Subject: Public Comment on FR Docket Number 04-7964, Mandatory Guidelines

I am writing to comment on the subject guidelines to recommend the use of alternative testing for drugs other than urine testing. I am one of approximately 7% of the American Male population which suffers from Paruresis or an inability to urinate in public or in other "threatening" situations.

I appeal; to you to offer alternative methods of testing. The current testing methodology discourages a significant number of people from seeking employment in those agencies or careers which would require regular urine analysis.

After having read some of the previous comments, I would agree that our glorious leaders, i.e., Senators and Representatives be the first in line to undergo regular drug testing.

I really feel that regular drug testing without "cause" is a significant invasion of one's privacy and is bad public policy.
