USAEHA TECHNICAL GUIDE NO. 107
GUIDE TO PESTICIDE REGISTERED TRADE NAMES

SECTION I
GENERAL

1. INTRODUCTION.

a. This technical guide was prepared to assist those Department of the Army (DA) personnel involved with use and disposition of pesticides as part of the ongoing DA Pest Management Program. The intent of this guide is to provide a ready reference to those registered trade names for pesticide chemicals and products and the corresponding manufacturers of these items.

b. The most reliable information available at the time, using selected references given in Appendix A, was compiled into this guide.

2. USING THIS GUIDE.

a. Registered trade names for pesticides can refer to specific chemicals which are utilized in the formulation of pesticide products (e.g., Dursban® with the approved common name of chlorpyrifos), to specific pesticide products which may contain one or more active ingredients (e.g., Aquafog® which contains 0.2 percent pyrethrin, 0.4 percent piperonyl butoxide and 0.7 percent MGK 264), or to a line of pesticide products or pesticide application equipment which a particular company manufactures (e.g., Ortho®, Micro-Gen®).

b. Section II contains an alphabetical listing of registered trade names for pesticide chemicals. The center column contains the officially approved common or generic name for the particular pesticide chemical trade name. Following the common name are letter abbreviations (in parentheses) for those organizations that have officially approved the use of the common name. A listing of the approving authorities is given in Appendix B. If no common or generic name currently exists, the chemical name is given in Section IV.

* The information contained herein is supplied with the *
* understanding that no discrimination or omission of *
* pesticide registered trade names is intended. The *
* mention of a pesticide, commercial or proprietary product *
* does not constitute a recommendation or an endorsement of *
* this product by the US Army. *

*-----
* This technical guide supersedes TG-107, Guide to Pesticide Registered Trade Names, November 1977.

c. Section III contains an alphabetical listing of registered trade names for specific pesticide products and equipment. In addition, those registered trade names for a manufacturer's product line are included in this section. The center column contains a letter designation for the primary pesticidal activity associated with this product or products. A key to the letter designation can be found in Appendix C. There are approximately 35,000 individual pesticide products currently registered with the US Environmental Protection Agency (EPA). Obviously, all products with registered trade names could not be listed in this section. However, an attempt has been made to list those products frequently encountered by DA pest management personnel.

d. The third column for Sections II and III gives an abbreviated name for the company which has the proprietary rights to the trade name listed. An alphabetical listing of company names and addresses is given in Appendix D.

e. Section IV contains an alphabetical listing of those pesticide trade names identified in Sections II and III as not having an approved common chemical name(s). In this section, the full chemical name is provided.

f. Further information regarding a particular pesticide product can be obtained by contacting the appropriate company or by calling the Pesticide Coordinator, US Army Environmental Hygiene Agency, via the "Pesticide Hotline" at AUTOVON 584-3773 or commercial (301) 671-3773.
