**Subject:** Docket # 04-7984

I am requesting that SAMHSA should mandate alternate testing for drugs if a person has an inability to produce a urine specimen. I know of many people who have parauresis, the inability to void in front of someone else. The inability to produce a specimen should not be equated with a refusal to test. This is a complex problem and the millions of people with it should be offered an alternative. Thank you.
