may have disproportionately exposed populations. The use of these tools is leading to identification of important environmental risks and noncompliance patterns. For example, the selection of two industry sectors (Petroleum Refining and Metal Services) as OECA priorities for inclusion in the fiscal year 2000/2001 Memoranda of Agreement (MOA) was based on an analysis of industrial sectors that took into account inspection coverage, violation rates, emissions data, and the views of state regulatory partners. Another OECA-developed targeting tool incorporates interactive mapping techniques to allow users to look at facilities in stressed areas (e.g., a priority watershed), near schools, in minority communities, or other relevant factors. By combining various types of information and using appropriate technologies, the Agency is able to improve its ability to target compliance and enforcement resources at the most important problems.

ENFORCEMENT TARGETING: PURPOSE AND SUPPORT TARGET ACTIVITIES

Question. Describe the different targeting activities in which the enforcement targeting program is engaged including their purpose and support of the Agency's goals and performance measures.

Answer. The Office of Enforcement and Compliance Assurance (OECA) engages in a broad range of both strategic and tactical enforcement targeting activities in support of Agency goals. OECA uses data strategically from across the Agency's programs and from external sources where possible to identify environmental risks or noncompliance patterns which may warrant intervention. Identifying these problems leads to further analysis and can result in a variety of responses, from declaring an industry sector a multi-year priority to be addressed by a variety of tools, to dispatching compliance assistance staff or an inspector to one or more facilities. By targeting our compliance and enforcement resources at important problems we align those resources with EPA goals and we can use performance measures to track progress and adjust strategies for maximum impact.

ENFORCEMENT TARGETING: DATA/INFORMATION SYSTEMS PROGRAM FUNDING LEVELS

Question. Provide funding levels in terms of dollars and FTE, for all activities under the Data/Information Systems program component of the Office of Enforcement and Compliance Assurance (OECA) in the fiscal year 1999 budget request, fiscal year 1999 operating plan, fiscal year 1999 actuals, fiscal year 2000 budget request, fiscal year 2000 proposed operating plan, and fiscal year 2001 budget request. Provide the information by appropriation, goal, objective, sub-objective, office or region, and activity. Ensure that targeting activities are labeled and differentiated from other data/information systems activities.

Answer. The attached spreadsheet provides resource information for OECA's data and information efforts. The information comes from the Agency's Budget Automation System (BAS). The budget activities on the table are used primarily in budget formulation. The resources requested for the fiscal year 1999 actuals are not maintained in the Agency's database.

OECA does not specifically identify targeting activities under this program. Targeting work supports the compliance assistance and compliance monitoring programs. However, the Integrated Data Enforcement Analysis (IDEA) system can be used for several purposes...targeting, public access to name two. These resources are located under the Office of Compliance's budget in Goal 7.

ENFORCEMENT TARGETING: COMPLIANCE MONITORING PROGRAM FUNDING LEVEL

Question. Provide funding levels, in terms of dollars and FTE, for all activities under the Compliance Monitoring program component of the Office of Enforcement and Compliance Assurance (OECA) in the fiscal year 1999 budget request, fiscal year 1999 operating plan, fiscal year 1999 actuals, fiscal year 2000 budget request, fiscal year 2000 proposed operating plan, and fiscal year 2001 budget request. Provide the information by appropriation, goal, objective, sub-objective, office or region, and activity. Ensure that targeting activities are labeled and differentiated from compliance monitoring activities.

Answer. The attached spreadsheet provides resource information for OECA's compliance monitoring key program. The information comes from the Agency's Budget Automation System (BAS). The resources requested for the fiscal year 1999 actuals and activity level information are not maintained in the Agency's key program database.

* In FY 2001, resources in the Immediate Office support this key program. Working capital fund dollars will be allocated across all key programs to reflect the total resources that support these programs.

QUESTIONS SUBMITTED BY SENATOR RICHARD C. SHELBY

ACCESS TO DATA: FEDERALLY FUNDED RESEARCH DATA

Question. It is my understanding that EPA has proposed to adopt OMB's interpretation of my amendment by applying it only to awards made to institutions after November 1999. Does this mean the American public will not see the underlying federally funded research data that has been or will be cited in your agency's TIER II rule, Environmental Justice Guidance, 2002 PM/Ozone review, and low sulphur diesel regulation—among others?

Answer. You are correct in your understanding that EPA has proposed to adopt OMB's interpretation that your amendment applies only to awards made to institutions after November 1999. As to the question of whether EPA will provide research data both produced as a part of federal assistance agreements initiated prior to November 1999 and not in the Agency's possession, this determination will continue to be made on a case-by-case basis. Of course, research data that are in the Agency's possession will continue to be provided upon FOIA request (subject to applicable FOIA exemptions). This policy applies to all research data related to Agency rulemakings and other proceedings, including those cited in your question.

ACCESS TO DATA: PUBLIC INTEREST IN CREDIBILITY AND VALIDITY

Question. Do you believe that the public has an interest in the credibility and validity of the underlying data that would support these agency actions?

Answer. It is crucial that the public know that the science that serves as the foundation for governmental actions is sound—from ensuring the safety of medications to protecting the environment. One way to make sure this happens is sustaining the integrity of scientific peer review, a process that has served the scientific community in the United States well over the years. EPA recognizes the need for thorough peer review of the science behind its policy decisions and has taken several steps to bolster the degree to which peer review is integrated into all major policy actions. For example, when the Agency reevaluates the adequacy of National Ambient Air Quality Standards, we only consider information in the peer-reviewed scientific literature. EPA summarizes these studies in a criteria document, which is then peer reviewed by the Clean Air Scientific Advisory Committee. The broadening of our reliance on peer review is best exemplified by the issuance of our Peer Review Handbook in 1998.

ACCESS TO DATA: LEVEL OF PUBLIC ACCESS

Question. Shouldn't they be able to see the data you claim supports your rules if they so choose? Or should they just take your word for it?

Answer. EPA is strongly committed to the public availability of data used to support regulations and policies. We encourage researchers to make their data available for other researchers and the public whenever possible.

Nonetheless, we recognize that there are circumstances that must be considered when determining whether it is appropriate to publicly release such information. For example, the Agency routinely considers confidential business information in its public access decisions whose release may place corporations at a competitive disadvantage were they to be made public. Additionally, the Agency sometimes bases decisions on health studies that rely on an individual's medical records, whose participation in the study was predicated on the agreement that these records not be made public.

In two recent situations involving health effects studies on particulate matter, researchers refused to release the underlying health data after requested to do so by EPA, citing confidentiality agreements not to release personal medical records. To address public concerns about the integrity of these studies, EPA enlisted the help of the original researchers and independent research organization, the Health Effects Institute (HEI). HEI recruited independent researchers to audit the data in the original reports and to undertake their own re-analyses of these data. These audits and re-analyses were recently completed and corroborated the results of the original peer-reviewed studies.

ACCESS TO DATA: PEER REVIEW AND PUBLIC ACCESS

Question. Do you believe peer review is a substitute for public access?

Answer. EPA evaluates peer review and public access issues separately; one is not considered to be a substitute for the other. EPA policy is to require peer review for all major scientific and technical work products, and in special cases for non-major products. Independent, expert review is key to the scientific credibility of EPA's de-

cisions. The Agency has taken major steps in recent years to enhance its peer review efforts, including its 1998 publication of the EPA Peer Review Handbook and the 1999 implementation of a new peer review database to track at the project level program and regional office implementation of the Agency's peer review guidance.

EPA also supports public access to data, as long as privileged information such as medical records and confidential business information (for example, proprietary data on patented chemical formulations) remains protected. Over the past several years, the Agency has taken many steps to increase public access to data; new information technology has helped us considerably in this area.

In sum, peer review and public access to data are both important, and neither is a substitute for the other. EPA has made great strides in recent years to enhance both of these key aspects of scientific credibility, and will continue to do so in the future.

ACCESS TO DATA: PUBLIC ACCESS AND FEDERAL DECISIONMAKING

Question. Do you not agree that public disclosure generally promotes greater scrutiny, accountability and transparency in the federal decisionmaking process?

Answer. We agree that public disclosure of information that serves as the foundation for Federal decisionmaking promotes scrutiny, accountability and transparency in the process. EPA remains committed to such disclosure, consistent with applicable statutes and other requirements.

ACCESS TO DATA: FEDERALLY FUNDED RESEARCH AGENCY ACCESS TO DATA

Question. Aside from last year's law and OMB's new rule expanding the public's access to federally funded research data—it is my understanding that EPA and every federal agency has the rights to obtain federally funded research data. It is in all of your contracts. Has EPA ever waived its rights to the research study data it funds?

Answer. EPA's Office of Research and Development (ORD) has never waived its rights to the research study data it has funded. EPA-ORD has the right to obtain research study data that it has funded.

Question. If you have, why and in what circumstances have you done that?

Answer. Not applicable

Question. If you have not, when has EPA ever exercised its right to obtain the underlying data, if ever? Please outline those cases, if any, in writing to the Subcommittee.

Answer. Please see attached Shelby Attachment 1 for instances when EPA-ORD has exercised its right to obtain underlying data from Federally funded research since 1995.

Instances When EPA-ORD Has Exercised Its Right to Obtain Underlying Data from Federally Funded Research Since 1995

Type of Instrument	Instrument #	Contractor or Recipient	Description of the Work/Data
Cooperative agreement	CR824167	Lovelace Clinic Foundation	Analysis of sera for antibodies to drinking water microbes
Cooperative agreement	CR822898	University of Cincinnati, Investigator: Leonard Bernstein.	Provided disk with raw data so we could run statistical analysis prior to publication.
Cooperative agreement	CR820510	University of Michigan (and now Case Western Reserve University, Investigator: Kevin Cooper.	Provided disk with raw data for statistical analysis.
Cooperative agreement	CR822003-01	Johns Hopkins University	Data related to human exposure to hexavalent chromium. Original data was collected by Allied Chemical in Balto. MD, and used by Johns Hopkins University in a cooperative agreement study. The data was provided to the project officer at EPA. Two pre-publication manuscripts were provided to Public Citizen in response to a FOIA. Earlier in the study, a subset of the preliminary data was provided to OSHA and marked as such. This same subject was also provided to Inside Washington in response to a FOIA.
Cooperative agreement	CR818090 and CR8116500	Harvard University and Brigham and Women's Hospital	EPA asked for data in 1/97 letter to researchers from Mary Nichols (AA/OAR), but request was denied. Data were not collected under co-ops (only analysis supported), but rather, under NIEHS Grants and privately by American Cancer Society. The Harvard investigators ultimately agreed to provide the original data, collected using federal funds provided by NIEHS et al, to a third party for reanalysis, with extensive controls put in place to assure private and confidential health data were not divulged.

Shelby Attachment 1

Instances When EPA-ORD Has Exercised Its Right to Obtain Underlying Data from Federally Funded Research Since 1995.

Type of Instrument	Instrument #	Contractor or Recipient	Description of the Work/Data
Contract	68D99002	EMORY University	Analysis of NHEXAS Harvard Cooperative Study Data
Contract	68D99003	University of Arizona	Analysis and Reporting of the NHEXAS Arizona Exposure Data and Delivery of Validated NHEXAS Arizona Study Database
Contract	68D99008	Research Triangle Institute	Analysis of NHEXAS Region V Study Data
Contract	68D99049	Man Tech Environmental Technology	Atmospheric and exposure research related to an agricultural health study of exposure of farm workers and families to pesticides.

Shelby Attachment 1

FEDERALLY FUNDED RESEARCH: AGENCY ACCESS AND PUBLIC ACCESS

Question. Why doesn't EPA use its existing powers to obtain that data to release the information as a matter of good government?

Answer. As noted in the answer to the previous question, EPA has exercised its right to obtain data for public release. Such information exchanges also occur routinely on the part of Federally-funded researchers on an informal basis, as a part of the scientific process.

To the maximum extent possible, EPA uses scientific and technical data for regulatory decision making that have appeared in peer-reviewed publication. Therefore, the data are already publicly available. For studies or data that do not fall into this category and were funded prior to the recent amendments to OMB Circular A-110, a decision to exercise our right to obtain data must be weighed against legal or other factors, e.g., the need for confidentiality of human subjects. There have been very few occasions where such issues have arisen. Thus, the Agency will continue its practice of evaluating such requests on a case-by-case basis.

ACCESS TO DATA: CRITICAL STUDIES DATA

Question. Why won't EPA make a commitment to do everything it can to obtain the data for the critical studies cited in rules in a timely manner, so the public can review the data?

Answer. EPA has been and remains strongly committed to the public availability of data used to support regulations and policies. We encourage researchers to make their data available for other researchers and the public whenever possible.

For regulatory decision making, it is our policy to rely to the maximum extent possible on studies and data that have already been published. We believe this is the best way to assure transparency of the decision process. However, we recognize that there are sometimes countervailing considerations that must be weighed when determining whether it is appropriate to publicly release information. For example, the Agency routinely considers confidential business information in its decisions, the release of which may place submitters of such information at a competitive disadvantage were it to be made public. Additionally, we sometimes base decisions upon health studies that rely on the medical records of individuals, whose participation in the study was predicated on the agreement that those records not be made public.

NAAQS RESEARCH FUNDING

Question. Ms. Browner, over the last few years, I have repeatedly requested the federally funded research data used to justify EPA's 1997 PM/Ozone rule—specifically, the American Cancer Society and Harvard (of Pope) studies. For various reasons, I have been told that your agency can not obtain these studies. Now, it is my understanding that EPA did not fund these studies. As Administrator of the EPA who promulgated this rule, I'd appreciate it if you find out if any federal agency funded these studies that you relied on.

Answer. With regard to obtaining the two studies mentioned above [Dockery et al., 1993, An association between air pollution and mortality in six U.S. cities. *N Engl J Med* 329:1753-1759; Pope et al., 1995, Particulate air pollution as a predictor of mortality in a prospective study of U.S. adults. *Am J Respir Crit Care Med* 151:669-674], EPA has always been able to obtain the studies themselves and has placed copies of the published studies in the docket for the PM NAAQS review. However, although EPA requested the raw health data, EPA has not been able to obtain the data used in these studies (see response to question #3).

With regard to federal funding for these studies, EPA has provided funding, in part, for both studies. In the published reports for the two studies, the authors acknowledge funding from numerous sources. The Dockery et al. (1993) study was supported by several grants from the National Institute of Environmental Health Sciences (NIEHS) and EPA as well as a contract with the Electric Power Research Institute. The Pope et al. (1995) study, which used health data collected by the American Cancer Society, was also supported by grants from NIEHS and EPA. For both studies, EPA grant funds were provided to specifically support the analysis of the data, not the collection of the health data.

GUIDANCE AND POLICY DOCUMENTS

Question. I am very concerned about the growing use of agency guidelines and policy documents that in many cases impose significant and substantive requirements on business and individuals. These documents are not given the public con-

sideration and due process protections of a rulemaking procedure. What legal effect do EPA interpretive rules, policies, and guidance documents have?

Answer. Interpretive rules are generally non-binding advisory statements that interpret the language of a statute or a legislative rule. They may state what we think a particular statute means and remind parties of existing duties. A policy statement (which includes guidance documents, guidelines, manuals, and opinion letters) announces EPA's intended future course or areas for exploration with respect to how EPA will interpret or enforce a statutory or regulatory provision, and leaves EPA free to exercise administrative discretion in carrying out the policy.

Generally, interpretive rules and policy statements are similar in that neither have the force of law that is, they do not impose binding legal requirements. Interpretive rules are distinguishable from general statements of policy and guidance documents because while interpretive rules clarify or explain existing statutes or regulations, general statements of policy announce to the public the policy which the agency intends to apply in the future when making decisions, whether through rulemakings, adjudications, or other agency actions. See *National Whistleblower Ctr. V. Nuclear Regulatory Comm'n*, F.3d (D.C. Cir. Apr. 11, 2000) ("the advance-notice function of policy statements yields significant informational benefits, because policy statements give the public a chance to contemplate an agency's views before those views are applied to particular factual circumstances"). See also EPA's response to the question below on legal analysis of binding effect of these types of documents.

Question. If they are not legally binding, should the taxpayers you regulate be told clearly these documents which interpret rules and policies have no binding legal effect and that people, in reality, are free to disregard them?

Answer. EPA believes such a provision is unnecessary. As you are aware, EPA issues many kinds of general guidance documents and other statements to help the public and regulated community understand and comply with the Agency's regulatory programs and requirements. EPA has found that the more tools we use to communicate with regulated entities, our regulatory partners (state, local and tribal governments), and the public at large, the more effective we can be in explaining our programs and anticipating and answering their questions. We believe the regulated community, our regulatory partners, and the public find EPA's extensive communication efforts—including guidance documents, policy statements, fact sheets, question and answer documents, reports, advisories, letters responding to individual questions, and other means of providing information about our activities—to be very helpful to, and an important part of our programs.

We appreciate the need of the regulated community to be able to differentiate between a legally binding document and one that is not. To promote clarity, the Agency currently includes language in many of our non-binding policy statements and guidance documents notifying the readers that such documents are not legally binding. Requiring the inclusion of a statement in all non-binding Agency documents, such as fact sheets, analytical reports, and guidance documents may cause unnecessary confusion, particularly when the aim of some of the materials is to inform and explain to regulated entities underlying regulatory requirements that are legally binding.

For example, section 212 of the Small Business Regulatory Enforcement Fairness Act requires agencies to publish one or more small entity compliance guides for any rule for which a final regulatory flexibility analysis was prepared under 5 U.S.C. § 604. The purpose of these guides is to assist small entities in complying with the rule, by "explain[ing] the actions a small entity is required to take to comply with a rule or group of rules." Pub. L. 104-121, sec. 211 (emphasis added). These are non-binding guidance documents that explain binding regulatory requirements to small entities in "sufficiently plain language likely to be understood by affected small entities." *Id.* Including a statement that the guide is non-binding and regulated small entities are free to disregard it may lead to unnecessary confusion.

Question. Are interpretive rules, guidance or policy documents subject to the administrative requirements of Section 553 of the Administrative Procedure Act?

Answer. No. Section 553(b) of the Administrative Procedure Act states:

"General notice of proposed rule making shall be published in the Federal Register, unless persons subject thereto are named and either personally served or otherwise have actual notice thereof in accordance with law."

However, section 553(b)(A) expressly exempts from the requirements of advance publication and opportunity for public participation interpretive rules, general statements of policy, or rules of agency organization, procedure or practice. That section provides:

“Except when notice or hearing is required by statute, this subsection does not apply—

“(A) to interpretive rules, general statements of policy, or rules of agency organization, procedure, or practice” 5 U.S.C. § 553(b)(A) (emphasis added).

A general statement of policy is merely an announcement to the public of the policy which EPA plans to implement in future rulemakings or adjudications. As a consequence, the APA does not require notice and comment rulemaking to issue a policy statement.

Question. What about judicial review? Are guidance documents subject to judicial review?

Answer. Policy statements, guidance documents, and interpretive rules generally are not subject to judicial review. However, someone may bring suit to challenge any of these documents if he or she believes it actually is a substantive rule that was not promulgated in accordance with the Administrative Procedure Act’s requirement of notice and opportunity for comment.

Question. I would appreciate you providing the Subcommittee with a legal analysis including citations of authorities that support the view that interpretive rules, guidance or policy documents have binding legal effect if you believe them to have some legal weight.

Answer. EPA is not aware of legal cases that support the view that interpretive rules, guidance or policy documents generally have binding legal effect. In fact, courts have consistently held that the fact that such documents do not create substantive law is one reason Congress exempted them from notice-and-comment rulemaking when it enacted the Administrative Procedure Act.

For example, in *American Hospital Association v. Bowen*, 834 F.2d 1037, 1045–46 (D.C. Cir. 1987), the court noted:

“The reading of the § 553 exemptions that seems most consonant with Congress’ purposes in adopting the APA is to construe them as an attempt to preserve agency flexibility in dealing with limited situations where substantive rights are not at stake. The exceptions have a common theme in that they accommodate situations where the policies promoted by public participation in rulemaking are outweighed by the countervailing considerations of effectiveness, efficiency, expedition and reduction in expense. Agency actions or statements falling within the three exemptions are not determinative of issues or rights addressed. They express the agency’s intended course of action, its tentative view of the meaning of a particular statutory term, or internal house-keeping measures organizing agency activities. They do not, however, foreclose alternate courses of action or conclusively affect rights of private parties Unlike legislative rules, non-binding policy statements carry no more weight on judicial review than their inherent persuasiveness commands.

“Substantive rules are ones which grant rights, impose obligations, or produce other significant effects on private interests, or which effect a change in existing law or policy. Interpretive rules, by contrast, are those which merely clarify or explain existing law or regulations, are essentially hortatory and instructional, and do not have the full force and effect of a substantive rule but [are] in the form of an explanation of particular terms.

“The function of the second § 553 exemption, for general policy statements, is to allow agencies to announce their tentative intentions for the future, without binding themselves. We have previously contrasted a properly adopted substantive rule with a general statement of policy, observing that while a substantive rule establishes a standard of conduct which has the force of law in subsequent proceedings, a general statement of policy, on the other hand, does not establish a binding norm. It is not finally determinative of the issues or rights to which it is addressed. The agency cannot apply or rely upon a general statement of policy as law because a general statement of policy only announces what the agency seeks to establish as policy. [Emphasis added.]”

There are cases in which a court has found an agency’s purported interpretive rule, guidance document, or policy statement to be a substantive rule, either because the rule established binding norms on its face, or the agency applied the document with the inflexibility of a rule. These cases, however, are instances where the agency did not properly issue a substantive rule; they do not stand for the proposition that generally, interpretive rules, guidance documents and policy statements have binding legal effect.

BEVILL WASTES DETERMINATION: NEW INFORMATION TO JUSTIFY REGULATORY DECISION

Question. What significant new information have you received that would justify overriding the technical positions of EPA's professional staff at the end of a 19 year process as well as your own recommendations last March in the Report to Congress? Please provide any such new evidence to the Committee.

Answer. On April 25, 2000, the EPA announced our decision to continue to exempt fossil fuel combustion wastes from regulation as hazardous waste. This decision was based on all available information, including new information submitted as public comments to us in response to our March 1999 Report to Congress.

At the same time, we announced that we will establish non-hazardous waste national regulations applicable to fossil fuel combustion wastes when managed in surface impoundments and landfills and when the wastes are used as minefill. This decision was based in part on significant new environmental information that was submitted to the Agency in response to our March 1999 Report to Congress. In preparing the Report to Congress, EPA concentrated its efforts on damage case analyses in 5 of the major coal consuming states, but our survey was not exhaustive in those states. Based on a review of facility data for these 5 states involving coal combustion wastes managed in surface impoundments or landfills, EPA identified 7 proven damage cases and 11 potential damage cases (a potential damage case is one in which there is a known release from a waste management unit, but the release has not traveled sufficiently far from the unit to pose an actual threat to human health or the environment, but has the "potential" to do so in the future). Commenters provided documentation for 59 candidate damage cases in another 13 states. After carefully reviewing this information, we concluded that 4 of these represented proven damage cases and an additional 25 represented potential damage cases. Thus, EPA believes that it is highly likely that other cases of proven or potential damage would be identified if we reviewed data in the remaining 32 states.

This new information contributed to our April 25 decision to continue to exempt the wastes from regulation as hazardous wastes but to establish national non-hazardous waste regulations for these wastes, under Subtitle D of RCRA.

BEVILL WASTES DETERMINATION: REASON FOR CHANGE OF POSITION

Question. If there is no new evidence to contradict previous findings, then why the change of position on the determination on these wastes?

Answer. As explained in the previous question, on April 25, 2000, EPA decided that it was appropriate to continue to exempt fossil fuel combustion wastes from being regulated as hazardous. Senator Shelby

BEVILL WASTES DETERMINATION: EFFECT ON RECYCLING EFFORTS

Question. Many states, including mine, have developed successful programs to increase the beneficial use of these materials, e.g., use in the production of concrete. This beneficial use is environmentally sound, conserves virgin natural resources and conserves energy. There is a growing market for coal combustion by-products and unless this waste is recycled it will have to be landfilled.

Has the EPA considered the chilling effect and significant decrease in these recycling efforts that will occur if you reverse EPA's own studies and your Report to Congress and regulate these materials as hazardous?

Answer. EPA did not identify any significant risk posed by beneficial uses of fossil fuel combustion wastes in construction applications, such as in concrete or concrete products, in production of wall board, and as road bed material. We have, however, identified the potential for significant risk resulting from certain applications of coal combustion wastes when used to fill underground or surface mines (an activity that increasingly uses these wastes). While this practice can provide significant benefits, when not properly done minefilling has the potential to contaminate ground water to levels that could damage human health and the environment.

EPA wants to ensure that any actions taken by the Agency not place any unnecessary barriers on the beneficial use of coal combustion wastes. Our analyses indicate that beneficial uses of coal combustion wastes, with the exception of minefilling when not done properly, are not likely to pose significant risks to human health and the environment. For this reason and because most beneficial uses of coal combustion wastes conserve natural resources and reduce disposal costs, EPA decided that we would continue the exemption of fossil fuel combustion wastes from being regulated as hazardous wastes. Because of a concern that certain minefilling practices may pose significant risk to human health and the environment, we also decided that we would develop national regulations under non-hazardous waste authorities

(Subtitle D of RCRA) applicable to coal combustion wastes when used as minefill. We would base these standards on the approaches taken by states that currently have comprehensive programs addressing minefilling of coal combustion wastes.

QUESTIONS SUBMITTED BY SENATOR LARRY CRAIG

KYOTO PROTOCOL

Question. In EPA's fiscal year 2000 Annual Performance Plan it stated: "EPA will build a program that provides appropriate credit for early action." [Page VI-30]

Has EPA developed any analysis regarding the "credit for early action" legislation introduced in the Senate in the 105th Congress and the 106th Congress? If so, please provide this documentation, including a list of any recipients of this documentation.

Under what authority will EPA develop a "credit for early action" program?

Has EPA sponsored, co-sponsored or participated in any public meetings related to the global climate issue? If so, please provide the dates of the meetings, a list of participants, copies of as delivered presentations, and any presentation material used by EPA staff or produced as a result of a grant from EPA.

Answer. The above questions are identical to questions asked by the House Committee on Science and the Senate Appropriations Committee last year. We have attached the responses that EPA submitted for those questions. Please let us know if you would like any additional information.

FUNDING FOR STUDIES OF DOMESTIC OR INTERNATIONAL CARBON EMISSIONS TRADING

Question. Has EPA provided any funding for studies of either domestic or international carbon emissions trading?

If so, please provide by April 1, 2000: (a) the names of the organizations or individuals receiving the grant; (b) the amount of the grant; (c) the documents describing the initial scope of the project; (d) the dates of initial contact and project initiation; and (e) copies of these reports or preliminary drafts.

Also, please provide the Agency's statutory basis for pursuing these studies.

Answer. Please see attached information on EPA funding (since October 21, 1998) for studies of the design of carbon emissions trading systems. These documents could not be provided by April 1, 2000, because the questions were not received by the Agency until after the deadline.

EPA is authorized to pursue these studies under the following statutory provisions:

- Clean Air Act, 42 U.S.C. 7401 et seq.—sections 103(a), (b), (g)
- National Environmental Policy Act, 42 U.S.C. 4321 et seq.—section 102(2)(F)
- Global Climate Protection Act of 1987, 15 U.S.C. 13101 et seq.—section 1103

CLIMATE CHANGE: USE OF MODELS

Question. In 1999, Tim Barnett, Scripps Institution of Oceanography, ran 11 models and concluded: "There is no model that consistently agrees well with the observations." Is EPA using any models to predict the effects of global climate change on a regional or local level? If so, what models are being used?

Answer. EPA's assessments do not make predictions of the effects of future global climate change on a regional or local level. EPA uses input from climate models to define scenarios of potential climate futures. That is, the scenarios are used to understand the sensitivity and vulnerability of human and ecological systems to potential future global climate change, but not to make actual predictions of future conditions. All of the regional assessments being sponsored by the EPA as part of the National Assessment effort use state-of-the-art climate scenarios generated by the Canadian and British climate modelers (e.g., the Canadian Centre for Climate Modeling and Analysis; the Hadley Centre for Climate Prediction and Research). In some cases, the outputs of these climate models are used as inputs to Regional Climate Models in order to develop scenarios for future climatic conditions at a regional level. Also, EPA—and the regional coordinators it is sponsoring in the research community—are using the Vegetation/Ecosystem Modeling and Analysis Project (VEMAP) model output to understand the potential changes in vegetation that may occur as the climate changes.

EPA has conducted one study that assigns probabilities to particular future effects of climate change: *The Probability of Sea Level Rise*, which was published in October 1995. This study, conducted by the Office of Policy, Planning, and Evaluation, developed probability-based projections that can be added to local tide-gauge trends to estimate future sea level rise at particular locations around the coast of the United

States. The Report can be found on the Internet at: <http://www.epa.gov/oppeoeel/globalwarming/publicatons/impacts/sealevel/probability.html>.

CLIMATE CHANGE: JUSTIFICATIONS OF MODELS

Question. Since, according to the Hansen paper as well as others, models are not capable of predicting natural variability and global effects, how can EPA justify using these models to predict effects on a smaller, “microscopic scale” as planned for the 3 regional assessments (Mid-Atlantic, Great Lakes, & Gulf Coast)?

Answer. EPA’s assessments of the potential consequences of climate change and variability on the United States rely on a diversity of information. Some of the EPA assessment work uses input from climate models to define scenarios of potential climate futures. For example, all of the regional assessments being sponsored by the EPA as part of the National Assessment effort use state-of-the-art climate scenarios. All of the regional and sectoral teams for the National Assessment worked with two climate models, the United Kingdom’s Hadley Center Model and the Canadian Coupled Climate Model. These two models were chosen for several reasons. First, it was important that all the assessments be based on the same models to ensure comparability. Second, when the National Assessment began, the Canadian and Hadley Models were the only two global climate models that incorporated the role of aerosols as off-sets to the warming effects of greenhouse gases. These two vary in their interpretation of other factors, and therefore differ in their scenarios of future climate.

It must be emphasized that the climate model output is viewed as scenarios, not predictions of future climate. EPA’s regional assessments do not use models to “predict” any particular climate future, but rather to develop a range of possible scenarios of future climate. The scenarios serve as the basis for assessing the possible consequences of climate change—positive and negative consequences. It is the possible consequences that will be of use to decision makers, and of interest to stakeholders. They are being used to understand the sensitivity and vulnerability of human and ecological systems to potential future climate change, but not to make actual predictions of future conditions.

It is also important to understand that the regional assessments are not limited to scenarios generated by climate models. The assessments also use other information to illustrate the potential consequences of climate variability and change for human health and ecological systems. In addition to climate model output, EPA’s assessment work also relies on historic data to understand the sensitivity of human and ecological systems to change (e.g., changes in the profile of the Blackwater National Wildlife Refuge as sea level has risen during the past 50 years). Also, plausible “what if” scenarios are used to illuminate the sensitivity of various systems. These sensitivity analyses help to define the potential risks and opportunities posed by climate change and variability to human health, ecosystems, and social well-being.

CLIMATE CHANGE: HEALTH SECTOR ASSESSMENT

Question. Because of these substantial modeling problems, what is the basis for EPA conducting a “Health Sector Assessment” in fiscal year 2000?

Answer. The Health Assessment Work Group used a set of assumptions and/or projections of future climates developed for all participants in the National Assessment of “The Potential Consequences of Climate Variability and Change.” The output from the climate models was used to define scenarios of potential climate futures. It must be emphasized that the climate model output was viewed as scenarios, not predictions of future climate. The scenarios were used to understand the sensitivity and vulnerability of human health to potential future climate change, but not to make actual predictions of future conditions.

The Health Sector Assessment focused on understanding the relationships between several categories of health outcomes and weather and/or climate variables (e.g., temperature-related morbidity and mortality; health effects of extreme weather events; air-pollution-related health effects). The assessment examined both benefits and detriments arising from possible changes in future climate. Their analysis was, for the most part, not quantitative because of many layers of uncertainties in the data. In fact, the Health Assessment Work Group concluded that the levels of uncertainty preclude any definitive statement on the direction of change for each of these health outcomes, although they developed some hypotheses.

Projections of the extent and direction of the potential health impacts of climate variability and change are extremely difficult to make because of the many confounding and poorly understood factors associated with potential health outcomes, population vulnerability, and adaptation. For example, the relationship between

weather and specific health outcomes is understood for a relatively small number of diseases, with few quantitative models available for analysis. Research aimed at filling the priority knowledge gaps identified in this assessment would allow for more quantitative assessments in the future.

The Health Sector Assessment went through an extensive peer review process that has been fully documented. Based on the peer review, the Assessment meets the highest standards of scientific excellence and is scientifically credible, balanced, and unbiased.

Question. Is the EPA using “worst case scenarios?”

Answer. No, EPA is not using “worst case scenarios.” As noted above, to the extent that scenarios of future climate were used, the Health Assessment Work Group used a set of assumption and/or projections of future climates developed for all participants in the National Assessment of “The Potential Consequences of Climate Variability and Change.” These projections were based on the outputs of the Canadian Coupled-Climate Model and the United Kingdom’s Hadley Centre Climate Model. These two models were chosen for several reasons. First, it was important that all the assessments be based on the same models to ensure comparability. Second, when the National Assessment began, the Canadian and Hadley Models were the only two global climate models that incorporated the role of aerosols as off-sets to the warming effects of greenhouse gases. These two vary in their interpretation of other factors, and therefore differ in their scenarios of future climate. Their outputs fall in the middle of a range of outputs by a number of climate models.

CLIMATE CHANGE: U.S. NATIONAL ASSESSMENT PARTICIPATION

Question. Who from EPA is participating in the U.S. National Assessment “The Potential Consequences of Climate Variability and Change” and what are the specific topical and work group assignments?

Answer. As part of the U.S. National Assessment effort, EPA is sponsoring the Mid-Atlantic Regional Assessment, the Great Lakes Regional Assessment, the Gulf Coast Regional Assessment, and the Health Sector Assessment. An “arms-length” relationship has been maintained between EPA and the Work Groups producing the three Regional Assessments and the Health Sector Assessment. EPA researchers are contributing to the assessments, but the assessments are being managed by independent universities throughout the country. These assessments are being conducted through a public-private partnership that actively engages researchers from the academic community, decision makers, resource managers, and other affected stakeholders in the assessment process.

Several EPA researchers have contributed to the EPA-sponsored assessments. EPA researchers involved in the Mid-Atlantic Regional Assessment include Dr. Catriona Rogers (Office of Research and Development), Dr. John McCarty (AAAS Fellow, Office of Research and Development), and Dr. Henry Walker (Office of Research and Development).

The Mid-Atlantic Regional Assessment is also a stakeholder-oriented process that is actively engaging an Advisory Committee of over 90 members from the private and public sectors. EPA researchers and personnel who serve on the large Advisory Committee include Mr. Thomas DeMoss (EPA Mid-Atlantic Integrated Assessment Team), Dr. Ray Lassiter (Office of Research and Development), Mr. Ed Linky (EPA Region 2), Dr. Joel Scheraga (Office of Research and Development), Dr. Betsy Smith (Office of Research and Development), Mr. Eric Walbeck (EPA Mid-Atlantic Integrated Assessment Team), and Dr. Janet Gamble (Project Officer, Office of Research and Development).

Ms. Anne Grambsch is one of the 12 Lead Authors for the Health Sector Assessment. The other Lead Authors come from Johns Hopkins University, Harvard Medical School, the University of Florida, EPRI, NOAA, CDC-Division of Vector-borne Diseases, and CDC-Division of Environmental Hazards and Health Effects.

Mr. Jim Titus is an author of the Coastal and Marine Resources Sector Team under the U.S. National Assessment.

CLIMATE CHANGE: U.S. NATIONAL ASSESSMENT SUPPORT FOR PARTICIPATION

Question. Who is being provided EPA support for participation in the U.S. National Assessment and what are the specific topical and Work Group assignments?

Answer. As part of the U.S. National Assessment effort, EPA is sponsoring the Mid-Atlantic Regional Assessment, the Great Lakes Regional Assessment, the Gulf Coast Regional Assessment, and the Health Sector Assessment. The Mid-Atlantic Regional Assessment is being conducted by The Pennsylvania State University. The Great Lakes Regional Assessment is being conducted by the University of Michigan.

The Gulf Coast Regional Assessment is being conducted by the Southern University. The Health Sector Assessment is being conducted by Johns Hopkins University.

The Mid-Atlantic Regional Assessment is analyzing the potential effects of climate change and variability on forests, agriculture, water, coasts, and human health, as well as additional selected issues that cut across these five impacts areas (e.g., ecosystems). The Great Lakes Regional Assessment is considering water quality and quantity (including lake level and temperature changes), storms and extreme events, ecological and natural resources (such as plant life, forests, wetlands, aquatic life and agriculture), air quality, health and education. The Gulf Coast Regional Assessment is, to varying degrees, analyzing the potential effects of climate change and variability on ecosystems, farming and forestry, industry, human health, air quality, water quality, fisheries, and recreation/tourism.

The Health Sector Assessment is examining five categories of health outcomes that are most likely to be affected by climate change because they are associated with weather and/or climate variables: temperature-related morbidity and mortality; health effects of extreme weather events (storms, tornadoes, hurricanes, and precipitation extremes); air-pollution-related health effects; water- and food-borne diseases; and vector- and rodent-borne diseases.

An "arms-length" relationship has been maintained between EPA and the Work Groups producing the three Regional Assessments and the Health Sector Assessment.

Question. Were any of these individuals involved in the IPCC Second Assessment Report?

Answer. To the best of our knowledge, only three individuals involved in the Regional and Sectoral Assessments being sponsored by EPA as part of the U.S. National Assessment were involved as Lead or Contributing Authors in the 1995 IPCC Second Assessment Report. These individuals are Dr. Jonathan Patz (Johns Hopkins University), Dr. Paul Epstein (Harvard Medical School), and Dr. Joel Scheraga (EPA Office of Research and Development). Dr. Patz is the Co-Chair of the Health Sector Assessment. Dr. Epstein is one of the 12 Lead Authors of the Health Sector Assessment. Dr. Scheraga is on the Advisory Committee for the Mid-Atlantic Regional Assessment.

Question. If so, please identify the specific roles and responsibilities in the Second Assessment Report?

Answer. Dr. Patz and Dr. Epstein were Principal Lead Authors of Chapter 8 of the Working Group II Report of the 1995 IPCC Second Assessment. Chapter 8 was entitled, "Human Population Health." Dr. Scheraga was a Contributing Author to Chapter 26 (a Technical Appendix) of the Workgroup II Report of the 1995 IPCC Second Assessment. Chapter 26 was entitled, "Technical Guidelines for Assessing Climate Change Impacts and Adaptations."

REQUEST: Please provide this list including affiliations and locations

Dr. Jonathan Patz, Department of Environmental Health Sciences, Johns Hopkins University School of Hygiene and Public Health, Baltimore, MD.

Dr. Paul Epstein, Center for Health and the Global Environment, Harvard Medical School, Boston, MA.

Dr. Joel Scheraga, National Program Director, Global Change Research Program, Office of Research and Development, U.S. Environmental Protection Agency, Washington, DC.

CLIMATE CHANGE: U.S. NATIONAL ASSESSMENT PEER REVIEW

Question. What peer review process is used for the science contributions prior to submittal to the US National Assessment?

Answer. All of the EPA-sponsored Regional and Sectoral Assessments are being held to the highest standards of scientific excellence. All of the Regional and Sectoral Assessment Reports are being subjected to an extensive peer review process that has been fully documented to ensure that they are scientifically credible, balanced, and unbiased. EPA's Global Change Research Program committed to the Congress that it would insist upon and maintain scientific excellence, openness, and broad-based participation in all of the regional and sectoral assessment reports that it sponsors. EPA has fulfilled this commitment and aggressively implemented a rigorous peer review process.

The following guidelines have been established and followed for the external peer review of the EPA-sponsored regional and sectoral reports:

Technical Review.—A technical review must be conducted to evaluate the accuracy and validity of statements of fact and interpretations of data. Each section of the report should be reviewed by independent experts with technical expertise in the appropriate subject area. These expert reviewers should include persons who are ac-

tive in relevant disciplines or fields of endeavor but who have not participated in the assessment process.

Comprehensive Review.—Experts with broad scientific and technical expertise relevant to the particular region or sector should review the entire document in a comprehensive manner. These reviewers should not have participated in the assessment process.

Public/Stakeholder Comment.—The report should be circulated for comment to a range of interested parties, including the stakeholders engaged in the assessment and be available to the public upon request during the review period.

Documentation of Reviews and Responses.—A document should be prepared that compiles and summarizes all broad categories of comments, and explains the assessment team's responses.

We also note that the entire assessment process was open and predicated on the involvement of stakeholders. The assessments were launched with workshops to formulate questions and concerns to be addressed by the assessments themselves. A wide range of stakeholders—including for example, representatives from industry, state and local governments, and environmental groups—were invited to take part in the workshops. Those who chose to take part had the opportunity to shape the assessment, to participate in it, and to review the assessment report.

CLIMATE CHANGE: U.S. NATIONAL ASSESSMENT PUBLIC REVIEW

Question. How can the public review this material prior to submittal to the U.S. National Assessment?

Answer. In order to ensure that all of the EPA-sponsored Regional and Sectoral Assessment Reports are scientifically credible, balanced, and unbiased, EPA established guidelines for a rigorous external peer review process that must be followed by the assessment teams. One component of this external peer review process includes:

Public/Stakeholder Comment.—The report should be circulated for comment to a range of interested parties, including the stakeholders engaged in the assessment and be available to the public upon request during the review period.

Copies of the assessment reports are available to the public upon request from the assessment teams during the review period. Also, EPA is requiring that each assessment team prepare a document that compiles and summarizes all broad categories of comments, and explains the assessment team's responses. This document will be made available to the public.

We also note that the entire assessment process was open and predicated on the involvement of stakeholders. The assessments were launched with workshops to formulate questions and concerns to be addressed by the assessments themselves. A wide range of stakeholders—including for example, representatives from industry, state and local governments, environmental groups—were invited to take part in the workshops. Those who chose to take part had the opportunity to shape the assessment, to participate in it, and to review the assessment report.

Question. Does EPA maintain a public Internet site that can be used to post this material?

Answer. EPA's Global Change Research Program does not yet have a public Internet site that can be used to post this material. However, each of the universities responsible for conducting the EPA-sponsored Regional and Sectoral Assessments maintain websites. These websites can be used to post this material. For example, The Pennsylvania State University maintains an excellent website on which is posted their Overview document entitled, *Preparing for a Changing Climate: The Potential Consequences of Climate Variability and Change*. The website address is: <http://www.essc.psu.edu/mara/index.html>

This website also posts documentation of responses to reviewers' comments on a draft version of the Overview report.

Question. Does EPA plan to use this site for public disclosure?

Answer. EPA's Global Change Research Program is in the process of developing a new public website. This website is being developed to further fulfill the Global Program's commitment to the Congress that it will insist upon and maintain scientific excellence, openness, and broad-based participation throughout its program (including in all of the regional and sectoral assessments that it sponsors). An important purpose of this website will be to disseminate data and information. It will provide a portal through which scientists, policy analysts, and the public can access research data, documents, project descriptions and updates, workshop announcements and proceedings, presentations, and analytic tools. It will also provide information produced by the Global Change Research Program's intramural and extra-

mural researchers, including output from the U.S. National Assessment. EPA expects to be able to use this new website for public disclosure.

CLIMATE CHANGE: TRANSFER OF INFORMATION

Question. Has EPA or anyone funded by EPA transferred any of its work under the U.S. National Assessment to anyone involved in the IPCC Third Assessment Report? If so, provide the following: (a) What material was transferred? (b) Who transferred the material? (c) Who authorized the transfer? (d) To whom was the material transferred?

Answer. No. In fact, EPA's Global Change Research Program has insisted that all work that it has sponsored as part of the U.S. National Assessment go through a rigorous peer review process before it is released—including release to anyone involved in the IPCC Third Assessment Report.

The following guidelines have been established and followed for the external peer review of the EPA-sponsored regional and sectoral reports:

Technical Review.—A technical review must be conducted to evaluate the accuracy and validity of statements of fact and interpretations of data. Each section of the report should be reviewed by independent experts with technical expertise in the appropriate subject area. These expert reviewers should include persons who are active in relevant disciplines or fields of endeavor but who have not participated in the assessment process.

Comprehensive Review.—Experts with broad scientific and technical expertise relevant to the particular region or sector should review the entire document in a comprehensive manner. These reviewers should not have participated in the assessment process.

Public/Stakeholder Comment.—The report should be circulated for comment to a range of interested parties, including the stakeholders engaged in the assessment and be available to the public upon request during the review period.

Documentation of Reviews and Responses.—A document should be prepared that compiles and summarizes all broad categories of comments, and explains the assessment team's responses.

CLIMATE CHANGE: IPCC EPA PARTICIPATION

Question. Who from EPA is participating in the U.N. Intergovernmental Panel on Climate Change (IPCC) Third Assessment Report and what are the specific topical and Work Group assignments?

Answer. The following EPA personnel are participating in the IPCC Third Assessment Report:

Mr. Bill Rhodes is a Contributing Author on ancillary benefits for Chapter 8 of Working Group III of the IPCC Third Assessment Report.

Dr. Stephen Andersen is the lead author of the Chapter 3 Appendix, Options to Reduce Global Warming Contributions from Substitutes for Ozone Depleting Substances, under Working Group III of the Third Assessment Report.

Neil Leary is on detail from EPA as the head of the Technical Support Unit in Washington, DC for Working Group II of the Third Assessment Report.

John "Skip" Laitner is a contributing author to Chapter 5, Barriers, Opportunities, and Market Potential of Technologies and Practices, under Working Group III of the Third Assessment Report.

Question. Were any of these individuals involved in the IPCC Second Assessment Report?

Answer. Yes. Neil Leary (EPA, Washington, DC) served as an expert reviewer of the Working Group II and III reports of the Second Assessment Report.

Question. If so, please identify the specific roles and responsibilities in the Second Assessment Report?

Answer. Neil Leary (EPA, Washington, DC) served as an expert reviewer of the Working Group II and III reports of the Second Assessment Report.

Request: please provide this list including affiliations and locations.

Answer. Neil Leary, Environmental Protection Agency, Washington D.C.

CLIMATE CHANGE: IPCC SUPPORT FOR PARTICIPATION

Question. Who is being provided EPA support for participation in the IPCC Third Assessment Report and what are the specific topical and Work Group assignments?

Answer. The following people are being provided EPA support for participation in the IPCC Third Assessment Report:

Dr. Terry Root is a Lead Author for the Ecosystems and Wildlife chapter of Working Group II. Dr. Root is affiliated with the University of Michigan, Ann Arbor, MI.

Joel Smith is Convening Lead Author for the Synthesis of Climate Change Impacts and Adaptation chapter of Working Group II. Mr. Smith is with Stratus Consulting Inc., Boulder, CO.

Dr. Charles Howe is a Lead Author for the Water Resources chapter of Working Group II. Dr. Howe is affiliated with the University of Colorado at Boulder, Boulder, CO.

Mr. Bill Easterling is involved in the IPCC Third Assessment Report. He is affiliated with Pennsylvania State University in State College, PA.

Jeff Price is a lead author for the IPCC Third Assessment Report. He is affiliated with Pennsylvania State University in State College, PA.

Dr. Sandra Brown is a Convening Lead Author for the IPCC Working Group II Chapter 5 on ecosystems and their uses. Dr. Brown is also serving as a convening lead author for Chapter 6 of the Land Use, and Land Use Change, and Forestry Special Report. Dr. Brown participated in the IPCC Second Assessment report. Dr. Brown works for Winrock International in Arlington, VA.

Dr. Jayant Sathaye is a Lead Author for the IPCC Working Group III Chapter 5 on barriers and opportunities and market potential of technologies and practices. Dr. Sathaye is also serving as a convening lead author for Chapter 6 of the Land Use, and Land Use Change, and Forestry Special Report. Dr. Sathaye is also a convening lead author for Chapter 7 of the Technology Transfer Special Report. Dr. Sathaye participated in the IPCC Second Assessment report. Dr. Sathaye works for Lawrence Berkeley Laboratories in Berkeley, CA.

Dr. Brian Murray is serving as a lead author for a chapter of the Land Use, Land Use Change, and Forestry Special Report. He did not participate in the IPCC Second Assessment Report. Dr. Murray works for the Research Triangle Institute, in Research Triangle Park, NC.

Mr. William Pepper and Mr. Alexi Sankovsky are serving as contributing authors to the IPCC Special Report on Emission Scenarios. Neither Mr. Pepper nor Mr. Sankovsky participated in the IPCC Second Assessment Report. Mr. Pepper works for ICF Incorporated in Fairfax, Virginia. Mr. Sankovsky works for ICF Incorporated in Washington, DC.

Dr. Lynn Price is a lead author for Chapter 3, Technical and Economic Potential of Greenhouse Gas Emissions Reduction, under Working Group III of the TAR.

Dr. Mark Levine is a lead author of Chapter 3, Technical and Economic Potential of Greenhouse Gas Emissions Reduction, under Working Group III of the TAR.

Dr. Willy Makundi is a lead author of Chapter 4, Technical and Economic Potential of Options to Enhance, Maintain, and Manage Biological Carbon Reservoirs and Geo-Engineering, under Working Group III of the TAR.

Mr. E. Thomas Morehouse (Institute for Defense Analysis in Arlington VA) is a contributing author of the Chapter 3 Appendix, Options to Reduce Global Warming Contributions from Substitutes for Ozone Depleting Substances, under Working Group III of the Third Assessment Report.

Dr. Devra Davis is a lead author of Chapter 8 under Working Group III of the TAR.

Dr. Hugh Pitcher was provided funds to attend a meeting associated with Working Group III of the Third Assessment Report.

Dr. R.N. Stavins is a lead author for the economics chapter of Working Group III of the Third Assessment Report.

Question. Were any of these individuals involved in the IPCC Second Assessment Report?

Answer. Yes.

Question. If so, please identify the specific roles and responsibilities in the Second Assessment Report?

Answer. Dr. Lynn Price was a lead author for Chapter 22, Mitigation Options for Human Settlements, under Working Group II of the Second Assessment Report. Dr. Price is affiliated with the Lawrence Berkeley National Laboratory in Berkeley, CA.

Dr. Mark Levine was the lead author for Chapter 22, Mitigation Options for Human Settlements, under Working Group II of the Second Assessment Report. Dr. Levine is affiliated with the Lawrence Berkeley National Laboratory in Berkeley, CA.

Dr. Jayant Sathaye was a principal lead author for Chapter 24, Management of Forests for Mitigation of Greenhouse Gas Emissions, and a lead author for Chapter 27, Methods for Assessment of Mitigation Options, under Working Group II of the Second Assessment Report. Dr. Sathaye is affiliated with the Lawrence Berkeley National Laboratory, in Berkeley, CA.

Dr. R.N. Stavins was a lead author for Chapter 11, Economic Assessment of Policy Instruments for Combatting Climate Change, under Working Group III of the Second Assessment Report. Dr. Stavins is affiliated with Harvard University.

REQUEST: Please provide this list including affiliations and locations. Affiliations and locations provided in the answers above.

CLIMATE CHANGE: IPCC PEER REVIEW

Question. What peer review process is used for the science contributions prior to submittal to the IPCC?

Answer. The IPCC is an independent entity that has its own process for producing and peer-reviewing its assessment documents. Lead Authors and Contributing Authors for every chapter of the IPCC Third Assessment Report were nominated by their respective governments and chosen by the IPCC. These authors work together in an independent IPCC process to write their respective chapters. All EPA researchers who are Lead or Contributing Authors, as well as EPA-sponsored authors, work with other researchers from around the world within this independent IPCC process. (In other words, chapters are not first written by individual countries outside of the IPCC process, peer reviewed, and then submitted to the IPCC.)

Once the chapters of the IPCC Third Assessment Report are drafted, they go through a rigorous international scientific review, which includes official government reviews. (IPCC Technical Reports go through an identical peer review process.) The U.S. Global Change Research Program is responsible for coordinating the U.S. government review of IPCC assessment documents. The draft chapters are then revised and submitted for approval by all governments involved in the IPCC process.

It is important to distinguish between U.S. scientific research done for the U.S. National Assessment and research that is done specifically for the IPCC process. These are two independent activities with their own peer-review processes. EPA's Global Change Research Program has insisted that all work that it has sponsored as part of the U.S. National Assessment go through a rigorous peer review process before it is released—including release to anyone involved in the IPCC Third Assessment Report.

As described in our response to Question #34, all of the EPA-sponsored Regional and Sectoral Assessments are being held to the highest standards of scientific excellence. All of the Regional and Sectoral Assessment Reports are being subjected to an extensive peer review process that has been fully documented to ensure that they are scientifically credible, balanced, and unbiased. EPA's Global Change Research Program committed to the Congress that it would insist upon and maintain scientific excellence, openness, and broad-based participation in all of the regional and sectoral assessment reports that it sponsors. EPA has fulfilled this commitment and aggressively implemented a rigorous peer review process.

The following guidelines have been established and followed for the external peer review of the EPA-sponsored regional and sectoral reports:

Technical Review.—A technical review must be conducted to evaluate the accuracy and validity of statements of fact and interpretations of data. Each section of the report should be reviewed by independent experts with technical expertise in the appropriate subject area. These expert reviewers should include persons who are active in relevant disciplines or fields of endeavor but who have not participated in the assessment process.

Comprehensive Review.—Experts with broad scientific and technical expertise relevant to the particular region or sector should review the entire document in a comprehensive manner. These reviewers should not have participated in the assessment process.

Public/Stakeholder Comment.—The report should be circulated for comment to a range of interested parties, including the stakeholders engaged in the assessment and be available to the public upon request during the review period.

Documentation of Reviews and Responses.—A document should be prepared that compiles and summarizes all broad categories of comments, and explains the assessment team's responses.

We also note that the entire assessment process was open and predicated on the involvement of stakeholders. The assessments were launched with workshops to formulate questions and concerns to be addressed by the assessments themselves. A wide range of stakeholders—including for example, representatives from industry, state and local governments, environmental groups—were invited to take part in the workshops. Those who chose to take part had the opportunity to shape the assessment, to participate in it, and to review the assessment report.

CLIMATE CHANGE: PUBLIC ACCESS TO PEER REVIEW INFORMATION ON U.S. NATIONAL ASSESSMENT

Question. How can the public review this material prior to submittal to the IPCC?

Answer. As noted in our response to Question #40, it is important to distinguish between U.S. scientific research done for the U.S. National Assessment and research that is done specifically for the IPCC process. These are two independent activities with their own peer-review processes.

IPCC Review Process.—Once the chapters of the IPCC Third Assessment Report are drafted, they go through a rigorous international scientific review, which includes official government reviews. The U.S. Global Change Research Program is responsible for coordinating the U.S. government review of IPCC assessment documents. The U.S. government review of the IPCC assessment reports is an open and inclusive process. Anyone from the public has an opportunity to participate, review IPCC chapters, and submit comments. These comments are then incorporated into the official U.S. government response to the IPCC.

Following the international scientific review, the draft chapters are then revised and submitted for approval by all governments involved in the IPCC process.

National Assessment Peer-review Process.—EPA's Global Change Research Program has insisted that all work that it has sponsored as part of the U.S. National Assessment go through a rigorous peer review process before it is released—including release to anyone involved in the IPCC Third Assessment Report.

In order to ensure that all of the EPA-sponsored Regional and Sectoral Assessment Reports are scientifically credible, balanced, and unbiased, EPA established guidelines for a rigorous external peer review process that must be followed by the assessment teams. This review process includes a public/stakeholder comment period. EPA's guidelines specifically requires that "The report should be circulated for comment to a range of interested parties, including the stakeholders engaged in the assessment and be available to the public upon request during the review period."

Copies of the assessment reports are available to the public upon request from the assessment teams during the review period. Also, EPA is requiring that each assessment team prepare a document that compiles and summarizes all broad categories of comments, and explains the assessment team's responses. This document will be made available to the public.

We also note that the entire assessment process was open and predicated on the involvement of stakeholders. The assessments were launched with workshops to formulate questions and concerns to be addressed by the assessments themselves. A wide range of stakeholders—including for example, representatives from industry, state and local governments, environmental groups—were invited to take part in the workshops. Those who chose to take part had the opportunity to shape the assessment, to participate in it, and to review the assessment report.

Question. Does EPA maintain a public Internet site that can be used to post this material?

Answer. EPA's Global Change Research Program does not yet have a public Internet site that can be used to post this material. However, each of the universities responsible for conducting the EPA-sponsored Regional and Sectoral Assessments maintain websites. These websites can be used to post this material. For example, The Pennsylvania State University maintains an excellent website on which is posted their Overview document entitled, *Preparing for a Changing Climate: The Potential Consequences of Climate Variability and Change*. The website address is: <http://www.essc.psu.edu/mara/index.html>

This website also posts documentation of responses to reviewers' comments on a draft version of the Overview report.

Question. Does EPA plan to use this web site for full disclosure of any material transferred for use by the IPCC?

Answer. EPA's Global Change Research Program is in the process of developing a new public website. This website is being developed to further fulfill the Global Program's commitment to the Congress that it will insist upon and maintain scientific excellence, openness, and broad-based participation throughout its program (including in all of the regional and sectoral assessments that it sponsors). An important purpose of this website will be to disseminate data and information. It will provide a portal through which scientists, policy analysts, and the public can access research data, documents, project descriptions and updates, workshop announcements and proceedings, presentations, and analytic tools. It will also provide information produced by the Global Change Research Program's intramural and extramural researchers, including output from the U.S. National Assessment. EPA expects to be able to use this new website for public disclosure.

Related answer from previous Question [NOTE: This has not been cleared with Department of State or others.]

IPCC Third Assessment Report.—Public Review.

Question. How can the public review this material prior to submittal to the IPCC? Will this material be posed on EPA's website prior to submittal to the IPCC?

Answer. EPA will not be leading the review of the Third Assessment Report and currently has no plans for posting this material on the EPA website prior to submittal to the IPCC.

For the Second Assessment Report, the United States Government invited public comment. A Federal Register Notice was published which provided information on how to obtain the report from the United States Global Change Research Program and a mailing address for comments. A team of people then went through all of the comments (from agencies, experts and the public) and put together a set of United States Government comments, taking into account some of the comments received from the public. The United States Government comments were then forwarded to the IPCC. In addition, the United States Government separately forwarded the public comments received during the review process. Individuals can also send comments directly to the IPCC.

CO₂: ANALYSIS OF EMISSIONS REDUCTIONS

Question. On August 8, 1998 Administrator Browner wrote to Chairman Sensenbrenner that "EPA is not attempting in any way to implement the Kyoto Protocol by conducting the multi-pollutant analysis called for in the proposed modification [to the settlement]. EPA does not have any plan to regulate CO₂ from electric power plants."

With this statement in mind, please describe the basis for including CO₂ in the Office of Air and Radiation March 1999 study "Analysis of Emissions Reductions Options for the Electric Power Industry" Please provide a full copy of this study and any presentation material developed.

Answer. EPA has the responsibility under the Clean Air Act to decide whether to regulate mercury emissions from coal-fired electric power plants. Mercury exposure is associated with serious neurological and developmental effects in humans. The March 1999 analysis was an update to a series of multi-pollutant analyses of utility emissions that were first undertaken four years ago. The updated analysis was specifically intended to assist EPA in making decisions on mercury. The information it generated will be considered in making decisions regarding the possible regulation of mercury emissions from electric utility steam generating units under section 112 of the Act.

Multiple pollutant analysis of utility emissions makes sense because any effort to reduce any one pollutant affects the others. In the March 1999 analysis EPA evaluated how much reduction in mercury would result (and at what cost) from various possible scenarios to control mercury. Those model runs also estimate the reductions in other pollutants (NO_x, SO₂ and CO₂) that would result from these possible mercury control scenarios. The analysis also provides estimates of mercury reductions that would result from possible scenarios that reduce emissions of NO_x, SO₂ and CO₂.

EPA routinely uses a widely-accepted computer model, called the Integrated Planning Model (IPM), to undertake these multiple pollutant analyses. EPA has conducted analyses like this for electric power plants for more than three years with broad stakeholder involvement and support. In 1996, EPA conducted the Clean Air Power Initiative (CAPI), a stakeholder process involving utilities, fuel suppliers, labor, and environmental organizations using the IPM model to look at the interaction of control strategies for various pollutants from electric power plants. In that process and in subsequent advisory committee meetings the inclusion of carbon dioxide in these analyses was supported by a broad range of stakeholders including a number of utilities, the United Mine Workers, and environmental organizations.

Multiple pollutant analyses are called for in the Clean Air Act. For example, § 103(g)(1) calls for analyses of "[i]mprovements in nonregulatory strategies and technologies for preventing or reducing multiple air pollutants, including sulfur oxides, nitrogen oxides, heavy metals, PM-10 (particulate matter), carbon monoxide, and carbon dioxide, from stationary sources, including fossil fuel power plants."

CO₂: LEGAL AUTHORITY FOR CAP AND TRADE SYSTEM

Question. What legal authority does EPA claim for assuming a "cap and trade" basis in this study for each of the following emissions: mercury, NO_x, SO₂.

Answer. As the introduction to the study report emphasizes, the options that were analyzed were "hypothetical approaches to emissions controls on the electric power industry for each pollutant." They do not represent an EPA or Administration position on how any of the pollutants should or could be reduced. EPA's authority for conducting this analysis can be found in sections 103 and 112 of the Clean Air Act.

MERCURY RULE NRDC SETTLEMENT

Question. Is the study related in any way with the NRDC settlement in April 1998 related to the Mercury rule?

Answer. An EPA commitment to perform the study was included as part of the proposed April 1998 stipulation modifying an existing settlement agreement with the NRDC. As discussed in more detail in the response to your question, “CO₂ Consent Decree,” EPA had already planned to perform this analysis irrespective of the settlement agreement. Including it in the proposed settlement modification helped EPA gain NRDC’s agreement to give EPA additional time beyond the then-applicable deadline of April 15, 1998 to determine whether to regulate mercury emissions from electric utility steam generating units.

CLEAN AIR PARTNERSHIP FUND—AUTHORIZATION OF FUNDS

Question. For the fiscal year 2000 appropriations, the Administration included language in the EPA appropriation for “State and Tribal Grants” for a “new” \$200 million program called the “Clean Air Partnership Fund,” which was not enacted by the Congress (see Budget App. p. 930–931). The request said the “new” program would be carried out under section 103 of the Clean Air Act. The word “new” is in the Budget explanation. This year the fiscal year 2001 appropriation language repeats the request at a lower funding level of \$85 million. In light of the provisions of section 327 of the Clean Air Act, why is EPA apparently trying to circumvent the legislative committees of Congress in requesting through the Appropriations Committees funds for a “new” program that appears to be for more than one fiscal year 2001? Is this only a 1-year program?

Answer. Section 103 of the Clean Air Act provides the statutory authority necessary for the award of financial assistance to support activities that would be undertaken as part of the Clean Air Partnership Fund program. Section 103 requires the Administrator to establish a “national research and development program for the prevention and control of air pollution.” As part of this program, Section 103(a)(1) requires the Administrator to “conduct, and promote the coordination and acceleration of research, investigations, experiments, demonstrations, surveys, and studies relating to the causes, effects (including health and welfare effects), extent, prevention and control of air pollution.” Section 103(b)(3) authorizes the Administrator to make grants to support the activities listed in Section 103(a)(1). The Section 103(b)(3) grant authority thus includes the authority to fund demonstration projects, as well as related studies and investigations, such as those that would be supported through the Clean Air Partnership Fund program.

Section 327 of the Clean Air Act (the Act) authorized appropriations “to carry out this chapter” for the seven fiscal years commencing after the date of enactment of the Clean Air Act amendments or November 15, 1990. This means that there were authorized to be appropriated funds to carry out the Act for fiscal years 1991 through 1997; the section 327 authorization of appropriations expired on September 30, 1998. Nonetheless, EPA can continue to implement a program whose authorization has expired provided Congress continues to appropriate funds for the program. This has been the situation for the Clean Air Act. The Comptroller General has recognized that, as a general proposition, the appropriation of funds for a program whose funding authorization has expired provides a sufficient legal basis to continue the program. 65 Comp. Gen. 524 (1986); 65 Comp. Gen. 318, 320–21 (1986). The enacted appropriation effectively carries its own authorization. See 67 Comp. Gen. 401 (1988); B–219727, July 30, 1985.

Appropriations are presumed to be available for one fiscal year, unless specified otherwise in an appropriation act. The funds appropriated in EPA’s State and Tribal Assistance Grants account are specifically “to remain available until expended”. With section 103 of the Clean Air Act serving as the grant authority, the Agency’s Appropriation Act and the STAG appropriation, enacted after section 327 of the Clean Air Act, would provide the Agency with the authority to carry out a new program with funds made available for the fiscal year of the Appropriation Act and with funds that are carried over and remain available for obligation until expended in a succeeding year.

CLEAN AIR PARTNERSHIP FUND—AUTHORITY FOR MULTI-YEAR PROGRAMS

Question. Section 327 of the Clean Air Act authorizes appropriations for the Act for 7 fiscal years after enactment in 1990 or through September 30, 1998. That authorization has expired. However, a February 16, 2000 White House letter to “Dear Interested Party” from Mr. Roger Ballentine, explains that EPA is re-proposing the “creation of a new” Clean Air Partnership Fund at an \$85 million level rather than

\$200 million “to achieve reductions in both greenhouse gas emissions and ground-level air pollutants.” The letter also states that EPA “will expand its industry partnership programs” to “encourage” businesses to adopt reduction opportunities for the “most potent greenhouse gases” listed in the Kyoto Protocol. The letter clearly implies that both of these programs are for multi-years, not just for fiscal year 2001. If that is right, what is the authority for multi-year programs in light of section 327 of the Act? Is EPA expecting the appropriation process to provide this authorization beyond fiscal year 2001?

Answer. Section 103 of the Clean Air Act provides the statutory authority necessary for the award of financial assistance to support activities that would be undertaken as part of the Clean Air Partnership Fund program. Section 103 requires the Administrator to establish a “national research and development program for the prevention and control of air pollution.” As part of this program, Section 103(a)(1) requires the Administrator to “conduct, and promote the coordination and acceleration of, research, investigations, experiments, demonstrations, surveys, and studies relating to the causes, effects (including health and welfare effects), extent, prevention and control of air pollution.” Section 103(b)(3) authorizes the Administrator to make grants to support the activities listed in Section 103(a)(1). The Section 103(b)(3) grant authority thus includes the authority to fund demonstration projects, as well as related studies and investigations, such as those that would be supported through the Clean Air Partnership Fund program.

Section 327 of the Clean Air Act (the Act) authorized appropriations “to carry out this chapter” for the seven fiscal years commencing after the date of enactment of the Clean Air Act amendments or November 15, 1990. This means that there were authorized to be appropriated funds to carry out the Act for fiscal years 1991 through 1997; the section 327 authorization of appropriations expired on September 30, 1998. Nonetheless, EPA can continue to implement a program whose authorization has expired provided Congress continues to appropriate funds for the program. This has been the situation for the Clean Air Act. The Comptroller General has recognized that, as a general proposition, the appropriation of funds for a program whose funding authorization has expired provides a sufficient legal basis to continue the program. 65 Comp. Gen. 524 (1986); 65 Comp. Gen. 318, 320–21 (1986). The enacted appropriation effectively carries its own authorization. See 67 Comp. Gen. 401 (1988); B–219727, July 30, 1985.

Appropriations are presumed to be available for one fiscal year, unless specified otherwise in an appropriation act. The funds appropriated in EPA’s State and Tribal Assistance Grants account are specifically “to remain available until expended”. With section 103 of the Clean Air Act serving as the grant authority, the Agency’s Appropriation Act and the STAG appropriation, enacted after section 327 of the Clean Air Act, would provide the Agency with the authority to carry out a new program with funds made available for the fiscal year of the Appropriation Act and with funds that are carried over and remain available for obligation until expended in a succeeding year.

KYOTO PROTOCOL: CLARIFICATION OF PROCEDURES AND MECHANISMS INVOLVING
“BINDING CONSEQUENCES” UNDER ARTICLE 18

Question. The Clean Air Report for February 17, 2000 reports that the U.S. delegation, which includes EPA officials, negotiating rules, guidelines, procedures and modalities for the Kyoto Protocol submitted to the Convention Secretariat on January 31 new ideas for enforcement of a country’s commitment under Article 3 of the Protocol and of the Kyoto mechanisms. This includes binding consequences for violations.

Is it correct that the Kyoto Protocol does not include any compliance provisions and that Article 18 provides that any procedures and mechanisms involving “binding consequences” must be adopted by amendment to the Protocol after it enters into force?

Answer. As this is a matter of treaty interpretation, we requested the views of the Department of State, which replied as follows: It is not correct to say that the Protocol does not include any compliance provisions. The Protocol contains many compliance-related provisions such as those for monitoring and reporting emissions data (Articles 5 and 7), expert review of implementation (Article 8), and dispute resolution (Article 19). It is also too broad to assert that the only way to adopt binding consequences is through an amendment to Article 18 after the Protocol enters into force. First, the requirement in Article 18 for an amendment applies only to procedures and mechanisms “under this Article.” Second, it applies only to noncompliance with the Protocol (as opposed, for example, to not meeting eligibility requirements under other Articles). Finally, it would also be possible for the Conference of the

Parties to modify the Protocol before it enters into force. The Parties would then ratify the modified instrument, not the original Protocol.

KYOTO PROTOCOL: U.S. DELEGATION PROPOSAL OF JAN. 31ST RECOGNIZE ADOPTION BY PARTIES TO PROTOCOL

Question. Does the U.S. delegation proposal of January 31 calling for bans on use of the Kyoto mechanisms and other binding consequences also recognize that such consequences must await adoption by Parties to the Protocol after entry into force of an amendment as provided in Article 18 or does the U.S. contemplate some other process for adopting such consequences?

Answer. The Department of State notes that the U.S. submission of January 31 did not call for “bans” on the use of the Kyoto mechanisms. Rather, the U.S., like other Parties, has proposed certain linkages between annual emissions inventory and reporting requirements and eligibility to use the Protocol’s flexibility mechanisms in order to assure the environmental integrity of those mechanisms. The U.S. has proposed that a Party could lose access to the mechanisms only in the case of a failure to meet inventory and reporting requirements so egregious as to undermine the environmental integrity of the mechanisms. In such a case, access to the mechanisms would be restored when the inventory or reporting problem was rectified. Smaller-scale inventory problems would be remedied in other ways and not result in loss of mechanism eligibility. Eligibility requirements would be part of the mechanisms provisions under Articles 6, 12, and 17, not binding consequences under Article 18. Eligibility requirements would thus be adopted by the Conference of the Parties (in the case of emissions trading) or the Conference of the Parties serving as the meeting of the Parties to the Protocol (in the case of joint implementation and the clean development mechanism).

KYOTO PROTOCOL: EFFECT OF PROPOSAL ON PREDICTIONS OF COSTS FOR U.S. TRADING WITH RUSSIA AND UKRAINE

Question. In 1998, the Administration’s economic analysis of the Kyoto Protocol stressed that it would not be costly because of the budget period of 5 years, the mechanisms, and sinks. However, the recent submissions by the U.S. delegation appear to undercut the benefits of the budget period and the mechanisms by, in essence, calling for annual reviews for enforcement purposes of a country’s inventories, which are merely estimates, and for bans on the use of the mechanisms during the five year period if the reviews find deficiencies in the inventories or if the monitoring and reporting systems are deficient. What will be the effect of that proposal on the predictions about the Protocol’s costs for the U.S. and on the ability of the U.S. to meet its commitment over the budget period through the mechanisms, such as trading with Russia and the Ukraine?

Answer. We do not expect there to be any impact on the Administration’s cost projections or our country’s ability to meet its commitment under the Kyoto Protocol, if it is ratified, as a result of the proposals to which you refer.

The Protocol provides for countries to undertake and report annual emissions inventories, which are to be reviewed each year. As you may know, emissions inventories are already performed and reviewed on an annual basis under the United Nations Framework Convention on Climate Change (UNFCCC), which was ratified in 1992, and Articles 5, 7, and 8 of the Protocol build on these existing requirements. Under Article 3 of the Protocol, a country will be required to show that its cumulative emissions over a five-year commitment period (2008–12) do not exceed its assigned amount, as increased or decreased due to the Protocol’s flexibility mechanisms (such as international emissions trading) or its sink provisions. Compliance with Article 3 will be evaluated using countries’ annual inventory reports on the basis of cumulative totals at the end of the five-year period.

As explained in answer to the preceding question, the U.S. submissions to which you refer include proposals for certain linkages between annual emissions inventory and reporting requirements and access to the Protocol’s flexibility mechanisms in order to assure the environmental integrity of those mechanisms. A Party could lose access to the mechanisms only in the case of a failure to meet inventory and reporting requirements so egregious as to undermine the environmental integrity of the mechanisms. In such a case, access to the mechanisms would be restored when the inventory or reporting problem was rectified. Smaller-scale inventory problems would be remedied in other ways and not result in loss of mechanism eligibility.

Under these proposals, we expect that countries will be able to retain their eligibility to use the mechanisms. As already noted, countries are already performing annual emissions inventories under the UNFCCC, and while improvements in inventories may be needed if the Protocol is ratified and enters into force, there is

ample time to make such improvements before the first commitment period begins. Thus, these proposed linkages would serve as a useful incentive for prompt compliance with inventory and reporting requirements without diminishing the flexibility offered by the five-year budget period, the mechanisms, or sink credits. As a result, we would not expect there to be any impact on the Administration's cost projections or the ability of the U.S. to meet its commitment.

KYOTO PROTOCOL: SOURCE AND REASON OF U.S. PAYMENT OF FINES FOR VIOLATIONS

Question. Some apparently want the countries to pay fines for violations and the Report says the "U.S. would entertain, but does not endorse," payment of fines into a fund to assist developing countries. Why would the U.S. even entertain such an idea and where would the money come from if the U.S. was a violator?

Answer. The Administration does not support mandatory payment of fines for non-compliance.

CO₂ EMISSIONS: STATUS OF PETITION TO REGULATE CO₂ EMISSIONS

Question. What is the status of EPA's consideration of the Oct. 20, 1999 environmental groups' petition for EPA to regulate CO₂ emissions from new cars and trucks? When does EPA plan to respond to the petition?

Answer. On October 22, 1999, a coalition of 19 groups, headed by the International Center for Technology Assessment, submitted a petition asking EPA to regulate emissions of carbon dioxide and other greenhouse gases from new motor vehicles and engines. EPA has made no decision concerning whether to grant or deny the petition. In compliance with the Agency's common practice and requests by members of Congress, EPA plans soon to publish a notice asking for public comment on the petition. The notice will probably provide a 90 day comment period. Several comments have already been received and placed in a public docket that EPA has established for the petition. See docket number A-2000-04. EPA will consider all comments in making a decision on the petition.

KYOTO PROTOCOL: KNOLLENBERG FUNDING RESTRICTION

Question. Under EPA's reading of the Knollenberg funding restriction, the Agency may issue regulations "for a number of purposes, including reduction of greenhouse gas emissions," as long as the regulation is "not for the purpose of implementing, or in preparation for implementing, the Kyoto Protocol." Reducing greenhouse gas emissions is the purpose of the Kyoto Protocol. As a practical matter, what real difference is there between issuing regulations to accomplish the purpose of the Kyoto Protocol and issuing regulations for the purpose of implementing the Protocol? Isn't EPA's reading of Knollenberg permissive rather than prohibitive or restrictive?

Answer. The Clean Air Act authorizes (and, in places, requires) EPA to take a variety of actions to address air pollution problems entirely unrelated to climate change. As elaborated below, some of these actions can also have the indirect effect of reducing greenhouse gas emissions, depending on the sources that are controlled and the types of pollution reduction measures sources elect to use. In addition, certain provisions of the Clean Air Act authorize regulatory actions that directly address emissions of greenhouse gases. These provisions pre-date the Kyoto Protocol and action taken under them carries out purposes articulated in the Clean Air Act itself and does not implement or prepare to implement the Protocol. EPA does not believe that the Knollenberg language bars, or was intended to bar, either of these types of regulatory action under the Clean Air Act.

The Knollenberg language covers EPA's proposal or issuance of a rule, regulation, decree, or order for the purpose of implementation, or in preparation for implementation of the Kyoto Protocol. EPA's regulatory activities implementing the requirements of the Clean Air Act are for the purpose of implementation of those particular requirements of the Clean Air Act, not the Kyoto Protocol.

As noted above, many EPA activities authorized under the Clean Air Act are entirely unrelated to climate change, but have various indirect effects, including reduction of greenhouse gas emissions. For example, control of sulfur dioxide for the purpose of reducing acid rain, or control of nitrogen oxides for the purpose of reducing tropospheric ozone, may have the indirect effect of reducing greenhouse gas emissions, depending upon the sources controlled and the types of abatement measures they elect to use. Protecting human health and the environment from ozone pollution and from acid rain are major goals of the Clean Air Act. The Knollenberg language does not on its face bar expenditures on such activities and it would be unreasonable to assume that Congress intended such an interpretation.

Other provisions of the Clean Air Act authorize regulatory actions that directly address emissions of greenhouse gases, but do not implement or prepare to imple-

ment the Kyoto Protocol. For example, Title VI of the Clean Air Act, enacted in 1990, provides for EPA to take certain actions regarding the health and environmental risks of substances that serve as replacements for ozone-depleting chemicals. Section 612 directs EPA to place limits on the use of particular replacement chemicals if the agency determines that other existing alternatives “reduce overall risk to human health and the environment.” EPA believes that a reasonable and common-sense/interpretation of the quoted language includes the consideration of contribution to climate change. Thus, in comparing the “overall risk” of various substitutes for ozone-depleting substances, EPA considers ozone depletion potential, human toxicity, flammability, contribution to global warming, occupational health and safety, and effects on water and air quality. Actions taken under section 612 of the Clean Air Act carry out the purposes of that provision (i.e., ensuring that replacements for ozone-depleting substances do not in turn create new and unnecessary risks). These actions are not for the purpose of implementing or preparing to implement the Kyoto Protocol.

CCTI TAX CREDITS: COST TO TREASURY IN LOST TAX REVENUE

Question. As you know, the Administration is requesting \$4 billion in Climate Change Technology Initiative (CCTI) tax credits over five years. What is the cost to the Treasury in lost tax revenue of each of those tax credits? In each case, is the cost in lost revenue greater or less than \$14 to \$23 per ton of emissions reduced?

Answer. As provided in the President’s budget, the tax incentives are estimated to cost \$4.03 billion over five years (fiscal year 2001 through fiscal year 2005). The 5-year revenue impact of each tax credit are as follows: energy-efficient building equipment (\$201 million), energy-efficient homes (\$633 million), solar energy systems (\$132 million), electric, fuel cell, and hybrid vehicles (\$2,078 million), clean energy (\$976 million), and distributed power (\$10 million).

CCTI TAX CREDITS: VOLUNTARY PROGRAM COSTS LESS THAN MANDATORY PROGRAMS

Question. Last year, the Energy Information Administration (EIA) estimated, for very similar proposals, that the average revenue loss per ton of carbon reduced or avoided is \$133/tonne to \$206/tonne. Only the utility co-firing tax credit fell within the \$14 to \$23 range estimated by Dr. Yellen as the cost of implementing the Protocol via emissions trading and other flexibility mechanisms. In short, all but one of the tax credits failed what might be called the “Janet Yellen Test.” The Kyoto Protocol would create mandatory—legally binding—emission reduction obligations. The CCTI tax credit proposals are voluntary. Shouldn’t voluntary programs cost less than mandatory programs, not the other way around?

Answer. Please see prior response to “CCTI Tax Credits: Cost to Treasury in Lost Tax Revenue.”

NSR REFORM AND RELATIONSHIP TO UTILITY ENFORCEMENT INITIATIVE

Question. While there is considerable debate about how to reform the New Source Review program (NSR) under the Clean Air Act, it appears that almost everyone agrees that this program is overly complex and has imposed a high level of uncertainty and unnecessary burdens on States and industrial sources. In its 1998 notice of availability of further changes to the NSR rules, EPA indicated that its proposed changes would be likely to result in NSR applicability to projects at existing facilities that “increase reliability, lower operating costs, or improve operational characteristics” of production equipment.

Can you explain how reinterpreting your rules to make routine efficiency and reliability projects subject to the NSR permitting process will help to improve this program and reduce disincentives for technology development and deployment?

Answer. In answering this question, it is important to distinguish between two efforts. One is the effort to enforce the existing NSR rules. The other is an effort to reform the NSR rules to promote more flexibility and certainty, as well as reduce the burdens on states and sources, while maintaining at least the same level of environmental protection.

In the context of this first effort, the enforcement action, some industry stakeholders have alleged that EPA has reinterpreted its NSR rules governing the long-standing NSR exemption for “routine maintenance, repair, and replacement.” However, the interpretation of “routine” has remained unchanged. Nothing in the recent EPA complaints, notices of violation, or administrative orders indicates that EPA has changed its interpretation of this exclusion nor has anyone identified the prior interpretation that EPA is alleged to be changing. In fact, in a widely publicized 1990 court decision (*Wisconsin Electric Power Co. vs. Reilly*) EPA’s historical inter-

pretation of "routine" was the subject of litigation, and the interpretation was upheld by the courts.

The EPA is hopeful that its effort to reform the NSR rules will promote flexibility and certainty in NSR permitting to reduce the burden on states and sources and assure an equivalent level of environmental protection as the current program. However, the subject of what is "routine" and the issues raised by the enforcement action are not at issue in NSR reform. Thus, not only have the policies on "routine" not changed in the past, but there is also no proposal to do so in NSR reform.

This question suggests that NSR reform (and specifically the notice of availability) will somehow expand NSR applicability to include projects that "increase reliability, lower operating costs, or improve operational characteristics." As stated earlier, EPA has indicated for years that NSR already applies to these types of changes where they increase emissions. The sentence you reference illustrates this point by stating:

"The EPA's experience leads to the conclusion that sources generally make non-routine physical or operational changes which are substantial enough that they might trigger NSR in order to increase reliability, lower operating costs, or improve operational characteristics of the unit and do so in order that they may improve their market position."

Thus, NSR reform will not subject these types of projects to NSR; they are already subject if they increase emissions. Many changes which a source labels "efficiency" changes can increase emissions by large amounts, and the Clean Air Act requires review of the environmental impacts of these changes. However, if an "efficiency" change does not increase emissions, NSR does not apply, and there is nothing proposed that would cause NSR to apply to a change that does not increase emissions.

EFFECTS OF NSR "REINTERPRETATION"

Question. Don't you think that reinterpreting the law to subject to NSR routine projects that neither increase capacity nor emission rates, but only improve operations will magnify the burdens of the NSR program, increase procedural delays, and further discourage innovation?

Answer. First, it is important to note that before a modification is subject to NSR it must first result in a potential emissions increase. Thus, unless a project to improve operations also results in an increase in emissions, it would not be subject to major NSR. Moreover, as noted above, the EPA is acting consistent with long-standing policy as upheld by the courts and is not "reinterpreting the law." Indeed, the preamble to the 1992 rule revising the NSR regulations applicable to electric utilities specifically states that "changes that improve operational characteristics will be treated in the same manner as any other changes" and thus, when an improvement "is not routine and an emissions increase results from the improvement, that portion of the emissions increase resulting from the improvement will be considered in determining whether the proposed change subjects the unit to NSR requirements" 57 Fed. Reg. 32314, 32327 (1992). Because there has been no change in EPA's interpretation of this exclusion, no increase in procedural delays or discouragement of innovation could have resulted from a reinterpretation.

ENFORCEMENT ACTION AND POTENTIAL BROWNOUTS

Question. Since EPA's actions could affect potentially thousands of projects and even require prior Agency NSR review of projects designed simply to prevent a deterioration in efficiency, is EPA prepared to accept responsibility for interruptions in service (brown-outs)?

Answer. Again, as stated earlier, a non-routine project designed to prevent a deterioration in efficiency would trigger major NSR only if it also resulted in a significant increase in emissions. EPA's responsibility is to assure that sources comply with the Act by obtaining the necessary permits when they increase emissions. Sources should plan for obtaining the necessary air permits whenever they undertake construction that will increase emissions by a large enough amount. Sources also have other options to legally avoid NSR permitting. These options include "netting out" of NSR or limiting the size of the emissions increase to stay below NSR levels. Therefore, to avoid interruptions in service and possible brownouts, a source should take into consideration its options for compliance with all regulatory requirements (including air regulations) as part of its normal capital and operational planning activities prior to undertaking a construction project that increases emissions. With appropriate planning, sources can readily avoid brownouts and other similar situations.

Moreover, as is the usual practice, the EPA intends to resolve the violations in the ongoing enforcement action in a manner that will not result in brownouts. In-

deed, in the settlement with Tampa Electric Company, the company has ample time to install the necessary emissions control technology and can thus plan the installation so that it minimizes any impact on the ability to meet electricity demand.

NAAQS: AIR ENFORCEMENT DIVISION: APPLICATION OF NEW RULES

Question. What kind of procedures will be put in place to ensure that the Agency's Air Enforcement Division will not become over zealous in the application of the new rules?

Answer. The EPA Air Enforcement Division's priorities are developed after discussion with the Air Program Office. In addition, the Regions, and representatives of state and local air pollution control agencies are consulted before enforcement priorities are set. By using objective targeting methodologies including analyses of compliance data and investigation reports, the Division pursues enforcement cases that result in the greatest environmental benefit while optimizing the use of available agency resources. The Office of Enforcement and Compliance Assurance, which includes the Air Enforcement Division, annually re-evaluates its list of "National Significant Issues" for enforcement, soliciting comment from other offices within EPA. We have also publicized existing requirements through widely distributed Enforcement Alerts.

GREENHOUSE GASES

Question. What other "greenhouse gases" are EPA trying to regulate: methane from agriculture, methane from wetlands, water vapor?

Answer. EPA has no current plans to regulate methane from agriculture, methane from wetlands, or water vapor.

TMDL: NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMITS:
FORESTRY ACTIVITIES

Question. What specific forestry activities has the Environmental Protection Agency (EPA) now designated to be point source discharges subject to federal National Pollutant Discharge Elimination System (NPDES) permits?

Answer. Currently, 40 CFR 122.27 designates a silvicultural point source as any discernible, confined and discrete conveyance related to rock crushing, gravel washing, log sorting, or log storage facilities which are operated in connection with silvicultural activities and from which pollutants are discharged into waters of the United States. EPA's August 23, 1999 proposal would, if promulgated, add an authority for States and EPA to designate for NPDES regulation, on a case-by-case basis, discharges of storm water from additional silviculture activities such as road building and harvesting. Under the proposal, a State may designate a source only where there is a discharge from a discrete, confined conveyance, a "point source," and where the State determines that the discharge contributes to a violation of water quality standards or is a significant contributor of pollutants. EPA could designate a source under these circumstances as well; however, its authority would be limited further. EPA could designate a source only where there is a point source discharge to a waterbody that is impaired, the silvicultural operation is contributing to that impairment, the Agency is establishing a TMDL for that waterbody, and the Agency believes it is necessary, to designate that source to provide reasonable assurance that the source will meet its allocated load reductions under the TMDL.

TMDL: SILVICULTURAL OPERATIONS REGULATION

Question. Is this the first time EPA will regulate silviculture operations?

Answer. This is not the first time the Agency would be regulating discharges associated with silvicultural operations. The Environmental Protection Agency's (EPA) regulations currently require NPDES permits for discharges associated with log sorting, log storage, gravel washing and rock crushing. (See silviculture regulations at 40 CFR § 122.27).

TMDL: SILVICULTURAL OPERATIONS PERMIT REQUIREMENTS

Question. Does this proposal automatically and categorically subject all silvicultural operations to NPDES permit requirements?

Answer. This rule would not automatically or categorically subject silviculture sources to the NPDES program. If the rule were promulgated as proposed, no additional silviculture sources would be required to obtain an NPDES permit. The proposed designation authority is discretionary, not mandatory, and, under the proposal could be invoked only on a case-by-case basis and under the following circumstances.

A State may designate a source only where there is a discharge from a discrete, confined conveyance, a "point source," and where the State determines that the discharge contributes to a violation of water quality standards or is a significant contributor of pollutants. EPA could designate a source under these circumstances as well; however, its authority would be limited further. EPA could designate a source only where there is a point source discharge to a waterbody that is impaired, the silvicultural operation is contributing to that impairment, the Agency is establishing a TMDL for that waterbody, and the Agency believes it is necessary, to designate that source to provide reasonable assurance that the source will meet its allocated load reductions under the TMDL.

Sources located in States with effective and appropriately protective forestry programs and which are implementing those programs would likely not be affected by this proposal. The intent of this proposal was to provide a mechanism to address those that are not implementing measures to protect water quality.

TMDL: FORESTRY ACTIVITIES DEFINED AS NON-POINT SOURCE

Question. Is it statutory or through regulation that forestry activities are defined as a nonpoint source category and thereby not subject to point source discharge NPDES permit requirements?

Answer. The current exemption from NPDES permit requirements for certain storm water discharges associated with a silvicultural operation is regulatory, not statutory. In other words, there is nothing in the CWA that explicitly excludes storm water discharges associated with silvicultural operations from NPDES requirements. The Agency's regulations currently define certain discharges associated with silvicultural activities as "nonpoint" source discharges therefore, not requiring NPDES permits. These regulations, drafted prior to the 1987 storm water amendments, properly prevent the general application of the permit requirements to countless discharges of storm water from silvicultural operations, the vast majority of which are not "significant contributors" of pollutants to waters of the United States.

Agency regulations established prior to the 1987 Amendments subject some discharges associated with silvicultural activities to NPDES permit requirements; namely, those associated with log sorting and storage facilities and gravel washing and rock crushing activities. (40 CFR § 122.27). Facilities conducting these activities are currently required to obtain NPDES permits.

TMDL: SILVICULTURAL OPERATIONS STORMWATER REGULATIONS

Question. Do the existing storm water regulations enacted after the 1987 Amendments to the Clean Water Act give EPA the authority to designate silviculture as a point source discharge subject to these provisions?

Answer. The 1987 Amendments to the Act created a new storm water program and exempted from the Clean Water Act (CWA) permit requirements, all "discharges" (i.e. a discernable, confined discrete conveyance) of storm water except specified discharges (e.g. some municipal industrial storm water). These amendments also provided discretionary authority to designate specific storm water discharges as needing a permit if they contribute to a violation of a water quality standard or are "significant contributors" of pollution to waters of the United States. (See CWA Section 402(p)(2)(E) and implementing regulations at 40 CFR § 122.26(a)(v)). Under the proposal, it is this discretionary designation authority which would be invoked if and when EPA or a State chose to designate a discharge from a silvicultural operation as requiring an NPDES permit.

TMDL: SILVICULTURAL OPERATIONS IMPAIRMENT OF WATER QUALITY

Question. Does impairment of water quality that might result from silvicultural operations provide the Agency with the justification to designate forestry operations a point source discharge subject to NPDES permits?

Answer. The August 23, 1999, Federal Register notice of the proposed rule explains that for the sources that were categorically excluded previously (nursery operations, site preparation, reforestation and subsequent cultural treatment, thinning, prescribed burning, pest and fire control, harvesting operations, surface drainage, or road construction and maintenance), the categorical exclusion from the definition of "point source" would be removed. Instead, on a case-by-case basis, selected sources could be designated for regulation under the NPDES program for storm water discharges under 40 CFR 122.26(a)(v). EPA believes the impacts and potential impacts on water quality of silviculture activities, as reported by States, do justify this use of case-by-case authority to designate discharges of polluted storm water for regulation under NPDES.

TMDL: SILVICULTURAL OPERATIONS POINT SOURCE DISCHARGE

Question. How does EPA now claim after almost 30 years of Clean Water Act legislation, regulation, and case law that silvicultural operations are to be designated as a point source discharge subject to NPDES permits?

Answer. As explained in the August 23, 1999, Federal Register notice of the proposed rule, in 1987, Congress directed EPA to focus on water quality concerns associated with storm water. One of the types of storm water discharges that the Agency identified as appropriate for regulatory control under the NPDES program was storm water discharges associated with construction activity, including clearing, grading, and excavation activities. Storm water discharges resulting from land disturbance have significant potential for water quality impairment due to excessive sediment loads and other factors. Sediment adversely affects aquatic ecosystems by reducing light penetration, impeding sight-feeding, smothering benthic organisms, abrading gills and other sensitive structures, reducing habitat by clogging interstitial spaces within a streambed, and reducing the intergravel dissolved oxygen by reducing the permeability of the bed material.

To date, NPDES regulation of storm water discharges associated with construction activity has protected water quality from the runoff associated with, for example, the construction of roads. A gap in regulatory coverage exists, however, in that the existing NPDES regulations categorically exclude silvicultural road construction and maintenance as well as run-off from several other categories of silviculture activities from the definition of "point source." Therefore, the current silviculture regulation excludes discharges related to all but four categories of silviculture activities (rock crushing, gravel washing, log sorting, and log storage facilities) from the universe of sources that can be regulated under the NPDES permitting program. EPA's August 23, 1999 proposal moved to address this gap by enabling EPA and States to designate, case-by-case, point sources of storm water for regulation under NPDES.

In 1998 the National Water Quality Inventory, 32 States identified forestry as a source of water quality problems that affect more than 20,000 miles of rivers and streams; 220,000 acres of lakes; and 15 square miles of coastal waters.

Several types of silvicultural activities that are currently exempt from NPDES regulation may cause significant adverse impacts on water quality. These include, but are not limited to, road construction and maintenance, site preparation, prescribed burning, clearcutting, and harvesting operations. As mentioned above, the construction and maintenance of roads, other than those constructed for silvicultural operations, are currently subject to NPDES requirements. The construction and maintenance of roads related to silvicultural activities, however, are exempt. Studies demonstrate that such road construction may create significant water quality problems. Results Senator Craig of a study on forest management activities in a small watershed indicated that suspended sediment yields increased almost 8 fold in the first year following road construction, and two-fold following logging in the second year.

Mechanical site preparation by large tractors that shear, disk, drum-chop, or root-rake a site may result in considerable soil disturbance over large areas and has a high potential to deteriorate water quality. Site preparation techniques that result in the removal of vegetation and litter cover, soil compaction, exposure or disturbance of the mineral soil, and increased stormflows due to decreased infiltration and percolation, all can contribute to increases in stream sediment loads. Prescribed burning is another method used to prepare sites that may also have effects on water quality as a result of increased erosion and the altering of soil properties.

The actual harvesting of timber can also contribute to water quality problems. Results from studies have indicated that clearcutting, which is often a method used for timber harvesting, can have significant effects on the nutrient levels and temperatures of nearby waters. The resulting impacts of a logging operation in the Bull Rull Watershed of Oregon include increased nitrate-nitrogen levels for up to 7 years after the harvest and an increase in annual stream temperatures by 2-3 degrees Celsius for the following 3 years after the harvest.

TMDL: FORESTRY COMMUNITY IMPROVEMENT IN WATER QUALITY

Question. What progress has the forestry community made to improve water quality over the last decade?

Answer. The forestry community has worked hard during the last decade to address water quality impacts from silviculture operations. Within the last decade, nearly every state has developed and published Best Management Practices (BMPs). Most states with significant commercial forestry operations routinely conduct assessments of how well their nonpoint source control programs are working. For

those states which have repeatedly measured implementation of BMPs, there is an encouraging trend of improving implementation rates. EPA recognizes that implementing properly designed forest management plans which include appropriate BMPs can result in logging activities that are both economically viable and protective of water quality.

TMDL: FORESTRY PROVISION IN THE CLEAN WATER ACT

Question. Has Congress specifically regulated forestry in any provision of the Clean Water Act?

Answer. Yes, the Clean Water Act (CWA) addresses forestry activities.

EPA regulates point source discharges from certain forestry under CWA Section 402, the NPDES permitting program. Since 1976, when EPA promulgated its regulations, discharges from certain silviculture activities (rock crushing, gravel washing, log sorting and log storage facilities) have been subject to NPDES permitting based on the interpretation of point source in Section 502 of the CWA. Section 502 does not specifically mention silviculture.

Section 319 provides for the establishment of State nonpoint source management programs to address various categories of nonpoint source pollution, including silviculture. Section 319 does not provide any Federal regulatory authority; nor does it mandate that States employ regulatory approaches. State 319 programs employ a broad range of voluntary and/or regulatory programs to address water quality issues associated with forestry, including publication of technical guidance, provision of technical assistance and financial assistance, conducting audits, and implementing State-established regulatory programs. Section 319 does not specifically mention silviculture, however, states may identify silviculture under their State assessment reports.

Section 404(f) describes exemptions from Section 404 permitting requirements for certain agricultural, silvicultural, and mining activities that result in discharges of dredged or fill material into waters of the United States. Discharges of dredged or fill material into waters of the United States typically require a permit from the Army Corps of Engineers. However, discharges of dredged or fill material associated with normal forestry activities such as harvesting and seeding, as well as for forest road construction and maintenance, are exempt unless they are recaptured under Section 404(f)(2). With respect to forest road construction or maintenance, Section 404(f) requires the use of best management practices to minimize adverse impacts to the aquatic environment.

TMDL: FORESTRY COMMUNITY VIEW OF FORESTRY ACTIVITIES AS NONPOINT SOURCE

Question. EPA states they will only designate forestry activities as a point source discharge in "very narrow circumstances," as a "last resort," and "extremely rare circumstances." How does the forest community view these assurances from the federal Environmental Protection Agency?

Answer. The forest community has indicated their belief that the rule as proposed would lead to a significant number of forestry operations being subject to NPDES permitting requirements. The Agency respectfully disagrees with this assertion. Indeed, EPA believes the case-by-case provisions would only need to be used in the specific circumstances described in the proposal as a means to correct water quality impairments resulting from silviculture, where no effective program to address such impacts is in place.

TMDL: FORESTRY EXAMPLES OF EPA IMPOSING LAND USE

Question. Are there current examples of EPA imposing land use forestry requirements on states and forest land owners?

Answer. No, EPA regulations currently require NPDES permits for point source discharges associated with log sorting, log storage, gravel washing and rock crushing. (See silviculture regulations at 40 CFR Section 122.27.) These permits regulate discharges from these activities, not land use.

TMDL: AUTHORITY TO REQUIRE STATES TO DEVELOP REASONABLE ASSURANCE

Question. Does EPA have the authority to require states to develop a "reasonable assurance" policy to achieve a nonpoint source load reduction and submit that policy with a TMDL implementation plan to EPA for approval?

Answer. Yes. The preamble to the proposed rule provides an extensive discussion of EPA's authority to require that an implementation plan be submitted as part of a TMDL and that reasonable assurance be part of that implementation plan. [see pages 46032 through 46034, Federal Register Vol. 64, No. 162, August 23, 1999].

TMDL: FORESTRY ECONOMIC IMPLICATIONS

Question. What are the economic implications of EPA's proposal to designate forestry as a point source discharge subject to NPDES permits?

Answer. The proposed silvicultural designation authority is both limited and discretionary and, if invoked, it would be on a case-by-case basis. By amending the definition of silviculture point source the proposed rule would remove an exemption from the NPDES program for discharges from certain activities associated with silviculture. The removal of this exemption would not automatically and categorically subject any silvicultural operations to NPDES permit requirements. EPA estimates that the costs related to this proposed authority would total \$3.7–\$13.2 million annually. The estimates include costs to potentially designated silviculture operators for compliance with NPDES permit requirements, and States and EPA for administration and oversight. The costs reflect that these sources would not be subject to NPDES permit requirements unless and until they are designated on a case-by-case basis.

TMDL: BENEFIT-COST ECONOMIC ANALYSIS OF ITS PROPOSAL

Question. Should EPA be required to conduct a thorough benefit-cost economic analysis of its proposal?

Answer. EPA recognizes that the TMDL program is of interest to a wide range of stakeholders, and expects that stakeholders will have an interest in understanding the costs and benefits from implementation of the TMDL program as well as the direct costs of developing TMDLs. While the issues and estimating methods are complex and difficult, EPA is working to develop such information. As this work evolves and its quality is sufficient to meaningfully inform the public, EPA will make it available for public review.

TMDL: NEAR A CULVERT—NONPOINT SOURCE

Question. Is it the position of EPA that any activity that takes place near a culvert will be classified as point source pollution? If not, how does the EPA determine which ones are? Does EPA intend to regulate forestry practices in the headwaters basins when natural runoff flows through a drainage culvert in conjunctions with a forest road?

Answer. EPA's August 23, 1999 notice proposed to allow states and EPA, in limited cases to designate for NPDES permitting, point source discharges of polluted storm water from forestry operations, where necessary to address a clear water quality problem. It is EPA's position, consistent with its regulations at 40 CFR Section 122.2, that a discharge of a pollutant means any addition of any pollutant or combination of pollutants to waters of the United States from any point source. The definition includes additions of pollutants into waters of the United States from surface runoff which is collected or channeled by man. A point source means any discernible, confined, discrete conveyance, including but not limited to, any pipe, ditch, channel, tunnel, conduit, well, or discrete fissure (40 CFR 122.2). EPA's proposal envisioned that, where a specific forestry activity such as forest road construction and maintenance results in the point source discharge of polluted storm water in a manner that causes or contributes to excursion of water standards, or is a significant contributor of pollutants to waters of the U.S., that point source could be required by the state to seek an NPDES permit. EPA could also require such sources to seek permits on a case-by-case basis, but only where necessary to ensure implementation of an EPA-established TMDL.

COMPLETENESS OF THE CALPUFF MODEL

Question. For FLAG, EPA is requiring long range visibility modeling to use a model not completely available to the scientific community—the CALPUFF model. Also, the company which has the missing piece of the model is not releasing it. Since the model is not completely available, EPA cannot hold a workshop to approve the model

Why is EPA requiring use of a model which is not completely available? Why is EPA requiring use of a model not accepted by EPA? Why is EPA requiring use of a model of which only one company has complete control, creating a monopoly in the modeling community?

Answer. EPA is not requiring use of any particular model as part of FLAG. FLAG is a joint program of the U.S. Forest Service, the National Park Service, and the U.S. Fish and Wildlife Service. EPA has been included in many of FLAG's discussions in an advisory and informational capacity, but is not an active member of the FLAG, nor does it participate in the management or direction of the group.

CALPUFF is, however, part of the Guideline on Air Quality Models which EPA has prepared. EPA has prepared changes to Appendix W of 40 CFR Part 51 that make minor changes to recommendations on visibility calculations. The complete set of proposed changes is about to be published in the Federal Register for a 90-day public comment period. These changes will also be the subject of the Seventh Conference on Air Quality Modeling in Washington, D.C. planned for June 28–29, 2000. Regarding regional haze, the proposed changes state:

“CALPUFF may be applied on a case-by-case basis when assessment is needed of reasonably attributable haze impairment due to one or a small group of sources. The procedures and analyses should be determined in consultation with the appropriate Regional Office, the appropriate regulatory permitting authority, and the appropriate Federal Land Manager (FLM).”

Thus, it should be clear that EPA has not required the use of CALPUFF for long range visibility modeling or regional haze. The model is, and has been, in the public domain and has been subjected to scientific peer review. It is available free of charge through an independent Internet website which is linked to EPA’s website on all air quality models that are used for regulatory applications.

The model (CALPUFF) is, and has been, publicly available through an Internet website free of charge. By mutual agreement with EPA, and for efficiency purposes, the website from which CALPUFF is obtained is managed by the model developer. If this arrangement becomes impractical or untenable and the developer can no longer provide access, EPA will make the model available on its own website. The version of the CALPUFF modeling system currently provided at the independent Internet website is dated March, 1999. The firm that produced the CALPUFF modeling system (which has had many sponsors, of which the EPA is just one) provides beta-test versions of software under development to individuals of its choosing. The EPA has requested the company to provide timely updates to the modeling system as new advances in software are finalized. It is EPA’s understanding that the company plans a major update prior to EPA’s planned Seventh Conference on Air Quality Models (an open workshop and hearing), in Washington, D.C. June 28–29, 2000.

FLAG: INDUSTRIAL AND SCIENTIFIC COMMUNITY REQUIREMENTS

Question. Scientists trying to meet FLAG requirements in Colorado asked your FLAG member, the National Park Service, in August for boundaries of the Rocky Mountain National Park and the Great Sand Dunes National Monument. The request was made August 5 and again in late December, but to date the scientists have yet to receive the necessary boundary information from your FLAG group. How can the industrial and scientific community meet your FLAG requirements if you do not provide the most basic of information?

Answer. The Federal Land Managers’ Air Quality Related Values Workgroup (FLAG) process referred to in this question is managed by the three agencies responsible for managing federal lands. They are the: National Park Service; U.S. Forest Service; and U.S. Fish and Wildlife Service. EPA is not involved in the FLAG process except as a commenter on its development and activities and a provider of technical support.

Information about the FLAG process and underlying technical data, such as Park boundaries for Rocky Mountain National Park and Great Dunes National Monument is currently available on the National Park Service web site: <ftp://ftp.nps.gov/pub/>. When you go to this site, choose “park boundaries” from the list of sub-directories.

COEUR D’ALENE: RIFS REPORT AND ROD

Question. On March 22, EPA announced in Coeur d’Alene that the RIFS report and ROD for the Coeur d’Alene Basin would be bifurcated and delayed for up to a year. The State did not have any knowledge of this action they thought we were all working together. This is a major change in direction and could have major impacts on the ability to find a solution in the Basin. Could you explain to me EPA’s attitude on working with states on Superfund and specifically what is going on in Coeur d’Alene?

Answer. EPA is and will continue to be committed to working closely with the State of Idaho, the State of Washington, the Coeur d’Alene Tribe and all the stakeholders in the Basin to come up with workable cleanup solutions. As you know, EPA originally proposed to issue a final Record of Decision for the Coeur d’Alene Basin by the end of this year, partly in response to concerns for moving the study process quickly toward cleanup decisions and cleanup actions. Meeting this schedule would

require extremely tight deadlines for stakeholder review of interim technical documents.

Early this year, we began hearing concern that this schedule would not allow enough time for adequate review of data and documents. When Regional Administrator Chuck Clarke traveled to the Basin with Idaho Environmental Director Steve Allred during the first week of March, stakeholders raised concerns that the RI/FS schedule was moving too quickly. During two days of meetings with community members in Coeur d'Alene and Wallace, the possibility of either phasing or delaying the schedule was discussed. Although several people had questions about a schedule change, there seemed to be no opposition to it. By modifying the Remedial Investigation/Feasibility Study and Record of Decision schedule, and phasing the release of cleanup decision documents, EPA believed it was being responsive to stakeholder concerns. EPA also believed that doing so was acceptable to Idaho and Washington states, the Coeur d'Alene Tribe, and other stakeholders. As soon as EPA decided to propose a phasing of the Records of Decision, we immediately notified the Idaho Department of Environmental Quality (IDEQ) staff and other government agencies. We thought we were doing our best to communicate and coordinate with those involved in this decision. We sincerely regret if anyone involved did not receive timely information. EPA Regional Administrator Chuck Clarke spoke with Idaho Environmental Director Steve Allred on March 29, 2000, to discuss important issues related to the site. EPA and IDEQ staff are working together to produce a schedule that will be workable for both agencies.

SRF FUNDING LEVELS FACILITIES

Question. In many Idaho communities, the systems for ensuring safe drinking water and efficient wastewater disposal facilities lag behind modern demands. In some cases, the costs associated with meeting national standards have outstripped a community's ability to pay for necessary upgrades and/or replacement of worn-out or outdated facilities. Do you feel the capitalization grant programs for wastewater and drinking water are adequately funded to meet these concerns?

Answer. Financing for wastewater infrastructure has been, and will continue to be, a partnership between EPA, other Federal agencies, state governments, and local communities. By capitalizing the SRF such that it will be able to provide at least \$2 billion in financial assistance to local communities over the long run, the Agency is providing a substantial source of financing consistent with historic levels of Agency contribution. Over \$17 billion has already been provided to capitalize the CWSRF, more than twice the original Clean Water Act authorized level of \$8.4 billion. Total SRF funds available for loans since 1987 reflecting loan repayments, state match dollars, and other sources of funding are approximately \$30 billion, of which \$26 billion has been loaned to communities (\$4.2 billion was available for loans as of June 1999).

The Drinking Water SRF continues to provide an affordable source of funding for communities to build and upgrade their drinking water facilities to ensure that all public water systems provide drinking water that is safe to drink. Since its inception in fiscal year 1997, \$3.6 billion has been provided to capitalize the DWSRF. EPA expects that states will soon make their 1,000th loan under this program representing nearly \$2 billion in loan assistance to local communities. EPA's annual performance goal and measure estimates that 1,800 loans will be made and some 450 SRF-funded projects will be initiating operations by the end of fiscal year 2001. The DWSRF program is also fulfilling the goals of the Safe Drinking Water Act (SDWA) with respect to assistance for small systems. Fully three quarters of the loans made to date have gone to small water systems that serve fewer than 10,000 persons. Forty percent of total loan dollars have gone to these small systems, well above the SDWA mandate of fifteen percent.

The Agency acknowledges that needs estimates may be higher than previously estimated. Given that, and the fact that we now have a better understanding of the water quality challenges that states and local governments face, the Administration believes it would be useful to have a dialogue with the Congress and the broad range of stakeholders on the future funding levels and project eligibilities for the Clean Water and Drinking Water SRF programs.

BOISE NAAQS/DESIGNATION ISSUE

Question. Idaho is involved in a comprehensive airshed management effort in the Treasure Valley/Boise Area. EPA is currently considering reimposing a non-attainment designation over a portion of the area which has not had an air quality violation since 1991. The State of Idaho feels such a designation would needlessly divert attention and resources away from the real issue. The real issue being an airshed-

wide management program assuring that the health of Idaho's citizens is protected. Is EPA intending and will they support the State of Idaho's efforts to resolve this issue? If so, by what action?

Answer. The EPA fully supports the State's efforts to resolve this issue, and has been working diligently with all parties in this matter to find a solution that benefits the environment and the people of Idaho. It is our goal to provide the State of Idaho with as much flexibility to implement an airshed plan for the Treasure Valley/Boise area as the law allows when we take action to reinstate the PM10 national ambient air quality standards (NAAQS) in the northern Ada County/Boise area. If the State is successful in developing a comprehensive air quality management plan that addresses the long-term protection of public health and the continued maintenance of the PM10 NAAQS in the area, including assessment of the impact of transportation activities, we will give every consideration to alternative approaches available to EPA in lieu of reinstating the nonattainment designation.

REGIONAL HAZE: IMPLEMENTATION OF RULE

Question. How can EPA be implementing the Regional Haze Rule despite being directed by Congress to implement it only in conjunction with PM/ozone standards?

Answer. EPA is proceeding with work now that will enable the states to coordinate future regional haze implementation plans with any future implementation plans for PM_{2.5} standards. This work is consistent with the TEA-21 legislation and fiscal year 2000 appropriations for regional haze planning activities. EPA has work under way to complete a review of the PM_{2.5} standards by 2002, to complete deployment of the PM_{2.5} monitoring network to characterize ambient air quality, and to provide funding to the states to establish regional planning partnerships for coordinating the development of policy and technical analyses for regional haze. If PM_{2.5} standards are in effect upon completion of the Agency's review of the standards in 2002, EPA and the states will have the necessary monitoring data for designating PM_{2.5} attainment and nonattainment areas in the 2002-2005 time frame.

Consistent with the TEA-21, the regional haze rule links the date for submittal of regional haze control strategy State Implementation Plans (SIPs) in certain states to the dates for designation of PM_{2.5} attainment and nonattainment areas. Thus, control strategy SIPs for regional haze are due in the 2004-2008 time period which encompasses the period that control strategy SIPs would be due for PM_{2.5} nonattainment areas.

Under a specific section of the regional haze rule, certain western states have the option to submit regional haze SIPs in 2003. The timing for these SIPs would not be linked to the dates for designation of PM_{2.5} areas. This approach is consistent with TEA-21 and was included in the haze rule to allow these states to move forward with implementing the set of recommended strategies from the Grand Canyon Visibility Transport Commission within the framework of the regional haze rule.

In addition, EPA has provided funding to states and regional air quality planning organizations to enable them to initiate regional planning activities to address the regional haze program. Many of the activities and analyses done in support of regional planning for regional haze will overlap with implementation of the PM_{2.5} standards, thereby, allowing coordination of these efforts. EPA believes that by taking the steps outlined above, the Agency will be able to ensure coordination of PM_{2.5} and regional haze SIPs as discussed in the preamble to the regional haze rule.

TIMETABLE FOR IMPLEMENTATION OF OZONE/PM/REGIONAL HAZE

Question. What specific timetable will EPA use for implementing PM/ozone standards which allows the Regional Haze Rule to follow?

Answer. The timetable for submittal of state implementation plans (SIPs) in the regional haze rule is consistent with the TEA-21 legislation. As noted in the response to the preceding question, the TEA-21 links due dates for SIPs for regional haze with the dates for designation of PM_{2.5} attainment and nonattainment areas. Regional haze implementation plans for areas designated attainment or unclassifiable for PM_{2.5} are due within 1 year of the designation. Regional haze implementation plans for areas designated nonattainment for PM_{2.5} are due within 3 years of designation, which is consistent with the time period for submittal of plans for PM_{2.5} nonattainment areas. The regional haze rule also allows states the option of participating in regional planning groups and submitting regional haze implementation plans for all parts of the state at the same time, consistent with the timing for PM_{2.5} nonattainment plans. In addition, as noted above, certain western states have the option to submit regional haze SIPs in 2003 allowing them to implement the set of recommended strategies from the Grand Canyon Visibility Transport Commission within the framework of the regional haze rule.

REGIONAL HAZE RULE: COST/BENEFIT ANALYSIS

Question. Did EPA conduct a cost/benefit analysis of the Regional Haze Rule?

Answer. Yes. The Regulatory Impact Analysis is available on the OAR Policy and Guidance web page at: www.epa.gov/ttn/oarpg/t1ria.html.

REGIONAL HAZE RULE: SCIENTIFICALLY PROJECTED REDUCTIONS

Question. What are the scientifically projected reductions in haze?

Answer. In the Regulatory Impact Analysis (RIA) for the Regional Haze Rule, mentioned in the previous question, the Agency estimated reductions in regional haze as a result of the rule out to the year 2015. These estimates in reductions in haze are based on meeting four illustrative progress goals applied nationally over a period of time (10 to 15 years) and based on whether fugitive dust emissions are controlled or not. In summary, 43 to 90 percent of Class I area counties (e.g. counties with national parks) achieve the illustrative progress goals when fugitive dust emissions are controlled, while 31 to 84 percent of Class I area counties achieve the four illustrative progress goals when fugitive dust emissions are not controlled.

REGIONAL HAZE RULE: COST IN CASH OUTLAY

Question. What will the Rule cost in cash outlay by affected emissions sources?

Answer. In the Regulatory Impact Analysis (RIA) for the Regional Haze Rule, the total estimated capital cost (e.g., the costs of installing pollution control equipment) to facilities having to meet requirements associated with these four illustrative progress goals in the projection year of 2015 ranges from \$2.8 billion to \$15.9 billion when fugitive dust emissions are controlled and from \$3.2 billion to \$16.3 billion when fugitive dust emissions are not controlled. The total estimated annual cost (e.g. the costs of operating pollution control equipment) nationally to facilities having to meet requirements associated with these four illustrative progress goals range from \$1.0 billion to \$4.4 billion (1990 dollars) when fugitive dust emissions are controlled and from \$0.8 billion to \$3.6 billion (1990 dollars) when fugitive dust emissions are not controlled.

REGIONAL HAZE RULE: SOCIO-ECONOMIC COSTS

Question. What are the socio-economic costs?

Answer. In the Regulatory Impact Analysis (RIA) for the Regional Haze Rule, the economic impacts associated with the four illustrative progress goals examined for the regional haze rule in the projection year of 2015 showed that only 0.02 to 0.04 percent of establishments (i.e. facilities or plants) nationwide are expected to have control costs of greater than 1 percent of their sales or revenues regardless of whether fugitive dust emission controls are considered or not. These results suggest that changes in prices of most affected products and changes in prices of fuels and electricity from implementation of the regional haze rule should be relatively small.

DOE PARTICIPATION IN REGIONAL HAZE RULE

Question. Emissions Limits being set are well below those recommended by the Grand Canyon Commission. Also, the Regional Haze Rule has a "regional BART" rather than the statutory site-specific BART. Consequently, the Rule will impose tremendous costs on stationary sources, including power plants, which were not identified as a major source of haze by the Grand Canyon Commission.

Since this rule obviously will affect power plants' operations and permitting, why was DOE not an active part of developing the Regional Haze Rule?

Answer. Like all EPA rules, the Regional Haze Rule went through the interagency review process. The Department of Energy was included in this review process for both the proposed regional haze rule and the final regional haze rule.

REGIONAL HAZE RULE: LEGAL AUTHORITY FOR THE FLAG AQRV "POLICY"

Question. What is the legal authority for the FLAG AQRV "policy"?

Answer. Under the Clean Air Act, the federal land managers have an "affirmative responsibility" to protect the air quality related values (e.g. visibility, ozone impact to terrestrial resources, acidic deposition impacts to aquatic and terrestrial resources) in Federal Class I areas, and they have specific authority to take part in the review of new source permits. The Federal Land Managers' Air Quality Related Values (FLAG AQRV) document is guidance, not standards or regulations, developed to bring more predictability and uniformity to Federal Land Managers (FLM) participation in the permit review process. For more information on their authority to convene a work group to issue this guidance, we recommend that you contact the

federal land managers directly (U.S. Department of Interior—National Park Service, Air Quality Division, and U.S. Department of Agriculture—U.S. Forest Service). We have forwarded a copy of your questions to our contacts in the National Park Service and the U.S. Forest Service.

FLAG: FLAG AQRV CRITERIA

Question. Page 27 of the FLAG's draft Phase I Report issued October, 1999 states, "The FLAG recommendation is designed to prevent new sources from causing visibility impairment." Do FLAG AQRV standards affect legal rights and responsibilities of permit applicants?

Answer. No, the Air Quality Related Values (AQRV) criteria themselves do not affect the legal rights and responsibilities of permit applicants. Applicants are bound by the Clean Air Act and the New Source Review (NSR) regulations implemented by EPA, states and tribes. These regulations have always required consultation with Federal Land Managers during NSR permitting and the Federal Land Managers have always had the responsibility to identify AQRVs and protect them against adverse impacts. The FLAG AQRV work will simply better define what resources in Class I areas are considered AQRVs and how they can be damaged by pollution. This should promote more predictability in NSR permitting but does not alter any of the rights and responsibilities of permit applicants.

FLAG: FLM'S, EPA, AND NOAA FOLLOWING RULEMAKING PROCEDURES

Question. If FLAG standards affect legal rights and responsibilities, the standards are a rule. Why are FLMs, EPA, and NOAA not following rulemaking procedures of the Administrative Procedures Act with their FLAG standards? No public hearing has been held—only a public "meeting" during the holiday season in late 1999 when FLAG members gave no answers to questions.

Answer. Because the FLAG Air Quality Related Values (AQRV) document is guidance that has been drafted by the National Park Service and the U.S. Forest Service, we recommend that you contact them for a full explanation of the procedures followed in developing it. We have forwarded a copy of your questions to the National Park Service and the U.S. Forest Service.

FLAG: DENIED PARTICIPATION SINCE 1995

Question. I understand the public consistently been denied participation in FLAG efforts since at least 1995. Why is this?

Answer. As noted, the Federal Land Managers drafting the FLAG Air Quality Related Values (AQRV) guidance held a public hearing on the guidance in December 1999 and provided a public comment period as well. We recommend that you contact the National Park Service or U.S. Forest Service for more information on these issues. We have forwarded a copy of your questions to the National Park Service and the Forest Service.

FLAG: FLAG AQRV HEALTH-BASED OR NON-HEALTH BASED STANDARDS

Question. Are FLAG AQRV standards health-based or non-health based?

Answer. The EPA has been involved in FLAG only from an advisory and informational capacity. EPA has not been an active member of the FLAG, nor did it participate in the management or direction of the group. We have forwarded your questions to the National Park Service and the U.S. Forest Service and recommend you contact them directly for more information on these issues.

FLAG: STATUTORY COST/BENEFIT ANALYSIS

Question. Did you conduct a statutory cost/benefit analysis on FLAG standards?

Answer. It is our understanding that a cost-benefit study was not performed on this guidance. Because the FLAG Air Quality Related Values (AQRV) guidance has been drafted by the National Park Service and the U.S. Forest Service, we recommend that you contact them with questions about this issue. We have forwarded a copy of your questions to the National Park Service and the U.S. Forest Service.

FLAG: ENVIRONMENTAL BENEFITS

Question. What are the environmental benefits—the haze reductions or other AQRV benefits—you have determined will result from FLAG standards?

Answer. Because the FLAG air quality related values (AQRV) document is guidance that has been drafted by the National Park Service and the U.S. Forest Service, we recommend that you contact them for an explanation of these issues. We

have forwarded a copy of your questions to the National Park Service and the U.S. Forest Service.

FLAG: "ADVERSE" IMPACT THRESHOLD FOR OZONE

Question. Why has FLAG defined an "adverse impact" threshold for ozone at a level below that which occurs naturally? Doesn't this automatically create a tool to block any permit for a new or modified source?

Answer. Because the FLAG Air Quality Related Values (AQRV) document is guidance that has been drafted by the National Park Service and the U.S. Forest Service, we recommend that you contact them for an explanation of these issues. We have forwarded a copy of your questions to the National Park Service and the U.S. Forest Service.

FLAG: MEMBERS DELEGATING OR REQUIRING NON-FEDERAL ENTITIES

Question. Why are FLAG members (EPA, FLMs, NOAA) delegating or requiring non-federal entities, such as permit applicants, to study AQRV issues on federal land? Isn't the study of AQRVs of federal lands something for which you should be budgeting and coming to Congress for appropriations?

Answer. EPA is not a member of FLAG but participates only in an advisory and informational capacity. For additional information on these issues, we recommend that you contact the National Park Service and the U.S. Forest Service. We have forwarded a copy of your question to the National Park Service and the U.S. Forest Service.

FLAG: SCIENTISTS NOTED FOR STUDIES OF AQRVS

Question. Why are scientists noted for their studies of AQRVs (ozone, visibility, deposition) and whose work you use to support the FLAG standards disputing the use of their work and your alleged scientific bases?

Answer. Because the FLAG Air Quality Related Values (AQRV) document is guidance that has been drafted by the National Park Service and the U.S. Forest Service, we recommend that you contact them for an explanation of these issues. We have forwarded a copy of your question to the National Park Service and the U.S. Forest Service.

FLAG: FIRES ON FEDERAL LANDS

Question. Federal lands' fires were identified as a major source of western haze by a 1993 National Academy of Sciences study and by the eight-state Grand Canyon Commission in which EPA and FLMs extensively participated. How does FLAG address federal lands' fires as a major source of haze?

Answer. Since the FLAG air quality related values (AQRV) document is guidance that has been drafted by the National Park Service and the U.S. Forest Service, we have forwarded a copy of your question to the National Park Service and Forest Service and recommend that you contact them for an explanation of these issues. As indicated in the response to your later question on forest fires, EPA has worked closely with the Federal land managers to develop the "Interim Wildland Fire Policy." This policy outlines EPA's approach to dealing with the impact of wildland fire on the PM National Ambient Air Quality Standards. EPA expects to work with the same stakeholders in expansion of this policy to deal with the impact of fire on regional haze.

FLAG: COMPLIANCE WITH STATUTES AND THE CONSTITUTION

Question. Have the FLAG standards complied with:

- the Unfunded Mandates Reform Act?
- the Regulatory Flexibility Act of 1980?
- the Small Business Regulatory Enforcement Fairness Act of 1996?
- the statutory requirement that no buffer zones are allowed for wilderness areas or national parks?
- the Property Clause of the constitution—federal agencies can have oversight of private land use only to the extent federal lands are harmed by private land activities?

Answer. Because the FLAG Air Quality Related Values (AQRV) document is guidance that has been drafted by the National Park Service and the U.S. Forest Service, we recommend that you contact them for an explanation of these issues. We have forwarded a copy of your question to our contacts in the National Park Service and the U.S. Forest Service.

FLAG STANDARDS VERSUS EPA MODELING PROTOCOLS

Question. Does the visibility component of FLAG standards conflict with EPA modeling protocols and requirements?

Answer. The FLAG guidance was developed by those agencies concerned with federal land management so input on this question should be sought from them. EPA has acted in a review capacity on the visibility component of the FLAG guidance and believes that it is based on models and modeling approaches referenced in EPA's Guideline on Air Quality Models. To meet FLAG needs, the applications are sometimes extended beyond what is specified in that guideline. However, EPA staff have reviewed these extended applications and find them consistent with the more general EPA guidance.

CLEAN AIR ACT: FLAG STANDARDS

Question. The Clean Air Act requires federal agencies to comply with stricter-than-federal state clean air laws. Colorado state statute requires a federal agency to factually establish an AQRV impairment exists before declaring an impairment. Colorado state statute also tracks with cost/benefit analysis required by the federal Clean Air Act. The Clean Air Act gives states the authority to define AQRVs. Why do the FLAG standards not accommodate state statutory AQRV protection programs which comply with federal law?

Answer. The Clean Air Act (CAA) requires federal facilities to comply with state requirements respecting the control and abatement of air pollution in the same manner and to the same extent as any nongovernmental entity. This provision of the CAA does not apply to federal agencies in their regulatory capacity. With respect to protecting AQRVs on federal lands, the CAA imposes an affirmative responsibility on the FLMs to protect these values. Because the FLAG Air Quality Related Values document is guidance that has been drafted by the National Park Service and the U.S. Forest Service, we recommend that you contact them for further explanation of these issues. We have forwarded a copy of your question to the National Park Service and U.S. Forest Service.

CLEAN AIR ACT: STATIONARY SOURCES

Question. Why are federal agencies pursuing stationary sources (such as forest prescribed burning) not found to be a major source of western haze?

Answer. Section 169A of the Clean Air Act requires states to develop implementation plans that provide for reasonable progress in remedying existing impairment and preventing future impairment in mandatory Class I Federal areas (such as national parks and wilderness areas). These plans must include two basic elements: (1) measures addressing the best available retrofit technology for a specific set of major stationary sources that emit any pollutant that causes or contributes to impairment in any Class I area, and (2) a long-term strategy for making reasonable progress. The regional haze rule acknowledges that many different types of sources contribute to visibility impairment and it requires states to address all types of sources in the long-term strategy: mobile sources; fire emissions; other area sources; and other stationary sources.

While there are some actions under way by federal and state agencies to address stationary sources contributing to regional haze, there are many other efforts in place to characterize and develop strategies for many types of sources contributing to haze, not just stationary sources. For example, these agencies are also working to develop smoke management programs that incorporate best available control measures to minimize emissions and smoke impacts from wildland fires they manage to achieve resource benefits (e.g., prescribed fires).

CLEAN AIR ACT: REGIONAL HAZE REQUIREMENTS

Question. What is the difference between what federal land managers are willing to do to address haze and what is required of industry?

Answer. As noted in the response to the above question, state regional haze State Implementation Plans (SIPs) need to address a range of source categories that contribute to visibility impairment. For example, certain major stationary sources may be required to implement best available retrofit technology under the rule. The states have the flexibility to implement best available control measures to address other source categories as well, such as fire emissions from federal, state, and private lands.

The EPA understands that the policy of returning fire to the wildlands to address excessive fuel build-up in certain areas is expected to provide the benefit of reduced incidence of catastrophic wildfires and improved forest health over the long term.

It is recognized, however, that this policy will result in smoke emissions that can impact visibility and the National Ambient Air Quality Standards for particulate matter on an episodic basis. EPA understands, based on working with high level managers in the U.S. Forest Service and the Bureaus of the Department of the Interior, that those agencies have agreed to use the best available control measures to minimize emissions and smoke impacts from wildland fires they manage to achieve resource benefits (e.g., prescribed fires). Federal agencies are familiar with several techniques that can be used to minimize emissions from prescribed fires including mechanically thinning fuel levels, burning when fuel moisture is high, mopping up smoldering embers after the fire, and burning on days with proper meteorological conditions. Federal agencies will use smoke management techniques to minimize the potential impact of the smoke emitted from prescribed fires on visibility, regional haze and the national ambient air quality standards. Smoke management techniques consider how prescribed fire emissions will affect air quality and impact smoke sensitive areas under the atmospheric conditions that will exist at the time of the fire.

CLEAN AIR ACT: FEDERAL LAND MANAGERS REDUCTION OF HAZE

Question. Fires of tremendous heat and excessive emissions result from the heavy fuel loading allowed to occur on forest floors (no logging, no clearing blowdown, 100 year policy of preventing natural burns). What are federal land managers willing to do to reduce haze?

Answer. It is EPA's understanding that the U.S. Forest Service and the Bureaus of the Department of the Interior are committed to complying with the National Ambient Air Quality Standards and with national visibility goals for mandatory Class I federal areas while conducting their wildland fire programs. We believe all the federal agencies are committed to using smoke management techniques to minimize emissions and mitigate air quality impacts from prescribed fires.

CLEAN AIR ACT: FEDERAL AND STATE REQUIREMENTS

Question. The Clean Air Act requires federal agencies to comply with states' stricter-than-federal clean air laws. However, in Colorado, FLMs actively worked against legislation requiring them to submit emissions inventories, seek permits, and mitigate fire emissions. FLMs now are threatening to sue Colorado to ensure their emissions are not regulated by Colorado law as allowed by the Clean Air Act. Why are the USFS and NPS resisting federal and state clean air requirements regarding a major source of western haze and the single largest episodic source of haze "federal lands" fires?

Answer. EPA understands that these agencies are prepared to employ the best available control measures applicable to prescribed fires (i.e., smoke management techniques). However, EPA has not had communication with Federal Land Managers regarding their support for Colorado's legislation regarding smoke emissions. Therefore, we cannot comment on their position.

QUESTION SUBMITTED BY SENATOR JON KYL

REVIEW OF PHOENIX'S REVISED SERIOUS AREA PM10 NONATTAINMENT PLAN

Question. As you are aware, the Phoenix, Arizona, area has been struggling with particulate matter air pollution for some time. The EPA Region 9 office has been working with Maricopa County, Arizona, to address Maricopa County's failure to attain the PM-10 National Ambient Air Quality Standards established in the Clean Air Act. Maricopa County is extremely positive about its experience in this effort.

On December 23, 1999, the Maricopa Association of Governments submitted its Clean Air Act Revised Serious Area Nonattainment Plan to EPA for review. Again, EPA's Region 9 staff have been cooperative and agreed to expedite its review of the revised plan, indicating to county officials that the matter should be resolved by April 3, 2000. In the interim, sanctions were imposed beginning on March 2, that require 2-to-1 offsets for new or substantially modified major particulate sources in Maricopa County. Delay in final resolution of this may result in additional sanctions.

What is the status of EPA's review?

Answer. EPA signed the proposed approval of the revised Phoenix serious area PM-10 plan on April 3, 2000. We committed to Governor Hull to do everything possible to expedite EPA's review of this plan, which was received in draft on January 3, 2000 and officially on February 23, 2000.

On April 3, 2000, EPA's Administrator for Region 9 also signed an interim final determination which, when published in the Federal Register on April 13, stayed the Clean Air Act 2-to-1 offset sanction that was imposed on the Phoenix area on March 2, 2000. It also defers the imposition of the highway sanctions until EPA takes final action on the plan.

EPA's review of the plan was aided by the efforts of Maricopa County Environmental Services Department, the Maricopa Association of Governments, Maricopa County Department of Transportation, and the Arizona Department of Environmental Quality in revising the plan quickly to address the disapproval issues that EPA raised in a November 9, 1999 letter to Governor Hull.

QUESTIONS SUBMITTED BY SENATOR TED STEVENS

RED DOG MINE PERMIT: AGENCY INVOLVEMENT

Question. What has the EPA done to address the concerns regarding the mine's ability to operate in the future under a state Clean Air Permit?

Answer. EPA is always willing to work with companies to ensure that the operation of their facilities is in accordance with the Clean Air Act. Unfortunately, despite months of discussions during which most issues were resolved, EPA continues to disagree with the State regarding whether the Clean Air Act permit for a current expansion project at the mine complies with the Act. Thus, EPA took steps to ensure both the State and the facility acted in compliance with the Act. EPA remains committed to resolving issues with the permit in a manner that minimally impacts the operation of the mine's expansion project. Recently, we have amended our order so that the Red Dog Mine can begin "water-related" construction while we attempt to resolve our concerns about the need for emission controls. The Red Dog Mine will be able to continue to operate in the future so long as they remain in compliance with the requirements of the Clean Air Act.

CO NAAQS REVIEW

Question. Will EPA factor in the conditions faced in Northern Tier communities in reviewing the CO NAAQS?

Answer. The EPA has conducted an air quality analysis of northern tier cities, including the largest cities of Alaska. The EPA analysis has been incorporated into the Air Quality Criteria Document for Carbon Monoxide, which forms the scientific basis for the CO NAAQS review and is about to be released as a final document. The analysis has also been referenced in the air quality section of the CO Staff Paper currently being prepared for public and Clean Air Scientific Advisory Committee (CASAC) review.

CO NONATTAINMENT AREAS: WORKING WITH ALASKA

Question. Is EPA willing to work with the delegation, the local communities, and the State in effort to identify possible solutions to the difficulties Alaska has had in reaching CO attainment?

Answer. EPA will continue to work with the State of Alaska and local communities to find ways to reduce carbon monoxide air pollution in Anchorage and Fairbanks and welcomes the input of the Alaska Delegation. EPA has provided technical and financial support for a number of special projects aimed at gathering scientific information about the sources of air pollution, their relative contributions, and the impacts of various control strategies to abate air pollution levels. These EPA efforts have included:

- vehicle testing in Fairbanks and Anchorage during several winters and under different operating conditions, including the use of engine block heaters ("plugs");
- making changes sought by the Alaska Department of Environmental Conservation (ADEC) for the national computer model used to predict vehicle air pollution levels;
- studying driver behavior in Anchorage to document typical idling times for commuters;
- approving a substitution to the contingency measures requested by ADEC (air pollution control measures that are automatically triggered by the failure to attain the national health-based CO standard); and
- conducting CO saturation studies in both Anchorage and Fairbanks to better identify where the highest levels of CO air pollution are being generated within the boundaries of the official nonattainment areas for the communities.

QUESTIONS SUBMITTED BY SENATOR BARBARA A. MIKULSKI

B. CEPACIA: CONTAINED IN BIO-PESTICIDE PRODUCTS

Question. Can you please outline for the Subcommittee what steps the Agency will be taking with regard to the use of *B. cepacia* in bioremediation and what the timetable will be to address this aspect?

Answer. *B. cepacia* may be subject to regulation as a bioremediation application under the Toxic Substances Control Act (TSCA) and is subject to regulation as a pesticide under the Federal Insecticide, Fungicide and Rodenticide Act. EPA is currently examining uses of this microorganism that fall under the purview of either statute, identifying data needs, assessing risks where possible, and considering possible voluntary and regulatory options for addressing risks where appropriate. We met with the Cystic Fibrosis Foundation (CFF) on March 1, 2000 on this issue, and provided a detailed update on our progress as part of a professional meeting sponsored in part by CFS on April 8, 2000. This April 8 update included an examination of the commercial products which could contain *B. cepacia* such as those used for bioremediation, specialty chemical production, and drain cleaners.

While we do not have a definite timetable for any potential regulatory action, we are expediently addressing potential risks posed by *B. cepacia* by taking immediate steps within our statutory authority when possible (under FIFRA, for example). EPA has a continuing dialogue with CFF and, at this time, is attempting to define the issues (with CFF's help). Once we have better information on the scope of the issues (i.e., exposure and potential risk), OPPT will be able to establish a course of action and a timetable for any needed regulatory action.

BURKHOLDERIA CEPACIA: USE

Question. Administrator Browner, can you highlight for the Subcommittee what the Agency's plans are to improve, label or re-classify, or remove existing biopesticide products containing *B. cepacia*?

Answer. *B. cepacia* (*Burkholderia cepacia*) is under review as a result of human health concerns. There may be some impact on uses or registrations of products containing *B. cepacia*, but it is too early in the process to predict. The FIFRA Scientific Advisory Panel (SAP) prepared a report to explain the basis for the risk assessment for microbial pesticide products containing *B. cepacia* and to discuss the scientific issues that have informed this risk assessment. The Agency is currently working to complete its analysis of the SAP report by July 2000. Based upon conclusions drawn from that assessment, the Agency will take whatever actions are necessary regarding the *B. cepacia* products. EPA is not currently registering any *B. cepacia* products until data gaps can be addressed. In addition, Stine Co. has voluntarily withdrawn its registrations, and Agrium, U.S., Inc. recently withdrew its application for a product containing *B. cepacia*.

STATUS OF NSR REFORM RULEMAKING

Question. What is the status of discussions with the complex manufacturer stakeholder group on New Source Review (NSR) reform?

Answer. Some of the members of the group we now refer to as the complex manufacturing group have been actively participating in the NSR Reform effort since it began. Among other activities, various members of this group took part in eight public meetings of the NSR Reform Subcommittee of the Clean Air Act Advisory Committee (CAAAC) in the 1993-94 time frame; commented on a 1994 preliminary draft of the NSR Reform proposal; participated actively in several additional meetings prior to the 1996 summer proposed rule; commented on the proposed NSR Reform Rule that appeared in the Federal Register; testified at a public hearing on the proposed rule; provided input at several subsequent meetings of the CAAAC Subcommittees; and actively participated in another round of meetings that stakeholders requested when EPA released a 1998 Notice of Availability updating several issues within the NSR Reform rule.

Then, in late 1998 during discussions over litigation of the rules governing NSR applicability for utilities, EPA suggested to industry stakeholders to try again to develop a better system for determining what is or is not covered by NSR—one that could receive broad stakeholder support. At this time EPA indicated a desire to complete this last effort in just a few months, given that the NSR Reform stakeholder discussions had been ongoing since 1992. We have made a special effort since then to seek further input from all stakeholders on new approaches that will help achieve this goal. A large stakeholder meeting was convened on February 2-3, 1999, and multiple rounds of follow-up meetings have been held with stakeholders since then including the complex manufacturing group with whom we last met in March 2000.

The meetings we have held this year with the complex manufacturing group have been productive. We are now discussing some of the ideas they raised with other stakeholders, such as environmental groups and state and local agencies, to get their input as well. Once we complete this round of meetings we plan to have an additional meeting with the complex manufacturing group.

SHARING CONTENTS OF FINAL RULE BEFORE PROMULGATION

Question. What do you plan to include in this final NSR reform package?

Answer. As described in the above question, the EPA has engaged in an extraordinarily thorough and inclusive stakeholder process in developing the NSR Reform package. We have held hundreds of hours of meetings with stakeholders representing a very broad cross-section of industry, Federal, state and local governments, and the public. The EPA continues to work with all our stakeholders to be sure that we have a full understanding of their views on the issues raised. However, because the EPA is still involved in stakeholder discussions and internal deliberation, it would be premature to discuss the extent to which we plan to incorporate any specific provisions in the final rule.

NEW SOURCE REVIEW REFORM: ENFORCEMENT ACTION

Question. I understand that the Agency's enforcement office is also involved in the NSR debate. The Agency is pursuing enforcement Actions in several sectors: utilities, pulp and paper, refining, the chemical industry, etc. Why is EPA targeting these industries?

Answer. EPA has conducted very extensive targeting analyses of various industry sectors to ascertain those industries that should be the subject of enforcement initiatives. As a result of those analyses, EPA determined that coal-fired utilities, petroleum refineries, pulp and paper facilities and the chemical industry are large emitters of criteria pollutants, as well as the industries that have high rates of non-compliance with the NSR requirements. EPA will continue to evaluate its priorities and may select other sectors for future enforcement initiatives.

QUESTIONS SUBMITTED BY SENATOR PATRICK J. LEAHY

MERCURY MONITORING: FUNDING FOR UNDERHILL, VERMONT SITE

Question. The uninterrupted monitoring of mercury deposition at the Proctor Maple Research Center in Underhill, Vermont is critical to national and Northeastern mercury monitoring initiatives. In place since 1992, this monitoring station is the longest continuously-running monitor of its kind in the Northeast and is invaluable as a long-term data collection site for mercury monitoring networks, including EPA's Regional Ecological Monitoring and Assessment Program (REMAP), the Northeast States for Coordinated Air Use Management (NESAUM), and the National Park Service Air Monitoring Program. Despite its national importance, we recently heard that federal funding for the Underhill, Vermont site has vanished this year. I would like to know how EPA can help this monitoring station in the short-term as well as the long-term.

Answer. EPA's efforts to help the Proctor Maple Research Center mercury monitoring site have been many. Since 1992, the Proctor Maple Research Center mercury monitoring site has been funded by the Air Resources Laboratory of the National Oceanic and Atmospheric Administration (NOAA). However, cuts in NOAA's budget over the past several years eventually resulted in NOAA ending their funding of the site in fiscal year 2000. Aware of the decreasing funding, EPA New England began partially funding the Proctor Maple Research Center mercury monitoring site with Regional Ecological Monitoring and Assessment Program (REMAP) funds during fiscal year 1998 and fiscal year 1999. As a part of the EPA Region's mercury monitoring network initiative, the Region also leveraged funds from other EPA programs, such as the National Estuary Program (NEP), Regional Applied Research Effort (RARE), and EPA New England discretionary funds. These funds were provided as a "stop-gap" and not expected to support routine long-term monitoring. In 1999, EPA New England approached the Vermont Department of Environmental Conservation (VTDEC) to consider partial funding of the Proctor Maple Research Center mercury monitoring site. The VTDEC declined to support the site because of insufficient funds.

Over the next several years, the EPA Office of Air will provide additional grant funds to promote state air toxics monitoring programs. Federal funds for these programs may be used to support mercury monitoring sites such as the Proctor Maple Research Center site. In addition, the EPA Office of Research and Development is

developing a Mercury Research Strategy, expected to be finalized this year, which will address research questions in various areas, including human health, exposure, ecological effects, transport and fate, and risk management. It also will address various research questions for mercury deposition.

In addition, the newly formed New England Governors and Eastern Canadian Premiers Mercury Research Workgroup is considering the completeness of ambient mercury monitoring New England and maritime Canada. EPA New England is a member of this Workgroup and will promote the continuation of the Proctor Maple Research Center mercury monitoring site.

MONITORING MERCURY: EPA'S LONG-TERM PLANS

Question. In addition, I would like to know EPA's long-term mercury monitoring plan for U.S. air, land, and water—especially in the Northeastern states.

Answer. Several important monitoring efforts are underway. In particular, EPA recently developed a draft concept paper outlining the development of a nationwide air toxics monitoring network (which would include air concentrations and deposition). The initial focus of the network will be the operation of selected pilot studies in major U.S. cities to assist the design of a long-term network that will be used to support application of air toxics models and characterize trends in air toxics concentrations. The draft concept paper and initial program have been guided by a steering committee consisting of EPA and state and local agency representatives. The paper has undergone peer review by EPA's Science Advisory Board. Mercury is discussed in the draft concept paper and mercury monitoring eventually will be brought into the national network.

EPA is also undertaking or supporting various mercury monitoring activities, including:

- the Mercury Deposition Network which maintains sites throughout the U.S. to measure mercury deposition as part of the National Atmospheric Deposition Network;
- a National Sediment Inventory established by EPA to provide information on sediment quality;
- EPA's Environmental Monitoring and Assessment Program (EMAP) which provides estimates of changes in the nation's ecological resources on a regional basis;
- a National Survey of Chemical Residues in Fish to determine methylmercury and other chemical contaminants concentration in freshwater fish during the time period from 1999 through 2002
- the National Health and Nutrition Examination Survey (NHANES) human monitoring program which has been expanded to measure mercury in blood and hair along with dietary records. This study will allow better characterization of exposure of the U.S. population to mercury.

In addition, as part of developing EPA's Mercury Action Plan, we are considering additional ways to assist in the coordination of the monitoring efforts of various Federal, state and local agencies.

We will keep you and others in Congress apprised of our mercury monitoring plans as we proceed.

TMDL REGULATION: ASSISTANCE TO FARMERS AND LANDOWNERS

Question. Through the work of the Lake Champlain Basin Program and the Northern Forest Lands Council, we have learned that the conversion of forest and farm land to urban/suburban use represents the greatest threat to our environment, especially our water quality. Contaminants from non-agricultural and non-silvicultural non-point run-off are many times greater than farm and forest land run-off on a per acre basis. Therefore, we are very concerned with any approach to water quality improvement which, however well-intentioned, inadvertently forces farmers out of business or encourages the sale and conversion of working forests to developed land.

For this reason, I have authored legislation such as the Environmental Quality Incentive Program (EQIP) which provides cost-share funding to help farmers and landowners implement water quality improvement practices. These include animal waste storage, riparian protection and erosion control. These programs have long waiting lists of farmers and landowners yet also have woefully insufficient public funding. In past years I have specifically included EPA appropriations to fund such cost share pilot programs in specific watersheds such as Vermont's Lake Memphremagog.

Can you outline for me how your agency would reconcile its proposal regarding TMDL regulation with my concerns? I would like to know specifically how EPA

would work with states such as Vermont to sustain working farms and forests through popular and effective voluntary conservation programs—and not unintentionally drive them to sell lands for further development.

Answer. EPA shares your concerns about sustaining working farms and forests and supports using popular and effective voluntary conservation programs, such as EQIP, to help farmers and landowners implement management practices needed to improve water quality.

As Assistant Administrator J. Charles Fox stated in his April 5, 2000, letter to the Honorable Bud Shuster, EPA regrets the confusion about treatment of diffuse runoff in our August TMDL proposal and wants to specifically clarify that EPA remains committed to relying on voluntary approaches to reduce runoff from diffuse water pollution sources. The proposed rule would not require Clean Water Act permits for polluted runoff. In fact, voluntary and incentive-based approaches, which are often as you note supported by financial assistance from the Federal government, are the preferred way to address these problems. EPA has proposed that state grant funds for polluted runoff programs be increased from \$200 to \$250 million in fiscal year 2001 and the President has also requested a \$1.3 billion increase in authorized levels for conservation assistance programs at the US Department of Agriculture.

MTBE STUDIES: PUBLIC ACCESS TO INFORMATION

Question. I strongly support the recent announcement by the Environmental Protection Agency (EPA) and the United States Department of Agriculture (USDA) to significantly reduce or eliminate the use of the fuel additive MTBE (methyl tertiary butyl ether) and to increase the use of safe, renewable alternatives such as ethanol. I understand that studies have been done to measure the quantity and spread of Volatile Organic Compounds (VOCs), including MTBE, in the nation's ground water and drinking water wells. Has EPA made this information available to the public? If so, please let me know how this information can be accessed.

Answer. EPA has entered into a cooperative study with the U.S. Geological Survey (USGS), titled the "12-State MTBE/VOC Drinking Water Retrospective." This study assesses MTBE occurrence and distribution in 12 Northeastern and Mid-Atlantic States. While the release of the final report is expected by early Fall 2000, preliminary data from the study were presented to a Blue Ribbon Panel in April 1999. This information is available at the Blue Ribbon Panel's Internet website address of: <http://www.epa.gov/oms/consumer/fuels/oxypanel/blueribb.htm>

ACID RAIN: CAP AND TRADE APPROACH

Question. As published in the recent "Progress Report on the EPA Acid Rain Program," sulfur dioxide emissions and total acid deposition have declined in the Northeast since the passage of the Clean Air Act Amendments of 1990. However, the decreases in acid precipitation have not been enough. High-elevation soils, lakes, and other critical habitats throughout Vermont and the northeast continue to receive high levels of acid precipitation, from both sulfuric and nitric acid components. Environmental scientists agree that ecosystem recovery from the damaging effects of acid precipitation may take twenty to fifty years at least.

EPA has often proposed that a cap-and-trade approach to nitrogen oxides will help alleviate the northeastern acid rain problem. Please outline how this program would work and, based on what is known about sulfur dioxide emissions trading patterns and the differences between major SO₂ and NO_x sources (power plants vs. vehicles), what decreases you expect in total acid deposition in the northeast over the next 10 years of such a program. Also, please explain how you will monitor the effect of the acidity trends over time in the regional ecosystems that are most affected by acid deposition.

Answer. With regard to recovery of sensitive ecological systems in the Northeast, EPA agrees with observations in the recent GAO study, entitled *Acid Rain—Emissions Trends and Effects in the Eastern United States*. Despite significant reductions in sulfur dioxide (SO₂) emissions, decreases in total sulfur deposition and declining surface water concentrations of acid anions, many of the most sensitive ecosystems in the Northeast have not demonstrated significant recovery. Recent studies attribute lack of recovery to two important factors. First, base cations in watershed soils have been severely depleted due to many years of leaching caused by acid deposition reducing the acid buffering capacity of soils. Second, despite reductions in SO₂ emissions and sulfur deposition, significant reductions in nitrate deposition have not been observed due to relatively constant emissions of nitrogen oxides (NO_x) over the past 20 years. Scientists contend that both further reductions in SO₂ and significant reductions in NO_x emissions may be necessary to ensure recovery

of the most sensitive ecosystems. EPA has been aggressively pursuing NO_x reductions through the 22 state NO_x SIP Call, Tier II/low-sulfur vehicle standards, and the Section 126 NO_x petitions. These rules will reduce 2.3 million tons of NO_x annually in 2010.

EPA believes that if a national, annual NO_x reduction effort is developed, a NO_x cap and trade program would provide the most cost-effective means to achieve reductions. Such a program would likely be set up much like the current sulfur dioxide cap and trade program, which has been highly successful in providing significant, low cost, early reductions resulting in benefits to health and the environment. For the first time under the Clean Air Act (CAA), in 1994, EPA began collecting actual hourly emissions data (SO₂, NO_x, CO₂) from large power generating sources through Continuous Emissions Monitoring systems (CEMs). There has been 100 percent compliance with the SO₂ emissions reduction requirements for this section of the Clean Air Act. Utility SO₂ emissions have dropped by over 5 million tons annually relative to the 1980 baseline. The first five years of the program have produced SO₂ reductions in every state and beyond the legal requirement in almost every affected state. The greatest reductions occurred in the highest emitting areas (Midwest). Full implementation will achieve a 10 million ton SO₂ reduction, approximately 40 percent below 1980 levels. Full compliance cost is now expected to be about \$1 billion per year, based on a combination of scrubber installations, coal substitution, fuel switching and other approaches, as opposed to the \$4 to \$7 billion per year cost projected in 1990 at the time of enactment.

Such impressive results achieved under this program have resulted in expressed interest in cap and trade as a successful model for implementing other pollutant reduction programs. A similar, ongoing program modeled on the SO₂ program already provides a template for a program targeted at nitrogen oxides. The Ozone Transport Commission (OTC), composed of 12 Northeastern states and the District of Columbia, is implementing a cap and trade program to reduce summertime NO_x emissions during the ozone season. Preliminary results from 1999 (the first summer of operation) indicate that the OTC NO_x Program is achieving its goal of reducing ozone season NO_x emissions. There has been a 55 percent reduction since 1990 by the eight states currently participating in the program. Emissions were reduced 20 percent below required levels and NO_x allowance costs are well below early estimates. When the program is fully implemented in 2003, summertime NO_x emissions in the Northeast will be reduced by 70 percent (from 1990 levels), resulting in lower ozone levels and improved health for Northeast residents. The OTC NO_x Program demonstrates that emission cap and trading mechanisms can achieve significant NO_x emission reductions and improve air quality in the United States at a lower cost than traditional command and control approaches.

One important distinction must be made, however, between the current OTC NO_x budget trading program designed to address summertime ozone levels and any program designed to better lead to recovery of sensitive ecosystems. In order to address the most biologically sensitive time period (spring), it is vital that a program achieve annual reductions, rather than seasonal reductions, to ensure benefit to ecosystems.

One crucial means of determining ecological response and recovery involves monitoring pollutant concentrations in precipitation, deposition of pollutants to land and water, and the response of sensitive ecosystems. Efforts to assess the impact of the CAA should focus on national and regional long-term monitoring programs such as the NADP (National Acid Deposition Program), which monitors wet deposition, and EPA's CASTNet (Clean Air Status and Trends Network), which monitors dry deposition, rural ozone and other forms of atmospheric pollution. In addition, it is important to monitor status and trends in sensitive ecosystems in receptor areas through networks such as EPA's LTM/TIME (Long-Term Monitoring Program/Temporally Integrated Monitoring of Ecosystems), which monitors surface water chemistry at 135 sites in the Northeast (currently 14 in Vermont, reduced from 36 in 1980 and 24 in the early 1990s). Such regional and national long term monitoring programs are essential to understanding the overall impacts of the Clean Air Act to the environment, including recovery of ecosystems. Although current patterns of SO₂ trading have produced no negative consequences for sensitive ecosystems, such monitoring systems are the best means for measuring performance in the future.

Total acid deposition reduction in the Northeast over the next 10 years depends on assumptions of additional levels of reduction. Under the current Clean Air Act, EPA is expecting an additional 10 percent reduction in sulfate and nitrate deposition to Northeast ecosystems. Several proposals before Congress call for additional SO₂ and NO_x reductions from power generation of 50–60 percent and 60–75 percent, respectively. Our experience with cap and trade programs and understanding of atmospheric chemistry suggest that sulfate and nitrate deposition reductions due to power generation emissions would be approximately proportional to these emissions

reductions. However, it should be noted that power generation currently comprises about 65 percent of total sulfur dioxide emissions and about 30 percent of nitrogen oxide emissions. Therefore, deposition reductions would also be affected by the relative proportion of other emissions sources. Ascertaining the ecological effects of such deposition levels over time depends entirely upon continuing essential long-term monitoring programs such as NADP, CASTNet, and LTM/TIME.

VERMONT SCHOOL ENVIRONMENTAL HEALTH INITIATIVE: AGENCY ASSISTANCE

Question. The Vermont Legislature is currently considering indoor environmental health legislation known as the School Environmental Health Initiative. An EPA indoor air quality specialist had been detailed to the Vermont Health Department and gathered a great amount of data that informed Vermonters about air quality issues in the state's schools. Unfortunately, the appointment of this specialist recently ended and has not been renewed. Would your agency support an extension of this specialist or a similar assignment of an appropriate EPA staffer to assist Vermont in its School Environmental Health Initiative?

Answer. The Agency does not support an extension of this specialist to assist Vermont in its School Environmental Health Initiative because the assignment has reached a successful conclusion. The staffer was detailed to the State of Vermont two years ago to pilot test both the EPA's Indoor Air Quality (IAQ) Tools for Schools implementation strategy and the Agency's approach to training school personnel and other stakeholders on improving the indoor environment in schools. This appointment worked to the benefit of EPA by: (1) providing the Agency with first-hand experience at the local and state level that proved invaluable in revising the Indoor Air Quality Tools for Schools kit and (2) refining the schools' training and outreach materials.

EPA's Region I office in Boston, MA, is responsible for providing support and technical assistance to the New England states, and is particularly active in promoting the voluntary implementation of IAQ Tools for Schools. Please do not hesitate to contact our Regional Administrator, Mindy Lubber, and advise her of your desire for assistance.

QUESTIONS SUBMITTED BY SENATOR ROBERT C. BYRD

NITROGEN OXIDE (NO_x) REGULATORY ACTIONS TO ADDRESS AIR QUALITY

Question. In November 1997, the Environmental Protection Agency (EPA), issued a draft ruling on its regional NO_x SIP Call which primarily focused on the transport of nitrogen oxide emissions discharged from electric power and other manufacturing sources. In September 1998, the EPA issued the final NO_x SIP Call rule requiring stringent reductions of NO_x primarily emitted from electric utilities and other industrial facilities in the Midwest and Southeast. In October 1998, Midwestern and Southeastern states and the electric utilities from those states challenged the EPA NO_x SIP Call rule in the U.S. Circuit Court of Appeals for the D.C. Circuit because of its stringency and limited compliance schedule (*Michigan vs. EPA*). On May 25, 1999, the same court issued an indefinite stay on the submission of SIP Calls for states until the court ruled on the merits of the NO_x SIP Call suit. Oral arguments on the SIP Call rule were heard by the court on November 9, 1999, and on March 3, 2000, the court issued a decision relating to the EPA's September 1998 rule on regional NO_x SIP Call rule. The court upheld most aspects of the SIP Call rule. Given the continued existence of a court stay of the states' deadlines to submit their SIP Calls and the year and a half delay since first issuing the SIP Call rule, it seems reasonable to assume that the schedule for compliance with the rule and installation of emission controls on affected utilities and industrial sources should also be delayed.

The EPA has also recently issued a final rule under Section 126 of the Clean Air Act directing almost 400 utility and industrial sources of NO_x to meet a stringent NO_x standard by May 2003, not much more than three years from now. Thus, state environmental agencies and the regulated sources may now be faced with separate regulatory programs with different compliance schedules affecting the same electric and industrial sources.

The electric utility industry and several states have raised concerns about the ability to comply with the stringent NO_x SIP Call reduction requirements in a very short time frame (by May 2003) without threatening the reliability of the electrical supply in many regions in the affected states. The North American Electric Reliability Council and the East Central Area Reliability Council have issued two separate reports indicating that a compliance May 2003 deadline poses a potential

threat to reliability. Additionally, the Section 126 Petition deadlines do not comport with the NO_x SIP Call rule if and when the stay is lifted by the D.C. Circuit Court of Appeals.

Administrator Browner, are you considering administratively revising the compliance deadlines for the Clean Air Act's Section 126 Petition sources so that those deadlines will be consistent with the compliance schedule established by the NO_x SIP Call rule once the U.S. Circuit Court of Appeals for the D.C. Circuit rules on lifting its stay on the NO_x SIP Call? If this is not the case, why not?

Answer. EPA does not see any reason to change the compliance deadlines for the sources subject to the action EPA took in December 1999 when it granted states' petitions requesting relief from pollution caused by sources in upwind states. The petitioning states have the right under the Clean Air Act to relief and the temporary stay of an independent action (the NO_x SIP Call) does not deprive these states of the relief to which they are entitled. The United States Court of Appeals for the District of Columbia Circuit denied petitioners request last year to stay the Section 126 action. EPA did a careful and thorough analysis that demonstrated that it is feasible for the covered sources to comply with the Section 126 action without adversely impacting reliability of the power supply.

Sources regulated under Section 126 and the NO_x SIP Call need not be subject to separate regulatory programs with different compliance dates. If a state submits and EPA approves a SIP revision meeting all the requirements of the NO_x SIP Call (including providing for control measures to be in place by 2003), then EPA will withdraw the Federal requirements for sources in that state subject to the Section 126 action. Furthermore, as discussed in more detail in response to the following question, EPA believes that May 1, 2003, is the appropriate compliance deadline for the primary portion of the NO_x SIP Call.

NO_x SIP CALL: COMPLIANCE DEADLINE REVISION

Question. The North American Electric Reliability Council and the East Central Area Reliability Council have issued two separate reports indicating that a compliance May 2003 deadline poses a potential threat to reliability. Is the EPA willing to take the necessary steps to avoid the possible threat to the reliable supply of electricity as indicated by these reliability studies?

Answer. EPA has taken steps to protect the reliable supply of power. Before issuing the NO_x SIP Call and taking final action on the section 126 petitions, EPA carefully analyzed whether a May 2003 deadline posed a potential threat to reliability. (See *Feasibility of Installing NO_x Control Technologies by May 2003*, EPA Office of Air and Radiation, September 1998). EPA projected that compliance with the SIP Call will require the installation of selective catalytic reduction (SCR) on 72.9 GW worth of coal fired capacity. Furthermore EPA believes that past experience in both the U.S. and Germany shows that SCR can be installed in outage periods of five weeks or less. EPA examined a worse case study where 62.3 GW worth of SCR were installed in a one year period and where SCR installations required 9 week outages. Even under these extreme conditions, EPA's analysis found no threat to reliability. As an added precaution to protect the reliable supply of power, EPA included a compliance supplement pool in both the SIP Call and the section 126 action. This special provision is designed in part to protect the reliability of the power supply and assist facilities that cannot install controls by May 1, 2003, despite their good faith efforts to do so. Under the Compliance Supplement Pool as established in the SIP Call, at states' options, a total of 200,000 tons of credits would be available that facilities could either buy from a facility that reduced its emissions early or be given by the state. If states decide to use this pool, it could allow some units to delay installation of controls beyond May 1, 2003.

EPA believes that the North American Electric Reliability Council (NERC) Study supports EPA's analysis. First NERC's study explicitly acknowledges that there are fewer concerns about the impact that the Section 126 rule will have on reliability. Second, most of the scenarios that NERC examined did not indicate reliability problems. For example NERC did not find any reliability problems when there were 30 months available for installation of controls. Additionally, NERC did not find reliability problems when 72.3 GW worth of SCR was installed in 18 months with 9 weeks required for installation of controls. It is only when NERC combined a number of extremely conservative assumptions that they found a significant impact on reliability.

East Central Area Reliability Council's (ECAR's) study predicts reliability problems, but it is based on extreme assumptions about the availability of electricity and the installation of control equipment. ECAR, which is a subregion of NERC, began with the premise that the system is on the verge of having reliability problems even

without the SIP Call. This is not consistent with the assumption NERC used. Furthermore, ECAR makes some very conservative assumptions about the amount of new electricity generation that may come on line over the next several years and the availability of existing power plants. The more new electricity generation that comes on line, the less likely it is that reliability problems will occur. ECAR assumes that approximately 9900 MWs of generation will come on line by 2008. In contrast, the Electric Power Supply Association reports that more than 10,000 MWs of capacity already have been announced to come on line before 2003.

BEVILL WASTES: REPORT TO CONGRESS

Question. Administrator Browner, I understand that in March 1999, the EPA issued a report to Congress on the wastes from the combustion of fossil fuels. In that report, the EPA concluded from its nineteen-year technical study that the regulation of these wastes should generally remain the responsibility of the states and should remain exempt from federal hazardous waste regulations. Is this the case and is the EPA preparing a Federal Register notice that is contrary to previous findings in its report to Congress?

Answer. In the Report to Congress, EPA indicated a preliminary decision that disposal of coal combustion wastes should remain exempt from regulation under RCRA Subtitle C, although we noted that these wastes contained levels of arsenic that caused the Agency some concern. We also identified specific situations where we had particular concerns with the disposition or uses of coal combustion wastes.

In comments on the Report to Congress, EPA received significant new information related to damage to human health or the environment. This coupled with the fact that a large fraction of facilities do not have basic environmental controls in place (e.g., 62 percent of all utility surface impoundments do not employ groundwater monitoring), we became further concerned that damage to ground water may be going undetected. Ultimately, on April 25, 2000, EPA issued a regulatory determination in which we explained that we would continue to exempt coal combustion wastes from being regulated as hazardous wastes but we also explained that we would develop national regulations under non-hazardous waste authority (RCRA Subtitle D) for coal combustion wastes when managed in landfills and surface impoundments or when used to fill underground or surface mines.

Question. Can you explain to the Congress and the industry why your agency is not prepared to follow the recommendations made by your own technical staff, based on nineteen years of study?

Answer. Ultimately, relying on all of the information that was available to us, we determined that the best way to ensure that appropriate controls were applied at all coal combustion facilities would be to continue to exempt coal combustion wastes from being regulated as hazardous wastes and to develop national regulations under non-hazardous waste authority (RCRA Subtitle D) for these wastes when they are managed in landfills and surface impoundments or when used to fill underground or surface mines.

ENERGY POLICY IMPLICATIONS AND THE EPA'S REGULATORY ACTIONS

Question. In the past three years, the EPA has promulgated four major new regulatory requirements and announced an intention to focus on the electric utility industry to achieve improvements in air quality goals. These rules include the following:

- New national ambient air quality standards for ozone;
- New national ambient air quality standards for fine particulates (PM_{2.5});
- Regional NO_x SIP Call;
- Section 126 petitions from Northeast states to require stringent NO_x reductions from specified electric utility and industrial sources in the Midwest.

In addition the EPA is in the process of finalizing a new rule to reform the existing New Source Review regulatory program affecting existing electric generation sources. The EPA has also, in this regard, filed suit against eight electric utilities alleging that these companies have illegally modified their older power plants in violation of the existing New Source Review regulations.

Finally, the EPA has reportedly reconsidering nineteen years of evidence and a March 1999 report to Congress on how to regulate coal combustion waste products by recommending that some yet unspecified regulatory action may be warranted.

Answer. The cumulative effect of these actions is likely to significantly drive up the cost of coal-fired electric generation, force the retirement of some existing coal-fired power plants, as well as encourage the replacement of coal-fired generators with natural gas at other facilities. Currently, coal provides fifty-six percent of the nation's electricity. It is also the source of an affordable and reliable domestic supply

of energy. All of these actions are occurring at a time that the share of electric generation from nuclear power is declining and generation from hydro power is not increasing. Additionally, it remains uncertain whether gas and renewable energy sources are in a position to completely fill this potential energy gap. Finally, the Energy Information Agency reports that the overall demand for electricity will continue to rise in the future. At this time, many states and the federal government have already taken action or are considering restructuring the electric power industry with the expressed goal of reducing the cost of electricity to consumers.

Question. Does the EPA believe its policies and regulations regarding ozone, fine particulates, the Regional NO_x SIP Call, Section 126 petitions, New Source Review, coal combustion wastes, and electricity deregulation may be conflicting and dangerous to other important energy policy implications?

Answer. The rules EPA has already issued that regulate the utility industry are to address well-recognized and long-standing public health and air quality problems. The NO_x reductions that will be required by either section 126 or the NO_x SIP Call are necessary to bring areas into attainment with the pre-1997 1-hour ozone standard. Before issuing these rules, EPA carefully considered their impact on the cost and reliability of the electric power supply. EPA found that these NO_x reduction requirements will not have an adverse effect on electricity system reliability or on electric power costs for households or industrial users. EPA also found that these NO_x reduction requirements will not have a significant impact on the use of coal for electrical generation. As the electricity generating industry has recognized, over the next ten to fifteen years public health and environmental concerns are likely to require additional reductions of multiple pollutants from the electric generating industry.

EPA has considered the restructuring of the electric power industry in the context of our rulemakings and other Agency actions. EPA believes that this transitional period for the power industry is an appropriate time to address the environmental responsibility of electric generating facilities; in this way, the industry can be afforded the most coherent planning framework and the greatest flexibility and stability. The Administration believes that restructuring will have substantial benefits for consumers, including a significant reduction in the cost of electricity which is likely to exceed the costs of the environmental safeguards necessary to ensure that public health and the environment are protected.

REGULATORY ACTIONS: IMPACT ON USE OF COAL

Question. Has the EPA done any analyses or commissioned any studies to determine the cumulative effect of all of these regulatory and agency actions on the use of coal and any unintended electric power cost increases from such actions? Does the EPA believe that the combination of these regulatory actions, unintended or not, will reduce the use of coal for electric generation in the foreseeable future?

Answer. EPA has not conducted an analysis of the cumulative effect of the specific list of policies and regulations listed in your previous question. EPA's analysis of changes that will occur in the electric power industry due to the NO_x SIP call and Section 126 shows very little reduction of coal-fired capacity. Instead, compliance with both regulations will be achieved primarily through the installation of emission control technologies such as selective catalytic reductions (SCR) and selective non-catalytic reduction (SNCR). The Agency estimates early closure by 2007 of, at most, 0.06 percent of the coal-fired capacity in the SIP call region. We also estimated an increase in combined-cycle capacity of between 1,798 and 4,156 MW. (See the Regulatory Impact Analysis for the NO_x SIP call, FIP, and Section 126 Petitions, Volume 1: Costs and Economic Impacts. EPA Office of Air Quality Planning and Standards, and EPA Office of Atmospheric Programs, September 1998). Further, the Agency's analysis indicates that there will be less than a one percent reduction in total coal demand in the U.S. in 2007 that will result from the NO_x SIP call. This translates to an anticipated annual reduction of approximately 4.6 million tons of coal production in the eastern U.S. (See Responses to Significant Comments on the Proposed Finding of Significant Contribution and Rulemaking for Certain States in the Ozone Transport Assessment Group (OTAG) Region for Purposes of Reducing Regional Transport of Ozone, Docket No. A-96-56, U.S. EPA, September 1998).

EPA examined the potential increases that may occur in electricity prices under the NO_x SIP call and section 126. The Agency concluded that these increases will likely result in a 1.6 percent increase in the average electricity bill. (See the Regulatory Impact Analysis for the Final Section 126 Petitions Rule. EPA Office of Atmospheric Programs, December 1999).

Looking at potential future regulations, EPA released a report in March 1999 concerning its investigation of some options for emission controls and their impact to

the electric power industry and the fuels it uses. The report, titled "Analysis of Emissions Reduction Options for the Electric Power Industry," presents the results of multiple pollutant analyses conducted by EPA regarding the four most significant air pollutants from electric power generation: nitrogen oxides, sulfur dioxide, mercury, and carbon dioxide. The options presented in this report are hypothetical approaches to emission controls on the electric power industry for each pollutant and do not represent the EPA or Administration position on how any of these pollutants should be reduced in the future. The analysis shows that having advance knowledge of potential requirements for all four pollutants could lead the industry to follow significantly different compliance strategies at individual plants, compared with compliance choices made when the pollutants are addressed one-by-one. Further, the analysis shows that an integrated strategy would have more modest impacts on fuel patterns than many other analyses have predicted. In all options investigated, coal remains a major fuel in the production of electricity in this country. EPA continues to refine these multi-pollutant analyses.

SUBCOMMITTEE RECESS

Senator BOND. Thank you so much.
[Whereupon, at 11:14 a.m., Thursday, March 23, the subcommittee was recessed, to reconvene subject to the call of the Chair.]

**DEPARTMENT OF VETERANS AFFAIRS AND
HOUSING AND URBAN DEVELOPMENT AND
INDEPENDENT AGENCIES APPROPRIATIONS
FOR FISCAL YEAR 2001**

THURSDAY, MARCH 30, 2000

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 9:34 a.m., in room SD-138, Dirksen Senate Office Building, Hon. Christopher S. Bond (chairman) presiding.

Present: Senators Bond, Kyl, Stevens, Mikulski, and Leahy.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

STATEMENT OF ANDREW CUOMO, SECRETARY

ACCOMPANIED BY:

SAUL RAMIREZ, DEPUTY SECRETARY
GAIL LASTER, GENERAL COUNSEL
JACQUIE LAWING, DEPUTY CHIEF OF STAFF FOR POLICY AND PROGRAMS
RHODA GLICKMAN, DEPUTY CHIEF OF STAFF
HALL DeCELL, ASSISTANT SECRETARY FOR CONGRESSIONAL AND INTERGOVERNMENTAL RELATIONS
CARDELL COOPER, ASSISTANT SECRETARY FOR COMMUNITY PLANNING AND DEVELOPMENT
HAROLD LUCAS, ASSISTANT SECRETARY FOR PUBLIC AND INDIAN HOUSING
JACKIE JOHNSON, DEPUTY ASSISTANT SECRETARY FOR NATIVE AMERICAN PROGRAMS
WILLIAM P. APGAR, ASSISTANT SECRETARY FOR HOUSING—FEDERAL HOUSING COMMISSIONER
IRA PEPPERCORN, DIRECTOR, OFFICE OF MULTIFAMILY HOUSING ASSISTANCE RESTRUCTURING
GEORGE ANDERSON, EXECUTIVE VICE PRESIDENT, GOVERNMENT NATIONAL MORTGAGE ASSOCIATION
EVA PLAZA, ASSISTANT SECRETARY FOR FAIR HOUSING AND EQUAL OPPORTUNITY
DAVID GIBBONS, ACTING CHIEF FINANCIAL OFFICER
EDWARD KRAUS, DIRECTOR, ENFORCEMENT CENTER
DONALD J. LaVOY, DIRECTOR, REAL ESTATE ASSESSMENT CENTER
JOE SMITH, ACTING ASSISTANT SECRETARY FOR ADMINISTRATION
DAVID JACOBS, DIRECTOR, OFFICE OF LEAD HAZARD CONTROL

SUSAN GAFFNEY, INSPECTOR GENERAL

OPENING STATEMENT OF SENATOR CHRISTOPHER S. BOND

Senator BOND. Good morning. The Senate VA-HUD and Independent Agencies Subcommittee hearing will come to order. We welcome Secretary Cuomo and our other guests from the Department of Housing and Urban Development who have joined us here this morning to testify on the President's fiscal year 2001 budget request for the Department of Housing and Urban Development.

The President's budget request for HUD proposes \$32.1 billion for fiscal year 2001, which is an increase of some \$5.8 billion over the fiscal year 2000 appropriation of \$26.2 billion. This includes a request for \$120,000 new incremental vouchers at a cost of some \$690 million as well as nine new housing initiatives costing another \$200 million. While I have significant reservations regarding the creation of these new boutique programs, I am pleased the Administration has included additional funds for a number of HUD's core programs such as public housing, the CDBG program, the HOME program, and Section 202 elderly housing. In most cases these programs represent our most important Federal investment in affordable low-income housing and community development initiatives.

Mr. Secretary, I expect this will be the last time that we sit in a hearing to discuss the annual budget for the Department of Housing and Urban Development together. I know that you have worked hard to make the Department a better agency. However, I am disappointed the early promise of your energy and commitment has failed to make the necessary reforms to ensure the success of HUD's core housing and community development programs. I know many of these issues are not sexy and probably not especially interesting, but they are important to the people who live in housing and want to live there.

Now, a year ago you were touting the fact that HUD received its first clean audit as evidence that HUD has turned the corner. This was the first time ever that HUD received an unqualified opinion, and you got good press and were justifiably proud.

Unfortunately, this year the books have slid back into disarray, so much so that the auditors have been able to actually audit them, and that's the report that we have here. HUD's reaction? Attack the auditors, call them unprofessional, even though they are the same ones who gave you the clean audit last year. I think it is not time now, once again, to place the blame on others but, rather, admit that HUD's operations priorities or internal controls did not get the job done and need to be improved.

Let's be honest. It is HUD's books that needed \$17.6 billion in adjustments to the fiscal year 1998 balances, and it is HUD's books that needed to make an additional \$242 million in adjustments totalling \$59.6 billion in the fiscal year 1999 balances.

I started my career in Government service as Missouri State Auditor, so I know a little about this, and Mr. Secretary, HUD has a huge problem on its hands, and you have on yours. In fact, if HUD were a private company, the SEC would probably have already suspended the trading in its stock.

Nevertheless, I am more concerned at this moment to be on balanced books. We need to have answers to the questions that are fundamental to the mission of the Department, namely, how is HUD performing its missions, do the programs work, if not, why not, and is HUD a good neighbor and partner?

One of the many frustrations people have with their Government is their gut feeling that no one is ever held accountable, no one is actually responsible for failures or bad ideas. Instead, the political culture comes out with phrases such as, mistakes were made, or else rewrites the nature of the problem.

In the case of HUD, the many programs it runs, and the millions of people it is supposed to serve, I have noticed an alarming pattern:

"Leadership quick to place responsibility or blame on others, but unwilling to understand or accept its own failings, and we have the extraordinary events of just this week, where you, Mr. Secretary, issued your fourth report in 4 years warning again about the crisis we are facing in affordable housing needs and, in discussing the report, you have been recorded as saying there was a 4-year hiatus when we went out of the housing business."

We are now paying for that hiatus, and moreover, from your statements you have identified the decision not to fund any new vouchers from fiscal year 1994 to 1998 is largely to blame for this accelerating housing crisis.

Based on this, what, of course, you are saying is that beginning in fiscal year 1994, with the House and Senate VA Appropriations Subcommittees under the leadership of Chairman Barbara Mikulski and Chairman Louis Stokes, their decision not to fund any new vouchers sowed the seeds for the crisis, and when Chairman Bond and Chairman Lewis continued the practice over the next few years, as we attempted to dig out of our budget quagmire, that we are responsible as well.

However, your own report states the problem is due to a shrinking number of affordable units, and as I have said over and over again, these vouchers you are so anxious for have not and will not produce one additional unit of affordable housing, but you have fixed the blame. It is Congress, Senator Mikulski and her leadership, Senator Bond and his leadership.

But we ask the question about HUD's leadership. Where is the discussion of what HUD has been doing over the past 4 years? Let's look at the record. Just between 1996 and 1998, according to the National Housing Trust, we lost over 925 properties through opt-outs, prepayments involving nearly 98,000 affordable apartments. The National Housing Trust further notes that these lost units have, quote, occurred in many prime housing markets, which unfortunately led to the loss of affordable housing from neighborhoods with better schools and services, close quotes.

In past years, we asked you to devote your attention to and solve the opt-out problem. Last year, this subcommittee became so frustrated with HUD's lack of leadership and action to preserve the units that we directed you through legislative provisions to preserve this housing, as well as provided \$100 million in new funding to get HUD to act.

According to HUD's 2001 budget summary, the good news was, this legislation in 1999 cut the loss of section 8 housing by 75 percent, so maybe our work is beginning to pay off, but for 2 years the

Majority and Minority on this subcommittee tried to get HUD's attention, and the failure to act cost us at least 100,000 affordable, low-income housing units, and we think that HUD's record on section opt-outs was abysmal.

Second, let us review how HUD has handled the multifamily properties in the FHA portfolio. These could be HUD-held, or HUD-owned. In both cases, the expectation that most of us have is that when HUD steps in, that preserving the housing stock in the inventory would be a priority. Unfortunately, what we found is just the opposite.

HUD has lost a significant number of affordable rental housing units that could have addressed the worst-case housing needs that HUD often cites. In terms of properties that HUD owned, then sold, only 14 properties containing 1,538 units were maintained as section 8 housing, while 107 properties containing 17,877 units were sold during your tenure, and the units lost as affordable low-income housing.

When we looked at HUD-held properties that had been sold by HUD, only 10 properties containing 830 units were maintained as section 8 housing, while 72 properties containing 8,891 units were sold and the units lost from inventory as low-income housing. That is a retention rate of less than 10 percent.

By our overall calculation, Mr. Secretary, that means on your watch we have seen the affordable housing inventory decline by nearly 125,000 affordable, low-income housing units. That, to me, is a record of failure, one that is felt Nation-wide.

In the meantime, Congress, at your request, has provided funding over the last 2 years for 110,000 vouchers, vouchers which you say are an important step towards closing this affordable housing gap. You have stated it is critical for working families, because increased housing costs have left them less able to afford food, medical care, education, and other necessities.

But of those 110,000 working families who could have been helped these past few years, only 3,300 actually have been given a voucher. That is just about 3 percent. What is going on at HUD that these vouchers are still sitting around? How could HUD fail this badly, when people it is supposed to serve have needs?

Of the 125,000 units of affordable housing lost, over 100,000 vouchers sitting around unused, and yet your reports accuse this committee of causing the affordable housing crisis. We look forward to hearing your comments, Mr. Secretary, but first let me turn to my distinguished Ranking Member, Senator Mikulski for her comments. Senator Mikulski.

[The statement follows:]

PREPARED STATEMENT OF SENATOR CHRISTOPHER S. BOND

The Senate VA, HUD and Independent Agencies Appropriations Subcommittee will come to order. We welcome Secretary Cuomo and our other guests from the Department of Housing and Urban Development who have joined us here this morning to testify on the President's fiscal year 2001 Budget Request for the Department of Housing and Urban Development (HUD).

The President's Budget Request for HUD proposes \$32.1 billion for fiscal year 2001 which is an increase of some \$5.8 billion over the fiscal year 2000 appropriation of \$26.2 billion. This includes a request for 120,000 new incremental vouchers at a cost of some \$690 million as well as 9 new housing initiatives costing another \$200 million. While I have significant reservations regarding the creation of these

new boutique programs, I am pleased that the Administration has included some additional funds for a number of HUD's core programs, such as public housing, the CDBG program, the HOME program and section 202 elderly housing program. In most cases, these programs represent our most important Federal investment in affordable low-income housing and community development initiatives.

Nevertheless, despite rosy scenarios and high expectations caused by a balanced budget, this will be another tough year for this subcommittee. We have made a commitment to reform social security first, and as always, this subcommittee has the responsibility for funding a variety of agencies with different missions and priorities. It is not easy to reconcile these missions and priorities and we again have significant funding increases that must be provided for in VA Medical Care as well as the need to address the escalating costs of section 8 contract renewals which have been aggravated by the Administration's and the Congress' decision to defer \$4.2 billion of fiscal year 2000 section 8 funding to fiscal year 2001. This funding decision will have to be accommodated under our budget caps for fiscal year 2001.

Mr. Secretary, I expect that this will be the last time that we sit in a hearing to discuss the annual budget for the Department of Housing and Urban Development. I know that you have worked hard to make the Department a better agency, but I am disappointed that the early promise of your energy and commitment has failed to make the necessary reforms to ensure the success of HUD's core housing and community development programs. I know that many of these issues are not sexy and probably not especially interesting, but they are important.

Now a year ago, you were touting the fact that HUD received its first "clean audit" as evidence that HUD has turned the corner. This was the first time ever that HUD had received an unqualified opinion, and you got good press and were justifiably proud. Unfortunately, this year the books have slid back into disarray, so much so that the auditors have been unable to actually audit them.

HUD's reaction? Attack the auditors. Call them "unprofessional"—even though they are the same ones who gave you the "clean" audit last year. I think that it is time not to always place the blame on others but rather admit that HUD's operations, priorities or internal controls just didn't get the job done.

And let's be honest, it is HUD's books that needed \$17.6 billion in "adjustments" to the fiscal year 1998 balances. And it is HUD's books that needed to make an additional 242 adjustments totaling \$59.6 billion to the fiscal year 1999 balances.

I started my career in politics as Missouri's state auditor—so I know a little about all this—and Mr. Secretary, you have a huge problem on your hands. In fact, if you were a private company, the SEC would suspend trading of your stock.

Nevertheless, I am more concerned at this moment to look beyond balanced books. We need to have answers to the questions that are fundamental to the mission of the Department; namely, how is HUD performing its mission, do the programs work, if not, why not, and is HUD a good neighbor and partner.

First, HUD remains a high-risk area that is considered vulnerable to waste, fraud, abuse and mismanagement. It is the only agency designated as a high risk area by GAO on an agency-wide basis, and GAO, the HUD Inspector General and others continue to raise questions and concerns about HUD's capacity and ability to deliver on the promise of its programs. This is a key question and concern. As we have discussed in the past, as a matter of fiscal responsibility, HUD is one of the nation's largest financial institutions, with sizable commitments, obligations and exposure. HUD is responsible for managing more than \$496 billion worth of insured mortgages, \$628.4 billion in outstanding mortgage-backed securities, and some \$106.9 billion in prior year unexpended budget authority for which it has future financial commitments.

Despite the magnitude of these responsibilities, HUD has never matched its staffing requirements with program needs. This has become especially critical as HUD has reduced its staffing from 12,000 staff in 1995 to some 9,100 staff today. In addition, many of the key program decisions within the Department have been transferred to Community Builders, who are not only contract employees but in many cases are without the necessary program expertise and knowledge to make appropriate program decisions and recommendations. While this program is being phased out, I worry about HUD's ability to develop the staff capacity and expertise needed to ensure the appropriate delivery of our housing and community development programs. In addition, HUD has an aging staff with top heavy salaries. So not only does HUD need to develop staff expertise and capacity, it needs to reinvent itself.

I also want to be very clear that I do not expect HUD to take shortcuts to solving these institutional and systemic problems. We need to establish a long-term staffing plan that is tied to program needs and requirements. We also need to establish an

information system that can track funding decisions and integrate information on all HUD programs; one that is accurate and dependable.

One of the frustrations many people have with their government is their gut feeling that no one is ever held accountable, no one is actually responsible for failures or bad ideas. Instead the political culture spews out phrases such as “mistakes were made” or else rewrites the nature of the problem.

In the case of HUD, the many programs it runs, and the millions of people it is supposed to serve, I have noticed an alarming pattern—leadership which is very quick to place responsibility or blame on others but absolutely unwilling to understand or accept its own failings. And thus we have the extraordinary events of just this week, where you, Mr. Secretary, issued your 4th report in 4 years warning again about the “crisis” we are facing in affordable housing needs, and in discussing this report you have been quoted as saying that “There was a 4 year hiatus when we went out of the housing business. We are now paying for that hiatus.” And, moreover, from your statements you have identified the decision to not fund any new vouchers from fiscal years 1995 through 1998 as largely to blame for the accelerating this housing crisis.

Based on this, what of course you are saying is that beginning in fiscal year 1995, with the House and Senate VA/HUD Appropriations Subcommittees under the leadership of Chairwoman Barbara Mikulski and Chairman Louis Stokes, that their decision to not fund any new vouchers sowed the seeds for today’s crisis. And that when Chairmen Bond and Lewis continued this practice for the next few years, as we attempted to dig out of our budget quagmire, that we are responsible as well.

Moreover, your own report states that the problem is “due to a shrinking number of affordable rental units”. And as I have said over and over, these vouchers you are so anxious for—have not, and will not, produce one additional unit of affordable housing.

But you have fixed the blame. It is Congress. It is Senator Mikulski and her leadership. It is Senator Bond and his leadership. But you have not commented on your own leadership.

Where is the discussion of what HUD has been doing over the past 4 years?

Let’s look at the record.

Just between 1996 and 1998, according to the National Housing Trust, we have lost over 925 properties through opt-outs and prepayments involving nearly 98,000 affordable apartments. The National Housing Trust further notes that these lost units have “occurred in many prime housing markets, which unfortunately led to the loss of affordable housing from neighborhoods with better schools and services.” Last year, this Subcommittee became so frustrated with HUD’s lack of leadership and action to preserve these units that we included a number of legislative provisions to preserve this housing as well as \$100 million in new funding to get HUD to act.

According to HUD’s fiscal year 2001 budget summary this “legislation in 1999 has cut the loss of Section 8 housing by 75 percent”. So maybe our work is paying off now—but for two years democrats and republicans on this Subcommittee tried to get HUD’s attention and this failure cost us at least 100,000 units.

Second, let’s look at how HUD handles the multi-family properties in the FHA portfolio. These can be HUD-held, or HUD-owned. In both cases, the expectation that most of us have is that when HUD steps in, that preserving the housing stock in the inventory would be a priority. Unfortunately, what we found is just the opposite.

In the case of this HUD multifamily inventory, HUD has lost a significant number of affordable rental housing units that could have addressed the worst case housing needs that HUD often cites. In terms of properties that HUD owned then sold, only 14 properties containing 1,538 units were maintained as section 8 housing out of 121 properties containing 19,415 units that were sold during your tenure. In terms of HUD-held properties that have been sold by HUD, only 10 properties containing 830 units were maintained as section 8 housing out of 82 properties containing 9,721 units during this period.

This means, Mr. Secretary, on your watch, we have seen the affordable housing universe of HUD owned and HUD-held multifamily housing decline by over 125,000 units. That is simply put, a record of failure.

In the meantime, Congress has provided funding, per your insistence, for 110,000 vouchers over the past two years—vouchers which you say are “important step in towards closing this affordable housing gap”. You say it is “critical for working families”, because increased housing costs have left them less able to afford “food, medical care, education or other necessities”.

But of those 110,000 working families who could have been helped these past few years—only 3300 have actually been given a voucher. That’s only 3 percent. What

is going on at HUD that these vouchers are still sitting around? How could HUD fail this badly, the very people it is supposed to serve?

225,000 units of affordable housing lost, over 100,000 vouchers sitting around unused—and you have the gall to accuse Senator Mikulski and I of causing this so-called affordable housing “crisis”.

In addition, while the FHA Mutual Mortgage Insurance Fund for the FHA Single family Mortgage program is presently in good shape, FHA’s inventory of single family homes that HUD has foreclosed on and taken ownership of has more than doubled under your tenure from 24,395 homes in 1996 to over 47,000 homes currently, despite the fact that this subcommittee has provided significant new tools to move this housing into the hands of nonprofits and homeowners. Even more troubling is the fact that from between April 1999 and January 31, 2000, the percentage of properties in HUD’s single family inventory for 6 months or more has increased from 30 percent to 41 percent of the inventory, and the percentage of properties in the inventory for more than 12 months has increased from 10 percent to 17 percent. This is a disaster for neighborhoods and sloughing off these properties on local governments is not a responsible answer.

And the bad news is not over. The percent of FHA loans in foreclosure has increased from 1.64 percent in 1996 to 2.2 percent in 1999. FHA’s loan delinquencies has also increased from 8.05 percent in 1996 to 8.57 percent in 1999, whereas the delinquency rate for conventional loans is some 2.63 percent. Even more disturbing is KPMG’s recent audit finding regarding FHA loans that HUD currently holds as the mortgagee. KPMG found that FHA could have prevented further losses to the fund if it was able to service its loans adequately. Specifically, over 2,500 loans, or 22 percent of the portfolio were not being actively serviced as of September 30, 1999. Lastly, KPMG found that the quality of the portfolio had deteriorated significantly between 1996 and 1999.

Again, when the federal government steps in to take over a property from a failing landlord, or becomes the owner of a house down the street through foreclosure, we expect that things will start to improve; that repairs will be made, lawns mowed, and broken windows fixed. What we don’t expect is that the housing conditions will deteriorate even further, that property values will fall in the neighborhood, and that in some instances the property will become a HUD-owned crack house.

What is HUD doing? And if it is true that HUD is running a huge surplus in the FHA fund . . . the fund that is used to maintain and preserve HUD-owned properties . . . while all these units are being lost, it is a fair question to ask what is HUD thinking?

We look forward to hearing your comments, Mr. Secretary. But first, let me turn to my distinguished Ranking Member, Senator Mikulski.

STATEMENT OF SENATOR BARBARA A. MIKULSKI

Senator MIKULSKI. Thank you very much, Mr. Chairman, and I also want to thank you for allowing the VA–HUD Committee to hold a very important field hearing in Baltimore on Monday on the issues related to the flipping of property, where property is bought at one price and then the poor are sold the housing at an inflated price, with false information about the buyer’s credit, false information and deceitful and criminal information by the appraiser, and so on, and we will talk more about it, but we had an excellent hearing, and I want to thank you for authorizing the hearing and for the participation of your staff.

We were joined at that hearing by Senator Sarbanes so that he, too, could get insights for corrective action through the authorizing.

Mr. Cuomo, we want to welcome you today for today’s hearing, and I know this will be your last appearance before the committee on the matter of the appropriation. Based on some of the things that we’ve uncovered and discussed with you, there might be additional, either a hearing or a roundtable or something.

In our work together I know that you have focused very much on the issues that I raised from time to time in hearings, on the issues of the consequences of HOPE VI and section 8, are we changing vertical poverty to horizontal poverty, your concern about

the digital divide, your taking on the challenge that I raised about the need to look at housing for the elderly, and look at the contemporary demands of people aging in place, and what we need.

Ordinarily, those are things that I would go through in detail at the hearing, because the appropriations put forth on housing for the elderly are a significant increase, and a focus on new groundbreaking initiatives and assisted living, and I would hope perhaps to have additional conversations with you and your staff on that.

In terms of HOPE VI, I believe it has been one of the most successful antipoverty programs we have had. We have not only created a new physical infrastructure but a new social infrastructure, and I know that you are looking at ways to improve the program, and under the leadership of Ms. Elinor Bacon, who is in charge of HOPE VI, it was how we could keep the momentum going, improve the program, and also make sure we are not creating horizontal poverty, and we look forward to further conversation on that.

Within the Senate itself, I have taken on the responsibility within the Democratic Caucus to come up with initiatives to ensure that there is no digital divide in this country. Through extensive conversations with the President, the Vice President, and his team, we really do have a legislative framework, and one we would like to build on lessons learned by bringing computer technology into HOPE VI, which meant job-training for adults, after-school activities for children, and again, those are areas for further conversation.

But today, I really want to focus on the hearing that I had in Baltimore and some of the issues raised prior to the hearing, but the hearing confirmed my worst fears.

Mr. Secretary, you know my background. You know that I came into politics to save lives, to save communities, and to save neighborhoods.

When I met with the community in Baltimore several weeks ago, with the advocates of a group called Coalition Against Predatory Practices, Predatory Real Estate Practices, I was horrified to see where the very tools of the Federal Government, used to promote home ownership, had become the very tools for scamming the poor, actually gouging the poor, and that in that process of gouging the poor, forcing them into bankruptcy then meant foreclosures, and that very often the very HUD inventory itself, of holding FHA mortgages, were destroying neighborhoods.

So in both my meetings with the coalition, and then in our hearing, what we found was that HUD itself was a contributor to the destruction of dreams, the erosion of neighborhoods—I will wait until you finish reading Mr. Apgar's note.

Mr. CUOMO. Sorry.

Senator MIKULSKI. Mr. Apgar, I think you need to hear this. I really think you need to hear this, because FHA is only one part of what happened in flipping, but it is the one, perhaps, that we have the most control over because of the sub-prime underissue. I know that HUD did not directly do this, but HUD has to know the consequences. HUD has to—perhaps Mr. Apgar—has to get out of headquarters and go out and take the same tour that I did to see that.

Now, what we see here is that people are buying and reselling property for a 100-percent profit, sometimes within the same day. Property-flipping is directly related to the problem of predatory lending, scamming them, destroying their lives, and ruining entire communities. These communities were part of my original city council district. They were part of my congressional district, and they are part of both my neighborhood, and they are the home, they are literally my home, and they are the home of my heart, so I am going to fight for those neighborhoods.

But those neighborhoods are a metaphor, because if I thought it was only going on in Baltimore, it would be like the Superfund site that we would move in to contain. But it is more like a virus, and it is spreading nationwide, in Milwaukee, in Chicago, in Buffalo, in my own State, tell-tale signs already in Prince Georges County, so it is more like a virus that is spreading, and I think we need to jump in and do something about it, to do something about the gouging of the poor, home improvements scams, crooked appraisers, kick-back to mortgage brokers, and then holding the destabilization of neighborhoods.

I know that you and I talked about this, and I know that you have some very important thoughts and recommendations on this. I personally want to thank you for taking very constructively the results of that hearing and actually meeting with the neighborhood people themselves, to leap-frog over our staffs, bureaucracies, and going on, and going directly to the people.

On behalf of them, I really want to thank you. They are in the audience here today, and we will acknowledge them later on in the testimony, but I want to thank you for going directly to them to get a sense of the problem, and so today I look forward to the solutions about not only what we could do about Baltimore, but using Baltimore as the laboratory, because the FBI said to me that this was the worst case situation in the Nation, and of the 5,000 homes that were sold in Baltimore, 10,000 homes last year, 5,000 are now into default.

Now, 50 percent are into FHA default. Something is wrong somewhere. Not all are a result of flipping, so I am going to stop the crime. I am going to stop the scam from gouging the poor in our communities nationwide, and I want to make sure that when FHA takes hold of property, we deal with it in a way that enhances and builds the neighborhoods. I know that is your commitment. Let us work together, and I look forward to hearing your testimony.

Senator BOND. Thank you, Senator Mikulski.

Senator Leahy.

STATEMENT OF SENATOR PATRICK J. LEAHY

Senator LEAHY. Thank you, Mr. Chairman, and Secretary, everybody has told you all that may go wrong. Let me say that there is a lot of things have gone right, and I think a lot of it reflects the hard work you have shown over the last 3 years at HUD.

I recall when you were appointed as Secretary I told you I did not know whether to congratulate you or offer you condolences, because it is a very difficult area. You are never going to have enough money to do all the things you want to do, and the things you want to do can almost never be done perfectly, because if there could be

there would not even be a need for HUD to be there. Usually you are facing some of the most intractable problems.

You took over the most overburdened Department in our Government, but at the same time you have reduced the size of HUD's bureaucracy. The head of the GAO has publicly stated you have made incredible progress toward implementing a plan to remove your Department from the high-risk designation. You have improved the HUD budget to better address the housing needs across the country.

I think you have prepared a strong budget for fiscal year 2001. I congratulate you for that. The recent release of HUD's worst-case needs report illustrates how important it is to remain committed to the housing needs of low-income families, and the irony is we are in a time of high economic prosperity, the best in my lifetime, in this country but we still have some real housing needs among low-income people.

You propose 120,000 new housing vouchers and \$1.2 billion in homeless assistance grants. I think they need it. They will begin to address the real problem of those who are least able to afford a place to live.

I am also encouraged by your commitment to the CDBG and HOME programs. These have been two of the most effective programs available for financing housing and economic development. They have also—I know they have been helpful in rural areas like my own State of Vermont, but also in other parts of the country, and to risk sounding parochial, something that rarely ever happens in the Appropriations Committee and almost never here, I did look at a study recently conducted in Vermont.

Now, to put this in perspective, Vermont has about 600,000 people. It shows on top of the 15,000 families already helped by State and Federal programs, nearly 22,000 families still need some sort of housing assistance. And 22,000 families is not much in California or New York, or Illinois. It is an awful lot of people in Vermont, and we have got one of the most expensive and tightest housing markets certainly I have seen in my lifetime.

In Chittenden County, one of our 14 counties, but one that has about a quarter of our State's population, and Mr. Secretary, you have visited that area, and you know many of the people there, the residents are currently facing a 1-percent vacancy rate, a 1 percent, and housing costs are expensive. The middle income families are being left homeless. They can go to a hotel. They can go—or just not have homes. And that is happening in other parts of the country. I am not suggesting that we are unique. Unfortunately it is happening in a lot of other parts.

Now, let me mention New York City and the homeless program. I am convinced from all I have read, all I have seen, all my staff's been able to see, that HUD acted in the best interest of the homeless in New York City. I want to make that very clear.

Legitimate concerns about reduction in grant proposals by city officials were identified by a Federal district judge in Manhattan, and suggested it was done out of a sense of vindictiveness. I think you were correct to take that program away from the city until it could be determined that homeless funds were being reviewed on

their merits, not according to some kind of litmus test set up in the mayor's office.

You know the funds that are awarded through the continuum of care program are only as effective as the organization that administers them. You can put the money in there, but it has got to be administered well, and it has been the homeless community in New York City which has been the victim throughout this process, and I understand you are working with that community and working with city officials.

I would hope that we can get politics out of it once and for all, and I do not particularly care which party is controlling HUD, or which party is controlling the city hall for the purposes of getting this money out there. It should be done where it is going to do the best. We know what we want to do. We want to help the homeless, and they were not being helped because too many litmus tests were being put for whatever reason, but not for reasons that were intended by the Congress or by your Department, so you were right to take it over.

So I thank you for that, and I will have some questions when we start, but I would also like to say again I enjoy working both with the chair and the ranking Member of this committee. I do not know two Senators who work harder on their budget, go through more frustration, but have more hopes for the future than the two of you.

Thank you. Thank you, Mr. Chairman.

Senator BOND. Thank you very much, Senator Mikulski, and Senator Leahy, we thank you for your faithful attendance on the appropriations subcommittees. With so many hearings we have, it is difficult to get appropriations members of the committee to join us, and you have been a faithful participant. We appreciate that.

Now, Mr. Secretary, we would welcome your opening statement. As always, we will make your full statement, the budget request and all the information already submitted a part of the record and ask you to summarize what you think would be the most important parts of the information you have today.

STATEMENT OF ANDREW CUOMO

Mr. CUOMO. Thank you very much, Mr. Chairman, for the opportunity to be here again, and thank you, Senator Mikulski and Senator Leahy, not just for your attendance at this hearing, but for all your good work and help over this past year.

If I might, with the committee's permission, quickly introduce the senior officials who are here today, who may be responsive to your questions. At the table seated with me, to my right, as you know, is FHA Commissioner William Apgar. To my left is Deputy Secretary Saul Ramirez. I will ask these people to stand quickly. It will also be good exercise.

Assistant Secretary Cardell Cooper, CPD, Assistant Secretary Harold Lucas, Public Housing, Mr. George Anderson, Acting President of GNMA, Assistant Secretary Susan Wachter, Policy Development and Research, Assistant Secretary Eva Plaza, Fair Housing, Gail Laster, General Counsel of the Department, Stephen Carberry, Chief Procurement Officer, Joe Smith, Acting Assistant Secretary for Administration, Mr. Donald Lavoy, who runs the REAC, Real Estate Assessment Center, Mr. Ed Kraus, who is a

detailee from the FBI and runs the Enforcement Center, Mr. Hal DeCell, Assistant Secretary for Intergovernmental Relations, Jackie Lawing, Acting Chief of Staff, Dave Gibbons, Acting CFO, Douglas Kantor, Deborah Vincent, Deputy Chiefs of Staff, Rhoda Glickman, Deputy Chief of Staff, Mr. Fred Karnas, who is in charge of the Homeless programs, Deputy Assistant Secretary, Jackie Johnson, who is in charge of the Native American Programs, and last but certainly not least, Ms. Elinor Bacon, who is in charge of the HOPE VI program, which, as Senator Mikulski rightly pointed out, has been a real success story.

Senator BOND. Mr. Secretary, we welcome all the members. Let me ask all the other representatives of HUD who were not introduced, would you stand up as well, please, so everybody else who works for HUD, if you would please stand up.

All right. Well, thank you very much. We feel somewhat overmanned. You have more than the combined staff of the entire Appropriations Committee here, and we are certainly glad, and welcome all of them to participate in the discussions.

HUD'S ACCOMPLISHMENTS

Mr. CUOMO. Thank you very much, Mr. Chairman.

First let me also thank the committee, as this will be probably the last time that I am before you. We have accomplished great things in this past 4 years, past 3 years, and I believe when they write the history book of housing, outside of this political year, these 4 years will be a period of great progress.

We have new section 8 vouchers over this period of time, not what the President requested, but at least we are back into business. We do have public housing legislation, which has reformed public housing, the first legislation that has been passed in 7 years. It has made a real difference, deconcentrated poverty.

We have addressed the section 8 issues. Mr. Chairman, I recall, I believe in this room at my confirmation hearing, with then Senator D'Amato, we put two charts on an easel to my left talking about the impending crisis of section 8 and how that had to be the focus because we were going to be losing units. Literally before I was in office, we identified that as the major problem, and I am glad that we have been able to respond to that.

We increased the FHA loan limits. We have made significant management progress at the Department, and every non-political credible source will confirm that management progress, starting with the GAO, which is often referred to by Congress, but also a raft of expert private consultants such as Price Waterhouse, Booz Allen, Arthur Andersen, et cetera, and we more than doubled the homeless assistance budget, and we changed the way of doing business there and I think in many ways we are doing much more service for those people who need it most, who make up the homeless population.

So I think those are just some of the highlights of what we have accomplished. Not that our job is done, certainly. We have not reached management Nirvana at HUD. We have further to go. We have not addressed the housing problem. It is getting worse in the midst, but we have made progress, and we have another good year ahead of us.

PREDATORY LENDING

Part of our responsibility is to address the changes that occur, the challenges that arise on our watch. I think Senator Mikulski has put her finger on probably the challenge to housing and communities that face the Nation for the next few years, and that is the issue of predatory lending.

The Senator has identified it in the City of Baltimore, where it is a significant problem, but it is also a national crisis, in my opinion, and it is going to be a priority for us at HUD over this coming year. It is just evolving on us, and we do not really see the full parameters of it yet, but what has happened is, the sub-prime mortgage market has actually exploded in growth.

If you look at the numbers just from 1993, the quote-unquote sub-prime market went from about 100,000 loans to about 900,000 loans, the value of the sub-prime portfolio from \$20 billion to \$150 billion, so this has been a market—

Senator MIKULSKI. Can you move that? The person doing the transcript sees it better than we do.

Mr. CUOMO. This has been an explosion in sub-prime lending. Now, sub-prime lending in and of itself is not bad. It is good, bringing credit to people who need it, but it has opened the door for abuse of a very vulnerable population. That is what has been now recently termed predatory lending.

National Consumer Law Center estimates 600,000 Americans may lose their homes because they were duped into bad loans. Now, the predatory lending comes in all types of forms. Basically, the forms are excessive up-front fees and high interest rates, up-front financing cost of credit life insurance, excessive prepayment penalties that trap homeowners in high-cost mortgages, and balloon loans that are structured to include an extremely high final payment.

This issue is bigger, frankly, than HUD. It is certainly bigger than the FHA. Alan Greenspan said that he is, quote, concerned over the unfair and deceptive lending practices in the mortgage industry that target the poor and underserved communities.

Mayor Richard Daley sees this in Chicago and says that predatory lenders are a new menace to our neighborhoods. These people do not wear gang colors and flash hand signals. They wear pin-stripe suits, and they flash easy cash. But I think there is much of the echo, Senator Mikulski, in your sentiments in that quote.

We believe it is the obligation of HUD to rise to this challenge. HUD is the housing organization for the Nation. HUD is responsible for RESPA, the Real Estate Settlement Procedures Act, which is applicable here, and this is primarily a housing problem.

The methodology that we would employ to address this issue over these next few months is as follows. First, rather than dealing with the problem in the abstract, or as a concept, we would deal with the issue as a practical, as it is presented in practice.

The City of Baltimore for a number of factors probably presents, in our opinion, one of the worst manifestations of all of these phenomena. There is a confluence of circumstances in the city that conspire to make this problem of, quote-unquote, predatory lending even worse.

We would use the City of Baltimore as what we call an operational laboratory. Let us address these issues as they are presented in the city, use the experience then to arm a national task force which could have hearings Nationwide to make sure what we are seeing in Baltimore is also what we are seeing in Chicago, also what we are seeing in Denver, also what we are seeing in Los Angeles, and then come up with a report to the Congress.

We would hope to do this in 8 weeks, so that Congress could consider legislative changes this year, because we think time is of the essence, and that is our plan going forward. We'd like to establish a national task force, also a Baltimore task force that focuses specifically on Baltimore, designing practical solutions and a national policy.

While Baltimore faces challenges, there are also significant opportunities in Baltimore. It has one of the strongest networks of CDC's, Community Development Corporations, in the Nation in our opinion, very organized, grassroots groups who are energized but also sophisticated in what they do, and we think that is a significant asset for us to build on.

So that is our proposal. We hope to get this done in 8 weeks, get a report back to Congress, as well as making the practical changes, and hopefully that can amount to legislative changes for the Nation, because in the final analysis we will need new laws for this new problem.

FHA has already done its part, and will do more. We have started to crack down on lenders who are making bad loans with what we call our credit watch program, but basically what this does is, it terminates lenders with excessive default or claim rates. If you are a lender, and you have an excessive claim rate, you are automatically terminated based on the default rate.

We are changing the appraisal process, because the appraisal process is very much an element in all of these schemes, and we are actually upgrading the appraisal process to what we call the homebuyer protection plan, which tested our appraisers for the first time, and makes the appraisal a submission to FHA and, hence, a submission to a Federal agency, and hence, a false appraisal a potential violation of the False Claims Act.

PROPERTY DISPOSITION

We are also working at FHA on expediting the disposition of our property. We are selling faster than we have ever sold before. You see the numbers coming down from 323 days to 144 days, and our most critical problem, which is what we call the aged inventory, our old properties, we have come up with what is in our opinion some very creative ways to sell them, 50 percent off for a police officer, the officer-next-door program—50 percent off for a teacher, to bring a teacher into a revitalized community, and a discount for qualified not-for-profits.

We have also gone the next step, which I believe is the final solution, if you will, for the aged inventory. If we do not sell a home after 6 months on the market, we give it to the city for \$1, period, and the city will then transfer it to a not-for-profit, et cetera. We will do all of these things to try to sell the property faster, but we will put—your point, Mr. Chairman, about performance—an end

point. If none of this works within 6 months, rather than have an FHA property that might deteriorate, we will give it to the city, period.

We announced this just a few days ago with Congressman Kasich, who is concerned about this issue, and I am very excited about that.

The last point on FHA is, so we do not lose the forest for the trees with FHA—FHA is having a banner year.

Senator BOND. Mr. Secretary, in a kinder, gentler Congress, somebody has killed the red light off. It should have gone off several minutes ago, but I would like you to wrap up as quickly as you conveniently can with hitting the main points you wish to hit.

BUDGET REQUEST HIGHLIGHTS

Mr. CUOMO. Fine, let me just wrap up in a couple of minutes, then, with the chairman's permission.

FHA has come a long way since we started. When we took over it was a negative \$2.7 billion. Now it is now \$16.6 billion. That is where we have identified \$5 billion to do more affordable housing, which we desperately need, and then we have, Mr. Chairman, the overall budget proposal by the President, which is the best budget for HUD in 20 years. As you pointed out, it goes up \$6 million from \$26 million to \$32 million. We think we need that increase.

Affordable housing, which as the chairman pointed out is at an all-time high, 5.4 million families need affordable housing. We would suggest new vouchers once again, which we have proposed in the past. We are not a total solution, but they are a big step towards the solution. We propose 120,000 vouchers, which would double last year's number, but start to make a dent in the backlog of housing needs in the Nation.

We would also fully fund public housing, increase the HOPE VI program, which is a real success story, by \$50 million. The HOPE VI program, following Senator Mikulski's vision of making HOPE VI not just a different community, a better community, but also a community of opportunity and lift, and bringing in e-villages and closing the digital divide, that has been a tremendous success.

We would also propose a new housing production program, because as the chairman has pointed out, vouchers alone do not make a housing program, and we also need a production program, especially in those areas where vouchers are not working.

We need more senior citizen housing. We propose another 7,500 units of mixed income, and flexible use of the FHA insurance.

Within the budget, we would also focus on the economic revitalization. The President has made a priority out of the quote-unquote, new markets, economic development in areas left behind. We have an APIC program, \$37 million, which would leverage \$1.5 billion from Wall Street, more empowerment zones and the raise in CDBG, the fair housing, we are looking for 14 percent more in fair housing money, because we still get those complaints daily of racial discrimination, and racism is very much alive and well and, finally, the safe and livable communities, where we are trying to come up with sustainable metropolitan-based solutions that bring the city together with the county in planning and action plans rather than dividing, and that is a very important piece as we go forward.

As the chairman pointed out, the affordable housing crisis has gotten worse. The vouchers have made a dent. I believe if we get a production program and we come up to scale and we use this surplus wisely, we can build on what is already a strong record, and I thank the committee for having us today.

[The statement follows:]

PREPARED STATEMENT OF ANDREW CUOMO

Chairman Bond, Senator Mikulski, members of the Subcommittee, thank you for inviting me here today to discuss HUD's proposed fiscal year 2001 budget. It is my pleasure to be here today. This year, HUD's budget request is \$32.1 billion. That represents a \$6 billion increase over the amount enacted last year. It's HUD's strongest budget in twenty years.

Mr. Chairman, before discussing the details of this year's budget, I would like to take a moment to thank you and this Committee for the extraordinary support that you gave us on our budget request last year, and for that matter, the year before. We have been able to accomplish great things together.

While we have not always agreed on all of the specifics, by working together we have been able to establish a remarkable record of bipartisan cooperation. For the past two years in a row we have reached unprecedented agreement on HUD's budget requests, with increased funding for public housing, economic development, homeownership, and rental housing. I look forward to another year of cooperation, and I pledge every member of my Department's commitment to that end.

Mr. Chairman, I believe that this year we are at a crossroads. This year, the first year of the new millennium, we must, make a choice. That choice is whether we build on our success and take a bold step towards once and for all addressing our nation's affordable housing needs. This year we have an extraordinary opportunity to set this nation on a new course, so that when the historians write the history of housing in this century, they will be able to say that this was truly the year we made good on the goal of a "decent, safe and affordable home for every American family".

And there should be no doubt that we are facing a crisis. It is a term that I do not use lightly. The evidence, unfortunately, is clear. It is impossible to open the newspaper today without reading reports describing the problem in communities in virtually every part of the country. Almost every day there are articles about rising rents and the lack of affordable housing—both in big cities like San Francisco, Los Angeles, Dallas, Miami and New York, as well as in smaller and medium-sized like Rochester, Norfolk, and Sacramento.

It is a cruel irony that while most communities are doing very well in this booming economy, the better they are doing the more acute their shortage of affordable housing. Those that are doing the best are often also facing the worst shortages. The stronger the economy, the stronger the upward pressure on rents. Even some of America's strongest regions for business are literally being "priced out" of housing by their success. In Silicon Valley, the leading companies driving the global information age have identified affordable housing as their number one backyard concern.

HUD's new worst case housing needs report, which we released earlier this week, gives us a nation-wide picture that confirms these local reports. With your permission I would like to enter this report into the record. It is entitled Rental Housing Assistance—The Worsening Crisis. It's the most in-depth, comprehensive and respected analysis of rental housing in the United States.

There are a number of dramatic findings in this report. I would like to highlight three of them today. The first, and most important, is that, despite the booming economy, the number of families with worst case housing needs has increased to 5.4 million—an all-time high. Since the last worst case housing needs report was released two years ago, the number of families with worst case needs has increased by 4 percent, twice the rate of growth for the U.S. population.

Households with worst case needs are defined as unassisted renters with incomes below 50 percent of the local median, who pay more than half of their income for rent or live in severely substandard housing.

Even more compelling than the record number of worst case needs is the increase that we've seen over the past decade. There are now 600,000 more households with worst case housing needs than there were in 1991 when the current economic recovery began—a rate of increase that is almost twice as fast as overall household growth.

A second important finding of this report is that families with worst case needs are working harder than ever. While you would expect that the poorest families also

have the worst case needs, the fact is that the number of people who work full-time and have worst case housing needs increased by 28 percent from 1991 to 1997—a rate of growth that is almost twice as fast as the rate for all other low-income renters. People used to think that if you were willing to work hard, things would take care of themselves. You would be able to afford housing and take care of your family. But that, unfortunately, is not always the case any more.

The third finding I want to highlight is that low-income Americans who live in the suburbs, not the cities, are more likely to have worst case needs than elsewhere. It disproves the myth that the affordable housing shortage in this country is an urban problem. It's the suburbs where you're seeing the largest drop-off in the number of affordable housing units available. In fact, over one third of all worst case households live in the suburbs.

These findings make a clear and compelling case for greater federal attention to our nation's housing needs. With this Committee's support and through bipartisan cooperation, we have broken the gridlock and affordable housing, when Congress approved new housing vouchers in each of the past two years—60,000 last year and 50,000 the year before.

With worst case needs at record levels, there is now an urgent need to strengthen federal efforts to assure adequate supplies of decent, safe and affordable housing for America's struggling families.

That is the need that our fiscal year 2001 budget proposals address, Mr. Chairman. That is why we have requested continued support from Congress for incremental housing vouchers to help meet the housing needs of low-income families struggling with rising rents.

And that is why the President has asked for an overall \$6 billion increase over last year's enacted level. It reflects his belief that we must squarely address this rental housing crisis, that we must address the needs of those people and places left behind in this new economy, that we must help working families move closer to job opportunities—and that HUD now has the strength to address these challenges effectively and responsibly.

FISCAL YEAR 2001 BUDGET BUILDS ON SUCCESS

A few years ago, some would have argued that while the need was there, HUD did not have the capacity to address it. I am pleased to tell you that that is no longer the case. By virtually any measure, and according to every independent expert, HUD today not only has the capacity, but is better positioned than ever to help communities take on the challenges of the 21st century.

This year's budget proposal is a direct outcome of the management reforms we have put in place over the past three years. I am convinced that we now have the tools, the resources, and the capacity to wisely and responsibly spend the funds we have requested.

Our management reforms have succeeded in transforming HUD into an agency that puts communities first. Fighting fraud, waste, and abuse, our Public Trust Officers are cracking down on those who misuse taxpayer dollars. Renewing our commitment to first-class customer service, our Community Builders are connecting people to the full range of HUD resources. As a result, HUD today is back in business—back in the housing business, in the economic development business, and in the community empowerment business.

But nowhere is HUD's turnaround more evident than in the FHA's mortgage insurance programs. In 1990 FHA was virtually broke—\$2.7 billion in the red. Despite a six-decade history of providing access to mortgage capital, FHA had projected losses from claims on mortgage insurance that were far in excess of projected revenue. Thanks to our Management 2020 reforms, that's all changed.

Today, the FHA and its Mutual Mortgage Insurance Fund are the healthiest they have been in decades. Last year FHA insured a record 1.3 million mortgages worth \$124 billion. With FHA's help, the nation is currently enjoying the highest homeownership rate in history.

And last month, the new Actuarial Review of the FHA Insurance Fund for fiscal year 1999 brought more good news. The review—conducted by Deloitte Touche—shows the value of the Fund stands at a record high of \$16.637 billion. According to the auditors, the value of the Fund is \$5.3 billion over previous estimates. The President has directed me to work with the Office of Management and Budget to develop recommendations on how these surplus funds can best be used to strengthen federal housing efforts in the years ahead.

This past year has been a banner year for HUD in other areas as well. President Clinton kicked off his New Markets Initiative with historic visits to the Pine Ridge Indian Reservation, East St. Louis, Los Angeles, the Mississippi Delta, Central Ap-

palachia, and other inner-city and rural communities served by HUD. These are the emerging markets of the new century. They are the places that will provide the consumer and labor markets needed to fuel economic growth in the future—and through our economic development programs we will help them tap this potential.

The budget also proposes to expand the successful Continuum of Care program for homeless assistance and prevention—a winner this year of the prestigious Innovations in Government Award from Harvard University and the Ford Foundation. The national survey of homelessness in America, conducted by the Census Bureau, showed that we are on the right track with the Continuum—which has, so far, helped 400,000 people move from homelessness to self-sufficiency. But with an estimated 600,000 Americans still homeless each night, there is still much more to do.

In the past year we launched a major commitment to address one of the key challenges facing us in the new millennium—the graying of America. Our budget requests increased funding for HUD's new Housing Security Plan for Older Americans—helping seniors stay in their own homes as long as possible, increasing funding for the successful Section 202 elderly housing program, converting existing elderly housing to assisted living, and in 2001, building new assisted living facilities.

We have seen historic, across-the-board gains on the homeownership front—70.1 million American families own their homes today, more than at any time in our history. With higher loan limits and through internal reforms, a revitalized FHA is now on the leading edge of this homeownership boom, serving minorities, first-time home buyers, and cities in unprecedented numbers. This year's budget request positions the FHA to do even more. And we are also investing more than ever in our Native American programs to boost homeownership in Indian Country.

This year we are also proposing to tap the vital skills and resources—and the commitment to social justice—of the non-profit and faith-based community. Through our Center for Nonprofit and Interfaith Partnerships, a \$20-million initiative will expand access of community and interfaith partnerships to HUD programs and help build new public-private partnerships at the local level.

Finally, we are more committed than ever to building safe, secure communities. The dramatic reduction in violent crime has been one of the great success stories of this past decade. Our budget contains several initiatives to further reduce the scourge of gun and other types of violence, both in public housing and in surrounding communities. Without safety there can be no prosperity.

Overall, this new budget affirms this Department's progress. HUD, clearly, is back in business. These initiatives will allow America's communities to make the most of this unique moment in our nation's history. Together, they will put this record prosperity to work for everyone, everywhere.

HUD's fiscal year 2001 budget addresses four major challenges: (1) economic revitalization of our nation's communities by investing in new markets; (2) increasing affordable housing and boosting homeownership; (3) ending discrimination in housing through enforcement of our Fair Housing laws; and (4) creating safe and livable communities.

ECONOMIC REVITALIZATION AND INVESTING NEW MARKETS

As we enter the 109th month of sustained economic growth—the longest our nation has ever known—we have much to celebrate: the lowest peacetime unemployment and inflation rates in decades; the fastest and longest real wage growth in 20 years; and an all-time high homeownership rate, which reflects both economic strength and consumer confidence.

But there is another side to this success. Though most cities are doing well, one in six still has unacceptably high levels of unemployment; in older suburbs, crime, poverty, and homelessness have become more prevalent; and in some parts of rural America, areas persist that are virtually untouched by the economic boom.

In his State of the Union message earlier this year, the President addressed these people and places when he said: "To keep our historic expansion going, we need a 21st century revolution to open new markets, start new business and hire new workers right here in America—our inner cities, poor rural areas, and on Indian reservations."

With this fiscal year 2001 budget, HUD is on the front lines of this 21st century revolution, building on HUD's successful track record of promoting business investment and job creation in underserved communities. Over the past seven years, we have retooled our job creation and business investment programs, creating hundreds of thousands of jobs in both urban and rural communities across the United States.

HUD's economic development initiatives will not only help spur the economic revitalization of distressed communities, they will contribute to the continued economic

growth of the nation as a whole. The goal of these initiatives is straightforward: extend the national prosperity to people and places left behind in the new economy.

CDBG.—Last year we celebrated the 25th anniversary of the Community Development Block Program. A pioneer of devolution, CDBG has developed a proven record as the most flexible federal aid to both cities and smaller rural communities. This year's budget request builds on 25 years of success, with a request for \$4.9 billion, up \$119 million over last year, and \$195 million over the past three years. However, the real increase for this program is even larger than these totals imply. By reducing set-asides, we will increase the effective amount of formula funding that goes directly to communities by \$250 million, for uses they themselves designate.

American Private Investment Companies.—Last year, Congress appropriated \$20 million as an initial credit subsidy for the cornerstone of the President's New Markets Initiative: for-profit investment funds known as America's Private Investment Companies (APIC). APIC will make sorely-needed private capital available to larger businesses that are expanding, relocating, or joint venturing in low- and moderate-income areas, both urban and rural. We have submitted authorizing legislation for this initiative, which must be authorized by June 30, 2000.

As we did last year, HUD is requesting \$37 million to fully fund APIC. These funds will subsidize and secure \$1 billion in privately issued, federally-guaranteed loans, which will leverage another \$500 million in private equity commitments, for a total of \$1.5 billion in new private sector funds that will create an estimated 200,000 jobs.

EDI and Section 108 Guaranteed Loans.—The Community Empowerment Fund streamlines two existing HUD programs that are important tools for local communities to create jobs and attract business investment: our Economic Development Initiative (EDI) grants and Section 108 guaranteed loans. Overall, our budget seeks \$1.2 billion in loan guarantee authority under Section 108 of the Housing and Community Development Act.

This year, HUD is requesting \$100 million in EDI grant funds. The \$100 million in EDI grants will leverage an estimated \$500 million in Section 108 guaranteed loans, and create an estimated 73,000 jobs. These grants and loans will leverage substantial additional private sector commitments. Together, they will be used to create revolving loan funds for small businesses, build inner-city shopping centers, retain or expand industrial facilities, expand and modernize businesses, and support other job creation or welfare-to-work initiatives.

Empowerment Zones.—Over the past five years, led by Vice President Al Gore, HUD has helped create Empowerment Zones and Enterprise Communities (EZ/ECs) in more than 75 urban communities. In almost all of these places, the EZ/ECs have achieved success in leveraging private dollars and expanding job creation. The EZs and ECs report that more than 30,000 people have been placed in jobs as a result of EZ/EC programs, some \$10 billion in public and private sector investment has been committed to these places, 4,300 businesses have been served by capital or credit access programs and another 4,500 businesses have received technical assistance.

In short, EZs and ECs have successfully combined tax credits with federal grants and loans along with local resources to attract billions of dollars in private sector investments. Accordingly, we are requesting \$150 million in mandatory funding for the fifteen recently-selected Round II Empowerment Zones, under Title XX of the Social Services Block Grant program. The Administration is also proposing to designate ten additional Empowerment Zones (eight urban and two rural). In addition, the President has proposed significant extensions of the wage tax credits and other tax incentives for business investment that were such an important part of the success of the original Empowerment Zone concept.

Other Economic Development Initiatives.—HUD will participate in the fourth phase of the National Community Development Initiative (NCDI), to be funded at \$24 million. This highly successful public/private partnership will help build the capacity of CDCs and other community-based organizations, allowing them to continue their impressive track record as engines of economic growth in low-income areas.

In 1998, the Rural Housing and Economic Development Program was created to fund innovative strategies for rural housing and economic growth. The fiscal year 2001 Budget requests \$27 million for this program, an increase of \$2 million over last year. We will continue to work closely with other Federal departments, including Agriculture, Commerce, and the Appalachian Regional Commission, to design effective responses to the needs of our nation's rural communities.

In addition, the President's budget supports the Mississippi Delta Economic Development initiative, with proposed HUD funding at \$22 million. This is a government-wide effort to jumpstart the economy of a significant region of the country that

has been left behind by the economic boom of the past decade. HUD will work in partnership with other Federal agencies to capitalize on our special expertise in housing and economic development to help revitalize the region's economy.

We are also requesting an increase in the successful Youthbuild program from \$42.5 million to \$75 million. Youthbuild provides young people with training in the building trades, as well as assistance in securing high school diplomas. We estimate that the program will help over 5,000 disadvantaged youth rebuild their communities at the same time as they learn vital job skills.

ADDRESSING THE AFFORDABLE HOUSING CRISIS

At the core of HUD's mission is the charge to provide housing that is decent, safe and, affordable to all. As I stated earlier, it is actually becoming more and more difficult for low-income American families to afford a decent place to live. Rents have soared in many regions with strong economies. Worst case housing needs have reached an all-time high of 5.4 million households, growing especially fast among working families. As a result, there is a greater need than ever for HUD's programs.

Our fiscal year 2001 initiatives build on recent efforts to reform and restore public trust in HUD's housing programs. Historic legislation created the Mark-to-Market program, which preserves project-based Section 8 housing while bringing costs in line with the private market. We have cracked down on program abuses. Our Real Estate Assessment Center is on track towards meeting our goal of inspecting, for the first time, all 40,000 properties in HUD's inventory of public housing and multifamily insured or assisted housing. And more than 600 troubled properties have been referred to the new Enforcement Center, with 45 percent of the cases resolved and revenues from fines imposed in fiscal year 1999 up five times over the previous year.

Section 8 renewals and incremental vouchers.—HUD is requesting \$13 billion in new budget authority to renew existing Section 8 contracts, covering 2.6 million rental units. In addition, we are requesting \$690 million for 120,000 new vouchers, the largest increase since 1981. Two years ago, HUD got back into the housing business with 50,000 new vouchers focused on families moving from welfare to work. We topped that last year with 60,000. With this year's request, we are taking the next step. These new vouchers will be targeted as follows: one half, or 60,000, will be "Fair Share" vouchers, to be used by public housing authorities to reduce their waiting lists; 32,000 will be targeted to those moving from welfare to work; 18,000 will be for homeless persons; and 10,000 will stimulate new housing production that will be affordable to extremely low-income individuals.

New housing production vouchers.—Our proposal for new vouchers includes the first Section 8 housing production vouchers in 17 years. For decades, national housing policy has shifted back and forth between production-oriented programs (that focus on expanding the supply of affordable housing) and income-based initiatives (that provide cash assistance to enable lower-income families to afford rental housing). As we enter the 21st century, it is clear that both approaches are needed if America is to realize the goal of decent housing for all. We are proposing 10,000 housing production vouchers that, in tandem with the Low Income Housing Tax Credit and FHA insurance, will leverage 40,000 total units (subsidized and unsubsidized).

Public housing.—Two years ago, Congress enacted landmark bipartisan public housing legislation, that brought working families into public housing without sacrificing our historic commitment to low-income and very low-income persons. Through our new physical inspections system, we have now inspected every property in public housing—and the results are in: 84 percent of all public housing properties are in sound or excellent condition, and customer satisfaction surveys show that 75 percent of all public housing residents are satisfied or very satisfied with their housing. That's a customer satisfaction rating that beats the banking, the utility, and the retail industries.

HUD's fiscal year 2001 budget continues our efforts to transform public housing. We are requesting a \$54 million increase in public housing operating funds, to almost \$3.2 billion, or 100 percent of PFS. We also are proposing almost \$2.96 billion for the Capital Fund to help public housing authorities modernize or rehabilitate public housing units that are in need of significant repairs or replacement, an increase of \$86 million over the fiscal year 2000 enacted level.

Finally, we are requesting \$625 million for HOPE VI, which is revolutionizing public housing by replacing obsolete high rises or barracks-style projects with new, mixed-income, mixed-use livable communities and housing vouchers. Through 2000, the program is expected to approve the demolition of 100,000 units. By 2003, our goal is to approve 145,000 units for replacement with hard units or with vouchers.

Home Investment Partnerships Program (HOME).—Since it was created ten years ago, the HOME program has become a proven housing rehabilitation and production tool in both urban and rural America. We are requesting \$1.65 billion, a \$50 million increase over last year's level. This will provide approximately 103,000 units of affordable housing for both owners and renters through a combination of new construction, rehabilitation, acquisition and tenant-based assistance.

Homeownership.—Over the past three years we have done more than ever to bring homeownership to underserved markets. I'm proud of the record homeownership rate of 66.8 percent; but the real success is what we've done to close the gap for minorities, first time buyers, younger couples, residents of cities. We have increased the affordable housing goals of the GSEs from 42 percent to 50 percent. Fifty percent of their total purchases must aid low- and moderate-income Americans. With higher FHA loan limits enacted by Congress, in fiscal year 1999 we boosted FHA loans to a record 1.3 million—40 percent of which were to minority buyers. Automated underwriting has dramatically reduced underwriting times for applicants. And the process for disposition of foreclosed properties has been improved substantially.

Our fiscal year 2001 budget builds on this record of success. In fiscal year 2001, FHA is proposing to develop a new hybrid adjustable-rate mortgage product. In the conventional market, hybrid ARMs have proven very popular because they offer the security of a fixed-interest rate for periods of 3 to 10 years, while they are more affordable than 30-year fixed-rate mortgages because they carry lower interest rates. Adding this product to FHA's lineup should help 55,000 additional families become homeowners in fiscal year 2001, and will result in an additional \$114 million income for the Federal government.

Native American assistance.—Native American housing needs will be served through the Indian Housing Block Grant Program, and the Indian Housing Loan Guarantee Program. Overall, HUD's request for Native American programs is the largest ever—\$730 million, an increase of \$37 million, including an increase of \$30 million, to \$650 million, for Indian Housing Block Grants.

Homelessness and Special Needs.—Over the past seven years, we have made significant progress on homelessness in America. When I first came to HUD, the entire Federal government had been spending about the same as just the state of New York on homeless assistance. Since then, we've more than doubled the amount of federal homeless assistance.

But this is about more than just the dollars and cents. It is about a new, comprehensive approach, the Continuum of Care, that we've put in place—a holistic approach aimed at moving people into permanent housing and self-sufficiency. According to a study by Columbia University, we are now serving 14 times more people than we were in 1993. This progress was recognized when last year the Continuum won the prestigious Innovations in Government Award from Harvard University and the Ford Foundation.

By all measures, the Continuum of Care is working. Accordingly, for fiscal year 2001, we are proposing \$1.2 billion for homeless assistance, an increase of \$180 million. We also propose to shift the source of funds for Shelter Plus Care contract renewals to the Section 8 Housing Certificate Fund, creating additional savings for localities and homeless service providers. This increase, plus 18,000 new rental vouchers to create permanent housing solutions, will address the housing needs of the most vulnerable Americans—those making a transition from the streets back into homes and community life.

We are also proposing an increase of \$28 million in the Housing Opportunities for People with Aids program (HOPWA), to \$260 million. The Centers for Disease Control estimates that between 650,000 and 900,000 Americans are living with the HIV infection. In addition to renewing all existing programs, the funds requested in fiscal year 2001 will provide for an additional 5,100 housing units for persons with AIDS, bringing the total to nearly 50,000 units nationally.

Elderly and the disabled.—Our special needs programs also serve the elderly and disabled. We are proposing \$210 million for the Section 811 program, which serves persons with disabilities, increasing the fiscal year 2000 enacted level by \$9 million.

Recent decades have seen a dramatic shift in America's population, with our elderly citizens leading longer, healthier, and more active lives—a shift that will only accelerate in coming decades. The challenge now is to meet the housing needs of this rapidly expanding population of elders. Just as we work to save Social Security, we must also work to provide housing security for our seniors.

Last year, Congress enacted major elements of HUD's Housing Security Plan for Older Americans as part of our fiscal year 2000 budget. This year, we are proposing a total of \$779 million for our elderly housing programs, an increase of \$69 million. We propose to increase funding for Section 202 housing to \$629 million; \$50 million

to convert existing Section 202 housing to assisted living; \$50 million for new assisted living facilities; and another \$50 million for service coordinators. Within Section 202, we are also proposing up to \$5 million to fund a small number of "Intergenerational Learning Centers", an exciting concept that will tap the skills and energy of seniors to help meet the needs of children in daycare centers located in Section 202 housing.

JUSTICE FOR ALL—ENFORCING FAIR HOUSING LAWS

The Fair Housing Act prohibits discrimination in the sale, rental, and financing of housing based on race, color, religion, sex, national origin, disability, or family status. Yet, even at the dawn of the 21st century, housing discrimination, in both blatant and subtle forms, continues to plague our country. Today's discrimination is often more subtle than it was in the past, but it is no less real and no less damaging to our social contract as a nation that values equality of opportunity for all.

And now there's an even newer venue for discrimination—the Internet. For all the good it can do, the Internet can also be a distribution mechanism for hate, prejudice and bigotry. We recently filed charges in a recent Fair Housing case that combines all three types of discrimination: the old style, graphic discrimination that is so shocking and appalling, the newer, institutionalized discrimination, and the even newer frontier of cyber-hate.

So we must do more. Two years ago, President Clinton announced his commitment to doubling the number of Fair Housing enforcement actions by the year 2000. To help complete this effort, we propose to increase the Fair Housing enforcement budget by 14 percent—to a total of \$50 million.

Our budget request provides for increased funding of both the Fair Housing Assistance Program (FHAP) and the Fair Housing Initiatives Program (FHIP). In 2001, the focus of FHIP will be on requirements for accessibility for people with disabilities, with an emphasis on education and outreach programs to housing providers.

In 2000, Fair Housing Partnerships are being created to form a formal links between private Fair Housing groups and state agencies. These partnerships will be used in 2001 to provide training and technical assistance to builders, developers, architects, building code officials, and others on accessibility requirements through a nationwide Project for Accessibility Training and Technical Assistance.

CREATING SAFE AND LIVABLE COMMUNITIES

Our communities face a number of threats to sustainable development, from uncontrolled growth to crime and drug abuse, from environmental hazards and a lack of energy efficiency in housing to blight and under-investment in vital community infrastructure. Many of these challenges call for cooperative regional solutions that span jurisdictional lines.

Promoting Livable Communities.—Congestion, hours-long commutes, a decrease in the amount of open space, pollution, and other environmental issues all have a detrimental effect on the livability of American communities. HUD recently convened a two-day conference, called Bridging the Divide, to focus on how cities, suburbs, and the federal government can work together to achieve more livable, sustainable communities. More than 200 state and local government officials and civic, community, and business leaders participated. A key theme that emerged from the conference was the importance of revitalizing the core of our central city areas in order to decrease the negative effects of suburban sprawl.

We are proposing a \$25 million Regional Connections initiative as a key part of the Administration's livability initiative. These funds may be used by states, partnerships of local governments, businesses and civic groups to develop and pursue smarter growth strategies that cut across traditional municipal lines.

We also propose to double the funding for the Brownfields Initiative, to \$50 million in fiscal year 2001. This will accelerate the Administration's previous commitment to a four-year, \$100 million program.

Because of an increased effort on the part of the Federal government to reduce the exposure of children and their families to lead poison, we are requesting \$120 million for HUD's Lead-Based Paint Hazard Control grant program, a 50 percent increase. As part of a new national strategy and by leveraging private funds, the goal is to eliminate childhood lead poisoning—including eliminating lead hazards in approximately 2.3 million units of housing by the year 2010.

Promoting Safe Communities.—Despite the extraordinary success we have achieved in reducing crime rates in public housing and elsewhere, crime and gun-related violence poses a major threat to HUD's obligation to help ensure "a decent home and a suitable living environment for every American family."

Funds from a variety of HUD programs—including the Community Development Block Grant program—have long been available to help make areas in and around communities HUD serves safer. This year, however, HUD plans a particular focus on improving the safety of America's neighborhoods.

A recent HUD report, *In the Crossfire*, specifically looked at the problem of gun violence in public housing. It found that public housing authorities have made extraordinary progress in reducing crime of all kinds, in some cases by as much as 70 or 80 percent. That is a result of strong local initiatives, the Administration's community policing and crime prevention efforts, and the added resources HUD has made available to public housing authorities through the streamlined Drug Elimination Grant program and other programs.

At the same time, our report showed that, according to reliable data from the Department of Justice National Crime Victimization Survey, public housing residents are still two and a half times more likely to be victims of gun violence than the population at large. That is a statistic that cannot be ignored, and HUD's fiscal year 2001 budget addresses it directly.

The fiscal year 2001 budget proposes \$345 million in Public Housing Drug Elimination Grant funds to support efforts to reduce drug use and related activity and other crime in and around public housing. Of the total, HUD has requested \$30 million for a Community Gun Safety and Violence Reduction Initiative, which will help address the critical issue of gun violence in and around the communities HUD serves.

Strengthening community partnerships.—A key component of strong communities is the strength and capacity of their organizations. Because of the trust they build and the strong connections they forge, community and faith-based institutions can be uniquely placed to help bring about community change. We are proposing to support the work of our Center for Interfaith and Community Partnerships with a \$20-million initiative to help community and faith-based organizations expand their capacity to supply affordable housing, create economic opportunity, and increase their use of HUD programs.

We are also proposing \$69 million in Section 107 technical assistance, including \$37 million for colleges and universities to carry out community and economic development activities in their local communities. This will include grant funds for several successful initiatives, including Community Outreach Partnerships (COPC), and New Markets University Partnerships in "new market" areas. Another \$5 million is proposed for new Tribal College Partnerships.

CONCLUSION

HUD's fiscal year 2001 budget reflects the progress that HUD has made over the past three years. It does more than add funds to programs: it's a budget that contains innovative, smart, and creative proposals for addressing the new challenges of the 21st century.

This budget gives those people and places left behind a unique opportunity to share in this nation's overall success—not with bigger government, but with smarter government. Not just with additional resources, but by more effective use of the resources we have. Not by top-down mandates, but through menus of opportunity. And not by displacing private markets, but by clearing the way for them to invest.

HUD today is leaner, smarter, more effective than ever. The nation is prospering economically and at peace in the world. Our cities and rural areas, once lagging behind, are doing better than they have in a decade. Now it's time to build on this extraordinary success—time to bring this prosperity to every corner of America.

I look forward to working with this Committee, and with the Senate, to make this vision a reality, not just for HUD, but for all Americans.

NBC REPORT ON HOUSING

Senator BOND. Thank you very much, Mr. Secretary.

To go back to the questions I raised in my opening statement, put a human face on the issue of HUD's failure to act as a good neighbor and a good landlord, over a year ago NBC ran a piece on fleecing of America, on FHA's failure to manage its inventory of single family properties. In that segment, Commissioner Apgar challenged the finding and remarked how FHA had instituted new controls and procedures to improve its management and sale of homes, but as I have seen in Missouri, and I am sure you are

aware from Senator Mikulski's concerns in Baltimore, it is questionable whether the evidence has showed things have improved. Since the airing of the NBC report, the inventory has grown by 10,000 homes, and HUD has foreclosed over 70,000 homes.

To illustrate the problems of what happens when HUD is in the position of preserving an affordable rental housing complex, I want to air a video of a couple of these news segments, and then I will ask a question related to them.

[The information follows:]

[From NBC Nightly News, February 25, 1999]

HUD AS A LANDLORD

VOICE. The Department of Housing and Urban Development in Washington owns a lot of housing across this country. It can represent, all that housing, a great deal of value if it is kept up, but for an agency that specializes in dealing with housing problems, critics say there are some big holes in its oversight responsibilities. NBC's Bob Faw tonight on the fleecing of America.

Mr. FAW. Imagine the house next door is an eyesore, and the owner is Uncle Sam, in this case the U.S. Department of Housing and Urban Development.

Ms. JOHNSON. They said they were going to do something about it, but they never did.

Mr. FAW. Bad as these properties look outside, inside they are even worse. In here it is absolutely overwhelming, and according to the most recent Government data, published a year ago, this is just one of 800 foreclosed properties which HUD owns in Chicago, many, say critics, in shambles.

Our organization said the same pattern exists in Indianapolis, in Buffalo, and in Cleveland. Foreclosed homes which HUD pays private contractors to maintain are collapsing.

VOICE. Bad housing isn't nice.

Mr. FAW. For 30 years she has complained that Washington has fleeced homeowners, letting abandoned homes deteriorate, wrecking property values in neighborhoods. Today she says the situation is just as bad.

Ms. CINCOTTA. Now we have our Government, FHA, HUD being the biggest slum landlord in the United States.

Mr. FAW. HUD says the charges are outrageous, insists scenes like this are misleading and represent just a handful of its national inventory of 40,000 properties.

Mr. APGAR. I think our programs are well-run. We've been engaged in extensive reforms to improve our monitoring and oversight of our home-selling process over the last several years.

Mr. FAW. But the Government's own watch-dog, the independent General Accounting Office, strongly criticizes how HUD manages property. No taxpayer money is involved, but for mortgage payments of 7 million FHA homeowners HUD spends \$1 million every day to maintain properties like this.

Ms. ENGLAND-JOSEPH. I would say they aren't doing a very good job. HUD is not providing the kind of contract management that it needs to protect the Government's interest.

Mr. FAW. In its survey they found that 37 percent of the HUD properties inspected in Illinois contained imminent hazards, and in Boston it found continuing evidence of problems which the GAO that could threaten the health and safety of neighbors and potential buyers.

Mr. APGAR. It is an old report that does not reflect where we are today.

Mr. FAW. HUD maintains it does not permit situations like this, but the GAO remains skeptical.

Ms. ENGLAND-JOSEPH. They don't know how bad it is. Not a lot has really happened to change, to improve the problem that we identified.

Mr. FAW. Certainly not the kind of problems some of our neighbors want fixed.

VOICE. I don't care for them, not really, because they don't do their job.

Mr. FAW. Even where their job is costing millions.

Bob Faw, NBC News, Chicago.

Senator BOND. Mr. Secretary, to illustrate how things have not improved, these are some still photos of dilapidated HUD homes in Independence and Kansas City, Missouri.

OAK HOLLOW APARTMENTS

This is a news clip from Dallas TV on the Oak Hollow Apartments.

VOICE. From last month's news, that HUD was taking over the Oak Hollow Apartments to clean them up was like a gift from above to residents like Takulah Robinson.

Ms. ROBINSON. Over here, they gave me a new stove, a new sink, and a new refrigerator.

VOICE. But now she's losing it all. Today, HUD held a meeting to tell residents how they were going to help pay for them to leave the apartments they had just fixed up, because they are tearing them down, leaving many tenants with the question—

VOICE. So why can't HUD fix our homes up so we can continue to stay here?

VOICE. HUD now says that it would be too expensive to completely rehab Oak Hollow.

Mr. O'BRIEN. HUD is tearing down a lot more affordable housing than they are building.

VOICE. Tom O'Brien of the Dallas Tenants Association said HUD watched this property deteriorate for 20 years, and it's throwing in the towel.

Mr. O'BRIEN. Really, when they start improving HUD housing the same thing is going to happen over and over again.

VOICE. HUD officials told the displaced tenants they can use vouchers to move to better properties, but some of them don't believe they'll be moving up at all. Some tenants who have been moved before said the shortage in affordable housing could put them in another bad situation.

VOICE. It's no better across the street than over here. I don't want to move from one to another HUD.

Mr. Secretary, 100 residents have been displaced. Five families remain. They have filed a lawsuit to block HUD's plans to demolish it.

I know that Senator Mikulski is going to ask some questions about single family problems, so I will not go into that, but I am troubled about what we saw on the tape about Dallas, and I understand it is not an isolated case. We have heard about similar complaints from tenants evicted by HUD in Los Angeles, New York City, Hartford, Connecticut. They are saying that these evictions are HUD policy.

But what troubles me even more is what occurs in my own backyard. I have the pleasure to introduce to you today, and I would ask her to stand up, a constituent of mine, Mrs. Lizzie Lewis, the elected leader of the Pickwick Plaza Tenant Association. Thank you, Ms. Lewis.

Senator MIKULSKI. Hi, Ms. Lewis.

Senator BOND. She resides in a section 8 property in downtown Kansas City. She is among 50 elderly, disabled—elderly and disabled in the building, which is one block from my district office, in an area of economic revitalization. My staff reported to me that FHA Commissioner Apgar personally met with Ms. Lewis and my staff to talk about the fate of Pickwick, and that Mr. Apgar stated that he needed to have legislation from us to get HUD to protect Mrs. Lewis from losing her home.

Mr. Secretary, I thought that was the job of HUD, but I would ask you as my one question this segment, do you need us to legislate a solution to Ms. Lewis' problem, or can you commit today to solve the problem for Ms. Lewis and the people of Pickwick?

PROPERTY DISPOSITION

Mr. CUOMO. Mr. Chairman, obviously, if there is anything we can do within our current power to rectify the situation of Pickwick, we will, and I would ask the Assistant Secretary, William Apgar, who had the meeting, to respond specifically.

But on the overall point, let me just say this, Mr. Chairman. I would agree with the thrust of the pieces. This has been a long-term problem. You hear—in both pieces they said, in one case they said it has been a 30-year problem, in one case there has been a 20-year problem, but I would disagree when you say we have not made progress. On this entire issue of the run-down portfolio, we have made progress in almost every regard.

The, quote-unquote, aged inventory, the time that we are selling homes are coming down, the teacher next door, the officer next door, and now the 6-months or out is really in many ways the most you can do, which is you are just going to give the house away if you cannot sell it.

It is one of the incumbent problems with the real estate business, is when you have foreclosures the homes often get run-down, and then you have to dispose of them.

Also, in conversation with the committee, and I believe this was a collaborative effort, and one we are proud of. We have now privatized the disposition process, so we have gotten HUD out of the business of doing the very things that we saw on the video, the maintenance, et cetera, and we have turned it over to private contractors.

We had a problem with one of the contractors which caused some of the problems, but I am so sure that the privatization was the right way to go, to get HUD out of the business, turn it over to private sector firms who do this, who manage the real estate, and that was an issue that we discussed jointly, and I was proud of that.

PICKWICK PLAZA APARTMENTS

But on Pickwick specifically, let me turn it over to the Assistant Secretary.

Senator BOND. Mr. Apgar.

Mr. APGAR. Yes, thank you. I have met several times with Ms. Lewis when I was out in Kansas City last summer, and just recently with your staff and our staff in Kansas City has been working on this situation.

Pickwick is a story of HUD's effort to get a recalcitrant property owner out of the way so we could come in, secure the building, expand the services, and provide what the tenants need. As you mentioned, this property has many tenants with various sorts of disabilities, and it needs special attention. In order to do that, given the fact that the owner was incapable of upgrading the property, despite some initial efforts, we have begun the foreclosure process. What I explained in the meeting to Ms. Lewis, under the foreclosure process it is our full intention to preserve that property as affordable housing for the residents.

I might add, in the case of the Oak Grove situation, that was still our intention with Oak Grove. The legislation we work with, though, requires us to balance both the needs of the residents, cer-

tainly to consult with them, have preservation as an important goal, but also balance the financial interest of the fund. You know we can get whacked either way of that equation.

You are aware, perhaps, of the JVC properties in St. Louis, where we worked for nearly 12 months in order to secure what we think is a terrific outcome that managed to preserve the affordable housing, bringing foundation funds and other things together, a very good outcome for the residents and for the City of St. Louis.

Our Inspector General, of course, criticized us for waiting too long and not moving to the foreclosure sale, and that was prominently featured in a recent audit of our Department, so while we work with the tenants, there is this competing interest, the financial interest. The process will be as it is required by law. We will offer the city the right of first refusal to take over the building and do what they want to. That will happen in the first instance. If that does not happen, we can decide that the building will be appropriate to be saved and solicit bids through the RFP process.

Ms. Lewis' group is working with an excellent nonprofit, and we anticipate that that bid could be competitive and win the day. Only as a last resort do we sell the property off on the private inventory.

I would suggest that your statistics also are misleading in the sense that the disposition with section 8 is only one of the ways in which we preserve affordability. Many, if not most of our properties have long-term affordability contracts and protections of the residents without the section 8 voucher, so the idea that all the 114 properties that we sold without section 8 were lost to affordable housing is just flat-out wrong. You can go property by property and show the affordability restrictions that are presently on those buildings as part of our sales terms.

Senator BOND. Thank you very much, Mr. Apgar, and I turn it to Senator Mikulski for her questions.

Senator MIKULSKI. Mr. Chairman, I note that the chairman of the full committee is here, and before I go to my questions, which will be extensive, I did not know if the chairman has a statement and a question or two in the interests of his responsibilities.

STATEMENT OF SENATOR TED STEVENS

Senator STEVENS. You are very kind. As a matter of fact, I do not have any questions. I would like to make a short statement, and it is totally provincial.

Mr. Secretary, I am not one to get involved in too many national things with the size of the United States. I have enough problems of my own, without getting into that.

We are going to have a director, a State director I guess it is, vacant now, now that Arlene Patton has left, and I would urge you to name an Alaskan to fill that position, and here is why. We did have a discussion with Mr. Apgar about FHA appraising, and I received a letter that said, and I quote,

“as a consequence of the unique considerations that implementing the process in Alaska brings, we will continue to maintain the option for your constituents to ask questions and resolve issues related directly to this directly with the FHA staff in Anchorage.”

Now, that is working to a certain extent. However, the home ownership centers now are concentrated in Santa Monica, Cali-

fornia. It is impossible for people in our State to deal with Santa Monica, California. They are a different time zone and, what is more, they have no understanding whatsoever of Alaska conditions.

On the fair share section 8 vouchers, each region is supposed to receive a fair allocation. I am told that Alaska, which has one qualifying housing authority, was told to compete for vouchers in Alaska. Our allocation was lumped together with the State of Washington, and they obviously have a great many more people than we do. The net result of that is, is that Alaska has received not one single voucher.

As a matter of fact, I am told there was not one single house built in Alaska last year under the Native section of our State. There are 227 Native housing centers, housing authorities, and they have been in to see me repeatedly this year.

Wyoming, which has a smaller population, considerably smaller than our State, had 81 vouchers, and we received some welfare-to-work vouchers, but I understand that under the lottery system we have never received one single voucher.

I am here to ask you to review the situation in Alaska. We have still got people coming into the 20th Century. We are now living in the 21st, and the areas we are talking about are so remote that it is just impossible to deal with on a lottery system competing with other areas, particularly with Washington State.

I am one of those who fought for statehood for Alaska because we did not want to become a county, or remain a county of the State of Washington. That lumping with Washington is a pill that is a little hard to swallow. Not that we do not love our friends to the south, but they are our southern neighbors, and they are 900 miles away from us.

So I would urge you to have someone take a look at the Alaska scene. We had a regional authority in Alaska. It was going very well. We had an allocation that went directly to the State and, as you know, we—it is not political. Our State government is in the Democratic Party. We are Republicans here, but we are sort of different people in Alaska, and we are working very closely with the State government, and the State government is as perplexed about this as we are.

So I really—I have to go to another hearing. I appreciate your courtesy, Barbara, in letting me make this statement, but I would urge you, have someone take a look at the Alaska scene. We just do not deserve to be left out completely in this housing program.

SECTION 8 VOUCHERS FOR ALASKA

Mr. CUOMO. Mr. Chairman, I thank you for the comment, and I agree that the State, while beautiful, poses many unique challenges. With the chairman's assistance I had a great tour of the State.

I do not know the numbers on our production in Alaska. What you say troubles me, if the production is that low. I will find out, and I will report back to the chairman on exactly what we have done in Alaska, and on the State director's position, obviously we have civil service guidelines to go through, but I think to do that job well you would almost by definition need to be from Alaska,

otherwise you cannot really appreciate the situation, and if there is any way we can do that, we will.

Senator BOND. Good answer, Mr. Secretary.

Senator STEVENS. Thank you very much.

Senator BOND. Thank you very much, Mr. Chairman.

Senator Mikulski.

Senator MIKULSKI. Thank you very much, Mr. Chairman.

In my opening statement I did not acknowledge the role of the HUD Inspector General, Ms. Gaffney, in her investigation of flipping, and also her recommendations, and I look forward to pursuing a line of questioning with you, Ms. Gaffney, and also want to thank you, because the Federal law enforcement in Maryland I know has been working very closely with your inspectors.

INTRODUCTION OF ADVOCACY GROUPS

Mr. Chairman, the Secretary introduced his team. I want to introduce my team. In addition to my very able staff, it is wonderful networks in Baltimore that really are my advisors, and I would like to acknowledge in the room Mr. Ken Straw, the president and CEO of the Southeast Community Organization, a group that I was one of the founding mothers to save the neighborhood from a highway that was going to destroy several neighborhoods. Now we are working with SECO to save the neighborhood from FHA and predatory lending.

In addition to that, we have Mr. Vinnie Quayle from St. Ambrose Housing, one of the largest groups associated with advocacy for home ownership for the poor in Baltimore. Mr. Quayle has worked in the community for 32 years.

Then there is Mr. Ed. Wittowski of the Patterson Park Community Development Corporation. This CDC is new, and it came in because of the need to prevent what was happening to a neighborhood called North of the Park, because of what had happened when we tore down Lafayette Housing for HOPE VI the housing commissioner took the poor and literally dumped them into a neighborhood that was quite fragile, causing neighborhood destabilization.

But rather than turn against the poor, we turned to each other and established a very dynamic community development corporation, only then to find that the very poor we were helping began to be exploited by predatory lending. They have outstanding testimony that they gave on Monday.

PROPERTY FLIPPING

I want you, Mr. Chairman and members of the committee, to see this chart. See all those little dots? Now, first of all, this is not my chart. This is not Barbara Mikulski who takes old neighborhoods and puts little red, pink, and blue dots up. Every dot, that chart was developed by Southeast Community Organization after on their own did labor-intensive searches about what was happening to the exploitation of the poor.

Every dot represents a flipper, a flipper who bought a house for 15 grand, bilked a consumer, usually someone moving from welfare to work, false appraisals, mortgage bounty hunters and up. Each one of those represents that.

If you looked—and the blue dots represent one major investor-flipper, and he is currently under criminal indictment in Baltimore. I will not go into his case, because again, legal proceedings, but there is heartbreak there. That is really heartbreak.

Senator BOND. What are the red dots?

Senator MIKULSKI. Well, the red dots are other flippers, and they each represent a particular owner or investor, or those that are being under investigation.

We want to acknowledge the role of the IG Inspector, the United States Attorney in Baltimore, and also the FBI, and the Post Office Inspectors are involved because of wire and mail fraud.

Now, five more indictments that have occurred in Baltimore, and essentially we have the need for two strategies, Mr. Chairman, one the prosecutor strategy, in which if you are a flipper, you have broken criminal laws, and we are coming after you. That is number one. But number two is the preventive strategy to prevent predatory lending, and also to deal with the results of FHA-held property.

Now, what I would like to do is ask the Secretary to outline in more detail what his solutions are for doing this. Mr. Secretary, I will not—because of your responsiveness to the Baltimore hearing, I will not go into a set of questions I had for your FHA Administrator. I will not go through the questions that I had about what did you know and when did you know it, and what the hell did you do about it, but I feel that I have confidence in you, that you now know about it, and now you want to do something about it.

I am not here to finger-point, but I am here to pinpoint solutions. Could you elaborate on the methodology that you want to have on the preventive aspects while we are working in another dimension for the prosecutions?

BALTIMORE TASK FORCE

Mr. CUOMO. Yes. It would be my pleasure, Senator.

The challenge, in my opinion, of this predatory lending problem is, while we have been very good in the past in dealing with isolated parts of this issue, unless we really grab the comprehensive situation, we are not going to make the kind of progress we should. We have done a lot in piecemeal ways, but what predatory lending is saying is, in many ways the entire system is corrupted. The sub-prime has opened up this new vulnerability, and the predatory lenders have rushed in.

We want to take the City of Baltimore, which again for a number of factors poses, in our opinion, one of the worst manifestations in the country, and design a comprehensive approach using the City of Baltimore in a working partnership, FHA, the full HUD team, the local CDC's, the City of Baltimore, literally coming up with a physical strategy on how to fix this problem in the City of Baltimore.

In the meantime, we will have a moratorium—

Senator MIKULSKI. Let's just stop with that. So you are going to use Baltimore as a laboratory because we are the worst case, and I can assure you, with our mayor and our commissioner of housing working with you, along with our community groups—and I must

say the professional realtors have come in, the appraisers that want to have a professional relationship.

So you are going to use Baltimore as a laboratory for your solutions while you then pursue a national task force, is that right?

Mr. CUOMO. Exactly, Senator.

Senator MIKULSKI. And who will chair that, and when will it become operational?

Mr. CUOMO. It will become operational next week. We want to come up with a proposed membership that we could share with the Senator's office to see what your opinion is of who should be on this, but we will have the full complement of the senior HUD staff, because to do it right, we have to do all of it. We have to do the public housing piece, the economic development piece, the FHA piece, and we would have the senior Assistant Secretaries from HUD, because I think this can be a very valuable experience for the Nation.

It will do something practical for the City of Baltimore, which we have to do, but it will also be the genesis for national policy.

Senator MIKULSKI. Very good. Now, let's talk about national.

Mr. CUOMO. Okay.

Senator MIKULSKI. Which goes to this thing called RESPA.

Mr. CUOMO. Yes. The predatory lending, of which FHA often gets caught up in it, is beyond FHA, beyond HUD, as we said. It deals with truth in lending. It deals with RESPA violations, which is the laws and regulations that regulate the real estate market, fair lending laws.

We would, using Baltimore in the practical, then come up with a set of proposals which represent what we have learned in Baltimore and what we have implemented in Baltimore and recommend that to the Congress through a national task force which would also be having a series of hearings across the country, just to make sure what we have resolved in Baltimore answers the questions in the other cities.

This predatory lending may be a little different in different parts of the country. Baltimore is posing almost all of the different facets, but it may be a little different in Denver, a little different in Los Angeles, so we would have hearings in those areas, four, five, six different areas across the country before we come up with a full national—

Senator MIKULSKI. And I would hope you would look at these, following some of these, but not limited to these factors:

Number one, how best to ensure that buyers have prepurchase counseling so that they know what they are getting into, they know the full range of this. Because there are two issues here, the predators, and the other is that people get into a situation, and not know.

So one, how is a buyer going into this, but how can we protect the buyer without needless regulations?

Two, the appraiser process. Because of the way FHA has changed the way it does business, the seller now furnishes his own appraiser. Well, that is like Bonnie calling up Clyde to see if he wants to be an appraiser, and let's rob the bank together, so we do not want Bonnie calling Clyde. We do not want Clyde to be an appraiser, and we do not even want Bonnie and Clyde any more, so

the question is, what do we do about the appraisers? Community groups have ideas, et cetera. I know the appraiser community has those as well.

Third, you have to look at the mortgage bounty hunters, because there are now bounty hunters on getting mortgages. They get commissions. They get fat fees. They do not care. Again, I know in my own home town of Baltimore the banks are not necessarily the problem, and in fact they have worked with the community for the solutions, but there are these mortgage bounty hunters—and again, not every mortgage broker is a bad guy, and we need to separate that out and how to deal with it, so we need to look at that.

I know that my time is up. I am going to come back for a second round of questions, but those are the core issues, and I think it is in the national interest for the professional associations to work with you, otherwise there are going to be 50 State laws. My own Maryland General Assembly is already working on this, again lessons learned from them, but we either have a national framework, or we are going to be dealing with 50 State laws.

Senator BOND. Thank you very much, Senator Mikulski, and I would just add one thing. Having recently become a condo owner within the last couple of weeks, I can tell you that an hour-and-a-half of going through forms challenged all the training I had in law school and beyond to stay with it, and it has become so complex that even with a law degree, we are protected.

There is a story about the elves who disclosed the location of a pot of gold under a tree. When they went back to dig it up they found that the elves had put yellow ribbons around every tree in the forest and they could not find it, and I have felt like the guy walking into the forest with every tree with a yellow ribbon around it.

Senator MIKULSKI. Well, you see, Mr. Chairman, I concur with you. This is also what came out at the hearing. First of all, when the appraiser, HUD mandates, FHA mandates a license for a certified appraiser for a property over \$250,000. Well, three cheers for those who can buy that. And we are glad that FHA protects people who buy property worth more than \$250,000. But FHA is not protecting people who buy less than \$250,000.

Second, and this then goes to our own mandates, I think in our desire to protect the consumer, we have so many forms that tell so many people so much that they really ground in the settlement. And when we asked the people who had been bilked and really gouged, did you know what was going on at settlement, they said no, we were so overwhelmed we relied on the seller. Well, again, Bonnie put on her lipstick and said everything was okay.

Senator BOND. Thank you very much, Senator Mikulski. I resemble that remark.

Now I would like to turn to a distinguished member of the committee and one who has been a real champion for oversight. We appreciate your being here, Senator Kyl.

CUOMO'S TRAVEL

Senator KYL. Thank you, Mr. Chairman.

Before Senator Mikulski leaves, I just have to say that nobody puts it in more colorful terms than she does.

Mr. Secretary, you are well aware of a lot of news reports relating to your travel for political purposes, and I wanted to give you the opportunity to respond at least in a general way. I will give you an example of one of the reports, and then would ask that you send us, for the record, a list of all of the transportation and related expenses paid by HUD for you to attend and participate in political rallies, and also ask that you tell us what you have done to comply with the Hatch Act requirements for reimbursements.

[The information follows:]

HATCH ACT

All transportation and other related expenses associated with the attendance of any HUD political appointee at a political rally are not paid by HUD, but the organization sponsoring the political event. On those rare occasions when a trip taken by a HUD political employee includes both political and official activities, our Office of General Counsel has established clear guidelines governing the procedures for ensuring that HUD is reimbursed in accordance with the Hatch Act for any portions of such trips that involve political activity. These guidelines are communicated to all HUD political appointees through Hatch Act training seminars conducted by the Ethics Law Division of our Office of General Counsel.

Senator KYL. One of these events was alleged to occur on March 3rd of this year in Huntington, New York, reported in the Suffolk Life Newspapers and the Long Islanders Record. One of the headlines reads: Politics, not housing forum as posted. And the concerns expressed by attendees was that the forum was posted as an opportunity to come hear you talk about housing programs and how people might participate in them, but in fact it turns out to be a rally for Vice President Gore.

Do you recall that particular event, and can you tell us what was the purpose of the event? Did HUD pay for any of the costs associated with that event, including any travel or lodging of food?

Secretary CUOMO. Thank you very much, Senator, for the question. There is a Presidential election going on obviously. And I have a preference in that election, which is Vice President Gore. And I have campaigned for him. When I campaign for him, that is, quote, unquote, a political trip and it is paid for by the political committee. And the trip I believe that the Senator is referring to was a trip to Long Island to campaign for Vice President Gore. And that is what it was. And that is what it always was when I am doing campaigning, as any other official, Senator, Congressperson, et cetera. I was campaigning. I was doing political work, political activity, which is different than when I am in the official capacity.

Senator KYL. And so that was paid for then by the Gore campaign or some other political entity?

Secretary CUOMO. Yes, sir. Whenever I am on political activity, it is paid for by the political committee.

Senator KYL. I would suggest that, given the concern expressed by at least one of the attendees and backed up by one of the area aging representatives that the event was publicized as an opportunity to hear you talk about housing matters, and with no indication it was political, that you might ask your folks to ensure that when word goes out about such an event that it is very clear as to whether or not it is an official function of HUD as opposed to a political event.

Secretary CUOMO. Senator, when I go to an event—I think it was clear that it was a political event. Unfortunately, people still sometimes take the opportunity to pose their HUD-related questions even though I am on a—

Senator KYL. I am sure about that.

Secretary CUOMO. Yes. And I wish I could say, oh, no, I am sorry, I am not going to talk about that today because I am on a political day. So they will often ask a housing-related question or a Federal-related question, even though I am there for a different purpose. But I am sure everyone experiences that.

Senator KYL. And certainly people can have different views. But I re-initiate my request, because here is a representative of the Suffolk County Office of Aging who said that she sent a member of her staff to the meeting because she was informed that the subject would be senior housing. So I think it is important to make sure that people are not misled about the subject of those meetings.

Secretary CUOMO. Senator, if I might just so we are clear, I may also talk about housing as an issue when I am doing political activity.

LOS ANGELES COMMUNITY DEVELOPMENT BANK

Senator KYL. That is clearly understood. Let me ask you a question about the Los Angeles Community Development Bank. As you know, in 1992, HUD funded the bank at over \$400 million. The idea was to rebuild part of the riot-torn Los Angeles at that time. But also, as you know, the bank has been a disaster from the beginning. It is barely solvent at this time, I understand.

Most recently, I am informed, the bank lost a \$7.2 million lawsuit because the court found that the bank directly caused the total loss—that is a quotation—of Summit Industries. But the administration still continues to push for funding for HUD to administer a new program, called America's Private Investment Companies, under which HUD would underwrite loan guarantees for private businesses, totalling some \$1.5 billion in private debt and equity.

When you look at Los Angeles and the fact that HUD contends that it has closely monitored the situation—in fact, in an answer to a question, the concluding sentence is: HUD will continue to closely monitor the City's oversight of the bank. Given HUD's obvious inability to closely monitor well, why would we ever think that HUD actually has the capacity to pick the winners and losers in these kinds of complex economic deals?

Secretary CUOMO. Senator, the Los Angeles Community Development Bank was very much an example of the methodology that this committee has suggested over the years. This was a proposal, the bank, by the local government, the City of Los Angeles, which was their proposal, their idea for the best way to do economic development in their city. And we at HUD have very much respected local government. We do not believe there is one size fits all. We do not sit here in Washington and say to the City of Los Angeles, let us tell you what to do.

The City of Los Angeles said, this is what we think we need to do. We need to put together a community development bank, use it as a model to engender economic development. And they requested funds from the Federal Government to do this. They came

in with a full proposal. We funded their proposal to do this community development bank. There has been, obviously, at best, fits and starts with the development bank. The City government is working very closely with the bank. We have been monitoring the situation.

The City feels, and the bank represents, that they are improving—and they have a new business plan and a new CEO—and that the situation is going to get better. Obviously if the situation does not improve, we are going to have to take action. But, whenever possible, we do defer to the local governments, the State governments, on the best way to solve a problem in their backyard.

Senator KYL. I think that is a good principle. But in view of the fact that my time is up, let me just make the comment that this whole business of underwriting and the APIC proposal, to me, suggests, and what has occurred in Los Angeles, suggests the danger of trying to pick these winners and losers with this kind of federally funded kind of programs.

APIC

Secretary CUOMO. I understand, Senator. Just so we are clear, APIC is a different model, however.

Senator KYL. Well, it may be a different program, but it does require the picking of the winners and losers from an economic point of view, in who you are going to lend the money to.

Secretary CUOMO. No, I am sorry, Senator. Under APIC, we would have a private capital firm do that. We know what we are not good at. And under APIC, it says we bring in a private firm, let them do the underwriting, let them make the decisions, because they are in a better position to do that than HUD.

Senator KYL. Well, since my time is up, I will not pursue that.

Secretary CUOMO. Thank you.

Senator KYL. Thank you, Mr. Chairman.

Senator BOND. Thank you very much, Senator Kyl.

I am going to impose on the very good nature of my friend, Senator Leahy, because I have some good news and bad news for you, Mr. Secretary. The bad news is that I have to leave here at 11 o'clock, so I will not be able, at least for the next half hour or 45 minutes, to participate in the questioning, and I want to have one more round of questioning, turn it over to Senator Leahy.

Senator MIKULSKI. But I will be here.

Secretary CUOMO. Is that the good news?

Senator BOND. That is the good news.

Senator MIKULSKI. That is the good news.

PRESERVATION

Senator BOND. The other good news is I have to be in the budget committee to vote out a budget, which will get us the money that we need here. We feel we need at least \$6 billion for the expiring section 8 contracts alone. So I go forward with a mission that I think we could all agree on.

But let me go back to some of the questions and statements made about the video. You discussed the need to create a production program, suggesting using FHA single-family default reserves as a way to leverage funding for low-income, multifamily housing. However, HUD's stated policy for its HUD-owned and HUD-held

properties is to voucher out all families, even the elderly and disabled. This means that we are likely losing these units for low-income use and certainly for very low-income use.

For the record, I include a property disposition memorandum for Gary Eizerman, Deputy Assistant Secretary for Housing, that compels the vouchering out of these properties and replaces existing handbook requirements. Mr. Apgar, you mentioned that HUD preserves its HUD-owned inventory through other means besides section 8. But I understand that you only do this by setting ceiling rents at levels often that are not affordable to very poor people.

In fact, the folks in Dallas told us that these ceiling rents for Oak Hollow would be above the real market rent. So that does not sound like affordable housing to me. How would you square this policy with your acknowledgment that we need to produce additional affordable, low-income housing?

Secretary CUOMO. Thank you, Mr. Chairman. In general, as I said in the previous question, this has been—and as the video said—a 20- to 30-year challenge for HUD. My point was we are making more progress on this issue today than we have at any time certainly in the past 7 years. The numbers, the arrows are headed in the right direction. There is further to go, but the arrows are headed in the right direction.

Also, we have undertaken, again, in coordination with the committee, the first physical inspection of all HUD properties in the country. Before, HUD never knew the condition of their physical properties. We literally would ask the owners, what is the condition of the building? But we did not have an independent physical inspection. We have completed, for the first time ever, physical inspection of every property. So now we can say, if it is rundown, if it is a slum, we are not going to continue to subsidize a slum. The Federal Government should not be in that business. And I am very proud of that also. And, again, in coordination with the committee.

Let me ask Assistant Secretary Apgar to respond to your specific question.

Mr. APGAR. Well, of course, the Department's policy is to, with every instance, preserve the affordable housing. That is why we launched our mark-to-market initiative last May, and we are preserving a significant number of housing through that. That is why we work with the authorizing committee to produce new authorities to allow us to preserve the aging 236 inventory. And that is having a dramatic effect.

So it is not our policy to voucher out all HUD properties. The memorandum you refer to is simply clarifying how we finance the funding of the property during the period in which HUD holds the property. The properties typically have been getting section 8 funding prior to that. And while HUD is in possession of the mortgage or in the process of moving the owner out, we continue to fund the property through access to the vouchers. And so that simply was a reminder of how to go about the mechanism of funding the property during the period of HUD holding.

Again, with respect to Oak Hollow, we are awaiting a response from our offer to sell the property. And we anticipate there will be a number of development proposals that will use various resources

in order to produce affordability in that development. So we still are looking for a good outcome in Oak Hollow.

Senator BOND. Do you provide section 8 funding on disposition?

Mr. APGAR. Not always. In selected instances, for the project-based funding of section 8. We always provide resident-enhanced vouchers, which is of course the law. And the vouchers, in most instances, work. And if it is a tough situation, we bring relocation specialists in, and others. As you are aware, we did that in the Kansas City case, where we had to relocate residents out of the Brush Creek development, where there were families and other folks that needed special assistance in order to relocate.

Secretary CUOMO. Mr. Chairman, just so we are clear, we run into the issue which you have raised repeatedly, which is sometimes you are in an area where the section 8 voucher does not work especially well because the market is so hot and the market is so tight that you cannot find the unit that you can afford with a voucher. And it is in those areas, as the chairman has pointed out correctly so I think, that we need to talk about production, because vouchers are not doing the trick.

Senator BOND. How will you solve the problem Mrs. Lewis and her neighbors have?

Mr. APGAR. How are we going to solve it?

Senator BOND. Yes.

Mr. APGAR. Under our current authority, of course, we are working with the State to make sure the residents are provided appropriate social services. The city has the right of first refusal to purchase the property and do what it can in terms of bringing in affordable housing. We have a decision to make as to whether or not we are going to go the negotiated sales route, in which we would put the property forth for an RFP competition. And, again, that would allow the residents to form a nonprofit group and purchase the property, as was done in many instances.

If it turns out that the property is judged to be too far gone—and this is one of the worst properties in the inventory, probably in the lowest 2 percent in terms of overall physical condition—it may require so much resources that the decision is that it is not able to financially secure a preservation outcome, in which case we may not be able to go that route. And then a sale on the open market is the final and last choice. Believe me, our goal is to preserve every property we can through as many means as we have.

SMALL CITIES PROGRAM

Senator BOND. Mr. Secretary, we will be watching. And let me conclude by saying that last year's appropriations bill transferred the administration of the CDBG Small Cities Program from HUD to New York. I assume the transfer is complete. Could you give me assurances that that is done?

Secretary CUOMO. Yes, sir.

Senator BOND. Thank you.

Now it is with great regret that I leave, turn the gavel over, and call on Senator Leahy to continue the questioning.

NBC REPORT ON HOUSING

Senator LEAHY. Thank you, Mr. Chairman.

I watched with interest the NBC piece. And I rarely ever watch television news, but I seem to recall that one. And I am told that that was actually aired over a year ago and used data from 2 years ago. I assume that there has been a great deal that has gone on in the past 2 years since that. Am I correct that the gross sales price per property has increased over the last year and the average time homes are held in the inventory has decreased?

Secretary CUOMO. Yes, Senator, your observation is exactly correct. First, the piece was dated. Also, the piece was, in our opinion, overly sensationalized. The pictures in that video in no way reflect the HUD inventory. The average home sale for an FHA home is \$70,000. Those were not \$70,000 homes that we were looking at obviously. As a matter of fact, with that NBC piece, some of the homes that have been shown, we did not even own. And we went back and we demonstrated that to NBC.

And NBC corrected, on air, that piece, which was not shown in the video, the NBC correction. But they were fed, obviously, information for different reasons and they were duped, NBC. But they corrected it on air, which, as you can imagine, NBC Network does not easily correct or admit error, but they did off that piece, which was just aired once again.

As I said to Chairman Bond, we have made tremendous progress in this regard, Senator. We have privatized the disposition process. The values have gone up. The time to sell has gone down. We have done what I consider very creative things with the Police Officer Next Door Program, Teacher Next Door Program, and then the 6-month sale or \$1 disposition to the city. You cannot do any more than that. Basically, what you are saying is if it takes us more than 6 months, we are going to give up, forfeit the value of the home, and turn it over to the city.

So I am confident that we are doing just about all we can do with FHA alone. And this piece is in no way representative of where we are. That is not to say the entire situation is going to be remedied. Because the real problem here is not FHA. Senator Mikulski accurately points out that the real problem is predatory lending. And the real problem is fraud in the appraisal process or the lending process or the sale process and victimizing a vulnerable population.

And that issue has to be dealt with, otherwise this is going to be recurring. Because, in some ways, while the piece was unfair to FHA and incorrect to FHA, it is worse than the piece would suggest. Because it is not just FHA, it is private banks all across the country that are falling prey to this predatory lending scheme.

GAO HIGH-RISK LIST

Senator LEAHY. Am I also correct that the GAO is reevaluating HUD's status?

Secretary CUOMO. Deputy?

Mr. RAMIREZ. Yes, sir.

Senator LEAHY. Any indication that the current risk status may change?

Mr. RAMIREZ. Well, as it was mentioned earlier, Mr. Walker, from GAO, has acknowledged that we have made considerable progress. We have addressed the issues that have led the agency to a high-risk designation, and have made credible progress in re-

gard to addressing them, and feel very confident that as a result of our HUD 2020 management reform that, by the end of this year, when the review will be complete and a report will be coming out on all agencies, that we will be prepared to come off this high-risk designation, sir.

Secretary CUOMO. And, Senator, if I might quickly state. There is no doubt that this is a political year and there is political posturing all around. But on the management of HUD, we have come a long way. And GAO, which is always used as the credible source of the criticism—and I have been here for 7 years and I have heard GAO bandied about whenever convenient—GAO says we have made credible progress. They say that we are on the right track from a management point of view and that we have made management progress. And if we can use the GAO to criticize, then we should also use the GAO to confirm.

SMITH & WESSON/HUD AGREEMENT

Senator LEAHY. Let me go into another area that has probably seen some controversy. HUD and Smith & Wesson, you normally do not think of those two in the same sentence, but you have gone into an agreement to provide trigger locks with all firearm sales, requiring authorized dealers to conduct background checks and so on. My understanding is you want to keep the guns out of the hands of criminals, but also we all know how tragically the results are when they get in the hands of unsupervised children.

You and I, Mr. Secretary, are both gun owners. You have young children in your home, and my wife and I now have a young grandchild who comes around. And I think we both know how to keep weapons out of the hands of children and take all the usual steps. Unfortunately, not everybody does.

I just wanted to clarify some confusion, because I got some calls about this from some members of the law enforcement community. They were wondering whether the Federal Government was mandating the purchase of firearms from only those manufacturers that have entered into HUD agreements.

My understanding, and what I have told them, was that HUD is advocating only voluntary preferences to Smith & Wesson or any other firearm manufacturer that adopts similar public safety measures, but the final purchasing decision is still going to be up to State and local law enforcement agencies. Am I correct in that?

Secretary CUOMO. That is exactly right, Senator.

Senator LEAHY. I thought it would be good to clarify that. It is amazing—if I might just take a moment, Senator Mikulski, on this—because I come from the only State in the Union, as near as I can tell, that has no gun control laws, except during deer season we limit the number of rounds in a semiautomatic to give the deer at least a sporting chance.

But we also have a real sense of gun safety in our State, mainly because most of the, or a large percentage, of the households grew up with firearms in the household. But I hear from Vermonters across the political stripe that we have got to do something to have some area of restriction. And most of the gun control measures that have been proposed have been very modest.

We have the juvenile justice bill which Senator Mikulski voted for and I voted for. It passed the Senate, I believe, 73 to 25 last year. And now we are coming up on the anniversary of Columbine and it is still sitting, tied up in a conference committee because the gun lobby has said it cannot come out. And I think that is a mistake.

Again, as a gun owner, I would say, for whatever it is worth, and I have said this in other places, the gun lobby may be making the same mistake it made when it opposed a ban on the sale of cop killer bullets, that they wanted to allow the cop killer bullet sales to continue. A lot of people in law enforcement, a lot of people I worked with when I was a prosecutor, were pretty upset with that. I think a lot of parents are very upset with what is happening now. And I think a lot of parents, you are going to find, are going to agree with the position you have taken with Smith & Wesson.

Thank you.

Secretary CUOMO. Thank you, Senator.

Senator MIKULSKI [presiding]. Thank you, Senator Leahy.

Mr. Secretary, I do want to continue one line of questioning, but, before I do, I am going to say a couple of things. First of all, the President's request is for \$32 billion in a variety of categories that I want you to know I support. And I look forward to working in the appropriations process, as the budget committee goes through its analysis, to do what I can to ensure the integrity and follow through on the President's request.

I think it is an outstanding request and it does go to HUD's core programs. And we can talk about the elderly, HOPE VI, increased section 8's, about those things. And I do not want them, in this conversation, to get overlooked.

Secretary CUOMO. Thank you, Senator.

Senator MIKULSKI. So I want to assure you of that and look forward to working with you and your team on it. Because, under President Clinton's leadership, not only has the HUD budget been restored, but I think innovations in housing have been. So we do not want to have this hearing end without acknowledging the significant efforts there and the reforms, the continuum of care for the homeless, which continue as your signature issue, and so on. So I really do want to say that and acknowledge that for the many people who work with you.

Secretary CUOMO. Thank you very much, Senator.

Senator MIKULSKI. Now, just to continue again on our other conversation related to flipping and FHA disposal. Senator Leahy, in his questions with you, really you were able to cover the ground. But, once again, it is in the macro level. So if you look at all of FHA, all of FHA is a success. But there are these significant Super Fund sites at FHA that need to be contained.

I personally am very enthused about the teacher/cop initiative, in which we can have public servants, often who are on very spartan income for their contribution to the community, often can maybe buy homes in the very neighborhoods we would really enthusiastically welcome their presence in. What I see in my own hometown of Baltimore, we have three kinds of neighborhoods: siege, stress and stable.

By focusing really one set of strategies on siege, hopefully we contain it. But if we focus on stress, which is really what we are talking about here, we want to see them go to stable and not to siege. And the cops and the teachers are just a wonderful tool. We would welcome them in all three of our categories, but, still, a very welcome thing. I look forward to really being an advocate for the teacher and cop program, and I think it is a very innovative one, and also rewards public service and teaching and public safety.

BALTIMORE FHA DEFAULT RATE

Let us go back to the FHA. One, there is the predatory lending issue, but then there is also the regular consumer issue. One of the significant flashing yellow lights in Baltimore has been the tremendous default rate with FHA housing. Over 50 percent of the houses bought in Baltimore have resulted in default on their mortgage payments. Now something is wrong somewhere.

Part of that is the predators, the bums, the scum, that we are really going to go after, both preventive and prosecution. Remember, we have got our two strategies: prevention and prosecution. But I really need either your comments or as part of your overall review here to focus on why there was such a mortgage rate. We are not laggards in Baltimore. We are not a culture that abdicates responsibility. And it is enormously troubling that something is wrong somewhere, when people get into perhaps housing or buying a mortgage that they cannot.

Do you have any comments on that?

SECTION 8 VOUCHERS

Secretary CUOMO. Yes, I do, Senator. And if I might just quickly make a comment on the Senator's first point, which is the overall HUD budget, and clarify for the record a statement that the chairman made that suggested that I said that Senator Mikulski and Congressman Stokes were responsible for a budget that zeroed out vouchers. That was never the case. I never said that and it is not a fact.

The vouchers from 1994 were rescinded by the 1995 Congress. And that is the first time the number of vouchers went to zero. It stayed that way for 4 years, and then we got back into the business. And that is, in my opinion, one of the causes for the backlog of affordable housing today. And I understand the sensitivity when that number keeps going higher and higher and we did so little for that 4-year period. But it was not under your leadership or Congressman Stokes.

BALTIMORE FHA DEFAULT RATE

On the overall default rate, the Assistant Secretary is going to comment on the FHA default rate, but I think you are exactly right, Senator. That is not just a flashing yellow light, that should be a flashing red light and a bell and a gong. Everything should go off. Because that default rate really just shows the total dysfunction of the system.

It is a bad appraiser or a bad appraiser and a bad lender or a bad appraiser and a bad lender and a bad broker. But that higher

default rate says something is not right. It is the calling card of predatory lending, et cetera. It is corruption. And a 50-percent default rate, to me, just is so outrageously high that it is almost hard to imagine that it has been that high a level. But let me ask the Assistant Secretary for his comment, if I might.

Mr. APGAR. Just one point of clarification. There are undoubtedly in the neighborhoods—and we were talking to Mr. Quayle yesterday—where half of the FHA mortgages are in default. And when you factor in the whole city, counting the stable neighborhoods and the like, we are still above the national average.

Senator MIKULSKI. I do not want to hear this.

Mr. APGAR. But let me tell you—

Senator MIKULSKI. I do not want to hear this. I do not want to hear about national averages.

CREDIT WATCH SYSTEM

Mr. APGAR. No, no. I said the rest of the city. The defaults in the city are 11,000 mortgages that are in default. But I agree exactly with what Secretary Cuomo said. And that is why we created our Credit Watch System. When we see areas where the defaults are higher, we see lenders that are higher, we do not go through this lengthy legal process. We bring them in. We ask them to explain what is up. We make sure the data is right. But if they are way out of whack, we terminate them. That is the Credit Watch System.

You know, much to the cheers of the residents of Baltimore, one of our first entities terminated was a Baltimore lender, Capital Mortgage. And that system shows that we can quickly go in and address people who are generating bad loans through defaults. We are also now bringing online this new appraisal reform system where, for the first time, starting on March 1, all the lenders are required to send information to us about their appraisals online. So we can screen the appraisals and get a handle on who the bad appraisers are.

We have kicked 12,000 appraisers off our list. We are stuck with this kind of lender-select, Bonnie and Clyde system. That was what Congress gave us. But we have been doing a whole lot of appraisal reform, saying given that we have to run our system that way, we have, for the first time, testing requirements for all our appraisers and we have the new appraiser guidelines, and we have this new automated appraisal fraud system. So, we are on it.

But there is no excuse in these neighborhoods for these high default rates. You are exactly right.

Secretary CUOMO. And also, Senator, if I may, let me give you one of the reasons why we need legislation. We have this Credit Watch, which says if you are a lender who has a disproportionate default rate, you are out. We had a notoriously bad lender who had a disproportionate default rate. We said, you are out. They went to court and they are still in.

Senator MIKULSKI. Well, let us look at the legislative recommendations. But also there is another aspect here which I would look at, which is buyers needing really to be prepared to enter into home ownership. One of the great successes of welfare reform is when these people move from welfare to work they want to be

homeowners. We heard in our hearing, though, that no one told them about, gee, you have to pay property taxes. And there are just a whole series of other things. There were the gougers and the schemers, but there are people who are buying houses that do not really understand that, because they look at a monthly payment that seems like that is what they are going to pay for the month, until they get in it.

So I do not want to go over repeating the Baltimore hearing. You have the testimony on that. And you will be meeting with this Baltimore ops task force that I think will be very good.

The other thing is I am going to refer you to the fact that GAO and the I.G. found that there were inadequate controls over the real estate assessment management, otherwise known as REAM contractors, and that this had resulted in the deteriorating conditions in HUD properties. I am going to be discussing this with the I.G. in a minute, but I think we really do need to take a better look at that.

The second thing is that in your testimony you said that you hope to have a report to Congress in 8 weeks. We understand that that is not a magic number because we want you to be rigorous and thorough. But we also do not want to process it to death. I think there is the mood of the Congress, the chairman and I, and so on, who want to do it. So I want to discuss with Senator Bond what is the best way to follow up. Should we hold another hearing with you? Should we have a roundtable with you and some others? Should we have a meeting?

We will discuss this with Senator Bond and move on, and then see how we can really have not only just a report filed. Because I do not want a report that goes to the staff and we all look at it, and golly, gee whiz. You know there is a heightened urgency to move our appropriations. We will be moving in June and July. The chairman is committed to moving our bill promptly.

So we want to have whatever we can do through the appropriations there and the opportunity to review authorizing with Senator Gramm and Senator Sarbanes as to what would be appropriate to do through the appropriations process. But promptness, so we do not want to make the perfect the enemy of the good.

Secretary CUOMO. Senator, if I might say, I cannot tell you how excited we are about this opportunity. And we are going to get you the report in 8 weeks, because we do not want to lose this moment. It feels like there is an energy about this moment. Chairman Greenspan has talked about this. There have been numerous newspaper articles about this. And we want to seize the moment, if you will. We want to get you the report in 8 weeks.

We will make a difference to Baltimore. We will also make a difference to the Nation. And with your leadership, Senator, I think we can do some of the best work that we have done over these 4 years this last year. Because this is the problem, in our opinion, that can make a marked difference.

NONPROFITS AND PROPERTY FLIPPING

Senator MIKULSKI. I really thank you for your hands-on approach to this, number one, the attitude and frame of mind to really let us get this done. Number two, I really again appreciate the hands-

on approach that you have taken to that. And I know that you will continue this through the process. Because there are two other issues I am going to bring. As we look at FHA, we really need FHA to approach this and not be defensive and not give you any recommendations that are CYA.

We do not want CYA recommendations and macro this and national that and so on. We know macro and national. While we knew macro and national, we had this rotting in other areas. So we do not want a CYA approach from FHA.

The other concern that I have—and I would like the analysis on this rather than giving my opinion—but I do not want HUD to become a flipper to nonprofits in the city. Nonprofits do not have, often, any more money than the very poor in their own neighborhoods, nor do very strapped city governments have this. So I do not want HUD, FHA, to say, we will cosmetic our own situation and flip it to a nonprofit or flip it to a city that cannot afford to do anything anyway. And a Mayor O'Malley or a Mayor Daley or a Mayor Riordan or other mayors end up holding the inventory with no money to do anything with it again. So let us not become enablers here.

And I believe my concerns are valid; your solutions might be very good. But I think if we are going to turn them over to nonprofits and we are going to turn them over to a city, that nonprofit in that city is going to need to have the money to make the repairs. Because the homes I walked in are in pretty bad shape. And whether that movie was a year old, 2 years old, still, the conditions have validity. I mean the deteriorating conditions.

So let us really think this through, and do not inadvertently create more of a problem, by shifting the problem out of FHA and shifting it to a nonprofit and shifting the problem to a city. So let us be very careful. Because we like to have this nostalgia, oh, let us give it to the community. The community is saying, hey—

Secretary CUOMO. No, thanks. Yes.

Senator MIKULSKI [continuing]. We do not have the resources either. They are busy. I know the three groups over there are always foraging for funds. So we cannot have them foraging for funds just because we are going to unload a problem on them.

Secretary CUOMO. I agree, Senator.

Senator MIKULSKI. I want to thank you. And I think for this situation this concludes my questions.

Senator BOND [presiding]. Thank you very much, Senator Mikulski.

Something toward and unusual happened when I arrived at the budget committee to vote at 11 o'clock. They finally told me they were not going to vote at 11 o'clock. This has never happened before. So, fortunately, I am with us for a few more minutes, until they decide to start the votes.

FNAM/FREDDIE MAC

Changing the subject, Mr. Secretary, recently I sent a letter to Mr. Apgar, the FHA Commissioner, regarding a Washington Post article that attributed statements to him that Fannie Mae and Freddie Mac's underwriting policies are essentially discriminatory

by leaving blacks out at a rate that is disproportionate to other minorities. I am troubled by this statement on several levels.

First, my view and my experience in my State at least, I have seen Fannie Mae and Freddie Mac leaders—being the leaders in fact—in making housing credit available to all people, regardless of race or any other characteristic. And I wondered if that is the view of the Department or if that is only Mr. Apgar's views or whether he was misquoted. Could you clarify the position of the Department on that?

Secretary CUOMO. Yes, Mr. Chairman. I will ask Mr. Apgar to speak to his comments. The Department's position is this. We are the regulators of Fannie Mae and Freddie Mac. They get significant public benefits. Some estimates say that Fannie Mae gets \$6 billion in public benefits. One of the questions is: What does the public get back for their \$6 billion? How many affordable, quote, unquote, loans is Fannie Mae actually doing? And how many is Fannie Mae doing compared to the private banks, commercial banks, that get no subsidy?

You will hear many private bankers who say, look, we are doing more than Fannie Mae does and we are not getting any subsidies. Why is Fannie Mae getting \$6 billion to do less than we are doing as private lenders?

We try to balance all of that out. And we set the affordable housing goals, which are basically the percent that Fannie/Freddie must do to justify their public benefits. We just raised those goals from 42 percent to 50 percent. We did that in cooperation with them.

That will, Mr. Chairman, do more to provide affordable housing than the entire HUD budget combined over the next 10 years. So that is a massive contribution to affordable housing.

But let me refer to Assistant Secretary Apgar to clarify his statement.

Mr. APGAR. Right. And the reason we raised the affordable housing goals is because our analysis—a view which is shared by Fannie Mae—is that they can do more in these market areas.

The particular comment in the Washington Post related to their lending in African-American communities. And our data suggests that Fannie Mae in fact does not lead. This is the same as the Secretary was saying. Their record is not as strong as other lending institutions.

In that very same article that you quoted, Frank Raines himself conceded that point, by saying, Fannie Mae today does not lead in the African-American lending, but we will. Which is the partnership we formed with them in order to expand their lending and to embrace the higher goals.

Now, with respect to discrimination, that relates to issues that the Department is reviewing relative to a totally different set of authorities. We have engaged with Fannie Mae to review their automated underwriting system. This is being done by Gail Laster, our General Counsel and Eva Plaza our Assistant Secretary for Fair Housing and Equal Opportunity.

Again, Fannie Mae has been cooperative in that. It has been a very difficult undertaking, because this involves very complicated software and other things that they believe contain proprietary secrets. So we have set up a separate division to do that in order to

protect the confidentiality of their information. That review is not completed, and I did not comment on that review in the article or anywhere.

The same article pointed out that HUD officials were careful to note that Fannie Mae does not discriminate. And we have no evidence that they did or not. The review is underway. And it is not a review under my control.

Senator BOND. Mr. Apgar, the sense I got from that article was that you had reached the conclusion that they were discriminating.

Mr. APGAR. I did not reach such a conclusion. I reached the conclusion that they were not lending at the same rate as other banks in the area; that approximately 5 percent of all the loans done in the conventional conforming market are made to African-Americans. Fannie Mae, that year that was under review, did 3.2 percent of their business. Freddie Mac was even further behind at 3 percent. And I simply pointed out the fact that they were not serving this community as well as others in the marketplace.

That is the basis. This general need to improve their outreach to a variety of underserved communities is the basis for expanding the affordable housing goals, as the Secretary mentioned.

Secretary CUOMO. Mr. Chairman, if I might comment. I think the difference comes in the inference. It was not Mr. Apgar's statement, as I read the statement. The story did say the conventional lenders, who get no subsidy, are doing about 5 percent to the African-American community. Fannie and Freddie are doing about 3 percent. Why are Fannie and Freddie doing less than the conventional lenders, who are getting no subsidies? You could argue they are doing it through CRA.

And is the reduced amount the result of discrimination is the inference, is the hanging question. But no one at HUD said that. The exact opposite happens to be true. We announced the affordable housing goals cooperatively, and we are doing a fair housing review right now. Currently, we have no conclusion, no outcome, no opinion.

FHA COMMISSIONER'S RESPONSIBILITIES

Senator BOND. The second part of it that concerns me about Mr. Apgar's statement is relating to fair housing and their underwriting policies and business decisions. I think HUD has acknowledged that the FHA, in fact, acts as a competitor to these government-sponsored enterprises. And as a result, since FHA, which is in Mr. Apgar's responsibility, runs a competitor, HUD decided it was necessary to build a firewall, a formal delegation of Mr. Apgar's authority, on all GSE fair housing matters to the Assistant Secretary.

That means that Mr. Apgar should not be reviewing or commenting on information that would reasonably be considered proprietary business information for Fannie Mae and Freddie Mac. So, in a nutshell, what are Mr. Apgar's responsibilities with regard to HUD's regulation of Fannie Mae and Freddie Mac? And what safeguards has HUD put in place to protect Fannie Mae and Freddie Mac's proprietary business information?

Mr. APGAR. I will be happy to answer these questions, but I would like to propose, with your permission, that I enter into the

record the letter that I sent to you just on Monday which gave my full answer to all these questions, which are very similar to the letter that you sent me last week.

Senator BOND. I look forward to receiving it. Thank you.
[The information follows:]

LETTER FROM WILLIAM C. APGAR
DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT,
Washington, DC, March 27, 2000.

Hon. CHRISTOPHER BOND,
*United States Senator,
Washington, DC.*

DEAR SENATOR BOND: Thank you for your letter of March 20, 2000, regarding the level of service that the Government Sponsored Enterprises (GSEs), Fannie Mae and Freddie Mac, provide minority borrowers. As you know, HUD has recently published for comment proposed new affordable housing goals for Fannie Mae and Freddie Mac. While recognizing the progress that both organizations have made in expanding access to capital for low- and moderate-income borrowers and underserved communities, the rule proposes that both entities substantially expand their efforts in these areas. Indeed, both GSEs have broadly endorsed the proposed higher goals and have pledged to expand their affordable housing efforts. Although I have already had the pleasure of briefing your staff on this rule, I would be happy to provide any additional information you request.

Your letter also references a recent Washington Post article which states that, "Apgar and others said that the two companies' policies have had the effect of leaving blacks out at a rate that is disproportionate to other minorities, whether intended or not, and has been a pattern for years." You then say with respect to this quote from the article that "this presumes that these two companies are guilty of discrimination in their housing underwriting policies." I would suggest to you that based upon the facts known today that you should not reach this presumption, as I and others at HUD also have not done. In fact the paragraph in the article you quote from begins by stating that, "HUD officials have been careful, to avoid the word discriminate when talking about the companies' practices because they say that would imply that Fannie Mae and Freddie Mac are purposely denying blacks access to mortgage loans."

First, let me clarify for you that I never said, nor to my knowledge does HUD have any evidence that Fannie Mae and Freddie Mac are acting in a discriminatory manner, nor to my knowledge has HUD charged that the GSEs are operating in a manner that is inconsistent with fair lending laws. Rather, as part of HUD's effort to develop a proposed rule on new affordable housing goals for the GSEs, HUD prepared an assessment of GSE performance in the market place, and an analysis of whether or not the GSEs "lead or lag the market" in their purchases of mortgages from various categories of lending, including lending to particular demographic groups. The Post article presented information from the rule showing that in terms of home purchase and refinance mortgage lending in 1998, both Freddie Mac and Fannie Mae purchases failed to match market rates of lending to minorities, particularly African-Americans. This is factual information which is the basis of HUD's proposed rule requiring the GSEs to be more active in this market sector. It in no way supports the presumption which you have suggested.

Fannie Mae disputes HUD's analysis as it relates to all minority families, but does not dispute the conclusion as it applies to African-Americans. Indeed to Fannie Mae's credit, they recently, announced major new initiatives to significantly increase their outreach to minorities in general, and African-Americans in particular.

Your letter also referenced the fair lending review of the GSEs' automated underwriting systems and requests information on FHA's role in this review. You also state that your concern stems in part from the fact that "FHA is a competitor of these government sponsored enterprises." As you note, Secretary Cuomo has delegated to the Assistant Secretary for Fair Housing and Equal Opportunity the authority to review Fannie Mae's and Freddie Mac's underwriting and appraisal guidelines, including its automated underwriting systems. And as you note, HUD has augmented its usual safeguards by establishing internal protocols and "firewalls" to protect the confidential business and/or proprietary information that may be provided by the GSEs. These firewalls are as thorough and complete as both Fannie Mae and Freddie Mac required. Indeed, neither Fannie Mae or Freddie Mac would turn confidential business and/or proprietary data over to HUD until the Depart-

ment had agreed in writing to the GSEs' respective satisfaction that these "firewalls" were in place and effective. HUD is committed to maintaining these safeguards in accordance with our agreements.

Your letter does not distinguish (as I do), my role in monitoring GSE progress in meeting their obligations under the affordable housing goals, and the equally important, yet clearly separate, obligations of other HUD officials in the area of fair lending and fair housing. At no time have I made public statements, concerning any of the details of the Department's review of underwriting and appraisal guidelines, other than to state that this review is underway. Nor do I have access to any proprietary or confidential information received by the Department as part of this review.

In contrast, my public statements concerning the GSEs performance focused on market analysis completed as part of the development of the affordable housing goals rule. In establishing these goals, among other things, I am required by law to consider national housing needs; economic, housing, and demographic conditions; the ability of the GSEs to lead the market in making mortgage credit available to low- and moderate-income families, very low-income families, and families in areas underserved by mortgage credit. Accordingly, I am responsible for taking into account the housing needs of minorities in relation to any shortfall in the GSEs' performance in the purchase of mortgages made to African-Americans, Hispanics or other minorities.

Next, I would like to reassure you that FHA is not a competitor of Fannie Mae and Freddie Mac. The GSEs provide liquidity and stability in the mortgage market, by purchasing and holding loans originated by private lenders. In contrast, the FHA provides mortgage insurance to millions of families not able to obtain financing in the private market. FHA has an important public mission which is a complimentary relationship with the GSEs, not a competitive one. The Congressional plan for addressing the Nation's housing needs is that both FHA and the GSEs should work side by side in helping more Americans realize the dream of homeownership. The ongoing partnership between FHA and both Freddie Mac and Fannie Mae to develop and deploy automated underwriting systems for FHA loans is a good example of the benefits of cooperation between FHA and the GSEs.

Finally, you request information on HUD's effort "to ensure consumers have full information about how mortgage decisions are made by the GSEs." In a speech last fall at the University of Virginia, Secretary Cuomo challenged the mortgage industry to "demystify" the homebuying process by helping consumers better understand the decision making process. At the same time, he said that FHA should lead by example. As a result, FHA is now developing new tools designated to increase the transparency of the FHA's underwriting process.

The Secretary's speech was widely hailed by all segments of the mortgage industry, including the GSEs. Indeed, in January, Fannie Mae announced its own plans to expand consumer information about their underwriting systems. More recently, they have pledged to develop underwriting systems that are not dependent on FICO scores, a proprietary credit scoring system that has been over the years the source of considerable concern among housing advocates.

My comments on this topic simply reflect my own belief in the importance of expanding consumer knowledge and information about the homebuying process. As you know, HUD has requested expanded funding for our Homebuying Counseling Initiative in our fiscal year 2001 budget request to your Committee, a request that I trust you will support. I believe in the power of consumer information and education. Despite your statements to the contrary, I never said that I intended to "force" disclosure of trade secrets of the GSEs. As noted earlier, HUD has detailed procedures in effect, procedures that were formulated after extensive conversation with the GSEs, to protect any proprietary or confidential information received as part of HUD's regulatory responsibilities.

In closing, let me once again thank you for your interest in the GSE affordable housing goals and the equally important effort to assure that the GSEs adhere to applicable fair housing and fair lending requirements. I stand ready, along with my HUD colleagues, to provide you or your staff any additional information you request.

Sincerely,

WILLIAM C. APGAR,
Assistant Secretary for Housing-Federal Housing Commissioner.

FNMA AND FREDDIE MAC PROPRIETARY INFORMATION

As Congress continues its deliberations in the development of the fiscal year 2001 Budget for the U.S. Department of Housing and Urban Development (HUD), I would like to express my ongoing willingness to be of assistance during this impor-

tant stage of the legislative process. As you know, HUD continues to make great strides in meeting our mutually shared goal of helping to build stronger American communities. Over the past several years, HUD has made significant progress in implementing key management reforms contained in the HUD 2020 Reform Plan and in providing states and localities with much-needed assistance for affordable housing and economic development activities.

There is much good news on the state of the nation's housing and job markets. A total of \$70.7 million American families owned their own homes in the first quarter of this year—more than at any time in our history—raising the nation's home ownership rate to an all-time high of 67.1 percent. In addition, the nation's economic expansion—the longest period of peacetime economic growth in U.S. history—continues to create new jobs and economic opportunities at a steady pace.

Despite these encouraging trends, there is still a tremendous need for targeted federal investments, particularly for communities that have not fully benefited from the nation's unprecedented economic growth. For instance, HUD's latest estimates place the number of very-low income renters with worst case needs for housing assistance at a record-high 5.4 million families. These very low-income families are either paying more than half their incomes for rent or are living in severely substandard conditions. In addition, a recent study conducted by the Urban Institute underlines the need for continued assistance to combat homelessness. According to this study, between 2.3 million to 3.5 million Americans are likely to become homeless at some point each year, including 900,000 to 1.35 million children. These are but a few examples of why HUD's role will be as vital as ever for the families and communities that have been left behind.

I believe the subcommittee hearings conducted earlier this year on the status of the President's fiscal year 2001 budget proposal resulted in a constructive dialogue and raised important issues for improving Federal efforts to expand affordable housing and spur the creation of new jobs and economic development opportunities. What emerged from our discussions was a clear consensus on the importance of HUD's mission to serve at-risk families and communities. Since then, I have worked diligently to see that the particular issues of mutual concern that were raised during these hearings are addressed in a timely and effective manner. We have continued our efforts to transform public housing, to combat homelessness and to improve the operation of key HUD programs such as the HOME block grant, the Housing for Persons With AIDS (HOPWA), and the Section 202 Housing for the Elderly and Section 811 Housing for the Disabled programs.

In addition, HUD has moved swiftly to address other critical housing issues such as predatory lending and the impact of deceptive and unfair lending practices in specific neighborhoods. The Joint Task Force, convened by HUD and the Department of Treasury has held the second in a series of regional forums on this important issue. The Task Force plans to release a comprehensive report and a list of recommendations for possible legislative proposals to ensure that the scourge of predatory lending, which has impacted too many of the nation's elderly, low-income families, and at-risk communities, is stopped.

I look forward to continuing to work together to strengthen American communities and families through sensible government reforms and investments in affordable housing and economic development activities. As always, please do not hesitate to contact me if I can be of further assistance.

Mr. APGAR. I hope you have received it, since we faxed it on Monday. But, if not, we will make sure that you see a copy of it.

Let me just start off by saying that it is our opinion that FHA is not a competitor in the sense that you describe it. FHA is mortgage insurance. We operate in the primary market. Fannie Mae is a secondary market actor. It provides liquidity and stability to the secondary market. So we are in different businesses. So we do not compete. In fact, Fannie Mae could purchase FHA mortgages, and they are doing so today. So we are in different businesses.

We do have this interest in automated underwriting, which is central to some of their proprietary interests. We are developing our own system. In fact, we are developing our system to move us beyond where we started. Fannie Mae and Freddie Mac, together, helped us get our first automated systems up and running, and now we are developing our own.

In order to make sure that our work in providing our own development of our automated underwriting systems in no way benefitted or in no way let information from the automated underwriting review move out into the broad universe of people concerned about these matters, I was asked not to participate, and be firewalled off from that automated underwriting review that is happening on the fair housing side.

With respect to the firewalls, all I can say about that is there was extensive negotiations with Fannie Mae and Freddie Mac about the firewalls. And based on that information, they were able and willing to send over to the Department literally thousands and thousands of records of data. Fannie Mae I think came to the conclusion that the firewalls were sufficiently rigorous—and we can get you more on that if you would like—that they were comfortable with going through in the process of reviewing the loans. So that is the best I can say. They have signed off on the firewalls and I think they are effective.

Secretary CUOMO. Mr. Chairman, this was somewhat puzzling. Fannie Mae requested, in essence, the firewalls. Because they wanted to make sure, when they were providing their information for this fair housing review, that there was no advantage to FHA, which was also developing something called an automated underwriting system, where they have secret recipes, we call them, secret formulas. So we created the firewalls at Fannie Mae's request essentially. They were satisfied. They sent over the information. We are now reviewing the information.

So I do not understand why they would have a problem with the firewalls which they requested.

Senator BOND. I think the question was whether those firewalls were being implemented.

Secretary CUOMO. They are.

Senator BOND. And that is the question that was raised by the comments I saw from Mr. Apgar. But let me ask another question.

Mr. APGAR. The part about my authorities, of course, in terms of monitoring the GSE goals, commenting on their performance with respect to underserved communities is central to my role as the person involved in the goal-setting operation. Making comments about different demographic groups, different racial groups, how they are faring in the marketplace is essential.

As a matter of fact, our rule, which is now under public comment, has extensive comments on how Fannie Mae and Freddie Mac's lending is doing in low-income communities generally, in Hispanic communities, in African-American communities, in all types of communities. That is a congressionally mandated obligation of us as we put forth these goals, to look at different market conditions, to look at different demographic groups. So my comments were well within my authority in the goal-setting and had nothing to do with the issues relating to the automated underwriting review. And again, I do not understand why there would be confusion over my role and comments as a goal-setter in the affordable housing arena.

MARK-TO-MARKET

Senator BOND. Mr. Secretary, let me ask you one last question before turning it back over to Senator Mikulski again. We appreciated your statement that you acknowledge that the mark-to-market legislation we worked on over 2 years ago was a need corrective to a serious situation. In this body, though, sometimes we forget that passing a law is just the first step and that implementing the law is often a bigger challenge. One of the complaints that we have heard about HUD's implementation of the program has been the failure to use fully the housing finance agencies in administering the program as intended by Congress.

I know there have been numerous disputes about compensation, conflict of interest requirements, and perhaps most troubling, is the objection to the prescriptive nature of the program that HUD has designed. Finally, I understand that not one mortgage has undergone a complete restructuring yet. That means that a significant amount of section 8 savings that we had previously anticipated have not yet been realized.

What is the status on this? And has HUD fully complied with the letter and the intent of the law?

Secretary CUOMO. Yes, Mr. Chairman. As you rightly pointed out, this section 8 crisis—the chairman was referring in his opening comments by the loss of units—I think one of the greatest challenges we faced were these expiring section 8 contracts, and still today. The mark-to-market was a way to deal with it. And Mr. Peppercorn is here. He is the Director of the unit called OMHAR that does that.

This is, as the chairman pointed out, a very difficult transaction in general, because you are trying to renegotiate. But I believe we have made more progress than the chairman's comment would suggest. And I would ask Mr. Peppercorn to give you the updated information. I believe we have about \$60 million in savings.

Senator BOND. If we could make that very brief. I just want to know the overview. If you could do that in less than 60 seconds.

Mr. PEPPERCORN. I certainly will. To your first point, I have a copy of the GAO report with me which actually says that what we did in terms of the negotiations with State and local agencies was absolutely within the statutory requirements. In terms of what we have completed, I will not go into too much of the technical details, but there are actually 122 transactions that have been approved by OMHAR.

These are what are called LITES. They are not restructurings. They are rent reductions without restructurings. The estimated savings will be \$215 million. The discounted savings over 20 years are \$128 million, against \$12.2 million that we have spent. In other words, we are saving money at a rate, once fully implemented, at ten and a half times the cost of doing the deals.

Senator BOND. Thank you very much. And we will follow up with you on those.

Now I turn the questioning back to Senator Mikulski.

Senator MIKULSKI. Mr. Chairman, I have really concluded my questions for this phase. I think we now move on to the implementation of the excellent methodology presented by the Secretary. Mr.

Chairman, the Secretary wants to and is going to move as promptly as he can on these national and Baltimore laboratory task forces, and hopes to have something for us in the 8-week, roughly, period. And I would like to then discuss with you whether you would want to hold another hearing on this or a roundtable or just meet with the Secretary.

Senator BOND. Let us see what the schedule is. We may be asked to move more quickly. We still have a number of hearings in the other agencies in this committee.

Senator MIKULSKI. Why do not you and I talk.

Senator BOND. We will discuss this and see whether we can take care of all of our responsibilities and come back to a hearing on this.

Senator MIKULSKI. But I hope you would concur that when the Secretary finishes his analysis that we really have a face-to-face conversation with him, using whatever is appropriate to our schedule.

Senator BOND. We will, yes.

Senator MIKULSKI. I have advised the Secretary that both Senator Stevens and Senator Byrd have instructed us to move it in terms of moving your bill to the floor in June.

Senator BOND. And we may have to do a truncated version of a hearing to get that done or just set up a meeting.

Senator MIKULSKI. To see how to go, okay.

Senator BOND. Yes, we will hold that open and work with you.

Senator MIKULSKI. Thank you very much, Mr. Secretary. We look forward to working with you, both on this despicable situation that we find ourselves in, but also on the HUD core programs that I believe are working very well and empowering the poor.

SINGLE-FAMILY FORECLOSURES

Secretary CUOMO. Thank you very much. Thank you, Senator, again. We are excited by the opportunity that you have given us to resolve a national problem. Thank you.

Senator BOND. Mr. Secretary, while the FHA Mutual Mortgage Insurance Fund is presently in good shape, FHA's inventory of single-family homes that HUD has foreclosed on and taken ownership of has more than doubled under your tenure, from 24,000 homes in 1996 to over 47,000 homes currently, despite the fact that this subcommittee has provided significant new tools, including a single-family property disposition program as part of the VA-HUD fiscal year 1999 bill to move the housing into the hands of nonprofits and homeowners. Why the big increase and why have we not seen a decrease in the inventory?

NBC CORRECTION TO REPORT ON HOUSING

Secretary CUOMO. Thank you very much, Mr. Chairman. First, as I just mentioned when you were out of the room, the NBC video piece which you showed is dated and slightly misleading. NBC actually ran a correction on the air about that piece, because there were factual errors in the NBC piece. And you can imagine how hard it is to get a network to run a correction. They do not do that easily, I trust. So there were serious flaws in that piece.

There is no doubt that the long-term HUD problem has been this so-called aged inventory and moving those properties. It is the challenge of any real estate organization, public or private. We have made significant progress. The reason we have more homes is we are doing many more loans. The whole FHA business has gone through the roof. So we are also having more foreclosures.

But, as I mentioned, the radical privatization which changed the entire way we did business is starting to show the positive effect. The average resale is up. The average time of sale is down. And we are now solidly in keeping with the rest of the market. I will ask Commissioner Apgar to respond to your specific point.

Mr. APGAR. Right. The buildup of the inventory has a couple of factors. First of all, we came to the conclusion that our HUD process, the private sector process, just was not able to be up to the task. That is why we brought in the private sector contracts. We had built up from 24,000 to almost 42,000. And many of those homes had no work being done on them, in the sense that they were not appraised, they were not ready for sale.

We brought the new contractors in. There was a period of transition. And for the last 6 months, the inventory has been coming down steadily. As a matter of fact, today we have almost half of those homes that you mentioned in the inventory under contract. Somebody is there waiting to close in the next week or two to buy them. The number of FHA homes we have available for sale—that means are not under contract—is actually down over a year ago and is falling rapidly because of the new private sector contractors.

Secretary CUOMO. And one of the problems, if I might quickly say, Mr. Chairman, when we went to the privatization, one of the contractors who we selected defrauded us. A company called In-Town. And that has caused us operational problems that we are working through. We are bringing action against In-Town. But one of those contractors who we privatized to did misperform, did mislead us. We believe we have a legal action. But that has caused a delay.

Senator BOND. Mr. Secretary, I understand that before the privatization of FHA management and disposition, the average loss on the sale of one of these houses was \$31,872. After the new program was implemented, I am advised that the loss has increased slightly, to \$31,940. Is this a widespread problem? Are we losing more money under this privatization concept?

Secretary CUOMO. I have not heard those numbers, Mr. Chairman. But between HUD being in the real estate business and managing its own properties and privatizing it, the privatization is clearly a much better course of conduct. This committee made that suggestion to us years ago, and they were correct. We should not be boarding up buildings and cutting lawns and doing the resale whenever you can privatize the function. That is much of the advice that I got from this committee.

Mr. APGAR. Yes, I believe the numbers you are referring to relate to an Inspector General audit of this matter. We were unable to replicate their methodology. Our own statistics suggest that, in fact, our recovery rates are up prior to the contract versus now. We are recovering about \$4,500 more per home. When you multiply that times the 60,000 homes we signed onto the new contracting

process, that returns over \$260 million of savings. So we are saving money by selling the homes faster and at a higher price, as Secretary Cuomo mentioned.

Senator BOND. Mr. Secretary and Mr. Apgar, my apologies again. That is my master's voice calling, and I will turn it back over to Senator Mikulski.

Secretary CUOMO. That is an important vote for all of us. Vote twice, Mr. Chairman.

Senator BOND. Early and often.

Senator MIKULSKI [presiding]. We are back to the good news.

Secretary CUOMO. That is right.

HOUSING FOR FIREFIGHTERS

Senator MIKULSKI. Mr. Secretary, I think that concludes my questions. I think we have had a very rigorous and thorough hearing. We look forward to the implementation of your methodology and ongoing conversations on the other aspects of the HUD budget.

One of the things I would like you to ponder for when we talk again—let us go to the teacher/cop program that I know we are mutually bullish on—would you think about expanding the part also to firefighters? Because if we think about teachers, cops and firefighters in a community, that is really wonderful community leadership and so on. Because both are involved in public safety. And our firefighters risk their lives every day. They truly are on the line of fire—no pun intended. And their compensation is often quite modest.

Secretary CUOMO. Senator, as this is an appropriations hearing, I think HUD is going to do a little appropriating of many good ideas—this idea of the firemen next door program, I think I now hear it being called. We had a meeting yesterday with Mr. Quayle, who had some good ideas. We are going to appropriate those also. So, yes, there is a lot we can do together. And I think the firemen next door program has a nice ring to it.

IG EFFORTS IN HOUSING FRAUD

Senator MIKULSKI. Thank you very much. This phase of the hearing is concluded and we look forward to working with you.

We now turn to the HUD I.G., Ms. Gaffney. Thank you very much.

Secretary CUOMO. Thank you very much. Thank you for having us.

Senator MIKULSKI. Ms. Gaffney is next. Could I have some order here. I know the enthusiasm you all want to share with each other. We can do that out in the hall.

I understand Ms. Gaffney is not scheduled to testify formally. But, Ms. Gaffney, would you take the witness table, because I would like to say a few things, please.

Anybody who would wish to be enthusiastic in their conversation, we love enthusiasm, but we need to hear the witness.

Ms. Gaffney, first of all, I know you are not prepared to give testimony.

Ms. GAFFNEY. No, Senator.

Senator MIKULSKI. But I would like to just review a few things with you, if I might.

Ms. GAFFNEY. Please.

Senator MIKULSKI. First of all, thank you, thank you. I know that, on a bipartisan and a bicameral basis, we appropriated \$18 million to the HUD I.G. for their to be respective HUD I.G. audits in key cities. I know you caught a lot of grief over that. And that was a melancholy situation in which accusations to both you, against you, and also the members of the House were unfounded.

It is my observation that the HUD I.G.'s office and that appropriations of funds, along with many other things that you have identified, led to really significant work on this predatory lending. Am I correct in that?

Ms. GAFFNEY. You are correct.

Senator MIKULSKI. And I know that there are ongoing investigations. I will not ask about those. It would not be appropriate to ask about them. But the task force, under the aegis of the Baltimore U.S. Attorney, has apprised me of your work—meaning your team's work—and we really want to thank you for the housing fraud initiative in uncovering these flipping issues and also the issues related to FHA disposal, which are not criminal.

So we have got two areas that we are looking at, and we invite, as we move along with the Secretary's methodology, your advice and insights. I have got your letter to me in response to my questions.

And there are two issues that I am deeply concerned about. One, how we can prevent predatory lending and any insights you have on preventing well-intentioned people getting in over their head and thus contributing to the default rate of FHA. But predatory lending is the number one issue. So we welcome your insights that will come out of your task force work on what we can do to prevent this virus, and essentially giving too many Bonnie and Clydes too many opportunities to rob the taxpayer and gouge the poor.

The other is what we would call the prosecution part. And whatever tools the I.G. needs to continue their housing fraud initiative, the committee would like to be aware of, to be able to continue investigations and work with appropriate law enforcement for both investigation, which will, for those that are criminals, lead to indictments and prosecutions. I must say that your presence and the vigorous response by the U.S. Attorney in Baltimore, and other U.S. Attorneys, and the acknowledgement of that—not going into the details of investigation—by the press has already had a chilling effect on the flippers.

Because, you see, they know you are coming. They know the FBI is coming. They know the postal inspectors coming. They know the HUD I.G. is coming. Really, it is like Silverado, with you coming over the hills. And the fact that they know that you are coming, you—literally, you, meaning the HUD I.G.—but the full muscular, vigorous weight of the Federal law enforcement coming after the flippers and the chain of gougers who are committing criminal offenses has had a chilling effect. Because they know prosecutions could very well lead to convictions. And as you know, under our current Federal statutes, these would be sentences without parole.

So for all those white collar criminals, we have already said, if you are a flipper, pack it up and go away, because we are coming and we are here to stay. And if you are thinking about being a flip-

per, do not even go there, because we are coming, all of us are coming.

So I want to thank you for the professionalism of your team. I think, for all the pretty vitriolic criticism directed at you in some local quarters, I think both you, the work of the housing fraud initiative and your vigorous team, I think you have truly been vindicated. And today I think the beginning results speak for themselves.

So I would like to thank you for staying the course and bringing us such a professional team to our own community and many other communities.

Ms. GAFFNEY. Thank you so much.

Senator MIKULSKI. So we look forward to hearing from you what other tools, financial or whatever, to be able to continue to stay the course on the housing fraud initiative. And I am going to wrap up by saying we are here.

Ms. GAFFNEY. Okay.

ADDITIONAL COMMITTEE QUESTIONS

Senator MIKULSKI. We are here. We are going to stay here. This is directed at the gougers. We are here and we are going to stay here until you go away.

Ms. GAFFNEY. We will be there, too.

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

QUESTIONS SUBMITTED BY SENATOR CHRISTOPHER S. BOND

DISCRIMINATION IN NEWSPAPER ADVERTISING

Question. Mr. Secretary, it has come to my attention that a number of newspapers have been subject to risk of fine or other penalty under the Fair Housing Act in cases where a newspaper may have run an advertisement that is later determined to have a discriminatory effect. Several news organizations have raised concerns that they want to do the right thing but that there are no set or established standards. It has also been suggested that a better approach would be to allow notification to newspapers where there is an issue of discrimination and then allow the newspaper an opportunity to remedy the issue before there is a risk of penalty. This would promote dialogue on issues of discrimination, protect innocent parties and allow for the development of standards that everyone could rely upon. How would you look at this type of system as a way to promote dialogue rather than litigation and what steps would HUD be willing to make to implement such a system?

Answer. Typically, the complaints HUD receives regarding allegedly discriminatory advertising come from private parties who allege that such advertising has resulted in lost housing opportunity. HUD, itself, has not initiated such a case in over 5 years. When HUD receives a case from a person who alleges an advertisement is discriminatory and has caused that person harm, HUD, as a neutral fact-finder, must investigate the complaint. The HUD administrative process, however, affords the parties the opportunity to resolve the matter before HUD makes a determination on whether discrimination has occurred. HUD participates in that process and assists the parties in arriving at a reasonable resolution. Parties have resolved matters alleging discriminatory advertising with the publisher agreeing to cease publication of the subject advertisement.

Individuals also have a private right of action under the Fair Housing Act. HUD is not involved in cases filed directly in court. HUD, however, has provided guidance on how it believes the Act's provisions regarding advertising should be interpreted. This guidance provides a reasonable common sense approach. It recognizes that advertisers and publishers are in very different circumstances. At one time, there was much misinformation circulating among the housing industry and newspaper publishers. For example, there was a belief that the Fair Housing Act prohibited the use of certain words and phrases that a common-sense reading of the Act or the

pertinent case law would not have supported. We put out guidance and wrote letters to individual parties to clarify our interpretation of the law, which we understood addressed most concerns. That guidance is attached.

HUD is open to further discussion on how to promote common-sense enforcement of the Act's advertising provisions. HUD already notifies parties of alleged violations prior to taking enforcement action, and there is nothing which prevents a private party from contacting a person who has published a discriminatory advertisement before taking legal action.

ATTACHMENT

MEMORANDUM FOR: FHEO Office Directors, Enforcement Directors, Staff, Office of Investigations, Field Assistant General Counsel
 FROM: Roberta Achtenberg, Assistant Secretary for Fair Housing and Equal Opportunity,
 SUBJECT: Guidance Regarding Advertisements Under § 804(c) of the Fair Housing Act

The purpose of this memorandum is to provide guidance on the procedures for the acceptance and investigation of allegations of discrimination under Section 804(c) of the Fair Housing Act (the Act) involving the publication of real estate advertisements.¹

Recently, the number of inquiries involving whether or not potential violations of the Act occur through use of certain words or phrases has increased, and these issues cannot, in some situations, be answered by referring to decided cases alone. In some circumstances, the Advertising Guidelines, published at 24 C.F.R. Part 109, have been interpreted (usually by persons outside of HUD) to extend the liability for advertisements to circumstances which are unreasonable.

This guidance is meant to advise you of the Department's position on several of these issues.

Previous guidance already requires that Intake staff review a potential complaint, gather preliminary information to ascertain whether the complaint states a claim under the Act, and consult with counsel on any legally questionable matters before the complaint is filed. Likewise, jurisdictional issues such as standing and timeliness should also be established prior to filing.

If the Advertising Guidelines, this memorandum, or a judicial decision clearly indicate that the language used in the advertisement is a potential violation of Section 804(c) and the criteria for establishing jurisdiction are met, the complaint should be filed and processed. Any complaint concerning an advertisement which requires an assessment of whether the usage of particular words or phrases in context is discriminatory, requires the approval of Headquarters FHEO before a complaint is filed. If the advertisement appears to be discriminatory, but the Advertising Guidelines, this memorandum, or a judicial decision do not explicitly address the language in question, supervisory staff must also obtain approval of Headquarters FHEO before the complaint is filed. Potential complaints regarding advertisements which do not meet the above descriptions should not be filed.

Where there is a question about whether a particular real estate advertising complaint should be filed, relevant information regarding the factual and/or legal issues involved in the complaint should be gathered, and counsel should be consulted prior to contacting the potential respondent publisher. The matter should then be referred to the Office of Investigations for review. Such referrals may take the form of a short memo, reciting the applicable advertisement language, and any factual or legal analysis which is appropriate.

Section 804(c) of the Act prohibits the making, printing and publishing of advertisements which state a preference, limitation or discrimination on the basis of race, color, religion, sex, handicap, familial status, or national origin. The prohibition applies to publishers, such as newspapers and directories, as well as to persons and entities who place real estate advertisements. It also applies to advertisements where the underlying property may be exempt from the provisions of the Act, but where the advertisement itself violates the Act. See 42 U.S.C. 3603(b).

Publishers and advertisers are responsible under the Act for making, printing, or publishing an advertisement that violates the Act on its face. Thus, they should not publish or cause to be published an advertisement that on its face expresses a preference, limitation or discrimination on the basis of race, color, religion, sex, handicap, familial status, or national origin. To the extent that either the Advertising

¹This memorandum does not address fair housing issues associated with the publication of advertisements containing human models, and does not address 804(c) liability for making discriminatory statements.

Guidelines or the case law do not state that particular terms, or phrases (or closely comparable terms) may violate the Act, a publisher is not liable under the Act for advertisements which, in the context of the usage in a particular advertisement, might indicate a preference, limitation or discrimination, but where such a preference is not readily apparent to an ordinary reader. Therefore, complaints will not be accepted against publishers concerning advertisements where the language might or might not be viewed as being used in a discriminatory context.

For example, Intake staff should not accept a complaint against a newspaper for running an advertisement which includes the phrase female roommate wanted because the advertisement does not indicate whether the requirements for the shared living exception have been met. Publishers can rely on the representations of the individual placing the ad that shared living arrangements apply to the property in question. Persons placing such advertisements, however, are responsible for satisfying the conditions for the exemption. Thus, an ad for a female roommate could result in liability for the person placing the ad if the housing being advertised is actually a separate dwelling unit without shared living spaces. See 24 CFR 109.20.

Similarly, Intake staff should not file a familial status complaint against a publisher of an advertisement if the advertisement indicates on its face that it is housing for older persons. While an owner-respondent may be held responsible for running an advertisement indicating an exclusion of families with children if his or her property does not meet the "housing for older persons" exemption, a publisher is entitled to rely on the owner's assurance that the property is exempt.

The following is policy guidance on certain advertising issues which have arisen recently. We are currently reviewing past guidance from this office and from the Office of General Counsel and will update our guidance as appropriate.

1. *Race, color, national origin.*—Real estate advertisements should state no discriminatory preference or limitation on account of race, color, or national origin. Use of words describing the housing, the current or potential residents, or the neighbors or neighborhood in racial or ethnic terms (i.e., white family home, no Irish) will create liability under this section.

However, advertisements which are facially neutral will not create liability. Thus, complaints over use of phrases such as master bedroom, rare find, or desirable neighborhood should not be filed.

2. *Religion.*—Advertisements should not contain an explicit preference, limitation or discrimination on account of religion (i.e., no Jews, Christian home). Advertisements which use the legal name of an entity which contains a religious reference (for example, Roselawn Catholic Home), or those which contain a religious symbol, (such as a cross), standing alone, may indicate a religious preference. However, if such an advertisement includes a disclaimer (such as the statement "This Home does not discriminate on the basis of race, color, religion, national origin, sex, handicap or familial status") it will not violate the Act. Advertisements containing descriptions of properties (apartment complex with chapel), or services (kosher meals available) do not on their face state a preference for persons likely to make use of those facilities, and are not violations of the Act.

The use of secularized terms or symbols relating to religious holidays such as Santa Claus, Easter Bunny, or St. Valentine's Day images, or phrases such as "Merry Christmas", "Happy Easter", or the like does not constitute a violation of the Act.

3. *Sex.*—Advertisements for single family dwellings or separate units in a multi-family dwelling should contain no explicit preference, limitation or discrimination based on sex. Use of the term master bedroom does not constitute a violation of either the sex discrimination provisions or the race discrimination provisions. Terms such as "mother-in-law suite" and "bachelor apartment" are commonly used as physical descriptions of housing units and do not violate the Act.

4. *Handicap.*—Real estate advertisements should not contain explicit exclusions, limitations, or other indications of discrimination based on handicap (i.e., no wheelchairs). Advertisements containing descriptions of properties (great view, fourth-floor walk-up, walk-in closets), services or facilities (jogging trails), or neighborhoods (walk to bus-stop) do not violate the Act. Advertisements describing the conduct required of residents ("non-smoking", "sober") do not violate the Act. Advertisements containing descriptions of accessibility features are lawful (wheelchair ramp).

5. *Familial status.*—Advertisements may not state an explicit preference, limitation or discrimination based on familial status. Advertisements may not contain limitations on the number or ages of children, or state a preference for adults, couples or singles. Advertisements describing the properties (two bedroom, cozy, family room), services and facilities (no bicycles allowed) or neighborhoods (quiet streets) are not facially discriminatory and do not violate the Act.

Please contact Sara K. Pratt, Director, Office of Investigations or Susan Forward, Deputy Assistant Secretary for Enforcement and Investigations, for further information.

SECTION 8 FAIR SHARE VOUCHERS

Question. Mr. Secretary, HUD recently published on March 10th the regulations that will govern the award of fair share vouchers. How do these requirements differ from how HUD used to award fair share vouchers?

Answer. In order to underscore the importance the Department places upon effective and efficient management of the Section 8 programs by Public Housing Authorities (PHA), the fiscal year 2000 Notice of Fund Availability (NOFA) established more stringent threshold requirements that PHAs with an existing program must meet in order to be eligible to submit an application. These threshold requirements are a prerequisite to a PHA reaching the review stage where its application would then be rated under the NOFA's rating criteria. Examples of the more stringent threshold requirements in fiscal year 2000 NOFA versus the "fair share" NOFA in 1994 include an increase in the required certificate and voucher lease-up rate from 85 percent to 90 percent, and automatic disqualification of the application if the applicant has been debarred. With this lone exception, the fiscal year 2000 NOFA, as amended on May 18, 2000, is substantially similar to the last "fair share" NOFA published in fiscal year 1994.

Question. How were these new regulations and requirements developed and what is the reason for any differences from prior requirements?

Answer. The more stringent threshold requirements imposed in this year's Notice of Fund Availability (NOFA) arise from the Department's continuing oversight and experience with the program, and concerns noted by both the Department and the Congress regarding the incidence of Public Housing Authority (PHA) program under-utilization. As noted above, the fiscal year 2000 NOFA closely adheres to the 1994 "fair share" NOFA.

Question. In particular, we understand that this new award formula has reduced the emphasis on "need" as a criteria for making an allocation of incremental vouchers. Were outside comments collected and considered, and if so, to what extent?

Answer. "Housing needs" in this year's Notice of Fund Availability (NOFA), as amended, are afforded the same weight as the fiscal year 1994 Fair Share NOFA. This weighting was increased in the May 18th NOFA amendment to parity with the 1994 NOFA as a result of comments received from Congressional representatives, Public Housing Authorities (PHA), and an organization representing PHAs.

Question. Also, please provide a chart of the proposed allocation under the new regulations as compared to the last 3 years in which the previous fair share requirements were used?

Answer. A comparison of the fiscal year 2000 fair share distribution with the most recent three fair share distributions is provided for your information as requested. During 1992-1994, the fair share funds were allocated to each of the field offices where the application review and selection process was conducted. Starting in fiscal year 1999, this process is centralized in the Grant Management Center and the available funds are now fair shared to the HUD State offices for suballocation.

SECTION 8 ALLOCATION

INCREASED HUD INVENTORY OF SINGLE FAMILY FORECLOSED PROPERTY

Question. While the FHA Mutual Mortgage Insurance Fund is presently in good financial condition, FHA's inventory of single family homes that HUD has foreclosed on and taken ownership of has more than doubled under your tenure from 24,395 homes in 1996 to over 47,000 homes currently, despite the fact that this sub-

committee has provided significant new tools, including a Single Family Property Disposition program as part of the VA/HUD fiscal year 1999 Bill, to move this housing into the hands of non-profits and homeowner.

Answer. HUD has in fact reduced the rate at which it acquires foreclosed properties (a 7 percent decline over last fiscal year). This drop reflects both an improved economy, enhancements to the Department's underwriting standards, and the very positive effect of HUD's explosive loss mitigation program, which supports foreclosure avoidance actions by borrowers and lenders.

There is no doubt that poor housing market conditions in the late-1990s adversely impacted many homeowners, especially the lower income families which FHA serves. The increase in defaults, foreclosures and new HUD home acquisitions in the late-1990s was similar to a trend in the late-1980s, when HUD's inventory of foreclosed homes increased from 26,000 in 1985 to 54,000 in 1989. What has differed is the effectiveness of HUD's response in addressing both individual and community needs.

New property disposition tools are designed to use private sector skills to improve disposition approaches once properties are acquired. Remarkably, under HUD's new Management and Marketing (M&M) strategy this recent growth in the portfolio due to higher acquisition rates has been swiftly addressed, and through August 2000 the Department had reduced its inventory to 35,000 homes. A similar reduction in inventory in the early 1990s took 2½ years to accomplish, while the same reduction was realized in nearly half the time thanks to HUD reform measures.

While accomplishing this inventory reduction, HUD has been careful to meet its fiscal responsibilities and employ Congressional authorizations for community reinvestment. The Department invests an average of \$10,000 per property in holding costs over a 5-month period—it's average time in inventory. In the first 6 months of fiscal year 2000, HUD recovered 65 percent of the insurance claim paid to acquire a property. Through PD Reform measures, recoveries on claims paid have increased an average of \$4,000 per property over the prior 12-month period. As the portfolio of HUD-held properties declines, the Department has made inroads in disposing of its hard-to-sell properties, reducing its homes in inventory for more than 6 months by 12 percent.

Question. Why the big increase in foreclosures and why has HUD failed to implement effectively the Single family Property Disposition program?

Answer. The surge in foreclosures which was experienced last year resulted to a great degree from a loss of home equity in certain parts of the country, most notably southern California and the New England states. The Department provides a broad safety net to help more homeowners avoid foreclosures, even in less than favorable market conditions. Further, the Department has employed new tools and new approaches to dramatically reduce the inventory of HUD-held homes.

FHA has taken steps to tighten lax underwriting standards existing prior to 1996, most particularly regarding adjustable rate mortgages. The Department is now beginning to realize the benefits of this change, as default and foreclosure rates decline. Further, the success of FHA's loss mitigation program has been proven by the ability this program has had in avoiding foreclosures and helping to keep homeowners in their homes. During fiscal year 1999, FHA paid over 26,000 loss mitigation claims, nearly 2½ times the number paid in the previous fiscal year. Through August 2000, fiscal year to date loss mitigation activity has increased by 35 percent, and the number of foreclosure avoidance actions is expected to exceed 35,000 for fiscal year 2000. Over 85 percent of all of FHA loss mitigation actions not only help homeowners avoid foreclosure, it enables them to remain in their home while these families work to overcome the financial difficulty which caused them to default on their mortgage.

HOLDING PERIOD FOR HUD-OWNED HOUSING

Question. Mr. Secretary, it is very troubling that from between April 1999 and January 31, 2000, the percentage of properties in HUD's single family inventory for 6 months or more has increased from 30 percent to 41 percent of the inventory, and the percentage of properties in the inventory for more than 12 months has increased from 10 percent to 17 percent.

This HUD failure is a disaster for neighborhoods. In particular, when the Federal government steps in to take over a property from a failing landlord, or becomes the owner of a house down the street through foreclosure, we expect that through foreclosure, we expect that things will start to improve; that repairs will be made, lawns mowed, and broken windows fixed. What we don't expect is that the housing conditions will deteriorate even further, that property values will fall in the neighborhood, and that in some instances the property will become a HUD-owned crack

house. It is this failure to maintain and dispose of its foreclosed inventory in the 1980s on the part of HUD that destroyed a number of neighborhoods throughout the country—a number of these neighborhoods remain distressed even today. I also know that you saw examples of these failures at the field hearing in Baltimore on Monday.

What is the average cost to the Federal government to hold a property for 6 months? What is the average cost to the Federal government to hold a property for a year? What was the total in holding cost for each of fiscal years 1997, 1998, 1999 and the first half of 2000?

What is the average loss in value to a house that is held by HUD foreclosed properties to local jurisdictions. While it sounds good, it looks like HUD is merely clearing its books while passing on troubled properties to jurisdictions. Why can't HUD take care of its own responsibilities and problems?

Answer. As stated above, the time a property is held in HUD's inventory has decreased by 13 percent over the past 12 months. Of HUD's current inventory, 49 percent is currently under a sales contract. In May 2000, HUD acquired 5,164 properties and placed 10,481 under a sales contract. The appraised value of HUD homes has increased by 12 percent from the previous year, with a net recovery rate increase of 4.6 percent. The value the real estate market places on HUD homes is the best indicator of overall improvements in the condition of HUD homes. These homes are often in poor condition when HUD acquires them, but aggressive maintenance and repair efforts under PD Reform are helping to swiftly transform the tragedy of foreclosure into the opportunity of homeownership.

To accomplish this objective FHA invests an average of \$10,267 per property in holding costs over a 5-month period—it's average time in inventory. FHA currently recovers 65 percent of the insurance claim paid to acquire a property. Through PD Reform measures, recoveries on claims paid have increased an average of \$4,000 per property over the prior 12-month period.

Before FHA dramatically reduces prices on its hard-to-sell properties, it wants to offer a partnership with local governments in transforming a house acquired from the tragedy of foreclosure into a home and a community asset. Local governments are better positioned to ensure that communities not only find a new neighbor to occupy a vacant home, but a good neighbor. This can mean specific uses for homes such as community centers, or police sub-stations, or rehabilitated properties consistent with local standards. If local governments are not interested in purchasing a house because of its poor condition, FHA will also consider demolishing the home, and offer the land to local governments, for use as parkland or to meet similar community needs. FHA estimates that sales to local governments will make of 1 percent of its overall sales. An estimate of 10 percent of HUD home sales will fall into the Good Neighbor program, 1 percent of which is estimated to go to local governments.

FHA SINGLE FAMILY FORECLOSURE RATES

Question. Mr. Secretary, the percent of FHA loans in foreclosure has increased from 1.64 percent in 1996 to 2.2 percent in 1999. FHA's loan delinquencies has also increased from 8.05 percent in 1996 to 8.57 percent in 1999, whereas the delinquency rate for conventional loans is some 2.63 percent. Why are these delinquency and default rates so high? What is HUD doing to lower them?

Answer. The FHA claim rate is quite lower than the 2.2 that is often cited. The rate has remained relatively unchanged at approximately 1.1 percent over the last 2 years, according to information from the Mortgage Bankers Association.

The figure of 8.57 percent rate reflects a 30-day rate. Most independent industry analysts focus primarily on 90-day defaults in evaluating performance. Independent analysts of FHA activity focus on the more serious 90-day default figures, which indicate a default rate of between 3 and 3.5 percent over the last several years. FHA's default rate has been steadily declining during this entire fiscal year—as of April 30, the default rate stood at 3.3 percent. That equals a 4 percent reduction from 1 year ago, when the rate stood at 3.46 percent.

Question. In addition, I have a huge concern that we are in a policy mode of putting families in homes without regard to whether they can afford to maintain the home. Isn't it likely that we are going to see a lot of families lose their homes if there is a downturn in the economy, and that this will destroy the credit of these families? What policies does HUD have in place to address this potential set of problems?

Answer. HUD seriously considers the likelihood of a person's ability to maintain a home when someone applies for an FHA loan. The criteria are fairly straightforward but serve as qualifications or indicators. They are: having the income HUD believes to be necessary to support the mortgage payment and pay other obligations;

having an acceptable (if not perfect) credit history that indicates a willingness to repay obligations. A downpayment of at least 3 percent of the sales price is also considered a sign of the ability to maintain the household.

It is difficult to speculate about a possible economic downturn, but there are loss mitigation tools that can assist a mortgage holder who may have difficulty making payments. These tools are designed for lenders to use to maintain ownership when families have a change of circumstance. There are three tools that are particularly helpful for a family that is trying to avoid foreclosure while retaining possession of their home. They are:

—*Special forbearance.*—Written repayment agreement between a lender and a mortgagor which contains a plan to reinstate a loan that has been delinquent—FHA reduced its minimum delinquency requirement from 4 months to 90 days to make this option more attractive for lenders. This option provides the family the chance to repay the money owed while allowing the borrower to recover from the cause of the default.

—*Loan modification.*—A permanent change in one or more of the terms of a borrower's loan which, if made, allows the loan to be reinstated and results in payment the borrower can afford. Modifications may include a change in the interest rate; capitalization of delinquent principal, interest or escrow items; extension of time available to repay the loan; and/or re-amortization of the balance due.

—*Partial claim.*—A lender will advance funds on behalf of a borrower in an amount necessary to reinstate a delinquent loan(not to exceed the equivalent of 12 months PITI). The borrower, upon acceptance of the advance, will execute a promissory note and subordinate mortgage payable to HUD.

There are two options for the family that is unable to use the three tools described above, but who is looking for an option less harmful to its credit rating than a foreclosure. The first of these is the pre-foreclosure sale, which allows a borrower in default to sell his or her home and use the sale proceeds to satisfy the mortgage debt even if the proceeds are less than the amount owed. This option is appropriate for borrowers whose financial situation requires that they sell their home, but who are unable to sell without FHA relief, because the value of the property has declined to less than the amount owed on the mortgage.

Borrowers must make a commitment to actively market their property for a period of 4-to-6 months, during which time the lender delays foreclosure action. Owner-occupant borrowers who successfully sell to a third party within the required time, are paid a cash consideration up to \$1,000. Lenders also receive a \$1,000 incentive for successfully avoiding the foreclosure. Since the pre-foreclosure sale was introduced in 1994, it has helped thousands of borrowers in default avoid foreclosure and make a smooth transition to more affordable housing.

If the property does not sell, borrowers are encouraged to convey the property to FHA through a deed-in-lieu of foreclosure. Deed-in-lieu of foreclosure (DIL) is a disposition option in which a borrower voluntarily deeds collateral property to HUD in exchange for a release from all obligations under the mortgage. Though this option results in the borrower losing the property, it is usually preferable to foreclosure because the borrower mitigates the cost and emotional trauma of foreclosure and is eligible to receive borrower's consideration of \$500. Also, a DIL is generally less damaging than foreclosure to a borrower's ability to obtain credit in the future. DIL is preferred by HUD because it avoids the time and expense of a legal foreclosure action, and due to the cooperative nature of the transaction, the property is generally in better physical condition at acquisition.

FHA STAFF

Question. Please identify the HUD staff assigned to the FHA single family and multifamily housing programs by program, function and salary for fiscal years 1992 through 2000. Please identify all contracts, including individual contractors, for activities under the FHA single family and multifamily housing programs by program, activity and cost for fiscal years 1992 through 2000. Please identify all contracts that were not competitively bid during this period.

Answer. The Department has assembled payroll and contract data in response to this request which will be transmitted to the Committee.

HUD STAFFING

Question. Mr. Secretary, HUD has a very old and expensive workforce which has gone from 12,000 employee in 1995 to 9,100 today. In 1995, the average cost per FTE was \$58,000. The cost per FTE then rose to \$78,000 by the end of 2000.

Mr. Secretary, I think you know how unhappy I am with HUD's lack of capacity to administer its programs. I also believe there is a tremendous need to ensure that staff capacity is tied to program needs. Please identify the specific components which make up the growth in FTE costs in each fiscal year from 1995 through fiscal year 2000.

Answer. Like most Federal agencies, HUD has undergone increased FTE costs due, in part, to natural changes in the workforce. The Agency has incurred increased costs as a result of the following responsibilities and obligations as a Federal employer:

Employee Benefits

Cost of Living Adjustments.

	<i>Percent</i>
1995	2
1996	2
1997	2.3
1998	2.3
1999	3.1
2000	3.8

Spending for health benefits continues to grow.

Increasing numbers of HUD's staff are covered under the Federal Employees Retirement System (FERS). These costs to the Agency are more significant due to the 1 percent agency contribution and the government matching funds for employee contributions to the Thrift Savings Plan (TSP).

Employee Transit Subsidy.

Quality Step Increases for employee recognition.

In general, employees are working longer.

Legislative Mandate for Office of Multifamily Housing Assistance Restructuring (OMHAR)

As of May 2000, OMHAR has 82 staff onboard. Pay is Administratively Determined (AD) at a rate that is significantly higher than the General Schedule.

Question. What does HUD plan to do to address the growing costs of FTE's at HUD as well as the need to develop a young infrastructure of staff that will grow with HUD's programs?

Answer. We have established and implemented a Departmental Succession Plan which focuses heavily on targeting critical position needs and filling those positions with available qualified staff from within, utilizing in particular, staff in developmental programs. We are encouraging managers and supervisors to identify more positions for developmental opportunities so that aspiring employees, demonstrating a potential for more challenging assignments, may advance to address the Department's future critical needs. We are using more targeted recruitment for external hiring. We also are encouraging managers to examine and reengineer positions to capture the most essential job elements and maximize the performance of the work at the lowest grade levels. We are continuing to support the Agency's ability to exercise the Voluntary Early Out Retirement Authority, as well as, reconsidering the benefits of another Buyout Program.

To ensure that the appropriate talent exists to carry out HUD's revitalized mission, well into the future, executives, managers, and supervisors have examined the human potential of their organizations. We are actively developing an increased capacity by utilizing several key programs and staffing activities. A majority of the candidates for these programs represent a developing younger infrastructure of staff within the Department.

For entry level positions, the Welfare to Work Program has yielded over 200 hires (Worker Trainees). Immediately, these hires were assigned to fill much-needed clerical support positions and placed in an extensive training and development program. By providing high quality training and skills development opportunities, we expect these employees will build their skills and be committed to working for the Department well into the 21st century.

Also, to ensure a steady recruitment source of candidates for worker trainee positions, HUD supports a strong Work Experience Program. Under this program, candidates volunteer to work in the Department to gain experience in various clerical and office management functions. These volunteer opportunities prepare them to

compete for entry level positions. This program has attracted a younger cadre of interested candidates, many of whom have subsequently joined the HUD staff as permanent hires.

The Bridge Positions Program provides advance opportunities for employees who have completed the Worker Trainee Development program. Through merit staffing, this program offers career progression from GS-4 into one-grade interval positions at GS-5/6/7. Typical positions include office automation assistants; management assistants; program assistants; and personnel assistants.

The Professional Development Institute for HUD Assistants provides opportunities for HUD Assistants and other staff in developmental positions to gain technical skills for advancement into non-clerical technical positions. Established in 1997, this program has been both successful and rewarding for 1,215 employees who were committed and motivated for advancement (815 Assistants; 200 Upward Mobility candidates; and 200 Worker Trainees).

The Upward Mobility Program provides opportunities for existing staff with clerical and technical one-grade interval positions to move into more responsible two-grade interval positions. Since 1998, HUD has filled 209 upward mobility positions and 73 candidates have graduated the program into targeted positions.

The Leadership Development Program for executives, managers and supervisors strengthens their ability to lead and manage in an agency undergoing dynamic and constant change as a result of HUD 2020 reforms. This program also contains a module for aspiring managers and supervisors. It allows eligible employees, with leadership potential, to develop core competencies and team building skills.

The new Senior Executive Service Candidacy Program will prepare a cadre of managers for executive level assignment in HUD's most responsible career positions.

The current Staffing 2000 Initiative is a major recruitment effort to attract highly qualified candidates for permanent employment with the Department. Approximately 700 full time positions, in a wide range of administrative and professional series occupations, will be filled throughout the Department. The recruitment outreach was very broad, and it is likely that these employment opportunities will draw more staff for a younger infrastructure.

Finally, as part of succession planning, using the above training programs, HUD is developing career paths for qualified employees to move from entry level positions into responsible specialist and leadership positions. These career development opportunities will be very attractive for workers who are far from retirement and seeking both permanence and longevity in a Federal career.

Question. Also, for the record, please provide a 5 year comparison of staffing by GS level, salary, office and job responsibility.

Answer. An attachment has been provided that provides a 5-year comparison of staffing by GS level, salary, office and job responsibility.

MCKINNEY HOMELESS ASSISTANCE PROGRAMS

Question. Mr. Secretary, there are a lot of issues that we need to look at in the McKinney Homeless Assistance programs over the next few months. I have serious concerns over how well continuums of care work as well as concerns about HUD's oversight of the homeless assistance programs. A number of homeless assistance programs also face serious funding problems.

As you know, HUD funds local McKinney Homeless Assistance programs through a block grant funding formula allocation that is not authorized under the Supportive Housing program or the Shelter Plus Care program. This approach depends on local convenors to identify local homeless priorities through a continuum of care but the funding formula itself uses no indicators of need that are associated with homeless issues and concerns. How does HUD justify this approach outside the argument that the formula is already used for Emergency Shelter Block Grant program?

Answer. HUD does not fund McKinney Homeless Assistance programs through a block grant formula, but rather a competition which uses the Emergency Shelter

Grant formula as the basis for determining relative need to ensure a more equitable distribution of dollars to those communities which successfully compete for funding. The actual determination of who receives funding is based on various selection criteria mandated by Congress, including: capacity of the applicant, the extent of supplemental resources provided by the applicant, the cost-effectiveness of the project, the extent to which the applicant has demonstrated coordination with other entities, and the need for the project.

You raised a concern that the formula used to assign need uses no indicators associated with homelessness. There is no precise measure of homeless need because homeless persons are difficult to regularly enumerate. As such, HUD looked to Congress for direction on how best to reflect need in selecting projects. The McKinney Act requires that the allocation of Emergency Shelter Grant Program (ESG) funds shall be made using the Community Development Block Grant (CDBG) formula factors. The factors are population, poverty, housing overcrowding, growth lag, and age of housing. Given that Congress directed HUD to use these factors in allocating ESG funds for homeless persons, the Department chose to follow this lead and use these same factors in assigning need for the HUD's competitive McKinney programs.

Question. What oversight procedures does HUD have in place to ensure that the continuum of care approach provides appropriate decisionmaking?

Answer. Several components of the continuum of care process facilitate appropriate decision making at the community level. First, each community must include, in their funding application, a list of the names and types of organizations that were part of their planning process. This list includes the populations served by each organization and the level of participation of each entity. Second, communities must provide a description of the process and rationale used for establishing the community's priorities. Finally, a description must be included that shows how the project selection process was fair and gave equal consideration to projects proposed by non-profit organizations. These components are evaluated, as part of HUD's review of applications, and communities that do not address these components may not receive funding.

Question. What oversight procedures does HUD have in place to ensure that funds are being used appropriately?

Answer. The Department does a number of things to ensure that funds are being used appropriately. First, grantees receive funds through an automated voice response letter of credit system. The system contains checks and balances so that payments are made only after certain requirements are satisfied. Each grantee must submit an Annual Performance Report (APR) to HUD. If the APR is not submitted after 110 days, the letter of credit system is edited so that grantees may not draw down funds. The APR is reviewed at the field office and Headquarters levels.

Both on and off-site monitoring is a critical part of grant oversight. Field office staff perform the monitoring, using written standards and procedures. Results of monitoring are issued in writing to the grantee, and the monitoring process includes follow-up.

Expert technical assistance is available to grantees that may be having specific problems in implementing their projects. The Department oversees the provision of technical assistance by subcontractors.

Grantees applying for renewal funding must meet threshold eligibility and capacity standards. Monitoring results, audits, general oversight and other information are taken into account in determining whether a renewal grantee meets these threshold standards.

Question. Please identify for each of fiscal years 1998, 1999 and 2000 all HUD staff (by name, title and responsibility) that are responsible for the oversight of McKinney Homeless Assistance funds in each HUD region and at headquarters.

Answer. The following is the listing of Headquarters employees and the geographic areas for which they are responsible in administering HUD's homeless assistance programs.

Attached is "Report 1" which details the staffing for each CPD Field Office with responsibility for McKinney Homeless Assistance programs. There are 233 CPD staff in Field Offices working on homeless assistance programs. Their titles are provided. However, it is important to note that CPD Field Office staff are generalists. CPD staffers that work on McKinney Act programs also have numerous other responsibilities. While CPD Field Office staff are not dedicated solely to McKinney Homeless Assistance programs, each of the persons listed below has considerable experience in these programs and maintains personal responsibility for various grants.

Question. Please identify all (non-Inspector General) audits of McKinney projects conducted by HUD staff in the last 3 years, including the dates of the audits, the staff involved, the activities reviewed and the results of each audit in summary.

Answer. Attached are all of the audits (excluding Inspector General audits) of McKinney projects conducted during the last three years. The first set of reports is entitled, "CPD Program Monitoring National Totals" (Reports 2 and 3). These reports provide a summary for fiscal year 1999 and fiscal year 2000 of all on-site monitoring visits conducted by CPD Field Offices. McKinney Homeless Assistance programs are detailed in the reports as "Continuum of Care." The reports indicate that 322 on-site monitoring visits were made in fiscal year 1999 and that, to date, 133 on-site monitoring visits have been made in fiscal year 2000. The reports also detail the findings, concerns, and sanctions taken by CPD staff. The "Amount" is the dollar amount requested to be repaid for ineligible activities found during on-site monitoring of grantees.

The second set of reports, "Field Office Summary Monitoring Reports," (Reports 4 and 5) provides an office by office listing of the grants monitored and the concerns, findings, and sanctions associated with each review. Also included is a report (Report 6) that provides greater detail for each of the findings with associated sanctions. The system contains a report on each monitoring that provides the level of detail requested.

The large report entitled, "Field Office Detailed Monitoring Report," (Report 7) provides the detailed information on each monitoring visit, including the date of the visit, the staff person who conducted the visit, the activities reviewed, and a brief summary. The report provided is for fiscal year 2000. Because of the extensive monitoring activities undertaken by CPD Field Offices, the report is large. We selected the fiscal year 2000 report because the fiscal year 1999 report is approximately 1,000 pages in length. If the purpose of the request is to determine the depth of monitoring undertaken currently by CPD Field Offices, then we are hopeful that this report will meet that purpose. If additional information is required, we will provide the larger report.

Please note that CPD's existing computer systems do not capture all the information on the monitoring activities for fiscal year 1998. Available information is listed in Report 1. The information is limited in nature because there was no standardized reporting requirements at the time for Field Office monitoring. The overall level of monitoring of these programs was also lower during fiscal year 1998, as the report indicates.

As the information provided indicates, the level of on-site monitoring by CPD Field Offices rose sharply in fiscal year 1999 and continues at high levels for fiscal year 2000. The Office of Community Planning and Development is committed to professional oversight of McKinney Homeless Assistance programs as these reports attest.

[CLERK'S NOTE: The reports required can be found by contacting HUD due to the fact that the reports were not supplied in format suitable for printing.

- (Field Office Detailed Monitoring Report, fiscal year 2000 (Report 7)]

Question. Isn't it true that HUD supports the funding of expiring rental contracts under the Supportive Housing programs and the Shelter Plus Care program that have not been renewed under the local continuum of care selection process even where the President's budget does not support additional funding?

Answer. No. HUD's policies are consistent with the President's budget. Some Supportive Housing Program renewals have been funded outside of the annual competition to ensure that services are not disrupted in highly ranked projects, and taxpayer's investment in these projects are protected. Such renewals are allowable under the law and are always paid for out of the budget for the year their project funding expires. In addition, no project is ever funded that has not been ranked a priority in the previous year's Continuum of Care application by the local community.

In addition, the Department has never funded Shelter Plus Care projects outside of the annual competition. By law, the Department cannot fund Shelter Plus Care projects outside of an annual competition. The Administration does, however, support funding Shelter Plus Care renewals out of the Housing Certificate Fund, and has asked that \$37 million be made available to do so beginning in fiscal year 2001.

Question. Isn't it true that these expiring contracts are not funded because they do not rank high enough at the local level in the local continuum of care?

Answer. Grant applications, including expiring grants requesting renewal, may go unfunded in a competition for any of three reasons: (1) they are part of a Continuum of Care that scores below the national funding line; (2) they are not placed high enough on the priority list by a funded Continuum of Care; or (3) the renewal project is found to be ineligible or of poor quality, or the project applicant or sponsor lacks the capacity to continue to operate the project. The standards to be used in making the determinations under number 3 are specified in the Notice of Funding Availability.

Question. Should expiring homeless assistance contracts be renewed where a local continuum of care does not support the renewal of these contracts?

Answer. No. This question goes to the essence of the Continuum of Care concept. The local continuum of care is in the best position to determine whether a specific renewal project should be included as a priority for funding through its analysis of local needs, understanding of the range of resources available in the community, and in-depth knowledge of the capacity, efficiency and the role of the sponsoring organization in the homeless assistance delivery system.

Question. Isn't it true that localities, including convenors and local homeless assistance providers, know the minimum amount of Federal homeless assistance each jurisdiction will receive at the time the locality or convenor makes its continuum

of care application in each fiscal year and therefore know to some degree of certainty whether an expiring contract will be renewed?

Answer. The publicly available information provided to all potential applicants as they prepare for the 2000 competition allows them, for the first time, to know with confidence the minimum prorata need share, adjusted for renewals, that is available to the continuum if they are successful in the competition. While they cannot know the exact amount (because HUD does not know the exact amount until it has determined how many areas of the country did not seek funding and those funds are redistributed to the applying continuums), the convenor and other participants in the process have sufficient information to determine prior to application submission whether a specific project, new or renewal, falls within the continuum's prorata need share depending upon its placement on the priority list. It should be noted that a significant increase in the Fair Market Rents for a community published in the Federal Register in October of each year, after the submission of applications, would increase the budgets for any Shelter Plus Care and SRO project applications submitted and could, therefore, result in a project going unfunded that would otherwise have been funded under that continuum.

HOMELESS ASSISTANCE BLOCK GRANT PROGRAM

Question. Does HUD support a block grant for states and localities to address homeless assistance needs, especially since such an approach could rely on local decisionmaking while integrating funding decisions with the procedures and decisions associated with the existing HOME, CDBG, Public Housing, and Section 8 programs?

Answer. HUD does not believe it is necessary to implement such a legislative change. Current procedures best address the multi-faceted needs of the program. Originally, in coordination with the Interagency Council on the Homeless, HUD held 17 regional interactive forums across the country early in President Clinton's first term in office to discuss how the Federal government should proceed to better address homelessness. Valuable input was provided from more than 10,000 representatives of state and local governments, not-for-profit providers of housing and services, advocates for homeless people, and currently and formerly homeless persons. As a result, HUD made numerous changes to how competitive program funds are awarded.

HUD has continued to improve and refine the competitive award process since initial implementation in 1994. In addition to having a single application for all three competitive programs, the continuum helps assure all parties are given an opportunity to be involved in developing the community wide application. Moreover, communities are able to prioritize their projects as they would through a formula approach. Finally, retaining a national competition helps assure a high level of quality and performance that a formula approach might not achieve. As a result of the successes we've been able to accomplish through the competitive process, HUD no longer deems it necessary to implement a legislative change.

HOPE VI

Question. Mr. Secretary, as you know, I am a big fan of the HOPE VI program and have supported the significant funding of this program since its inception. Nevertheless, it is a costly program and there will come a time in the next few years where we will have taken down the worst public housing and replaced it with mixed income public and private housing. How should this program evolve?

Answer. Although HOPE VI has been successful in revitalizing many of this nation's most severely distressed public housing developments, a significant need still remains that will not be adequately addressed by HOPE VI appropriations in the next couple of years.

Each year, the Department receives four times the number of applications than can be funded through annual appropriations. Moreover, there are 30,000 units identified under the Section 202 mandatory conversion provision that have not yet been addressed. Finally, a HUD-sponsored study by Abt Associates, completed in April 2000, estimated that the backlog of unmet capital needs as of June 1998 was \$23 billion and the annual accrual was \$2.1 billion. If funding for Capital Programs is insufficient to eliminate the backlog, it is possible that conditions at under funded developments will worsen.

Question. In addition, I am very concerned about costs of the HOPE VI program and how HUD keeps the costs of this program down. How does the per unit costs of HOPE VI projects compare to similar private sector multifamily housing?

Answer. The Department has taken great efforts to ensure that costs are in line with relevant industry standards. HUD instituted cost control guidelines for soft

costs and a stringent TDC policy that does not permit exceptions. To oversee this effort, a quarterly tracking system has been implemented that monitors data on costs, leveraging, construction progress and other management indicators.

—*Total Development Cost.*—In a March 1999 notice, the Department established Total Development Cost (TDC) and Cost Control Policy consistent with the Public Housing Reform Act of 1998. The notice established clear cost limits for public housing funds used in the three elements of HOPE VI developments, namely, housing units, community renewal efforts, and community and resident social services. The new Housing Cost Cap (HCC) was based on an average of RS Means (Average) and Marshall and Swift (Good) regional estimates for housing construction costs based on housing type and size. The new cap is higher than the prior HCC which was based on Boeckh (Average) and Marshall and Swift (Average). The new HCC standard reflects the quality of housing needed to attract middle income families into HOPE VI developments. Unlike the previous policy, no exceptions from the current TDC will be granted. The policy has been in effect for 1 year and is now being evaluated. An analysis of changes in costs over the years has been conducted, and the findings have been discussed with OMB and congressional staff. Based on the analysis and input received, the modified guidance is expected to be published as a Proposed Rule in the near future. *Soft Cost Controls*—The Department instituted cost control guidance that will limit the development of soft costs associated with mixed-finance development (e.g., developer fees, administration fees, program management fees), and create incentives for competitive pricing. The controls include “safe harbors” and maximum fee ranges that are based on industry standards which were developed with input from housing authorities, developers and other housing industry representatives. If a project is at or below a “safe harbor” standard, no further review is required. If a project is above a “safe harbor” standard, additional review by, and negotiation with, HUD are necessary. These guidelines, “Cost Control and Safe Harbor Standards” are included in a document developed by the program office. This document has been distributed to all HOPE VI program sites, and is also included in the NOFA application completed by prospective grantees.

—*Competitive Procurement.*—HUD requires that developers and program managers be competitively procured thereby assuring that costs and fees are consistent with the private market. The Department reviews and approves developer and program manager procurements and contracts to verify that the processes are open and competitive.

—*Management Controls.*—As noted below, a computerized tracking and data collection system for effective program management and data retrieval and analysis has been developed. Every quarter grantees report data regarding costs, funds obligated/expended, construction progress, leveraging, and other management indicators. The Department is currently expanding the scope of the data collected to document what is happening to the people in a HOPE VI site (i.e., how many people gain employment, how many in job training, how many receiving case management, etc.). The Department has prioritized the receipt of accurate and timely information and has instituted a policy that freezes receipt of a grantee’s HOPE VI funds if reports are not submitted within 30 days following the end of the quarter. This data tracking system enables more effective oversight by HUD grants managers and Public Housing Authority (PHA) staff.

—*HOPE VI Construction Costs as Compared with Private Sector.*—Per unit construction costs are, by design, comparable to similar private sector housing. Because the HCC is based on regional industry standards, it ensures that public housing funds that are spent on construction do not exceed what the private sector would pay for a comparable unit. 1999 grantees reported that public housing funds would be used for \$58,722 per unit cost¹ to public housing funds associated with a HOPE VI construction—well below the average HCC of \$88,000 in 1999. In most cases, the construction cost are supplemented with Low Income Housing Tax Credit (LIHTC) funds and other funding. An informal survey of HOPE VI developers yielded similar conclusions—the per unit hard cost of HOPE VI construction, adjusted for Davis-Bacon wages and Section 3 requirements, is very comparable with private and subsidized developments.

¹This figure includes dwelling unit construction and equipment and 50 percent of site improvement costs. It assumes that builder’s overhead and profit are included in dwelling unit construction.

TABLE 1.—AVERAGE PUBLIC HOUSING FUNDS PER PH UNIT RELATED TO HCC BY YEAR

Grant Year	1993	1994	1995	1996	1997	1998	1999

¹ Ellen Wilson homes has 129 Cooperative Agreement Units.

² Cabrini Green's HCC figures are unusually low because the Chicago Housing Authority does not plan to build new units, but buy scattered site housing. The HCC does not include acquisition costs which are estimated at \$33 million. As a result, the HCC figure only reflects the cost of site improvements. If acquisition costs were included, hard construction costs would be \$47,900/unit.

³ For Richmond—Blackwell and Tampa—College Hill/Ponce De Leon 3/31/2000 unit data was used.

⁴ Allegheny's HCC costs are low because the housing authority is rehabbing instead of building new units. The authority is also leveraging significant resources for the hard construction costs which are not reflected in the figures above (only public housing dollars are included). \$1.7 million of public housing funds and \$5.6 million of leverage funds are going towards hard construction costs. If all sources are considered, the costs related to HCC average \$32,000/unit.

Notes: HCC cost is estimated as the HOPE VI Dwelling Unit Construction Cost, Dwelling Unit Equipment Cost and 50 percent of Site Improvements.

On a program wide basis, this correlates to the information provided on the HOPE VI TDC Guidance Chart.

Only 128 sites—Alexandria not required to report this information.

Question. What accounts for any differences in the per unit costs of HOPE VI projects with similar private sector multifamily housing?

Answer. Because the Housing Cost Cap (HCC) is pegged to regional industry standards by housing type, "vertical" construction costs are comparable with the private sector. However, there are additional construction costs associated with HOPE VI projects that increase overall development costs and do not similarly impact private development projects, as described below.

1. *Demolition and Site Remediation.*—The HOPE VI program was created to revitalize severely distressed public housing which makes it unique when compared to other types of private-sector construction and development. Unlike the majority of private-sector multifamily developments which are built on environmentally safe,

vacant sites, many HOPE VI projects incur extraordinary costs to demolish distressed buildings and remediate existing environmental hazards that are often associated with large-scale urban redevelopment, (e.g., lead and asbestos abatement, soil remediation, etc.). Such costs are not directly attributable to the cost of new construction, but are unavoidable in the HOPE VI revitalization process.

2. *Community Revitalization.*—HOPE VI developments also include provisions for services and facilities that will revitalize the community and help residents become self-sufficient (e.g., community facilities, community and supportive services and relocation of residents). These costs, not required in traditional private sector development, are vital to achieve the intended transformation of neighborhoods and the lives of the residents.

3. *Federal Wage and Hiring Regulations.*—Compliance with federal wage and hiring regulations, including Davis-Bacon wages, Section 3, and resident participation requirements, tends to apply upward pressure on construction costs.

Question. Also, how do the administrative costs of this program compare with private sector costs and what is the average administrative cost (i.e. including attorney fees, etc.) per project?

Answer. Public Housing Authorities (PHAs) provide a unique link between the residents of the local community and the Federal Government for both the development and administration of assisted housing. Due to this unique role of PHAs, this function has been contracted out to the private sector. However, this indispensable role in the process also contributes to higher soft costs for HOPE VI than those associated with private sector development. Additional costs incurred by the PHAs include: administrative costs, program and construction management fees, external legal counsel, and other consultants, as well as increased coordination and oversight due to complex financing partnerships and other business arrangements between the Housing Authority and the city, developers, business sector, etc. Since HOPE VI began in 1993:

- PHA's internal administrative costs have averaged 2.79 percent of total project costs.
- Planning and professional services (includes program/construction management, external legal counsel, other fees) have averaged 4.22 percent of total project costs.
- The impact of these higher HOPE VI soft costs add an average of 7 percent to the total project costs.

These additional costs are explained in the following paragraphs:

PHA Administration.—HOPE VI developments must pay for the PHA's overall administrative costs associated with HOPE VI. There is no comparable cost in private sector projects.

PHA Capacity.—Many HOPE VI developments also include costs for program management and construction management due to the complexity of the program and the lack of in-house capacity. Typical private sector developers do not incur these costs since the required skills are resident with existing staff.

Complex Financing.—Virtually all HOPE VI developments involve complex financing mechanisms which include multiple funding sources, increasing the legal and financing costs of the project. It is estimated that the legal costs and time delays for approvals associated with mixed-finance closings can increase costs by as much as 10–15 percent over unsubsidized, non-Federal, privately financed development.

TABLE 2.—PERCENTAGES OF BUDGETED HOPE VI SOFT COSTS TO TOTAL PROGRAM BUDGET

Soft cost category	Average for all HOPE VI sites	Range	
		Low	High
PHA's Internal Administrative Costs	2.79	13.6
Planning and Professional Services (PM/CM, Legal Fees, and Other Fees)	4.22	16.7
HOPE VI Soft Cost Total	7.01

Source: HOPE VI Quarterly Data as of 12/31/99.

Question. Please provide a list of all current HOPE VI projects and the per unit costs of each project.

Answer. See table 2 on page 537.

HUD INCOME VERIFICATION REQUIREMENTS FOR PUBLIC AND ASSISTED HOUSING

Question. As you know, we have been very concerned that each year an independent audit of HUD's financial statements indicate that some \$900 million is lost through improper, illegal or negligent reporting of income by tenants in HUD's public and assisted housing programs. This is a significant amount of money that could help maintain the funding level of HUD programs. This is an important responsibility and I would like to know the status of HUD's efforts to implement a system that ensures the residents in the HUD's rental assistance programs are paying the appropriate level of rent.

Answer. The tenant income verification process is a state-of-the-art fraud prevention system that addresses a long-standing material weakness. This system is also designed to ensure that eligible American families receive the correct amount of rental assistance. The system uses computer matching software to compare tenant reported information from HUD systems with income data stored in Social Security Administration (SSA) and Internal Revenue Service (IRS) databases.

Tenants who under report income may have their rental assistance reduced or terminated, or potentially face prosecution. Tenants also may be required to re-pay any excess rental assistance. However, the focus on HUD's efforts this year are on setting correct baseline incomes and rents.

HUD is planning to mail out most, if not all, of the income discrepancy letters in June 2000; 230,000 in all. In February 2000, about 875 letters were sent to tenants.

In the interest of fairness to all parties, the Department is also addressing over-reporting of income and will soon be mailing letters, as part of this initiative, in the near future, to tenants who might not have received all of the rental assistance to which they were entitled.

The next steps will be HUD monitoring of progress in the resolution of the income discrepancies. This will include:

- 1. an analysis of data that public housing authorities, owners and agents (POAs) will submit to HUD on income discrepancy resolution;
- 2. visits to some POAs to review progress and techniques employed; and
- 3. supplemental training for POAs, as needed.

Additional training is underway. The Department has also developed a fact sheet explaining the tenant income verification process and HUD's intent to have eligible tenants pay correct amounts. This fact sheet will be provided to approximately 6.1 million tenants occupying HUD assisted housing.

ATTACHMENT A

The \$900 million underpayment figure calculated by the Inspector General is wrong.

- It is wrong because the IG made very dubious assumptions in calculating its figure-sampling indicates that the figure may be far lower.
- The figure does not attempt to calculate the extent of overpayments by tenants.
- The figure does not take into account the fact that many kinds of income have been excluded from rent calculations at the direction of Congress.
- Sheila Crowley, President of the National Low Income Housing Coalition told Congress "we believe that a substantial percent of the discrepancy between rent certifications and tax returns that is identified in the Inspector General's report has occurred for one of a number of legal and legitimate reasons or is the result of honest mistakes or is rooted in errors on the part of housing authorities or property owners."
- The underpayment estimate is also misleading because it is not a reasonable estimate of the actual amounts that could realistically be recovered by the government. In fact, verifying income will probably lead to an additional \$80 million.
- Studies show that, once presented with this information, many tenants simply move away.
- It often costs more to collect the money than the amount the tenant owes.
- Tenants often simply do not have the money for the landlord to collect.
- Verifying tenant income will be most helpful in making sure the right people receive assistance. The Department is committed to ensuring that only those eligible receive assistance and that others be replaced by someone languishing on long waiting lists due to the failure of Congress to adequately fund the Section 8 program.

Question. In addition, please advise on the safeguards that HUD is putting in place to ensure that the process itself does not become an unreasonable burden on PHAs and tenants, and how personal privacy rights are protected and respected.

Answer. The tenant income verification process imposes minimal additional requirements on Public Housing Agencies, Owners, and Agents (POAs) and tenants. Tenants have always had the obligation to report their income completely and accurately and POAs have always had the responsibility to verify their incomes. This Program provides a new tool to POAs to verify tenant income. The only additional requirement for tenants is to resolve discrepancies identified by the income matching, and for POAs to report on their resolution of these discrepancies.

Under this program, the personal privacy rights of tenants are fully protected and respected. HUD strictly follows Social Security Administration (SSA) and Internal Revenue Service (IRS) guidelines regarding release of confidential income data. The computer matching program provides a high degree of accuracy. Extensive software testing has been completed to assure that the computer matching is properly conducted. Real Estate Assessment Center (REAC) has developed procedures to minimize the "false positive" results that may sometimes occur and reduce related administrative burdens or other adverse effects.

The following steps have been taken to ensure that tenants do not receive erroneous income discrepancies letters were:

- 1. Annualization of income to produce income for the calendar year that would be comparable to SSA and IRS data;
- 2. Eliminating residents who did not receive rental assistance for the entire calendar year for the match; and
- 3. The use of income thresholds.

Procedures were also developed to minimize the effects on tenants who do receive letters and who have complied with applicable income reporting requirements. These include:

- 1. Careful wording of the letter to the tenant;
- 2. Written instructions and training for POAs that describe ways to minimize the burden on the POAs and the tenants,
- 3. Establish enhanced grievance procedures for tenants to ensure due process, and
- 4. Establish special toll-free phone numbers for tenants and POAs to answer all program questions.

HUD POLICY TO VOUCHER OUT ALL HUD-OWNED AND -HELD PROPERTIES

Question. Mr. Secretary you have discussed the need to create a production program, even suggesting using FHA single family mortgage insurance default reserves as a way to leverage funding for the development of new units of affordable low-income multifamily housing. However, HUD's stated policy for its HUD-owned and HUD-held multifamily properties is to voucher out all families, even the elderly and disabled. This means that we are likely losing these multifamily housing units for low-income use, especially very low-income use. In addition, many of these multifamily housing projects are designed for the elderly or disabled and are hooked into needed services for these populations. In other cases, the housing is in better neighborhoods where there are good schools, transportation and job opportunities which will be lost to these residents. For the record, I am including a property disposition memorandum from Gary Eisenman, General Deputy Assistant Secretary for Housing, that compels the vouchering out of these properties and replaces existing handbook requirements.

How do you square this policy with your acknowledgment that we need to produce additional affordable low-income housing and the request for additional, incremental vouchers?

Answer. The Department shares the Senator's concern for the preservation of affordable housing. A careful reading of HUD's outstanding guidance to the field shows that we preserve affordable housing projects which can and should feasibly be preserved. Given the nature of elderly housing, we continue the project based Section 8 when they are sold, provided it is needed as elderly housing and is feasible to preserve. On family projects, rather than using project based Section 8 as the affordability tool, we provide eligible tenants with Section 8 Vouchers. With Vouchers, an individual can remain in the preserved project, or move to other accommodations. In addition, when these properties are sold at foreclosure or from the owned inventory, if they need to be preserved as affordable housing, they are sold with requirements that they be repaired, and operated as affordable housing. These requirements are enforced through land use restrictions that generally last at least 20 years. Many purchasers utilize the Low Income Housing Tax Credit program, which is another way to maintain affordable housing without the use of project-based Section 8. Requiring that projects be repaired and remain affordable provides the tenants with Vouchers an opportunity not afforded to them if we were to sell

the projects with project based Section 8. It gives the tenants a choice, and an ability to decide whether to stay, or relocate. Many choose to stay, and many choose to relocate. Freedom of choice is not something found with project-based Section 8.

HUD also uses its ability to provide Up Front Grants for projects that need to be preserved. We have sold over 60 projects in the last few years with such grants. This is consistent with our policy to preserve.

Not all projects are needed as continued sources of affordable housing, and some that may be needed cannot cost effectively be repaired or rebuilt. In those cases, residents are offered Vouchers and assistance in finding alternate decent, safe and sanitary housing.

In addition, the memorandum from General Deputy Assistant Secretary Eisenman that the Senator introduced into the record has nothing to do with vouchering out properties. Unfortunately, the word "voucher" has several meanings at HUD. It not only means a Section 8 voucher that can be given to a tenant to seek affordable housing, it also means the document that is prepared by the owner of a Section 8 project to obtain the monthly Section 8 payment; in that instance, it's more like a monthly invoice. The subject memorandum was simply guidance to HUD's field staff that it must voucher (invoice) for Section 8 payments on projects in HUD's owned inventory and those for which HUD is Mortgagee-in-Possession. While it is true that this memorandum did supersede outstanding handbook instructions, the change continues the project-based contracts in an active status.

We are not abandoning affordable housing that needs to, and feasibly can be preserved. If preservation is feasible, projects are being preserved. Projects can and are being preserved as affordable housing using preservation tools other than project-based Section 8 (except for elderly projects).

GNMA AND FHA APPLICATION OF CREDIT REFORM

Question. Mr. Secretary, for the first time since the enactment of credit reform in 1992, the Administration has requested \$40 million for GNMA administrative contract expenses. This also has become an FHA issue with appropriations having to pay for "non-administrative overhead" for both single family and multifamily mortgage insurance programs. Why are these additional costs being charged to the appropriations process and what do these additional costs cover? Also, please provide a legal analysis on why and how credit reform applies to GNMA and FHA activities despite the availability of program revenues which should be available to cover all costs? Also, please provide a legal analysis on why and how credit reform applies to GNMA and FHA activities despite the availability of program revenues which should be available to cover all costs?

Answer. Section 1 of the National Housing Act (NHA) contains a permanent indefinite appropriation which permits GNMA to pay administrative expenses, including contracting expenses, from revenues. Section 209 of the HUD Administrative Provisions printed in the Appendix to the President's Budget for fiscal year 2001, if enacted, would eliminate such authority for the payment of contracting expenses under section 1 of the NHA, and in effect, require that GNMA's contracting expenses become an appropriated line item.

Until the enactment of HUD's fiscal year 2000 Appropriations Act (Public Law 106-74), Section 1 of the NHA also permitted FHA to pay contracting expenses from revenues. In the fiscal year 2000 Appropriations Act, Section 212 eliminated FHA authority for the payment of contracting expenses under Section 1 of the NHA, while the FHA accounts included appropriated amounts for FHA administrative contract expenses. Section 209 and the GNMA account language proposed in the Administration's fiscal year 2001 budget would establish the same funding mechanism for GNMA contracting expenses.

The proposed changes for GNMA and enacted changes for FHA with respect to funding of contracting expenses have not been based on the application of the Federal Credit Reform Act (FCRA) to GNMA and FHA as a matter of law.

In fact OMB's general counsel has issued a legal opinion that explicitly notes the legal appropriateness and applicability of Section 1 of NHA. Rather, these amendments have been proposed by the Administration solely to make the administration of these GNMA and FHA contracting expenses conform with the policies of the Administration with respect to the FCRA. It should be noted that GNMA's contracting expenses under Section 1 of the NHA are reviewed annually by Congress and OMB as part of the President's Budget and are reviewed quarterly by Treasury and OMB in the SF 133 Report on Budget Execution.

FHA REVENUES

Question. Mr. Secretary, you have made a number of statement indicating that the FHA Mutual Mortgage Insurance account has an additional \$5 billion in revenues that could be made available for other housing programs, including a new multifamily housing production program. What are these funds?

Answer. These estimates of additional funds were calculated by using the results of the 1999 Actuarial Review in the MMI models used for the 2001 Budget. New subsidy rates were calculated for fiscal years 2002–2006 using the 1999 Review data. Then the difference in the subsidy rates before and after the 1999 actuarial review was multiplied by the dollar value of each year's estimated book of business for 2002–2006. The sum of those figures was rounded to \$5 billion.

Question. Are they currently maintained in the FHA Mutual Mortgage Insurance account or are they projections of future income subject to income rate fluctuations and other market forces?

Answer. The \$5 billion is a projection of additional negative subsidy estimated to be generated in fiscal years 2002–2006. Under Credit Reform, subsidy rates are calculated on the basis of expected performance over the entire life of a particular group of loans; thus, any subsidy rate calculation is subject to future market forces. The \$5 billion is based on the most recent data, which was used in the fiscal year 1999 Actuarial Review.

Question. In, addition, are these funds available for spending without being subject to offsets or pay-go considerations?

Answer. The additional \$5 billion in negative credit subsidy is an offset of both budget authority and outlays and represents budgetary resources which could be applied towards critical housing needs of the Nation without diminishing the currently projected budget surplus of the Government. Whether Congressional budget procedures require specification of a discretionary offset, or subject this proposal to pay-go requirements for mandatory activities, will depend on the applicable Congressional Budget Resolution, and the specific nature of the proposal under development by the Administration.

Question. Please provide a legal analysis on how these funds may be made available for non-FHA housing and community development programs?

Answer. As just indicated, the \$5 billion may serve as an offset for other spending within the unified Federal budget. These funds are deposited into the FHA Mutual Mortgage Insurance Fund and whether additional legal authority is necessary will depend on how the funds would be utilized (as an offset or a fund source) and on the specific nature of the proposed use. Direct use of these funds for non-FHA programs would require an amendment to sections 1 and 202 of the National Housing Act and/or obligational authority in an appropriations act.

FHA HYBRID ARM LEGISLATION

Question. Mr. Secretary, the Administration has proposed a new FHA adjustable rate mortgage (ARM) insurance program. What is HUD's prior experience in underwriting ARMs, including the default and foreclosure rates?

Answer. As one would expect with a riskier product line such as the adjustable rate mortgage (ARM), historically ARMs have had a higher default and claim rate than the relatively low risk fixed-rate mortgages (FMRs). The performance gap between these two products however has narrowed since FHA tightened its underwriting standards for ARMs in 1998.

Question. Why would this new ARM program be less financially risky to the Department?

Answer. The risk of the current ARM program was substantially reduced in January 1998 by requiring consideration of the second year rate in the underwriting analysis (rather than the entry rate) and by eliminating any form of buydowns on these loans that contributed to payment shock.

If the hybrid ARM proposed legislation is enacted, we would continue to impose underwriting requirements that mitigate against unacceptable risk. Further, the hybrid ARMs would lock in an interest rate for several years (rather than just the first year) thus allowing those first-time homebuyers borrowers that may (a) need the mortgage for only a few years and/or (b) need the lower initial payments to take advantage of the program either to acquire some equity, and then sell the property and move to a more desirable home or to refinance the current home.

AMERICAN PRIVATE INVESTMENT COMPANIES (APIC)

Question. Mr. Secretary, the Department does not have an outstanding track record in providing targeted funding for economic development, such as APIC. How would APIC work?

Answer. As configured in the proposed legislation (Title 3, H.R. 2848 and H.R. 2764), APIC would create a number of companies licensed by HUD as for-profit, private venture capital firms. The program would provide government guarantees of company debentures, provided the licensed APIC's committed at least \$25 million in private equity capital. Each APIC would be entitled to receive \$2 in government guarantees of company debentures for every \$1 of its private committed equity. HUD's debt guarantees cannot, however, exceed \$300 million for APIC-issued debentures in fiscal year 2000. APICs will invest in a broad array of firms and industry sectors. As you know the President submitted legislation to authorize the APIC program and this legislation is proceeding through Congress. In addition, the President and the Congress have focused on a broad community revitalization package which would include APIC as an important capital development tool.

Question. Why wouldn't Treasury, the Small Business Administration or CDFI be a more appropriate agency to administer an APIC-like program?

Answer. Neither the SBA nor the Treasury can target their resources to low-income areas, as HUD is able to. Further, SBA restrictions on the size and types of businesses it assists would prevent that agency from financing the large-scale businesses and real estate developments envisioned that APICs will financially assist in urban and rural low-income areas. HUD has the experience in working on such projects through the Community Development Block Grant and other economic development programs. Nevertheless, the Department of Treasury and the SBA will act as program advisors to HUD in development and administering the APIC program.

Question. Wouldn't HUD or intermediaries be picking "winners and losers" in the APIC program?

Answer. HUD or intermediaries will be "picking" winners and losers in the APIC program, only in the sense that some competition applications are better than others. The proposed APIC legislation enables HUD to competitively select APICs and to license them for making equity and credit investments in large scale business developments that benefit low-income communities. We will be looking to the experience of the Overseas Private Investment Companies when structuring our selection criteria and licensing process. The selection of award recipients by HUD will be based on sound evaluation criteria.

EMPOWERMENT ZONES

Question. Mr. Secretary, we remain concerned over the HUD's inability to provide adequate oversight of empowerment zone funds.

What procedures does the Department have in place to ensure that these funds are being used appropriately and what criteria and benchmarks are in place to measure the success and failure of empowerment zones and enterprise communities?

Answer. HUD has adequate controls to ensure taxpayer funds are spent according to all laws and regulations as provided in the following details. In addition, HUD has a system to adequately measure and assess EZ/EC success.

To ensure compliance with applicable laws and regulations, the Assistant Secretary has increased EZ/EC staff, and assigned a Public Trust Officer (PTO) to monitor and assess the progress of each EZ/EC. The EZ/EC PTO Network works with the EZ/EC Initiative Office at Headquarters to help ensure full compliance with HUD's statutory monitoring responsibilities for Round I and Round II EZs.

To ensure EZ/ECs are making adequate progress in implementing their strategic plans, the EZ/EC Office has instituted a cutting-edge Internet-based performance measurement system called PERMS. HUD requires each EZ/EC to keep track and evaluate all the projects and programs they are implementing to achieve their local strategic plan. The EZ/EC Office developed PERMS to ensure that there is adequate information to measure and assess EZ/EC success. The EZ/EC Office and the PTOs use PERMS to monitor and evaluate the progress of each EZ/EC. Each year the EZ/EC designees use PERMS to submit an annual performance report which identifies progress made in achieving project/program milestones and output measurements, and which tracks the performance of EZ/EC governance boards. PERMS not only cuts down on the paperwork burden facing the EZ/ECs, but provides HUD with a low-cost mechanism for continually monitoring the progress of each EZ/EC. PERMS also provides detailed information on the over 2,500 projects and programs the EZ/ECs are implementing to achieve their strategic plans.

Congress has split oversight of the Urban EZ/EC Initiative between the U.S. Department of Housing and Urban Development, the U.S. Department of Health and Human Services, the States and the 89 Urban Designees. Each plays a different, but important role in ensuring program integrity. By statute, HUD is the designating agency for urban EZ/ECs. HUD is also statutorily responsible for making a periodic determination to ensure each of the 89 designees is making progress. HUD's legal responsibility regarding monitoring derives primarily from section 1391(d)(2) of the Omnibus Budget Reconciliation Act, which provides for the revocation of an EZ's or EC's designation if the Secretary determines, among other things, that a designated EZ or EC has failed "to make progress in achieving the benchmarks set forth in their strategic plan. This provision applies to both Round I and Round II designations, and implies that information must be submitted to and reviewed by HUD in order for the Department to make such determinations. To further implement this responsibility, the Department's regulations at 24 CFR §§ 597.400–403 provide for reporting, performance reviews, validation of designation and revocation of designation under appropriate circumstances. Similar provisions apply to Empowerment Zones designated in Round II pursuant to 24 CFR §§ 58.415–430.

The U.S. Department of Health and Human Services (HHS) has primary oversight responsibility for EZ/EC funds. Section 13761 of the Omnibus Budget Reconciliation Act of 1993 amended title XX of the Social Security Act to provide funds to the States for designated Empowerment Zones and Enterprise Communities pursuant to Round I. Neither the 1993 legislation nor sections 951 and 952 of the Taxpayer Relief Act of 1997, which authorize additional EZ designations by HUD, speak to any additional monitoring or audit responsibilities of HHS. These statutes deal primarily with the designation process, which is HUD's responsibility. Therefore, audit and related responsibilities concerning EZ/EC SSBG funds are subject to the HHS procedures applicable to the parent title XX program. In general, under Title XX, HHS delegates oversight responsibilities for the EZ/EC SSBG funds to the States. The States are responsible for ensuring program integrity just like they are with all Title XX, SSBG funds. The States are responsible for monitoring EZ/EC spending to ensure compliance with EZ/EC legal requirements.

For Round II EZs, Congress has approved \$100 million in HUD funding. HUD uses a process similar to the HUD Community Development Block Grant (CDBG) program to distribute the EZ funding. HUD sends its funding to the lead locality (city or county) which in turn may distribute the funding to a non-profit 501(c)(3) corporation.

OPTIONAL ENTITLEMENT CITIES AND COMMUNITIES

Question. The Department has suggested that the CDBG program should be revised to provide a new class of small cities with entitlement funding. What is the justification for this proposal?

Answer. Last year, the Department considered a proposal to create "Optional Entitlement Communities (OEC)" that would provide consistent Community Development Block Grant funding to meet the needs of smaller urbanized areas. To implement this proposal would require legislative action.

The proposal originated not because of any particular failure by states to meet the priorities of non-entitlement areas in their states. Rather, it came from recognition that some of the larger small communities, below the entitlement threshold, could also greatly benefit from reliable annual funding to carry out a broader range of community development activities to address local priorities characteristic of urbanized areas like the entitlement communities. Most states set the funding priorities and limit the range of eligible community development activities. The proposal follows the same bipartisan concept of devolution that created the Community Development Block Grant program in 1974—that a single block grant allows cities and counties, not the Federal government, to make decisions about the community development projects in their neighborhoods. An annual formula allocation allows communities more flexibility in determining how best to address local community and economic development needs. It provides predictable annual funding. It allows the community flexibility in carrying out multiyear projects.

We are reviewing the numerous comments and issues raised to date. We are consulting with cities, counties, states, their representative interest groups, and other interested parties and, of course, will continue to work with you in the legislative process.

VOUCHER SUCCESS FUND

Question. Mr. Secretary, the Administration is recommending \$50 million in fiscal year 2001 for a Voucher Success program. This program is designed to facilitate the use of section 8 assistance by voucher holders, especially since the Administration is beginning to admit that voucher holders are having significant problems in using vouchers as well as finding affordable rental housing. However, this appears to be a double payment since PHAs already receive administrative fees that are intended to compensate PHAs in making the Section 8 program work. What are PHAs doing with their administrative fees?

Answer. Public Housing Authorities (PHA) administer units for the owners, and process subsidies for families in the tenant-based assistance programs. The fees that they receive covers a broad range of ongoing routine program responsibilities, including:

- marketing, accepting applications, maintaining a waiting list, selecting families for admission;
- verifying eligibility, monitoring income mix, providing outreach to owners and fostering owner relations;
- briefing families on (a) the housing search process, (b) housing opportunities, (c) fair market rents, (d) housing quality standards (HQS);
- managing voucher search terms/extensions;
- approving leases;
- determining reasonable rent for each unit leased;
- establishing payment standards, establishing and maintaining utility allowance schedule;
- performing pre-leasing and annual HQS inspections;
- enforcing HQS and performing HQS quality control inspections;
- coordinating portability moves & billing;
- managing the process of family moves within HA jurisdiction;
- reporting family data;
- processing annual and special rent increases for each unit leased;
- terminating assistance and conduct hearings;
- making monthly housing assistance payments; and
- maintaining program/project accounts.

These administrative fees would be both inadequate and inappropriate to respond to the types of issues/concerns for which the Voucher Success Fund is proposed. The Voucher Success Fund is intended to improve lease-up rates in difficult markets, and concomitantly reduce recaptures. By design, the funds would be targeted to communities running sound programs, but still experiencing problems. Some of the activities that are clearly beyond normal program operations, and which would be the focus of the Voucher Success Fund include:

- focused technical assistance to local PHAs or communities to improve program outcomes;
- counseling (including mobility counseling) and security deposit assistance for families using vouchers; and
- intensive outreach programs to encourage landlord participation.

Question. Are these fees too low for PHAs to administer their Section 8 Programs?

Answer. Only in isolated instances have Public Housing Authorities (PHA) found the current administrative fees to be inadequate. This is mostly true in their attempt to fulfill obligations to administer particular unfunded mandates that go beyond usual program operations, i.e., Family Self-Sufficiency, Family Unification, and the Mainstream Housing Opportunities for Persons with Disabilities Programs. For such programs which provide a large influx of vouchers at one time, staff time and resources are stretched beyond capacity.

Question. Please identify all audits and/or studies that review the use of administrative fees by PHAs.

Answer. Only one study of the Public Housing Authority (PHA) administrative fees has been conducted during the last decade, namely, "Section 8 Administrative Fees: A Report to Congress," prepared by the Department's Office of Policy Development and Research in June 1994 (A copy of the Study is enclosed.) Information derived from that Study was used as the basis for the formulation of the Department's policy: "Annual Factors for Determining Public Housing Agency Administrative Fees for the Section 8 Rental Voucher and Rental Certificate Programs," issued January 24, 1995 (copy attached). The policy established in that Rule was used to determine PHA administrative fees until enactment of the Public Housing Reform Act of 1998, which amended Section 8(q) of the 1937 Act.

NATIVE AMERICAN HOUSING BLOCK GRANTS PROGRAM

Question. How well has the Native American Block Grant program met the housing needs of the Native Americans?

Answer. The Indian Housing Block Grant (IHBG), authorized by the Native American Housing Assistance and Self-Determination Act (NAHASDA) was initially implemented in fiscal year 1998. The number of grantees receiving funds since the implementation of NAHASDA represents a substantial increase in the number of clients assisted since the transition from the programs administered under the U.S. Housing Act of 1937 (1937 Act). Under the 1937 Act, assistance was provided to approximately 200 Indian housing authorities (IHAs). In the first year, 368 Indian housing plans (IHPs) (representing 552 tribes) were approved for allocations from the fiscal year 1998 appropriation of \$585 million. In fiscal year 1999, 356 IHPs representing 527 tribes were approved for a share of the \$610 million appropriation.

The IHBG has also increased the number of eligible activities for the development of new affordable housing activities. The result has been an increase in housing opportunities for many eligible tribal families throughout the country. Activities proposed by tribes in their IHPs include: down payment and other mortgage assistance, revolving loan funds for rehabilitation of housing units, transitional housing, spousal abuse shelters, elderly homes and congregate housing. In many cases IHBG funds have been used effectively to leverage other funds for affordable housing activities.

Training and technical assistance activities have also increased under NAHASDA. The Act required tribes to act either as a direct housing provider or to designate a tribally designated housing entity (TDHE), as opposed to their prior role providing indirect oversight. Consequently, more intensive, hands-on training is needed for Office of Native American Programs (ONAP) staff, tribal officials and TDHE personnel. A staff training plan was developed during the early stages of implementing the Act, and is routinely modified and updated to reflect the training conducted, as well as to reflect new needs that are identified. The Tribal Training and Technical Assistance Center is a vital part of the overall training plan. It is internet-based, and provides a centralized repository for training and technical assistance products, a calendar of upcoming training sessions, and a mechanism for tribes and TDHEs to directly request assistance from ONAP.

A more in-depth review of NAHASDA was provided in the Department's report that was submitted to the House Subcommittee in March 2000. A copy of that report is attached.

The Department remains strongly committed to providing safe, decent and affordable housing for American Indian and Alaska Native families.

ATTACHMENT

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

REPORT TO THE U.S. HOUSE OF REPRESENTATIVES COMMITTEE ON APPROPRIATIONS,
INDIAN HOUSING PROGRAM PLAN

PREPARED BY THE OFFICE OF NATIVE AMERICAN PROGRAMS

The following report is respectfully submitted, pursuant to the request contained in House Report 106-286, accompanying the fiscal year 2000 Department of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations Act.

The objective of this report is to share with the Committee our performance goals and objectives for the Indian housing programs. We also offer detailed background information on these programs to inform you of our recent successes, our challenges and how these programs are operating. Taken together, this information will provide the Committee with a better understanding of how we will achieve our goals and objectives.

Within the Department of Housing and Urban Development (HUD), the Office of Native American Programs (ONAP) carries principal responsibility for development, delivery and monitoring of programs for Native Americans. The authorizing statute for ONAP's primary programs is contained in the Native American Housing Assistance and Self-Determination Act of 1996 (NAHASDA).

The performance goals for HUD and ONAP are as follows:

- to increase the availability of decent, safe and affordable housing in all Native American communities
- to increase homeownership opportunities in Native American communities by increasing the number of Section 184 guaranteed mortgage loans

- to increase the availability of affordable rental housing to low-income Native American families residing within an American Indian and Alaska Native area
 - to create additional housing opportunities by increasing the technical expertise of Indian tribes and Tribally Designated Housing Entities (TDHEs)
 - to promote self-sufficiency and asset development by poor and disadvantaged Native American families and individuals
 - to enhance the development of affordable housing through the use of successful, innovative models in the Title VI program
 - to increase access to private capital
 - to further economic growth on Indian reservations and other Indian areas
 - to contribute to the overall decline in housing discrimination from 1989 levels
- The performance objectives which have been established are reflective of HUD's Business and Operating Plan and our Annual Performance Plan. They are the following:
- increase the number of Native American families served by the Indian Housing Block Grant program by 3 percent in fiscal year 2001 from the baseline established in fiscal year 2000
 - provide training sessions to tribes, TDHEs and financial institutions covering the Section 184 and other mortgage loan programs, in order to increase homeownership opportunities
 - provide Section 504 training to a minimum of 20 percent of NAHASDA grant recipients in order to help reduce discrimination levels
 - encourage the investment and participation of traditional financial institutions that have not served Indian reservations and other Native American areas

BACKGROUND INFORMATION ON HUD'S INDIAN PROGRAMS

The Indian Housing Block Grant Program

The Office of Native American Programs (ONAP) has successfully completed its second year of reviewing the Indian Housing Plans (IHP) submitted by participants in the Indian Housing Block Grant (IHBG) Program, as required by section 103 of the Native American Housing Assistance and Self-Determination Act of 1996 (NAHASDA). Figure 1 illustrates client and funding levels for fiscal year 1998 and fiscal year 1999. This represents a substantial increase in the number of clients that ONAP has assisted since the transition from the programs administered under the U.S. Housing Act of 1937 (1937 Act). Under the 1937 Act, ONAP provided assistance to approximately 200 Indian housing authorities.

FIGURE 1
[Funds in millions of dollars]

	No. of plans submitted	No. of tribes represented	Funds allocated
Fiscal year:			
1998	368	552	\$585
1999	356	527	610

NAHASDA has provided tribes with the ability to develop new affordable housing activities that were not eligible under the 1937 Act. The result has been an increase in housing opportunities for many eligible tribal families throughout the country. Examples of the activities proposed by tribes in the IHPs include: downpayment and other mortgage assistance, revolving loans funds for rehabilitation of housing units, transitional housing, spousal abuse shelters, elderly homes and congregate housing. NAHASDA has been used in many cases to leverage funds for affordable housing.

In addition to the review of plans, we have continued to administer the IHBG formula developed by the Negotiated Rulemaking Committee. This included the successful completion of challenges and corrections to the NAHASDA funding formula. In fiscal year 1999, we enlisted the assistance of a contractor to assist the Department and our recipients in this effort. These challenges and corrections are submitted for the purpose of correcting the data used in developing the formula allocation for each tribe. See Figure 2.

FIGURE 2.—Indian Housing Block Grant

	<i>No. of formula challenges</i>
Fiscal year:	
1998	120
1999	137

We also have developed a “Toll Free” hotline so that tribes and tribally designated housing entities can receive immediate assistance with formula allocation questions and problems.

ONAP will be convening a work group this year to re-examine the formula, pursuant to the requirements contained in 24 CFR 1000.306. This regulation states that the IHBG formula can be modified by developing a set of measurable and verifiable data directly related to Indian and Alaska Native housing needs; determining if NAHASDA units should be included under Formula Current Assisted Stock (FCAS) or other changes that may be needed with respect to funding under the FCAS component of the formula; and/or, reducing the Section 8 units by the same percentage that the current assisted rental stock has diminished since September 30, 1999. The goal of the work group will be to determine if the formula should be modified as a result of the data uncovered.

Title VI: Federal Guarantees for Financing for Tribal Housing Activities

Title VI of NAHASDA authorizes HUD to guarantee notes or other obligations issued by Indian tribes or TDHEs for the purpose of financing affordable housing activities as set forth in Section 202 of NAHASDA. Indian tribes, or their TDHEs, leverage IHBG funds to secure financial obligations to a maximum of five times their annual grant allocation. Current and future IHBG funds are pledged as security to the repayment of the Federally-guaranteed financial obligation. In its third year of funding, ONAP issued Preliminary Letters of Acceptance to seven potential borrowers representing potential loan commitments of \$34,155,000. With continued training, technical assistance and sharing of model loans from those first funded, ONAP expects continued growth of the program.

Section 184 Indian Home Loan Guarantee Program

The Indian Home Loan Guarantee 184 Program was created under Section 184 of the Housing and Community Development Act of 1992, as amended by Title VII of the Native American Housing Assistance and Self-Determination Act of 1996 (NAHASDA). The Section 184 program gives Native Americans access to sources of private mortgage financing by providing loan guarantees to lenders. Section 184 covers one-to-four family homes located in an Indian or Alaska Native area where the land may be tribal trust, allotted individual trust or fee simple land.

Native American and Alaska Native families, individuals, Indian Tribes or Indian Housing Authorities (including TDHEs) may obtain Section 184 financing in order to purchase an existing home, construct or rehabilitate a home within an Indian area. In the event of a foreclosure, only these eligible borrowers may purchase the home from HUD.

SECTION 184 ACTIVITY TO DATE FROM PROGRAM IMPLEMENTATION IN 1994 TO JANUARY 31, 2000

Ownership Type	No. of Loans	Amount of Loans
Fee Simple	433	\$46,966,523
Tribal Trust	185	14,737,222
Allotted Trust	13	1,093,011
Totals	631	62,796,756

TRAINING AND TECHNICAL ASSISTANCE SUCCESSES

The passage of NAHASDA and its implementation through the program regulations developed by the Negotiated Rulemaking Committee challenged tribes and ONAP staff to create a new atmosphere of consultation and coordination. Asking a tribe to adopt procedures to become the direct housing provider was vastly different than their prior role as an indirect oversight entity. More intensive, hands-on training may be needed for ONAP, tribes and their housing entities to meet those chal-

lenges along with the skillful use of all technological tools to reduce costs and maximize the utilization of Federal funds.

As part of the ONAP reorganization, a Training and Technical Assistance Committee was formed consisting of a representative from each ONAP field and Headquarters offices. One of the first priorities of the committee was to develop a staff training plan. In the past two years the training plan has been modified and updated as training has occurred and new needs are identified. The committee conducted a staff survey in December 1999 and has continued to receive input from the local offices.

In order to meet the committee's mission of achieving the most effective and efficient use of training resources, many of the training courses are consolidated sessions for grant recipients and ONAP staff. In many instances, ONAP uses outside contractors to develop and conduct the training sessions; therefore, the annual procurement plan is prepared in conjunction with the training plan.

In the past year, the following training sessions have been held for grantees, ONAP staff, financial institutions or all of these participants:

- Indian Housing Plan preparation and submission
- Environmental Review requirements
- Grants Monitoring Business Processes
- NAHASDA Grant Requirements
- Indian Community Development Block Grant
- Internal Controls and the Audit Process
- Section 184 Loan Guarantee Program
- Homeownership Counseling
- Homeownership Summit Seminars
- Low-income Housing Tax Credit Workshops
- Policy Development Workshops
- Implementation Skills for Boys and Girls Clubs
- Boys and Girls Club Executive Directors Training
- Crime Prevention and Drug Elimination Conference

The technical assistance plan developed by the committee provides for periodic assessment of needs, local Area ONAP involvement, evaluation of requests and short- and long-term evaluation. Based on an analysis of technical assistance requests, workshops providing hands-on technical assistance for small groups of housing or tribal representatives are scheduled. The workshop environment allows for a more cost effective method of delivering technical assistance while providing one-on-one assistance.

A Tribal Technical Assistance and Training (TTAT) Center has been established on the Internet to provide a central location for tribes and TDHEs to request technical assistance in program planning, development, and management. The TTAT Center maintains a training calendar and provides training and technical assistance products.

Under the Drug Elimination technical assistance program, training manuals and newsletters have been developed to support the Boys and Girls Club Initiative. Five guidebooks have been developed for the Youth Development and Community Leadership program. Under the Community Anti-Crime in Indian Country initiative, needs assessments and site visits have been conducted by our contractor.

During fiscal year 1998 and fiscal year 1999, ONAP conducted over 13 regional training and technical assistance sessions for recipients on submission of IHPs. Additionally, we completed numerous sessions with ONAP staff, instructing them on how to review these IHPs in order to ensure national consistency across the program. ONAP developed a National Review Committee, comprised of program staff from throughout the country, to assist in the review of IHPs during these first two years of NAHASDA implementation. The purpose of the NRC was to ensure consistency in the interpretation of NAHASDA and its implementing regulations.

In fiscal year 2000, we continue to work on improving the IHP review requirements and open further channels of communication between our staff and our grant recipients. Staff training was held in December of 1999 with follow-up training provided in January of 2000. Training is also scheduled for the third or fourth quarter of this year. Sessions on IHP and NAHASDA requirements are also planned for grant recipients. We continually work with staff to ensure that the 60-day statutory deadline for IHP review is met.

In order to successfully implement the new Title VI program, HUD published a Notice of Funds Availability (NOFA) to provide "capacity-building" (i.e. the transferring of skills and knowledge) to potential borrowers. The purpose of the NOFA was to solicit a qualified technical assistance to: (1) strengthen the economic feasibility of projects guaranteed under Title VI of NAHASDA; (2) directly enhance the security of guaranteed loans; (3) finance affordable housing activities and related

projects that will provide near-term results; (4) demonstrate economic benefits such as homeownership opportunities, increase housing availability, housing accessibility and visibility, and job creation related to the approved project; and (5) attain Indian Housing Plan goals and objectives.

Thus far, the contractor selected has provided training at approximately 20 tribal and association meetings and developed an assessment program that screens potential borrowers. The multi-step assessment program includes a telephone assessment to determine initial qualification and needs, followed by an on-site review to determine the extent of technical assistance that may be required. This is accomplished by reviewing records, audits, resident accounts, maintenance schedules, work orders and other housing activities. Data is assembled and a Technical Assistance Plan is custom designed to meet the needs of the borrower. The Technical Assistance Plan is then submitted to ONAP for approval and Capacity-Building grant funds are reserved. Three Technical Assistance Plans have been approved by ONAP and another is currently under ONAP review.

Outreach and training has continued under the Section 184 home loan guarantee program. A significant change took place in fiscal year 1999 in the delivery of this training, as a result of the One-Stop Mortgage Center Initiative. In August 1998, President Clinton held an Economic Development Summit to focus on Indian country issues. One of the by-products of the Summit was the Initiative, co-chaired by HUD and the Treasury Department. The goal of the joint committee was to increase homeownership opportunities in Indian country through streamlining the mortgage loan process.

HUD and Treasury were requested to put together working groups to identify the barriers to mortgage lending in Indian country, and develop solutions to those barriers. In the course of this process many participants identified the need for education about available loan products sponsored by Federal agencies. The result was inter-agency training sessions, sponsored by ONAP, which cover not only the Section 184 program, but also loan programs sponsored by the U.S. Department of Agriculture and Veterans Affairs. Speakers from the Bureau of Indian Affairs also participate in order to train attendees on land issues. Three inter-agency trainings were held in fiscal year 1999 and four have been planned for fiscal year 2000. ONAP staff continue to participate in conferences around the country, to promote the Section 184 program.

ONAP has also developed many technical assistance products which have been made available to grant recipients on the Internet or through distribution of CD-ROMs. Some of these products include:

The Side-by-Side Guidebook.—Allows the user to easily refer to NAHASDA along with the applicable program regulation(s). The Guidebook also includes all regulations and laws included or cross-referenced in NAHASDA or in 24 CFR Part 1000.

The Tribal Legal Code Project.—An outline and illustrative guide for drafting tribal-specific housing codes, including representative examples of land use, building, and zoning codes. The project utilized existing tribal codes and identified best practices.

The ONAP Online Training Modules.—A web-based training tool that allows users to learn whenever they want, at their own pace. The online training currently includes basic level modules on housing finance, procurement, homeownership, financial management, construction management, and property management. Additional topics and intermediate and advanced modules will follow.

The NAHASDA Development Model Series.—Models crafted to help tribes and TDHEs design eligible programs using NAHASDA funds. Each model includes, where appropriate, an outline of new regulations and detailed guidance on program design, implementation strategies and effective approaches.

The Guide to Creating a Nonprofit Homeownership Entity.—A resource guide for launching a nonprofit with the mission of promoting homeownership opportunities. The guide leads the user through the planning stages, the legal creation of an entity, the application process for Internal Revenue Service 501(c)(3) status, the development of the organization, and program operations.

The HUD ONAP Community Builders have been actively involved in the provision of direct technical assistance to tribes and TDHEs in all six Area Offices. Their regular activities include site visits, responding to telephone requests for assistance or information, preparation of explanatory materials on Federal programs, and conducting workshops and training sessions. ONAP Community Builders carried out some of the sessions noted above and in addition provided the following technical assistance sessions:

—*Muckleshoot Tribal Housing Authority.*—Considered different financing alternatives including developing their own lending firm.

- Lower Elwha, Jamestown Klallam and Makah Tribes.*—Provided information and training on Section 184, tribal programs, and tribal employment.
- Port Madison Tribe.*—Explained Title VI, purchase of fee simple land, downpayment assistance and the purchase of HUD Acquired Properties.
- Yakama and Port Gamble S’Kallam, Tribes.*—Provided examples and models of homeownership counseling programs.
- Coquille Tribe, the Coos, Lower Umqua, & Siuslaw Confederation of Tribes, the Siltz Tribe and the Grand Ronde Tribe.*—Providing training on Section 184, Title VI, and other financing options.
- Lummi, Tulalip, Quinault and Puyallup Tribes.*—Gave training and materials on the Title VI program.
- Santa Clara Pueblo Housing Authority.*—Explored establishing homeownership programs and utilization of the Title VI program.
- Jemez Housing Authority.*—Provided examples of homeownership and rehabilitation programs for the elderly.
- Santo Domingo Housing Authority.*—Provided training on various homeownership programs, Title VI and low-income housing tax credit project.

TRAINING AND TECHNICAL ASSISTANCE GOALS AND OBJECTIVES FOR FISCAL YEAR 2000

Objectives fully or partially completed:

- Provide job-specific training to 100 percent of the ONAP staff.
 - Job-specific training was provided to over 95 percent of the ONAP staff at the first ever all-staff training in December 1999.
 - Workshops on Low-income Housing Tax Credits, Special Needs Assessment, Indian Housing Plans, Policy Development, Project Implementation for Rehabilitation and Internal Controls and Self-Monitoring, have been held in October and December 1999 and January and February 2000 in three locations.
 - Issue at least six Dream Catchers; a newsletter offering up-to-date program information. The last issue in this on-going series was issued December 1999.
- Training and Technical Assistance projects being finalized:
- Hold training sessions in each region for IHBG recipients and ONAP staff on a minimum of five topics.
 - Develop additional modules for the ONAP Online Training.
 - Develop and distribute additional technical assistance products.
 - Maintain quality Internet sites (Code Talk) as a resource for tribes.
 - Conduct workshops on at least eight different topics in at least six different locations for IHBG recipients.

ONAP TECHNOLOGY HIGHLIGHTS

ONAP utilizes technology to better serve its clients, administer its programs, and manage its most important corporate asset—knowledge capital. Since 1997, ONAP has provided its clients and the general public with improved Internet access to the latest reference documentation, frequently asked questions, collaboration forums, and grant program assistance information. Additionally, annual plans and reports can be submitted via the Internet by grant recipients directly to ONAP staff for review, tracking, and approval as part of an efficient Lotus Notes workflow system. This system also allows ONAP to track work-load by assigning reviewers to plans and reports, as well as determining benchmarks for process improvements by capturing specific metrics such as how long it takes to review plans and reports.

ONAP’s success in providing information to our clients through the use of the internet is proven by examining the number of “hits” on our various web pages during the months of December 1999 and January 2000.

ONAP Web Site Tracking

[December 1999 and January 2000]

	<i>No. of “hits” to web page</i>
Web-based Training	6,083
Planet Youth	32,600
Tribal Consultation Information	1,656
E-Library	2,665

The Planet Youth web site is designed for and primarily used by Native American youth. It is the third most popular site among ONAP’s various web sites. Additionally, ONAP’s web pages have proven to be a vital and ready source of information. Program information and publications such as the Dream Catcher newsletter are frequently downloaded, according to tracking information.

ONAP established a Knowledge Management Committee (KMC) focused on standardizing office processes, increasing staff efficiency and effectiveness, sharing knowledge, working smarter, and helping ONAP achieve its mission and objectives. The KMC also manages ONAP's Electronic Library (eLibrary), which is our Front Page for weekly messages from the Deputy Assistant Secretary, contact information, calendar events, meeting minutes, best practices, and reference materials. The eLibrary also allows for electronic dialogue between geographically dispersed ONAP staff members through the use of discussion databases.

During fiscal year 2000, ONAP will expand the use of the Internet and other leading-edge technologies to continue to lead HUD and the Federal Government with Electronic Business. They will continue their commitment to grant recipient technology enablement through a new initiative designed specifically to help the Native American community obtain Internet access. ONAP will provide hands-on, on-site support to these groups. The benefits of this initiative include expediting the grant allocation process by allowing ONAP staff to review the plans and reports on-line. Increasing on-line submissions will enable ONAP staff to spend more time assisting grant recipients in developing successful housing programs. Additionally, the Recipient Technological Enablement initiative helps to shrink the digital divide by providing Internet access and skills to geographically remote groups who might otherwise be left behind in the new technology-based economy.

ONAP will continue to promote the KMC and eLibrary. Our plans are to reevaluate the roles of the KMC representatives so that they have more time and incentive to contribute to its success. An active KMC and a well-utilized eLibrary will help reduce paper transactions and rework as well as increase ONAP's responsiveness to clients. This initiative also supports ONAP's Virtual Office goals by allowing ONAP staff located across the country to collaborate, sharing data and ideas.

During fiscal year 2000, ONAP will also begin development of the Native American Economic Development Access Center (NAEDAC), as directed by President Clinton. The NAEDAC will provide tribes, Indian-owned businesses, the private sector, and non-profit organizations easy access to information on a wide range of Federal economic development programs and initiatives. The NAEDAC will initially consist of a toll-free telephone number answered by ONAP staff, who will direct callers to sources of obtain information on federal resources for economic development. Ultimately, the Internet and other technologies will be used for the Native American community to conduct their own research through a single access point on the Internet.

MONITORING AND OVERSIGHT OF INDIAN PROGRAMS

During fiscal year 1999, ONAP created a team of managers, staff, and subject-matter experts to develop a business process for the evaluation of grantee performance. The outcome of this effort is a risk-based monitoring effort wherein the recipients with the highest potential for not accomplishing their objectives receive the greatest attention, such as closer oversight and access to available technical assistance, from the Department. The ONAP recognizes the benefits of reviewing all recipients on a regular basis to identify best practices, so that they may be shared with other program participants. In addition to regular monitoring of the poorer performers, an objective has been established to visit at least 20 percent of all program participants each year, so that all recipients will be monitored not less frequently than every five years. During fiscal year 2000, 116 recipients have been scheduled for monitoring with 96 planned for on-site review. This level of effort reflects review of approximately 20 percent of all active recipients.

ONAP will extend its use of the Internet during fiscal year 2000 to provide the public with access to the schedule of upcoming monitoring visits, copies of final monitoring reports on recipient performance, and the guidelines and tools used by ONAP in its monitoring efforts. The planned monitoring visit schedule is currently posted on the "CODETALK" website and is updated monthly. This information will assist grant recipients in preparing for HUD monitoring of its' programs and provide relevant information on what is or is not working for other tribes.

The business process development team created a guidebook to provide instruction to HUD staff in monitoring requirements and to improve consistency in the application of program requirements among all ONAP offices. During fiscal year 2000, ONAP plans to refine and expand the contents of the guidebook to incorporate knowledge obtained during the monitoring process. The initial guidebook, along with any improvements, will be made available to tribes and tribally designated housing entities for their information and use via the electronic medium.

During fiscal year 2000, ONAP will constantly review and refine its monitoring processes and procedures to improve the efficiency and effectiveness of its oversight

functions. This will include, as mentioned in the previous paragraph, regular updates to its internal guidance (self-evaluation), assessment of its performance by outside experts to solicit recommendations for streamlining and other improvements, assessing the availability for out-sourcing monitoring elements such as analysis of physical condition of housing stock, financial reviews of recipients and incorporating greater use of technology in monitoring.

ONAP continues to monitor the performance of lenders and individual loan performance in the Section 184 program. Loss mitigation options are strongly encouraged for servicing mortgagees. When quality control reviews of guaranteed loans reveal potential lender problems, on-site monitoring reviews will be scheduled.

CONCLUSIONS

HUD and the Office of Native American Programs, remains committed to providing safe, decent and affordable housing for Native Americans and Alaska Natives. In order to accomplish our goals and objectives, we will maintain a dynamic program of technical assistance and training. An aggressive monitoring program will assure quality program delivery.

Question. How does HUD measure the success of this program under the Results Act?

Answer. The fiscal year 2001 performance goal under Government Performance Results Act (GPRA) for the Indian Housing Block Grant (IHBG) is to increase the number of Native American families served by 3 percent over the baseline that will be established in fiscal year 2000. The Department will accomplish this by analyzing the Annual Performance Reports (APRs) which are required to be submitted by grant recipients pursuant to sections 403(b) and 404(b) of NAHASDA and its implementing regulations at 24 CFR 1000.512–521. The Department's Office of Native American Programs (ONAP) staff reviews the APRs to determine if the grantee was successful in meeting its stated Indian Housing Program (IHP) goals. Staff also monitor each grantee's performance and track data submission through on- and off-site monitoring.

Question. What significant reforms need to be made to this program to ensure its success?

Answer. The Office of Native American Programs (ONAP) has been deeply involved in consulting with its clients to reach consensus on how to improve program operations and delivery. A number of issues have been identified for further discussion, including:

- reviewing the established allocation formula to ensure that it meets tribal needs;
- expanding Native American Housing Assistance and Self Determination Act's (NAHASDA) six eligible affordable housing activities to include comprehensive planning activities, housing services, and certain infrastructure needs when the low-income families are residents of housing not developed under NAHASDA (these and similar activities are currently prohibited by statute); and
- resolving problems associated with reaching cooperative agreements with local jurisdictions and the tax-exempt status of housing units developed with NAHASDA funds.

PUBLIC HOUSING OPERATING FUND

Question. What is the status of the rule making for establishing a new operating subsidy formula and when will this new formula be ready for implementation?

Answer. Regulatory negotiations for establishing a new operating subsidy formula were completed on March 8, 2000, with the adoption by consensus of preamble and regulatory language drafted by the established Negotiated Rulemaking Committee. Following internal, OMB, and Congressional Committee reviews, the draft material is expected to be issued as a proposed rule later this month. The Department will consider the public comments received on the proposed rule and, per the consensus agreement, issue an interim rule that would govern the determination of funding distributions to Public Housing Authorities (PHA) under the Operating Fund, until a final rule, reflecting the results of a Congressionally requested public housing cost study, is developed and published. The interim rule will first be effective for PHAs with fiscal years beginning on or after January 1, 2001.

PUBLIC HOUSING CAPITAL FUND

Question. What is the current estimate of unmet capital needs for the entire stock of public housing?

Answer. A major study conducted by Abt Associates for HUD, completed in March 2000, concluded that the backlog was approximately \$23 billion in June 1998. The

Study, which also concluded that the requirements have an annual accrual of \$2.1 billion, was based on physical inspections of 684 developments with 229,973 units at 219 housing authorities. A copy of the referenced Study is enclosed.

[CLERK'S NOTE: A copy of "Capital Needs of the Public Housing Stock in 1998", formula capital study, can be obtained by contacting the U.S. Department of Housing and Urban Development.]

Question. Should these capital needs be considered as a priority among HUD programs?

Answer. Yes. Public housing developments are a vital source of housing for low-income families. Vast improvements have been achieved in rehabilitating and integrating public housing into the fabric of the community through HOPE VI and Public Housing Capital Fund appropriations. To forestall and reverse the deterioration of the aging, existing stock, including failing infrastructure, and the consequent negative impact on communities, continued funding at significant levels for both programs is critical.

Question. Does HUD have a long-term plan for addressing these capital needs?

Answer. The Department has a three pronged approach for addressing the capital needs as follows: (1) Annual physical inspections are conducted by the Real Estate Assessment Center (REAC) to document and provide a current assessment of the conditions of all public housing developments; (2) Based on the annual assessment, Public Housing Authorities (PHA) develop long-range strategies in order to target capital fund resources and additional assessments of capital needs to correct those deficiencies through renovation of viable developments and/or demolition of non-viable developments; and (3) HOPE VI funds are used in select cases, where the PHA, the local community, the City, and private entities are able to form a partnership for a comprehensive plan to revitalize a community, and capital funds otherwise would be inadequate.

Question. Has HUD conducted a cost benefit analysis of what is the appropriate level of funds needed to meet public housing capital needs over the next 10 years?

Answer. The 1998 Abt Study, commissioned by the Department, documented a modernization backlog of approximately \$23 billion, and an annual accrual of \$2.1 billion. The results of this Study (copy provided with previous answer) can be used as a guide for the appropriators.

SECTION 202 ELDERLY HOUSING CONVERSION TO ASSISTED LIVING

Question. Mr. Secretary, the administration is proposing \$50 million for the conversion of section 202 housing to assisted living units. What is the status of this new initiative and what is the nation-wide need for this type of housing?

Answer. The Notice of Funding Availability (NOFA), announcing fiscal year 2000 funds, was published in the Federal Register on March 17, 2000 and applications are due July 17, 2000. The number of Section 202 elderly residents 85 years and older are increasing rapidly. As these residents continue to age in place, they are becoming frailer and consequently need more accessibility features and more supportive services in order to remain independent and not be prematurely displaced to nursing homes. In most cases, nursing homes provide the primary option for the very low-income frail elderly since most assisted living facilities are not affordable. As we have been informed by the industry, the \$50 million for converting existing Section 202 projects to assisted living facilities allows their residents to remain in place and provides their frail elderly residents with an affordable option to nursing home placement.

SECTION 811 HOUSING FOR PERSONS WITH DISABILITIES

Question. Mr. Secretary, the Department continues to propose increased funding annually for the Housing for Persons with AIDS housing program (HOPWA) while Section 811 Housing for Persons with Disabilities has primarily received flat funding under recent Administration budgets?

Answer. The Department has also proposed an increase in funding for the Section 811 program since fiscal year 1999. In fiscal years 1999, 2000, and 2001, the Department proposed \$174 million, \$194 million, and \$210 million respectively. The Department has proposed an increase in the HOPWA program to help address growing needs and provide support for additional communities that are projected to become eligible for the formula. For the Section 811 program, the Department has proposed an increase in funding to further address the housing needs of persons with disabilities who, as a population, have the worst case housing needs.

In addition to the increased funding the Department is proposing to expand the "earned income disregard" that is now applicable only to HUD's public housing program to the calculation of income for persons with disabilities to many of the pro-

grams at HUD. HUD has the authority to implement the "earned income disregard" immediately for the following four programs: HOME, Housing Choice Voucher Program, HOPWA, and Supporting Housing for the Homeless. For other programs at HUD, statutory language change will be required. The language is being drafted by the Department at this time. The earned income disregard will assist persons with disabilities in obtaining and retaining employment, which obtaining and retaining employment, which is an important step toward economic self-sufficiency.

Question. In fact, HOPWA funding receives more annual HUD housing funding than Section 811 housing despite the fact that persons with AIDS are housed in Section 811 housing?

Answer. Since 1992, the HOPWA program has been the Federal Government's primary targeted response to the pressing housing needs of low income persons who are living with HIV/AIDS and their families. Although persons with HIV/AIDS are eligible for Section 811 housing, it is estimated that only 800 of the more than 16,000 housing units funded through the Section 811 program over the past 10 years are for this population. Therefore, the funding that the HOPWA program has received over the years which covers the cost of a wide array of activities such as housing assistance, supportive services and program planning and development, is necessary to address the often unique and diverse housing needs of a growing population of persons with HIV/AIDS.

Question. How do you explain the difference in the funding priorities by the Administration between these programs?

Answer. The HOPWA program and the Section 811 program are different in many respects. The Section 811 program provides funding for the development of new permanent housing for persons with disabilities. The HOPWA program is responding to a national epidemic. Although the HOPWA program serves one population of persons with disabilities and its primary focus is on housing assistance, the assistance is quite different than what is provided through Section 811.

Under Section 811, the majority of the assistance is project-based. Of the HOPWA funds used for rental assistance (78 percent of total funding), 84 units supported through 57 percent of the HOPWA funds are for tenant-based rental assistance and short-term rent, mortgage and utilities payments to prevent homelessness. These funds may be used to support residents in their existing housing which enables them to maintain their independence. Only 16 percent of the units, supported with 43 percent of rental assistance funds are for facility-based forms of housing assistance. The remaining 22 percent total of HOPWA funds are used for supportive services. No Section 811 money can be used for supportive services. The above is indicative of the fact that the large population of persons with HIV/AIDS in this country has needs that, in most cases, are not well served through the project-based Section 811 program. Funding for HOPWA is essentially based on caseload levels and again represents the existence of a national epidemic and the basic fact that the number of persons living with AIDS continues to increase. In addition, the Department has in recent years requested additional Section 811 funding, reflecting growing demand for this program as well.

Question. Should these programs be merged?

Answer. No, the programs should not be merged because, as described in the answer to the previous question, the two programs are very different with respect to the types of activities that can be implemented. In addition, eligible applicants for the two programs are different. Under the Section 811 program, eligible applicants are nonprofit organizations with a Section 501(c)(3) tax exemption. Under Housing Opportunities for People With Aids (HOPWA), grants are provided by formula allocations for 90 percent of the appropriation to States and metropolitan areas with the largest number of cases and incidence of AIDS, and for 10 percent of the appropriation, by competitive selection of projects proposed by State and local governments and nonprofit organizations. Both programs have very different legal structures. Under HOPWA, funding is provided in the form of a grant that must be expended within three years or the funding will be deobligated. A grant agreement is used to obligate the funds. Under 811, however, funding is in the form of capital advances and project rental assistance funds for the development and operation of the projects. The project must operate for at least 40 years; otherwise the Owner must repay a prorated share of the capital advance to HUD. There is no grant agreement under Section 811. Instead, there is a capital advance agreement and a mortgage note, among other legal documents.

LEAD-BASED PAINT HAZARD REDUCTION

Question. Mr. Secretary, the Administration is proposing a significant increase in the Lead-Based Paint Hazard Reduction program from \$80 million in fiscal year

2000 to \$120 million in fiscal year 2001. What activities will these funds be used for? In addition, I understand that HUD funding of remediation far exceeds private sector costs for similar activities.

Answer. Of the proposed \$40 million increase, \$30 million will be used to increase funding for states and local governments to control lead-based paint hazards in privately owned low-income dwellings where the risk of childhood lead poisoning is greatest. For the past several years, HUD has received grant requests totaling over \$200 million each year; most of these applications demonstrate very real need and capacity. The need for funding has consistently exceeded the availability of funds. Without a significant increase in funding, low-income children will continue to be unnecessarily exposed to lead paint hazards.

Eligible activities under the grant program include lead-based paint inspections, risk assessments, correction of detected hazards, post-abatement clearance testing (to ensure the work was done properly and the property is safe to occupy), blood lead testing (if not reimbursable from Medicaid or another source), public education to provide parents with the information they need to protect their children and to encourage landlords and other property owners to enroll in the program, relocation expenses (to ensure children are not exposed to hazards during the work), and administration (limited to 10 percent of the award). Many local jurisdictions are able to leverage private sector funds or set up revolving loan programs with the Federal funding. The proposed increase in funding is part of a governmentwide strategy to eliminate childhood lead paint poisoning by the year 2010 (this strategy report was sent to Congress in March 2000).

Grants are currently active in over 200 cities, but without increased funding, many jurisdictions will not have the resources needed to eliminate this disease. Funds are also used to provide technical assistance to grantees and conduct research to promote innovation and drive down hazard detection and abatement costs. Recent data from a scientific evaluation of the grant program show that blood lead levels have declined by approximately 25 percent in children living for at least 1 year in abated housing and that dust lead levels have declined by 66 percent over a 3-year period. Updates on the evaluation have been provided in reports to Congress each year for the past several years, with a major report expected in 2001.

The remaining \$10 million will be used to enforce lead paint regulations and to provide compliance assistance. At the Federal level, HUD has new responsibility to enforce both the lead paint disclosure regulation and a new regulation that consolidates, streamlines and modernizes lead paint regulations for all Federally assisted housing. The latter will take effect on September 15, 2000. Without increased resources, HUD will be unable to provide the necessary training, technical assistance and enforcement oversight needed to ensure compliance and to ensure that Federal resources are not being used to subsidize housing that poisons children. The fiscal year 2000 budget provided \$70 million for the lead paint grant program, technical assistance and research and \$10 million for the Healthy Homes Initiative.

See next question for details on HUD versus private sector costs.

Question. Please provide a comparison of HUD costs as opposed to private sector costs for remediation. Explain any differences in costs?

Answer. There are no data on privately funded abatement costs. As a practical matter, most hazard control actions are performed under orders of local health departments investigating cases of poisoned children, or publicly funded projects through federal state and local funding. HUD estimates the average costs of interim controls to be approximately \$2,500 per unit and \$9,000 for permanent abatement. However, since most homes do not have lead paint hazards and, therefore, will not require treatment, the average cost per unit of the regulation is only \$196.00. The costs for individual dwellings can vary widely, due to differences in size, number and type of surfaces with lead hazards, and condition. The costs of lead hazard control are best detailed in the Economic Analysis for HUD's lead hazard control regulation, available upon request or at www.hud.gov/lea. The Economic Analysis relies on the cost data collected from the evaluation of the grant program, as well as interviews with private lead hazard control contractors. The analysis shows that the cost of complying with the new HUD lead paint regulation for federally-assisted housing is \$235 million. The cost of not implementing the regulation (i.e. the benefit) is \$1.1 billion due to increased medical care, special education, and reduced lifetime earnings (due to reduced IQ).

Question. Please identify the targets and benchmarks for this program under the Results Act.

Answer. Performance indicators are contained in the Department's Strategic Objective (1.3.5) of the Annual Performance Plan. They include the number of units made lead-safe, the percent reduction in dust lead levels in homes treated under the grant program, the number of cooperative agreements completed under the Healthy

Homes Initiative, and the reduction in children's blood lead levels. The target number of units treated under the grant program for fiscal year 1999 was 6,000 units and the actual number was 7,471. The overall cumulative number of units treated is currently about 25,000 (which does not include the units treated as a result of public education undertaken by grantees). The target percent reduction in dust lead levels for fiscal year 1999 was 25 percent compared to baseline levels before abatement. Actual performance was 64 percent. The fiscal year 1999 target for the Healthy Homes Initiative was 8 awards; the actual performance was 11 awards. The fiscal year 1999 target reduction in blood lead levels for children living for at least 1 year in abated housing was 20 percent. The actual reduction was 26 percent. Blood lead levels decline more slowly than dust lead levels due to body stores of lead in the bone. National blood lead levels should be available from the Centers for Disease Control and Prevention in 2003 in the next National Health and Nutrition Examination Survey.

Question. How does HUD measure the success of this program?

Answer. The two chief outcome measures are blood lead levels and dust lead levels. Population blood lead levels are measured through Center for Disease Control's (CDC) National Health and Nutrition Examination Survey and dust lead levels are measured through the on-going HUD Evaluation of the Lead Hazard Control Grant Program. The report of the President's Task Force on Environmental Health Risks and Safety Risks to Children contains new projections of the number of children with elevated blood lead levels and the number of housing units at risk of lead paint hazards. We estimate that there are about 250,000 low-income children with lead poisoning living in pre-1960 housing units. The last estimate from CDC was about 800,000 children (from 1991-1994). While this represents enormous progress (due in part to the HUD lead paint grant program) it is noteworthy that the prevalence of this disease is still very large among certain populations. Among low-income children living in older housing, the prevalence is 16 percent (compared to 4.4 percent for all children). Among African-American children in older housing, the prevalence is 21 percent. Unfortunately, childhood lead poisoning continues as one of the major childhood environmental diseases. The report estimates that by the year 2010, unless further actions are taken, about 135,000 children annually will be poisoned. The proposed expansion of the grant program and implementation of the new HUD regulation is designed to eliminate this problem over the coming decade. HUD will also complete a new national survey of the prevalence of lead paint hazards in the U.S. housing stock by December 2000. This will enable HUD to measure progress in making housing lead-safe.

Question. What is HUD's role in remediation efforts in the private sector?

Answer. HUD encourages its grantees to leverage private sector funding to augment the Federal resources available. We also play an important role in setting standards to create a level, competitive playing field that promotes innovation and new technology in the lead hazard control industry. For example, HUD produces Performance Characteristics Sheets for XRF lead paint analyzers, which has helped fuel a new generation of quicker, more accurate and less costly methods of lead paint analysis. HUD also enforces the lead paint disclosure regulation, which enables new homebuyers to obtain a 10-day opportunity to have a lead paint inspection or risk assessment performed. If hazards are identified, their correction can be financed through the normal mortgage financing systems or through home improvement loans. Some jurisdictions are now providing "lead-safe" certificates for housing found to be lead-safe to encourage property owners to make investments in lead-safety, as much as they would any other capital improvement or on-going maintenance program. HUD also funds training programs for remodeling, renovation, painting contractors, landlords, maintenance workers, housing inspectors and the public to promote the broad adoption of lead-safe work practices.

SYNCHRONIZATION

Question. HUD staff have indicated that the HUD Budget office is pursuing a policy of synchronization of HUD section 8 and public housing contracts. What is this policy and program?

Answer. Synchronization is a concept which was introduced by housing industry groups during the negotiated rule-making meetings on the Section 8 renewal policy. The term "synchronization" means to align contract expiration dates for a public housing authority (PHA) to occur at the same time. This concept is only applicable to the Section 8 tenant-based programs.

Over the years, housing agencies have been awarded numerous funding increments through Notice of Fund Availability (NOFA) competition, conversions of tenant-based assistance, demonstration programs, etc. Each allocation of funding pro-

vided by HUD is unique, having effective and expiration contract dates based on: (1) the length of the contract, (2) the date funding was awarded by HUD, and (3) the execution date of the annual contributions contract.

Currently, although there are only 3,000 PHAs, there are over 20,000 funding increments with renewal dates occurring throughout the year. Given an annual renewal policy with a 1-year term, the process is time and staff intensive for both the Department as well as the PHAs.

Moreover, multiple contracts expiring at different times throughout the year increase the complexity of formulating budget projections, creates confusion, and has, in fact, contributed to under-utilization of the unit inventory by some PHAs. During the negotiated rule-making sessions conducted during 1999, the housing industry groups requested that the Department realign all contracts for a housing agency to expire on the same date, which would result in one contract renewal date each year for a housing agency.

Question. What are the costs associated with it and what is and will be the impact of this policy and program on section 8 and public housing programs?

Answer. The realignment of contract expiration dates for each housing agency involves both contract extensions as well as truncations. The net effect of the realignment results in a cost since most contracts need to be extended to a new future date. The current estimate to synchronize the increments is a one-time cost of approximately \$1.8 billion.

The impact of this policy on the Section 8 program is that both HUD and the housing agencies will be able to manage program funds in more effectively and efficiently. Budgetary projections will be facilitated, and the Department will be able to quickly identify program under-utilization, and reallocate unused resources to other housing authorities. Recaptures would be minimized.

Question. Please identify all budget and other documents provided to the Congress that identify and discuss this policy and program?

Answer. As one of the discussion items during the Congressionally mandated negotiated rule making session for the development of a Section 8 renewal formula, a discussion of the Department's "synchronization" is included in the Federal Register: "Renewal of Expiring Annual Contributions Contracts in the Tenant-Based Section 8 Programs; Formula for Allocation of Housing Assistance; Final Rule," published October 21, 1999. A copy of this document is attached for your information.

[FROM THE FEDERAL REGISTER, OCTOBER 21, 1999]

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

24 CFR Part 982

[Docket No. FR-4459-F-03]

RIN 2577-AB96

Renewal of Expiring Annual Contributions Contracts in the Tenant-Based Section 8 Program; Formula for Allocation of Housing Assistance

AGENCY: Office of Public and Indian Housing, HUD.

ACTION: Final rule.

SUMMARY: This rule specifies the method HUD will use in allocating housing assistance available to renew expiring contracts with public housing agencies (PHAs) for Section 8 tenant-based housing assistance. As required by statute, this rule is the product of a negotiated rulemaking, following implementation, as further required by statute, of a HUD notice on this subject.

EFFECTIVE DATE: November 22, 1999.

FOR FURTHER INFORMATION CONTACT: Robert Dalzell, Office of Public and Indian Housing, Department of Housing and Urban Development, 451 Seventh Street, SW, Room 4204, Washington, DC 20410; telephone (202) 708-1380. (This is not a toll-free number.) Persons with hearing or speech impairments may access that number via TTY by calling the Federal Information Relay Service at (800) 877-8339.

SUPPLEMENTARY INFORMATION:

I. Background

The statutory provision that provides the foundation for this rule is section 8(dd) of the United States Housing Act of 1937 (the 1937 Housing Act)(42 U.S.C. 1437(dd)), as added by section 556(a) of the Quality Housing and Work Responsibility Act of 1998 (Pub. L. 105-276, 112 Stat. 2461, approved October 21, 1998) ("Public Housing Reform Act"). The new section 8(dd) directs HUD to establish an allocation baseline amount of assistance (budget authority) to cover the renewals,

and to apply an inflation factor (based on local or regional factors) to the baseline. The new provision states as follows:

(dd) *Tenant-Based Contract Renewals*.—Subject to amounts provided in appropriation Acts, starting in fiscal year 1999, the Secretary shall renew all expiring tenant-based annual contribution contracts under this section by applying an inflation factor based on local or regional factors to an allocation baseline. The allocation baseline shall be calculated by including, at a minimum, amounts sufficient to ensure continued assistance for the actual number of families assisted as of October 1, 1997, with appropriate upward adjustments for incremental assistance and additional families authorized subsequent to that date.

Section 556(b) of the Public Housing Reform Act required the Department to implement section 8(dd) of the 1937 Housing Act through notice not later than December 31, 1998, and to issue final regulations on the allocation of tenant-based Section 8 annual contributions contract renewal funding that are developed through the negotiated rulemaking process no later than October 21, 1999.

On December 30, 1998, the Department issued HUD Notice 98-65 to implement the provision, satisfying the requirement of section 556(b) to implement the new provision through Notice not later than December 31, 1998. The Department published a notice in the FEDERAL REGISTER on February 18, 1999, advising the public of the provisions of HUD Notice 98-65. The Department has developed this final rule implementing the requirements of section 8(dd) of the 1937 Housing Act through a negotiated rulemaking process, in accordance with the statutory requirements of section 556.

II. Negotiated Rulemaking

HUD convened a negotiated rulemaking advisory committee to assist in developing this final rule—the Section 8 Housing Certificate Fund Negotiated Rulemaking Committee. (See publication of notice of establishment of the Committee on April 26, 1999, 64 FR 20232.) The charter for the Committee stated: “The purpose of the Committee is to discuss and negotiate a rule that would change the current method of distributing funds to public housing agencies (PHAs) for purposes of renewing assistance contracts in the tenant-based Section 8 program. The committee will consist of persons representing stakeholder interests in the outcome of the rule.” Records of the advisory committee’s deliberations can be found at <http://www.hud.gov/pih/pih.html>.

The members of the advisory committee were as follows:

HOUSING AGENCIES

Massachusetts Department of Housing and Community Development, Boston, MA
 New Jersey Department of Community Affairs, Trenton, NJ
 Southeastern Minnesota Multi-County Housing and Redevelopment Authority, Wabasha, MN
 Oklahoma Housing Finance Agency, Oklahoma City, OK
 Fort Worth Housing Authority, Fort Worth TX
 Minneapolis Metropolitan Council Housing and Redevelopment Agency, Saint Paul, MN
 Santa Cruz County Housing Authority, Santa Cruz, CA
 Burlington Housing Authority, Burlington, VT
 Michigan State Housing Development Authority, Lansing, MI
 New York City Housing Authority, NY, NY
 Atlanta Housing Authority, Atlanta, GA
 Cincinnati Metropolitan Housing Authority, Cincinnati, OH
 Housing Authority of the City of Los Angeles, Los Angeles, CA
 Stillwater Housing Authority, Stillwater, OK
 Spokane Housing Authority, Spokane, WA
 Jacksonville Housing Authority, Jacksonville, FL
 Panama City Housing Authority, Bay County, FL
 Alameda County Housing Authority, Hayward, CA
 Housing Authority of New Orleans, New Orleans, LA
 Stustman County Housing Authority, Stustman County, ND

PUBLIC INTEREST GROUPS

Center on Budget and Policy Priorities, Washington, DC
 New Community Corporation, Newark, NJ
 Disability Rights Action Coalition for Housing
 Section 8 Resident Council of New Orleans, Inc., New Orleans, LA

INDEPENDENT ACCOUNTING AND CONSULTING FIRMS

Fenton, Ewald & Associates, PC
IMRglobal—Orion Consulting, Inc.

NATIONAL/REGIONAL PHA ASSOCIATIONS

National Leased Housing Association (NLHA)
National Association of Housing and Redevelopment Officials (NAHRO)
Council of Large Public Housing Authorities (CLPHA)
Public Housing Authority Directors Association (PHADA)

(Note that I. Fenton, Ewald & Associates, PC was made an alternate due to its representative's time constraints and that the Southeast Regional Section Eight Housing Association (SERSHA) was added as a member of the Committee)

FEDERAL GOVERNMENT

U.S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

The Committee met in Washington, DC, on April 27 and 28, 1999, on June 2 and 3, 1999, on June 21 and 22, 1999, on July 19 and 20, 1999, on August 19 and 20, 1999 and on September 28 and 29th, 1999. (See notices of meetings: 64 FR 26923, May 18, 1999 and 64 FR 30450, June 8, 1999.) These Committee meetings were led by Larry Susskind and David Fairman of the Consensus Building Institute ("CBI"), as facilitators/mediators. Tom Fee and Michael Lewis, also of CBI, assisted in the facilitation/mediation. Kelly Davenport of CBI provided further assistance, taking minutes of the meetings.

HUD appreciates the active participation in this negotiated rulemaking process by such knowledgeable groups. The participants spent many days reviewing materials, working with others in small groups to prepare draft position papers, attended meetings of the Committee, and participated in teleconferences. Ultimately, the members reached consensus on the content of this rule. During the course of their deliberations, they provided valuable advice to the Department on broader issues, not reflected in this rule.

*III. Discussion of Comments**A. General*

This section provides a brief overview of the most important issues discussed in the meetings of the Committee over the course of its deliberations. This overview of the issues is not a detailed recitation of the more than 12 days of meetings or the multiple additional work group meetings/conference calls that took place during the term of the Committee's charter but rather highlights the significant issues considered by the Committee. In addition to providing HUD with recommendations related to this regulation on the methodology for allocating Section 8 renewal funding, the Committee also provided recommendations on related issues (including policy on ACC reserves) that HUD intends to implement through a FEDERAL REGISTER Notice. This overview of the discussion of the Committee focuses only on the issues related to the regulation itself and not on the issues discussed in conjunction with developing separate Notice(s).

B. Establishing the Baseline

To initiate discussion of housing assistance allocation methods, HUD staff provided background information to the Committee regarding the various methods used over time to calculate renewals. An explanation of the current renewal funding Notice, PIH 98-65 (HA), including the process for setting the baseline and awarding renewal funding for Fiscal Year 1998, was reviewed by HUD staff.

Issue. The Committee discussed specific details regarding accounting rules and anomalies of the current method of calculating the allocation of renewal funding. Several members expressed concern that there was the possibility of discrepancies between historical documented unit counts and the unit counts in HUD's data systems. Members questioned whether a crosscheck of the data in the HUDCAPS system against their own data was possible. Some members felt that the October 1, 1997 baseline data were somewhat arbitrary and could adversely impact agencies. Members suggested alternative ways to setting the baseline units, such as choosing dates other than October 1, 1997. Concerns about using October 1, 1997 included that this date "freezes" many inequities among PHAs (e.g., rewarding those who continued leasing during the 90-day freeze period declared by HUD). A suggestion was made to use October 1, 1998 as the baseline date, because at this time all PHAs

would have had time to adjust to HUD interim rules and guidelines on baseline accounting and renewal funding.

Response. HUD noted that it had confidence that data discrepancies in HUDCAPS are minor, and that most of the discrepancies between HUDCAPS and PHA data would be attributable to data entry problems, or differences in interpretations of unit or project classifications. HUD representatives stated that they would check the kinds of information that could be shared and how this information could be shared. HUD representatives stated that they had revised the baseline determination method to ensure that each PHA would receive the higher of the number contracted or the number leased on October 1, 1997. HUD indicated that the statute required a focus on the state of housing authorities as of October 1, 1997 and that using other dates would not satisfy the statutory mandate.

Conclusion. The Committee reached consensus that the baseline number of units should be the higher of the number of units leased as of October 1, 1997 or the number of units reserved by HUD as of October 1, 1997. The Department has added approximately 19,000 units to its previously reserved number of units as a result of the comparison. This increase in the number of units as well as transactions that have taken place since October 1, 1997 will be reflected in the baseline established as of December 31, 1999, in accordance with the rule. In response to the Committee's recommendation, HUD will establish a mechanism for PHAs to request an adjustment of the baseline unit number assigned to them if they can demonstrate that the number in HUD's system is inaccurate.

C. Unit-Based vs. Dollar Based Funding Allocation

Issue. The Committee discussed moving from the current "unit-based" funding system (using units multiplied by an adjusted per unit cost as the basis for determining annual funding amounts) to a "dollar-based" system: A dollar-based system would fund PHAs by adjusting their previous year's dollar grant amount to account for changes in local rental costs, without considering how many units were rented through the program in the previous year. Initially there appeared to be a preference for a dollar-based system, for reasons of administrative simplicity and ability to serve more households if costs are contained. Some Committee members raised concerns regarding switching to a dollar-based system, because it might lead to significant swings in the number of families assisted year-to-year.

The Committee extensively explored possible adjustment factors that would be applied to PHA's previous year grant amount in a dollar-based system. The Committee reviewed data analysis from Andersen Consulting Corporation that compared the accuracy of different adjustment factors against the actual experience of approximately 400 housing authorities over the course of 3 years (1995-1997) for which reliable historical data was available. The most reliable predictor of future costs proved to be changes in a housing authority's most recent year's actual costs in HUDCAPS. The analysis uncovered significant problems in using MTCS data for the purpose of calculating renewals at this time.

Response. HUD indicated that it is cognizant of its obligation to protect existing assisted families from losing their assistance due to a shortfall in funding. In addition a number of the reasons why per unit costs might vary would not be related to the PHA's discretionary actions (e.g., the need to meet new income targeting requirements).

Conclusion. After much discussion, the Committee and HUD reached consensus that the Department should have authority to use the current unit-based method for the next several years. Given the limitations of current data systems and adjustment factors, the unit-based system has the best potential to predict fluctuations in per unit costs and to ensure reasonably adequate funding to support the reserved number of units in a housing authority's inventory.

Issue. Some members of the Committee, including HUD, expressed concern that the current method creates a disincentive for PHAs to contain per-unit costs, because the higher a PHA's per-unit costs, the higher its funding for the next year. Additionally, the current system creates a disincentive for PHAs to lease more than their contracted number of units, because their funding allocations are determined based on the number of reserved units, not the leased number of units.

Other members of the Committee asserted that costs are largely outside of the control of a PHA. Rents are set by the local market and the size of the family. The PHA does not control the local rental market and has little control over the family size, because it has to follow the waiting list. Tenant contributions are affected for the most part by tenant incomes. Again, this factor is largely controlled by residents themselves, as well as the local job market. However, in some important instances, a PHA can influence the per-unit cost. These instances include, but are not limited to, rent reasonableness, subsidy standards, and payment standards. (For this pur-

pose, “subsidy standards” refer to a PHA’s policy for determining the appropriate unit size for a particular household.)

Committee members also made the point that PHAs themselves do not benefit from an increase in the grant amount for renewals, because their administrative fee is not tied to the grant amount used to subsidize families. The administrative fee formula actually provides an incentive for cost containment, because a PHA would benefit from being able to lease more units—which could only be accomplished by lower per-unit costs.

Members of the Committee also emphasized how difficult it would be to isolate how much of a change in per-unit costs was attributable to actions taken by a PHA as opposed to market/demographic changes totally outside the control of the PHA.

Response. HUD is concerned that the regulation’s methodology not create an incentive or bias toward higher per-unit costs as a result of PHA policies that can affect per-unit costs. Such a bias can result both from the current rule’s characteristic of adapting to higher costs over time without penalty and from its subtraction of funding to support additional units that a PHA is able to put under lease because of cost saving measures. HUD acknowledged that there are very significant difficulties administratively in isolating the effects of PHA policies on cost per unit. HUD proposed that the rule give it flexibility to put in place checks and balances that would offset the impact of PHA policies on per-unit costs and ultimately the allocation amount.

Conclusion: HUD’s proposed mechanism for addressing cost containment is embodied in paragraph (g) of the rule. Paragraph (g)(1) permits HUD to put in place mechanisms to step in to prevent a PHA from becoming overextended and exceeding its allocated funding. Paragraph (g)(2) gives HUD the ability to act on either a case-by-case or a systemic basis. If the Department’s analysis of the program costs and related factors determines that systemic adjustments, including cost containment and other cost adjustments, to the program are necessary because of threats to the future availability of funding, HUD has agreed that it would consult with PHA representatives and other relevant stakeholders before putting such a policy in place. HUD further indicated that any such cost adjustment would be consistent with the legitimate program goals. These goals are:

- (1) Deconcentration of poverty and expanding housing opportunities;
- (2) Not imposing unreasonable rent burdens on residents;
- (3) Compliance with the income targeting requirements of the Public Housing Reform Act;
- (4) Consistency with applicable consolidated plan(s);
- (5) Assuring rent reasonableness;
- (6) Maintaining program efficiency and economy;
- (7) Providing service to additional households within budgetary limitations; and
- (8) Providing service to the adjusted baseline number of families.

Paragraph (g)(3) gives HUD the flexibility to keep PHAs with declining per unit costs from losing funding under the regulation and to allow additional households to be served if costs are contained. Many factors are intersecting to influence per unit costs at this time (including the merger of the certificate and voucher program, the requirement for income targeting, the requirement that payment standards not impose unreasonable rent burdens, the flexibility of housing authorities to set payment standards between 90% and 110% of FMR on their own as well as the continued implementation of this rule’s methodology that indexes funding closely to per unit costs). HUD will gain program experience as it monitors program costs and analyzes the reasons for fluctuations in costs.

D. Inflation Factors

Issue: The Committee considered other more up-to-date measurement of rents, or weighting the Annual Adjustment Factor so that the most recent inflation data count for more than older data. Additionally, the Committee recommended that inflation factors be more closely attuned to individual PHAs’ housing markets: examples included local rents, and the use of local government or real estate agency data on rents.

Response: Based on its program experience, HUD staff advised that some of these options could work, but that the smaller the sample area, the higher the cost to obtain statistically valid data on costs. Sometimes the more accurate the Annual Adjustment Factors (AAFs) could produce lower rather than higher inflation factors for some PHAs. A review and comparison of the Annual Adjustment Factor and the National Inflation Factor were presented.

Conclusion: The Committee agreed to keep the AAF as it exists in the rule for the time being. HUD will examine whether it can get better data and more predictable information in the future. At the Committee’s request, HUD added a provision

that will allow it to consider requests from PHAs on a case-by-case basis in instances where because of special circumstances the AAF is not accurately predicting per unit cost.

IV. Renewal Funding Level Consideration

The renewal formula included in this regulation assumes continuation of the current system, in which the Department allocates sufficient funds to renew 100 percent of the units reserved for a PHA, even though many PHAs do not use all of the allocated funds. The Department subsequently recaptures funds that PHAs do not use after the end of their fiscal years. This system of initially overfunding on a national basis and then recapturing, has the advantage of assuring that each PHA will have the necessary renewal funds, but it also has created some confusion in Congress and elsewhere.

At the end of the fiscal year 2000 appropriations process, the Senate Appropriations Committee raised substantial concerns about the tenant-based assistance program that appear to be partly related to this system. The Administration is exploring the feasibility and desirability of an approach that would minimize overfunding and subsequent recapture, while still meeting the basic requirement that each PHA have the necessary funding for timely renewals. The evaluation and any Administration proposals will be mindful of the consensus reached by the negotiated rule-making committee.

V. Explanation of Rule Text

Renewal Units

This rule revises part 982, governing tenant-based assistance. It adds a new defined term, "renewal units" to the definitions found at §982.4. This rule also adds a new §982.102 to outline a multi-step process for calculating the number of units that constitute "renewal units." The total number of renewal units will be assigned to one or more (if applicable) of a housing agency's funding increments. Ultimately, the Department will multiply the number of renewal units times the adjusted per unit cost to calculate the amount of funding a housing agency will receive to renew a given funding increment.

Applicability

This rule will apply to the renewal of funding increments that expire in calendar year 2000 and thereafter (the initial increments covered by the regulation would be those that expire on January 31, 2000). The Department adjusted to a calendar year basis for allocating renewal funding in the first quarter of 1999. The Department adjusted to a calendar year basis to ensure that it would have adequate time to process renewal funding in advance of expirations even if appropriations are not finalized until late in a given fiscal year or early in a subsequent fiscal year. The regulation also makes it clear that it applies to units that a housing agency project bases pursuant to regulatory flexibility to project base up to 15% of the tenant-based units that are reserved for it.

Renewal Methodology

The new §982.102 outlines the method for calculating renewal funding. The Department does have the ability to adjust the amounts allocated if the Department's appropriation is not sufficient to fully fund all housing agencies pursuant to the regulation.

Determining the Amount of Budget Authority Allocated for Renewal of an Expiring Funding Increment

The basic calculation the Department performs to determine the renewal funding for an expiring increment is multiplication of the number of renewal units assigned to the increment by the adjusted per unit cost.

For example, the Department calculated the adjusted baseline number of units for the Main Street Housing Authority to be 115 for the year 2000. It then multiplied the adjusted baseline number of units (115) by the final per unit cost (\$4979) to calculate the gross amount of renewal funding for the housing authority, \$572,585.

Determining the Number of Renewal Units

The Department will determine the number of renewal units for each calendar year as of the last day of the previous calendar year through a 3-step process.

Step 1—The Department will calculate the initial baseline. It will be set at the reserved number of units (the number of units awarded to the housing agency during the history of the program) as of December 31, 1999. The statute requires that the Department ensure, at a minimum, sufficient funding for the number of families assisted as of October 1, 1997. The Department has already compared the number

of reserved units as of October 1, 1997 with the number of program families assisted as of that date. In instances in which the number of program families exceeded the reserved units as of October 1, 1997, the Department reserved additional units to account for the difference. These additional units were awarded to housing agencies in or before September of 1999. Because of the actions the Department has taken to account for the October 1, 1997 statutory minimum, it believes the number of reserved units will already have taken into account the statutory October 1, 1997 requirement when it sets the initial baseline as of December 31, 1999. In the event the Department has made an error in its analysis to ensure adherence to the statutory minimum, the Department has the ability to correct for such an error in 982.102(d)(3).

For example, on December 31, 1999, the Department's records indicated that it had reserved 110 units for the housing authority. The Department would set the initial baseline at 110 units.

Step 2—Each calendar year, the Department will review all of the transactions that have altered the number of reserved units since it set the initial baseline. The Department will make adjustments to add to the initial baseline any additional units awarded to the housing authority by the Department supported from additional funding reserved since setting of the initial baseline. Adjustments to the baseline number of units will include units supported by incremental funding as well as other funding such as that awarded to provide continued assistance to assisted families pursuant to the conversion of project based assistance to tenant-based assistance. The Department also will include adjustments for budget authority reallocated from one housing authority to others. In this case, the adjusted baseline of the PHA whose budget authority is being reallocated would decrease, reflecting the decrease in budget authority, and the adjusted baseline of PHAs to which the budget authority is being reallocated would increase.

For example, in calendar year 2000, the Main Street Housing Authority received 10 incremental units in the Family Unification Program. In 2000, the authority also had 10 units added to its inventory as a result of the conversion of a property from project based to tenant-based assistance. All 20 of these additional units would be added to the initial baseline to calculate the adjusted baseline number of units, 130 for the year 2001.

Step 3—In its final step in determining the number of renewal units that will be used to calculate renewal funding, the Department will further adjust the baseline number by subtracting the number of units supported by contracts that are not scheduled to expire until after the end of the calendar year. The baseline number of units includes such non-expiring units; however, the Department has previously allocated sufficient budget authority to support such units beyond the time period for which it is allocating renewal funding.

For example, the Department's records indicate that the Main Street Housing Authority has 15 units in its Initial Baseline number of units that are not scheduled to expire until 2002. The Department would then subtract 15 units from the Main Street Housing Authority's 130 units to revise the Adjusted Baseline Number of Units to 115. Similarly, in the event that the Department awarded budget authority for 50 incremental units for Welfare to Work in 2000 that would not expire until 2001, the Department would subtract the 50 units from the baseline in 2000 because they would not expire during that year.

Determining the Adjusted per Unit Cost

The Department will derive an annual actual per unit cost using a 3 step process.

Step 1—The Department will extract the total expenditures for all of the housing authority's Section 8 tenant-based assistance programs and the unit months leased information from the most recent approved year end statement (Form HUD-52681) that each housing authority has filed with the Department. The Department will divide the total expenditures for all of the housing authority's Section 8 tenant-based assistance programs by the unit months leased to derive an average monthly per unit cost.

Step 2—The Department will multiply the monthly per unit cost by 12 (months) to obtain an annual per unit cost.

Step 3—The Department will then multiply the result of step 2 above by the Section 8 Housing Assistance Payments Program Contract Rent Annual Adjustment Factors (table 1 amount with the highest cost utility included) for the applicable intervening Federal Fiscal Years between the time of the last year end statement and the time of the renewal to generate an adjusted annual per unit cost.

For example, the Main Street Housing Authority's 1998 Year End Statement (the most recent one approved) indicated that it expended \$120,000 in its tenant-based Section 8 assistance programs and that it achieved 300 unit months leased. The De-

partment would take the total expenditure (\$120,000) and divide it by the unit months leased (300) to calculate the monthly per unit cost (\$400) and then multiply the result by 12 months to obtain an actual annual per unit cost (\$4,800).

To continue the example, the Annual Adjustment Factors for the Main Street Housing Authority were 1.5% in 1999 and 2.2% for 2000. The Department would take the original annual per unit cost (\$4,800) and adjust it by 1.5% (\$4,872) and then again by 2.2% to obtain the resulting adjusted per unit cost (\$4,979).

Many housing agencies have jurisdictions that cover multiple rental markets with separate AAFs. In such instances, the Department will use the highest AAF that applies to a portion of the housing agency's units and use it as the adjustment factor.

For example, the Main Street Housing Authority is a regional agency that covers a metropolitan area with an AAF for 1999 set at 2.1% and for 2000 set at 1.9%. The housing authority's jurisdiction also covers several non-metropolitan counties outside of the metropolitan area assigned an AAF for 1999 of 1.5% and for 2000 set at 2.0%. In this instance, the Department will use the higher metropolitan area AAF for 1999 (2.1%) and the higher non-metropolitan area AAF for 2000 (2.0%).

CACC Amendment To Add Renewal Funding

The Department intends to process renewal funding if possible at least a month before a given funding increment is due to expire. A normal renewal will extend the expiration date for one year.

Modification of Allocation of Budget Authority

The regulation permits HUD to address the issue of cost containment through this provision. Paragraph (g)(1) permits HUD to put in place mechanisms to step in to prevent a PHA from becoming overextended and exceeding its allocated funding. Paragraph (g)(2) gives HUD the ability to act on either a case-by-case or a systemic basis. If the Department's analysis of the program costs and related factors determines that systemic adjustments to the program, including cost containment and other cost adjustments, are necessary because of threats to the future availability of funding, HUD has agreed that it would consult with PHA representatives and other relevant stakeholders before putting such a policy in place. Paragraph (g)(3) gives HUD the flexibility to keep PHAs with declining per unit costs from losing funding under the regulation and to allow additional households to be served if costs are contained.

Ability To Prorate and Synchronize Contract Funding Increments

Notwithstanding the formula amount that HUD derives pursuant to the regulation, the Department is permitted to prorate the renewal of units that expire on different dates throughout the year in order to have their expiration date match the expiration of other units within the housing authority's inventory and/or a given point in time in relation to the housing authority's fiscal year. The Department will consider using this flexibility in order to merge the multiple sets of units for the purpose of allocating renewal funding in the future. The Department desires to consolidate increments as much as possible in order to reduce the tracking required for thousands of separate increments. The Department will endeavor to synchronize and/or merge all increments so as to expire 6 months after the housing agency's fiscal year. Such a schedule would permit the Department to use a year end statement that is less than a year old to calculate current per unit costs at the time of the renewal.

For example, the Main Street Housing Authority has 115 units that require renewal on April 1, 2000 and also has 20 units that were awarded to it on August 1, 1999 that would require renewal on August 1, 2000. If the Department decided to merge the two sets of units for future renewals, it would have the ability to prorate the renewal of the 20 units so that they would expire on April 1, 2001, simultaneously with the expiration of the other 115 units. The Department would be able to merge the two sets of units into one set of 135 units for the purpose of calculating future renewal funding.

Reallocation of Renewal Units

This provision gives HUD the ability by FEDERAL REGISTER notice to permanently de-reserve units and their associated budget authority from a PHA with performance deficiencies (particularly underleasing) and to reallocate the budget authority to other PHAs. The reallocation would not preclude a PHA from being awarded new units in the future.

VI. Findings and Certifications

Impact on Small Entities

The Regulatory Flexibility Act, 5 U.S.C. 601–612, requires that an agency analyze the impact of a rule on small entities whenever it determines that the rule is likely to have a significant impact on a substantial number of small entities. Most small PHAs do not qualify as “small governmental entities” under the Act. However, this rule, developed in consultation with a negotiated rulemaking committee including representatives of small PHAs, will not be likely to have a significant impact on a substantial number of small PHAs or on the few of them that qualify as “small governmental entities.” Therefore, no further analysis is required under the Act.

Environmental Impact

This final rule does not direct, provide for assistance or loan and mortgage insurance for, or otherwise govern or regulate, real property acquisition, disposition, leasing (other than tenant-based rental assistance), rehabilitation, alteration, demolition, or new construction. This rule also does not establish, revise or provide for standards for construction or construction materials, manufactured housing, or occupancy. Accordingly, under HUD regulations (24 CFR 50.19(c)(1)), this rule is categorically excluded from the requirements of the National Environmental Policy Act of 1969 (42 U.S.C. 4321) and is not subject to environmental review under related laws and authorities (24 CFR 50.4).

Federalism Impact

The General Counsel, as the Designated Official under section 6(a) of Executive Order 12612, *Federalism*, has determined that the policies contained in this rule will not have substantial direct effects on states or their political subdivisions, or the relationship between the federal government and the states, or on the distribution of power and responsibilities among the various levels of government. As a result, the rule is not subject to review under the order.

Unfunded Mandates

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1532) establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. This proposed rule does not impose a Federal mandate that will result in the expenditure by State, local, or tribal governments in the aggregate, or by the private sector, of \$100 million or more in any one year.

Regulatory Review

The Office of Management and Budget (OMB) has reviewed this proposed rule under Executive Order 12866, *Regulatory Planning and Review*, issued by the President on September 30, 1993. Any changes made in this proposed rule after its submission to OMB are identified in the docket file, which is available for public inspection during regular business hours in the Regulations Division, Office of General Counsel, Room 10276, U.S. Department of Housing and Urban Development, 451 Seventh Street, SW, Washington, DC 20410.

Catalog

The Catalog of Federal Domestic Assistance numbers for these programs are 14.855 and 14.857.

List of Subjects in 24 CFR Part 982

Grant programs—housing and community development, Housing, Rent subsidies. Accordingly, HUD amends part 982 of title 24 of the Code of Federal Regulations as follows:

PART 982—SECTION 8 TENANT-BASED ASSISTANCE: HOUSING CHOICE VOUCHER PROGRAM

1. The authority citation for part 982 continues to read as follows:
AUTHORITY: 42 U.S.C. 1437f and 3535(d).
2. Amend §982.4(b) by adding the definition of *Renewal units*, in alphabetical order, to read as follows:

§ 982.4 Definitions.

* * * * *

(b) * * *

Renewal units. The number of units, as determined by HUD, for which funding is reserved on HUD books for a PHA's program. This number is used in calculating renewal budget authority in accordance with § 982.102.

* * * * *

§§ 982.102 and 982.103 [Redesignated as §§ 982.103 and 982.104]

3. Redesignate §§ 982.102 and 982.103 as §§ 982.103 and 982.104, respectively.

4. Add a new § 982.102 to read as follows:

§ 982.102 Allocation of budget authority for renewal of expiring CACC funding increments.

(a) *Applicability.* This section applies to the renewal of CACC funding increments in the program (as described in § 982.151(a)(2)) that expire after December 31, 1999 (including any assistance that the PHA has attached to units for project based assistance under part 983 of this title). This section implements section 8(dd) of the 1937 Act (42 U.S.C. 1437f(dd)).

(b) *Renewal Methodology.* HUD will use the following methodology to determine the amount of budget authority to be allocated to a PHA for the renewal of expiring CACC funding increments in the program, subject to the availability of appropriated funds. If the amount of appropriated funds is not sufficient to provide the full amount of renewal funding for PHAs, as calculated in accordance with this section, HUD may establish a procedure to adjust allocations for the shortfall in funding.

(c) *Determining the amount of budget authority allocated for renewal of an expiring funding increment.* Subject to availability of appropriated funds, as determined by HUD, the amount of budget authority allocated by HUD to a PHA for renewal of each program funding increment that expires during a calendar year will be equal to:

(1) *Number of renewal units.* The number of renewal units assigned to the funding increment (as determined by HUD pursuant to paragraph (d) of this section); multiplied by

(2) *Adjusted annual per unit cost.* The adjusted annual per unit cost (as determined by HUD pursuant to paragraph (e) of this section).

(d) *Determining the number of renewal units.*—(1) *Number of renewal units.* HUD will determine the total number of renewal units for a PHA's program as of the last day of the calendar year previous to the calendar year for which renewal funding is calculated. The number of renewal units for a PHA's program will be determined as follows:

(i) *Step 1: Establishing the initial baseline.* HUD will establish a baseline number of units ("baseline") for each PHA program. The initial baseline equals the number of units reserved by HUD for the PHA program as of December 31, 1999.

(ii) *Step 2: Establishing the adjusted baseline.* The adjusted baseline equals the initial baseline with the following adjustments from the initial baseline as of the last day of the calendar year previous to the calendar year for which renewal funding is calculated:

(A) *Additional units.* HUD will add to the initial baseline any additional units reserved for the PHA after December 31, 1999.

(B) *Units removed.* HUD will subtract from the initial baseline any units de-reserved by HUD from the PHA program after December 31, 1999.

(iii) *Step 3: Determining the number of renewal units.* The number of renewal units equals the adjusted baseline minus the number of units supported by contract funding increments that expire after the end of the calendar year.

(2) *Funding increments.* HUD will assign all units reserved for a PHA program to one or more funding increment(s).

(3) *Correction of errors.* HUD may adjust the number of renewal units to correct errors.

(e) *Determining the adjusted per unit cost.* HUD will determine the PHA's adjusted per unit cost when HUD processes the allocation of renewal funding for an expiring contract funding increment. The adjusted per unit cost calculated will be determined as follows:

(1) *Step 1: Determining monthly program expenditure.*—(i) *Use of most recent HUD-approved year end statement.* HUD will determine the PHA's monthly per unit program expenditure for the PHA certificate and voucher programs (including project-based assistance under such programs) under the CACC with HUD using data from the PHA's most recent HUD-approved year end statement.

(ii) *Monthly program expenditure.* The monthly program expenditure equals:

(A) *Total program expenditure.* The PHA's total program expenditure (the total of housing assistance payments and administrative costs) for the PHA fiscal year covered by the approved year end statement; divided by

(B) *Total unit months leased.* The total of unit months leased for the PHA fiscal year covered by the approved year end statement.

(2) *Step 2: Determining annual per unit cost.* HUD will determine the PHA's annual per unit cost. The annual per unit cost equals the monthly program expenditures (as determined under paragraph (e)(1)(ii) of this section) multiplied by 12.

(3) *Step 3: Determining adjusted annual per unit cost.* (i) HUD will determine the PHA's adjusted annual per unit cost. The adjusted annual per unit cost equals the annual per unit cost (as determined under paragraph (e)(2) of this section) multiplied cumulatively by the applicable published Section 8 housing assistance payments program annual adjustment factors in effect during the period from the end of the PHA fiscal year covered by the approved year end statement to the time when HUD processes the allocation of renewal funding.

(ii) *Use of annual adjustment factor applicable to PHA jurisdiction.* For this purpose, HUD will use the annual adjustment factor from the notice published annually in the FEDERAL REGISTER pursuant to part 888 that is applicable to the jurisdiction of the PHA. For a PHA whose jurisdiction spans multiple annual adjustment factor areas, HUD will use the highest applicable annual adjustment factor.

(iii) *Use of annual adjustment factors in effect subsequent to most recent Year End Statement.* HUD will use the Annual Adjustment Factors in effect during the time period subsequent to the time covered by the most recent HUD approved Year End Statement and the time of the processing of the contract funding increment to be renewed.

(iii) *Special circumstances.* At its discretion, HUD may modify the adjusted annual per unit cost based on receipt of a modification request from a PHA. The modification request must demonstrate that because of special circumstances application of the annual adjustment factor will not provide an accurate adjusted annual per unit cost.

(4) *Correction of errors.* HUD may correct for errors in the adjusted per unit cost.

(f) *CACC amendment to add renewal funding.* HUD will reserve allocated renewal funding available to the PHA within a reasonable time prior to the expiration of the funding increment to be renewed and establish a new expiration date one-year from the date of such expiration.

(g) *Modification of allocation of budget authority.—(1) HUD authority to conform PHA program costs with PHA program finances through Federal Register notice.* In the event that a PHA's costs incurred threaten to exceed budget authority and allowable reserves, HUD reserves the right, through FEDERAL REGISTER notice, to bring PHA program costs and the number of families served, in line with PHA program finances.

(2) *HUD authority to limit increases of per unit cost through Federal Register notice.* HUD may, by FEDERAL REGISTER notice, limit the amount or percentage of increases in the adjusted annual per unit cost to be used in calculating the allocation of budget authority.

(3) *HUD authority to limit decreases to per unit costs through FEDERAL REGISTER notice.* HUD may, by FEDERAL REGISTER notice, limit the amount or percentage of decreases in the adjusted annual per unit cost to be used in calculating the allocation of budget authority.

(4) *Contents of FEDERAL REGISTER notice.* If HUD publishes a FEDERAL REGISTER notice pursuant to paragraphs (g)(1), (g)(2) or (g)(3) of this section, it will describe the rationale, circumstances and procedures under which such modifications are implemented. Such circumstances and procedures shall, be consistent with the objective of enabling PHAs and HUD to meet program goals and requirements including but not limited to:

(i) Deconcentration of poverty and expanding housing opportunities;

(ii) Reasonable rent burden;

(iii) Income targeting;

(iv) Consistency with applicable consolidated plan(s);

(v) Rent reasonableness;

(vi) Program efficiency and economy;

(vii) Service to additional households within budgetary limitations; and

(viii) Service to the adjusted baseline number of families.

(5) *Public consultation before issuance of FEDERAL REGISTER notice.* HUD will design and undertake informal public consultation prior to issuing FEDERAL REGISTER notices pursuant to paragraphs (g)(1) or (g)(2) of this section.

(h) *Ability to prorate and synchronize contract funding increments.* Notwithstanding paragraphs (c) through (g) of this section, HUD may prorate the amount of budget authority allocated for the renewal of funding increments that expire on different dates throughout the calendar year. HUD may use such proration to synchronize the expiration dates of funding increments under the PHA's CACC.

(i) *Reallocation of budget authority.* If a PHA has performance deficiencies, such as a failure to adequately lease units, HUD may reallocate some of its budget authority to other PHAs. If HUD determines to reallocate budget authority, it will reduce the number of units reserved by HUD for the PHA program of the PHA whose budget authority is being reallocated and increase the number of units reserved by HUD for the PHAs whose programs are receiving the benefit of the reallocation, so that such PHAs can issue vouchers. HUD will publish a notice in the FEDERAL REGISTER that will describe the circumstances and procedures for reallocating budget authority pursuant to this paragraph.

Dated: October 15, 1999.

Deborah Vincent,

General Deputy Assistant, Secretary for Public and Indian Housing.

[FR Doc. 99-27445 Filed 10-20-99; 8:45 am]

BILLING CODE 4210-33-P

CONSULTANT COSTS

Question. Mr. Secretary, please identify all consultants who have worked for or are working for the Department since the beginning of fiscal year 1999 by name, amount of the contract, purpose of the contract, duration of the contract and the type of bidding process used?

Answer. An attachment has been provided that identifies all consultants who have worked for or are working for the Department since the beginning of fiscal year 1999 by name, salary rate, purpose of project, and duration of employment. These consultants are hired through the Office of Human Resources and not via contracts, therefore the type of bidding process used is not applicable in this case.

CONSULTANTS

Name	Salary		Dates of employment	Office	Nature of project
Elizabeth Burdock	\$264.00	PD	08/26/96 to present	Office of Housing	To work with staff to develop task orders for the National Partners in Homeownership program.
Shaun Donovan	333.60	PD	10/13/98 to 07/17/99	Office of Housing	To provide advice on multifamily housing, finance and policy matters.
Andrew Fay	191.66	PD	10/25/98 to 04/10/99	Office of Multifamily Housing Assistance Restructuring.	To draft interim and final regulations on Owner eligibility section of Operating Procedures guide and provide assistance in drafting Portfolio Restructuring Agreement and protocols.
Todd Richardson	38.40	PH	10/08/99 to 05/20/00	Office of Community Planning and Development.	To perform analysis, comparison and evaluation of state and SBA reported disaster data.
Catharine Vernon	384.62	PD	01/03/99 to 05/22/99	Office of Multifamily Housing Assistance Restructuring.	To develop and implement the Asset Allocation and Critical data Tracking system.
Michael Murphy	269.23	PD	12/10/98 to 07/17/99	Office of Multifamily Housing Assistance Restructuring.	To develop system requirements and implement a system to plan, monitor, and review the status of assigned assets, as well as create oversight controls.
Howard Menell	482.61	PD	03/14/99 to 04/24/99	Office of Multifamily Housing Assistance Restructuring.	To negotiate final Portfolio Restructuring Agreement for public and private PAE's.
Frederick Tombar	364.16	PD	01/19/99 to 06/19/99	Office of Housing	To advise the Assistant Secretary on Section 8 contract administration issues. Represent the Assistant Secretary before GAO, OMB and Congressional Budget Committees.
Engram A. Lloyd	372.64	PD	11/29/99 to 02/12/00	Office of Single Family Housing	To advise on impact, efficiencies and benefits derived from organizational realignment within Home Ownership Centers. To evaluate the adequacy of property disposition program controls and recommended necessary changes to safeguard HUD's assets and insurance fund.
Ruth Roman	275.00	PD	10/07/99 to 05/20/00	Office of Housing	To work with Grants Technical Representatives, contracts office and contractor to manage development of new commercials and media campaign for Federal Housing Administration (FHA).
Bonnie Jouhari	124.08	PD	03/06/00 to present	Baltimore Field Office	To provide research, fact finding, telephone and in person interviews, and file reviews with regard to counseling, and housing mobility.

Emmanuel Cleaver, II	46.59	PH	09/21/99 to present	Office of Senior Community	To provide the Secretary's Representative, Great Plains, with advice on matters involving development and public service diversification. Analyzes and evaluates the Department's current procedures and makes recommendations for improvements and refines in the methodology.
Truman Holland	362.00	PD	07/20/98 to present	Office of Multifamily Housing Assistance Restructuring.	To make written recommendations to Congress outlining the characteristics of the Mark to Market process that need change and restructuring related mortgage issues.
Cherylayne B. Walker	372.64	04/03/00 to present	Office of Housing	To provide advice to the Deputy Assistant Secretary for Single Family Housing on the review and formulation of real estate owned disposition procedures.
Michael Stegman	46.57	PH	07/21/99 to present	Office of Housing	To assess conditions and trends for affordable housing in the U.S. and report on major trends, needs and HUD's policy responses to these.
David Snell	236.32	PD	11/08/98 to 01/15/99	Office of Public and Indian Housing, Denver	No records could be obtained.
Steven Kilkelly	206.67	PD	08/28/98 to 10/08/98	Office of Community Planning and Development.	No records could be obtained.
William Apgar	453.86	PD	10/01/97 to 10/24/98	Office of Housing	To provide a wide range of knowledge on matters involving programmatic development and diversification in and for the Office of Housing.
Susan Wachter	453.92	PD	11/25/98 to 11/30/99	Office of Policy Development and Research	To analyze and evaluate current procedures and make recommendations on possible refinements and improvements, as well as conducting a review of proposed strategies.
Virginia Terzano	56.54	PH	06/22/99 to 11/26/99	Office of Public Affairs	To advise and provide expertise on the preparation of remarks, speeches, and talking points on issues, policies, and procedures confronting the Secretary.

Note: PH = per hour; PD = per day.

MORTGAGE PARTNERSHIP PROGRAM

Question. The Mortgage Partnership Program offered by the some Federal Home Loan Banks has allowed members of the Federal Home Loan Bank System to offer FHA loans to consumers at a lower rate—as much as 100 basis points—for first time home buyers in the first year. However, that program is currently capped at \$9 billion.

When will the cap be lifted on this program, and what assurances can you give me that first time home buyers will continue to have access to these new FHA loan products?

Answer. The Mortgage Partnership Finance Program (MPF) offered by a number of Federal Home Loan Banks is currently subject to a limit of \$9 billion in outstanding residential mortgages that was established by a resolution of the Federal Housing Finance Board, the regulator of the Federal Home Loan Bank System. This program is not under HUD's jurisdiction. However, Secretary Cuomo is a member of the Finance Board and Assistant Secretary Apgar serves as his designee.

On May 3, 2000, the Finance Board's Federal Home Loan Bank Acquired Member Assets, Core Mission Activities, Investment and Advances (AMA/CMA) proposed rule was published for public comment. The rule would authorize the Federal Home Loan Banks to hold acquired member assets (AMA), whole loans acquired from or through Bank System members or associates. Under the proposed rule, the MPF investments, including FHA loans funded through the MPF, would be considered AMA. The proposed rule would place no limit on the amount of AMA the Federal Home Loan Banks could hold, in effect eliminating the \$9 billion aggregate limit currently applied to the MPF by resolution.

In addition, the proposed rule does not limit the amount of FHA insured single family loans that a FHLBank could acquire under its MPF, so that any new FHA loan products that the FHLBanks are facilitating under the MPF could continue. Under the proposed rule, AMA would be considered core mission activities (CMA), except that only a proportion of the amount of federal government insured or guaranteed single family mortgage loans (including FHA insured loans) acquired as AMA after April 12, 2000, would be considered CMA. One dollar of government-insured single family AMA would be counted as CMA for every two dollars of conventional loans acquired as AMA. While the proposed rule does not contain any requirement that the FHLBanks engage in any particular amount of CMA, it would encourage the FHLBanks to see to it that the composition of their mortgage portfolios more closely reflects the distribution of loans made in the financial marketplace.

The proposed rule public comment period closes on June 15 and the Finance Board expects to issue the AMA/CMA final rule shortly thereafter.

DOWNPAYMENT SIMPLIFICATION

Question. The fiscal year 1999 VA/HUD spending bill contains an extension of the simplified FHA down payment calculation on a nationwide basis. However, the bill restricted the calculation to a two-year pilot program which is set to expire at the end of this fiscal year.

The Administration's budget contains a permanent, nationwide extension of the simplified down payment calculation. How has the pilot program fared so far, and why do you believe this permanent extension is necessary?

Answer. From the pilot, we learned that overall loan-to-values did not increase significantly and the process was more easily understood by homebuyers, real estate agents, and lenders. We need the permanent authority to maintain the simplified process and to continue to offer a process that is more easily understood than the "sliding-scale" mortgage amount calculation previously employed. Reverting to the previous mortgage amount calculation and losing the ability to continue with a successful program would be counter to FHA's mission.

QUESTIONS SUBMITTED BY SENATOR LARRY CRAIG

GUN CONTROL

Question. Please tell the Subcommittee what HUD's intentions are, and what actions you have taken, with regard to filling a lawsuit against members of the firearms industry.

Answer. As the Department has stated on previous occasions, HUD has no intention of filing a lawsuit in its own capacity against the gun industry. HUD, however, is working with cities and counties that have filed suit against the gun industry, as well as with responsible manufacturers, to find a negotiated solution that will

facilitate the industry's role in reducing the tide of gun violence by fostering safer manufacturing and distribution practices. Should these negotiations prove unsuccessful, HUD is prepared to work with public housing authorities, including those under HUD's control, on a possible suit against the industry.

Question. For example, who authorized the filing of such a lawsuit? What actions by members of the firearms industry gave rise to that lawsuit? What actions by members of the firearms industry would prevent the filing of such a lawsuit against them, and who determined those parameters for withholding suit?

Answer. No lawsuit on behalf of the Department is contemplated.

Question. What HUD resources—financial or personnel—have been spent in preparing such a lawsuit or pursuing negotiations with the firearms industry, and what is the estimated cost to federal taxpayers of pursuing these activities?

Answer. While HUD has spent no resources preparing to file suit on the Department's behalf, as noted above, the Department has been involved in assisting cities and counties that have filed suit against the gun industry reach common ground with the industry, thereby helping to bring the litigation to a close. The March 17, 2000 settlement with Smith & Wesson was the first fruit of that effort. In terms of resources, HUD has devoted staff time and related expenses (travel, phone, office supplies, etc.) maintaining contact with both sides and assisting in negotiations.

Question. What other agency or agencies of the federal government has HUD consulted with about such a lawsuit or negotiations?

Answer. HUD has consulted with the White House, the Justice Department, and the Department of Treasury in the course of assisting with negotiations.

Question. What mission of HUD do these activities serve, and where is that mission stated in writing?

Answer. In the Department's enabling statute, Congress made clear that HUD was created in part "to encourage the solution of problems of housing, urban development, and mass transportation through State, county, town, village, or other local and private action." 42 U.S.C. § 3531 (1999). Given the awful toll of gun violence in our nation's communities, particularly those at the core of HUD's mission, helping cities and counties seek improved gun safety and more responsible distribution through negotiations with the gun industry, is a prime example of such encouragement. Moreover, reducing gun violence is at the core of HUD's responsibility for promoting national housing policy. The Housing Act of 1949, for example, declared as national housing policy "the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family," 42 U.S.C. 1441 (1999), and Congress has declared that the "objective of national housing policy shall be to reaffirm the long-established national commitment to decent, safe, and sanitary housing for every American by strengthening a nationwide partnership of public and private institutions able . . . to help make neighborhoods safe and livable." 42 U.S.C. § 12701 (1999).

Question. How much has HUD spent on gun turn-in program, cumulatively and by program?

Answer. Please see attached chart.

GUN BUYBACK PARTICIPANTS

Question. How does HUD monitor the success of these programs in reducing crime?

Answer. HUD is currently in the process of establishing an evaluation mechanism to assess the current buyback initiative.

Question. How much has crime been reduced through these programs?

Answer. Again, HUD is planning an evaluation. It is important to remember, however, that buybacks by their nature are preventative measures that reduce the presence of unwanted firearms in a community, thereby reducing the supply of weapons potentially available to criminals.

Question. Were any other anti-crime efforts being pursued in the same areas simultaneously, and if so, what were they?

Answer. HUD's buyback initiative is part of a larger anti-crime and anti-drug abuse effort funded through the Public Housing Drug Elimination Program (PHDEP), which is, in turn, part of the Department's comprehensive public safety agenda. PHDEP was funded at \$310 million in fiscal year 2000, supporting a broad spectrum of activities, including employment of security personnel, reimbursement of local police for additional security services, physical improvements to increase security, training and equipping voluntary tenant patrols, innovative anti-drug programs, and funding nonprofit resident management corporations and tenant councils to develop security and drug-abuse prevention programs.

INTOWN MANAGEMENT GROUP (ITMG)

Question. As mentioned, your agency recently negotiated with the Department of Justice to acquire funds to pay off liens placed on HUD owned homes as a result of HUD firing InTown Management Group and transferring those accounts to Golden Feather Realty Services. Can you tell me what actions HUD is taking to insure that payments are received by all businesses, not just the larger subcontractors that worked with HUD and HUD's agents on a good faith basis?

Answer. The Department has a procedure in place for satisfying liens placed on HUD-owned properties by subcontractors who have not been paid by ITMG. Lien resolution questions may be referred to HUD's Atlanta Homeownership Center at (888) 696-4687 (this is a toll-free number). This procedure, along with the Department's replacement of ITMG, will keep sales of HUD homes moving forward efficiently so that home buyers may complete the purchase of their homes promptly.

The termination of the Management and Marketing prime contract under which subcontractors provided services was unavoidable. Termination of a contract is the most extreme action the Government can take to remedy a contractor's failure to perform. This was not the remedy HUD desired. HUD afforded ITMG every opportunity possible to correct its deficient performance, but in the end, ITMG's failure to perform acceptably left HUD with no other choice than to terminate ITMG's contracts. HUD did so in strict accordance with the Federal contracting rules that govern termination.

In lieu of filing a lien and seeking its satisfaction by HUD, a subcontractor may file a claim with the Atlanta Division of the Bankruptcy Court for Northern District of Georgia. ITMG filed a voluntary petition for a Chapter 11 Bankruptcy, with that court, on September 22, 1999. All payments will be governed by the regulations covering bankruptcies under the Federal court system. ITMG's petition is identified as Case Number 99-74091. For more information pertaining to the bankruptcy and how to proceed with filing a claim, subcontractors should call the Atlanta Division of the Bankruptcy Court at (404) 215-1000.

SOUTHEASTERN IDAHO COMMUNITY ACTION AGENCY

Question. I would also like to ask a few questions concerning SouthEastern Idaho Community Action Agency (SEICAA). As background, SEICAA has served its com-

munity for 31 years and is a vital link to providing safe, affordable housing in rural southeast Idaho. One of SEICAA's largest programs is our HUD Housing Apartment Complexes which they own, maintain, and rent to low-income individuals, families and elderly persons. However, their properties are older and are increasingly difficult to maintain, keep safe and sustain the required reserve accounts, pay their mortgages, repairs, preventative maintenance, etc. Because of the nature of their business, they occasionally turn to HUD for assistance in some of their sponsored programs, including Subsidy rent increase, Flexible Subsidy loan, and troubled project funding. However, SEICAA continually receives little communication, assistance, or direction from HUD as they struggle to maintain their HUD properties. SEICAA believes, and I am inclined to agree, that for the benefit of the people that are serving and the service they provide, they deserve HUD's timely attention and response to their inquiries.

When can SEICAA and other similar struggling properties expect HUD personnel to respond to requests submitted for assistance and keep in compliance with HUD's own designated timeframes and regulations?

Answer. Efforts to improve customer service provided by federal employees has been a major effort for this Administration. HUD has a staff dedicated to precisely this function—Community Builders. The Community Builders have dramatically improved HUD's responsiveness. In fact, Anderson consulting surveyed HUD's customers and found that the agency was providing customer service at the level of Boldridge Quality Award winners—perhaps the most prestigious award a private business can receive. Ongoing outreach and technical assistance to HUD's program participants, like SEICCA, is a continuing mission through ongoing industry training sessions, our web sites, and points of contact who provide one on one technical assistance.

With the recent changes in how Section 8 contracts are renewed, some owners experienced difficulty providing the necessary information HUD now requires in order to renew subsidy or increase subsidy levels. With the last year of implementing new Section 8 renewal policy behind us, and, the advent of 5-year contract renewals, contract renewals should run much more smoothly.

In the specific case of problems encountered by SEICCA, they did experience difficulty and delay in renewing their Section 8 contract last year; it originally expired in July, 1999. In order to renew a Section 8 contract, HUD requires the renewal request to be complete and provided to HUD 120 days in advance of the contract expiration. When this is not done, as in the case of SEICCA, delays in subsidy renewal occur. In response to an inquiry from Senator Craig's staff regarding the delays in processing SEICCA's contract renewal in September of 1999, a letter was sent to SEICCA specifically outlining the deficiencies in their submission for both a subsidy increase and renewal, as well as their subsequent request for additional flexible subsidy to handle additional required repairs. Once the deficiencies in the submission were corrected, the Section 8 contract was renewed, with substantially higher rents.

REDUCING INTEREST RATES

Question. Will HUD consider reducing mortgage interest rates or mortgage elimination on struggling properties in order to increase cash flow for making emergency repairs, preventative maintenance and upkeep, retention of qualified employees to maintain the facilities, and to keep rents at an affordable level to qualified tenants?

Answer. Where HUD is the holder of a mortgage the answer is yes. HUD has many tools at its disposal that can be used to address such needs, including those mentioned. However, HUD has a fiduciary responsibility to the taxpayers to make sure it services each property in the taxpayers' best interests. Therefore, it is essential that each project be evaluated separately to determine what, if any, of the tools can or should be used in a particular case. HUD is not the only answer. Owners need to seek and maintain professional property management that select tenants properly, perform preventive maintenance promptly, and budget wisely but adequately.

Where HUD is mortgage insurer, there is a private lender involved who makes loans for a profit. We know of no private lender that would reduce interest rates or eliminate the need to repay the loan.

ONE-TIME GRANTS

Question. Will HUD consider making available sizeable one-time grants to bring properties up to safe and decent standards?

Answer. HUD has had authority over the years for various grant and loan programs. Funding for such programs as you describe lapsed several years ago.

HUD and the Congress saw the continuing need for such programs. The latest program, which should be available shortly, will provide grants for some projects using unspent Interest Reduction Payments from the Section 236 program.

INTERVENTION

Question. HUD has commitments to communities. Will HUD consider the very real probability that without timely, appropriate intervention, many of these properties will either be condemned, fall into serious disrepair, and/or require foreclosure reverting back to HUD?

Answer. HUD shares the Senator's concern for the community and the effects of maintaining affordable housing. This administration has taken several steps to do exactly as suggested to provide timely intervention. For example:

- We established the Real Estate Assessment Center (REAC). One of REAC's jobs is to implement a system of uniform physical evaluations of multifamily properties. In fact, we just completed the first ever evaluation of the physical condition of the entire multifamily inventory. Through REAC, we also automated the receipt of Audited Annual Financial Statements. We now have the best information ever on the financial condition of this inventory.
- We established the Departmental Enforcement Center (DEC). The DEC is responsible for enforcing the business documents between HUD and the worst offenders doing business with the Department.
- We are in the process of awarding contracts for Contract Administrators who will administer project-based Section 8 contracts.
- We reorganized the Office of Multifamily Housing in the field to improve servicing. We recently reorganized the Office of the Deputy Assistant Secretary for Multifamily Housing in Headquarters to improve overall management.

Also, foreclosure and or HUD ownership does not mean the loss of affordable housing. When properties are sold at foreclosure or from the owned inventory, if they need to be preserved as affordable housing, if feasible, they are sold with requirements that they be repaired, and operated as affordable housing. These requirements are enforced through land use restrictions that generally last at least 20 years. In addition, eligible tenants are provided with Section 8 vouchers, which they can use to stay at the repaired project, or move to another project or house.

HUD also uses its ability to provide Up Front Grants for HUD-owned projects that need to be preserved and preservation is not feasible without a grant from HUD. We have sold over 60 projects in the last few years with such grants.

So, while we would hope that no property ever would fall into disrepair, we are more prepared than ever to address such problems early on, and where such efforts fail, our foreclosure and disposition programs can and are used to address the problem.

 QUESTIONS SUBMITTED BY SENATOR JON KYL

GUN CONTROL

Question. The Administration has not been successful in securing the passage of gun-control legislation. However, it has, through HUD, threatened a massive lawsuit against gun manufacturers (except for Smith & Wesson, which has now reached a separate agreement with the Department). Some believe that the Administration is attempting to achieve through litigation what it cannot achieve through the normal legislative process. What is the statutory or constitutional authority on which HUD intends to pursue lawsuits against the gun industry?

Answer. As the Department has stated on previous occasions, HUD has no intentions of filing a lawsuit in its own capacity against the gun industry. HUD, however, is working with cities and counties that have filed suit against the gun industry, as well as with responsible manufacturers, to find a negotiated solution that will facilitate the industry's role in reducing the tide of gun violence by fostering safer manufacturing and distribution practices. Should these negotiations prove unsuccessful, HUD is prepared to work with public housing authorities, including those under HUD's control, on a possible suit against the industry.

HUD has statutory authority, moreover, to provide such assistance, and to assist the cities and counties that have filed suit against the gun industry in their negotiations for settlement. In the Department's enabling statute, Congress made clear that HUD was created in part "to encourage the solution of problems of housing, urban development, and mass transportation through State, county, town, village, or other local and private action." 42 U.S.C. § 3531 (1999). Given the awful toll of gun violence in our nation's communities, particularly those at the core of HUD's mission,

helping cities and counties seek improved gun safety and more responsible distribution through negotiations with the gun industry, is a prime example of such encouragement. Moreover, reducing gun violence is at the core of HUD's responsibility for promoting national housing policy. The Housing Act of 1949, for example, declared as national housing policy "the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family," 42 U.S.C. § 1441 (1999), and Congress has declared that the "objective of national housing policy shall be to reaffirm the long-established national commitment to decent, safe, and sanitary housing for every American by strengthening a nationwide partnership of public and private institutions able(to help make neighborhoods safe and livable." 42 U.S.C. § 12701 (1999).

CIVIL RIGHT PROTECTIONS

Question. Every year, local leaders from Arizona express dissatisfaction with the degree to which HUD's interpretation of fair housing statutes impedes their ability to protect the quality of life in their communities. Such questions typically arise in circumstances where a community seeks to exercise control over the siting of a group home—perhaps one where all the residents have a history of serious substance abuse—pursuant to the locality's traditional prerogative to set occupancy standards. In response to previous inquiries on this subject, your office has indicated its willingness to seek a more satisfactory accommodation with local leaders. The mechanism cited for reaching that accommodation is, I gather from your past responses, a process of consultation bringing together all those with a stake in the matter.

I recognize the need to ensure that civil rights protections are enforced in the housing sphere. But my question to you is: When do you expect that these discussions will lead to concrete changes that will make it easier for local leaders to be responsive to the concerns of families in their communities?

Answer. We believe that our discussions with stakeholders such as Mayors, the National League of Cities, and disability groups have served to clarify any misunderstandings about HUD's interpretation of the Fair Housing Act on the matter of group homes. In some instances, we have found that the stakeholders' concern rests not with HUD's interpretation of the law, but with the law itself, or the Supreme Court's interpretation of the law as in the Edmonds decision. To clarify where HUD stands on these issues, HUD and the Department of Justice issued easy-to-understand questions and answers. A copy of that guidance is attached. The Department welcomes further dialogue on this subject and believes our recent dialogue with the above interested parties has done much to resolve areas of disagreement or misunderstanding.

ATTACHMENT

JOINT STATEMENT OF THE DEPARTMENT OF JUSTICE AND THE DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

GROUP HOMES, LOCAL LAND USE, AND THE FAIR HOUSING ACT

Since the federal Fair Housing Act ("the Act") was amended by Congress in 1988 to add protections for persons with disabilities and families with children, there has been a great deal of litigation concerning the Act's effect on the ability of local governments to exercise control over group living arrangements, particularly for persons with disabilities. The Department of Justice has taken an active part in much of this litigation, often following referral of a matter by the Department of Housing and Urban Development ("HUD"). This joint statement provides an overview of the Fair Housing Act's requirements in this area. Specific topics are addressed in more depth in the attached Questions and Answers.

The Fair Housing Act prohibits a broad range of practices that discriminate against individuals on the basis of race, color, religion, sex, national origin, familial status, and disability.¹ The Act does not preempt local zoning laws. However, the Act applies to municipalities and other local government entities and prohibits them from making zoning or land use decisions or implementing land use policies that exclude or otherwise discriminate against protected persons, including individuals with disabilities.

The Fair Housing Act makes it unlawful—

¹The Fair Housing Act uses the term "handicap." This document uses the term 'disability' which has exactly the same legal meaning.

- To utilize land use policies or actions that treat groups of persons with disabilities less favorably than groups of non-disabled persons. An example would be an ordinance prohibiting housing for persons with disabilities or a specific type of disability, such as mental illness, from locating in a particular area, while allowing other groups of unrelated individuals to live together in that area.
- To take action against, or deny a permit, for a home because of the disability of individuals who live or would live there. An example would be denying a building permit for a home because it was intended to provide housing for persons with mental retardation.
- To refuse to make reasonable accommodations in land use and zoning policies and procedures where such accommodations may be necessary to afford persons or groups of persons with disabilities an equal opportunity to use and enjoy housing.
 - What constitutes a reasonable accommodation is a case-by-case determination.
 - Not all requested modifications of rules or policies are reasonable. If a requested modification imposes an undue financial or administrative burden on a local government, or if a modification creates a fundamental alteration in a local government's land use and zoning scheme, it is not a "reasonable" accommodation.

The disability discrimination provisions of the Fair Housing Act do not extend to persons who claim to be disabled solely on the basis of having been adjudicated a juvenile delinquent, having a criminal record, or being a sex offender. Furthermore, the Fair Housing Act does not protect persons who currently use illegal drugs, persons who have been convicted of the manufacture or sale of illegal drugs, or persons with or without disabilities who present a direct threat to the persons or property of others.

HUD and the Department of Justice encourage parties to group home disputes to explore all reasonable dispute resolution procedures, like mediation, as alternatives to litigation.

DATE: AUGUST 18, 1999.

FAIR HOUSING ACT AND ZONING

Question. Does the Fair Housing Act pre-empt local zoning laws?

Answer. No. "Pre-emption" is a legal term meaning that one level of government has taken over a field and left no room for government at any other level to pass laws or exercise authority in that area. The Fair Housing Act is not a land use or zoning statute; it does not pre-empt local land use and zoning laws. This is an area where state law typically gives local governments primary power. However, if that power is exercised in a specific instance in a way that is inconsistent with a federal law such as the Fair Housing Act, the federal law will control. Long before the 1988 amendments, the courts had held that the Fair Housing Act prohibited local governments from exercising their land use and zoning powers in a discriminatory way.

Question. What is a group home within the meaning of the Fair Housing Act?

Answer. The term "group home" does not have a specific legal meaning. In this statement, the term "group home" refers to housing occupied by groups of unrelated individuals with disabilities.² Sometimes, but not always, housing is provided by organizations that also offer various services for individuals with disabilities living in the group homes. Sometimes it is this group home operator, rather than the individuals who live in the home, that interacts with local government in seeking permits and making requests for reasonable accommodations on behalf of those individuals.

The term "group home" is also sometimes applied to any group of unrelated persons who live together in a dwelling—such as a group of students who voluntarily agree to share the rent on a house. The Act does not generally affect the ability of local governments to regulate housing of this kind, as long as they do not discriminate against the residents on the basis of race, color, national origin, religion, sex, handicap (disability) or familial status (families with minor children).

Question. Who are persons with disabilities within the meaning of the Fair Housing Act?

Answer. The Fair Housing Act prohibits discrimination on the basis of handicap. "Handicap" has the same legal meaning as the term "disability" which is used in other federal civil rights laws. Persons with disabilities (handicaps) are individuals with mental or physical impairments which substantially limit one or more major

²There are groups of unrelated persons with disabilities who choose to live together who do not consider their living arrangements "group homes," and it is inappropriate to consider them "group homes" as that concept is discussed in this Statement.

life activities. The term mental or physical impairment may include conditions such as blindness, hearing impairment, mobility impairment, HIV infection, mental retardation, alcoholism, drug addiction, chronic fatigue, learning disability, head injury, and mental illness. The term major life activity may include seeing, hearing, walking, breathing, performing manual tasks, caring for one's self, learning, speaking, or working. The Fair Housing Act also protects persons who have a record of such an impairment, or are regarded as having such an impairment.

Current users of illegal controlled substances, persons convicted for illegal manufacture or distribution of a controlled substance, sex offenders, and juvenile offenders, are not considered disabled under the Fair Housing Act, by virtue of that status.

The Fair Housing Act affords no protections to individuals with or without disabilities who present a direct threat to the persons or property of others. Determining whether someone poses such a direct threat must be made on an individualized basis, however, and cannot be based on general assumptions or speculation about the nature of a disability.

Question. What kinds of local zoning and land use laws relating to group homes violate the Fair Housing Act?

Answer. Local zoning and land use laws that treat groups of unrelated persons with disabilities less favorably than similar groups of unrelated persons without disabilities violate the Fair Housing Act. For example, suppose a city's zoning ordinance defines a "family" to include up to six unrelated persons living together as a household unit, and gives such a group of unrelated persons the right to live in any zoning district without special permission. If that ordinance also disallows a group home for six or fewer people with disabilities in a certain district or requires this home to seek a use permit, such requirements would conflict with the Fair Housing Act. The ordinance treats persons with disabilities worse than persons without disabilities.

A local government may generally restrict the ability of groups of unrelated persons to live together as long as the restrictions are imposed on all such groups. Thus, in the case where a family is defined to include up to six unrelated people, an ordinance would not, on its face, violate the Act if a group home for seven people with disabilities was not allowed to locate in a single family zoned neighborhood, because a group of seven unrelated people without disabilities would also be disallowed. However, as discussed below, because persons with disabilities are also entitled to request reasonable accommodations in rules and policies, the group home for seven persons with disabilities would have to be given the opportunity to seek an exception or waiver. If the criteria for reasonable accommodation are met, the permit would have to be given in that instance, but the ordinance would not be invalid in all circumstances.

Question. What is a reasonable accommodation under the Fair Housing Act?

Answer. As a general rule, the Fair Housing Act makes it unlawful to refuse to make "reasonable accommodations" (modifications or exceptions) to rules, policies, practices, or services, when such accommodations may be necessary to afford persons with disabilities an equal opportunity to use or enjoy a dwelling.

Even though a zoning ordinance imposes on group homes the same restrictions it imposes on other groups of unrelated people, a local government may be required, in individual cases and when requested to do so, to grant a reasonable accommodation to a group home for persons with disabilities. For example, it may be a reasonable accommodation to waive a setback requirement so that a paved path of travel can be provided to residents who have mobility impairments. A similar waiver might not be required for a different type of group home where residents do not have difficulty negotiating steps and do not need a setback in order to have an equal opportunity to use and enjoy a dwelling.

Not all requested modifications of rules or policies are reasonable. Whether a particular accommodation is reasonable depends on the facts, and must be decided on a case-by-case basis. The determination of what is reasonable depends on the answers to two questions: First, does the request impose an undue burden or expense on the local government? Second, does the proposed use create a fundamental alteration in the zoning scheme? If the answer to either question is "yes," the requested accommodation is unreasonable.

What is "reasonable" in one circumstance may not be "reasonable" in another. For example, suppose a local government does not allow groups of four or more unrelated people to live together in a single-family neighborhood. A group home for four adults with mental retardation would very likely be able to show that it will have no more impact on parking, traffic, noise, utility use, and other typical concerns of zoning than an "ordinary family." In this circumstance, there would be no undue burden or expense for the local government nor would the single-family character

of the neighborhood be fundamentally altered. Granting an exception or waiver to the group home in this circumstance does not invalidate the ordinance. The local government would still be able to keep groups of unrelated persons without disabilities from living in single-family neighborhoods.

By contrast, a fifty-bed nursing home would not ordinarily be considered an appropriate use in a single-family neighborhood, for obvious reasons having nothing to do with the disabilities of its residents. Such a facility might or might not impose significant burdens and expense on the community, but it would likely create a fundamental change in the single-family character of the neighborhood. On the other hand, a nursing home might not create a "fundamental change" in a neighborhood zoned for multi-family housing. The scope and magnitude of the modification requested, and the features of the surrounding neighborhood are among the factors that will be taken into account in determining whether a requested accommodation is reasonable.

Question. What is the procedure for requesting a reasonable accommodation?

Answer. Where a local zoning scheme specifies procedures for seeking a departure from the general rule, courts have decided, and the Department of Justice and HUD agree, that these procedures must ordinarily be followed. If no procedure is specified, persons with disabilities may, nevertheless, request a reasonable accommodation in some other way, and a local government is obligated to grant it if it meets the criteria discussed above. A local government's failure to respond to a request for reasonable accommodation or an inordinate delay in responding could also violate the Act.

Whether a procedure for requesting accommodations is provided or not, if local government officials have previously made statements or otherwise indicated that an application would not receive fair consideration, or if the procedure itself is discriminatory, then individuals with disabilities living in a group home (and/or its operator) might be able to go directly into court to request an order for an accommodation.

Local governments are encouraged to provide mechanisms for requesting reasonable accommodations that operate promptly and efficiently, without imposing significant costs or delays. The local government should also make efforts to insure that the availability of such mechanisms is well known within the community.

Question. When, if ever, can a local government limit the number of group homes that can locate in a certain area?

Answer. A concern expressed by some local government officials and neighborhood residents is that certain jurisdictions, governments, or particular neighborhoods within a jurisdiction, may come to have more than their "fair share" of group homes. There are legal ways to address this concern. The Fair Housing Act does not prohibit most governmental programs designed to encourage people of a particular race to move to neighborhoods occupied predominantly by people of another race. A local government that believes a particular area within its boundaries has its "fair share" of group homes, could offer incentives to providers to locate future homes in other neighborhoods.

However, some state and local governments have tried to address this concern by enacting laws requiring that group homes be at a certain minimum distance from one another. The Department of Justice and HUD take the position, and most courts that have addressed the issue agree, that density restrictions are generally inconsistent with the Fair Housing Act. We also believe, however, that if a neighborhood came to be composed largely of group homes, that could adversely affect individuals with disabilities and would be inconsistent with the objective of integrating persons with disabilities into the community. Especially in the licensing and regulatory process, it is appropriate to be concerned about the setting for a group home. A consideration of over-concentration could be considered in this context. This objective does not, however, justify requiring separations which have the effect of foreclosing group homes from locating in entire neighborhoods.

Question. What kinds of health and safety regulations can be imposed upon group homes?

Answer. The great majority of group homes for persons with disabilities are subject to state regulations intended to protect the health and safety of their residents. The Department of Justice and HUD believe, as do responsible group home operators, that such licensing schemes are necessary and legitimate. Neighbors who have concerns that a particular group home is being operated inappropriately should be able to bring their concerns to the attention of the responsible licensing agency. We encourage the States to commit the resources needed to make these systems responsive to resident and community needs and concerns.

Regulation and licensing requirements for group homes are themselves subject to scrutiny under the Fair Housing Act. Such requirements based on health and safety

concerns can be discriminatory themselves or may be cited sometimes to disguise discriminatory motives behind attempts to exclude group homes from a community. Regulators must also recognize that not all individuals with disabilities living in group home settings desire or need the same level of services or protection. For example, it may be appropriate to require heightened fire safety measures in a group home for people who are unable to move about without assistance. But for another group of persons with disabilities who do not desire or need such assistance, it would not be appropriate to require fire safety measures beyond those normally imposed on the size and type of residential building involved.

Question. Can a local government consider the feelings of neighbors in making a decision about granting a permit to a group home to locate in a residential neighborhood?

Answer. In the same way a local government would break the law if it rejected low-income housing in a community because of neighbors' fears that such housing would be occupied by racial minorities, a local government can violate the Fair Housing Act if it blocks a group home or denies a requested reasonable accommodation in response to neighbors' stereotypical fears or prejudices about persons with disabilities. This is so even if the individual government decision-makers are not themselves personally prejudiced against persons with disabilities. If the evidence shows that the decision-makers were responding to the wishes of their constituents, and that the constituents were motivated in substantial part by discriminatory concerns, that could be enough to prove a violation.

Of course, a city council or zoning board is not bound by everything that is said by every person who speaks out at a public hearing. It is the record as a whole that will be determinative. If the record shows that there were valid reasons for denying an application that were not related to the disability of the prospective residents, the courts will give little weight to isolated discriminatory statements. If, however, the purportedly legitimate reasons advanced to support the action are not objectively valid, the courts are likely to treat them as pretextual, and to find that there has been discrimination.

For example, neighbors and local government officials may be legitimately concerned that a group home for adults in certain circumstances may create more demand for on-street parking than would a typical family. It is not a violation of the Fair Housing Act for neighbors or officials to raise this concern and to ask the provider to respond. A valid unaddressed concern about inadequate parking facilities could justify denying the application, if another type of facility would ordinarily be denied a permit for such parking problems. However, if a group of individuals with disabilities or a group home operator shows by credible and unrebutted evidence that the home will not create a need for more parking spaces, or submits a plan to provide whatever off-street parking may be needed, then parking concerns would not support a decision to deny the home a permit.

Question. What is the status of group living arrangements for children under the Fair Housing Act?

Answer. In the course of litigation addressing group homes for persons with disabilities, the issue has arisen whether the Fair Housing Act also provides protections for group living arrangements for children. Such living arrangements are covered by the Fair Housing Act's provisions prohibiting discrimination against families with children. For example, a local government may not enforce a zoning ordinance which treats group living arrangements for children less favorably than it treats a similar group living arrangement for unrelated adults. Thus, an ordinance that defined a group of up to six unrelated adult persons as a family, but specifically disallowed a group living arrangement for six or fewer children, would, on its face, discriminate on the basis of familial status. Likewise, a local government might violate the Act if it denied a permit to such a home because neighbors did not want to have a group facility for children next to them.

The law generally recognizes that children require adult supervision. Imposing a reasonable requirement for adequate supervision in group living facilities for children would not violate the familial status provisions of the Fair Housing Act.

Question. How are zoning and land use matters handled by HUD and the Department of Justice?

Answer. The Fair Housing Act gives the Department of Housing and Urban Development the power to receive and investigate complaints of discrimination, including complaints that a local government has discriminated in exercising its land use and zoning powers. HUD is also obligated by statute to attempt to conciliate the complaints that it receives, even before it completes an investigation.

In matters involving zoning and land use, HUD does not issue a charge of discrimination. Instead, HUD refers matters it believes may be meritorious to the Department of Justice which, in its discretion, may decide to bring suit against the

respondent in such a case. The Department of Justice May also bring suit in a case that has not been the subject of a HUD complaint by exercising its power to initiate litigation alleging a "pattern or practice" of discrimination or a denial of rights to a group of persons which raises an issue of general public importance.

The Department of Justice's principal objective in a suit of this kind is to remove significant barriers to the housing opportunities available for persons with disabilities. The Department ordinarily will not participate in litigation to challenge discriminatory ordinances which are not being enforced, unless there is evidence that the mere existence of the provisions are preventing or discouraging the development of needed housing.

If HUD determines that there is no reasonable basis to believe that there may be a violation, it will close an investigation without referring the matter to the Department of Justice. Although the Department of Justice would still have independent "pattern or practice" authority to take enforcement action in the matter that was the subject of the closed HUD investigation, that would be an unlikely event. A HUD or Department of Justice decision not to proceed with a zoning or land use matter does not foreclose private plaintiffs from pursuing a claim.

Litigation can be an expensive, time-consuming, and uncertain process for all parties. HUD and the Department of Justice encourage parties to group home disputes to explore all reasonable alternatives to litigation, including alternative dispute resolution procedures, like mediation. HUD attempts to conciliate all Fair Housing Act complaints that it receives. In addition, it is the Department of Justice's policy to offer prospective defendants the opportunity to engage in pre-suit settlement negotiations, except in the most unusual circumstances.

LETTER FROM JOHN A. MAGAGNA AND KENNETH H. ZIMMERMAN

AUGUST 13, 1999.

CHAI R. FELDBLUM,
Georgetown University Law Center,
Washington, D.C.

DEAR MS. FELDBLUM: We are writing to provide you with the Joint Statement that the Department of Justice and the Department of Housing and Urban Development have developed concerning Group Homes, Local Land Use, and the Fair Housing Act.

We are aware of the interest that the United States Conference of mayors, the National League of Cities, the Coalition to Preserve the Fair Housing Act, and other interested parties have expressed in such guidance from the federal agencies with responsibility for enforcing the Fair Housing Act. We would be happy to meet with you in the near future to discuss this statement and your own efforts to provide further information concerning these issues.

Thank you for your ongoing interest in these issues. We look forward to working with you further.

Sincerely,

JOHN A. MAGAGNA,
Chief, Housing and Civil Enforcement Section, Civil Rights Division, U.S.
Department of Justice.

KENNETH H. ZIMMERMAN,
Deputy Assistant Secretary for Enforcement and Programs, U.S. Department of
Housing and Urban Development.

SHELTER PLUS CARE

Question. Shelter Plus Care is one of the federal Homeless Assistance Programs authorized under the McKinney Act. Under this specific program, the federal government funds permanent housing for some of the most troubled among the homeless population—particularly individuals with severe mental illnesses—and local governments provide social services for those residents. Shelter Plus Care projects initially receive five years of funding. After that, these programs must compete with other projects that serve the homeless. Local governments decide which projects will be funded, but the standards they use are guided by HUD's "Continuum of Care" framework.

Last year, expiring Shelter Plus Care projects serving 885 people went unrenewed. A disproportionate share of these are in Maricopa County, Arizona. I recognize that HUD has proposed a fix for this situation in the fiscal year 2001 budget, but the fact is that Congress has been left to try to address the problem that currently exists. In light of these circumstances, and in light of the fact that we will likely see more projects going unrenewed in the next few years, do you be-

lieve that the "Continuum of Care" model could be improved to better address the varied needs of communities working to address the problems of homeless people?

Answer. In the 1999 competition, 79 percent of all Shelter Plus Care renewal funding requests were approved for a total of \$87.2 million and representing 3,527 funded beds.

Shelter Plus Care renewal requests are not spread proportionately among jurisdictions but are driven by local needs and timing considerations which vary considerably from place to place. In the 1999 competition, Maricopa County had three of its four Shelter Plus Care renewal requests funded, \$10,721,760 out of the \$13,752,900 requested. The continuum of care competition provides additional funds to communities with large renewal burdens and Maricopa benefited from this adjustment in 1999. Only one other continuum in the country received more Shelter Plus Care renewal funding—Cuyahoga County, Ohio. Maricopa assigned its four S+C renewals priority numbers 17 to 20 out of the 23 projects submitted. Maricopa County had sufficient funds available to it in the competition, approximately \$15 million, to have had all four of its Shelter Plus Care renewals funded, if they had decided to do so, by assigning them a higher priority.

With or without a continuum of care system, the only way of ensuring the continuation of homeless assistance projects deemed essential to our communities, such as those in Maricopa County, is to fully fund them through an annual appropriations bill. The Department has proposed just such a vehicle for the funding of Shelter Plus Care renewals through the Section 8 Housing Certificate Fund. We strongly urge that Shelter Plus Care permanent housing project renewals be funded in this manner going forward. This will strengthen the continuum of care process and the communities and residents it is intended to serve.

SHORTAGE OF AFFORDABLE HOUSING

Question. Mr. Secretary, the shortage of affordable housing in this country is truly a crisis. The tight rental market and the high cost of housing in Vermont is severely limiting the availability of affordable housing throughout the state. I am concerned that the high housing costs and limited availability are not only aggravating the need of low income families, but putting middle income families out in the streets. What is your Department's response to the rising housing costs throughout the country and how does your department intend to spur production of new housing?

Answer. Senator, I couldn't agree with you more. The need for increasing the supply of affordable housing has reached crisis proportions—HUD's recent report on "worst case" housing needs found a record 5.4 million American families are in urgent need of affordable housing. The Department is moving on a number of fronts to address this problem. A key program proposal to foster affordable housing production is the Department's proposal to increase funding for Housing Vouchers and to earmark 10,000 vouchers for housing production—the first new affordable housing production program for families since 1996.

HUD's HOME program provides funding to state and local governments to help them acquire, rehabilitate or build affordable housing and the Administration has proposed an innovative "continuum of care" program that would ensure that the full range of housing needs of the elderly—from maintaining their own homes to assisted living—are provided. And I should emphasize the Department's efforts to provide affordable housing for people with special needs—especially the homeless and people with AIDS.

GUN CONTROL

Question. The Administration has not been successful in securing the passage of gun-control legislation. However, it has, through HUD, threatened a massive lawsuit against gun manufacturers (except for Smith & Wesson, which has now reached a separate agreement with the Department). Some believe that the Administration is attempting to achieve through litigation what it cannot achieve through the normal legislative process. What is the statutory or constitutional authority on which HUD intends to pursue lawsuits against the gun industry?

Answer. As the Department has stated on previous occasions, HUD has no intentions of filing a lawsuit in its own capacity against the gun industry. HUD, however, is working with cities and counties that have filed suit against the gun industry, as well as with responsible manufacturers, to find a negotiated solution that will facilitate the industry's role in reducing the tide of gun violence by fostering safer manufacturing and distribution practices. Should these negotiations prove unsuccessful, HUD is prepared to work with public housing authorities, including those under HUD's control, on a possible suit against the industry.

HUD has statutory authority, moreover, to provide such assistance, and to assist the cities and counties that have filed suit against the gun industry in their negotiations for settlement. In the Department's enabling statute, Congress made clear that HUD was created in part "to encourage the solution of problems of housing, urban development, and mass transportation through State, county, town, village, or other local and private action." 42 U.S.C. 3531 (1999). Given the awful toll of gun violence in our nation's communities, particularly those at the core of HUD's mission, helping cities and counties seek improved gun safety and more responsible distribution through negotiations with the gun industry, is a prime example of such encouragement. Moreover, reducing gun violence is at the core of HUD's responsibility for promoting national housing policy. The Housing Act of 1949, for example, declared as national housing policy "the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family," 42 U.S.C. § 1441 (1999), and Congress has declared that the "objective of national housing policy shall be to reaffirm the long-established national commitment to decent, safe, and sanitary housing for every American by strengthening a nationwide partnership of public and private institutions able . . . to help make neighborhoods safe and livable." 42 U.S.C. § 12701 (1999).

SUBCOMMITTEE RECESS

Senator MIKULSKI. With that, this hearing now stands recessed until next Thursday, April 6, at such time as we will take testimony from Secretary Togo West on the VA budget.

[Whereupon, at 11:56 a.m., Thursday, March 30, the subcommittee was recessed, to reconvene subject to the call of the Chair.]

**DEPARTMENTS OF VETERANS AFFAIRS AND
HOUSING AND URBAN DEVELOPMENT AND
INDEPENDENT AGENCIES APPROPRIATIONS
FOR FISCAL YEAR 2001**

THURSDAY, APRIL 6, 2000

U.S. SENATE
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 9:30 a.m., in room SD-136, Dirksen Senate Office Building, Hon. Christopher S. Bond (chairman) presiding.

Present: Senators Burns, Mikulski, and Leahy.

DEPARTMENT OF VETERANS AFFAIRS

STATEMENT OF HON. TOGO D. WEST, JR., SECRETARY

ACCOMPANIED BY:

**THOMAS L. GARTHWAITE, M.D., DEPUTY UNDER SECRETARY FOR
HEALTH, VETERANS HEALTH ADMINISTRATION
JOSEPH THOMPSON, UNDER SECRETARY FOR BENEFITS, VET-
ERANS BENEFITS ADMINISTRATION
MICHAEL WALKER, ACTING UNDER SECRETARY FOR MEMORIAL
AFFAIRS, NATIONAL CEMETERY ADMINISTRATION
D. MARK CATLETT, DEPUTY ASSISTANT SECRETARY FOR BUDGET,
DEPARTMENTAL ADMINISTRATION**

OPENING STATEMENT OF SENATOR CHRISTOPHER S. BOND

Senator BOND. Good morning, ladies and gentlemen. The Subcommittee will come to order. We meet this morning to review the fiscal year 2001 budget request of the Department of Veterans Affairs. We welcome Secretary Togo West and other VA officials. Senator Mikulski is here but she was called away temporarily, so she suggested that I go on, because we do have a couple of votes beginning at 10:30, and with the budget and vote-arama going on, we don't know if we're going to be able to give you the full treatment, Mr. Secretary, and I know that you're going to miss that if we're unable to come back; but we will keep the record open and have questions for the record.

VA's appropriation request totals about \$47 billion of which \$22.4 billion is in the discretionary appropriations level. The budget would grow by \$1.5 billion over the fiscal year 2000 level under the proposal submitted by the administration.

A year ago, VA submitted a request to Congress which would have resulted in 13,000 VA health care workers being laid off,

thousands of veterans being denied medical care, longer waiting times for appointments, and closures of scores of programs for such critical activities as substance abuse treatment, cancer therapy, psychiatric treatment and cardiac surgery.

Despite the fact that the Vice-President announced in July the administration would request an additional \$1 billion for medical care, we never received a budget amendment or any request from the administration. Notwithstanding the administration's failure to be responsive, after a long hot summer and a lot of hard work we came up with a budget for the Department which increased medical care by \$1.7 billion. I think everyone in the room will agree it was the right thing to do to ensure high quality, accessible medical services to all veterans seeking care at the VA.

VA'S MEDICAL CARE PROGRAM

It seems the administration finally saw the light, as this year's budget proposal would increase medical care by \$1.35 billion for a total of \$20.3 billion. I congratulate you, Mr. Secretary, in getting the White House to come to its senses and recognize the importance of this vital program for veterans.

We are pleased the budget includes \$548 million to implement the new Millennium Act, increasing by \$278 million the funds for home and community-based care. These programs are vitally important for our growing aging veteran population. The new emphasis on home-based services should allow more veterans to stay in their homes, surrounded by their family members, as long as possible.

While we're on the issue of long-term care, let me say I have become increasingly concerned about the quality of care provided to our nation's elderly and nursing homes. A recent audit in Missouri and several GAO reports indicate there are serious and well-documented problems in the nation's nursing home system, suggesting that inexcusable regulatory lapses have occurred. VA has established a process to ensure that veterans it places in community nursing homes are receiving good care, through regular inspections and evaluations. Yet it is my understanding that VA is neither systematically maintaining nor sharing critical information with HCFA and State agencies about the community homes with which it contracts. We will be following up with you on this issue because I think this is one area where VA could make a significant contribution and benefit from the work done by HCFA and State inspection agencies as well.

The budget also includes \$339 million to continue to treat veterans who suffer from Hepatitis C. Last year, Dr. Kizer told us that Hepatitis C was a problem of epidemic proportion among the veteran population in particular, and we seek to ensure that the Department is allocating funds appropriately, screening all at-risk patients and treating all veterans who can benefit from the new combination therapy.

While Dr. Kizer spoke last year about the need for as much as \$500 million for treating veterans with Hepatitis C, your budget indicates only \$195 million will be spent in fiscal year 2000. More disturbing, recent data from the field indicates far less than this

is being spent this year. We need to understand why this is happening.

I note there is a new initiative in this year's budget which you've dubbed 30-30-20—I understand it has nothing to do with the old 30-20-10 initiative—aimed at improving access to care and decreasing waiting times. This is an admirable goal; we all have scores of stories from our constituents about their having to wait for weeks or even months to get an appointment and then waiting for hours to see the doctor the day of the appointment. I look forward to hearing details about how VA will improve this situation.

Another emphasis in VA's budget is patient safety, with \$137 million in initiatives aimed at patient safety improvements. This is an extremely important issue, and while VA has been a leader in certain aspects of ensuring the safety of its patients, such as the bar coding system for medications and the patient safety registry, VA, along with all health care providers, has a long way to go. Anytime there are instances of patient abuse, neglect or mistakes, there's much work to be done. VA must ensure that all of its facilities are following VA's patient safety policies and procedures, and that there is strong and consistent leadership.

Another area I am interested in is VA's homeless programs. We increased these programs by \$40 million last year, and the budget proposal would maintain current levels of spending. I'm concerned that while we're spending a lot of money on these programs, there seems to be insufficient coordination within VA and with a myriad of other Federal agency programs serving homeless. Also, there seems to be a great deal of variation from one VA hospital to the next in terms of how much priority is placed on helping homeless veterans.

If helping homeless veterans is a national priority for VA, and it absolutely should be, we need to be confident that it is a priority at each of the 22 networks and each of the 172 VA hospitals. Anecdotal evidence coming to us suggests that it is not.

Fortunately, VA has efforts underway to identify and link services between homeless veterans and VA medical and other supportive services. This is a good thing, but the Department needs also to recognize the importance of preventing its patients from becoming homeless. The point is very important in view of the fact that substantial numbers of homeless vets are treated in every VA medical center.

CAPITAL ASSET REALIGNMENT PROTOCOL

Moving on, I also have concerns about VA's progress in developing the capital asset realignment protocol. GAO told us last year that the VA was wasting \$1 million a day on unneeded buildings, and that only 25 percent of buildings in the VA medical system are being used for direct patient care. So it is important that VA move forward with capital asset planning and market studies, and in a manner which protects veteran's needs but does not enable stakeholders to hijack the process.

Mr. Secretary, you have to have direct involvement in this and push this forward; this is not something that is going to happen. It is pushing a rock up a hill, but that rock has to go up the hill.

Clearly everyone who has an interest—veterans, employees, the medical schools—need to be at the table and contributing to the process. But the stakeholder process that I’ve witnessed too often is like trying to load frogs in a wheelbarrow. You get a couple in, and when you go out to look for the others, the ones you put in at first jump out. That’s what we’ve seen in Chicago, and we absolutely cannot repeat this process in other market studies.

According to GAO testimony, which will be inserted in the record today, “VHA’s process, as currently designed, raised concerns about whether the right people are involved at the right times in the right ways.” GAO’s assessment is that VA has not learned any lesson from the Chicago capital asset realignment study and that the process as currently structured will not lead to timely, appropriate capital investment decisions that are in the best interests of veterans and taxpayers.

[The information follows:]

[General Account Office, April 6, 2000]

VA IS STRUGGLING TO RESPOND TO ASSET REALIGNMENT CHALLENGES

(By Stephen P. Backhus)

Mr. Chairman and Members of the Subcommittee: We are pleased to contribute this statement for the record for the Subcommittee’s deliberations on the fiscal year 2001 budget request for the Department of Veterans Affairs (VA). It discusses the management of VA’s health care assets that are operated by the Veterans Health Administration (VHA). VHA has primary responsibility for capital asset planning activities, whereas VA’s Capital Investment Board has primary responsibility for capital budgeting activities, including review of VHA’s capital investment proposals.

Between its establishment in 1946 and 1995, VHA’s health care system grew into our nation’s largest direct provider of health care, serving veterans at over 600 locations nationwide. In October 1995, VHA began to transform its system from a hospital operator to a health care provider that relies on community-based, integrated networks of VA and non-VA providers to meet veterans’ needs.

Over the next few years, VHA will spend billions of dollars operating, maintaining, and improving buildings and land at health care delivery locations nationwide. Currently, VA’s health care capital assets total over 4,700 buildings and 18,000 acres of land at 181 major delivery locations.

In March 1999, we reported that VHA could enhance veterans’ health care benefits if it reduced the level of resources spent on underused, inefficient, or obsolete buildings and reinvested these savings in providing health care more efficiently in modern facilities at existing locations or new locations closer to where the veterans live.¹

VHA agreed in general with our evaluation and committed at that time to taking the steps needed to realign its portfolio of health care assets. In essence, VHA agreed to implement in a timely manner a strategic planning process that systematically studies all its medical care markets in order to develop capital asset realignment plans.² VA’s Capital Investment Board will use these plans to determine the best investment opportunities.

Last April we reported to this Subcommittee that VHA’s transformation had made significant progress, although it appeared to be losing momentum. We concluded that VHA’s transformation could not be successfully completed until VHA had addressed its greatest management challenge: realigning its massive portfolio of aged capital assets.³

Last July we reported that VHA had made limited progress toward implementing a realignment process and estimated the opportunity cost of delay was as high as

¹ VA Health Care: Capital Asset Planning and Budgeting Need Improvement (GAO/T-HEHS-99-83, Mar. 10, 1999).

² A market, for the purposes of this statement, is defined as a geographic area generally within 75 miles of an existing VHA major delivery location.

³ Veterans’ Affairs: Progress and Challenges in Transforming Health Care (GAO/T-HEHS-99-109, Apr. 15, 1999).

\$1 million a day.⁴ VHA's efforts had focused primarily on discussions among VHA officials, VA officials, and stakeholders, such as veterans' service organizations, regarding a conceptual framework for its asset realignment process. VHA reported at that time that its realignment process would be operational within 2 months (September 1999).⁵ Our statement today (1) assesses VHA's progress to date, (2) identifies concerns regarding VHA's realignment process, and (3) examines the potential effects of VHA's actions on VA's capital budgeting process.

My comments this morning are based on discussions with officials responsible for VHA's asset realignment and VA's capital budgeting processes and reviews of documents, primarily those relating to VHA's proposed asset realignment procedures and VA's Capital Investment Board decisions concerning VHA investment proposals considered for funding in fiscal year 2001.

In summary, VHA has been unsuccessful over the past 13 months in its efforts to design a capital asset realignment process. VHA's efforts have focused on discussions of who should lead such a process, how stakeholders should participate, and how decisions are to be made. Moreover, VHA estimates, as it did 8 months ago, that it could be several months before its process is operational.

Our assessment of VHA's process, as currently designed, raises concerns about whether the right people are involved at the right times and in the right ways. Specifically, senior managers at headquarters may not be proactively involved in a leadership role at key decision points. In addition, stakeholders with vested interests appear to be involved in decision-making, rather than advisory, roles. And activities supporting key components, such as options development and evaluation, are not sufficiently rigorous. As a result, VHA may not be able to produce within a reasonable time frame capital asset plans that are in the best interest of veterans.

VHA's slow progress creates dilemmas for VA's capital budgeting process. In the short term, VHA and VA's Capital Investment Board face the challenge of maintaining and improving capital assets without sufficient information about future asset needs to ensure cost-effective capital investment decisions. By contrast, if funding for projects is delayed until capital asset plans are completed, the longer-term challenge will be how to successfully finance and implement capital realignment investments potentially totaling billions of dollars. These challenges could be ameliorated, in part, if VA effectively manages short-term investment risks and the Congress provides alternative financing arrangements for future investments.

VHA IS STRUGGLING TO DESIGN ASSET REALIGNMENT PROCESS

The goal of an asset realignment process, in our view, is to produce within a reasonable time frame a capital asset plan that is in the best interest of veterans namely one that provides better health care services for currently enrolled veterans while enabling more veterans to access VA care. The capital asset plan should conform to Office of Management and Budget guidelines.⁶ If done successfully, the capital asset plan should provide a road map to guide investment decisions over the next decade.

Over the past 13 months, VHA has taken an inordinate amount of time trying to develop a method to achieve these objectives. In March 1999, VHA developed a broad conceptual framework to guide its design efforts. Over the next 3 months (July 1999), VHA developed a draft statement of work needed to conduct the market studies and an action plan for completing the studies. Three months later (October 1999), VHA developed a draft capital asset management policy statement that outlined a proposed design method as well as a revised statement of work and action plan. In February (4 months later), VHA provided a revised draft policy statement to a wide variety of stakeholders for their review.

These critical documents are currently being revised again. Over the next several months, VHA expects to (1) continue refining its capital asset realignment design method on the basis of stakeholder concerns and suggestions, (2) complete work needed to solicit and award a consulting contract, and (3) obtain senior management review and final approval of a method to employ.

⁴VA Health Care: Challenges Facing VA in Developing an Asset Realignment Process(GAO/T-HEHS-99-173, July 22, 1999).

⁵VA's Capital Assets Realignment Plan for Enhancing Services to Veterans, hearing before the Subcommittee on Oversight and Investigations, House Committee on Veterans' Affairs, No. 106-20 (July 22, 1999).

⁶Capital Programming Guide, Office of Management and Budget (July 1997).

During the same period, VHA has also struggled to develop a capital asset realignment plan for its Chicago market. This initiative,⁷ started in July 1998, produced a draft realignment plan in September 1999. VHA has spent the last 6 months obtaining and evaluating stakeholders' concerns and advice as well as re-evaluating potential options. VHA expects this experience to help shape the ultimate design of its systemwide asset realignment process.

VHA'S PROPOSED CAPITAL ASSET REALIGNMENT PROCESS RAISES CONCERNS

We identified three weaknesses in VHA's proposed method. First, senior managers at headquarters appear to be in reactive, rather than proactive, leadership roles. Second, stakeholders appear to have decision-making, rather than advisory, roles. Third, key components, such as development of evaluation criteria, lack rigor; that is, they do not appear to be driven by quantifiable, objective data clearly linked to well-defined measurement standards.

VHA'S SENIOR MANAGERS LACK PROACTIVE ROLE

VHA's senior management should play a critical leadership role in the development of (1) well-defined evaluation criteria that have the measurement standards needed to guide the collection of data necessary to make capital asset realignment decisions, (2) guiding principles that consultants and others could use when developing asset realignment options for consideration, and (3) systematic procedures for scoring options in relation to each evaluation criterion.

However, VHA plans to give a consultant primary responsibility for developing options and evaluation criteria as well as for conducting the evaluation of potential options. Senior managers at headquarters are to be primarily in an oversight role, reacting to the consultant's proposed evaluation criteria, methods for evaluating potential options, and choice of the best option.

We are concerned about this arrangement. The capital asset plans that result from these market studies are expected to guide VHA's future investment initiatives for the next decade. Without strong leadership in the development of these plans, VHA risks not being able to timely implement meaningful capital asset realignments. A case in point is VHA's Chicago market realignment process. Senior managers at headquarters were not actively involved until after stakeholders and others raised significant concerns about the recommended realignment option. VHA has since convened a special review group that has spent the last 2 months assessing stakeholders' concerns and deciding how such concerns could be best resolved. Now, 20 months after the study was initiated, this review group has decided to set aside the originally recommended option and consider others, including options that had not been considered before. If senior managers had been involved, such options might have been considered earlier. With senior managers continuing in a reactive role in its proposed systemwide asset realignment process, VHA risks replicating in other markets its struggle to make progress realigning assets in Chicago.

VHA'S STAKEHOLDERS HAVE DECISION-MAKING ROLE

Last July we expressed concern that VHA's capital asset realignment process as then proposed could rely too heavily on local stakeholders who may have vested interests in maintaining the status quo. Our assessment of VHA's proposed asset realignment process today suggests that stakeholders remain heavily involved in a decision-making role.

VHA plans to have national and local committees, which possess decision-making authority, review the consultant's products, such as its proposed evaluation criteria and data collection methods. The committees' members include representatives of veterans' service organizations, union or labor organizations, medical school affiliates, research organizations, state veterans and health associations, and local VHA staff.

We remain concerned that stakeholders' participation as decision-makers on such committees could bias the market studies and, ultimately, the capital asset plans. VHA stakeholders are a diverse group with competing interests, who, quite naturally, could oppose some changes that they believe are not in their best interests. For example, medical schools' reluctance to change long-standing business practices has sometimes been a factor inhibiting VHA's asset management. In addition, unions sometimes are reluctant to support decisions that result in a restructuring of services because operating efficiencies can result in staffing reductions.

⁷VA Health Care: Closing a Chicago Hospital Would Save Millions and Enhance Access to Services (GAO/HEHS-98-68, Apr. 16, 1998) recommended that VHA develop and implement a plan that meets veterans' needs by operating fewer capital assets.

We believe it is essential to involve stakeholders in an advisory role in the capital asset realignment process. This is because they can provide valuable perspectives on the evaluation criteria for selecting the best market study option and on procedures for scoring realignment options in relation to the criteria. Such input could enhance stakeholder understanding of VHA's capital asset realignment process and build confidence that realignment decisions are fair and fact-based.

Realignment Decision Points Lack Rigor

From our perspective, VHA's experience with the Chicago capital asset realignment study offers three valuable lessons so far that could improve VHA's systemwide asset realignment process:

- ill-defined capital asset realignment evaluation criteria lead to unsupportable decisions;
- flawed asset realignment options result in flawed decisions; and
- an unstructured, subjective evaluation process impedes stakeholder acceptance.

It does not appear, though, that VHA has taken these lessons into account for its proposed realignment process. First, VHA's systemwide evaluation criteria, when developed, could be vaguely defined. VHA's draft statement of work for its systemwide process calls for a consultant to develop evaluation criteria, but it does not require the evaluation criteria to be defined in terms of quantifiable measurement standards that are clearly linked to each criterion. The lack of well-defined criteria can lead to problems, as it did in the Chicago realignment process. There, VHA used accessibility of health care services as a criterion without adequate measurement standards that could be quantified, such as the potential effect on veterans' travel time and the number of veterans affected. Moreover, because VHA's draft statement of work for its systemwide process does not require the consultant to develop a systematic data collection approach that directly links data to individual evaluation criteria, the consultant's data collection could be incomplete. This could significantly reduce the likelihood that VHA would select the best option available.

Second, we are concerned that VHA's systemwide realignment process may not consider the best options that are potentially available. For example, VHA's Chicago process appears to have explored flawed options because VHA's steering committee and consultant limited the options evaluated to ones that would generally rearrange services among existing assets. On the basis of its assessment of stakeholders' comments pertaining to the Chicago process, we understand that VHA is reevaluating options, including ones not originally evaluated. VHA's draft statement of work for its systemwide process calls for a consultant to develop at least three alternative asset configurations. VHA plans to rely on the consultant's judgment to develop the best options for consideration. Unless options other than incremental reconfiguration of current assets are considered, the realignment process is likely to take a narrower view than is needed to identify the most efficient and effective way to meet veterans' health care needs. For example, building or leasing a replacement facility in a location closer to where veterans live might not be evaluated.

Third, we are concerned that VHA will use an unstructured process to decide which of the available capital asset realignment options best meets the evaluation criteria. For example, in its Chicago process, VHA did not prioritize its evaluation criteria, nor did it use a systematic scoring method to reach decisions about how well each option met the evaluation criteria. Rather, its recommended realignment option was determined on the basis of the subjective consensus of a steering committee, but the draft report did not elaborate sufficiently on VHA's rationale. VHA's draft statement of work for its systemwide process calls for a consultant to develop a method for evaluating realignment options. At present, this statement of work has no requirements for the consultant to develop a systematic way to score how well each option meets the evaluation criteria, nor has anyone in VA been charged with doing this. Without a systematic method for reaching a decision about the best option, VHA's realignment decisions may be difficult to explain, support, and defend.

While VHA possibly could satisfactorily address our concerns within the coming months, its progress to date casts doubt on its ability to do so. This is because, in part, VHA may not possess the requisite financial planning skills to make the best realignment decisions. Currently, VHA is using health care professionals to make financial decisions. While such professionals have the necessary skills to make decisions about veterans' health care needs, they may not have the business skills necessary to make the best financial decisions. For example, financial experts possess knowledge and skills for analyzing life cycle costs of assets under different scenarios as well as for determining potential pay-back schedules for initial capital investments for options and potential long-term returns on those investments.

Clearly, it seems desirable to bring to bear the combined expertise of financial experts and health care professionals to evaluate potential realignment options to

identify those that provide the best investment return for veterans and other taxpayers. There is a unit within VA that, in our view, has worked to develop financial expertise regarding capital asset management decision-making, namely, VA's Capital Investment Board. The Board has (1) experience developing options evaluation criteria that are more clearly defined than criteria used in VHA's Chicago realignment process, (2) a systematic data collection approach that directly links data to each evaluation criteria, (3) guidance for developing options, and (4) a systematic options evaluation process. The Board currently uses a capital budgeting model for major investments that embodies the key attributes needed to address our concerns about VHA's process. Its model has been used and refined over the past 3 years, and it gives decisionmakers, in our view, better information than they had in the past.

New Business Model Could be Considered

There appear to be two alternative business models for completing the design and implementation of a capital asset realignment process in a timely manner, besides continuing with VHA's current efforts. First, leadership of the asset management responsibilities could be transferred to another unit within VA, but outside of VHA. A second model could involve the shifting of capital asset decision responsibility outside VA.

Transferring capital asset management responsibilities to another unit within VA, such as the Capital Investment Board, could better combine VHA's health care expertise with VA's financial experts. As previously discussed, VA's Capital Investment Board appears to have a business model that could address financial management decisions involving capital asset realignment options. This approach has appeal because the Board has a full-time dedicated group that has studied industry best practices for capital asset management and has used this knowledge to develop evaluation criteria and procedures to score capital asset investment options.

Capital asset decision-making could also be moved outside of VA. This could be accomplished through the establishment of an independent commission or comparable group to develop and evaluate options for realigning capital assets. This option could be advisable if it is determined that VA lacks the desire or wherewithal to realign capital assets or that the pressures from competing stakeholders inherent in VA's environment are deemed to be insurmountable.

Regardless, VA needs to finalize its capital asset realignment process as quickly as possible because its delay is creating dilemmas for short-term and long-term capital investment decisions, as I will discuss next.

VHA'S DELAYS CREATE CAPITAL BUDGETING DILEMMAS

VHA's slow progress creates dilemmas for VA's capital budgeting process. On a short-term basis, VHA, VA's Capital Investment Board, and the Office of Management and Budget must decide what level of risk they are willing to tolerate as they continue maintaining or improving capital assets without sufficient information about VA's future asset needs to ensure cost-effective investment decisions.

Appropriately, they seem unwilling to accept much risk when making high-cost capital investment decisions those exceeding \$4 million. They have significantly limited such investments over 4 fiscal years (1998 through 2001) and could continue this de facto moratorium for another 3 years (through 2004), given VHA's struggle to realign its assets. VA's fiscal year 2001 budget 8 for high-cost capital investments, for example, requested only \$25 million for one new project after VA's Capital Investment Board considered 14 VHA high-cost investment proposals totaling \$350 million.

By contrast, there appears to be a greater willingness to accept more risk for less expensive capital investment decisions those below \$4 million. We find this troublesome because there have continued to be significant investments requested for less expensive capital improvements about \$400 million for each of fiscal years 2000 and 2001. These involve improvements at many locations, such as ward renovations; outpatient space reconfigurations; and enhanced heating, ventilation, and air conditioning systems. To successfully manage investment risks, VHA needs to carefully consider its less expensive construction investments at delivery locations that could ultimately be determined to be unneeded to meet veterans' health care needs once capital asset plans are completed.

In March 1999 we reported that, until an effective capital asset planning process is in place, VHA's less expensive investment decisions should be subjected to tighter scrutiny. Toward that end, we suggested that VHA ensure that the fundamental principles underlying the Capital Investment Board's evaluation process for high-

cost capital investment be rigorously implemented when making less expensive capital investment decisions.⁹

An effective risk assessment process should identify health care delivery locations where, for example, there are no alternatives for providing care. This process could involve two key components: (1) risk measurement factors and (2) data to evaluate investment proposals in relation to risk factors. Low-risk factors, for example, could include noncompetitive markets, large veteran population growth, or large growth in veterans' use of VHA services.

On a longer-term basis, VA faces a different dilemma. Today VHA's high-cost capital investment needs are not known and will remain so until its capital asset plans are completed; nonetheless, VHA believes, and we agree, that they will likely require a significant investment. VHA's investment needs may not be as daunting as they now seem because, for example, investments will be spread over the next decade and each will require many years to implement. VHA's Chicago realignment process, for example, is expected to take 10 years to be fully implemented.

Moreover, the magnitude of the new investment resources needed could be mitigated. First, VHA should realize significant returns on these capital investments up to 100 percent or more in the form of annual operational savings. VHA's Chicago realignment option, for example, was estimated to yield annual operating cost savings of \$189 million, compared with one-time capital investment needs of \$92 million. In March 1999 we suggested that some or all of these savings could be used to finance future capital investment decisions. Legislative action, for example, could authorize VA to accumulate resources (that is, savings) in a Capital Asset Fund by charging VHA delivery locations for the capital investment costs used to realign assets. Locations could return to the fund some or all of the amount invested over a prescribed number of years.¹⁰

Second, last year VA proposed a new funding source to help finance high-priority investments faster. In its fiscal year 2000 budget submission, VA proposed a 5-year demonstration that would allow VHA to sell, transfer, or exchange up to 30 excess or underutilized properties; deposit proceeds into a new Capital Asset Fund; and use the Fund to invest in more appropriate assets. This proposal, which we supported last year, offers a way to help finance capital investments needed to realign assets for two reasons: VA has significant unused or underused buildings, and it lacks incentives to dispose of properties because funds can, by law, be spent only to construct, alter, or acquire nursing home facilities.¹¹

In addition to addressing high-priority asset needs faster, such funding sources could also provide incentives for more effective capital planning and greater accountability for investment decisions. To realize such benefits, the Congress would need to expand the types of deposits that VHA could make into its proposed Capital Asset Fund or establish a separate revolving fund for this purpose.

CONCLUDING OBSERVATIONS

We are concerned that VHA's slow progress in establishing an asset realignment process needlessly delays critical decisions and the opportunity to reinvest resources to enhance veterans' future health care. Furthermore, the weaknesses we identified in VHA's realignment process, as currently proposed, undermine our confidence that, once implemented, it will produce within a reasonable time frame capital asset plans that are in the best interest of veterans and taxpayers. It appears that if a capital asset realignment process is patterned after the Capital Investment Board's decision-making model, the process would be less likely to replicate VHA's Chicago experience.

Because VHA is struggling to reach a sound realignment decision in Chicago and complete the design of a systemwide realignment process, and because VA's Capital Investment Board has a model that could address many of VHA's weaknesses, it seems appropriate that VA consider transferring the asset planning responsibility to the Board. The daily cost of delayed decisions is unacceptably high.

Mr. Chairman, this concludes my prepared statement. I will be happy to answer any questions that you or Members of the Subcommittee may have.

GAO CONTACT AND STAFF ACKNOWLEDGMENTS

For future contacts regarding this testimony, please call Stephen P. Backhus at (202) 512-7101. Individuals who made key contributions to this testimony include Paul Reynolds and Walter Gemback.

Senator BOND. Before moving on to other accounts, I have to tell you I'm very troubled about the accountability in the VA's medical care budget. We've given the Department tremendous flexibility in how it allocates its budget, yet we have come to find huge discrepancies between what we thought we were spending money on and what is actually happening. We are seeing this is in Hepatitis C, post traumatic stress disorder, substance abuse and other areas which are stated as national priorities for the VA. This is something we absolutely must get a handle on, or we will begin in the appropriations process to be far more prescriptive as to how VA is to allocate its budget.

VETERANS BENEFITS ADMINISTRATION

Moving on to the Veterans Benefits Administration, the budget also calls for an increase of roughly \$100 million for VBA. There are tremendous needs in VBA to expedite and improve the quality of veterans' claims for service-connected disability and pension payments, and it seems additional funds are needed for more staff and to bring the process into the 21st Century.

I am deeply disappointed that so little progress seems to have been made in the last year. I recognize that the under secretary, Joe Thompson, has made many changes including a reorganization of the field, and a new emphasis on quality, not just timeliness. When you overhaul a system, obviously it's going to be disruptive. However, we've been talking about this problem as long as I've been chairman, and as long as Senator Mikulski was chair before me.

In fiscal year 1999, the time it took to process an original disability claim worsened from the year before, growing from 168 days in 1998—which we said was unacceptable—to 205 days in 1999. Now let me let you guess on how excited and enthusiastic we are about those numbers. And, quality improved only marginally. I certainly hope you are on a glidepath at this point to your goal of 74 days, and that we won't see any more upticks. Too many veterans are dying before their claims are decided, and that is simply unacceptable.

OTHER CONCERNS ON VA'S BUDGET

With respect to other aspects of the administration's budget request, I'm disappointed with the budget proposal for research. This critical program will be frozen at current levels of \$321 million, leading to a real reduction in staffing and a further decline in the number of proposals that get funded. Certainly based on my experience and visits with the VA hospitals, I will tell you that we are able to attract and retain top quality physicians and researchers mainly because they have the opportunity to combine research with their service to patients; and I would hope that you would agree that this program is vitally important in maintaining VA's cadre of high quality clinicians.

I am also discouraged that VA has chosen, once again, to cut the budget for the State home construction grant program. The program is slated to be cut by one-third, down to \$60 million, despite the fact there are hundreds of millions of projects in the pipeline. The program is a very cost-effective way of caring for our aging veteran population, and we will be seeking to ensure an appropriate level of funding.

STATEMENT OF SENATOR BARBARA A. MIKULSKI

Senator BOND. That concludes my statement, and I'll be happy now to turn to Senator Mikulski. Welcome.

Senator MIKULSKI. Thank you very much, Mr. Chairman. This morning I would like to welcome the Secretary of VA, Mr. Togo West, to our hearing to discuss our most crucial and probably one of the significant parts of our VA-HUD appropriations.

Since the VA was founded, we fought a world war, a cold war, a Gulf war, and now once again our troops are overseas in Bosnia, Kosovo and other places around the world, keeping the peace and enforcing the peace. We're very proud of our military, and one of the reasons, as they serve we make a promise to them that when they come home, there will be a Department of Veterans Affairs to meet their needs. Promises made must be promises kept. Veterans, both men and women, really count on the VA for so much of their medical care.

The VA budget contains some good news for our veterans despite some troubling issues that must be resolved.

VA health care is funded at \$20.9 billion, including \$608 million in medical collections, the largest increase VA has received in years. While many groups believe more is necessary, it is an important first step to ensuring that our veterans get the health care that they need. We're also very glad that the proposal in the President's budget for VA medical and prosthetic research is funded at \$321 million; and we all know the crucial nature of VA medical research. VA medical research doesn't just help veterans, it helps everyone.

Hepatitis C research is funded at \$340 million, an increase of \$145 million over fiscal year 2000. This is especially important for Vietnam-era vets; a major cause of liver cancer, Hepatitis could become a major medical expense in future years. I also believe that the Hepatitis C research will have tremendous benefits to our civilian community. When we talk to our firefighters or our first responders to medical emergencies like our paramedics, one of the greatest fears that they have is contracting Hepatitis C, though they used universal precaution; but they still feel very vulnerable; nurses, et cetera.

So once again, as VA does the research to help veterans it also helps a larger population, and we're very proud of it.

I'm very proud of the three major facilities in Baltimore or in Maryland; Baltimore, Fort Howard, and Perry Point, in addition to our wonderful extended rehab and long-term care facilities. You should know that we're very pleased with the community-based outpatient clinics that we have established. I think it has been a new model for making highest and best use of staff, taking the services to where the veterans are, and yet making again highest

and best use of the specialty services we have; we are very, very pleased about that.

There are two issues that I will raise with you in the course of the hearing, Mr. Secretary. One is the future of Fort Howard, which served our veterans so ably over many years; but now the facility is dated, we're talking about a new mission, but there is a question about both mission and who will be the leader.

The second will be the yet still-unresolved cases of discrimination that I brought to your attention; and there are people in the audience here who have come to hear our questions, and we will be able to deal with this. I know of your deep commitment to end discrimination across all lines; race, ethnicity, gender, and so on. There are still some troubling things that I would like to share with you; they're not widespread, they're not systemic, and I'd like to bring it to your attention for a greater resolution.

So I look forward to hearing your testimony, and once again, problem-solving with you both on budget and service delivery and an open door both for veterans for service and for people to be able to move up the ladder of opportunity within the veterans organization itself.

Thank you very much.

Senator BOND. Thank you very much, Senator Mikulski, and now I turn to Senator Burns for his statement.

STATEMENT OF SENATOR CONRAD BURNS

Senator BURNS. Thank you, Mr. Chairman. I will just submit my statement, and I want to thank—

Senator BOND. We will really be pleased to submit the whole thing in the record.

Senator BURNS. Really?

Senator BOND. Yes, sir.

Senator BURNS. You're not going to edit it?

Senator BOND. No, sir, you can have the whole—

Senator BURNS. I appreciate the Secretary coming in, and we talked about some things that are pretty parochial as far as the State of Montana is concerned.

I have a couple of questions, and I'm looking forward to hearing from the witnesses. Here it is, we've already gone 20 minutes and we haven't learned a dang thing.

Senator BOND. Well, thank you very much, Senator Burns, I'm sure glad you weren't paying attention, because you would have heard some really interesting things.

Senator BURNS. Apparently, I was—

Senator BOND. Tell you what, I'll submit a copy of my statement for your review, too.

With that, Mr. Secretary, would you proceed?

STATEMENT OF TOGO D. WEST, JR.

Secretary WEST. Thank you, Mr. Chairman, Senator Mikulski, Senator Burns, Members of the Subcommittee. Indeed, we have had a chance to learn quite a bit over the last few minutes, and we're grateful to you, Mr. Chairman, and to the Members of the Subcommittee for this opportunity to present the administration's

fiscal year 2001 budget proposal for the Department of Veterans Affairs.

I do have a statement.

Senator BOND. We will be happy to have the full statement submitted in the record, right after Senator Burns' statement. And we just ask you to summarize the things that you think are most important, and we will get into probably many of these areas in the questions.

Secretary WEST. Thank you, Mr. Chairman. I have a few brief highlights.

The President's budget for 2001 for the entire Federal Government uses a fiscally responsible approach to balancing the budget; it puts our nation on a path to eliminate the national debt in the year 2013, while strengthening social security and extending its solvency to the year 2050. The President's fiscal year 2001 budget request for the Department of Veterans Affairs recognizes as well another debt—that owed by this nation to her veterans.

The request reflects, as has been noted, the largest discretionary dollar increase ever proposed by any president for veterans programs. It demonstrates his and this nation's continued commitment to those who have served our country well and with honor.

It proposes significant increases in each of VA's three administrations and for all of our staff functions. We expect these resources will continue to improve our ability to provide the highest quality service.

The 2001 budget request totals, as has been noted, some \$48 billion—\$22 billion for discretionary programs, \$26 billion for entitlements—that request is \$1.5 billion above last year's enacted funding level. Let me note at this point that we in the Department are grateful to this committee especially, Mr. Chairman, for the work you did in seeing that the budget that emerged from the Congress and from the joint efforts of the administration and Congress for fiscal year 2000 was able to support the things that needed to be done for veterans.

A \$1.5 billion increase in the fiscal year 2001 discretionary budget, along with those resources that the Congress added and that the administration agreed in fiscal year 2000 provides a 2 year total increase of more than \$3.1 billion, or 16.4 percent.

For the Veterans Health Administration, our appropriation proposal is \$20.3 billion to provide health care; this is a \$1,355 million increase over last year's appropriated level, and added to that is an additional \$608 million in anticipated collections, for a total of \$20.9 billion to be spent on health care.

With these funds, VA will treat in fiscal year 2001, 3.9 million veterans, 100,000 more patients in 2001 than in 2000. VA will open 63 new outpatient clinics to go with the total that we are opening in fiscal year 2000 so that by the end of fiscal year 2001 we should exceed some 650 outpatient clinics across the nation. We will put 1,500 full time equivalent employees directly into the effort to increase access to VA health care, and to improve health care service to veterans.

And as noted, we will increase our spending on Hepatitis C by \$145 million for a total of \$340 million, and we will fully fund the provisions of the Veterans Millennium Health Care and Benefits

Act passed last year by the Congress, in the amount of \$548 million. This allows us to increase our funding on long-term care initiatives by \$350 million, enhancing home and community-based care programs for older veterans, covering the implementation of emergency care programs for veterans as well.

As noted, the \$321 million which we will set aside again for VA research, will support more than 1,942 high priority research programs.

It is true, Mr. Chairman, that over the last several months in medical journals and in other media, were noted the reports that as many as 180,000 deaths may be occurring in the United States each year due to errors in medical care, many of which are preventable. As you have pointed out, it will take dramatic action from every health care provider in the nation in addition to the VA to improve in this area.

We plan to spend \$137 million to monitor and oversee safety issues and recruit and comprehensively train all VA health care staff on a recurring basis. We not only recognized the problem, but also recognized that it is a great opportunity, perhaps the greatest in recent times, for this nation to make very dramatic improvements in the way health care is provided.

We have insisted that it is impossible to correct medical errors and to prevent them without first acknowledging that they do exist. We've launched a National Safety Partnership, an organization that's brought together Federal and private sector experts to join forces to address this problem. We have recognized that change will require team effort, and we will make that effort.

We have led the nation in identifying problems that result in medical errors, and this budget will enable us to continue that leadership. In the coming year, our oversight of patient safety will be addressed through comprehensive monitoring at the national and local levels. Significant training, highlighted by a national center for patient safety, a quality scholars program, and 20 hours of biannual training for all full time staff, thus keeping this Department at the forefront of patient safety management issues.

For benefits programs, we're requesting \$22.8 billion to support compensation payments for 2.3 million veterans, 301,000 survivors of veterans, and 864 children of Vietnam veterans who were born with spina bifida. These funds will support pension payments to 363,000 veterans and 253,000 survivors.

We propose a cost of living adjustment, currently estimated at 2.5 percent to all compensation beneficiaries. We propose the increase be effective December 1, 2000.

If this committee and the Congress approves, we will pay full disability compensation to veterans of Filipino forces who served with U.S. forces in World War II and are now residing in the United States. They currently receive benefits at half the level of the U.S. veterans beside whom they fought.

We're requesting \$1.6 billion for the readjustments benefit program to provide education benefits, opportunities for veterans and eligible dependents, and for special assistance programs for disabled veterans.

For the Veterans Benefits Administration and benefits processing, the budget provides \$999 million. That's an increase of \$109

million over fiscal year 2000. With that, we will add 586 FTE into compensation processing to help us improve quality and the timeliness of disability claims. It will result in a 14 percent increase in staffing for adjudication over the past 2 fiscal years when we add in the 440 that were included in the fiscal year 2000 budget.

We will also continue our funding for the pilot project, Virtual VBA, to get us to the era where veterans claims can be processed in an entirely electronic environment. Thus eventually eliminating our paper-intensive and time-consuming manual claims process.

Let me emphasize, Mr. Chairman and Members of the Subcommittee, that is very important to us, for that is the long-range solution we believe to both timeliness and accuracy in claims processing. But in the interim to have results now, we have added in the 586 additional FTE to try to make improvements in the processing right now.

Last year 561,000 veterans died, more than 1,500 a day. About 1,000 of those each day are World War II veterans. For the operation of the National Cemetery Administration we are proposing \$110 million for their budget, a \$13 million increase over the 2000 appropriated level.

That budget provides funding and FTE to address an increasing interment and maintenance workload at our national cemeteries, due to the high rates of increasing interments during the first years of operation of new national cemeteries. In addition, we have four new national cemeteries that are operational, two that opened in 1999 at Saratoga, New York, and at the Abraham Lincoln National Cemetery outside Chicago. And two more that will open this year: the Dallas-Fort Worth National Cemetery, and the Cleveland, Ohio National Cemetery. Also, this budget includes master planning funds on sites which will be used on new national cemeteries in Atlanta, Detroit, Miami, and Sacramento.

Mr. Chairman and Members of the Subcommittee, our national cemeteries are and should be shrines dedicated to preserving our nation's history, nurturing love of country and honoring the service and sacrifice of our veterans. They should be places where our honored dead rest, in quiet triumph, yes; but also where veterans families can, amid peaceful and beautiful surroundings, resume their closeness, even for a brief moment, with family members who are buried there. And where visitors can move in hushed awareness. The grave markers among which they walk are in truth memorials both to our veterans and to our nation's eternal virtues of patriotism, honor and fidelity.

To achieve this, we will use \$5 million of the \$13 million increase to begin this national shrine commitment, beginning an extensive and long-deferred renovation of grounds, grave sites, grave markers and historic structures. This amount, \$5 million in a \$48 billion budget, is only a small down payment on years of work which will commence across the entire cemetery system.

For 224 years, America's veterans and our men and women in uniform have brought a record of security and peace to our North American continent, benefiting this nation and our citizens. With this bill we say to our veterans, "Well done. The nation values your gift of service and patriotism and will honor her commitment to you."

We're grateful to this committee and to this committee's staff, to each member, for your support of our veterans and of this department. We're grateful to the VSOs, the veterans service organizations, for their advocacy both in our budgeting cycle and in the appropriations cycle. We look forward to working with you on these issues in the future.

PREPARED STATEMENT

Seated with me, Mr. Chairman, to my immediate right, the Acting Deputy Under Secretary and the Under Secretary Designate for Memorial Affairs, Mike Walker. To my immediate right, the Under Secretary for Health, Dr. Tom Garthwaite. To my left, Mark Catlett, who directs our budget, Deputy Assistant Secretary of the Budget. To the far left, Joe Thompson, Under Secretary for Benefits.

We are available for your questions.
[The statement follows:]

PREPARED STATEMENT OF TOGO D. WEST, JR.

Mr. Chairman and members of the Committee, good morning. I am pleased to present the President's 2001 budget request for the Department of Veterans Affairs (VA). The President's budget for 2001 uses a fiscally responsible approach to balancing the budget. Utilizing realistic and responsible funding levels, it puts our Nation on a path to eliminate the national debt in the year 2013, making our Nation debt free for the first time since 1835.

The President's request for VA reflects the largest discretionary dollar increase ever proposed for veterans' programs. It demonstrates his continued commitment to those who served our country with honor. Our budget proposes significant increases for each of VA's three administrations and all of our staff functions. These resources will allow us to continue to improve our ability to provide the highest quality service to our Nation's veterans—service they have earned through their sacrifices for America.

We are requesting approximately \$48 billion, which includes \$22 billion for discretionary programs, without collections, and \$26 billion for entitlements. Our request for discretionary programs is \$1.5 billion more than last year's enacted funding level. This request, along with additional resources agreed to by Congress and the Administration in 2000, reflects a two-year total increase of more than \$3.1 billion, or 16.4 percent.

Our veterans are entitled to the best health care America can provide. In the past few years, we have transformed the hospitals run by VA to provide greater access for better care to more veterans. And with the funding in our fiscal year 2001 budget, we will continue this improvement.

The budget provides \$20.9 billion, including \$608 million in medical collection transfers, to provide medical care to eligible veterans. This represents a \$1.4 billion increase over last year's level. VA plans to open 63 new outpatient clinics and treat 100,000 more patients in 2001 than in 2000, a 2.6 percent increase. This patient level is 24 percent above the 1997 baseline, which exceeds our goal of a 20 percent increase.

We are focusing our resources on improving veterans' access to VA health care and the services we provide them through newly established service standards and access goals. These are:

- New patients are to receive an initial or non-urgent appointment with their primary care or other appropriate provider within 30 days.
- Patients will receive a non-urgent specialty appointment within 30 days when referred by a VA practitioner.
- Patients will be seen within 20 minutes of their scheduled appointment.

Restructuring efforts made possible through the use of buyout authority will allow us to redirect an additional 1,500 full time equivalent (FTE) employees to meeting these goals. Altogether, more than 2,200 employees will be dedicated to improving access and services. These FTE, along with planned management savings and an additional funding request of \$77 million, will provide a total resource commitment of \$400 million in this area in 2001.

To enhance VA's leadership role in patient safety management, we plan to spend \$137 million to monitor and oversee safety issues and to comprehensively train all VA staff on a recurring basis.

We are also requesting an increase of \$145 million to treat veterans with Hepatitis C. In addition, our budget would fully fund the \$548 million needed to implement provisions in the Millennium Act dealing with specialized mental health services, emergency care, and extended care services.

Enhancing VA's patient safety management and reporting system will also improve the quality of care we provide veterans. It has been reported in medical literature that as many as 180,000 deaths occur in the United States each year due to errors in medical care, many of which are preventable. It will take dramatic action from every health care provider, not only VA, to improve in this area.

VA has not only recognized the problem, but also recognized that it is the greatest opportunity we have had in a very long time to make dramatic improvements in the way health care is provided in our country.

We have acknowledged that it is impossible to correct or prevent errors without first accepting that they exist.

We are taking a systematic approach to solving the problem of patient safety, and to the way we deliver health care, to identify problems and develop solutions.

We have launched the National Patient Safety Partnership, an organization that has brought together Federal and private sector experts to join forces to address this problem.

We have recognized that change will require a team effort at every level of our organization, and we are committed to making that effort.

VA has led the Nation in identifying problems that result in medical errors. Our budget will enable VA to continue its world leadership in patient safety initiatives—benefiting not only veterans, but all Americans.

Our oversight of patient safety will be addressed through comprehensive monitoring at the national and local levels. We will be redirecting an additional 190 FTE toward patient safety enhancements, which means 500 FTE will be dedicated to this effort. Significant training, highlighted by a national center for patient safety, a quality scholars program, and 20 hours of biannual training for all full-time staff, will keep VA at the forefront of this important area.

In addition to basic clinical components funded through medical care, the 2001 budget request provides considerable support for the education and training of health professionals, and for VA's research programs.

In addition, we will increase the number of unique patients treated to 3.9 million, continue to enhance the quality of our care, and improve customer satisfaction.

Among our most important new initiatives are those designed to provide long-term care for veterans. These initiatives are linked to the provisions of the Millennium Act. The \$350 million increase for these initiatives included in this budget will enhance home and community-based care programs for older veterans. It will also cover out-of-system emergency care for certain veterans.

VA is committed to formulating and implementing a well-designed pilot of VA-Medicare subvention. Currently, the Department of Defense is operating a three-year subvention demonstration in six sites, scheduled to end in December 2000, and the demonstration results may offer a useful lesson for us. We look forward to working with you again to pass a VA subvention model that does not jeopardize the Medicare Trust Funds or VA's ability to provide top-quality medical care to high priority veterans.

We propose a legislative initiative to combine the Health Care Services Improvement Fund and the Extended Care Revolving Fund with the Medical Care Collections Fund (MCCF) to improve administrative efficiencies. This legislative proposal also allows 50 percent of medical collections to be returned to the Treasury as they are received until a level of \$350 million is achieved. Returning collections in this amount will recoup Millennium Act funding appropriated in medical care, while maintaining an incentive to collect all government debt.

To continue VA's identification and treatment of Hepatitis C for veterans, we request an additional \$145 million, which will increase the total funding level to combat this disease to \$340 million. Also provided is funding to meet anticipated increases for pharmaceutical and prosthetic costs.

We continue to support a two-year spending availability of \$900 million, less than five percent of our resources—excluding those funds set aside due to the deferred spending of medical equipment funds required by law. This proposal will provide VA with maximum flexibility regarding spending decisions and will promote cost-effective decision-making.

For Medical and Prosthetic Research, a total of \$321 million and 2,883 FTE will support more than 1,942 high priority research projects to enhance the quality of

health care our veterans are provided. This level of funding will allow VA to continue our significant research in the areas of Gulf War veterans' illnesses, diabetes, Parkinson's disease, spinal cord injury, cancer, prostate disease, depression, environmental hazards, and women's issues, as well as rehabilitation and Health Service Research and Development field programs.

No other federally-supported clinical or research entity has initiated or completed such critical and ambitious research activities on behalf of America's veterans as VA. The Department expects the amount of non-appropriated research funding we receive from the private and public sectors to total an additional \$497 million.

The Balanced Budget Act of 1997 and the Millennium Act allow VA to retain collections from third parties, copayments, per diems, and certain other sources. These collections are deposited in the MCCF and are available for transfer to the Medical Care appropriation. The funds remain available to VA until they are expended. For 2001, VA estimates more than \$958 million will be collected, of which VA will retain \$608 million.

In part, we will be able to do this by implementing reasonable charges to certain veterans for inpatient and outpatient procedures. In addition, we are in the process of ensuring that our collection documentation meets the requirements of the Health Care Financing Agency. We are also looking to improve our ability to collect funds from private sector organizations. Additional Tricare payments from the Department of Defense, and increased copayments by veterans as provided for in the Millennium Act are assumed in the collection estimate.

For the Medical Administration and Miscellaneous Operating Expenses, or MAMOE activity, we are requesting \$64.8 million in appropriations and expect \$7.2 million in reimbursements to support 584 FTE in 2001. This level of staffing will strengthen the functions, especially in the areas of quality assurance and performance management, needed to oversee VA's efforts.

Our veterans are entitled to have their claims for benefits processed correctly and in a timely manner. This budget will fund initiatives to process claims and education benefits in an electronic environment—allowing those who process claims to have complete and easy access to the information they need.

For benefits administration, the budget provides \$999 million. The request reflects an increase of \$109 million over the operating level enacted in 2000 and a one-time adjustment of \$30 million from the Readjustment Benefit Account to ensure that all Vocational Rehabilitation and Employment administrative costs are funded from General Operating Expenses. Excluding this technical adjustment, this is a 13 percent increase.

These additional resources will ensure that veterans' compensation, pension, vocational rehabilitation and employment, education, and housing benefits will continue to be delivered while we move forward with our reengineering efforts. To help us process disability claims more efficiently, provide quality-enhancing initiatives, and continue our succession planning efforts, 586 FTE will be added to compensation processing.

VA's benefits programs are a tangible expression of the Nation's obligations to its veterans. For 2001, the Administration is requesting \$22.8 billion to support compensation payments to 2.3 million veterans, 301,000 survivors and 864 children of Vietnam veterans who were born with spina bifida, and to support pension payments to 363,000 veterans and 253,000 survivors.

We propose to provide a cost-of-living adjustment (COLA) based on the change in the Consumer Price Index, to all compensation beneficiaries, including spouses and children receiving dependency and indemnity compensation. The percentage of the COLA is currently estimated at 2.5 percent, which is the same percentage that will be provided, under current law, to veterans' pension and Social Security recipients. The increase would be effective December 1, 2000, and would cost an estimated \$345 million during 2001.

If Congress approves, VA will pay full disability compensation to veterans of Filipino forces residing in the United States who currently receive benefits at half the level that U.S. veterans receive. The cost of this legislation is estimated to be \$25 million over five years.

The Administration is also proposing repeal of a provision in the Balanced Budget Act of 1997 which would preclude the Government from making its October, 2000, VA-benefit payments on Friday, September 29, 2000 and instead require that they be delayed until Monday, October 2 (in fiscal year 2001). Under the law which would otherwise apply, when the first of the month falls on a weekend, payments are to be made on the Friday immediately preceding it.

In order to enhance educational opportunities for veterans and eligible dependents and provide various special assistance programs for disabled veterans, an appropriation of \$1.6 billion is being requested for the Readjustment Benefits program.

Education benefits will be provided for about 480,000 trainees in 2001, including 309,000 training under the Montgomery GI Bill. This request includes funds for the annual Consumer Price Index adjustment, which is estimated to be 2.7 percent effective October 1, 2000, for education programs.

The heart of the Veterans Benefits Administration's (VBA) strategy for improved customer service is measurable success. This budget builds on critical indicators that have been instrumental in past performance. VBA is positioning itself to improve dramatically the delivery of benefits and services.

Mr. Chairman, as we all know, VA is not completing work on claims for compensation and pension benefits in as timely a manner as we would like. This is a difficult problem not easily or quickly resolved. More veterans are receiving disability compensation today than at any time in the history of the United States and, despite a declining veteran population, VA has an ever-increasing compensation workload.

Veterans are filing claims today for more issues or conditions than at any time in our history. The complexity of these claims has also increased dramatically. The level of effort required to evaluate a claim for benefits today is significantly greater than just eight years ago. This is because of both the increased complexity of today's claims and expanded procedural requirements occasioned by judicial review of our decisions. VA has embarked on an aggressive program to hire veterans service representatives who, when fully trained in these intricate procedures, will ensure veterans get the right decision on their claim the first time.

By the end of 2001, we expect to have 1,000 more employees to work on adjudicating claims than we had last year. Significant strides have been made in implementing our case management approach to customer service and in improving the information technology infrastructure that supports veterans' claims processing. For example, two years ago, a veteran would get a busy signal more than half the time he or she called our nationwide toll-free number; today, the percent of blocked calls is 5 percent.

The problems facing VA in overcoming its claims processing backlog were long in making and are systemic in nature. All of us are dissatisfied with the rate of our progress, but there is no "quick fix" to this problem. To do what is needed will take time, but we have put in place a foundation for success and are requesting a budget through which these goals will be achievable.

Our vision for VBA emphasizes accurate and timely claims decisions, along with a high level of customer service and satisfaction. To reach those goals, VBA's 2001 budget request is \$999 million and 11,824 FTE. This represents an increase of \$109 million and 287 FTE above the 2000 level, plus a one-time adjustment of \$30 million from the Readjustment Benefit Account for Vocational Rehabilitation and Employment administrative costs.

By combining this increase in the number of employees with positions available due to efficiencies in other areas, VBA will be able to increase its number of personnel in claims processing and associated initiatives by 586. This will result in a 20 percent increase in adjudication staffing since 1999.

This budget continues to include funding for a pilot project, Virtual VBA, which will allow VA to process veterans' claims in an electronic environment, eventually eliminating the now paper-intensive and time-consuming manual claims process. When fully implemented, it will provide for complete access to information by anyone with access to the new system.

In addition to the electronic claims processing pilot project and increased FTE, VBA seeks funding in the amount of \$31.1 million for a number of other C&P initiatives including:

- The expansion of our Systematic Technical Accuracy Review (STAR) Program in order to obtain current and diagnostic information about the accuracy of the work being produced at field stations.
- The Systematic Individual Performance Assessment (SIPA), a new initiative designed to complement the on-going STAR program, which will bring performance assessment and accountability to the journey-level employee. This will help keep fraud from occurring and will improve oversight of individual decision-making accountability.
- Training and Performance Support Systems (TPSS), an ongoing multi-year training initiative for employees working in the area of compensation and pension. The effectiveness of this training has been established and it substantially improves the accuracy of the work of those who complete it.
- Initiatives to assist in replacing our antiquated payment system, and provide various improvements to existing technology used in this environment.

Funding is included for the enhancement of education activities intended to improve stakeholder and customer satisfaction. Building upon the EDI/EFT initiative,

funding is included for The Education Expert System (TEES), an umbrella project that will expand our achievements in the area of electronic data exchange and funds transfer, and will make changes to the application used by schools to transmit enrollment information to VA.

This budget contains several initiatives designed to provide much needed improvements in service and accountability to VA's housing program. Included is funding to redesign our Loan Service and Claims processes in order to automate routine activities. Funds are also provided for an ongoing effort to consolidate guaranteed loan servicing at the nine Regional Loan Centers. Other projects include providing a redesign of the Construction and Valuation system; continuing the consolidation of the mortgage loan accounting functions to one centralized location; and enhancing the Lockbox Funding Fee system and a system to provide on-line determinations of eligibility for loan guaranty benefits.

Funding has also been included to support several areas of service that the Vocational Rehabilitation and Employment program has sought to strengthen. These initiatives are designed to improve communications, emphasize outreach, increase access, improve case management, and emphasize the program's central goal of finding appropriate employment for our veterans.

Mr. Chairman, issues regarding the Department's responsibility to procure for claimants the evidence necessary to establish their eligibility for disability and death benefits are also of concern to many. What responsibility do claimants, and those advocating on their behalf, have to first demonstrate their claims are plausible before significant Government resources are devoted to the claims' further development? Should the Department's obligation be the same regardless of a claim's plausibility, or should VA resources be devoted to those claims most likely to prove meritorious? The answers will directly affect our ability to award benefits in a timely manner to deserving claimants.

On December 2, 1999, we published for public comment a notice of proposed rule-making concerning well-grounded claims and VA's duty to assist claimants. Consistent with currently controlling judicial precedents, the regulations we have proposed would include important exceptions to a general rule that claimants must present plausible claims before the Department's duty to assist arises.

First, under the proposed rule, there are certain types of assistance VA would provide without regard to whether a plausible claim had been submitted. VA would routinely procure service medical records in claims for service-connected disability or death benefits, and would obtain records of any VA medical treatment identified by a claimant.

Further, if VA determines a claim is not "well grounded," which is the legal term denoting plausibility, a claimant would be notified of the types of evidence they would need to present to make it so. In addition, our proposal exempts certain claimants from the well-grounded-claim requirement: those whose claims are filed within a year after service separation, and certain specific categories of others, such as the terminally ill and those unable to afford medical treatment, for whom the burden of producing evidence may be especially onerous.

Within the dictates of current law, we have attempted to strike an appropriate balance between the obligations of claimants for Federal funds and their claims representatives and those of the Government they honorably served.

We are hopeful that, with input from veterans and their representatives, we can develop a final rule that will be both acceptable to veterans and administratively feasible. Should Congress judge the outcome of this rulemaking unacceptable and contemplate shifting more of the evidentiary burden onto the Department, we ask only that consideration be given to the resource and performance issues, which would necessarily accompany such a change in law.

Our veterans deserve a dignified and respectful final resting place. The final resting places we provide for them—our Nation's VA cemeteries—are national shrines and must be maintained in a way that does honor to the men and women who are buried there.

The budget requests \$110 million, \$13 million more than the 2000 enacted level, for the operation of the National Cemetery Administration (NCA). This 13 percent increase will reinforce our national shrine commitment by beginning an extensive renovation of the grounds, gravesites and grave-markers at cemeteries where the most need exists.

New national cemeteries at Albany, NY; Chicago, IL; Dallas/Ft. Worth, TX; and Cleveland, OH will be fully operational in 2001. We will begin master planning on sites in Atlanta, GA; Detroit, MI; Miami, FL; and Sacramento, CA.

One of VA's strategic goals is to assure that national cemeteries are shrines dedicated to preserving our Nation's history, nurturing patriotism, and honoring the service and sacrifice veterans have made. In order to achieve this objective, it is nec-

essary for NCA to address some deferred-maintenance needs. Improvements in the appearance of burial grounds and historic structures will be accomplished with an additional \$5 million requested in this budget.

VA estimates that the annual number of veteran deaths will peak in the year 2008 before beginning to decrease. Consequently, NCA's workload is projected to rise during that period. NCA is preparing for this increase by planning for the construction of new national cemeteries, extending the service life of existing cemeteries, and encouraging states to build state veterans cemeteries.

This budget includes funding and FTE to address increasing interment and maintenance workload at the national cemeteries, including the high rates of increase in interments during the first years of operation at the new cemeteries just completed. The budget also includes planning funds in the Construction, Major Projects appropriation to continue the development of additional new national cemeteries.

VA is asking for \$226.5 million for the Office of the Secretary, six Assistant Secretaries, Board of Veterans' Appeals, Board of Contract Appeals and General Counsel. This request, along with \$4.4 million associated with credit reform funding, will provide us a total resource level of \$230.9 million.

Compared to last year's appropriation, the 2001 request is \$20.3 million higher. The budget authority, along with \$53 million in anticipated reimbursements, will provide for total obligations of \$280 million in 2001. FTE will decrease by 93 in 2001 from the 2000 current estimate of 2,528.

We are requesting \$45.9 million in funding for the Board of Veterans' Appeals for 2001. The Board's marked improvement in timeliness in making decisions on veterans claims, its increase in productivity, and its reduction of the appeals backlog from 1995 through 1999 have exceeded our most optimistic expectations.

The budget request will give us the opportunity to continue to decrease the amount of time it takes to process veterans' appeals. BVA and VBA have adopted a joint performance indicator that is a system-wide measure of how long it takes to resolve an appeal made by a veteran. In 2001, we project it will take an average of 650 days. In 1999, it took an average of 745 days.

We are requesting \$56.6 million for the Office of the General Counsel. This would include \$47.6 million in budget authority, and an additional \$9.0 million funded through reimbursements under the MCCF, the Credit Reform statute, and other reimbursable authorities. This level of funding is essential if the office is to continue to meet the increasing demand for legal services required by VA's three Administrations, and if it is to keep pace with its representational responsibilities at the Court of Appeals for Veterans Claims (CAVC).

Increased funding for the Office of the General Counsel will also permit us to address rising demands for representation of the Department in workplace disputes.

For the Office of Information and Technology (OI&T), we are requesting \$30.9 million in total obligations and 195 FTE, including \$22.3 million in budget authority (156 FTE) and reimbursements of \$8.6 million (39 FTE). These resources would enable OI&T to continue to support information technology policy, program assistance, VA capital planning, the nationwide telecommunications network, the VACO campus office automation platform and local network, and other efforts. The Austin Automation Center is separately supported by VA's Franchise Fund.

VA successfully began the Year 2000 without any significant Y2K incidents. VA benefits were paid on time and our health care facilities remained open throughout the date rollover. Having met the challenge of Y2K, our next priority is information security.

In early 1999, VA initiated a Department response to the General Accounting Office (GAO) and Inspector General recommendations on the need for a strengthened VA information security program. A Department-wide working group created a security plan for investment of \$83.3 million from 2000-2005 with funding to be redirected from completed Year 2000 efforts.

The plan, which GAO commended, is a comprehensive approach to managing risk through continuous risk assessment, incident response processing, policy development, workforce education, virus protection, intrusion detection, and strong centralized management and oversight. Immediate undertakings have resulted in the establishment of a national Critical Incident Response Capability system, which tracks security incidents; the initiation of a Department-wide assessment of risk; piloting of Web-based workforce security awareness training; and the issuance of strengthened security policies for high-risk areas.

For 2001, the Office of Financial Management (OFM) is requesting \$30.9 million in total obligation authority and an average employment of 229. Before I discuss the specifics of our request for OFM, I would like to highlight a recent accomplishment. I am pleased to announce our success in obtaining an unqualified opinion on the Department's Consolidated Financial Statements for fiscal year 1999 and 1998. This

represents a major milestone in improving financial management and reporting in VA and provides sound baseline information to build upon for the future. It also fulfills my commitment to the President to obtain a clean audit opinion on our fiscal year 1999 financial statements in my July 1998 letter. Office of Financial Management staff and the Chief Financial Officer staffs of the Veterans Health Administration and the VBA made a significant effort to make this possible.

The request for OFM includes \$29.1 million in budget authority and \$1.8 million in reimbursable authority. These resources will allow us to continue our current level of operations and sustain efforts on critical initiatives underway. Reimbursements will fund financial operation and program reviews, and will allow us to provide assistance in financial policy development and oversight. The requested budget authority also includes \$2.6 million toward implementation efforts of a new integrated VA core Financial and Logistics System to replace the current financial management system and its interfaces. OFM will coordinate the Department's investment in this area. In 2001, the total investment of approximately \$57 million will fund specific tasks for the acquisition (Phase III) and the prototyping and implementation (Phase IV) phases of the project.

We are requesting \$13.9 million and 65 FTE to support the activities of the Office of Planning and Analysis (OP&A). With these resources, OP&A will continue to facilitate the Department's strategic planning process; provide actuarial and analytical support to VA program offices; conduct statutorily required program evaluations; coordinate corporate management improvement activities; and support the development, analysis, and review of issues affecting veterans' programs.

Funding increases for 2001 will support expanded analyses and reports of data collected in the National Survey of Veterans, which will be conducted in 2000. Additional funding will be used to enhancing data development and actuarial services so that VA program offices and others will have available more sophisticated demographic and socio-economic information about veterans. This will improve our service-delivery planning.

Increased funding will also support a continuous environmental scan process, including stakeholder consultation sessions and focus group meetings, and an ambitious schedule of program evaluations mandated by Title 38 and the Government Performance and Results Act.

The Office of Human Resources and Administration (HR&A) is requesting \$82.8 million in total obligation authority and an average employment of 579 FTE. The requested budget authority for HR&A is \$51.4 million.

Included are requests for additional resources to carry out several initiatives, such as developing and implementing strategies to prevent discrimination complaints; developing a Departmental workforce succession planning and decision system; conducting the Department's next One VA organizational assessment; conducting VA's next Human Resources conference; and maintaining and testing the Department's Continuity of Operations Plan for assuring essential emergency services.

The total figure for HR&A reimbursements is \$31.4 million. This includes \$27.8 million and 260 FTE for the Office of Resolution Management (ORM) and \$3 million to complete development of the department's HR LINK\$ personnel payroll system. In 2001, the Department is again requesting that the operations of ORM and Office of Employment Discrimination Complaint Adjudication (OEDCA), located in the Office of the Secretary, be funded through reimbursements from its customers.

In summary, a total appropriation of \$1.062 billion is requested for General Operating Expenses (GOE); \$835 million for VBA and \$226.5 million for General Administration in 2001. This funding level, combined with \$168 million of administrative costs associated with VA's credit programs, funded in the loan program accounts under credit reform provisions; \$9.8 million in reimbursements from the compensation and pensions account for costs associated with the implementation of the Omnibus Budget Reconciliation Act of 1990 as amended; \$36.5 million from insurance funds' excess revenues; and other reimbursable authority, will provide \$1.359 billion to support operations in the GOE account.

Our Franchise Fund completed its third year of operations on September 30, 1999. The six lines of business, our Enterprise Centers, are proving to be very successful. Sales to federal entities have dramatically increased since our initial year of operations in 1997, from \$59.1 million to \$97.3 million. The 1998 financial statements of the Fund were audited by a private sector CPA firm. The audit resulted in an unqualified, or clean, opinion. On October 1, 2000, the Shared Services Center (SSC), which will support the implementation and operation of the HR LINK\$ personnel payroll system, will join VA's Enterprise Centers.

The 2001 request for the Office of the Inspector General (OIG) contains total resources slightly over \$49 million. The request includes direct budget authority of

\$46.5 million and planned reimbursements of \$2.6 million, which supports average staffing levels of 369 and 24 positions, respectively.

This funding provides OIG with an increase of \$1 million for nine positions. The request will assist OIG in expanding oversight in the quality of health care services rendered our veterans, identifying internal control vulnerabilities in benefit payment processes, and detecting fraud through extensive review and analysis of VA databases and matching initiatives.

We are requesting new budget authority of \$309 million for the Department's construction programs. Our request provides funding for two major construction projects and another \$10 million for an effort to assess our medical infrastructure needs for the future. A 10 percent increase above last year's requested level is included for minor construction and the grant programs for state veterans' nursing homes and cemeteries.

We are requesting new budget authority totaling \$62 million for the major construction program. The major construction request includes funding for a seismic corrections project at Palo Alto, CA and a gravesite development project at Ft. Logan National Cemetery in Colorado. An additional \$10 million is requested in planning funds to continue the Capital Asset Realignment for Enhanced Services (CARES) studies. Congress initially provided \$10 million to begin these market-based assessments of health care requirements and capital needs in 2000. The 2001 request also includes planning funds to continue the development of four new national cemeteries, to be located near Atlanta, GA; Detroit, MI; Miami, FL; and Sacramento, CA.

Additionally, we are requesting new budget authority totaling \$162 million for VA's minor construction program. The request will be used to make improvements throughout the Nation to our medical centers' ambulatory care settings, patient environment, and aging infrastructure. Funds have also been requested for nursing home care, clinical improvements, correction of code deficiencies in existing facilities, and the elimination of fire and safety deficiencies at our facilities.

Funds requested in the minor construction budget will also support VBA and staff office construction requirements, and gravesite development and improvements at existing national cemeteries. In addition, as a result of the expanded authority provided by the Millennium Act, minor construction funds may be used to make capital contribution payments for enhanced-use lease projects such as the new regional office building at Milwaukee, Wisconsin.

The 2001 request of \$60 million for the Grants for the Construction of State Extended Care Facilities will provide funding to assist states in establishing new nursing homes and domiciliaries or renovating existing facilities. The 2001 request of \$25 million for the Grants for the Construction of State Veterans Cemeteries will provide funding to assist states in establishing, expanding, or improving state veterans cemeteries.

Mr. Chairman, for 224 years, America's men and women in uniform have brought a record of security and peace to the North American continent that is unmatched in the history of the world.

I believe this budget meets the needs of the Nation's veterans and lives up to the commitment we have to them.

I want to thank the members and staffs for your continued interest in our Department's needs. I look forward to continuing to work with you on behalf of our Nation's veterans and their families.

I also want to thank the Veterans Service Organizations for the vigorous efforts they have made on behalf of veterans during the appropriations process, and I look forward to continuing to work with them on these issues in the future.

Thank you for your time, and your consideration.

ALLOCATION OF MEDICAL CARE FUNDS

Senator BOND. Thank you, Mr. Secretary. We'll try to take advantage of all these great opportunities.

There are several areas of your budget where VA is spending far less than what you told us you would in 1999 and the current year, even while we increased the overall budget by \$1.7 billion. Let me give you a couple examples.

Post-traumatic stress disorder, VA spent \$87 million in 1999, when you told us last year the estimate was \$109 million. VA is estimating that it will spend \$94 million this year, while last year VA estimated it would spend \$113.5 million in 2000.

In the substance abuse treatment area, last year you told us VA would spend \$411 million in 1999, yet the actual 1999 expenditure was \$357 million. The 2000 estimate had been \$427 million and currently VA estimates it's going to spend about \$373 million. The homeless compensated work therapy program, you now estimate you will spend about half of what was estimated for fiscal year 2000.

These programs are highlighted in the budget because they're national priorities that you've identified, critical to veterans. I'd like you to address the following questions:

Why isn't VA allocating its budget consistent with its own budget justification? How can we be sure that through the VERA allocation system that VA networks and individual hospitals are allocating sufficient funds to these national priorities, and why shouldn't we be funding these national priorities separately from VERA?

Secretary WEST. Let me make a preliminary response, Mr. Chairman. I suspect Dr. Garthwaite, who oversees that administration, will want to speak more specifically.

The first and easy answer is, we should be spending the money the way we tell you we're going to spend it when we come up here to ask for it. It seems to me that's the whole purpose of this process, and that if you get to a point in this committee where you cannot trust our best good faith estimates, and that we will live up to them, then we will be in great trouble.

I think the first answer is, I believe it is our intention to do what we say we're going to do with the funds, it is then our best effort to follow through on it. I think you are going to want to know more than our best efforts, though; so I will let Dr. Garthwaite try to address these directly.

Dr. GARTHWAITE. Thank you. I think there are probably three or four reasons, perhaps, that contribute to this. I think at the beginning of last year, many of our FTE hires were delayed somewhat because of the initially presented budget and the plans that we had for that.

But I think the two key pieces are (1) our data systems; and we have been working diligently to put into place a decision support system. The decision support system is now fully operational in most VA medical centers. And we're in fact going to use fiscal year 2000 DSS data as the base for future allocations so that the intensity and interest by our managers in getting the data in DSS so that we have a more complete base for our budget allocation decisions.

The final thing I would mention is that the issues tend to be quite complex. Our initial runs at trying to understand how much we were spending on Hepatitis C, for instance, used diagnostic codes. And when we went back and saw how many people were identified with primary diagnosis of Hepatitis C under specific diagnostic codes and compared that to our laboratory data systems and found out how many people actually had a positive test, we found a significant discrepancy.

So today we have the list of patients with positive tests being sent to the financial folks, who work from the diagnostic codes, so

we can begin to compare and understand and correct the discrepancy.

HEPATITIS C FUNDING

Senator BOND. I was just looking at the Hepatitis C because in the first quarter, your figures show that the total amount spent was \$8.6 million and for all of 1999, as I said, it was only \$26.8 million, but we had obviously a much greater indicated need and provided much more money.

Will that solve the problem?

Dr. GARTHWAITE. I think it will make a significant difference. Just to give you an example, in fiscal year 1999, by pulling out diagnostic codes only, we found 25,000 patients treated for Hepatitis C. We know that the number of unique patients that we diagnosed was closer to 60,000. So we are only accounting for about half of them with the diagnostic codes.

If you came in with a primary diagnosis coded as cirrhosis, and the computer also included Hepatitis C as a diagnosis, and the major reason you're in there is end stage liver disease from hepatitis, we have to make sure that when we do the necessary analysis so that both the clinical people and the analytical people capture the Hepatitis links. I think that is what we've accomplished; we have figured that out and we are hard at work making sure that we capture all the actual workload.

Senator BOND. This is a concern. Do we have to line item it to make sure that the networks actually do spend it? How are we going to make sure that sufficient funds are allocated to a national priority?

Dr. GARTHWAITE. I believe that, we've made it exceptionally clear. We have in place now a registry so we will be able to track each patient. We'll very shortly be able to marry our database that identifies who has a positive test with the database that identifies who got medications. So I think that we will be in good shape to double-check to make sure that a patient who has a positive test either gets the drug or we have a reason for not providing it.

Senator BOND. Thank you very much.

Secretary WEST. Mr. Chairman, I might just say that when we have instances like this where the question is: Are we able to get sufficient and timely data for you that indicates that we're following through on the spending patterns the way we said and to give you a sense of what we are seeing? It is not unusual for us to undertake some sort of a regular report on workload, and get it to you on some sort of a quarterly basis so that your people, and you are able to follow with us what our experience is. It may be more reliable data, it may be better than trying to seek some other way to put in controls before we know what we're dealing with.

Senator BOND. It's not just us, I hope you get the information yourself.

Secretary WEST. Yes.

Senator BOND. Let me turn now to Senator Mikulski.

MEDICAL CARE COLLECTIONS

Senator MIKULSKI. Thank you very much, Mr. Chairman.

Mr. Secretary, we presume that, and maybe unfairly, that this will be your last appearance before—but we do know that a year from now we will have a new president and so on. But I would really like to thank both you and your entire team for their professionalism and their work with my staff in trying to determine how we can often in tight years really serve our veterans.

So I would like to thank each and every one of them for their competency and their professionalism in dealing with this.

Let me ask a question about medical care and the budget, and it will go to the collections from third parties. Wherever we go, the veterans organizations and service organizations and so on, the word is always “more.” What can we do more, what can we do better, the rising cost of prescription drug benefits that we are grappling with and maybe we all be grappling with in Medicare.

There is a limit to our budget, so this then takes me to “Where can we get our money?” And takes us to the collection aspects. Could you tell me what is the current status of VA’s efforts to increase collections, what have we seen from your plan to increase recoveries, and what can we expect? Is it that we don’t have the right systems from VA to collect the money, or do we have dead-beat third parties?

Secretary WEST. I am going to let Dr. Garthwaite speak to that, but I want to—

Senator MIKULSKI. He liked that last phrase.

Secretary WEST. He does. First of all, I think we are getting to the point where we are better at predicting how much we will be able to collect, and at making hardheaded, accurate estimates.

For one thing, we have learned from experience. We have put in changes so that our billing is done better, more professionally. Additionally, I will say that we have to remind ourselves at VA that this is not a core competency of VA or of VHA; we’re learning, but we are also continuing to have to look at something you just mentioned—the best ways of making these collections. Do we need to contract it? Do we need to have other ways of doing it?

I know that our networks have tried both ways; and I’ll let Dr. Garthwaite take it from there.

Dr. GARTHWAITE. Thank you. I think there are several issues here. One is that because we for many, many years did not bill, it has taken us a while to get better at billing. We’re still not all the way there, but I think we’ve made significant progress in the last year.

We have gone through the issue of teaching everyone how to do the proper documentation to support the bill rendered, and that’s a key piece in collection. Second, I think we implemented reasonable rates which should help significantly with collection efforts. That also took us some time to get going, but in January of this year we sent out bills for a 14 percent greater amount than we did in the January of last year, and for February, 23 percent greater than in February of last year.

So we think we may have turned the corner. We believe these are optimistic signs that the compliance efforts and the reasonable billing rates have both helped.

There are certain parts of the process namely, the end in the collection area where we don’t think we’re necessarily the best at

doing that, and we would be willing to look at possibly contracting it out. There are a lot of human resource and personnel issues related to that.

Senator MIKULSKI. Well, thank you very much, Doctor. I think that this is a big issue, and it's a big issue of how we can make highest use of professional staff at VA, new technologies and new infotech technologies in terms of identifying what needs to be collected and how is the best way to do this.

I feel very strongly that this should be a very important revenue stream, and it is essentially VA getting its fair share from third party contracts.

I know that—I see that flashing yellow light here. One that I need you to get back to me on, on two issues.

DISCRIMINATION ALLEGATIONS

Mr. Secretary, last year about 20 VA employees, working under one assistant secretary at VA came to me with allegations of discrimination at VA. And we wrote you about this, asking you to review the companies, and let me get to where I want to make my point.

We received an interim response from Eugene Brickhouse saying that they were looking into it. Then also this was assigned to a Miss Gibson, who has sent an interim draft. And there seem to be some issues resolved and some not.

Mr. Secretary, knowing of your own commitment, your own memorandum to staff and so on, could you look into this? Because it seems to come from one place at headquarters. I don't want to elaborate on it here, we'll be able to talk with you privately about it—and I would like to have this response from you: Number one, that you've looked into it; number two, that corrections are being made about those 20 complaints. That where it has been directed at one spot and primarily one person and one culture within that area, that the corrections have been made, and we'll get you the specifics after the hearing.

FORT HOWARD VA MEDICAL CENTER

The last point I would like to make where we need help back, and then yield to the next senator—the biggest issue in Maryland right now is the future of Fort Howard Hospital. We know that it needs a new mission, a new direction, and so on. What we are facing, though, is confusion because of VA organization.

There has been submitted to headquarters a desire for there to be declared a new mission. There is supposed to be an answer on that. We really need to have that answer. Number two, VA in Maryland has yet reorganized itself to delineate activity. We have no idea who was in charge of the Fort Howard project. It used to be Mr. Dennis Smith. We are not going to pick your leadership team for you, but we need a one-stop shop with Fort Howard and a one-stop shop leader who doesn't say, "It's all up to headquarters," and then goes out to the veterans and say "it's up to headquarters and Mikulski." It's not up to Mikulski. But if it's going to be up to Mikulski, the first thing is we need to know what is the mission, who was your projects director, and then make highest and best use of this really grand facility.

Can I have your help on this?

Secretary WEST. Yes, you can, Senator.

Senator MIKULSKI. Thank you very much.

Senator BOND. Thank you, Senator Mikulski.

Senator Burns.

Senator BURNS. Thank you very much, Mr. Chairman.

FUNDING FOR RURAL HEALTH

Mr. Secretary, last year there was language inserted in the appropriations bill that directed you to do a study of some of the problems we face in rural areas where we are a long way from health care facilities.

That report was due to us about the end of this month, the 21st of April. Could you give me a progress report on that, and are you going to make the deadline?

Secretary WEST. Dr. Garthwaite.

Dr. GARTHWAITE. I believe this is the one related to funding for rural health?

Senator BURNS. Yes.

Dr. GARTHWAITE. We do have this particular report in headquarters and we plan to make the deadline.

Senator BURNS. Okay, I would be interested in that, because we have a couple of questions that we talked about the other day and there are a couple more.

PRESCRIPTION POLICY

We are having a hard time in getting our prescriptions filled. In other words, prescriptions that are written by a private doctor under his consultations, and then getting those filled.

Can we allow these veterans to have their prescriptions issued by a private doctor and filled at a VA pharmacy?

Dr. GARTHWAITE. VA has never really believed it should fill prescriptions other than for patients who are under VA care.

Secretary WEST. That is probably not Dr. Garthwaite's fault, it is probably the fault of our general counsel—not this one.

In the late Eighties, and I will count on her to correct me, VA's general counsel did an opinion about that practice and I think the prevailing opinion is that Dr. Garthwaite's doctors are not a pharmacy; they are part of a continuum of care. They can write prescriptions for patients for whom they are caring, who come in, who have enrolled.

Once they've had that first prescription, of course, they could mail in the refills from all over if they would like. So what may be the solution for us is to try to get our doctors even closer to those veterans who are far away from the hospital where they can be treated.

EMERGENCY CARE

Senator BURNS. We know in some States that is going to be almost impossible to do, so we are going to have to do something to develop that.

Just to take that one step further, we have an arrangement now under emergency conditions. If a veteran needs health care he can

go to a local facility and that will be reimbursed by the VA. If we close up at 5 o'clock and it's on a Saturday night or whatever, we have people and they're sick, they don't care whether it's service-connected or not. That would have to be determined later, but we are having a hard time in making those connections or working that out.

Do you want to respond to that, how we're taking care of that?

Dr. GARTHWAITE. In cases where someone's receiving service for a service connected condition, we can fee basis out their care, that means they can see someone in the local community, we give them a card, and we will fill those prescriptions.

If we become the pharmacy for every veteran, then that will require significant resources, and some veterans who rely on us for their care will go by the wayside unless there are appropriations to compensate for those additional dollars. It's a very expensive position to put us in. There are 25 million veterans, all of whom would love to get free prescriptions.

So if the difference between the 25 million who are out there, who have prescriptions and would like them free, and the current 4.2 million who are enrolled in our system, that would be an enormous undertaking to do in any fair fashion.

Secretary WEST. It seems to me, Senator, that you are raising a problem, though, that we should be able to try to look at and work with. It is the question of whether we are delivering the services to a veterans population that is disbursed, like Americans, they live where they want to live. Your State is an example, but we have similar challenges in other States—whether there is some way to address that.

For example, you have already addressed the emergency care problem to some extent in the Millennium Act, I think now emergency care is not just service-connected, it's just whoever is enrolled according to the Millennium Act that you passed last fall.

So the real question in emergency care is veterans who are not yet enrolled. In fact, the problem with pharmacy care is the same thing, the prescriptions. Veterans who are not yet enrolled in the system. If we can deal with that part and somehow make them able to become part of the system, then we may be able to help out there. I think we need to look at the particular circumstances.

Senator BURNS. Yes. Are you comfortable with the way you are dealing with emergencies now, that are away from a VA hospital?

Secretary WEST. I saw a head shake over there, from Dr. Garthwaite.

Dr. GARTHWAITE. Well, no, because until we implement the Millennium Act later this spring, there is really no way for us to pay for emergency care for the non-service-connected. We believe that people shouldn't have to worry about how far they're going to drive when they are ill, they should go right to the emergency room, the closest one, if that's the medically appropriate thing to do.

We believe that the Millennium Act will fix that, and we think that's an important piece of legislation.

Secretary WEST. But we have got to get them enrolled.

Senator BURNS. Those are areas where we have the most concern, Mr. Chairman and, of course, we are talking about distances. We realize that change comes slowly. We understand that, and any

way that we can help facilitate that we sure would. I think sometimes we lose what our mission is, and our mission is to provide medical services to our veterans, and how we get that done is where we run into disagreements.

I thank you for coming today, and I thank you for your service to your country also, Mr. West, and this may be your last appearance—it may not be, who knows? We may see you around a lot.

Secretary WEST. Anything is possible.

Senator BOND. Thank you very much, Senator Burns. We very much appreciate your participation.

Senator Leahy.

STATEMENT OF PATRICK LEAHY

Senator LEAHY. Thank you, Mr. Chairman. I am glad to see the panelists here, and Secretary West, I enjoy the fact that I have always been able to communicate with you and talk about problems, and while not wanting to sound overly parochial, we usually talk about the VA hospital in White River Junction, Vermont. I appreciate you always calling back, and I am glad to see my friend Mike Walker here, we worked together when one of my favorite-of-all-time colleagues, Jim Sasscer was here, we were able to handle all the serious things and Mike, you recall, we sometimes had a few—especially when Jim was on a roll—some very funny lines in the back room. And Dr. Garthwaite, you were willing to come over and meet with me off the floor on one occasion when it was very important, and I do appreciate that.

I will continue to say now, I know we are going to be running out of time so I am going to submit questions for the record—but I would urge that we continue to look at the geographical differences in the VA medical system. It really is not—I realize I preach to the converted with this panel—but it isn't a one-size-fits-all, sometimes it is a difference of accessibility, even of climate. The situations and problems you may have in Florida and the Southwest or anywhere else it may be a lot different than the Northwest or the Northeast and colder climates. It doesn't mean that there are not needs in both places, but they are different needs.

I would look at things like the rural health care initiative and see the effects of different health care models based on where the people are. And I look forward to seeing the results of that kind of study.

PATIENT SAFETY

I also was concerned—Mr. Secretary, I know you were—about the reports last year of the prevalence of medical errors in the VA health care system. They put the errors somewhere around 3,000 from June 1997 to December 1998.

Now I'm not suggesting that VA is getting more or less problems than the civilian sector, but I worry about misdiagnosis, wrongly filled prescriptions, other types of mistakes. I know it could have been anything from a hurried prescription written down to illegible handwriting, whatever it might be.

We have things like so-called clinical couplers, the technology that may provide a solution to that. It's the kind of software that the doctor writes this, the pharmacy—it couples up the nurse that

may actually be delivering it, sees all of this and suddenly the red light goes on and says "Wait a minute, somebody else has also prescribed this, which would be fatal." I mentioned before, my wife is a nurse, she has found—usually she is grabbing a Merck manual and doing twenty different steps to see if the medicine is the right thing; sometimes people don't take that extra step.

Can you give us an idea of how such couplers might help you?

Secretary WEST. Oh, yes, and I think Dr. Garthwaite has some things to say about bar coding as well.

Dr. GARTHWAITE. We met with Dr. Weed and his staff last week, and have been working with the Department of Defense to look at the PKC coupler system. The reports I received have shown that we are fairly favorably impressed with what it can bring, and we will have to look at how it might integrate it into our system. But to the extent that we can find things like that, it helps us.

In terms of patient safety, I think it is important to realize that VA leads the way. That the report that showed 3,000 adverse events, not all of those were errors and not all of those were preventable with today's state of knowledge. So that has been widely misquoted in the media as all errors, and reading the report carefully I think you will be able to see the distinction.

The positive things we are doing are bar coding for medications, computerized entry of prescriptions and other data, research on what errors might occur and how to prevent them, especially the human factors engineering, which has never really been applied to medicine.

Finally I would say we have in place a fascinating and important new reporting mechanism. One that teaches people not just to report but that it's safe to report, and one that teaches them how to actually look for the root cause.

By history we blamed people and assumed we could train them to be perfect, and I think today we realize that people will always make some mistakes and we need to reengineer to provide the safety nets.

VERA ALLOCATION IN NEW ENGLAND

Senator LEAHY. Some of the things you are talking about, bar coding, color coding, a number of other things can dramatically reduce the accidents.

The other thing, and I would like more of an answer for the record, but the medical care funding allocation that VA uses, I think it really shortchanges New England, and equipment renovation. It divides funds based on patient volume—well, not only are our hospitals older, we're an older part of the country, our hospitals are older. But when it's 25 below zero and you are moving from A to B, and you have had a foot of snow the night before—which happens. I was going to my office in Vermont one time this winter when we had had a foot of snow within the last 24 hours, it is now 24 below zero—everything is open, everybody is expected to get to work, but even in Vermont it takes a little bit of effort.

I would ask you to look at this, because if the allocation is just on patient volume, then VA medical centers across our region are going to suffer some very serious budget shortfalls every year. And I think you have to have more in the allocation models than just

volume. And I'd ask you to respond to that if you could for the record, because I think it's something we should look at in this committee.

[The information follows:]

VERA ALLOCATIONS IN NORTHEAST

Energy Costs.—Department of Veterans Affairs (VA) reviewed this issue on numerous occasions and found that because there is not significant variation among networks, specific energy allocations would not change the final outcome. VA does recognize that energy costs have risen sharply in the last couple of months and are having some affect on the network costs more heavily in the Northern areas. VA is monitoring this to see if the costs begin to rise in the Southern areas as warmer weather sets in. Comparing the last 12 months with the previous 12 months, the average national energy cost increase was 7.5 percent and the cost increase in Veterans Integrated Service Network (VISN) 1 was 6.8 percent.

NRM Costs.—Funds are allocated on a basis of patient volume adjusted for regional costs of construction and renovation. Building age previously was a factor in this allocation process but was phased out because it was not making a material difference in the network allocations.

Equipment Costs.—Funds are allocated on the basis of patient volume. Equipment needs are directly related to the level of patient care services.

Veterans Equitable Resource Allocation (VERA) was designed to be a workload-based allocation system and efforts have been to strive towards a system where allocations are in line with patient need.

Senator BOND. Thank you very much, Senator Leahy.

Senator LEAHY. I have other questions to submit for the record.

Senator BOND. Please, yes. We will be submitting some for the record as well.

SCREENING FOR HEPATITIS C

Mr. Secretary, in June 1998, VA issued a mandate that all veterans seeking care were to be evaluated for HCV risk. According to the Inspector General, VA hospitals are not uniformly screening all veterans who seek care.

Why, and again this points to a huge problem. There seems to be a disconnect between a national priority and what's really happening where the rubber hits the road.

Dr. GARTHWAITE. Mr. Chairman, we've undertaken many initiatives to make sure that every veteran gets screened. We've had a satellite broadcast to let our staff know what is expected, we've trained physicians, brought them to Washington. We trained counselors and pharmacists last week, and we have primary care M.D.'s coming to a conference on Hepatitis C very shortly.

By the end of next month, we are introducing a patch to our electronic data system that whenever a patient's record is electronically accessed, the provider is automatically reminded they need to check one of four boxes, two of which are: "is going to be screened," "wants to be screened." The key questions will be asked of each clinician interactively at the time patients are being seen.

So we have screened a significant number of patients. In fiscal year 1998, we tested approximately 113,000 and detected 27,000 unique veterans with Hepatitis C. In fiscal year 1999, we tested another 176,000 veterans and found 32,000 unique veterans with Hepatitis C, and this year we've already tested 37,000 veterans and found an additional 8,000 with Hepatitis C.

We continue to have outreach efforts, both with the American Liver Foundation and we've received some publicity help from the

current Miss America who is very interested in veterans issues. We ourselves go out into the community. We are finding that the community efforts don't yield a large number of veterans, and a lot of the veterans that do surface are already in our system. We'll continue our efforts.

Senator BOND. Can you assure me that you will follow up to make sure that what you say is a national priority and what we fund as a national priority actually gets done in the field?

Dr. GARTHWAITE. Absolutely.

Senator BOND. Do we have that commitment?

Dr. GARTHWAITE. [Affirmative, nonverbal]

Senator BOND. All right, we will remember that. Thank you. I don't say that you won't, I just want to make sure that we are clear on that, and that we understand that.

NURSING HOME CARE

Mr. Secretary, as I mentioned in my opening statement, it's my understanding the VA places veterans in private nursing homes when they can't be placed in a VA-operated facility. In doing so, the VA conducts its own evaluations of the homes to ensure that the nation's elderly veterans receive the quality of care that they so richly deserve. Furthermore, nursing homes under contract with the VA are evaluated annually. Follow-up service is provided by VA staff who visit the veterans homes on a monthly basis.

As I indicated, I've been concerned with the quality of care, and the regulatory lapses that have occurred in other Federal agencies and in State agencies. It seems to me that VA's evaluation and follow-up services would be helpful to other elderly residents in problem homes.

Does the VA currently share its evaluations and observations either with HCFA or with State agencies? Is there a centralized system in place where the information and data can be integrated?

Dr. GARTHWAITE. We have completed a draft directive that mandates that we share all this information, and it will be going out as soon as it clears. But we agree with you and think it's important.

Senator BOND. I thank you for that, because I think it is very important that the VA, which already uses HCFA and State agency information, should likewise share their evaluations and observations. It makes sense, and it would seem that coordination would encourage rigorous monitoring of problem nursing homes.

MANAGEMENT EFFICIENCIES

Mr. Secretary, one last major question. You assume in your budget \$360 million in management efficiencies. We've received no details as to what these efficiencies are. It's tough for us to assess them. When will we see the specifics? Are you confident that the budget you proposed is adequate and would not require inappropriate cutbacks?

Dr. GARTHWAITE. We believe we can do these efficiencies. We have a large budget, and health care is not optimized in terms of all the processes within it.

A part of these are energy savings. We find that we can sign energy contracts by putting in new electronics and so forth, control-

ling lights and other things and can save a fair amount of money there.

We can have continued integrations and realignments and other movements for using automation that help us. It is a little like, I think you said earlier, pushing a rock uphill to make changes because it does affect employees and other things. So it is hard work to make a lot of the efficiencies, but we think there are opportunities and we think what we have on the table this year is realistic.

Secretary WEST. In response to the last part of your question, yes, we believe we can do very well with this budget, Senator. We don't expect to have panicky moments when we're looking to cut here in order to fund somewhere else. If there are changes in the system, in our health care system, they will be so that we can do our job better.

Senator BOND. And you will implement best practices?

Secretary WEST. Yes.

Dr. GARTHWAITE. Yes, sir.

Senator BOND. Senator Mikulski, do you have—

PRESCRIPTION DRUG BENEFIT

Senator MIKULSKI. One final question, and this goes to a prescription drug benefit, and maybe it requires a detailed written answer.

As you know, we're considering adding a voluntary prescription drug benefit to Medicare. There is no doubt about the compelling human need, particularly for the management of chronic conditions—blood pressure, cholesterol, diabetes, et cetera.

Here's the question: Whatever we embark upon must be affordable to the taxpayer and affordable to the patient, and must be sustainable. How has VA been able to control costs in a way that has kept at least some financial discipline on the prescription drug benefit for our veterans? And what are the lessons learned as we embark upon a medicare expansion to date?

Secretary WEST. I know Dr. Garthwaite wants to answer that, because VHA is particularly proud of what they've done. I would say in one word the formulary, but I should let him say it in greater detail.

Dr. GARTHWAITE. I think we have used several strategies. We have clear clinical guidelines and we expect people to adhere to these guidelines which spell out which drugs are effective, and which effective drugs to use first.

Second, to not provide every possible drug on our formulary, but to drive that process with very bright clinical involvement. So we use some of our best front line clinicians who are actually prescribing to help select the drugs for the formulary. The good news about all that is, the recent drug that was pulled off the market for diabetes, we recognized that we shouldn't have that on our formulary. We didn't put it on the formulary, and in fact we were so concerned we put out guidelines for its use off formulary.

So I think the formulary process worked very well in that instance. Then I think the third strategy we have used is that if we can limit our choices and commit to a certain volume, we can negotiate pretty good prices, and we have done that both alone and

more recently in partnership with the Department of Defense, to save the taxpayers a lot of money.

Senator MIKULSKI. Well, thank you, Doctor. If you could, I'd like to have a paper or something on this, because I think there are really very important lessons learned, both in the area of formulary issues which are quite complex and should never be political. Number two, though, the negotiation of price without formal price controls, stifling innovation, and someone—we are going to have a lot of big issues ahead of us, and we can't just do slogans and bumper stickers and so on. So we appreciate whatever lessons are learned. Thank you very much.

Dr. GARTHWAITE. Thank you.
[The information follows:]

PRESCRIPTION DRUG BENEFIT

VA'S NATIONAL FORMULARY PROCESS: LESSONS LEARNED FOR A SUCCESSFUL MEDICARE DRUG BENEFIT

The basic premise of Department of Veterans Affairs' (VA) approach to formulary management has been and remains the provision of quality medical care at an affordable price through the appropriate use of pharmaceuticals in the veteran population. Formularies are not a new component of healthcare delivery systems in either the private or public sector. The Veterans Health Administration (VHA) has employed drug formularies for over four decades. What has changed over time is formulary management. In the distant past, the sole function was to define what drugs could and could not be prescribed. More recently, formulary management has included clinical protocols to assist clinicians in using drugs effectively and efficiently and is continuing to evolve.

One of the many positives to formulary management is solid clinical evidence demonstrating that a specific drug can provide a cost-effective benefit to a patient population. The result of this is the ability to negotiate lower drug acquisition cost. As indicated earlier, VA's primary motivation is always to improve the quality of care. Economics, though important, has become a secondary issue. This change in philosophy is a major reason that VA pharmacy expenditures have risen over the past few years and, VHA officials believe will continue to rise during the foreseeable future.

Formulary management today not only includes the functions above, but also seeks to develop the means to measure and improve disease outcomes associated with pharmaceutical care. Moreover, formulary management has become far more dependent on evidenced-based reviews and practices than ever before. This is part of the overall strategy to improve healthcare delivery, especially as it pertains to caring for large populations with specific diseases. No one to date has perfected such a strategy, but to work toward this goal established the Pharmacy Benefits Management (PBM) Strategic Healthcare Group (SHG) in September 1995. The PBM is composed of a twelve member Medical Advisory Panel (MAP) comprised of field-based practicing physicians, including one member from the Department of Defense, clinical pharmacist specialists, data based managers and contracting experts.

A fundamental part of the overall strategy in establishing the PBM was to create a comprehensive pharmaceutical coverage package for the VA system. The reasons for this are fourfold. First, this ensures that all veterans, no matter where they are in the United States, will have the same potential access to important pharmaceuticals, over-the-counter medications and medical-surgical supplies. This improves overall equity of care and reduces the likelihood that patients will be denied drugs or other items because of local economic considerations. However, the national formulary process is not all-inclusive, but rather, with few exceptions, allows Veterans Integrated Service Networks (VISNs) to add pharmaceuticals that may be important to selected populations within their region. In addition, VA's formulary management system includes a responsive and locally directed non-formulary approval process. While VA's goal is to include on its formulary those medications which best serve the needs of veterans, the non-formulary process addresses those situations and patients where the formulary drug does not produce the desired clinical outcome.

Second, our strategy ensures that the VA healthcare system will have a coordinated approach in determining the optimal use of pharmaceuticals for patient populations with specific diseases. An example of this coordinated approach is the PBM/

MAP's recommended protocols for treating diseases commonly found in veteran patients. These protocols include pharmacologic guidelines on Diabetes, Hypertension, High Cholesterol, Heart Failure, Prostatic Hypertrophy, Depression, Ulcer Disease, Gastroesophageal Reflux, and Osteoarthritis (pending). These evidence-based guidelines, developed in collaboration with physician experts, are being used by many VISNs to help improve and measure the quality of care.

Third, a coordinated approach to pharmacy benefits management means that VA can better organize its purchase and distribution of pharmaceuticals. The PBM SHG has beneficially utilized the power of the entire VA healthcare system to assure the best value possible, both clinically and economically, for selected pharmaceuticals. The grassroots approach, reliance on sound clinical evidence, and the ownership of the organization in the process has resulted in dramatic compliance rates with VA national contracts. This initiative has been a major success for the Department and has had ancillary benefits for the Department of Defense and the U.S. Public Health Service. With regard to distribution, the VHA's leadership and track record in implementing pharmaceutical prime vendor systems and Consolidated Mail Outpatient Pharmacies (CMOPs) is exemplary.

Fourth, a comprehensive formulary management program allows for applied research. Our goals are to continually improve the pharmaceutical benefits package, clinical guidelines and, ultimately, patient care. In this area, the PBM has begun to matrix with established research groups within VA and is also in the process of developing relational software in order to better assess quality of care as it relates to pharmacy and to pharmaceuticals. This process is in its infancy, but we expect VA, as one of the nations largest integrated healthcare networks, to soon lead and influence policy decisions on how to deliver high quality pharmaceutical care to all Americans.

VA's success in formulary management is due to the grassroots nature of its process, buy-in from front line physicians and a commitment to using the best drug(s) possible in the veteran population. As indicated above, the cost of an individual drug is important but it is outweighed through providing the right drug to the right patient at the right time. In this context, VA's pharmaceutical expenditures, as a percentage of its health care dollar, have increased and VHA officials anticipate they will continue to increase. There are many lessons learned by VA that could benefit the Medicare program.

First, a Medicare drug benefit that only concerns itself with the cost of a bottle of pills is doomed for financial and clinical failure. Second, interdisciplinary and multidisciplinary involvement in guideline development and care delivery has and can contribute to the delivery of best value care, including the financial viability of the Medicare program. Third, VAs accomplishments in contracting for selected high cost, high volume pharmaceuticals are successes that can be replicated under Medicare. There is no reason that Medicare cannot contract in this manner to reduce price without impinging on overall quality of care as VA has done. These successes have enabled VA to treat many more veterans, again without compromising patient care. Standardized contracting could be applied across providers and a consortium of states without resorting to federal price controls. Fourth, VA's success in implementing new initiatives for the distribution of prescriptions to veterans has direct implications for the Medicare program. For example, through the use of federal consolidated mail outpatient pharmacies, coupled with the wide-spread use of strategically placed, federally controlled unit of use outpatient automated dispensing technology, the federal government could economically and effectively distribute needed medications to Medicare beneficiaries. The most important part of this strategy for the Medicare program is a matrix of contracts with private sector credentialed clinical pharmacists to work collaboratively with physicians to manage the appropriate use of medications in the senior population. This two-fold approach ensures integrity in the distribution processes (one the pharmaceutical industry would be happy about and embrace from a diversion perspective) and, equally important, develops a relationship between the patient, his physician and pharmacist. If (1) appropriate copayment infrastructure for patients, (2) appropriate risk incentives for providers (physicians and pharmacists) and (3) the ability of the states to form consortiums for price negotiations are a part of the expansion, the potential for a successful, financially viable response to the medication need of this Nation's seniors is accomplishable.

Finally, VA's excellence in geriatric medical practice is well documented. Part of that excellence is the wisdom gained and successful management of co-morbid older patients taking multiple drug therapies. VA truly does have much to offer the Medicare program as it considers expansion to include a drug benefit.

Senator BOND. Thank you, Senator Mikulski.

Mr. Secretary, we are going to have a number of questions for the record. They've called for a vote.

CORRECTING PROGRAM DEFICIENCIES IN ST. LOUIS

Last October, the combined assessment program review by the I.G. identified a number of areas in the St. Louis VA hospital requiring management attention, and I'd like for you to give me in writing an update on correcting the program deficiencies at St. Louis. I'd like to know how VA follows up to ensure the problems are corrected in a timely manner.

I would like your views on the CAP program and whether it's a useful target.

[The information follows:]

CORRECTING PROGRAM DEFICIENCIES IN ST. LOUIS

SUMMARY OF INSPECTOR GENERAL COMBINED ASSESSMENT PROGRAM (CAP) REVIEW CONDUCTED AT VETERANS AFFAIRS MEDICAL CENTER, ST. LOUIS, MISSOURI, JUNE 7-11, 1999

Summary of Recommendations and Responses

(1) Take immediate action to ensure that nurse staffing levels in the Nursing Home Care Unit (NHCU) are always at or above established minimum safe staffing levels.

Nurse staffing levels are kept at or above minimum safe levels by reassignment of staff within the Extended Care Service Line wards, scheduling contract agency staff, and scheduling overtime. Recruitment and hiring has been an on-going process. Staffing needs are reviewed daily and recruitment requests sent weekly as vacancies occur. Recently with the Medical Center's initiative of reorganization, merging and relocation of wards have occurred. This has allowed for additional staff to be assigned to the wards as needed. Patient acuity and program activities are continually monitored to determine staffing needs and readjustments are made.

Office of Inspector General (OIG) STATUS: Closed

(2) Take immediate action to ensure Domiciliary patient privacy needs are met when providing urine samples for drug testing.

A Standard Operating Procedure (Domiciliary SOP #4) has been written to provide guidance on DOA Collection. Procedures have been developed to cover situations when there is no same gender staff member present. For male patients who present concerns regarding specimen collection by female staff members, the specimen will be obtained at a later time, usually this occurs on the next shift. All female patients will have the specimen collected by a female staff person. However, this policy emphasizes the need for sensitivity for all of our patients and attempts to ensure patient privacy to the maximum extent possible. Staff training and orientation has been provided on the procedure. This process has been in effect since July 27, 1999. No patient or staff complaints have been identified since the OIG visit or initiation of the new procedure.

(3) Assess the issues regarding employee safety to determine the adequacy of shuttle bus services from the employee parking lot to the medical center.

Every effort has been made to improve parking for our patrons and staff, particularly during the hours of darkness. The following actions have been taken by management to insure the safety of the staff during hours of darkness.

- Employees working irregular tours of duty, particularly at night, are encouraged to park on VA property and not on the streets or in private parking lots adjoining VA property.
- Police and Security routinely accomplished street and parking lot lighting surveys to insure that lights are repaired as quickly as possible when deficiencies exist as well as to identify areas that need improved lighting.
- Efforts have been made and will continue to be made to improve lighting so as all parking areas used by the staff are brightly illuminated during the hours of darkness.
- Police and Security provides security escorts upon request, regardless of the time of day or night with only one exception and that is during peak duty changeover hours (see next item). Employees arriving for duty during hours of darkness must park in card access only parking lots. When they arrive at the

gates they may, by using the call boxes, request a police patrol be dispatched to escort them to the 24-hour entrance by the Emergency Room (ER). Again, police and security will provide this service at any time except during peak changeover hours (see next item).

—During peak changeover hours, police and security post their on duty officers in the John Cochran (JC) Division parking lots, one in top half of lot “E” (south side of hospital) across from the ambulance parking area, to monitor the staff as they enter/exit the 24-hour entrance. The second officer on duty is posted at the bottom half of lot “E” and monitors employees coming and going from their vehicles in lot “E”, “F” and “G”.

There have been no incidents where a staff person has been assaulted, molested, mugged or robbed as they negotiated VA owned property to go to and from their vehicles.

In addition, there have not been any incidents of assault, molestings, muggings, or the robbery of anyone who parks on the lots leased by the VA during daylight hours. Approximately half of the employees who park on the Grandel and Sun lots ride the shuttle while the remainder of the staff walks from the lots to work without any problems. Employees are urged to ride the shuttle bus during the afternoon hours, particularly in the Fall and Winter months when it becomes dark earlier in the day.

The facility monitors employee needs regarding the shuttle via general surveys and verbal comments and complaints. Complaints were received previously that identified a need for wheelchair accessible vans. Wheelchair accessible vans are now in use. Comments also identified a potential need to expand services to the Yeatman lot. The stop was added to the driver’s route for several weeks. Records were kept on the number of employees being picked up and dropped off at the stop. There were very few employees that rode the shuttle van to or from this stop, thus, it was not adopted as a permanent pick-up stop.

A parking garage would be a great improvement in alleviating the parking situation at John Cochran Division; however, even with a parking garage, safety will remain an issue and if the staff is not alert of what is going on around them, incidents may occur.

(4). Revisit the issue of shared use of the dining room and combined recreational activities for Nursing Home Care Unit patients and Domiciliary patients to ensure this arrangement is therapeutic for both groups.

Recreational activities have been consolidated in the Nursing Home Care Unit (NHCU) for NHCU resident and Mental Health patients. Domiciliary patients do not use the NHCU dining room for any activities. The joint recreational programs for NHCU residents and Mental Health patients was instituted just prior to the site visit. Enhancements have been implemented with the input of the residents council.

Residents now have the option of attending combined recreational activities or program specific recreational activities. The combined activities are monitored by ward nursing staff, recreational staff and the nursing supervisor. Improved scheduling and monitoring of the recreational activities have eliminated this process.

No complaints have been received and no patient incidents have been reported. Residents Council will continue to monitor this process.

(5). Assure that patients are seen by a clinician within 15 minutes of their arrival in the Walk-in Clinic to determine urgency of treatment needs.

We concur that unscheduled patients should be seen by a clinician in a timely manner. The Department of Veterans Affairs “Customer Service Standards”, VHA Directive 10–94–102, dated October 14, 1994, establishes a standard that patients will be seen within 30 minutes of their scheduled appointment time. Walk-in patients report to clinics in two ways: (1) After they have first been seen in the Emergency Room and referred to a clinic, or (2) After they have been interviewed by the Operations Center (Patient registration) and then referred to a clinic. During 1998 and 1999 walk-ins to Emergency Room (ER) were seen by a physician within 10 minutes of their arrival. The desired outcome is that patients will be seen by a physician within 20 minutes of their arrival. Data is not available on walk-in patients who present to the clinic but have not been seen first in ER.

For those walk-ins that are not seen in ER, a time study will be conducted to determine waiting time to be seen by a clinician. The study will examine the delays that would preclude a walk-in patient from being seen by a clinician within 15 minutes of their arrival. Also, walk-ins are instructed to report back to the Operations Center if they were not seen by a clinician within 20 minutes.

Regularly scheduled patients were seen in the seven Primary care Clinics within an average of 15 minutes of their appointment. This data is based on the two most recent waiting time studies conducted in each of the Primary Care clinics. Waiting time studies are conducted usually in the Primary Care Clinics semi-annually.

These studies examine all aspects of waiting time and care time that are part of the Veteran's clinic visit.

Further measures have been incorporated into the fiscal year 2000 Performance Improvement Plan to assure continued timeliness.

(6) Examine the system for awards and recognition to ensure equitability.

VA Handbook 5430.1, dated February 28, 1997, outlines the approved performance appraisal program for the VA. Paragraph 14, states, "Performance awards that are solely based on an employee's rating of record are not authorized in connection with this appraisal program."

VA Handbook 5451, dated August 18, 1998, outlines the approved award recognition system for the VA. Part C, paragraph 1a, states, "General Provisions. Recognition through a cash award, time off award or other honorary or non-monetary means may be granted to an individual employee or group or team of employees in recognition of a contribution, act, service or achievement that benefits VA or beyond, or for overall sustained performance beyond normal job requirements."

Currently, award nominations are submitted by the Service Line Director, through Human Resources (for technical review), to the Medical Center Director for approval. In accordance with Article 15, Section 4, of the Master Agreement between the Department of Veterans Affairs (VA) and American Federation of Government Employees (AFGE), each facility will establish an awards panel consisting of management and bargaining unit employees. The Partnership Council at this medical center submitted a charter and a local awards panel has been established.

In July 1998, this medical center established a Veterans Service Excellence (VSE) recognition system to recognize employees who go out of their way to provide service to veterans seeking health care and related social services. The program is in addition to the Special Contribution, Suggestion, and Employee of the Month/Year, Team of the Quarter and other existing recognition programs. In accordance with Medical Center Memorandum 00-35, the VSE program was thoroughly audited by two employees who have a knowledge of the process but are not involved in the assignment of VSE points. The results of this audit were provided to the Director. Some of the results included reviewing VSE Point Earning Categories to ensure that all "reports of excellence" from patients and/or their families be treated in the same manner; establish a procedure whereby the Canteen will process and redeem certificates in a timely manner, etc. The Employee Satisfaction Team and Partnership Council used the audit results to improve the VSE program.

This medical center is taking the necessary steps to ensure equitability of award recognition.

(7) Assess employee morale to determine why such a large number of randomly selected employees do not believe the medical center is an employer of choice and would not recommend treatment at this facility to a friend or family member.

An all employee survey has been conducted for the purpose of determining what areas can be specifically addressed in relation to making our facility an employer of choice. Subsequently, issues of concern were categorized and prioritized based upon the employee responses to this survey. Results were shared with all employees and workgroups are in various stages of developing and implementing strategies for improvement. Examples are as follows:

—*Job advancement opportunities.*—Selection Panels are now utilized to interview and screen applicants based on the performance based interview process.

—*Job training/proficiency.*—All-employee survey conducted to determine training/educational needs.

—*Improve communication/keeping employees better informed.*—All-employee forums are held every other month. Supervisory forums are held every other month. The employee newsletter was reinstated. The Medical Center Director continues to send all-employee E-mail informational bulletins.

—*Performance/job-recognition improvement.*—Semi-Annual Formal Awards ceremonies established for more timely recognition. Employee newsletter issue dedicated to awards recognition.

—*Improve employee morale and employee behavior/conduct.*—Achieving Excellence in Service (AES) two day customer service training being provided to all employees Electronic employee suggestion program under development Patient Satisfaction and Employee Satisfaction committees combined

A follow-up all employee survey will be conducted in the future to measure the results of our actions.

(8) Take immediate action to ensure cleanliness of the public bathrooms at both divisions.

All public use restroom facilities are now being maintained/cleaned hourly instead of once in the morning and again in the afternoon. In concert with the Associate Director, supervisors in Environmental Management (EMS) have developed a week-

ly basis "inspection checklist" which they use to monitor the cleanliness of their areas. Problem areas are then graphed and tracked/trended, with employees providing input on how to improve the results. The supervisors responsible for sanitation activities at both divisions submit the tracking reports to the EMS Program Manager. The cleanliness of the public use areas, including restrooms has improved and is being maintained at satisfactory levels.

(9). Improve the management of the ambulance service contract by: Establishing local policies that include adequate procedures and controls regarding authorization, certification, and payment of transportation services.

Policies have been created and implemented regarding the ambulance/transportation program. Trip sheets are now required to be provided to the medical center by the contractor. These sheets are used to verify services provided.

Reexamining the number of personnel authorized to order ambulances and determine if the number is appropriate.

A review of staff authorized to order transportation was completed. It was determined that current staff authorized should continue to do so. Additional training has been provided to the staff authorized to do this.

Providing training for all personnel responsible for ordering ambulances to include identifying the proper mode of transportation of the patient.

Training has been conducted with all clerical staff and providers.

Reviewing the ambulance service contract provision with the contractor and ensuring that we pay only the contract rate for transport of veterans.

The contract rate is being applied for all ambulance trips whether ordered by the VA or the patient. This was implemented on July 1, 1999. Upon receipt of the bill, the price is verified. Those that are priced higher are paid at the contract rate. Any invoice that is not charged at the contract rate is extensively reviewed and challenged as appropriate.

Ensuring that certification procedures include verifying the rates charged.

The contract rate is being applied for all ambulance trips whether ordered by the VA or the patient. This was implemented on July 1, 1999. Upon receipt of the bill, the price is verified. Those that are priced higher are paid at the contract rate. Any invoice that is not charged at the contract rate is extensively reviewed and challenged as appropriate.

Challenging every invoice that is priced higher than the contract rate.

The contract rate is being applied for all ambulance trips whether ordered by the VA or the patient. This was implemented on July 1, 1999. Upon receipt of the bill, the price is verified. Those that are priced higher are paid at the contract rate. Any invoice that is not charged at the contract rate is extensively reviewed and challenged as appropriate.

Challenging invoices that do not appear to be proper or may have received prior payment from other sources.

The contract rate is being applied for all ambulance trips whether ordered by the VA or the patient. This was implemented on July 1, 1999. Upon receipt of the bill, the price is verified. Those that are priced higher are paid at the contract rate. Any invoice that is not charged at the contract rate is extensively reviewed and challenged as appropriate.

Proceeding with collection actions if it is verified that duplicate payments have occurred.

Duplicate billings were corrected by Fiscal Program staff. One duplicate payment of \$562.50 has been recovered by offset from current payments to the contractor. The other duplicate payment of \$9,613.45 will be deducted in May, 2000, from future payments for services rendered.

Establishing better communication and control over patients scheduled to ensure that ambulance arrival is coordinated with the patient's completion of clinic exams or discharge.

A transportation team was appointed to improve the coordination and communication of patient travel. This included working with clinic staff to better coordinate ordering of the transportation. The following were reviewed, and/or implemented:

1. A cost comparison study was performed for contract ambulance versus VA owned ambulance to determine if owning and operating our own ambulance would be more cost effective. A two-month study indicated that owning our ambulance would not result in any cost saving.

2. Psychiatric patients presenting to JC, if stable, are transported to Jefferson Barracks (JB) by ParaLift (Wheelchair) Van with an attendant in lieu of ambulance.

3. We have increased communication and coordination of scheduling appointments and ambulance trips in order to reduce waiting time and resulting increased costs. There will be final review in May, 2000 to determine the outcome of these efforts. During December, we did a specific review of ambulance trips to determine if they

were clinically necessary. This review indicated that 95 percent were clinically necessary and the other 5 percent may be able to be transported by alternate modes if we change specific ER practices before transporting the patient between divisions. The following alternatives are being actively pursued with providers to help make further reductions:

- Whenever possible, provide appropriate psychiatric medications before transfer to the mental health unit in order to stabilize the patient and allow for alternate mode of transportation.
- When appropriate, insert Heplock in patient to remove the necessity for IV treatment during transport.

Based on the issues identified above, review all other contracts and contracting procedures to ensure that effective internal controls are in place and are working.

Thirty-one individuals received Contracting Officer Technical Representatives (COTR) training on June 14, 1999 and June 15, 1999 concerning their duties and responsibilities as a COTR. This training was done at the request of VISN 15 at each of the facilities. This training emphasized to the COTR's their responsibility for ensuring that the work under the contract must be performed in a complete and exact compliance with the requirements of the contract including review of contractors invoices against the contract price and terms.

- (10). Establish controls over fee basis payments to ensure: CPT coding is accurate.

Reviews have been made of bills received to assure the accuracy of CPT codes provided. If a CPT code is not listed the bill is returned requesting this information with justification of the amount billed based on that CPT code. Training has been provided to further educate staff on what to look for to improve the accuracy of our reviews.

VA's fee schedule is updated properly and used to limit fees paid.

VA's fee schedule is updated at the beginning of each fiscal year. The recommendation has been implemented and is being used to limit amounts paid.

Verification that service was provided prior to authorizing payment.

Test results and progress notes are being requested with each authorization to verify services were rendered. If the information is not provided, the invoices are not paid and are returned to the vendor as incomplete.

- (11). Establish procedures to notify the contract credit card company and cancel the authorized use of purchase credit cards by employees who either transfer to a position not requiring the purchase card or leave VA employment.

Effective September 20, 1999, the contract credit card company was notified to cancel all accounts for employees who either transfer to a position not requiring the purchase card or leave VA employment. We continue to monitor purchase credit cards and employee transfers and separations. The credit card company is being appropriately notified to cancel cards.

- (12). Consult with Regional Counsel to determine the next course of action for recovering the balance owed VA in the case identified.

Financial Services forwarded the information in question to Regional Counsel, St. Louis, Missouri, and asked for their advise as to what course of action can be taken for recovering the balance owed the VA in the case identified, "Pre-Trial Diversion Procedures." A re-payment plan was established and signed by the individual in March and we have received two consecutive payments. Further collection options are legally available if there is failure to pay.

- (13). Require excess government vehicles be turned in as surplus.

Utilization of leased vehicles was reviewed. Five were determined to be no longer needed. Five vehicles were turned into General Service Administration (GSA) during the time period of June and July 1999 saving the lease cost of \$17,400 annually. The vehicles turned in are as follows:

2 G92 series	tractor/trailer
1 G82 series	tractor/trailer
2 G32 series	shuttle buses

- (14). Ensure the Muse CV File System is recorded on the CMR and a preventive maintenance schedule is established.

The Muse CV File System was recorded on CMR 20C in June 1999. It is covered by a one-year warranty which expires in the spring of 2000. BMET will review the system requirements and determine if preventive maintenance should be performed by in-house staff or by contract.

- (15). Ensure that identified payroll overtime "Exceptions" are reviewed.

The Exceptions Listing is reviewed on a regular basis by payroll, but, it is the responsibility of the timekeeper and supervisor to review this menu option on a regular basis (daily, weekly or bi-weekly), and act on any discrepancies listed. The Exceptions Listing is available under both the supervisors and timekeepers menus. As

part of payroll's semi-annual timekeeper audits, the Exceptions Listing is reviewed by payroll and forwarded to the appropriate timekeeper for action. All discrepancies MUST be resolved by either the timekeeper or the supervisor. The supervisor must then certify the audit and return to it to payroll.

During the recent timekeeper and supervisor training, timekeepers and supervisors were once again reminded to utilize the Exceptions Listing menu option regularly. Currently, the subject Service does not have any prior pay period exceptions.

(16). Require Washington University to ensure that transferred research projects meet the informed consent standards set by VAMC St. Louis.

Transfer of research studies to the St. Louis VA Medical Center from the affiliated universities is rare. Research Service Line has, however, adopted a policy that will require the VA investigator to develop and submit a VA consent for Human Studies Subcommittee review. Upon approval of the consent, the investigator will be required to re-consent all subjects that are continuing in the study. The subjects will be advised of the reason for the change in venue and need for re-consent. Thus, the subject, the investigator, and a disinterested witness will be required to sign the new VA consent form.

(17). Share with other VAMCs the best practice of photocopying patient insurance cards to improve the identification of third party obligors.

This was implemented when the VISN 15 MCCF Accounts Manager reviewed our Category A/MCCF Program. This program was provided to her and she indicated she would encourage other VISN facilities to implement this practice.

There were 28 recommendations covering 17 areas. All of these recommendations have been closed by the OIG with two exceptions (9H and 9I). VA expects that our report to OIG on April 28, 2000 will result in closure of these final two items. At the St. Louis VAMC, we have charged the Director of Quality Management to maintain a tracking mechanism on all recommendations from external review groups, including the Office of Inspector General. This tracking mechanism is maintained until recommendations are resolved and closed. This has been a successful method to assure timely completion.

CAPITAL ASSET REALIGNMENT

Senator BOND. And finally on the capital asset realignment. As I indicated, GAO has raised serious questions—this is the rock we have got to push up the hill. Stakeholders seem to be involved in decision making rather than advisory roles, and the senior leadership in VHA is not involved until too late in the process.

I would like to know here, now, on the record, if these problems can be resolved in the final plan, when the plan will be finalized, and when will VA begin allocating the \$10 million we gave you for these studies in fiscal year 2000?

Dr. GARTHWAITE. We will be implementing, and spending the \$10 million for the studies this year. We believe that one of the key issues is to have criteria-based evaluation. We've promised draft criteria yesterday in testimony and we'll provide it here as well—within 30 days and, hopefully, then be able to have final draft criteria shortly after that.

I think we are open to many different models and how to govern this in headquarters. I would agree with you, we need stakeholder involvement, but how that is done, it needs to be less as a decision-making, more advisory, and we don't disagree with the GAO at all on that.

Senator BOND. You have got to be directly involved, and we expect to see some movement on it. It's tough, and this is going to be the challenge. And we really expect to see the process underway, because there is so much money we could be devoting to better patient care if we weren't taking care of empty, unneeded buildings.

ADDITIONAL COMMITTEE QUESTIONS

Joe Thompson, it seems that we have been neglecting you, but you should know that you are in our hearts and you are going to be in our questions for the record. As a matter of fact, we have just a lot of interesting things we are going to get into. Unfortunately, I see that we have run out of committee members because of the vote.

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

QUESTIONS SUBMITTED BY SENATOR CHRISTOPHER S. BOND

ALLOCATION OF FUNDS

Question. There are several areas of your budget where VA is spending far less than what it told us it would spend in 1999 and the current year—even while we increased the overall budget by \$1.7 billion. For example:

Post-Traumatic Stress Disorder.—VA spent \$87 million in 1999 when it told us last year the estimate was \$109 million. It is estimating it will spend \$94 million this year, while last year VA estimated it would spend \$113.5 million in 2000.

Substance Abuse Treatment.—Last year you told us VA would spend \$411 million in 1999, yet the actual 1999 expenditure was \$357 million. The 2000 estimate had been \$427 million, and currently VA estimates \$373 million.

Homeless Compensated Work Therapy Program.—VA now estimates it will spend about half what it had estimated for fiscal year 2000.

How were these budget estimates developed, and why are there such inconsistencies between planned and actual expenditures (please provide specific answers for each of the three examples cited)?

Answer. Budget estimates for 1999 and 2000 in last year's budget for PTSD and Substance Abuse treatment were based on the 1998 actual experience plus inflation. The reasons for the decrease in actual expenditures for PTSD and Substance Abuse Treatment follows:

PTSD.—The decrease reflects the continuing shift in clinical emphasis from inpatient to outpatient care in VA. There was a 22.1 percent decrease in episodes of care for PTSD, and a decline of 15.1 percent in general psychiatry beds used to treat veterans with a primary diagnosis of PTSD in fiscal year 1999 compared to fiscal year 1998. During the same time, specialized outpatient episodes increased 3.1 percent. A recent population-based assessment of PTSD treatment need indicated there are gaps in PTSD care at various places across the system in inpatient and residential care, as well as potential outpatient needs. In recognition of this, the Millennium Act directed increased funding for specialized PTSD (and substance abuse) care programs for fiscal year 2000.

Substance Abuse Treatment.—A combination of closure of inpatient beds and increased use of ambulatory care have resulted in an overall reduction in total program expenditures.

For both of these programs, we believe that the steady outpatient increases will catch up with the initially quick inpatient reductions, providing more stability to the funding level of these programs.

Homeless Compensated Work Therapy Program.—The estimates contained in the fiscal year 2000 budget for this program were built upon a 1998 base that was not an actual at the time of printing. The base estimate turned out to be double the actual. The estimates included in the fiscal year 2001 budget (for 2000 and 2001) were based on a 1999 actual of \$4.1 million which reflects the actual allocation of homeless veterans program funds to specific VA medical centers for use in implementing CWT and CWT/TR programs.

Question. How does VHA management ensure national priorities are implemented at the local level?

Answer. One of the primary tools that VHA uses to ensure that national priorities are implemented at the local level is a system of performance measures and monitors. The Chief Network Officer (CNO) holds quarterly conference calls with each of the network directors and their staffs to review the progress made on performance measures in a number of areas. Examples of measures tracked are the Chronic Disease Index, Prevention Index and Clinical Practice Guidelines. National goals are set for each of these measures, and success on these, as well as the other meas-

ures, is an important factor in the end of year performance appraisal for each Network Director. In addition, the CNO monitors many areas that he and other officials in the Office of the Under Secretary of Health have determined need special attention, such as implementation of Alternate Dispute Resolution, the High Performance Development Model, and Patient and Occupational Safety Initiatives. In addition the Headquarters program officials monitor their specific field activities and report findings to the field and the Office of the Under Secretary of Health.

Question. How does VHA management track local expenditures?

Answer. Local expenditures are tracked at each VA facility and input to a national cost system in Austin, Texas. Costs are accumulated to specific clinical activity levels on the Cost Distribution Report (CDR). Costs for each medical center and the Nation are then consolidated with workload information in the VA's National Patient Care Database, and costs are computed for specific patient care activities at the local and national levels. Patient specific cost is also determined in this process.

Question. Where expenditures are inconsistent with plan, what actions are taken?

Answer. At the Veterans Integrated Service Network (VISN) level, Network Directors intervene as necessary to re-focus or re-emphasize facility direction. If expenditures are deemed reasonable for the outcome generated, the plan is modified accordingly. At the national level, the VHA Chief Financial Officer provides information and recommendations to the network and Administration management. As in the case with supplemental funding requests from VISNs, a financially-based site visit to the VISN and respective facilities may be conducted and recommendations provided. Specific program site visits also may be initiated.

Question. How can we be sure that through the VERA allocation system that VA networks and individual hospitals are allocating sufficient funds to these national priorities? Why shouldn't we be funding these national priorities separately from VERA?

Answer. VHA believes that the value of its national programs can best be managed through setting standards and measuring performance, assigning accountability and monitoring spending and revenues rather than centrally controlling all program funding. The performance of national programs are monitored through established VISN measures.

VERA is an effective system for allocating resources to the network level. It was not designed to allocate to facilities or programs. Networks have the flexibility to allocate resources to their facilities using methodologies that they need to meet local needs. However, VHA Headquarters has provided networks with the ten resource allocation principles that they are to use in providing allocations below the network level.

WAITING TIMES

Question. One of your key budget initiatives is "reducing waiting times," for which you estimate spending \$400 million in fiscal year 2001, an increase of \$200 million over the current year. How can we be assured that these additional resources will go to "reducing waiting times?"

Answer. The resources for this initiative are tied to the service and access budget initiative. As a result, performance measures and monitors also include monitoring waiting times. The Chief Network Officer reviews VISN performance with the Network Directors quarterly. VA is developing software to better measure waiting times and accurately reflect the reporting and progress of this initiative. Through network financial planning, VISNs will identify planned and actual expenditures towards reaching their waiting times performance targets.

Question. Will VISN directors be required to track and report to headquarters the funds spent on meeting the 30-30-20 timeliness goals?

Answer. To ensure accountability for resources attributed to the waiting times reduction initiative, VHA is developing a plan to monitor and track expenditures and evaluate the impact of the resources and activities in reducing waiting times. Six clinics have been identified to monitor the waiting times for specialty care. These will be reflected in the performance goals. This plan will be part of the VISN financial plan submission to VHA headquarters this summer.

Question. Will all of these funds be allocated through VERA, or will you be targeting resources to those facilities which have the worst waiting times?

Answer. The majority of the \$400 million will be included in the \$18 billion General Purpose funding distributed by VERA. The exception may be the Information Technology dollars spent nationally (e.g., the scheduling package). General Purpose funds constitutes 89 percent of VA's Medical Care appropriation. The combination

of increased funding and specific monitoring of performance toward the goals is expected to address the waiting time issue appropriately at all sites.

Question. VA has acknowledged it has a problem with waiting times. What data did VA use to make that assessment?

Answer. There are several sources that VHA used to make that assessment. The Institute for Healthcare Improvement (IHI) initiative findings and an evaluation of the top diagnoses of the veteran population provided an analysis of potential clinic workload requirements. VHA also analyzed data extracted from the medical centers' scheduling packages. These are the main sources for the initial assessment. Other sources include, patient complaints, historical problems with hiring specialists in some areas, and evaluation of the top diagnoses of our veteran population that indicate potential clinic load.

Question. Did VHA analyze the root causes of its excessive waiting times?

Answer. The Institute for Healthcare Improvement (IHI) initiative on Waits and Delays started their improvement effort by having each facility-based team perform a root cause analysis for the specific clinic they were trying to improve. This is most appropriate since it is not possible to identify two or three root causes for waits and delays at a national or even a VISN level. Root causes are embedded in clinic processes, which vary from clinic to clinic and site to site.

Question. If not, how did VHA identify the initiatives it plans to use to help achieve the 30-30-20 goals?

Answer. As noted in the previous response, root causes were identified. Also, VHA intends to issue planning guidance indicating that for each service and access goal, sites are to identify their current level of performance and performance target for that goal. For each goal they are to identify all planned interventions and the estimated or actual expenditures for each intervention. The list of possible interventions was developed from those identified by IHI and from actions Networks identified as possibilities. VHA believes this approach allows facilities to individualize their approaches, while providing for the national development and monitoring of improvement actions.

Telephone care was chosen as a national initiative based on numerous published articles that indicate access to telephone care increases patient satisfaction, provides quick access to the system and decreases the number of medically unnecessary visits to providers. Providing alternatives to physician/clinician visits should decrease the overall demand for visits. That in turn will make more appointment slots available and help decrease waits. As VHA implements phone care across the system, it expects to develop measures that assess the number of avoided visits and the appropriateness of that avoidance.

Question. What problems exist with VHA's current efforts to collect national waiting time data and how will VA fix these problems?

Answer. The current methodology used to measure clinic appointment waiting times is to measure the time between the date that a next available appointment was requested at a clinic and the date for which the appointment was scheduled to occur. This time actually represents the waiting time experienced by the patient for the appointment. Next available appointment types were selected because their waiting time is dependent on the availability of an opening and is not confounded by patient date and time preferences.

Problems with existing waiting time data is as follows: Waiting times derived from using this next available approach suffer two weaknesses. The first is that if a clinic has zero next available appointments the waiting time cannot be calculated. The possibility of a clinic not having a 'next available' is that the clinician and/or the patient have requested a specific time in all cases. If a specific appointment time is requested it is not placed in the average for next available as there may be numerous slots available before this appointment was made. If the longer, requested time is averaged in it gives a false extended waiting time. The potential for no visits to be 'next available' is small but could happen. In general about 20 percent of scheduled appointments are comprised of next available appointment types. There is however a good deal of variation across clinics. The second problem is the dependence on the scheduling clerk to accurately categorize an event as a next available appointment request. We are working to solve this problem through training. Guidance and education directed at the scheduling clerks on how to respond to the VISTA scheduling prompts has been provided.

VHA's ability to solve these problems is directly related to deficiencies in the VISTA scheduling software. This software was built in the 1970's and needs to be replaced. Deficiencies in the scheduling software are listed below:

(1) Inability to distinguish between new and follow-up appointments and the inability to distinguish between urgent and routine appointments.

(2) Inability to document the patient's or provider's desired date of the future appointment.

(3) Inability to specify a particular appointment duration when searching for future availability.

(4) Inability to calculate the total time interval between request and appointment when the appointment has been rescheduled one or more times.

(5) Inconsistent use of the scheduling system within and across facilities due to locally developed "work-arounds" devised in response to deficiencies in the scheduling software.

The current software does not support local business needs and is viewed as an obstacle rather than an asset. Tasks such as managing rotating house-staff (with concomitant changing and unpredictable staffing levels, difficulties in achieving continuity of care and requirements to transfer appointments from one provider to another), scheduling visits far into the future, scheduling across facilities, viewing a patient's appointment schedule from a VISN perspective and linking appointments together (such as laboratory or radiology visits preceding a provider encounter) are only marginally supported by the current Scheduling System. It is believed that a major overhaul of the Scheduling System is required in order to facilitate these types of activities.

The VA is considering another software patch that will collect waiting times for all appointment types by recording the date the appointment is desired and the date the appointment is scheduled for. This will produce waiting times that have some elements of patient preference built into them and will be able to collect waiting times for all patients. This patch will help produce a more complete view of waiting times but does not substitute the need to rebuild the existing software.

Question. What types of ongoing data reliability problems might persist?

Answer. Waiting times are a new measure. As with all new measures, data reliability is an issue during the first few early runs. As concerns arise, they are solved (e.g. the first pilot run of the measure indicated a problem with the clinic numbers that designate a primary care clinic). The issue was addressed and resolved. There will be ongoing evaluations to identify future issues.

Question. What is VHA's basis for selecting the six clinics—audiology, cardiology, ophthalmology, orthopedics, primary care, and urology—that will be measured?

Answer. Initial entry into the VHA is through the Primary Care provider or clinic, therefore Primary Care clinics were chosen. The other clinic choices resulted from historical qualitative information about diagnoses that lead to high clinic loads and historical problems with hiring specialists.

Question. How will VHA ensure that improved timeliness for the six clinics is not achieved at the expense of other clinics?

Answer. Each quarter the Performance Measurement Workgroup reviews the findings of all measures. The waiting times reviews will include not only those selected, but all clinics. This evaluation will be used to determine the performance measure for upcoming years. This baseline clinic information will be used to track progress and to determine if any other clinic waiting times are increasing. Selected clinics for subsequent years will change according to the findings of these reviews.

RESERVE

Question. Each year VA has a national reserve for "emergencies." What is the process for allocating the reserve?

Answer. The reserve is used as a source of funding for new activities or to supplement existing activities during the year. VHA's Screening and Evaluation Committee releases funds from the reserve after review, recommendations by the Policy Board, and approval by the Deputy Under Secretary for Health. If there is a current year funding balance at or shortly after mid-year that is not expected to be needed for other emergencies, it is distributed to the networks using the VERA methodology.

Question. How much is left in fiscal year 2000 reserve funds?

Answer. The current balance in the reserve, originally \$150 million, is now \$42.7 million.

Question. Have any networks requested additional Hepatitis C funds?

Answer. VA has not had any requests from networks for additional Hepatitis C funding. However, Network 3 requested supplemental funding for fiscal year 2000 and included Hepatitis C workload as part of its justification. Its total request was \$102 million and \$66.2 million was approved.

TWO-YEAR FUNDS

Question. Last year the Committee agreed to the administration's proposal to make available for 2 years about 5 percent (\$900 million) of the medical care appropriation. How much do you anticipate you will carryover, and can you give me assurances these funds aren't being inappropriately squirreled away when needs exist now?

Answer. VA still embraces the concept of 5 percent of appropriation as no-year funding to provide maximum beneficial use for veterans health care of all funds Congress provides. Last year Congress set the level as an absolute amount at \$900 million. That level was close to the 5 percent amount of the 2000 appropriation level. The \$900 million level provides sufficient flexibility for fiscal year 2001 and we will adjust it in the fiscal year 2002 budget request.

VHA has no intent to withhold dollars inappropriately or otherwise to compromise the intent of Congress. Two-year availability provides flexibility to management in those cases where funding priorities need to be addressed.

HEPATITIS C

Question. A year ago, we were told that VA spending for hepatitis C might need to be \$500 million or more in fiscal year 2000. At that time, there was question as to the prevalence rate in the veteran population, as well as uncertainty about what percent of patients afflicted with Hepatitis C might be well-suited for the new combination treatment. Does VA have a better handle on the prevalence rate in the VA population?

Answer. The prevalence rate from the one day Surveillance sample of March 17, 1999, was 6.6 percent. Two ongoing clinical trials (one funded by VHA and one by industry) should provide more precise data within the next several months.

Question. How many patients are currently receiving the new combination therapy, and what is your current estimate of the number of enrolled veterans who would benefit from treatment?

Answer. According to current information approximately 1,200 patients are receiving combination therapy for hepatitis C. The medication was not approved by the FDA until December 1998 and was placed on the VA formulary in February 1999. Currently only 20 percent of our HCV positive patients are believed to be clinically appropriate for combination therapy. This is based on both expert opinions by VA hepatologists and early evidence from an ongoing clinical trial where appropriateness for treatment in clinical study patients ranges from 0 percent to 40 percent. Many patients do not have evidence of cirrhosis on liver biopsy and, therefore, are not presently believed to require treatment with interferon and ribavirin. Other patients have cirrhosis that is too severe to be improved by treatment. All patients who are not presently being placed on combination therapy are still followed for any change in their clinical status which might make them eligible for treatment at another point in time. Also, some patients refuse treatment after they are informed of the risk and benefits, and many drop out due to side effects.

Question. According to the budget, VA estimates it will spend \$195 million in fiscal year 2000 on Hepatitis C, while the original budget estimate had been \$250 million. Yet for the first quarter of this year, VA hospitals have reported that they have spent only \$9 million. Whether the field is not coding information properly, or if in fact they're only spending \$9 million, in either case this points to a huge problem. These numbers give us no confidence in the estimates we see in the budget justification. Can you explain the numbers? Why is spending so much less than the \$500 million we anticipated last year?

Answer. Last year's (fiscal year 2000) and this year's (fiscal year 2001) budget estimated the following costs for Hepatitis C:

HEPATITIS C COST ESTIMATES

[In millions of dollars]

Budget	Fiscal years—		
	1999	2000	2001
Fiscal year 2000 President's Budget	114	250
Fiscal year 2001 President's Budget	46	195	340

Fiscal Year 2000 and Fiscal Year 2001 Budget Estimates.—Although the Hepatitis C funding model was used in formulating estimates for both fiscal year 2000 and

fiscal year 2001 budgets, the cost estimate differences between the two budgets can best be summarized as follows:

The fiscal year 2000 budget model assumed more patients would be evaluated and treated in fiscal year 1999 and fiscal year 2000 than that predicted in the fiscal year 2001 budget for the same years. VA believes that the surge of patient workload is likely to occur in the fiscal year 2001 due to the increasing veteran awareness, education and training of staff and to VA's promotional efforts to identify patients of high risk for this disease.

It is important to note that the unit cost assumptions in the fiscal year 2001 budget are higher. However, the overall total cost estimates are lower than that estimated last year due to a more conservative assessment of screening and patient workload for fiscal year 2000.

Actual Costs Compared to Estimates.—The original estimates for Hepatitis C were based on a model developed in VA that included cost and workload assumptions on screenings, tests, and treatments. With the availability of hard data (actual costs), a transition will be made from modeled baseline costs to actual baseline costs. At this time, some actual information is available for fiscal year 2000, although somewhat limited. Using available information we have estimated costs for screenings, tests for patients testing negative, clinic and counseling staff for patients testing positive, and education costs not available in actual cost reporting. Projecting actual and estimated costs for the full year results in a current Hepatitis C estimate of just under \$100 million for fiscal year 2000. In addition, VA will spend approximately \$1.8 million to support the two Centers for Excellence for Hepatitis C and national training efforts in fiscal year 2000. We are taking steps to capture more complete information on treatment of patients who are HCV positive and to improve our cost accounting for these patients. An automated Hepatitis C registry with a clinical reminder patch is currently being tested and is expected to be fully operational later this summer. This updated system will permit VA to better track its Hepatitis C efforts and their associated costs. Also, we are reviewing our program and its funding to ensure that our facilities and providers have the proper incentives to aggressively pursue the goals of this program.

Question. Recognizing that Hepatitis C treatment is very expensive, and given VHA has apparently limited both the scope of its outreach efforts and the pace of screenings, can it be concluded that VHA's hepatitis C spending plan is more budget-driven than needs based?

Answer. The scope of outreach efforts has not been limited and the pace of screening has significantly increased in a number of Networks. Recently the local chapters of the Vietnam Veterans of American held screening efforts in several cities in conjunction with Miss America, an effort sponsored by Schering-Plough. The turnout was disappointingly low, but VA Medical Centers across the country provided support to these efforts. On March 31 and April 1, the American Liver Foundation also held screening efforts in five cities in cooperation with the national offices of the major Veteran Service Organizations (VSOs). Again, the turnout was lower than expected, but the efforts continue.

The Chief Consultant, Acute Care Strategic Healthcare Group also made a presentation to the Hepatitis Foundation International regarding VA's efforts. This organization's membership is largely individuals who have either Hepatitis B or C, and this organization has already been helpful in providing educational materials for patients.

A presentation about Hepatitis C and liver transplantation was held May 4, 5, and 6 on the Mall for Public Service Awareness Week. At the booth VA provided patient information and answered questions from the public. Outreach efforts are also a part of each network plan. It is VA's intention that every patient is asked about his/her risk factors for HCV, and tested if appropriate or if the patient requests a test. VA has developed a clinical reminder system that is currently in beta testing. The purpose of this system is remind clinicians to screen all veteran patients for HCV risk factors. Full implementation of this system is expected in the near future and should ensure that 100 percent of enrolled veterans are screened for risk factors.

Based on their risk factors, veterans are then referred for HCV testing. The pace of such screening, testing and treatment is dependent on having in place the appropriate education, infrastructure, and resources. Appropriate clinical staff are being recruited and educated to meet these needs. Programs of this magnitude require time to develop, implement, and subsequently evaluate.

The Acute Care Strategic Health Care Group program office has worked with the Centers of Excellence to support the networks' effort with the appropriate provider education materials and presentations, and counseling materials and educational sessions. This office has assisted in outreach through public relations; published ar-

titles in both the lay press and professional journals; and provided network management with feedback from the HCV Registry in order to assist them in assessing their needs.

Question. I understand that last year, VA spent \$657,000 on six projects directly related to Hepatitis C, and expects to spend \$1.2 million this year. Is this enough, to really get a better handle on this disease and treatments?

Answer. In fiscal year 1999 the VA expended \$5,549,009 on 34 projects related to liver disease; \$2,639,091 was expended on 24 projects related to Hepatitis; and \$657,031 on six investigator-initiated projects directly related to Hepatitis C. This was an increase for Hepatitis C from fiscal year 1998, when \$298,433 was expended on three projects, and reflects the increased interest in Hepatitis C as an emerging pathogen. Starting July 2000, we anticipate funding a Cooperative Study, entitled "Epidemiologic Multi-Site Hepatitis C Virus (HCV) Study." This will cost approximately \$500,000 in fiscal year 2000, raising the total VA Research expenditure this fiscal year to \$1.3 million. In fiscal year 2001, the Cooperative Study will be fully funded for \$1 million. This will result in an estimated expenditure in fiscal year 2001 of \$1.9 million on Hepatitis C research provided the VA Research budget remains level. This represents an almost 300 percent increase in spending on Hepatitis C research from fiscal year 1998 to our projection for fiscal year 2001. At present, \$1.3 million is adequate as it represents what VHA can appropriately spend on scientifically meritorious proposals dealing with Hepatitis C. As time goes on, we anticipate more meritorious proposals on the topic, and we will endeavor to fund them as they are approved. Presently, the number of meritorious proposals, not the amount of money, is the limiting factor.

MANAGEMENT EFFICIENCIES

Question. Last year, General Accounting Office (GAO) indicated that approximately \$600 million of the "management efficiencies" that VA's 22 networks identified as potential cost-savings measures for fiscal year 2000, could be undertaken without jeopardizing patient care. How much of the \$600 million in initiatives identified by GAO and VA are being implemented with funds redirected to health care?

Answer. VHA is in the process of implementing approximately \$348 million in cost savings measures.

Question. How much is left to make VA health care truly cost-effective?

Answer. Achieving cost effectiveness is not a one-time effort. It is an on-going process. There will always be elements within VHA, as with any public or private business, that can operationally improve. VHA's task is to continue to monitor and assess its operations to: identify areas where efficiencies can be implemented; to utilize the skills of its work force to identify areas available for improvement; participate with the private sector to determine best management practices; and, be forward thinking and willing to improve management practices and provide more appropriate health care. Significant progress has been made by VHA in the last few years and more is expected. Since fiscal year 1996, VHA has reduced cost per unique patient by 8.25 percent (18.25 percent in constant dollars) through management efficiencies.

Question. Have "best practices" been standardized throughout the system?

For example, the IG recently reported that centralizing food productions within a network is a best practice that should be adopted by all networks if feasible.

Another example, the IG did a recent report on management of prosthetic supply inventories, and found better management could lead to \$31 million in savings.

Answer. Best practices are commonly applied throughout VHA. Examples include: clinical guidelines implementation, health promotion/disease prevention, management of chronic disease, patient safety initiatives, management and care of Human Immunodeficiency Virus (HIV)/Acquired Immune Deficiency Syndrome (AIDS) patients, homeless—care and psycho-social intervention, IHI collaborative on waits and delays, and care and treatment of PTSD. Another example is the standardization of pharmaceuticals which has resulted in cost savings of approximately \$650 million. Now, VHA is implementing standardization of Medical/Surgical supplies.

ENROLLMENT

Question. VA is in the second year of open enrollment. What has been VA's experience to date—has it met or exceeded expectations in terms of the numbers of veterans who have signed up for care?

Answer. VA is experiencing a slight increase in enrollees from fiscal year 1999 to fiscal year 2000. This would bring us to approximately 4.3 million veterans—2.8 percent more than fiscal year 1999. This is consistent with our expectations.

Question. What percentage of veterans who enroll are actually using VA for health care?

Fiscal year	Patient users	Total enroll-ees	Percentage
Fiscal year 1999	3,177,216	4,520,012	70.3
Fiscal year 2000 ¹	2,849,189	4,411,859	64.6

¹Fiscal year 2000 data is through March 2000. Additionally, the total enrollee definition was modified from fiscal year 1999 to fiscal year 2000.

Question. How many people are enrolling and using VA primarily to “fill in the gaps”—say for inexpensive prescriptions and eyeglasses?

Answer. VA can give an estimate of those types of people by identifying the “non-vested” (those not receiving a full range of services) priority 7 patients in VERA. Of the approximately 85,000 non-vested priority 7 veterans, 687 used prosthetic services (which includes eyeglasses) and 18,000 received pharmacy services.

HOMELESS

Question. How does VA evaluate the effectiveness of its various homeless initiatives?

Answer. VA’s Northeast Program Evaluation Center (NEPEC) has been monitoring and evaluating VA’s homeless veterans programs since the programs began in 1987. The program monitoring and evaluation system uses structure, process and outcome measures to evaluate the effectiveness of the homeless veterans programs. Clinicians assigned to the homeless veterans programs across the country complete intake forms when homeless veterans are first enrolled in the program and complete discharge summary forms when veterans are discharged from the program. The data gathered on each homeless veteran at admission and discharge is analyzed and used for program evaluation.

Outcome measures that are used to evaluate the therapeutic effectiveness of the programs include:

- percentage of homeless veterans who are housed at the time of discharge;
- percentage of homeless veterans who are employed at discharge; and
- clinical improvement for mental health and substance abuse problems.

In addition to the ongoing monitoring of the homeless veterans programs described above, NEPEC conducted an observational outcome study of the initial Homeless Chronically Mentally Ill (HCMI) Veterans Programs at nine pilot sites to assess the long-term effectiveness of the services offered by these programs. A total of 406 veterans completed follow up interviews and the average number of months from time of admission to final follow-up interview was eight months. Significant findings from this observational outcome study were as follows:

Greater numbers of contacts between homeless veterans and the clinical staff of the HCMI Veterans Program was significantly associated with greater improvement in four outcome measures: (1) veterans had less psychological distress; (2) veterans had reduced severity of alcohol problems; (3) veterans had fewer days of substance used; and, (4) veterans spent fewer days homeless.

The longer duration of homeless veterans’ involvement in the HCMI Veterans Program was related to improvement in the number of days housed from the time of discharge to the time of the follow-up interview.

The greater number of days in community-based residential care was associated with greater improvement in: (1) number of days housed from the time of discharge to follow-up; (2) number of days employed from time of discharge to follow-up; and, (3) size of social network at follow-up.

Although this observational outcome study was conducted several years ago, the structure of VA’s core-homeless veterans programs (i.e., outreach, treatment, case management, and contract residential care in community-based programs) remains essentially the same. The results of this study are applicable to VA’s programs as they exist today.

VA continues to monitor the outcome of residential treatment through clinician discharge summaries. In addition, at General Accounting Office’s request, we are starting a new series of outcome studies.

NEPEC is also completing data collection and analysis of a five-year, long-term follow-up study of homeless veterans who received standard care in the HCMI Veterans Program and homeless veterans who received services in the Housing and Urban Development—VA Supported Housing (HUD–VASH) Program. The HUD–VASH program provides permanent housing to homeless veterans through dedicated

Section 8 housing vouchers made available by HUD, and VA clinicians provide ongoing case management services to help these homeless veterans find permanent housing and remain in it. While the HUD-VASH demonstration program exists at 35 locations, four pilot sites were selected to participate in a rigorous experimental design approach. Homeless veterans at these four pilot sites were randomly assigned to: (1) Section 8 Vouchers plus Case Management; (2) Case Management Only; or (3) HCMI Veterans Program Treatment (which includes relatively short-term transitional residential care in community-based facilities that are under VA contract).

The purpose of the HCMI Veterans Program/HUD-VASH Program long-term outcome study is to compare the effectiveness of three types of services that are being provided to homeless veterans. In this study, care provided in the HCMI Veterans Program is considered to be standard care while case management only and case management plus vouchers are considered to be new models of treatment.

Outcome measures for the HCMI Veterans Program/HUD-VASH Program Study include housing stability, clinical status and employment status. Veterans who were assigned to these three models of care have been followed for several years and have been interviewed on a quarterly basis. Results of this study will provide important information on the types of services that are most effective in helping homeless veterans achieve housing stability, clinical improvements, and meaningful employment. This study was started five years ago and was designed to address questions concerning long-term effectiveness of VA's homeless veterans programs. Results of this study will be available in 2001.

Question. How does VA ensure each VA hospital has effective programs, particularly in those geographic areas where a large homeless population exists?

Answer. All VA medical centers with specialized homeless veterans programs comply with NEPEC's evaluation procedures. Information about workload for each homeless veterans program is compiled and sent to each program coordinator and VA medical center director. NEPEC uses 32 key measures to assess therapeutic and cost effectiveness. Any program that fails one standard deviation from the national average in a negative direction on a given measure is identified as an outlier. Program coordinators and VAMC Directors have an opportunity to compare their programs with others and modify program operations if necessary. Programs are asked to address the causes of outlier status and identify plans for remedial action. These changes are reviewed in the subsequent year's report.

Question. Does VA track staffing and funding levels in each medical center dedicated to homeless services? If not, why not?

Answer. Yes. Tracking staffing and funding levels is part of the NEPEC evaluation system.

Question. The CHALENG legislation (Public Law 102-405) required VA to assess and coordinate the needs of homeless veterans living within the area served by the medical center or regional office. What progress has VA made in implementing that legislation?

Answer. VA has been coordinating Project CHALENG (Community Homelessness Assessment, Local Education and Networking Groups) for the past five years. Each VA medical center has appointed a CHALENG Point of Contact to work with representatives from other federal agencies, state and local governments and nonprofit organizations to identify the needs of homeless veterans and to develop action plans to meet those needs. The CHALENG process usually involves one or more meetings per year and gives both VA and non-VA staff an opportunity to discuss homeless veterans issues. In 1999, 2,651 people participated in CHALENG activities across the country. Of the total participants, 15 percent were VA staff and 85 percent were community participants. Approximately 8 percent of the participants were homeless or formerly homeless veterans. As in past years, the need for transitional housing, permanent housing, transportation, day treatment programs, eye care, dental care, childcare, legal assistance and guardianship were identified as some of the greatest needs of homeless veterans. VA staff has also identified plans that have been jointly developed by VA and community partners to address these unmet needs.

Question. Are all medical centers implementing the law fully?

Answer. In 1999, 92 percent of all VA medical centers participated in Project CHALENG with 8 percent failing to comply with the legislation. Those sites have been contacted and we expect 100 percent compliance next year.

COMMUNITY BASED OUTPATIENT CLINICS (CBOCS)

Question. VA's goal is to have a total of 659 community-based outpatient clinics by 2003; VA estimates it will reach that goal in fiscal year 2001. What is the basis for that number?

Answer. CBOCs are defined as all outpatient clinics except; hospital based, mobile, and independent clinics. The 659 was a combination of clinics existing prior to the 1995 legislation, opened between 1995 and 1997 as reported in the 1998 VA Accountability Report, and projected 1998–2002 by the networks in their 1998–2002 strategic plans. Each network, as part of the strategic planning process, evaluates veteran needs and service delivery options which will result in a full continuum of care. Access to outpatient services is an integral part of providing a full continuum of care and CBOCs are identified in the Strategic Plan. When meeting veterans' need for services is hampered by access, Networks plan new CBOCs.

Question. With 659 CBOCs, will there be adequate access, and equity of access, throughout the VA system?

Answer. Equity of access is relative and definitional. VHA strives to assure that all veterans who use VA have access to all needed service as close to their home as possible. There are challenges in doing this. More CBOCs continue to be proposed and established which will increase convenience of access. At this time, 80 to 85 percent of veterans have access to care within 30 minutes or 30 miles of their homes.

Question. How many total new users have come to the VA in the last 4 years through CBOCs?

Answer. Using the definition of a new user as someone who has not received VA health care services during the previous three fiscal years, during the time period of fiscal year 1996 to fiscal year 1999, there were 374,127 new users who came to VA through CBOCs. This data only captures those new patients who had their first encounter at a CBOC versus at a parent facility.

<i>Fiscal year</i>	<i>Number of new users first seen in CBOC</i>
1996	72,452
1997	70,222
1998	95,720
1999	135,733

Question. Are the CBOCs actually providing care more cost-effectively? If yes, on what basis can you claim this?

Answer. A CBOC Performance Evaluation study is being conducted and should be completed by early summer. This study will include information on cost effectiveness. Preliminary indications, based on a sample, indicate that primary care costs may be higher but are offset by lower specialty and inpatient costs resulting from early intervention.

Question. What is the total fiscal year 2000 and fiscal year 2001 cost of the CBOCs?

Answer. In order to obtain accurate current and projected costs, a field survey has been conducted and the information is being compiled and should be available by the end of summer.

BUYOUTS

Question. VA estimates it will buyout 4,400 VHA employees in fiscal year 2000–2001. What is the basis for predicting the number of employees who would accept buyouts?

Answer. VHA was provided authority to use up to 4,400 buyouts in fiscal year 2000 and the first quarter of fiscal year 2001 through the Veterans Millennium Health Care and Benefits Act, Title XI—Voluntary Separation Incentive Program. As VHA committed in discussions with Congressional staff, the positions eliminated as a result of these buyouts are no longer needed as the result of improvements in healthcare services delivery or through efficiencies gained through organizational restructuring and business process re-engineering. In their place, new or restructured positions will focus on direct health care delivery, quality and safety improvement and improving access to care.

VHA's estimates of potential buyouts were based on the Buyout Operational Planning process we completed in December 1999 to obtain Office of Management and Budget (OMB) approval to implement our Buyout program. Through this process, all VHA facilities were surveyed and asked to estimate the number of potential buyouts they may expect based on their individual organizational plans. Based on this Buyout Operational Plan, we anticipate that we will use from 3,000 up to the 4,400 maximum buyouts allowed by December 31, 2000. We expect that the majority of these buyouts will come from administrative and clinical positions impacted by reduced inpatient care programs and from organizational and business process efficiencies.

As noted above, VHA will use the resources freed through this effort to add new or restructured positions to support achievement of VA's goals to improve quality

and access to care (predominately through expansion of our outpatient healthcare programs) and to expand our patient safety program. VHA will establish and fill these new positions as specific needs are identified and as associated program and organizational plans are implemented. Based on trends in earlier Buyout programs and on employee retirement patterns in general, we expect that large numbers of buyouts will occur around fiscal and calendar year boundaries. On the other hand, new positions will be continually established as buyout savings accrue and program and organizational plans are implemented throughout the fiscal year.

Question. For the projected level of accepted buyouts, how many FTE can be realized in fiscal year 2000-fiscal year 2001?

Answer. While it is difficult to predict with any great degree of accuracy this early in the Buyout program, we anticipate that the number of new positions established in fiscal year 2000 and fiscal year 2001 will approximate the number of buyouts given in each of these fiscal years. VHA has implemented a monthly reporting process to ensure effective monitoring of our Buyout program and we are actively managing the program to ensure that we fully comply with the intent of the law, especially to not use buyouts to reduce full time equivalent employment in VHA.

COLLECTIONS

Question. What progress has been made in improving VA's collections of third-party payments?

Answer. Billing third party carriers using Reasonable Charges is vastly different from previous billing and includes a significant increase in the type, amount, and complexity of information required to prepare the claims for each episode of care, higher standards for the accuracy and completeness of clinical data and documentation required to support each claim, and the procedures needed to post reimbursement to first party copayment and third party accounts. Since the implementation of Reasonable Charges on September 1, 1999, networks have provided staff training to address issues of documentation, coding, and compliance. They are entering into agreements with carriers for payments. A Reasonable Charges workgroup has been formed to address the operational issues that the field encounters as we continue billing under Reasonable Charges. Third party receivables have gone from a low \$63 million in October to a high of \$185 million in March. First-party collections appear to be following this trend as well.

Question. Are you satisfied with the progress that has been made in the last year, and why does VA continue to fall short of its goals?

Answer. The field is going through a massive training effort and the results are just now beginning to be seen in increases in receivables and collections. We are satisfied that progress is being made and are encouraged by the fact that revenue exceeded prior collections for the month of March. Collections reached \$55.5 million in March, our highest collection month ever.

Question. What is the status of VA's compliance with HCFA requirements for billing and coding?

Answer. VHA has taken a position that we will strive to meet HCFA requirements. Due to the complexity of the issue and the impact that compliance with HCFA standards may have on medical center operations, VHA has decided to conduct an Impact Analysis of meeting HCFA standards. An independent consultant that understands VHA policies and HCFA requirements will conduct the Impact Analysis. A contract was awarded in May and we expect to have the analysis completed within 60 to 90 days. VA expects the contractor to conduct a comprehensive analysis of the circumstances and issues surrounding VHA's ability to meet Medicare/HCFA standards specifically as it relates to resident billing and supervision. The recommendations and findings from the study are expected to provide a more clear understanding of the impact on VHA operations and quantification relative to resources and effect on revenue in meeting HCFA standards.

Question. The Independent Budget has as one of their key recommendations, that VA should have authority to contract out its medical care collections. Do you agree?

Answer. VA currently is in the process of developing a pilot test to determine the most feasible way to do medical care collections, either by internal franchise or by contracting out. VA agrees that it should have the flexibility to contract out, if it proves to be more effective than in-house collections.

Question. Is VA confident it will collect the \$958 million estimated in the budget for fiscal year 2001?

Answer. Collection of \$958 million is dependent on VHA making timely policy decisions on how to implement various provisions of the Millennium Health Care Bill, capturing those decisions into regulations, issuing draft regulations, receiving comments, and issuing final regulations. Implementation of the Millennium Health

Care bill will require major software changes to the Veterans Health Information Systems and Technology (VISTA) system as well as an extensive educational effort. Reaching \$958 million will also depend on VA and Department of Defense agreeing on how to implement the "Priority 7 retiree" provisions, and implementing those provisions nationwide. If those two processes are completed early in fiscal year 2001, VA believes the \$958 million estimates are obtainable.

Question. If not, what are the consequences, particularly in view of VA's proposal to return to Treasury 50 percent of the first \$700 million in collections?

Answer. VHA has projected that returning \$350 million of the \$958 million in collections to Treasury is possible without negatively impacting patient care since the President's Budget includes an additional \$350 million in its estimate to offset new costs imposed by the Millennium Bill.

COMPUTER SECURITY

Question. According to the Secretary's opening statement, VA is working to improve its information security program. Have there been incidences of hackers intruding into VA systems? Please explain. How much is included in the budget to implement VA's computer security improvements which are described in today's testimony?

Answer. VA has experienced one known outside attack. An outside party attacked VA's public website on October 25, 1999. The website's content was defaced with a hacker's signature message but was restored to its normal appearance in a few hours. VA operates numerous connections to the Internet. Tests conducted by VA indicate some of these connections are vulnerable to attack. Further, some of these connections are not adequately monitored to recognize attempted or successful intrusions. VA's national information security plan calls for a strategic investment of \$83.3 million over the six-year period fiscal year 2000 through fiscal year 2005 to address the Internet attack vulnerability, as well as other kinds of information security weaknesses. The annual cost for fiscal years 2000 to 2002 will average \$16 to \$17 million. Beyond fiscal year 2002, the program will level to about \$10 million per year. The national plan was approved by the Capital Investment Board, and is included in VA's fiscal year 2001 submission as a budget neutral item. VA will face difficulties constituting a national security fund from multiple appropriations because formal management mechanisms to do so are unavailable.

MILITARY RETIREES

Question. According to VA's budget, VA anticipates receiving \$182 million in DOD reimbursements. What is the status of VA's negotiations with DOD?

Answer. The two Departments and the Office of Management and Budget (OMB) are working together to resolve some implementation issues in preparation for the development of the memorandum of understanding (MOU) that is required by the statute. We remain hopeful that we will be able to meet the date of August 31 for completion of a MOU.

Question. Are you confident a MOU will be in place prior to the start of the fiscal year?

Answer. Although there are some difficult legal issues (reimbursement issues, current status of TRICARE and users of Military Medical Treatment facilities) to address, all parties concerned are seeking to have a MOU in place by the deadline.

Question. What is the basis for \$182 million in reimbursements, and how many military retirees do you anticipate serving in fiscal year 2001?

Answer. DOD and VA jointly developed the \$182 million estimate that VA would receive from DOD for providing services to DOD beneficiaries. This is a "best guess" estimate since neither VA or DOD have the appropriate statistics on the number of military retirees who currently use or will now use VA health services due to the provision.

Question. What is the current number of military retirees using VA medical care services?

Answer. Although we do not have this information currently, VA is in the process of matching patient records against the Defense Eligibility and Enrollment System and should have better data this summer.

LONG-TERM CARE

Question. VA's budget includes \$548 million to fulfill the requirements of the Millennium Act, an increase of \$350 million over the current year. According to the veterans service organizations, an increase of \$459 million is needed for the new long-term care initiatives and \$270 million is needed to cover the costs of expanded emer-

agency care. Have you looked at the VSO's analysis? Why is there such a large discrepancy between your estimates and theirs?

Answer. VA has not had the opportunity to review the methodology supporting the veterans service organizations' cost estimates of Public Law 106-117. VA is seeking that information and will provide a final response to this question once complete.

Question. Are you confident sufficient funds have been included?

Answer. VA is confident that funds available in fiscal year 2000 and proposed in fiscal year 2001 are sufficient to meet the implementation costs of Public Law 106-117.

CAPITAL ASSET REALIGNMENT

Question. Capital asset realignment is the most important next-step for VA to ensure it expends its medical care dollars effectively for health care. Only about 25 percent of facilities currently are used for direct-care. And GAO estimated last year VA is wasting about \$1 million a year on unneeded infrastructure. GAO recommends that VA's Capital Investment Board—which manages the process of prioritizing construction projects—be given responsibility for capital asset realignment. Do you agree? Please explain how VA will be addressing the concerns and recommendations in GAO's testimony of today.

Answer. GAO concluded that VHA is spending 25 percent of the medical care appropriation on operating, maintaining, and improving buildings and land nationwide. Based upon the fiscal year 2000 proposed medical care appropriation these costs would be approximately \$4 billion. These expenditures are based on activities that GAO includes in asset ownership, such as administration, engineering, environmental, security, textile services, food services and capital investment. These expenditures represent the total costs of asset ownership and not the potential savings. GAO estimated that \$365 million of the \$4 billion could potentially be saved if VA stopped operating and maintaining unneeded buildings. GAO based their savings estimate on their finding that \$20 million could be saved if VA closed one of the four VA hospitals in the Chicago area. GAO then assumed that approximately 18 locations of VA's 40 multi-facility markets could be removed from service at savings (generalized from the Chicago estimate) of \$20 million each. The GAO estimate of \$365 million or \$1 million a day would be a result of these locations being removed from service. According to GAO, approximately 50 percent of the savings consists of reductions in personal services and 50 percent would be for all other costs. GAO is in agreement with VA that \$365 million represents a portion of the \$4 billion asset ownership costs that could be potentially saved by realigning VA's capital assets.

We do not agree with GAO's recommendation that the VACIB be given operational responsibility for capital asset realignment. The VA Capital Investment Board has accomplished much over the past three years in the development of the Capital Investment Methodology and in improving the Department's capital investment decision making. VHA needs to take advantage of this experience and the lessons learned by the Department VACIB. There are many reasons that the responsibility for capital realignment should reside in VHA. The primary reason is Capital Asset Realignment for Enhanced Services (CARES) must respond to patient needs and services and the enhancement of those needs and services to veterans. VHA is clearly the best organization to focus the initiative on appropriate patient and clinical issues.

VHA agrees with GAO, in the need to develop objective and measurable criteria that can be used to evaluate the service delivery options and the associated capital realignment proposals that will result from the (CARES) process. VHA is currently developing criteria in conjunction with Department offices, and GAO staff, that will result in a decision model that will be similar to that used by the VACIB to evaluate major capital investments but will focus on patient outcomes such as quality and access to services in addition to resource utilization and cost.

As stated at the hearing, VHA will provide a report to the subcommittee within 30 days that will identify the broad evaluation criteria that have been agreed to and will outline the process to involve stakeholders in the development of criteria weights, specific identification of quantifiable sub-criteria, identification and linkage of specific data to each of the sub-criteria, development of rating scales for evaluating the proposed options and incorporation of all of this into a methodology that will be used to evaluate CARES study recommendations. In addition, the final report and completed methodology, including specific criteria and sub-criteria with relative weights and the rating scales will be provided in 60 days.

VA recognizes the need to raise the importance of asset management at both the Department and Administrative (VHA, VBA, and NCA) levels. The Department and Administrations including VHA also need to have staff dedicated to the improvement of the management of capital assets.

Currently, VA does not have a comprehensive asset management program. In order to meet this need, VA proposed the establishment of a Department level office for Capital Asset Management in the fiscal year 2001 Budget Submission. This office would provide corporate policy and direction to other aspects of asset management including, but not limited to, asset utilization and disposal. The functions of a capital asset management program would include policy development, planning, investment strategies, portfolio management, performance measurement, and administration. Also, as with the implementation of the VHA Capital CARES studies, this office would work to ensure a Department-wide perspective on capital investment decisions made, with respect to the needs of VBA, NCA, and staff offices.

Question. What is the status of the Chicago realignment, and when will a final decision be made?

Answer. The VISN 12 Delivery System Options Study was commissioned by Dr. Kenneth W. Kizer, former Under Secretary for Health, in response to a GAO report that recommended the closure of a VA hospital in the Chicago area. In August 1998 the Veterans Health Administration charged a steering committee to develop a report with recommended options for restructuring the delivery of health care to veterans in the Chicago area. The recommended options were to increase the efficiency of the VA health care system by planning for the best use of capital assets in the long term while maintaining or improving the quality of care and ensuring the availability of health care to veterans for many years.

The Veterans Health Administration received in excess of 5,000 comments in response to this VISN 12 Delivery Options Study report. The comments were categorized into broad topic headings and provided to a Review Task Group who met at the end of January under the auspices of the Special Medical Advisory Group (SMAG). The goals of the Review Task Group were to review and evaluate comments received, consider the impact of the comments on the original study options and provide a revised prioritized set of options if indicated.

At an April 5, 2000 House Committee on Veterans' Affairs Subcommittee on Health hearing, VA received congressional guidance on capital asset planning which is applicable to the VISN 12 Delivery System Options Study. The Subcommittee asked VA to develop and adopt objective, measurable criteria for formulating and evaluating options for restructuring the delivery of health care. Presently the Veterans Health Administration is working with VA Office of Financial Management and the General Accounting Office in the development of this criteria. Stakeholder comments will be sought, the criteria finalized and then once developed, will be applied to the various VISN 12 options identified by the Review Task Group.

The outcome of the application of the criteria to the various options will be shared with key stakeholders, as was the case for the first report in September 1999. A second round of comments would extend any decision on the Options Study into fall 2000. Again the purpose of this initiative is to assure that the healthcare needs of veterans residing in the Chicago area are met well into the future.

Question. GAO also recommended that minor construction projects be subject to the same rigorous scrutiny as major construction projects. Do you agree?

Answer. VHA concurs with GAO's recommendations to improve the capital investment decision making process for minor construction projects. A VHA policy directive is being developed and coordinated with the CARES process. This policy for network level capital investment decisions, including those in the minor construction program, will require a multi-level criteria based review. All minor construction initiatives will be subjected to a more rigorous review process at the network level that will include an assessment of minor investments against accepted decision criteria. Following the criteria based evaluation of minor projects at the network these applications will be forwarded to VA Headquarters where a VHA CARES Project Team will validate the proposal prior to implementation by the network. The VA Headquarters' review will ensure that network investment decisions are viable in the context of VHA strategic goals and objectives, statutory requirements, and VA's overall corporate perspective. VHA plans to implement this review process for minor construction projects concurrently with the implementation of the CARES directive in June 2000. Projects in the networks' fiscal year 2001 operating plans will be included.

Question. Will you begin using the Capital Investment Board process for minor construction projects this year?

Answer. The Capital Investment Board process has been developed for reviewing the Department's major capital investment decisions. This process will not be used to evaluate minor construction projects.

Question. Why isn't VA supporting, as it did last year, a Capital Asset Fund to expedite the divestiture of underutilized properties?

Answer. VA continues to fully support the creation of this fund, however, at this time there are a number of intragovernmental issues that need to be worked out before the fund can be established. One of the major issues that needs to be resolved is the how the operations of this fund would relate to the requirements of the McKinney Act that requires that excess Federal properties be offered to homeless organizations. The fiscal year 2000 Capital Asset Fund proposal stated that in order to be exempt from McKinney Act, 10 percent of the net proceeds would be transferred to the Department of Housing and Urban Development to assist in funding homeless assistance groups in local areas. This aspect of the proposal met stiff resistance from some homeless organizations and from other Federal agencies.

VETERANS BENEFITS ADMINISTRATION

Question. A year ago, VA testified that its average days to process claims in 1999 were going to be worse than what was in the budget justification. The budget justification indicated it would take 99 days to process a rating-related action in 1999. It actually took 166 days. Are you satisfied with the progress that has been made in the last year? Why is progress so slow?

Answer. We are not satisfied with the progress that has been made in the last year to improve claims processing timeliness. However, many complex factors have had a cumulative effect on our efforts to improve service. At the same time, we are working to reshape and rebuild the claims process and make changes in our organizational culture and structure that are essential to our long-term success. We are making effort to improve this indicator and we believe have made a good start.

Over the past few years, we have struggled with a number of factors that directly impact our efforts to progress at a more rapid pace:

Workload Management.—We shifted our focus from working newer cases and asked employees to process the older claims. This action was taken to ensure claims continue to move through the system. However, it also caused average processing time to increase.

Because of concerns about our high error rate, we asked employees to take a closer look at the way they process claims. We asked them to write better decisions—decisions which are more easily understood by our claimants and can be sustained through the appellate process.

Increased Difficulty and Complexity of the Workload.—Our employees are faced with significant changes in the body of law governing the compensation and pension programs. Disability decisions must increasingly be prepared using case law rather than a static body of regulations—a more difficult and time-consuming process. The process of evaluating claims using a combination of regulations and precedent decisions is much more complex, and requires additional research time.

VA has made ad hoc changes to the regulations based on the Court's decisions. The consequence of making changes on an ad hoc basis is decreased readability of the regulations. In addition, the changes were written in a bureaucratic and legalistic format which is not easy for employees to interpret. At this time, we are rewriting regulations so that they will have a cohesive structure which employees and veterans can easily understand.

The decisions of the Court have long-ranging effects on our workloads. Precedent decisions which invalidate previously accepted adjudicative practices impact cases in the pipeline and remands. We have also increased the level of resources devoted to training to better support our employees in implementing important Court decisions.

We have struggled with the issue of service-connection for undiagnosed illness for Gulf War veterans. The processing of these claims is contrary to the way we traditionally adjudicate service-connected disabilities. Decisions on undiagnosed illness claims are labor intensive and are therefore completed at the expense of other claims. We have dedicated additional resources to several efforts to ensure that Gulf War veterans claims are properly evaluated.

Changed Organizational Structure.—The first stage of the evolutionary process to our reengineered environment required regional offices to merge Adjudication and Veterans Services Division functions into Veterans Services Centers. While this merger will ultimately result in better customer service, it has required stations to undertake a major cultural and organizational shift. Extensive cross-training of employees must be accomplished. Decisionmakers in the Adjudication Divisions must

now learn or refine their public contact skills and gain general knowledge about other VA benefit programs. Personnel in the Veterans Service Divisions must learn how to adjudicate compensation and pension claims.

We anticipated some service degradation as employees are pulled away from claims processing and customer service activities to undergo training. However, the transition has proven even more labor intensive than anticipated and performance suffered more than expected. We underestimated the magnitude of the training hours required to teach each group of employees the full range of duties and skills needed to function in a merged environment. While we consider this training a critical investment for the future, the enormity of this effort has had an adverse impact on the productivity of the existing workforce. As cross-training is completed and employees are certified in their positions, performance will improve.

Loss of Highly Experienced Decision-Makers.—Succession planning estimates show that about 2,200 decision-makers will be eligible to retire over the next five years. We project that nearly half of this pool of potential retirees will actually retire. In order to avoid a two to three year skill gap, which would exacerbate our service delivery challenges, we have begun a nationwide recruitment initiative to stabilize the C&P workforce.

Question. The number of rating cases pending over 6 months is 68 percent at the Washington, DC RO according to a March “Monday Morning Report,” an increase from the July 1999 level of 66.5 percent. This office appears to be the worst in the nation, and was the topic of debate in last year’s appropriation hearing. Why has progress actually deteriorated there? What has been done to improve their performance? What interventions does VBA take to improve the performance of “problematic” regional offices?

Answer. Significant progress has been made in resolving the workload situation at the Washington Regional Office over the past eight months. The total number of pending claims has been reduced by over 40 percent (from 12,266 at the end of August to 7,417 as of the end of April). While the over-six-month cases may represent a slightly higher percentage of the current pending workload, the actual number of over-six-month cases has been reduced by nearly 2,400 cases. Since September, we have transferred over 4,000 ready-to-rate cases to other Regional Offices for processing. We continue to broker 200 cases per week to our satellite rating activities in Huntington, West Virginia and St. Louis, Missouri.

At the same time, we have made a major commitment to building the technical capabilities of the Washington Regional Office and increasing the Service Center staffing. Twelve senior level technicians and managers were recruited from across the nation to enhance the experience level of the staff and provide a strong base of technical knowledge and training support. An aggressive training program is in place for all Service Center employees, with over 2,900 hours of training completed during the first six months of this fiscal year. Special training classes for rating specialists have been conducted by C&P Service staff experts. Master rating specialists have been charged with reviewing the work of all rating specialists and providing comprehensive rating board training.

Since September, we have transferred over 4,000 ready-to-rate cases to other regional offices for processing. We continue to broker 200 cases per week to our satellite rating activities in Huntington, West Virginia and St. Louis, Missouri.

The Washington Regional Office is concentrating on completing the development of claims and identifying claims that are ready-to-rate so that decisions can be rendered as quickly as possible.

The Washington Regional Office is a member of Service Delivery Network (SDN) 3. The SDN played a key role in identifying and assessing the workload and performance problems of the Washington office. The SDN is jointly responsible for the operations of all regional offices within the SDN, and is therefore working very closely with Washington’s management team to provide assistance and ensure that actions are taken to resolve the situation as quickly as possible.

The performance of all regional offices is monitored continuously through our bi-monthly leadership meetings attended by the SDN team representatives and the headquarters top management staff. At every Leadership meeting, we make it a practice to analyze VBA performance across all business lines and in all SDNs. Each team representative is responsible for identifying significant gaps in performance and discussing actions the SDN has taken to remedy those gaps. We review the success of interventions undertaken to improve performance in offices with more difficult workload situations. This process assures that we are constantly assessing the level of service delivery in all program areas and in all regional offices, and that we are sharing best practices and working together to correct deficiencies and improve performance.

Question. The Veterans Service Organizations and the National Academy of Public Administration in their report a few years ago, recommended giving VA program directors line authority over the 57 regional field office directors. VA has resisted making this organizational change but without it, it seems VA headquarters has no real hammer to effectuate the changes which are desperately needed. Why hasn't VA made this change to ensure standards are enforced and managers held accountable for performance?

Answer. The restructuring of our field organization into Service Delivery Networks (SDNs) was designed to increase the responsibility and accountability of field managers for performance. Through the SDN structure, decision-making authority is pushed down to lower levels of the VBA organization, which then allows us to hold managers accountable for their decisions and their performance—and for identifying and effectuating the changes needed to improve performance.

The regional offices are organized under nine SDNs. Directors and program managers in each SDN function as a team, jointly responsible for the delivery of benefits and services within the SDNs' geographic boundaries. The SDNs operate with a practical degree of autonomy, but we have systems in place to ensure their accountability and measures established that evaluate performance on the basis of improvement and outcomes. Performance measures are tied to our Balanced Scorecard and strategic goals.

In restructuring the VBA organization, we recognized the need to maintain a direct line of authority over the field organization. Ensuring a direct line of authority is particularly critical during the initial stages of our evolution to the team-based SDN structure. This line of authority is provided through the Deputy Under Secretary for Operations and his two Associate Deputies. The Associate Deputies are responsible for overseeing the operations of the Service Delivery Networks, including monitoring performance against goals and standards and assuring progress in the implementation of national policies and initiatives. We believe this structure accomplishes the intent of the recommendation of the National Academy of Public Administration.

Question. VA's budget includes \$54 million in various electronic initiatives to improve the processing system. How much more will be required in the future to complete these initiatives and have a fully automated, 21st century system?

Answer. VBA developed a Compensation and Pension information technology (IT) strategy called Modern Award Processing (MAP) which examines the claims process from establishment through payment and accounting. This strategy provides guidance for current and future IT development efforts.

In 1999, we enhanced our existing technological tools in order to streamline evidence gathering and tracking processes. The Automated Medical Information Exchange (AMIE) system, the Personnel Information Exchange System (PIES), and the Veterans Appeals Control and Locator System (VACOLS) were successful. In 2000, we expect to have several more tools. Single Logon, which is access to our different applications through one password, was available to the field offices on April 17, 2000. Claims Application Processing Systems (CAPS), which is a rules-based system with case management features, will be available at the field offices by September 2000. Rating Board Automation (RBA) 2000, which is an application used by rating specialists to prepare rating decisions, will be deployed in August 2000. The functional requirements for Virtual VBA have been completed and we will begin building shortly. Development and Case Management and Establish Claim & Award Screen/Design also are expected to be available by the end of this year. In fiscal year 2001, we will have other tools such as Electronic Burial Claims and Social Security Administration Data Exchange.

As we become aware of new technology and develop ways to incorporate that technology into the claims processing environment, we will keep Congress informed of our efforts.

Question. A recent Court decision requires that a veteran must submit, without VA's help, enough evidence to prove that his claim is well-grounded, before the veteran is entitled to government assistance in obtaining evidence. Up until now, when a veteran filed a claim, VA assumed the responsibility of obtaining necessary records. I understand this Court decision is very controversial. How does it affect VBA and all the problems VBA has before it, and what is the Department's position on this matter?

Answer. The court decision, *Morton v. West*, affected VBA by invalidating certain internal claims development procedures of the Compensation and Pension Service (C&P Service), which supported full development of all claims, as inconsistent with Congress' intent. It led the C&P Service to develop a new policy for claims development pending the final publication of a revised regulation to liberalize the effects of the court's decision. Under this policy, we inform a claimant of the evidence need-

ed to establish a plausible or “well-grounded” claim. While claimants are gathering required evidence, we request their VA medical records and military records. If, after thirty days, the evidence of record does not establish a well-grounded claim, we will deny the claim on that basis. However, we review any evidence we receive in the subsequent year to determine if the claim has been well-grounded.

The Department believes it is still possible, under this court decision, to fashion a fundamentally workable and balanced sharing of responsibilities between VA and a claimant which will best utilize VA’s available resources. We agree with the Court that the statutory scheme reflects a policy that implausible claims should not consume the limited resources of the VA and force into even greater backlog and delay those claims which are well-grounded. VA has proposed a regulation which recognizes five exceptions to the well-grounded claim requirement for persons for whom the burden of producing evidence to well ground a claim may be especially onerous.

Question. Will the Court’s interpretation worsen the current backlog of claims?

Answer. No, it will improve it. Because a well-grounded claim is accompanied by evidence sufficient to justify a belief that the claim is plausible, including medical evidence, less development action is required to process it. Therefore, we are able to process more claims more quickly. Implausible claims require the most work on our part because the evidence to support such claims is often scant if non-existent, causing multiple requests for this evidence to ensure that we have exhausted all reasonable attempts to find it. Thus, the least meritorious of the claims take up the most time and action on the part of VA. This considerable expenditure of time and effort is counterproductive and causes an overall degradation in the service provided to claimants with plausible claims.

Question. Several pieces of legislation have been introduced to require VA to assist veterans. Does the administration have a position on the legislation?

Answer. We have recommended to Congress that action on this legislation be deferred until the ongoing rulemaking concerning VA’s duty to assist claimants has been completed. Our proposed regulation reflects the conclusion of the Veterans’ Claims Adjudication Commission that a policy of providing unconditional assistance to all claimants is unneeded and would be a waste of time and resources.

VA NURSING HOME

Question. The VA enters into contracts with private nursing homes as necessary for patient placement—do most nursing facilities request to participate in the VA’s Community Nursing Home (CNH) program or does the VA usually seek out nursing homes with whom to contract?

Answer. VA is seeking new Community Nursing Home (CNH) contracts through a national bidding process. Awards are expected in late May/early June 2000. At the local level, CNH Programs will seek out nursing homes to meet a specific care or geographic need. For the most part, CNH is a mature program with a sufficient inventory of nursing homes under contract.

Question. How are CNH applications processed, i.e., are they stored in a centralized and readily accessible record-keeping system? If so, please provide a list of applicants, broken down by state, for fiscal years 1998, 1999 and through March 2000.

Answer. CNH applications are handled locally by a manual process. There is no centralized listing of CNH applications.

Question. Prior to acceptance CNH applicants are evaluated—please describe in detail the CNH evaluation process.

Answer. Local CNH applications are evaluated in one of two ways. The CNH Evaluation Team at the VA Medical Center will review either the latest State Survey Agency (SSA) findings using a hard copy of SSA Form 2567, or the team will review OSCAR (On-Line Survey, Certification and Retrieval) reports. OSCAR reports contain findings of deficiencies for the past 5 years, a catalog of substantiated and unsubstantiated complaints, and patient and staffing profiles. The CNH Evaluation Team is composed of VA staff from Social Work, Nursing, Medicine, Pharmacy, Dietetics, Rehabilitation, Fire Safety, Medical Administration and Contracting. When the team uses the SSA 2567 as their review document, the team will decide which members of the team, other than nursing and social work will make an initial on-site evaluation. Social work and nursing staff will make an initial evaluation in any case. If the team uses the OSCAR system for their initial review, an evaluation visit is not required. VA staff are encouraged to make an orientation visit. Based on the findings of the review and the initial on-site evaluation, if indicated, the CNH team will make a recommendation to the Contracting Officer regarding the home’s application.

Question. Does the VA use standardized forms/records in the CNH evaluation process? If so, please describe in detail how the forms/records are used in the evaluation process and provide copies for review.

Answer. VA does not use standardized forms/records in the CNH evaluation process. This was a deliberate decision, following extensive consultation with VA field staff. No consensus was developed on the need for or content of such standardized forms. Absence of standardized forms, however, does not impact the standard approach and process of the evaluation.

Question. Does the VA conduct on-site evaluations of all CNH applications?

Answer. At this time, VA conducts on-site evaluations of almost all CNH applications. VA is moving away from this approach, finding it of marginal use. VA believes that full implementation of OSCAR-based reviews will provide a better assessment of the CNHs.

Question. What percentage of CNH applicants receive an on-site evaluation?

Answer. This information is not readily available and will require a field survey. The information will be provided in a month's time.

Question. What percentage of CNH applicants are rejected? Please provide a list of rejected nursing homes, broken down by state, for each of the following:

—Rejected after an initial CNH evaluation.

—Rejected after on on-site evaluation.

Answer. This information is not readily available and will require a field survey. The information will be provided.

Question. If the CNH evaluation determines that problems exist, are the CNH applicants notified and given an opportunity to make corrections?

Answer. Continued negotiations with a CNH which has not corrected State-found deficiencies will depend on the scope and severity of those deficiencies and the level of interest/need VA has in/for that particular CNH.

Question. How are rejected CNH applicants notified and are explanations provided for the rejections? Describe in detail whether standardized forms/records are used and provide copies for review.

Answer. Rejected CNH applicants are notified by letter of that rejection and the reasons for it. Standardized forms/records are not used in this process.

Question. Does the VA maintain CNH applicant rejection notification and/or explanation forms/records? If so, are rejection notifications and/or explanations integrated into a centralized and readily accessible record-keeping system?

Answer. VA does not maintain centralized files for local CNH applicant rejections. For the national contracts, VA does maintain files on rejected CNHs.

Question. Are rejection notification and/or explanation forms/records shared with HCFA and state regulatory agencies?

Answer. When VA staff conducts a full or partial on-site team evaluation of a CNH and uncovers new deficiencies of a serious nature, HCFA and/or the SSA are notified. When VA staff conducts an OSCAR-based review without an on-site visit and chooses not to contract with the CNH as a result of that review, then HCFA and the SSA will not be contacted. In the latter case VA is directly basing its decision on state-provided information.

Question. Provide a list of CNH participants, broken down by state, for fiscal years 1998, 1999, and through March 2000, that:

—Were suspended from accepting new veterans.

—The VA removed or transferred veterans.

—Were terminated from the CNH program.

—The VA did not renew contract with the CNH participant.

Answer. This information is not readily available and will require a field survey. The information will be provided.

Question. When the VA suspends placement of veterans in CNH facilities, removes or transfers veterans, or terminates nursing home facilities from the CNH program, are HCFA and state regulatory agencies notified?

Answer. HCFA and/or the SSA are notified when any of the events listed in the question occur and are related to poor care delivered in the CNH.

Question. When CNH participants' contracts are not renewed are they provided with an explanation?

Answer. CNHs are notified in writing when the CNH is not renewed for cause. An explanation is provided.

Question. Describe in detail the CNH quality assurance plan?

Answer. Listed below is the text from VHA's proposed directive on quality assurance in the CNH Program. This directive is in the final stages of concurrence within the VHA. Access to HCFA's Quality Indicators is expected to be available in the next six months. Current practice, based on re-hospitalizations, is described in Item number 6b, below.

Quality Assurance in the CNH Program

(a) The VA center will integrate the CNH Program in its Quality Assessment and Improvement Program. Quality indicators may be identified through review of the HCFA Facility Quality Indicator Profiles.

(b) CNH clinical indicators may include, but are not limited to, patient deaths at the Nursing Facility, multiple medication usage, psychotropic drug use, skin care, accidents and patients or family complaints about the CNH. Information on these indicators is available through the HCFA Facility Quality Indicator Profile. For patients readmitted to the medical center from CNHs, clinical indicators may encompass, but are not limited to the following areas: CNH-acquired pressure ulcers; falls with injury; medication errors with adverse effects; other issues as determined by the medical center.

(c) Patients readmitted to the VA medical center from CNHs will be evaluated for incidents in accordance with M-2, Part I, Chapter 35.

(d) The VA to improve care and make decisions about renewing contracts will use results of quality assessment and improvement activities.

Question. Does the VA maintain forms/records of evaluations and/or observations in the CNH quality assurance plan? If so, please describe in detail how the records/forms are used and provide copies for review.

Answer. VA does not maintain such records at the national level. This information is not readily available and will require a field survey. The information will be provided.

Question. How are CNH quality assurance forms/records processed, i.e., are they stored in a centralized and readily accessible record-keeping system?

Answer. Quality assurance forms are maintained at the Veterans Affairs Medical Center (VAMC) level. There is no centralized record keeping.

Question. Describe in detail the CNH follow-up service plan?

Answer. CNH follow-up services are provided every 30 days by VAMC staff. The health care record is reviewed, and VA staff discusses the care plan with the CNH staff and the patient. Any problems with the care or with the veteran's adjustment to the CNH are also discussed. The need for additional VA services are discussed, e.g., visit to specialty clinics.

Question. Does the VA maintain forms or records of evaluations and/or observations in the CNH follow-up service plan? If so, please describe in detail how the records/forms are used and provide copies for review.

Answer. Documentation of CNH follow-up services are contained in the VA health care record. These notes, along with SSA 2567 or OSCAR information and the review of re-hospitalizations, are used as part of the annual review process of the CNH. Attached is a sample OSCAR Report. Form SSA 2567 consists of multiple pages and not readily available at VA Central Office. We will provide a copy as soon as we receive it.

FMS SURVEY INFORMATION

* NO FMS SURVEYS FOR THIS FACILITY

Question. How are CNH follow-up service forms/records processed, i.e., are they stored in a centralized and readily accessible record-keeping system?

Answer. Documentation of CNH follow-up services is contained in the VA health care record. There is no centralized record keeping of this information.

Question. Are CNH participants provided with follow-up service forms/records of evaluations and/or observations?

Answer. CNH participants are generally not provided with information on a specific follow-up visit or evaluation.

Question. If problems are identified during CNH follow-up service are HCFA and state survey agencies notified?

Answer. HCFA and/or the SSA is notified when serious problems are uncovered by a VA follow-up visit.

QUESTIONS SUBMITTED BY SENATOR LARRY CRAIG

TRICARE

Question. What is the status of the Memorandum of Understanding between the Veterans Administration and the Department of Defense for the procedures for providing medical services to TRICARE-dependent military retirees in the Veterans Medical Centers?

Answer. Section 113 of the Veterans' Millennium Health Care and Benefits Act, Public Law 106-117, provides for reimbursement to the Department of Veterans Affairs (VA) for medical care provided to certain eligible military retirees. The law states that the Secretary of Defense and the Secretary of Veterans Affairs shall enter an interagency agreement not later than nine months (August 31, 2000) after the law's enactment to implement this section.

The law states that implementation would be phased in across the country. The first contract award for TRICARE 3.0 is scheduled for the summer of 2001. Thus, a minimal amount of revenue will be obtained in fiscal year 2001.

The two Departments and the Office of Management and Budget (OMB) are working together to resolve some implementation issues in preparation for the development of the memorandum of understanding (MOU) that is required by the statute. The Department of Defense and Department of Veterans Affairs have interpreted the provisions in this section differently and we are working to achieve a common understanding. We remain hopeful that we will be able to meet the date of August 31 for completion of a MOU. From VA's perspective, requiring TRICARE beneficiary cost sharing would be a major disincentive for retirees to use this program. VA remains hopeful of meeting the agreement date of August 31, 2000.

TRAVEL REIMBURSEMENT RATES

Question. Considering the rising gas prices, what flexibility does the Veterans Administration have in adjusting the travel reimbursement rates?

Answer. Each time there is an increase in travel allowances for Federal employees, Section 111 of Title 38 U.S.C. requires VA to conduct an analysis of the adequacy of mileage rates for travel by VA beneficiaries.

Mileage rates for Federal employees were increased on January 14, 2000. As a result of that increase, VA has begun the required analysis of beneficiary travel mileage rates.

CLAIMS AND APPEAL PROCESS

Question. What are the short-term and long-term procedures and policy changes which can be used to expedite the claims and appeal processes?

Answer. VBA continues to merge veterans services functions with adjudication functions into Veterans Services Centers where veterans service representatives use a case manager approach to complete claims for veterans benefits. Although this merging of functions initially adversely affects our ability to complete claims, the long term effect will be the ability to provide more timely and accurate service to our veteran customers.

VBA is committed to improve performance in claims processing, and the revised process which is demonstrated in the number and type of initiatives which are currently dedicated to achieving our performance improvements.

One critical area to be addressed in which to expedite the claims and appeal processes is the performance of claims development, disability examinations, and the preparation of rating decision for service persons awaiting discharge from active duty. Currently we have a physical presence in several military separation points in the United States, and ultimately it is our intention to provide every separating

service person, regardless of point of separation, with a physical examination adequate for rating purposes according to VA protocols.

Another important initiative for VBA is Virtual VBA (VVBA), a project that will launch VA into the 21st Century by allowing VA to process veterans' claims in an electronic environment. This will eliminate the now paper intensive and time consuming manual claims process.

The Personnel Information Exchange System (PIES) component for requesting service medical records and service verification from National Personnel Records Center (NPRC) to VA Regional Offices has been implemented since December 1998. During this initial development, additional requirements were identified. The PIES application will electronically submit information requests to all military records centers. These electronic linkages will eliminate the current cumbersome paper process. In addition, the Department of Defense (DOD) is engaged in the design and development of two initiatives which will have a direct bearing on our ability to acquire claims information. The first will attempt to create an on-line common pay and personnel system for all the military services, which will provide VBA with the ability to acquire the requisite service date, including data previously contained on the DD 214. Currently, all military services have optical digital imaging systems which are utilized for storing documents from the Office Military File. The second initiative will allow us to have access to all these optical digital-imaging systems from individual workstations. This will give the ability to select documents pertaining to claims development and further eliminate paper processing.

For a period of one-year we tested the viability of the Decision Review Officer (DRO) position as an enhancement to the appeal process. The results of the test indicated significant improvements in the appellate process. Timeliness of the decisions, from the date of the formal appeal to the date of the final decision, was reduced from an average of 421 days to 316 days. The DRO program will be implemented nationwide by September 2000.

CROHN'S DISEASE

Question. Is Crohn's disease being considered as a presumed disability under Agent Orange?

Answer. In establishing presumption of service connection for specific diseases and exposure to Agent Orange by United States veterans of the Vietnam War, the Department of Veterans Affairs relies extensively upon the periodic reviews of the scientific and medical literature conducted by the National Academy of Sciences Institute of Medicine (IOM). The IOM has published three major reviews on this topic (in 1994, 1996, and 1998), and a fourth review is due by the end of this calendar year. Crohn's disease has not been linked to Agent Orange exposure in previous IOM reviews on this topic. The IOM would consider this possibility in its future reviews of veterans and Agent Orange only if there is available scientific or medical literature that makes this association that it could review.

COMMUNITY BASED OUTPATIENT CLINICS

Question. To provide better and more local medical care, what are the plans to provide more services to veterans at the outpatient clinics?

Answer. The major goals of Community Based Outpatient Clinics (CBOCs) include the following:

- Improving geographic access
- Disease prevention/wellness approach
- One provider coordinating care for patients
- Quicker access to care and reduce need for service at parent facilities
- Increasing convenience
- Increasing pre-admission work-up and post discharge follow up to shorten hospital length of stay

The CBOCs have always been intended to provide primary care services. Veterans Health Administration (VHA) also now requests that facilities examine the need for mental health services. Although some CBOCs do provide some specialty services such as podiatry or ophthalmology on a limited basis, VA does not anticipate that these clinics will expand beyond the basic services they were initially intended to provide. VA does not anticipate a proliferation of expanded service outpatient clinics, rather it will continue to expand access to primary care services and, as the veteran need dictates, expand beyond primary care selectively.

QUESTIONS SUBMITTED BY SENATOR PATRICK J. LEAHY

CLAIMS PROCESSING

Mr. Secretary, I continue to receive mail from Vermont veterans about problems they are having with their claims. Some tell me that it takes an excessive amount of time, sometimes over six months, for the Veterans Benefits Administration to respond to their claims applications. Others have complained about the accuracy of the administration's response, saying that VBA has simply responded wrongly to their claims.

I understand that VBA is undertaking several initiatives to increase the speed and efficiency of the claims calculation process, but I am concerned that the administration is not taking advantage of new technologies that will assist in claims calculation. For instance, I understand that VBA is considering a new technology called clinical couplers which is an advanced decision-making software that can automate claims processing and improve the accuracy of reviews.

Question. Does VBA plan to implement these new advanced technologies to the claims calculation process? Are there funds in the fiscal year 2001 budget request to support such an initiative?

Answer. VBA has made improvement in technical accuracy its first priority. In 1997, we developed the Systematic Technical Accuracy Review (STAR) program, to replace the C&P's Quality Assurance (QA) program. STAR will be fully implemented this year. Complementing the STAR program is Systematic Individual Performance Assessment (SIPA), which brings performance assessment and accountability to the journey-level individual. This is a system that will enable local management to consistently monitor individual performance.

In addition, our commitment to improved performance in claims processing is demonstrated in the number and type of initiatives dedicated to achieving our performance improvements. These initiatives have been designed to streamline or enhance the claims process while providing employees better tools with which to serve veterans.

We have developed a Compensation and Pension information technology (IT) strategy called Modern Award Processing (MAP) which examines the claims process from establishment through payment and accounting. Our Training and Performance Support Systems (TPSS) contains comprehensive training and performance support systems for the core service delivery positions of the reengineered environment. Rating Redesign, along with the Rating Board Automation 2000 tool, will help to restore an analytical approach to the rating decision.

We recently became aware of the knowledge coupler technology. This technology does not recommend a decision, but gives options for a decision and the factors in the unique claim fact pattern that support or fail to support each possible decision.

Question. Are there funds in the fiscal year 2001 budget request to support such an initiative?

Answer. No funds were requested in the fiscal year 2001 budget, however, we have just contracted out for the development of a prototype in the area of psychiatry.

QUESTIONS SUBMITTED BY SENATOR BARBARA A. MIKULSKI

FORT HOWARD

Question. Theme.—Enhancing the quality of life for our aging veterans in Maryland and across the country.

Point.—VA must stand sentry on the Fort Howard transition plan, and there must be a single point of contact regarding Fort Howard. Because the inclusion of a new State Veterans Home at Fort Howard is now unlikely, we need clear answers on how this development will affect VA's plan and the timeline for Fort Howard.

Who is the point person at VA who is in charge of Fort Howard?

Answer. Mr. Dennis Smith, Director of the VA Maryland Health Care System (VAMHCS), Phone Number (410) 605-7016, is in charge of Fort Howard. Mr. Alan Hackman, Executive Officer, Phone Number (410) 605-7000, has the daily duty of operational oversight for Fort Howard, and is in charge of the Fort Howard Mission Review and Campus Revitalization project.

Question. What is the current status of the Fort Howard mission change proposal?

Answer. The proposed Fort Howard Mission Change and Campus Revitalization project with stakeholder comments is currently being analyzed in Headquarters for the Secretary of the Department of Veterans Affairs' review and decision.

Question. When can we expect a final decision on this?

Answer. VA anticipates a decision within two months.

Question. It appears that the state will not authorize construction of a State Veterans Home at Fort Howard. If the state does not build a Veterans Home at Fort Howard, what impact will this have on the overall plan for Fort Howard?

Answer. No effect. The State Veterans Home is a nice complement to the proposed continuum of care housing proposed, but neither the mission change nor the Enhanced-Use project, depend on that presence. Current plans will set aside property for the potential State Veterans Home and the VA welcomes a presence now or in the future.

Question. What is the current status of the Fort Howard facility?

Answer. Fort Howard continues to operate "status quo" pending final approval of the mission change by the Secretary of the Department of Veterans Affairs.

Question. What changes can veterans served at Fort Howard, their families, and VA employees expect in the coming months?

Answer. Upon approval by the Secretary of the Department of Veterans Affairs, the mission change will begin being implemented. There are several construction projects that will need to be accomplished before large-scale relocations can be accomplished. In anticipation of the approval, these projects are currently being designed. The complete relocation of all inpatient functions from Fort Howard is estimated to take 18 to 24 months to complete.

Question. What are the plans for the enhancement/expansion of the outpatient clinic at Fort Howard?

Answer. The primary care clinic will continue to operate without interruption. Current plans are to relocate this function temporarily to a one level building (building 249) behind the main hospital building. If the plan is approved by the Secretary of the Department of Veterans Affairs, under the proposed Enhanced-Use development of the campus, a new primary care building will be constructed.

Question. How is the VA working with the community and VA patients to ensure that patient care at Fort Howard is maintained and improved during the transition process?

Answer. The VAMHCS has given over 30 presentations to the numerous stakeholders including the Veteran Service Organizations, the VA employees, unions, local county and government officials, local community interest groups, and the local community at large. During these presentations it has been stressed that all current inpatient programs will continue, but will move to another VAMHCS site. The relocations are expected to enhance patient access to follow-up care at the downtown facility and increase hospice and respite bed access.

Question. What specific steps have been taken to ensure that this occurs?

Answer. During the presentations given, the VAMHCS has been responsive to concerns raised over some of the consultant's original recommendations. For example, the original plans to relocate the dementia unit at the Baltimore Rehabilitation and Extended Care Center (BRECC) to the Perry Point facility has been revised due to concerns over the adaptability of those patients to such a move. In its place, a more general nursing home population will now be relocated.

ALLEGATIONS

Question. Secretary West, are you personally aware of the allegations raised by these employees and Maryland residents?

Answer. I have been briefed on the nature of the allegations.

Question. I sent a letter and supporting material regarding these allegations on February 4, 2000, asking you to review these complaints and to report back to me as soon as possible. To date, I have only received an interim response from Eugene Brickhouse, your Assistant Secretary for Human Resources and Administration. A final report was promised within 30 days (March 30).

Answer. I directed the Assistant Secretary for Human Resources and Administration to provide an interim and final response to you since the matters brought to my attention fall under the Assistant Secretary for Human Resources and Administration's responsibilities. The Honorable Eugene A. Brickhouse was appointed by the President and confirmed by the Senate to occupy this most critical position. Mr. Brickhouse provided you with a final response on April 7, 2000. On March 30, a member of your staff, Mr. Sean Smith, met with Ms. Ventris Gibson, Deputy Assistant Secretary for Resolution Management, to discuss the allegations and provide you with information that would be in the final response. Following the hearing, Mr. Brickhouse and Ms. Gibson spoke with Mr. Smith to further provide assurance that we would maintain contact with your office.

Question. Why have I not heard from you personally on this most important matter?

Answer. On matters involving discrimination complaints processing or allegations of discrimination, I endeavor to be fair and impartial, affording all parties due process and maintaining a posture of independence. Since the allegations involved discrimination complaints pending within the Department or before the EEOC, my neutrality must be unwavering and unquestionable. This does not, however, inhibit my ability to exercise leadership over diversity management issues. For this reason, I have taken steps to see that the appropriate leaders within the Department and addressing these matters.

Question. Why has this deadline come and gone without a complete final report from anyone at VA?

Answer. On April 7, 2000, Mr. Brickhouse provided your office with a final report.

Question. Are you personally involved in this matter?

Answer. To the extent appropriate, I have provided executive direction to the responsible senior leaders and required their involvement, consistent with the employees' rights and the integrity of the process.

Question. Your issued a memorandum to VA employees on September 22, 1999 on harassment and discrimination at VA. However, is this policy being implemented and carried out at VA?

Answer. The policy was fully implemented on September 22, 1999, and is in effect Department-wide.

Question. Specifically how?

Answer. The September 22 letter to all VA employees provides for appropriate disciplinary and adverse action to be taken against those individuals who engage in harassing behavior or other discriminatory conduct should an investigation reveal that such misconduct occurred. Allegations, even multiple allegations, of discriminatory acts are an inadequate basis upon which to find discrimination or to impose discipline. VA would violate the rights of those alleged to have committed discriminatory acts when the case has not been fully adjudicated. When a finding of intentional discrimination or retaliation occurs, the respective VA organization takes appropriate personnel action affording due process as required by Federal regulations.

Question. Upon review of these complaints, it is clear that the majority come from one area of VA—the Office of the Assistant Secretary for Information and Technology and the Washington Regional Office. In addition, there are now complaints against the Office of Resolution Management, who is charged with the authority to thoroughly investigate allegations like these. What action is being taken to look into these areas of VA?

Answer. On March 29 and April 6, the Department advised each concerned employee, in writing, to contact a designated official within the office where he or she worked to discuss his or her concerns and attempt resolution, where possible. Senior leaders in the Veterans Benefits Administration and the Office of Information and Technology have initiated steps to meet with these employees. In ORM, the employee who wrote to you filed several complaints; all but one of these complaints was against the employee's former employing office, not ORM. The Office of Employment Discrimination Complaint Adjudication (OEDCA) dismissed the complaint the employee filed against ORM because the employee failed to provide requested information relative to the specific nature of his allegations. The Deputy Assistant Secretary for Resolution Management met with the employee within her organization to determine the specific nature of the employee's complaint. ORM also employs an Employee Executive Ombudsman for ORM employees who wish to discuss workplace or personal issues, or to mediate disputes. The establishment of this position is consistent with EEOC's guidance to ORM on addressing internal concerns, should they arise.

Question. VA's own statistics appear to confirm that there are few promotions of minorities in VA. In addition, they show that the majority of minorities at VA are within the lowest payscales. What is being done to address this discrepancy?

Answer. We believe that we can do more, as there is room for improvement. For example, VA is developing a plan in support of our diversity efforts to ensure that African Americans and other minorities benefit from all employment, advancement, and training opportunities available in the Department. The plan includes a focused effort on increasing the representation of African Americans in grades GS-7 through GS-12, and in grades GS-13 through GS-15, the primary feeder group from which we can develop a representative pool of candidates for the Senior Executive Service. We will continue our plans to provide additional developmental opportunities, mentoring assignments, and ensure recognition and awards for outstanding contributions toward this effort.

Question. What specific plans are in place to help move minorities up the ranks at VA?

Answer. VA conducts On-Site Equal Employment Opportunity Technical Assistance Reviews at field facilities around the country. Local and national union representatives are consulted during these reviews and have, at times, served on the review team. These reviews address the employment concerns of all employees, minorities, and non-minorities. The team provides the facility Director with recommendations to correct deficiencies noted during the review. Other initiatives include:

- African Americans are included in external training programs such as the Women’s Executive Leadership Program, the Federal Executive Institute, Aspiring Leaders Program, and the Management Development Centers.
- VA revised the Performance Appraisal process for senior executives to include a section on equal opportunity and diversity. The new requirement is that senior executives must show measurable progress in improving employment opportunities for women and minorities and increasing the diversity of organizations under their control.
- Prior to any senior executive being considered for a bonus or pay adjustment, the respective Under Secretary or Assistant Secretary must provide specific written examples of how the executive has contributed, by his or her actions, to a diverse workforce ensuring equal opportunity to all.
- ORM conducts trend analysis of discrimination complaints. Part of the trend analysis focuses on the underlying causes of allegations of discrimination when such allegations do not rise to the level of discrimination, for example, common workplace disputes. Since employees utilize the EEO complaint process to air common workplace disputes because they believe

VA RESEARCH PROGRAM

Question. VA is not requesting an increase in fiscal year 2001 for its research program. Please comment on the reason for this decision.

Answer. The request for fiscal year 2001 assures that all of our resources available to VA Research will be used with maximum efficiency.

VA currently funds approximately two thirds of the research program using non-VA research appropriations. It is anticipated that VA will increase funding from these sources so the research program will continue to grow and remain a national resource.

Question. I understand that VA has implemented a new policy intended to help solve the problem physician-investigators have in finding time to conduct research. What is the current status of this policy?

Answer. The “policy” referred to above was an interim arrangement, functional only for the fiscal year 2000 allocation period, pending development of a more comprehensive allocation solution that would assure dependable resource support to the Veterans Health Administration’s (VHA) research program. Basically this interim policy calls for a “pass through” of prior local reported costs to support research activities.

Based on guidance from the Acting Under Secretary for Health, VHA’s Chief Financial Officer appointed a VHA panel of research and financial specialists to examine and improve the current system of accounting for costs of the Medical Care appropriation that are applied to support VHA research at the facility level (including direct salary costs of clinician-investigators, facilities and administrative costs). This panel completed its analysis and submitted a report to the VHA Acting Chief Financial Officer on April 1, 2000.

The report recommends VHA take four actions:

- Adopt an interim manual spreadsheet accounting system, focused at the VA medical center level of research activity, but with capabilities of “rolling up” research support costs to higher levels.
- Field-test the manual system in a new group of VA medical Centers (it had been tested in ten centers at the writing of the report).
- Reprogram the new automated Decision Support System (DSS) accounting system to carry forward the intent of the manual spreadsheet.
- Pending full national implementation of the new method of accounting for Medical Care expenditures in support of research, extend for fiscal year 2001 the current “pass through” system of local research support, which characterizes VHA allocation policy for the fiscal year 2000 period.

The accounting team report is currently being reviewed by VHA. VHA anticipates presenting the report to the Acting Under Secretary for Health soon for consideration. Assuming approval of the proposal, field-testing of the improved accounting system will require several months. In the interim, a recommendation has been

made to the Acting Under Secretary for Health to extend the “pass-through” policy of support to research in the fiscal year 2001 allocation.

Question. When does it expire?

Answer. As noted earlier, the expiration date is September 30, 2000.

Question. Are there plans to extend this policy?

Answer. A decision by the Acting Under Secretary for Health is pending.

Question. Last year, the Under Secretary for Health announced two new oversight mechanisms for VA research involving humans—one external and one internal. Could you please detail the progress that has been made towards the implementation of each?

Answer. The Office of Research and Compliance (ORCA) is the primary component responsible for assuring compliance with the rules, policies, and procedures to protect human subjects in VA-conducted research. ORCA reports to the Under Secretary for Health. ORCA’s responsibilities include compliance through training, education, and development activities, negotiation of VA assurance documents with sites conducting research, and site visits (routine and for cause) to research sites. This office, announced in April 1999, currently has five employees in headquarters and has additional recruitment actions underway. Currently, there are plans for four Regional Offices in ORCA, that will include four employees in each office to help ensure compliance oversight in the 22 Veterans’ Integrated Service Networks (VISNs) and approximately 120 Veterans Affairs Medical Centers (VAMCs) that conduct research involving human subjects. The Regional Offices will be in Washington, DC; Atlanta, Georgia; Chicago, Illinois; and Los Angeles, California. Recruitment for their Directors is ongoing. ORCA is completing the final stages of its budget estimates for fiscal year 2000 and fiscal year 2001.

The external mechanism of oversight is based on a contract with the National Committee for Quality Assurance, which is managed by the Office of Research and Development, with participation from ORCA. After open competition, NCQA was selected to review each of VA’s sites conducting research and to evaluate them for accreditation for compliance with all VA and applicable Federal requirements for protection of human subjects in research. VA and the contractor will develop standards and pilot testing, and visits will begin later this year. ORCA staff will participate in site visits in conjunction with the accreditation process. In addition, ORCA will receive reports on each site to help assure education and training, and other actions that help promote compliance.

Question. How does VA plan to meet the needs of VA research facilities that need upgrades, renovations, or expansions?

Answer. Our programs in VHA health care facilities engaged in bio-medical research have identified twenty-five sites with high-priority needs for infrastructure improvements, primarily in direct research laboratories (so-called “wet” laboratories). The VA research program is given an annual opportunity, both locally and here in headquarters, to identify capital facilities projects for consideration in the overall VA budget formulation and capital investment review process. The Department’s priority-setting process correctly favors patient care and life-safety facilities projects at the highest level of priority. The Chief Research and Development Officer and the Chief Facilities Management Officer will continue to work together to carefully consider research—supportive capital projects during the budgetary process.

Question. In last year’s appropriations bill, the Committee supported expanding the number of community-based outpatient clinics which promote Mental Health Intensive Psychiatric Case Management. Research shows economic and health benefits from such clinics and its model, Assertive Community Treatment. Two Public Laws 104–262 and 106–74 charge the Veterans Health Administration (VHA) to maintain capacity by providing for the specialized treatment needs of disabled veterans. What has been done to make certain that money cut from inpatient psychiatric facilities is being used for Mental Health Intensive Psychiatric Care Management programs?

Answer. VHA surveyed each of the 22 VISNs to determine to what extent the savings in costs of inpatient psychiatric care were reinvested in outpatient mental health services. VISNs were asked to compare total costs in fiscal year 1996 for both inpatient and outpatient mental health care to the same costs in fiscal year 1999. That study, which is about to be released to Congress, suggests considerable reinvestment in outpatient mental health services and increases in the number of veterans served.

Various groups in VHA are collaborating to prepare a Directive that will encourage new initiatives in Mental Health Intensive Case Management (MHICM) programs. The directive asserts a policy to:

- Establish new MHICM programs where the need is demonstrated.
- Defines the target population within each VISN.
- Describes what is required to have an effective MHICM program.

—Mentions the monitoring procedures required to determine outcomes.

—Provides VISN-level responsibilities and national oversight.

Question. What is being done to ensure that quality psychiatric care is being offered within the community-based care facilities?

Answer. From fiscal year 1998 to fiscal year 1999, the total number of veterans served by mental health programs increased by 3.3 percent. Over the period of fiscal year 1996 to fiscal year 1999, a 9 percent increase was observed. This has been associated with a decrease in inpatient care, and an increase in outpatient services. Health services research has indicated that nearly half of the new Community Based Outpatient Clinics (CBOCs) offer basic mental health services. VHA believes that access to mental health services in general is increasing.

Although the inpatient workload and dollars have decreased from fiscal year 1996 to fiscal year 1999, outpatient workload and dollars have increased resulting in the total number of veterans served by VA's special emphasis programs increasing from 269,000 to 293,473. The increase in services is accounted for by improvements in access to and utilization of outpatient programs. VHA is a leader in mental health care and is one of the few health systems that support equal access to medical care and mental health care. VA will continue to monitor needs for mental health capability for new, as well as existing CBOCs.

Performance Measures for Mental Health Programs.—The Management Decision and Research Center (MDRC), a part of VHA's Health Services Research and Development Service recommended three performance measures addressing mental health in the community clinics: 1. the number of patients assigned a mental health diagnosis; 2. the average weighted outpatient workload per clinical mental health FTE; and, 3. the percentage of patients seen within 30 days after hospitalization for a mental health disorder.

All measures are compared to the parent VAMCs and are expected to be statistically identical or higher.

In May 1999, in response to the Under Secretary for Health's comments to a recommendation by the Committee on Care of Severely Chronically Mentally Ill Veterans, the Chief Consultant, Mental Health Strategic Healthcare Group, published criteria for VISN Directors and Clinical Managers for including mental health services in CBOCs. As a benchmark, "if the total number of veterans service-connected for mental health conditions in the 1–15 mile(s) CBOC catchment area exceeds 150, or the number of Priority 1 through 7 veterans exceeds 3,000, then it is strongly recommended that an existing or proposed CBOC would provide (or contract for) general mental health services."

As with all other mental health patients, those seen by a mental health professional in CBOCs, will be assessed using the Global Assessment of Functioning (GAF) scale to help determine whether their overall functioning improves following professional treatment. Used as an outcome measure, the quality of care for each patient or for all patients in each CBOC can be estimated. For fiscal year 2000, the percentage of mental health patients who receive a GAF rating is reported monthly to VISN Directors.

Question. How does VA intend to care for the ever-increasing demand for psychiatric care among veterans?

Answer. VA has increased the number of patients treated by its mental health services nationally. A recent survey shows that six Networks increased the number of patients seen in outpatient mental health facilities by greater than 25 percent from fiscal year 1996–fiscal year 1999. (VISNs 4, 8,10,15, 16 and 19). In fiscal year 1999 Network 10 for example, cared for 34 percent more Post-Traumatic Stress Disorder (PTSD) patients, and 24.2 percent more patients needing substance abuse treatment. VA has developed the largest integrated service delivery system for the homeless in the nation. These changes have been associated with a decrease in inpatient care, and increase in access to and utilization of outpatient programs including treatment at Community Based Outpatient Clinics (CBOCs). Half of all CBOCs currently offer basic mental health services.

Mental health services are addressed by providing a full continuum of care and access to needed medical/geriatric care. VA is working toward better integration of medical care with mental health care for veterans. Ongoing activities in the integration of mental health and medical and geriatric primary care programs and the development of mental health primary care teams demonstrate this.

An acknowledged leader in developing outcome measures of quality of care, VA is focusing its efforts on performance measures for all special disability programs including mental health to ensure that quality, access and service are maintained or improved.

In summary, VA is seeing more patients who suffer from mental disorders more efficiently and with no loss in quality. In fact, patient satisfaction with mental

health services has increased from 1995 to 1999. VA has been able to do this by increasing its use of residential care and outpatient services including CBOCs. VA has also increased its contracting capabilities with non-VA service providers as evidenced by the programs for homeless veterans. VA is using innovative approaches in telemental health to increase access to specialty mental health services in VA community-based sites such as CBOCs and Veterans Outreach Centers. VA will continue using these clearly efficient and effective approaches to maintain capacity and quality of care for veterans with mental disorders.

Question. What is being done to ensure the VA National and Veterans Integrated Service Network Formularies are becoming less restrictive?

Answer. The Congressionally mandated Institute of Medicine (IOM) study of the VA's formulary concludes that VA's National Formulary is not overly restrictive, and that its effects on quality are likely comparable to those of formularies in private and other public sector programs. The IOM report found no reason to abandon the National Formulary yet recommended improvements in the management of the VA formulary system. VA plans to respond constructively to all the recommendations in the report.

Question. What is the status of phasing out a typical medications that could be less expensive but have damaging side effects?

Answer. VA's national formulary process is designed to provide the most efficacious, safe and cost effective medications for use in the veteran population. VHA uses many factors to determine a product's suitability for use in the VA population, including patient compliance, relevance to the veteran population, pharmacy factors, adverse event profile and clinical outcomes. Management of VA's formulary process is a very dynamic activity that is clinically driven by the VA Medical Advisory Panel, a group of field-based practicing physicians; the VISN Formulary Leaders Committee, a group of clinical representatives from each of the 22 VISNs; and various VHA Technical Advisory Panels, which are comprised of senior VHA subspecialty clinicians. Safety and efficacy receive the highest priority in their deliberations.

SUBCOMMITTEE RECESS

Senator BOND. So with that I thank you, Mr. Secretary. I appreciate working with you. If this is our last time, it's always a pleasure to work with you in various generations and different decades. We wish you well and we thank you very much. Hearing is adjourned.

[Whereupon, at 10:40 a.m., Thursday, April 5, the subcommittee was recessed, to reconvene subject to the call of the Chair.]

**DEPARTMENT OF VETERANS AFFAIRS AND
HOUSING AND URBAN DEVELOPMENT AND
INDEPENDENT AGENCIES APPROPRIATIONS
FOR FISCAL YEAR 2001**

WEDNESDAY, APRIL 12, 2000

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 9:36 a.m., in room SD-138, Dirksen Senate Office Building, Hon. Christopher S. Bond (chairman) presiding.

Present: Senators Bond, Mikulski, and Lautenberg.

CORPORATION FOR NATIONAL AND COMMUNITY SERVICE

STATEMENT OF HARRIS WOFFORD, CHIEF EXECUTIVE OFFICER

ACCOMPANIED BY:

**WENDY ZENKER, CHIEF OPERATING OFFICER
TONY MUSICK, CHIEF FINANCIAL OFFICER
LUISE S. JORDAN, INSPECTOR GENERAL
KARYN L. MOLNAR, PARTNER, KPMG**

OPENING STATEMENT OF SENATOR CHRISTOPHER S. BOND

Senator BOND. The subcommittee will come to order.

This morning the VA-HUD Subcommittee will hear testimony on the President's fiscal year 2001 budget request for the Corporation for National and Community Service, the Chemical Safety Board, and the Department of Treasury's Community Development Financial Institutions Fund.

First we will hear from the Corporation's Chief Executive Officer, Senator Harris Wofford, who will be followed by the Honorable Luise Jordan, the Corporation's Inspector General, and Ms. Karyn Molnar from KPMG.

The subcommittee will then hear from the Chemical Safety Board. Finally, we will have officials testifying from the CDFI Fund.

The Appropriations Committee and the VA-HUD Subcommittee will face another year of very difficult budget decisions due to needs for VA medical care, significant increases in needed budget authority for Section 8 housing assistance contract renewals, and FEMA disaster assistance.

For the Corporation for National and Community Service, the President has requested a significant spending increase. Specifi-

cally, \$538.7 million has been requested, an increase of \$101.6 million over the \$437.1 million provided in fiscal year 2000.

Under the President's budget request, the Corporation would expand the AmeriCorps service from its current membership of 50,000 participants to 62,000 by fiscal year 2001, with a goal of 100,000 in fiscal year 2004. In addition, the President is proposing a number of new initiatives such as creating a new AmeriCorps Reserve program and two new youth programs under its Learn and Serve account.

While the Corporation has a number of laudable goals, such as improving child literacy—that is obviously one of my very strong concerns—there remain many significant issues concerning the management and implementation of its programs.

First, providing an increase in funds to an agency that has been fraught with significant management problems is troubling at best. While I applaud the progress the Corporation has achieved over the past year, there continues to be serious problems.

The Corporation has again received a "clean" opinion on its balance sheet, but a "disclaimer" on its statements of operations and cash flows. The number of material weaknesses has been reduced from eight to five, but a number of reportable conditions and failures to comply with various Federal laws and regulations remain.

We will later hear more from the CNCS's IG and KPMG auditors on these matters, but I must emphasize that I remain concerned about these issues.

Second, there continues to be a question of accountability within the Corporation and the grantees who administer many of its programs.

Last year, the auditors were unable to determine the nature of \$31 million in unidentifiable expenditures in the Corporation's financial statements. It was only after this Subcommittee raised concerns about it, that the Corporation's management took action to address this matter.

Unfortunately, the Corporation's contractors were unsuccessful in determining the nature of this \$31 million, and to this date, the Corporation still has no documentation or proof on whether those funds were misspent or whether this was simply a series of book-keeping errors or a combination of both.

It is my understanding that this contractor was also responsible for preparing the Corporation's financial statements. I hope this contractor was not actually paid on its work to identify the \$31 million in unidentifiable amounts that it was responsible for creating.

Another major concern is the Corporation's oversight of its grantees. The IG has found numerous problems in this area and continues to cite this as a major internal control weakness.

In this year's budget request, the Corporation has requested the legal authority to provide additional administrative funds to troubled State grantees. Currently, each State commission must provide a 50-percent match for any administrative funds received from the Corporation.

Nevertheless, the Corporation seeks to waive this matching requirement for troubled grantees. More puzzling is the Corporation's request for an additional \$3.6 million for this effort. Frankly, this

could be characterized as “throwing good money after bad,” or rewarding non-performance or poor performance.

Instead of throwing good money after bad, I wonder: Has the Corporation considered other ideas that would address the problems with its troubled grantees? How about using enforcement actions against troubled grantees? If the Corporation lacks the legislative tools to do this, I would be more than happy to entertain your requests for legislative solutions.

I am also curious to know if the Corporation allows its grantees to take on additional programmatic responsibilities when they have been found to be troubled.

The Corporation admits in its budget justifications that these “oversight problems are occurring at a time when the AmeriCorps grants program is growing significantly.” Well, if this is the case, why not reduce the programmatic burdens of these troubled grantees?

Finally, I emphasize the need for the Corporation to resolve fully its long-standing management and financial operations problems. The Corporation has made some real progress over the last year. For that, it deserves recognition and commendation. We are happy to do that.

Moreover, the Corporation has assembled a management team, which is beginning to lay the foundation for sound management.

In your testimony, Senator Wofford, you state that the Corporation’s “programs will depend upon the effective management of the resources dedicated to these purposes.” While I agree completely with that statement, it seems questionable to me that the Corporation would increase its program workload when it still has not cleaned up its management problems.

It seems like the Corporation is trying to fix a bike while riding it at the same time. I would hope that the Corporation will seriously consider my suggestion that you need to slow down and maybe take a minute to get off the bike before you start riding it again. In this city, I have seen a lot of potholes, and I think that would be good advice whether you are riding a bike or running a troubled agency.

I will now turn to my ranking member, Senator Mikulski for her statement and comments.

STATEMENT OF SENATOR BARBARA A. MIKULSKI

Senator MIKULSKI. Thank you very much, Mr. Chairman.

And I want to welcome the National Service Chief Executive, Senator Harris Wofford and, of course, the Inspector General, Ms. Luise Jordan, to our first panel.

I am very proud of the role that I played in helping to create National Service, the original authorizing framework. And I would hope in the next session of Congress, we could review the authorizing framework and really bring it in alignment with really the evolution and lessons learned from the more, now, than 6 years of the existence of National Service, because I think we all agree on both sides of the aisle that volunteerism is one of the best aspects of the United States of America.

And volunteerism is the backbone of our communities, working from seniors to community cleanups to helping your children get ready to learn.

The whole idea behind National Service was to link our values to public policy and to provide young Americans with an opportunity of doing community service and earning a voucher to reduce their student debt.

In my own home town of Baltimore, college tuition is escalating, where at Johns Hopkins the tuition next year will be \$33,000. Not everybody can get into Hopkins either because of SAT scores, or finances. But I would hope getting into the college of your choice would be based on your SAT scores and your dream, and not on your family's wallet. And this is a tool that we hope would be able to help with student debt.

We also wanted to link responsibility to opportunity. I am a firm believer that for every opportunity, there should be an obligation. And this is what we were going to promote.

So we look forward to hearing the results of now more than 5 years of the existence of the Corporation for National Service, on what it has meant to communities and what it meant to the volunteers who participated and the way they have either utilized the student voucher to go on, if they are the first one in their family to go to college; or to reduce student debt so they could either go on to volunteerism, or even careerism, non-profit organizations.

We also want to look at kind of the new innovations that have developed with the new economy. I want to be hearing from the—from Senator Wofford really about his relationships with the private sector, not only the wonderful things I know about the cooperation with General Colin Powell, but also the private sector in terms of the high-tech crowd, what—Steve Case's Power Up and other things that you have been doing, and then to discuss with him the idea of an E-Corps that I am advocating to help boys and girls cross the digital divide.

I am not talking about E-Corps volunteers being a substitute for teachers or a substitute for paid local government staff and programs. But one of the things that we have heard about, and clear, is that—two things: One, there is a work force shortage in America, but there is really a skill shortage. We have zip codes of prosperity, and yet high zip codes of unemployment.

If we could help our boys and girls learn the tools of the new economy and learn—and have their parents learn the tools of the new economy, they could literally be able to leapfrog out of poverty.

My E-Corps idea would be for the AmeriCorps volunteers to teach the teachers. Very often, our teachers have not had the technological training in order for them to make highest and best use of the technology we want to bring to the classroom.

So after the volunteers leave, we want to have in place teachers who have benefitted from their youth, their enthusiasm and their technical know-how, so they can keep it going in the classroom long after the volunteers leave. It is the old thing about let us—if we teach the teachers, then we have taught the children forever.

We will also be talking today about the issues around financial management; and we will be happy to hear from Anthony Musick, who was confirmed in November, what he found and some of the

management issues, many of which have been raised by Senator Bond.

I will talk about the Chemical Safety Board and CDFI when those very able people come to the table. But for now, I am ready to listen to Senator Wofford, to move the hearing on.

Senator BOND. Thank you very much, Senator Mikulski. I am most interested in your E-Corps idea. Sometime when we have more time and are not on the record, I will tell you about the problems I have confronted as an old dog trying to learn the new tricks of computers and E-commerce, but not where it is going to be on the public record. [Laughter.]

Senator MIKULSKI. Well, getting booted has a whole new meaning, does it not?

Senator BOND. I do not even understand that. Senator Wofford.

Senator WOFFORD. Me, too, Mr. Chairman, with my problems on the computer. I need some of those teachers to help me. Thank you very much, Mr. Chairman and Senator Mikulski.

Mr. Chairman, if my remarks do not respond to all of your suggestions, we—and we do not have time today, but we want to respond to your—

STATEMENT OF HARRIS WOFFORD

Senator BOND. We will have—we will raise some of the issues in questions and answers and also give you an opportunity to respond in writing. We will keep the record open, making your full statement a part of the record, and asking you to summarize.

Senator WOFFORD. Thank you.

I would like to introduce Wendy Zenker, the Corporation's Chief Operating Officer and Tony Musick, our Chief Financial Officer.

Let me start by thanking the committee for your support over the past years. The National Service would not be where it is today without your help.

Four and a half years ago when the President asked me to head the Corporation, he gave me a very specific charge: To make National Service a non-partisan enterprise in which all Americans take pride, like the Peace Corps and the Armed Forces. Even before I was confirmed, I was confronted with the second challenge, to strengthen management practices at the Corporation. These two imperatives have been my focus, and I will report briefly on both.

Under the guidance of your committee, the Corporation developed a detailed action plan to set our course on management improvements. We report regularly to the committee on this plan, so you have seen the progress we have made.

We now have a strong financial management team that has brought rigor and discipline to our business operations. Since our meeting last year, we have added an exceptionally gifted chief financial officer, Tony Musick, as well as a deputy CFO and a chief information officer.

Mr. Chairman, I want to thank you especially for your help in securing Tony's confirmation last fall. It was down to the wire, and you made sure that Tony was confirmed before Congress recessed, and it has made a great difference for us.

FINANCIAL MANAGEMENT

We have also made great improvements in our systems, including bringing critical new systems online. We have installed and are using a new core financial management system that dramatically improves the Corporation's financial accountability.

All documents in the National Service Trust have been digitally imaged and filed, making it easy, fast and accurate to retrieve records.

AmeriCorps grantees are now submitting information on enrollment, service hours and term completion through a secure web-based system. We have worked extremely hard, taken on big challenges and made major progress.

FISCAL YEAR 1999 AUDIT

The Inspector General's recently released audit report for fiscal year 1999 reflects some of this progress. The number of material weaknesses, as you pointed out, is reduced from eight to five. And the auditor issued a clean opinion on the Corporation's statement of financial position. And we still have much to do.

As this is the last annual audit during my tenure at the Corporation, I wish we had made it the final mile to full auditability. The Inspector General wrote that reducing the number of material weaknesses and implementing the new accounting system indicate that the Corporation continues to make progress toward producing auditable financial reports.

So while the outcome of the audit is not all that we had worked to achieve, it is now apparent that our goal of full auditability is within sight.

We will continue to focus our attention, resources and energy to complete this job. And we are requesting an increase in program administration funds to support that effort.

On the program front, National Service is stronger, more vital and more effective. That is why I am pleased to present the President's request to expand the opportunities for Americans to engage in service because it works, is working, and is recognized around the country as meeting critical needs of our communities and of our young people.

LEARN AND SERVE AMERICA

Through Learn and Serve America, young people in school are being challenged to take personal responsibility for the needs of their communities. Service-Learning is taking root in schools throughout the country. The evaluation shows that students who participate in Service-Learning improve their academic performance, develop problem-solving skills, and learn the habits of good citizenship.

AMERICORPS

In AmeriCorps over the past 5 years, communities across the country have experienced the power and the value of more than 150,000 AmeriCorps members getting things done, important things that the communities need.

The 5-year evaluation of AmeriCorps conducted by Aguirre International concluded that AmeriCorps prepares young Americans for the future, strengthens communities and helps build the civic sector by providing people-power to non-profit organizations.

We have worked to focus AmeriCorps and all of National Service on tackling big problems and achieving important goals. Three years ago, the Congress and the President agreed that the country should make literacy a top priority, which I know is a special interest of yours, Mr. Chairman.

AmeriCorps and our other service programs have taken this charge to heart. In fiscal year 2000, we will meet and exceed the committee's direction to devote at least \$40 million to literacy projects.

DIGITAL DIVIDE

Similarly, taking Senator Mikulski's lead, AmeriCorps members will be on the front lines of closing the digital divide. New technologies have brought our country to a critical juncture. Either computers and the Internet will be a great instrument of new opportunity, or they will create an even great chasm between the haves and have-nots in our society.

AmeriCorps and National Service will be powerful tools to help transform the digital divide we see today into the digital empowerment we seek.

AmeriCorps has supported several successful technology projects in the past with private sector partners, and now Senator Mikulski has proposed this new E-Corps within AmeriCorps. The President and Senator Mikulski announced just last week that AmeriCorps will make a start on E-Corps right away, and we look forward to working with the committee to make E-Corps a powerful reality.

CLOSING STATEMENT

Senator Bond and Senator Mikulski, this is the fifth and the last time that I will appear before this committee. I want to express my special thanks to you. The health of the Corporation and the strength of National Service have been greatly improved by the personal interest you and your staff have taken.

National Service is challenging citizens, especially young people, to take responsibility for something greater than their own self-interest, to become new patriots of the home front.

I believe more than ever today that National Service is at the vital center, not on any ideological spectrum, but at the core of what we need to do to make the promise of America a reality for all Americans.

Thank you.

[The statement follows:]

PREPARED STATEMENT OF HARRIS WOFFORD

INTRODUCTION

Mr. Chairman, Ranking Member Mikulski, and members of the Subcommittee, I appreciate this opportunity to present to you the Administration's fiscal year 2001 budget request for the Corporation for National Service and the national service programs that you fund: AmeriCorps, including the National Civilian Community Corps, and the service-learning program for students—Learn and Serve America.

These programs have helped to reinvigorate the long American tradition of service to community.

AmeriCorps members continue to provide valuable and important service to our country. This past year we celebrated those accomplishments on the occasion of AmeriCorps' Fifth Anniversary. One way we marked the Anniversary was to select 21 All AmeriCorps Award winners—AmeriCorps members whose exemplary service received special recognition at a White House ceremony. They were introduced and saluted by Sargent Shriver, General Colin Powell, Governor Michael Leavitt, Coretta Scott King, and President Clinton.

In at least 44 states and the District of Columbia, AmeriCorps members, state and local officials, and friends marked the Fifth Anniversary with Kick-Off and Swearing-In ceremonies. The Anniversary was planned in conjunction with Make A Difference Day, the nation's largest service day, in which thousands of AmeriCorps members and students in service-learning projects participated.

Mr. Chairman, five years ago when the legislation establishing the Corporation was passed, there were many questions: Would the combination of eight different federally-supported service programs work? The new Corporation for National Service, as you know, combined three long-serving senior service programs—Foster Grandparents, Senior Corps, and the Retired and Senior Volunteer program (RSVP)—with the Volunteers in Service to America (VISTA), the first domestic Peace Corps, now 35 years old; the service-learning program and the grant programs for youth service of the Commission on National Service, authorized by the National Service Act of 1990; the National Civilian Community Corps which was established by Congress in 1992; and on top of this Congress added the larger new national service program to be called AmeriCorps. The question was whether this combination would work to the benefit of American communities—and to the benefit of young and older Americans who want opportunities to serve their country.

As to the new venture—AmeriCorps—the questions were also numerous: Would it be effective in getting important things done? Would AmeriCorps support—and not in any way undermine—the large and small non-profit institutions of the service sector and the volunteer spirit in our country? Would AmeriCorps' decentralized system, designed to rely on newly-created, governor-appointed state commissions to deliver service opportunities, work? And would the experience of giving back through service to their communities prove beneficial to young people in AmeriCorps, giving them marketable skills, assisting them with paying for college, and making them better citizens?

Mr. Chairman, the work of the Corporation, and the work of now more than 150,000 AmeriCorps members, half a million senior citizens, and more than a million students in service-learning programs assisted by the Corporation has answered each of these questions with a strong Yes.

I am attaching the statement of sixty nonprofit organizations comprising the National & Community Service Coalition, including the American Red Cross, Big Brothers/Big Sisters of America, the Catholic Network of Volunteer Service, the Girl Scouts of the USA, and the YMCA of the USA. This is what they say about the Corporation's service programs:

"[W]e have seen firsthand how the federal investment has spurred the growth of service opportunities and mobilized hundreds of thousands of school-aged children, young adults and senior citizens to tackle an array of our nation's educational, social and environmental needs. They have contributed to the safety and well being of our most vulnerable citizens, the improvement of reading skills among young children, the protection of our endangered natural resources, the construction and renovation of homes for low-income families, and the restoration of individual neighborhoods and communities across the country.

"Federal funds constitute a small, but strategic, portion of the total resources which support national service. Moreover, the vast majority of federal funds pass straight through to State Commissions which, in turn, award grants to locally-controlled programs on a competitive basis that emphasize both quality and cost effectiveness. Finally, the federal government's involvement in national service builds on the nation's well-established tradition of volunteerism and on decades of painstaking development by grass-roots service programs—both of which have long enjoyed non-partisan support from elected officials at every level of government.

"It is important to note that the sheer reality of federal legislation and leadership has brought heightened visibility, as well as new state, local and private resources to the service movement." [emphasis in original]

These are not just generalities. The results, for example, in terms of the construction and renovation of homes for low-income families have been extraordinary. Habitat for Humanity reports that it has built 1,372 Habitat houses as the result of

AmeriCorps and counts over 177,000 Habitat volunteers who have been supervised by AmeriCorps members. I attach the statement of Tom Jones of Habitat for Humanity given recently at a congressional briefing. I also attach the summary of an independent study by Aguirre International on the cost effectiveness of AmeriCorps service, its benefits to communities, and the personal gains for members resulting from AmeriCorps service.

Mr. Chairman, AmeriCorps has affirmed what we already knew—that the answer to America's biggest problems lies in the energy, idealism, and personal responsibility of Americans.

BUDGET REQUEST SUMMARY

The total fiscal year 2001 budget request for the Corporation's programs in this Subcommittee's jurisdiction is \$533.7 million, an increase of \$100.6 million above fiscal year 2000. This increase will continue the Corporation's progress toward reaching the President's goal of having 100,000 new AmeriCorps members by the year 2004. This budget request will support 62,000 AmeriCorps members in fiscal year 2001, including 1,100 National Civilian Community Corps (NCCC) members. The request includes a \$79.6 million contribution to the National Service Trust to provide for the educational awards to AmeriCorps members upon completion of their service. The Office of the Inspector General is requesting a separate appropriation of \$5 million to support the functions of that organization, a \$1 million increase over fiscal year 2000.

The request also includes \$5 million to establish an important new effort—the AmeriCorps Reserves program. This pilot program will be modeled on the military reserves: former AmeriCorps members would serve in the Reserve Corps on weekends and/or after work or on vacations, and would work on critical national problems such as the need for rapid response to natural disasters. The Reserves program will enable former AmeriCorps members to re-engage in continuing special service to their communities, particularly in times of crisis. The Reserves will build on the AmeriCorps Continuing Service initiative, which connects AmeriCorps alumni to community service projects through a partnership with national non-profit organizations such as the American Red Cross, the Boys and Girls Club, Big Brothers/Big Sisters, Habitat for Humanity, the National Mentoring Partnership, and the YMCA.

The budget request also provides an \$8 million increase for the Learn and Serve America program. The total request for that program is \$51 million. This funding will continue the growth of service-learning for students at all grade levels and those in college. The \$8 million increase will support two new service-learning initiatives: \$5 million in grants for a new Community Coaches program and \$3 million for Youth Empowerment Grants.

The budget request would increase funding for Innovation, Demonstration and Assistance activities by \$14 million to \$42.5 million. The Corporation uses these funds to provide technical assistance to grantees and service programs, to assist programs in enrolling participants with disabilities and accommodating their participation, and to support innovative demonstration service programs that may not be eligible under other Corporation programs. This funding supports a significant portion of the Corporation's literacy activities, including a major literacy initiative in the District of Columbia and a part of America Reads funding designated by Congress, as well as the AmeriCorps Promise Fellows program.

As the members of the Subcommittee know, the Corporation for National Service has forged a very successful relationship with the Points of Light Foundation, an initiative established by President George Bush. The fiscal year 2001 budget request contains \$7.5 million for the Points of Light Foundation to continue support at last year's level.

The fiscal year 2001 budget request also contains an additional \$7.5 million to support America's Promise: The Alliance for Youth, led by General Colin Powell. That effort was launched by Presidents Clinton, Bush, Carter, Ford, and Mrs. Reagan representing her husband, at the Presidents' Summit for America's Future in Philadelphia. This new funding will enable America's Promise to continue and expand the work for children and youth started by all the living Presidents at Philadelphia, along with 38 Governors, more than a hundred mayors, and several thousand national and community civic leaders and organizations.

Like the Points of Light Foundation, America's Promise is a special agency for mobilizing community volunteering with the collaboration of the great organizations of the non-profit sector, large and small, of the business sector, and of government at all levels. Together, they are key parts of the system of community and national service.

The Corporation is seeking \$35.6 million for program administration. This includes \$3.6 million in additional funding for the state commissions and \$4.1 million in program administration funding to continue the high priority management information that are needed at the Corporation. The commissions are largely responsible for the selection and oversight of AmeriCorps programs and members. In addition, we are requesting \$5 million for program evaluation.

MANAGEMENT SYSTEMS IMPROVEMENT AND THE FISCAL YEAR 1999 AUDIT

Mr. Chairman, the future success of national service, the Corporation, and its programs will depend upon the effective management of the resources dedicated to these purposes. Since my last appearance before this Subcommittee the Corporation has taken aggressive action to improve its overall management.

We have given particular focus in the last year to remedying the material weaknesses in our financial management systems, as identified by the fiscal year 1998 audit. The Corporation developed an Action Plan not only to correct these weaknesses, but also to strengthen Corporation management generally, increase the use of technology, and improve our stewardship over Federal funds. The Action Plan is an effective tool for correcting problems and resolving issues, and reflects the Corporation's much improved general control environment.

When first developed for fiscal year 1999, the Action Plan had 8 Goals, 37 Objectives and 165 tasks. As the year progressed, we added additional tasks. As of March 21, 2000, we have completed 268 of 329 planned tasks, or over 80 percent.

The Corporation has made very substantial progress in critical management areas over the past 18 months. We have implemented new systems, successfully transitioned to the Year 2000 and brought on exceptionally talented people in key leadership positions at the Corporation. Specifically, the Corporation has—

- implemented a new financial management system that offers on-line, real-time data for management of the Corporation's resources;
- selected and confirmed an exceptionally well-qualified Chief Financial Officer, selected a Deputy Chief Financial Officer and a Chief Information Officer;
- hired new staff with strong financial management qualifications;
- within the National Service Trust, installed a new imaging system to electronically capture all of the historical Trust records and to digitally scan all new forms submitted to the Trust. This system has improved data reliability, addressed past audit issues, and reduced the labor needed for the management of the Trust;
- implemented a new Web Based Reporting System for AmeriCorps grantees to enroll, monitor and certify AmeriCorps member service;
- transitioned to the Year 2000 without mishap;
- issued seventeen new policies that provide clear management guidance in areas such as procurement, audit resolution, debt collection, and network and computer security;
- provided extensive training to staff to improve their skills and knowledge in areas such as procurement, grants management, grant monitoring, EEO compliance, finance, and appropriations law;
- established and staffed Executive Offices in the program areas to improve administrative controls;
- implemented a management control program;
- strengthened the performance management system; and
- increased oversight of grantees.

These are considerable accomplishments the results of which are reflected in the recently released fiscal year 1999 audit. Mr. Chairman, as you know last year auditors from KPMG, under contract to the Corporation's Inspector General, gave an unqualified opinion on the Corporation's balance sheet, or statement of financial position for fiscal year 1998, with disclaimers on the statements of operations and cash flow. They also identified eight material weaknesses in the Corporation's financial and other management systems.

This year, the audit found that the material weaknesses had been reduced from eight to five and again, the Corporation received an unqualified opinion on its balance sheet, and disclaimers on the other two related statements. In submitting the new audit the Inspector General stated that, "These improvements, and the Corporation's new accounting system implemented during the final months of fiscal year 1999, indicate that the Corporation continues to make progress toward producing auditable financial reports." The Inspector General also pointed out that "the Corporation has yet to fully correct all its financial management deficiencies."

We had hoped to receive unqualified opinions on all of our statements. However, the transition to the brand new financial management system, as the auditors

noted, was arduous. We succeeded, before the end of the fiscal year, in making the new system fully operational, but for most of the year we had to draw information from the long-established, but very inadequate former system. We will reap the great benefits of the new system in fiscal year 2000 and beyond. Meanwhile, the decrease in material weaknesses shows that our management improvements are working. We maintained the same opinion on our statements in a year when we implemented a brand new financial management system. This was a major effort for the Corporation and one that will reap benefits in fiscal year 2000 and beyond.

The major initiatives that have brought about this improvement are described below.

Implementation of the New Financial Management System

The Corporation implemented the new financial management system in September of 1999. The "Momentum" system is Year 2000 compliant, conforms to Federal system standards, and uses the federal government's standard general ledger. The system provides real-time, on-line access to data and it has front-end edit checks. Funds control is an integral part of the new system. Data integrity is much improved, and Corporation staff has access to critical management and reporting information.

The system implementation was difficult for us, as it has been for other federal agencies. The Corporation was moving from a non-standard to a standard system. Configuring the new system and converting data from the old system to the new system was a significant effort. We recruited new staff in Accounting with the skills needed to accomplish this goal, who worked long and hard hours to successfully implement the system without any break in meeting our financial obligations to grantees or participants.

Management Team in Place

The Corporation has taken its management responsibilities seriously. Wendy Zenker, our Chief Operating Officer, and the rest of the management team have worked diligently to improve the Corporation's operations.

The President nominated Anthony Musick as Chief Financial Officer in July and the Senate confirmed him in November of last year. His expertise and experience have provided important leadership in our determined efforts to improve financial management systems.

In addition, we recently named William Anderson as Deputy Chief Financial Officer. Mr. Anderson served in the Corporation's Inspector General's Office as the Assistant Inspector General for auditing. His experience will be a great asset to the Corporation. We have also hired additional staff in accounting, including an individual responsible for producing the Corporation's financial statements who reports directly to the CFO and Deputy CFO.

We also recently appointed David Spevacek as the Corporation's Chief Information Officer, another key position in our management team. He had previously served as our Director of Budget and the National Service Trust and has wide knowledge of the Corporation.

Management Controls

We have issued a number of new policies and procedures to make the Corporation operate more effectively in areas ranging from procurement, debt collection, audit resolution, property management, computer security, to Internet use. Seventeen policies have been issued. These administrative policies complement the programmatic policies that are already in place.

As we have developed our policies and procedures we have paid particular attention to our audit resolution processes. The Corporation maintains detailed reports on open and closed audit recommendations. As of March 31, 2000, the Corporation had completed final action on 181 of the 212 financial audit recommendations made by the Inspector General.

The Corporation has developed State Administrative Standards to guide state commissions in the administration of their grants. The Standards will enable the Corporation to apply consistent criteria to the assessment of state commission operations and to make well-informed decisions about funding. The Standards will enable commissions to pinpoint and diagnose their technical assistance needs. Once needs are clearly defined, commissions will improve their foundational systems, creating reliable infrastructure for the future of national service.

Technology

We have made improvements to the National Service Trust and have provided Internet access to each employee's desktop. Our transition to the year 2000 occurred smoothly for our widely dispersed field and headquarters staff.

Significant technology initiatives that were accomplished in fiscal year 1999 include the installation of an imaging system in the National Service Trust and the implementation of a web-based reporting system to record AmeriCorps member service. All existing Trust file documents have been captured electronically, and all official forms (enrollment, end-of-term, and other forms) are being imaged and retrieved electronically. This greatly improves the Corporation's ability to get access to historical records and speeds up the processing of newly received documentation. The system allows for the electronic storage and retrieval of almost one million pieces of paper filed with the Trust since the beginning of AmeriCorps.

The Web-Based Reporting System (WBR) for AmeriCorps member service was pilot tested in 10 states in 1999 and is now being implemented in all 50 States, 32 National Direct grantees, and 15 Education Awards programs. State Commissions and National Direct grantees are using this secure Internet server to record enrollments, member hours served, and education awards earned. WBR is greatly improving the quality of the data received by the Corporation and the speed at which the Corporation can process that data.

Mr. Chairman, these changes did not happen overnight. There were no quick fixes to longstanding problems, many going back to the systems used for years by the Corporation predecessor agencies before the Corporation was created. We have been working to develop lasting solutions to the financial and management problems the Corporation has faced. Our efforts to implement systemic improvements are recognized by the fact that the auditors' financial statement report reduced the number of material weaknesses from eight to five.

The Corporation is committed to continuing these improvements. The President's Budget requests \$35.6 million for the Corporation's program administration in fiscal year 2001, an additional \$7.7 million over fiscal year 2000. Of this increase, \$4.1 million will go to the Corporation's management. These funds will continue the critical financial management and other management improvements needed to make the Corporation operate in a more efficient and effective manner. The additional funds will support system development projects, such as the grants system; other technology improvements, such as increased use of the web; and critical staff needs to support the growing Corporation workload.

The increase includes \$3.6 million for State Commission administrative requirements. Reviews and other reports, such as pre-audit surveys now being performed by the Corporation's Inspector General, indicate that State Commissions require additional support to fully perform the responsibilities entrusted to them under the National and Community Service Act.

Cutting Per Member Costs

In addition to the management improvements, the General Accounting Office has found that pursuant to a 1996 agreement with Congress, the Corporation has reduced its average budgeted cost per member to no more than \$15,000 in the AmeriCorps*State/National program. We set ceilings on average budgeted costs for grants to state commissions and national non-profits, as well as implemented other cost cutting measures such as raising the program matching fund requirements for grantees. In addition, we expanded the Education Awards program under which the Corporation provides only the AmeriCorps education award and a minimal amount (less than \$500) of program support. The local nonprofits cover any other costs including living allowances. The Education Awards program is a major way of reducing the Corporation's costs while increasing support from the private and independent sectors.

AMERICORPS PROGRAMS FISCAL YEAR 2001 BUDGET REQUESTS

*AmeriCorps*State/National*

Last October, AmeriCorps celebrated its Fifth Anniversary. Since the beginning of the program, more than 150,000 people have joined AmeriCorps. For fiscal year 2001, the Administration is requesting a total of \$284 million for AmeriCorps grants. Of this total, \$233 million will fund grants to state commissions under the AmeriCorps*State program and \$51 million will go to our National Direct grantees. The overall request will support a total of 62,000 AmeriCorps members, 12,000 more than in fiscal year 2000, and will keep AmeriCorps on track to reach 100,000 members annually by the year 2004.

Under the AmeriCorps*State grant program, AmeriCorps members participate in local service programs operated by nonprofit agencies, local and state government entities, Indian tribes, institutions of higher education, local school and police districts, and partnerships among any of the above. Member recruitment, selection, and placement are the responsibility of the grantees. Members serving with these

grantees must help communities meet their educational, public safety, environmental, and other human needs. Governor-appointed state commissions select the local non-profits and community organizations that will provide service to communities with the AmeriCorps members. The \$233 million request is a \$44 million increase over fiscal year 2000.

AmeriCorps*National Direct program grantees are national nonprofit service organizations that operate in a number of states such as Habitat for Humanity, the American Red Cross, and the Boys and Girls Clubs. The Corporation has 39 National Direct grantees.

The National Direct program is an efficient and effective use of Corporation funding. These national and multi-state organizations have expertise and successful track records in administering service initiatives. They also have great success in meeting one of the goals of national service—increasing the spirit of volunteering in America. For example, AmeriCorps members with Habitat for Humanity supervised over 177,000 volunteers. We attach a 1999 article by Habitat's founder, Millard Fuller, "Habitat, AmeriCorps good partners," in which he states:
