### Nonappropriated Fund Wage and Surveys Areas

#### a. Wage area makeup.

A wage area is a defined geographic area within which are found concentrations of Federal wage employees in combination with concentrations of private enterprise employment, and which is treated as a single unit for purposes of fixing and applying Federal wage rates. A wage area consists of two parts:

- (1) *Survey area.* That geographic area consisting of one or more counties where there is the capability in NAF employment to conduct a wage survey and where there is sufficient private employment in wholesale, retail, service, and recreational establishments to provide adequate survey data.
- (2) *Area of application.* That geographic area consisting of one or more counties, including a survey area, plus those counties which do not meet the requirements for treatment as a survey area. The wage schedules established from data obtained in a survey area will be uniformly applied to covered NAF wage employees in the area of application.

#### b. Order of wage area definitions.

The wage area definitions which follow are in alphabetical order by State and alphabetically within a State by title of wage area. The definitions apply to all regular wage surveys and to all wage employees covered by regular schedules of the Federal Wage System. With a few exceptions each area is defined in terms of county units, independent cities, or, in the New England States, of entire township or city units. Each wage area consists of:

- (1) *Wage area title.* Wage areas usually carry the title of the principal city in the area. Sometimes, however, the area title reflects a broader geographic area, for examples Wyoming or Eastern Tennessee.
- (2) *Survey area definition.* Each county, independent city, or township in the survey area is listed.
- (3) *Area of application definition.* Each county, independent city, or township which in addition to the survey area is in the area of application is listed.
