

Highlights of women's earnings in 2016

August 2017 | Report 1069

In 2016, women who were full-time wage and salary workers had median usual weekly earnings that were 82 percent of those of male full-time wage and salary workers. In 1979, the first year for which comparable earnings data are available, women's earnings were 62 percent of men's. Most of the growth in women's earnings relative to men's occurred in the 1980s and 1990s. Since 2004, the women's-to-men's earnings ratio has remained in the 80 to 83 percent range. (See chart 1 and tables 1 and 12.)

This report presents earnings data from the Current Population Survey (CPS), a national monthly survey of 60,000 eligible households conducted by the U.S. Census Bureau for the U.S. Bureau of Labor Statistics (BLS). The weekly and hourly earnings estimates in this report reflect information collected from one-fourth of the CPS monthly sample and averaged for the calendar year. These data are distinct from the annual earnings estimates for full-time, year-round workers collected separately in the Annual Social and Economic Supplement (ASEC) to the CPS and published by the U.S. Census Bureau.

The earnings comparisons in this report are on a broad level and do not control for many factors that can be significant in explaining earnings differences, such as job skills and responsibilities, work experience, and specialization. The earnings estimates referenced throughout this report are medians. The median is the mid-point in the earnings distribution, with half of workers having earnings above the median level and half having earnings below.

See the accompanying technical notes section for more information, including a description of the source of the data and an explanation of the concepts and definitions used in this report.

Chart 1. Women's earnings as a percentage of men's, for full-time wage and salary workers, 1979–2016 annual averages

Earnings of full-time workers

Below are data highlights for women and men who usually work full time (35 hours or more per week) in wage and salary jobs, with sections focusing on characteristics such as age, race and ethnicity, education, occupation, and more.

Earnings by age group

In 2016, median weekly earnings were \$749 for all women age 16 and older. For men 16 and older, median weekly earnings were \$915. Women's median weekly earnings were highest for those between the ages of 35 and 54, with 35- to 44-year-olds (\$839) and 45- to 54-year-olds (\$836) earning about the same. For men, earnings were highest for 45- to 54-year-olds (\$1,075) and 55- to 64-year-olds (\$1,102). Young women and men age 16 to 24 had the lowest earnings (\$486 and \$512, respectively). (See chart 2 and table 1.)

Chart 2. Median usual weekly earnings of women and men who are full-time wage and salary workers, by age, 2016 annual averages

Click legend items to change data display. Hover over chart to view data.
 Source: U.S. Bureau of Labor Statistics, Current Population Survey.

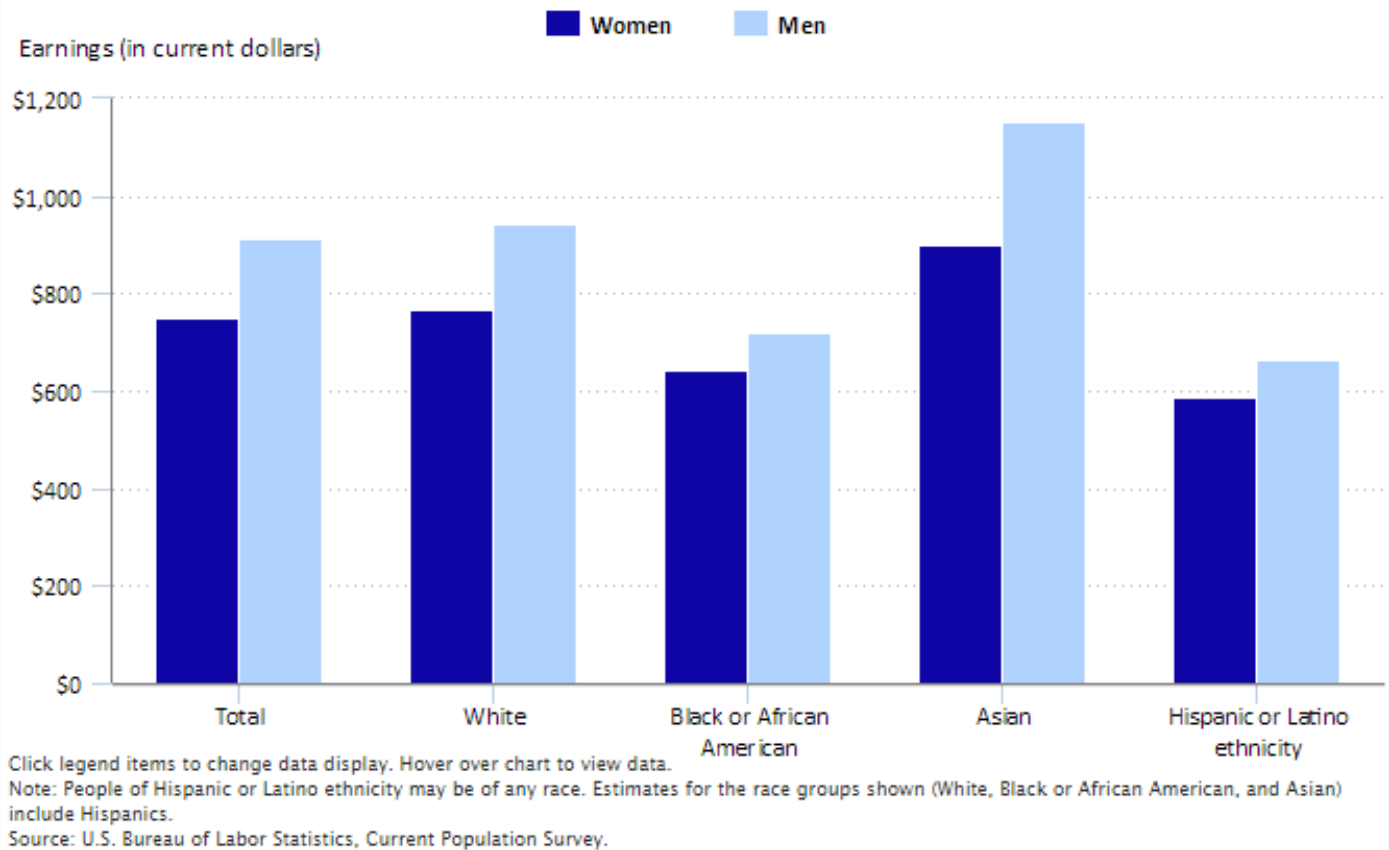

In 2016, women’s earnings ranged from 74 to 83 percent of men’s among workers age 35 and older. For those under age 35, the earnings differences between women and men were smaller, with women earning 89 to 96 percent of what men did. (See table 1.)

Between 1979 and 2016, women’s-to-men’s earnings ratios rose for most age groups, particularly in the prime working ages from 25 to 54. Among 25- to 34-year-olds, the ratio increased from 68 percent in 1979 to 89 percent in 2016; the ratio for 35- to 44-year-olds rose from 58 to 83 percent; and the ratio for 45- to 54-year-olds, from 57 to 78 percent. For workers age 55 to 64, the women’s-to-men’s earnings ratio rose from 61 to 74 percent over this period. For young workers age 16 to 24, the earnings ratio increased from 79 to 95 percent between 1979 and 2016, with the gains occurring primarily in the 1980s. (See table 12.)

Earnings by race and ethnicity

Asian women and men earned more than their White, Black, and Hispanic counterparts in 2016. Among women, Whites (\$766) earned 85 percent as much as Asians (\$902); Blacks (\$641) earned 71 percent, and Hispanics (\$586) earned 65 percent. In comparison, White men (\$942) earned 82 percent as much as Asian men (\$1,151); Black men (\$718) earned 62 percent as much; and Hispanic men (\$663), 58 percent. (See chart 3 and table 1.)

Chart 3. Median usual weekly earnings of women and men who are full-time wage and salary workers, by race and Hispanic or Latino ethnicity, 2016 annual averages

Earnings differences between women and men were the most pronounced for Asians and for Whites. Asian women earned 78 percent as much as Asian men in 2016, and White women earned 81 percent as much as their male counterparts. In comparison, Black women had median earnings that were 89 percent of Black men’s, and Hispanic women’s earnings were 88 percent of Hispanic men’s. (See table 1.)

Women’s earnings have increased considerably among the major race and Hispanic ethnicity groups since 1979 (the first year for which comparable data for Whites, Blacks, and Hispanics are available), with White women experiencing the greatest earnings growth. From 1979 to 2016, inflation-adjusted earnings (also called constant-dollar earnings) increased by 35 percent for White women, by 23 percent for Black women, and by 21 percent for Hispanic women. For White and Black women, earnings growth tapered off around 2004. Earnings for Hispanic women, however, have continued to increase, although substantial earnings growth for them did not begin until the late 1990s. (See table 18.)

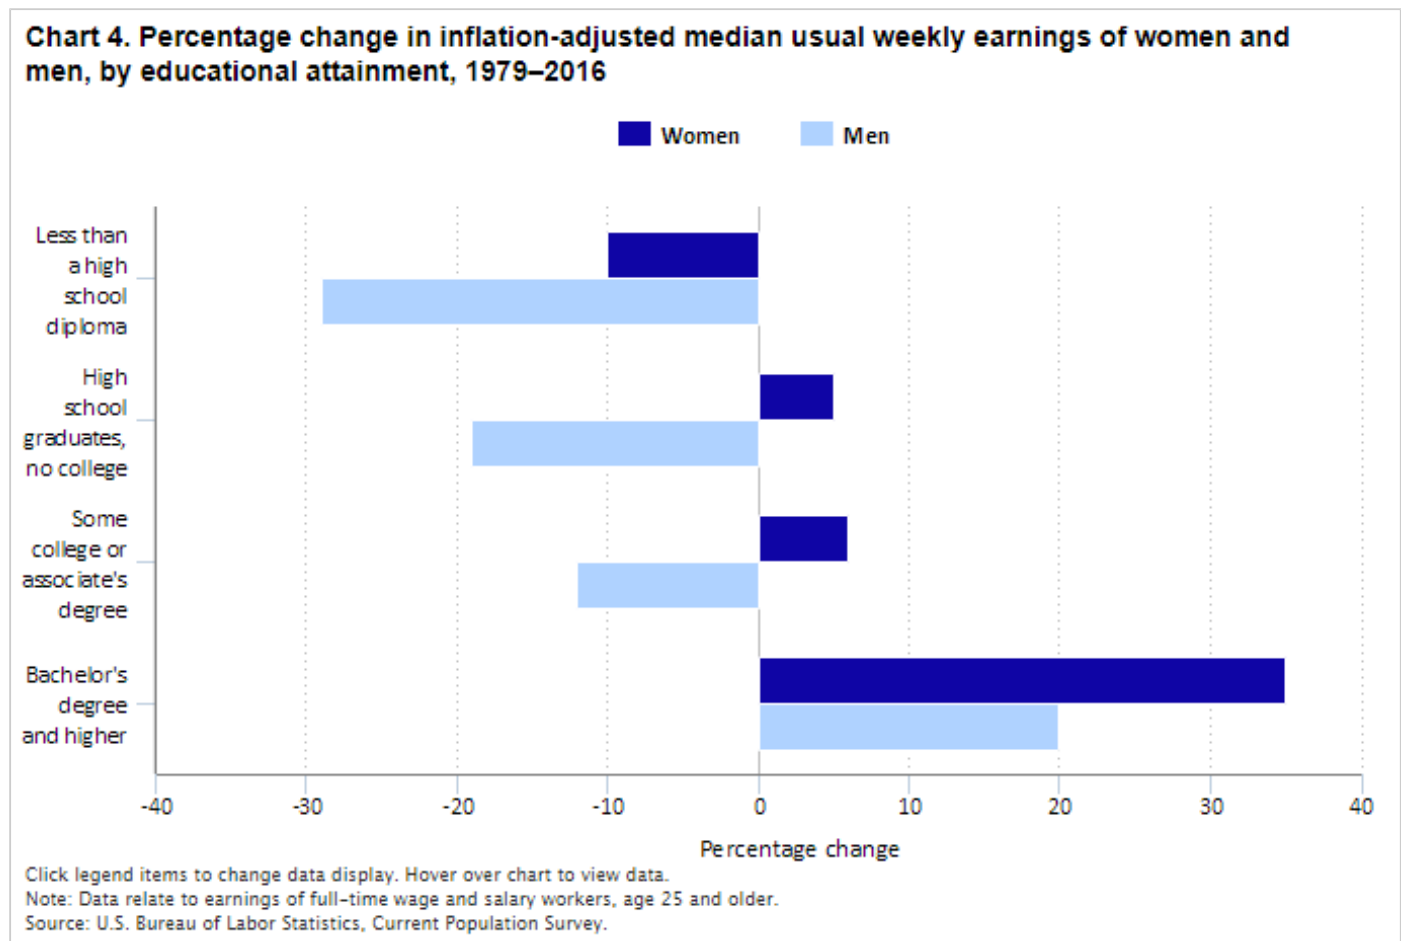

The long-term trend in men’s earnings has been quite different than that for women. Inflation-adjusted earnings for White and Black men trended down from 1979 through the first part of the 1990s, followed by a period of growth that stalled in the early 2000s. For Hispanic men, earnings also declined through the mid-1990s, then began to trend upward. Over the full period, 1979 through 2016, inflation-adjusted earnings for White, Black, and Hispanic men have changed little on net: a 2-percent gain for White and Black men, and a 2-percent decline for Hispanic men. (See table 18.)

Data for Asians were not tabulated prior to 2000. Between 2000 and 2016, inflation-adjusted earnings grew by 18 percent for Asian women and by 21 percent for Asian men. (See table 18.)

Earnings by educational attainment

Median weekly earnings vary significantly by educational attainment. Among all workers age 25 and older, the weekly earnings of those without a high school diploma (\$504) were 40 percent of those with a bachelor’s degree or higher (\$1,259) in 2016. For workers with a high school diploma who had not attended college, median earnings (\$692) were 55 percent of those with a bachelor’s degree or higher. Those with some college or an associate’s degree (median weekly earnings of \$779) made 62 percent of what workers with a bachelor’s degree or more made. (See table 1.)

In each educational attainment category, the long-term trend in inflation-adjusted earnings has been more favorable for women than for men. Although both women and men without a high school diploma have experienced declines in inflation-adjusted earnings since 1979, the drop for women was much smaller than that for men: a 10-percent decrease for women, compared with a 29-percent decline for men. On an inflation-adjusted basis, earnings for women with a bachelor’s degree or higher have increased by 35 percent since 1979. Earnings for men with a bachelor’s degree or higher have risen by 20 percent. (Data refer to workers age 25 and older.) (See chart 4 and table 19.)

Earnings by occupation

Women and men working full time in management, business, and financial operations occupations had higher median weekly earnings than workers in any other major occupational category in 2016 (\$1,099 for women and \$1,491 for men). Within management, business, and financial operations occupations, women who were chief executives (\$1,876) and computer and information systems managers (\$1,680) had the highest median weekly earnings in 2016.

Among men, those who were chief executives (\$2,419) and architectural and engineering managers (\$2,265) earned the most. (See table 2.)

The second-highest paying occupational category for women and men was professional and related occupations (\$998 for women and \$1,364 for men). This is a broad occupational category made up of several distinct job groupings for specialized fields such as computer science and math, architecture and engineering, law, education, and healthcare. Within this diverse category, women who were pharmacists (\$1,839) and nurse practitioners (\$1,753) had the highest earnings in 2016. For men, those who were physicians and surgeons (\$2,343), pharmacists (\$2,096), and lawyers (\$2,086) earned the most. (See table 2.)

Occupational distributions of women and men

The occupational distributions of female and male full-time workers differ considerably. Compared with men, relatively few women work in construction, production, or transportation occupations, and women are far more concentrated in office and administrative support jobs. (See chart 5 and table 2.)

Women also are more likely than men to work in professional and related occupations. In 2016, 30 percent of women worked in professional and related occupations, compared with 19 percent of men. Within the professional category, though, the proportion of women employed in the higher paying jobs is much smaller than the proportion of men employed in them. In 2016, 10 percent of women in professional and related occupations were employed in the relatively high-paying computer (median weekly earnings of \$1,325 for women and \$1,518 for men) and engineering (\$1,207 for women and \$1,529 for men) fields, compared with 46 percent of men. Women were more likely to work in

education (\$933 for women and \$1,154 for men) and healthcare (\$1,036 for women and \$1,332 for men) jobs, which generally pay less than computer and engineering jobs. Sixty-eight percent of women in professional occupations worked in education and healthcare jobs in 2016, compared with 30 percent of men. (See table 2.)

Across all occupational categories, the three most common jobs for women were elementary and middle school teacher (\$981), registered nurse (\$1,143), and secretary or administrative assistant (\$708). Each of these occupations employed more than 2 million women in 2016, collectively representing 13 percent of women in full-time wage and salary jobs.

Among men, the most common job by far was truck driver (driver/sales workers and truck drivers, \$787). In 2016, 2.7 million, or 4 percent, of all male full-wage and salary workers were truck drivers. Although engineering jobs are shown separately by specialty (civil, mechanical, etc.) in this report, if combined, engineer would be the second most common job for men. In 2016, a total of 1.9 million men were employed full time in the 16 designated engineering specialties (median weekly earnings ranging from \$1,526 to \$1,901). (See table 2.)

Earnings for those with and without children under 18

In 2016, a little more than one-third of full-time wage and salary workers were parents of children under age 18. (As defined here, “children” includes only sons, daughters, stepchildren, and adopted children under age 18 who live in the household.) Median weekly earnings for mothers of children under age 18 (\$756) were little different from the earnings for women without children under 18 (\$746). Earnings for fathers with children under 18 were \$1,013, compared with \$861 for men without children under 18. (See table 7.)

Earnings by state of residence

Median weekly earnings and women’s-to-men’s earnings ratios vary by state of residence. (In this report, “state” refers to the 50 states and the District of Columbia.) The differences among the states reflect, in part, variation in the occupations and industries found in each state and differences in the demographic composition of each state’s labor force. In addition, the sampling error for the state estimates is considerably larger than it is for the national estimates. Thus, earnings comparisons between states should be made with caution. Readers also should note that the state estimates are based on workers’ state of residence; their reported earnings are not necessarily from a job located in the same state. (See table 3.)

Weekly work hours of full-time workers

Among full-time workers (that is, those usually working at a job 35 hours or more per week), men are more likely than women to have a longer workweek. In 2016, 26 percent of men who usually work full time worked 41 or more hours per week, compared with 14 percent of women. Women were more likely than men to work 35 to 39 hours per week: 11 percent of women worked such hours in 2016, while 5 percent of men did. A majority of both male and female full-time workers had a 40-hour workweek. Among these workers, women earned 89 percent as much as men. (This analysis excludes people who usually work 35 or more hours per week but whose hours vary.) (See table 5.)

Earnings of part-time workers

Women are more likely than men to work part time—that is, less than 35 hours per week on a sole or main job. Women who worked part time made up 25 percent of all female wage and salary workers in 2016. In comparison, 12 percent of men in wage and salary jobs worked part time. (See tables 4 and 5.)

Median weekly earnings for female part-timers were \$255 in 2016, slightly higher than the \$245 median for men. (See table 4.)

Part-time workers are more likely to be under age 25 than full-time workers. Among part-timers, 29 percent of women and 44 percent of men were under age 25 in 2016. Among full-time workers, 9 percent of women and 9 percent of men were under age 25. (See tables 1 and 4.)

Earnings of workers paid by the hour

In 2016, 62 percent of women and 56 percent of men in wage and salary jobs were paid by the hour. Women who were paid hourly rates had median hourly earnings of \$13.01, which were 87 percent of the median hourly earnings of men (\$14.96). (See tables 8 and 11.)

Among workers who were paid hourly rates in 2016, 3 percent of women and 2 percent of men had hourly earnings at or below the prevailing federal minimum wage of \$7.25. (See table 10.)

Among both women and men, hourly paid workers age 16 to 19 were the most likely to have earnings at or below the minimum wage. Ten percent of teenage workers who were paid hourly rates earned the prevailing federal minimum wage or less in 2016, compared with just 2 percent of hourly paid workers age 25 and older. Five percent of workers age 20 to 24 had earnings at or below the federal minimum wage. (See table 10.) See the technical notes section for information about BLS estimates of the number of minimum wage workers.

Some college or associate's degree	27,307	779	3	12,924	688	4	14,383	896	5	76.8
Bachelor's degree and higher	41,125	1,259	4	19,747	1,101	7	21,378	1,464	8	75.2

(1) Includes people in opposite-sex married couples only. See the technical notes section.

(2) Separated includes people who are married, spouse absent. See the technical notes section.

(3) Differences in earnings levels between workers with and without union affiliation reflect a variety of factors in addition to coverage by a collective bargaining agreement, including the distribution of workers by occupation, industry, and geographic region.

(4) Members of a labor union or an employee association similar to a union.

(5) Union members and workers who report no union affiliation but whose jobs are covered by a union or an employee association contract.

Note: Estimates for the race groups shown (White, Black or African American, and Asian) do not sum to totals because data are not presented for all race groups.

People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics.

Pennsylvania	4,453	857	12	1,984	741	11	2,468	956	12	77.5

See footnotes at end of table.

Table 3. Median usual weekly earnings of full-time wage and salary workers, by state, 2016 annual averages

State	Total			Women			Men			Women's earnings as a percentage of men's
	Number of workers (thousands)	Median weekly earnings	Standard error of median	Number of workers (thousands)	Median weekly earnings	Standard error of median	Number of workers (thousands)	Median weekly earnings	Standard error of median	
Rhode Island	385	839	19	179	765	30	206	907	21	84.3
South Carolina	1,623	779	16	773	687	18	851	884	20	77.7
South Dakota	309	778	14	137	670	12	172	876	16	76.5
Tennessee	2,252	747	14	983	666	17	1,269	821	19	81.1
Texas	9,801	780	8	4,197	707	10	5,603	860	12	82.2
Utah	997	833	18	358	668	16	640	955	20	69.9
Vermont	228	850	14	104	801	27	124	888	27	90.2
Virginia	3,025	902	15	1,376	809	22	1,649	1,013	30	79.9
Washington	2,506	929	21	1,065	814	18	1,441	1,056	33	77.1
West Virginia	565	762	14	248	688	17	316	846	30	81.3
Wisconsin	2,098	843	16	947	737	14	1,152	940	20	78.4
Wyoming	199	848	17	82	699	22	117	970	28	72.1

Note: In general, the sampling error for the state estimates is considerably larger than it is for the national estimates; thus, comparisons of state estimates should be made with caution. Data shown are based on workers' state of residence; workers' reported earnings, however, may or may not be from a job located in the same state.

Table 7. Median usual weekly earnings of full-time wage and salary workers, by marital status and presence and age of own children under 18 years old, 2016 annual averages

Characteristic	Number of workers (thousands)	Median weekly earnings	Standard error of median
Women			
Total, all marital statuses	49,161	\$749	\$2
With children under 18 years old	17,288	756	4
With children 6 to 17, none younger	10,517	772	6
With children under 6 years old	6,771	730	7
With no children under 18 years old	31,873	746	3
Total, married, spouse present ⁽¹⁾	24,849	838	5
With children under 18 years old	11,327	870	7
With children 6 to 17, none younger	6,810	857	9
With children under 6 years old	4,516	885	9
With no children under 18 years old	13,523	815	6
Total, other marital statuses ⁽²⁾	24,312	671	3
With children under 18 years old	5,961	607	4
With children 6 to 17, none younger	3,706	662	8
With children under 6 years old	2,255	524	7
With no children under 18 years old	18,350	697	4
Men			
Total, all marital statuses	61,930	915	3
With children under 18 years old	22,021	1,013	5
With children 6 to 17, none younger	11,953	1,085	12
With children under 6 years old	10,068	952	8
With no children under 18 years old	39,909	861	4

See footnotes at end of table.

Table 7. Median usual weekly earnings of full-time wage and salary workers, by marital status and presence and age of own children under 18 years old, 2016 annual averages

Characteristic	Number of workers (thousands)	Median weekly earnings	Standard error of median
Total, married, spouse present ⁽¹⁾	36,195	1,062	6
With children under 18 years old	19,297	1,071	8
With children 6 to 17, none younger	10,623	1,134	9
With children under 6 years old	8,674	1,013	8
With no children under 18 years old	16,898	1,053	8
Total, other marital statuses ⁽²⁾	25,736	732	4
With children under 18 years old	2,724	719	10
With children 6 to 17, none younger	1,330	813	21
With children under 6 years old	1,394	652	13
With no children under 18 years old	23,011	733	4

⁽¹⁾ Refers to people in opposite-sex married couples only. See the technical notes section.

⁽²⁾ Includes people who are never married; widowed; divorced; separated; and married, spouse absent. See the technical notes section.

Note: "Children" refers to "own" children and includes sons, daughters, stepchildren, and adopted children under age 18 who live in the household. Not included are other related children, such as grandchildren, nieces, nephews, and cousins, as well as unrelated children in the household.

(1) Refers to people in opposite-sex married couples only. See the technical notes section.

(2) Separated includes people who are married, spouse absent. See the technical notes section.

(3) Differences in earnings levels between workers with and without union affiliation reflect a variety of factors in addition to coverage by a collective bargaining agreement, including the distribution of workers by occupation, industry, and geographic region.

(4) Members of a labor union or an employee association similar to a union.

(5) Union members and workers who report no union affiliation but whose jobs are covered by a union or an employee association contract.

Note: Estimates for the race groups shown (White, Black or African American, and Asian) do not sum to totals because data are not presented for all race groups.

People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics.

Table 10. Wage and salary workers paid hourly rates with earnings at or below the prevailing federal minimum wage, by selected demographic characteristics, 2016 annual averages

Characteristic	Workers paid hourly rates				
	Total (thousands)	Below prevailing federal minimum wage (thousands)	At prevailing federal minimum wage (thousands)	Total at or below prevailing federal minimum wage	
				Number (thousands)	Percentage of workers paid hourly rates
Men	5,297	93	62	156	2.9
Asian	3,962	75	21	96	2.4
Women	2,121	50	11	61	2.9
Men	1,841	25	10	35	1.9
Hispanic or Latino ethnicity	16,241	264	103	366	2.3
Women	7,197	171	59	229	3.2
Men	9,044	93	44	137	1.5
Full- and part-time status ⁽¹⁾					
Full-time workers	59,198	702	183	884	1.5
Women	26,780	434	116	550	2.1
Men	32,418	268	66	334	1.0
Part-time workers	20,582	748	519	1,267	6.2
Women	13,474	517	316	833	6.2
Men	7,108	231	203	434	6.1

⁽¹⁾ The distinction between full- and part-time workers is based on hours usually worked. These data do not sum to totals because full- or part-time status on the principal job is not identifiable for a small number of multiple jobholders.

Note: See the technical notes section for information about the federal minimum wage level and estimating the number of minimum wage workers. Estimates for the race groups shown (White, Black or African American, and Asian) do not sum to totals because data are not presented for all race groups. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics.

Footnotes:

⁽¹⁾ Data for 1990–91, 1996–97, and 2007–09 reflect changes in the minimum wage that took place in those years.

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at www.bls.gov/cps/documentation.htm#comp. See the technical notes section for information about the federal minimum wage level and estimating the number of minimum wage workers.

2013	82.1	81.7	91.3	77.3	91.1
2014	82.5	81.8	89.9	77.9	89.0
2015	81.1	80.8	90.4	77.7	89.7
2016	81.9	81.3	89.3	78.4	88.4

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at www.bls.gov/cps/documentation.htm#comp. The women's-to-men's earnings ratios shown here are calculated from the current-dollar median usual weekly earnings of full-time wage and salary workers in table 23. As of 2003, estimates for the race groups shown (White, Black or African American, and Asian) include people who selected that race group only; people who selected more than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian data for 2000–02 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics. Dash indicates data not available.

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at www.bls.gov/cps/documentation.htm#comp. The Consumer Price Index research series using current methods (CPI-U-RS) is used to convert current dollars to constant (inflation-adjusted) dollars. See the technical notes section.

2015	906	931	688	1,143	639
2016	915	942	718	1,151	663

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at www.bls.gov/cps/documentation.htm#comp. As of 2003, estimates for the race groups shown (White, Black or African American, and Asian) include people who selected that race group only; people who selected more than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian data for 2000–2002 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics. The Consumer Price Index research series using current methods (CPI-U-RS) is used to convert current dollars to constant (inflation-adjusted) dollars. See the technical notes section. Dash indicates data not available.

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at www.bls.gov/cps/documentation.htm#comp. The Consumer Price Index research series using current methods (CPI-U-RS) is used to convert current dollars to constant (inflation-adjusted) dollars. See the technical notes section.

2016	14.96	15.13	13.06	15.04	13.83

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at www.bls.gov/cps/documentation.htm#comp. As of 2003, estimates for the race groups shown (White, Black or African American, and Asian) include people who selected that race group only; people who selected more than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian data for 2000–2002 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics. The Consumer Price Index research series using current methods (CPI-U-RS) is used to convert current dollars to constant (inflation-adjusted) dollars. See the technical notes section. Dash indicates data not available.

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at www.bls.gov/cps/documentation.htm#comp. As of 2003, estimates for the race groups shown (White, Black or African American, and Asian) include people who selected that race group only; people who selected more than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian data for 2000–02 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics. Dash indicates data not available.

Note: The comparability of historical labor force data has been affected at various times by methodological and other changes in the Current Population Survey (CPS). Information about historical comparability is online at www.bls.gov/cps/documentation.htm#comp. As of 2003, estimates for the race groups shown (White, Black or African American, and Asian) include people who selected that race group only; people who selected more than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Asian data for 2000–02 are for Asians and Pacific Islanders. As of 2003, Asians constitute a separate category. Data for Asians were not tabulated prior to 2000. People of Hispanic or Latino ethnicity may be of any race; estimates for the race groups include Hispanics. Dash indicates data not available.

Technical Notes

The estimates in this report were obtained from the Current Population Survey (CPS), which provides information on the labor force, employment, and unemployment. The survey is conducted monthly for the U.S. Bureau of Labor Statistics (BLS) by the U.S. Census Bureau using a scientifically selected national sample of about 60,000 eligible households representing all 50 states and the District of Columbia. The survey data on earnings are based on one-fourth of the CPS monthly sample and are limited to wage and salary workers. All self-employed workers, both incorporated and unincorporated, are excluded from the data presented in this report.

The earnings comparisons in this report are on a broad level and do not control for many factors that can help explain earnings differences. This includes the direct comparisons of earnings levels among demographic groups and the women's-to-men's earnings ratios shown in the tables (that is, women's earnings as a percentage of men's). For example, the overall ratio of women's-to-men's earnings for full-time workers presented here is not controlled for differences in important determinants of earnings such as age, occupation, and educational attainment. The earnings comparisons in this report are not restricted to workers with otherwise comparable characteristics and comparable jobs. Even controlling for one of the factors may not fully explain earnings differences. Comparisons of women's and men's earnings by detailed occupation, for example, are not simultaneously controlled for differences in key factors such as age, job skills and responsibilities, work experience, and specialization.

Material in this report is in the public domain and may be used without permission. Information in this report will be made available upon request to individuals with sensory impairments. Voice telephone: (202) 691-5200; Federal Relay Service: 1 (800) 877-8339.

Concepts and definitions

The principal concepts and definitions used in this report are described briefly below.

Wage and salary workers are people age 16 and older who receive wages, salaries, commissions, tips, payments in kind, or piece rates on their sole or principal job. This group includes employees in both the public and private sectors. All self-employed workers are excluded whether or not their businesses are incorporated.

Full-time workers are defined for the purpose of these estimates as those who usually work 35 hours or more per week at their sole or principal job. The federal Fair Labor Standards Act (FLSA) does not define full- or part-time employment.

Part-time workers are defined for the purpose of these estimates as those who usually work fewer than 35 hours per week at their sole or principal job. The federal Fair Labor Standards Act (FLSA) does not define full- or part-time employment.

Usual weekly earnings reflect earnings before taxes and other deductions and include any overtime pay, commissions, or tips usually received (at the main job in the case of multiple jobholders). Before 1994, respondents were asked how much they usually earned per week. Since January 1994, respondents have been asked to identify the easiest way for them to report earnings (hourly, weekly, biweekly, twice monthly, monthly, annually, or other) and how much they usually earn in the reported time period. Earnings reported on a basis other than weekly are converted to a weekly equivalent. The term "usual" is determined by each respondent's own understanding of the

term. If the respondent asks for a definition of “usual,” interviewers are instructed to define the term as more than half the weeks worked during the past 4 or 5 months.

The median of usual weekly earnings reflects the midpoint in a given earnings distribution, with half of workers having earnings above the median and the other half having earnings below the median.

The BLS procedure for estimating the median of a weekly earnings distribution places each reported or calculated weekly earnings value into a \$50-wide interval that is centered around a multiple of \$50. The median is calculated through the linear interpolation of the interval in which the median lies.

Changes over time in the medians for specific groups may not necessarily be consistent with the movements estimated for the overall median boundary. The most common reasons for this possible anomaly are as follows:

- There could be a change in the relative weights of the subgroups. For example, the median earnings of 16- to 24-year-olds and the median earnings of those 25 years and older may rise, but if the lower earning 16-to-24 age group accounts for a greatly increased share of the total, the overall median could actually fall.
- There could be a large change in the shape of the distribution of reported earnings, particularly near a median boundary. This change could be caused by survey observations that are clustered at rounded values, such as \$600 or \$700. An estimate lying in a \$50-wide centered interval containing such a cluster tends to change more slowly than one in other intervals. Consider, for example, the calculation of the median for a multipeaked earnings distribution that shifts over time. As such a distribution shifts, the median does not necessarily move at the same rate. Specifically, the median takes relatively more time to move through a frequently reported earnings interval, but once above the upper limit of such an interval, it can move relatively quickly to the next frequently reported interval. BLS procedures for estimating medians mitigate such irregular movements; however, users should be cautious of these effects when evaluating short-term changes in the medians and in ratios of the medians.

Workers paid by the hour are employed wage and salary workers who report that they are paid at an hourly rate on their job. Typically, workers paid an hourly wage have made up around 60 percent of all wage and salary workers. Estimates of workers paid by the hour include both full- and part-time workers unless otherwise specified.

Hourly earnings data are for wage and salary workers who are paid by the hour and pertain to earnings from a person’s sole or principal job. Hourly earnings for hourly paid workers do not include overtime pay, commissions, or tips received.

Workers paid at or below the federal minimum wage include only workers who are paid hourly rates. Salaried workers and other nonhourly paid workers are excluded, even though some have earnings that, if converted to hourly rates, would be at or below the federal minimum wage.

The estimates of workers paid at or below the federal minimum wage in this report are based solely on whether the hourly wage they report (which does not include overtime pay, tips, or commissions) is at or below the federal minimum wage. Some respondents might round hourly earnings when answering survey questions. As a result, some workers might report having hourly earnings above or below the federal minimum wage when in fact they earn the minimum wage.

Some workers who reported earnings below the prevailing federal minimum wage may not be covered by federal or state minimum wage laws because of exclusions and exemptions in the statutes. Thus, the presence of workers with hourly earnings below the federal minimum wage does not necessarily indicate violations of the federal Fair Labor Standards Act (FLSA) or state statutes in cases where such standards apply. The CPS does not include questions on whether workers are covered by the minimum wage provisions of the FLSA or by individual state or local minimum wage laws. For more information about the minimum wage exemptions in the FLSA, see the U.S. Department of Labor’s website, “Minimum Wage and Overtime Pay: Who is Covered.”

The estimates presented in this report likely understate the actual number of workers with hourly earnings at or below the minimum wage. BLS does not routinely estimate the hourly earnings of workers not paid by the hour because there are data quality concerns associated with constructing such an estimate.

Regular collection of earnings data in the basic CPS began in 1979. The prevailing federal minimum wage from 1979 to the present is as follows, with the last change occurring in 2009.

Federal minimum wage	Effective date
\$2.90	January 1, 1979
\$3.10	January 1, 1980
\$3.35	January 1, 1981
\$3.80	April 1, 1990
\$4.25	April 1, 1991
\$4.75	October 1, 1996
\$5.15	September 1, 1997
\$5.85	July 24, 2007
\$6.55	July 24, 2008
\$7.25	July 24, 2009

When the minimum wage has increased during a given year, the estimates of the annual average number of minimum wage workers reflect both minimum wage levels in effect during the year. For example, data for 2007 reflect the number of workers who earned the federal minimum wage of \$5.15 for January to July and the number of workers who earned the minimum wage of \$5.85 for August to December.

Race is reported by the household respondent. In accordance with the Office of Management and Budget standards, White, Black or African American, and Asian are terms used to describe a person’s race. Beginning in 2003, people in these categories are those who selected that race group only. Those who identify multiple race groups are categorized as people of Two or More Races. Before 2003, people of Two or More Races identified one group as their main race. For more information on the 2003 changes to questions on race, see “Revisions to the Current Population Survey Effective in January 2003.” Data for other race groups—American Indians and Alaska Natives, Native

Hawaiians and Other Pacific Islanders—and for people of Two or More Races are included in totals but not separately identified in this report because the number of survey respondents is too small to develop estimates of sufficient quality.

Hispanic or Latino ethnicity refers to people who identified themselves in the survey process as being of Hispanic, Latino, or Spanish origin. People who identify themselves as Hispanic or Latino ethnicity may be of any race and are included in estimates for the race groups (White, Black or African American, and Asian) in addition to being shown separately.

Married, spouse present refers to people in opposite-sex marriages living together in the same household, even though one may be temporarily absent on business, on vacation, on a visit, in a hospital, or for other reasons.

Other marital status refers to people who are never married; widowed; divorced; separated; married, spouse absent; as well as people in same-sex marriages. Separated includes people with legal separations, those living apart with intentions of obtaining a divorce, and other people permanently or temporarily separated because of marital discord. Married, spouse absent, includes opposite-sex married people living apart because either the husband or wife was employed and living at a considerable distance from home, was serving away from home in the Armed Forces, had moved to another area, or had a different place of residence for any other reason except those listed in the separated definition above.

Inflation-adjusted earnings shown in this report use the Consumer Price Index research series using current methods (CPI-U-RS) to convert current dollars to constant, or inflation-adjusted, dollars. BLS has made numerous improvements to the Consumer Price Index (CPI) over the years. Although these improvements make the CPI more accurate, the official histories of CPI series are not adjusted to reflect the improvements. Because many researchers need a historical series that measures price change consistently over time, BLS developed the CPI-U-RS to provide an estimate of the CPI that incorporates most of the methodological improvements made since 1978 into the entire series. For further information, see Kenneth J. Stewart and Stephen B. Reed, “CPI research series using current methods, 1978–98,” (*Monthly Labor Review*, June 1999) and “Questions and Answers: Consumer Price Index Research Series Using Current Methods.”

This report uses the most recent version of the CPI-U-RS available at the time of production. Users should note that the CPI-U-RS is subject to periodic revision. As a result, the rate of inflation incorporated into the inflation-adjusted median earnings estimates in this report may differ from the rate used in previous reports in this series or in other publications.

Reliability

Statistics based on the CPS are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, there is a chance that the sample estimates may differ from the true population values they represent. The component of this difference that occurs because samples differ by chance is known as sampling error, and its variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the true population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

Readers should be aware that because of sampling error, apparent differences between estimates for two or more groups or categories may not be statistically significant, and therefore not meaningfully different from one another. Standard errors are shown with many of the median earnings estimates in this report to help readers evaluate differences in earnings estimates.

The CPS data also are affected by nonsampling error. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information on all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data. Further information about the reliability of data from the CPS is available on the CPS Technical Documentation page of the BLS website.
