Source Reduction: The INEEL has an active Pollution Prevention Program that promotes and monitors source reduction activities on all waste streams. Source reduction programs include solvent substitution, material substitution, and inventory control, material exchange, and process modifications.

Process Waste Assessments are scheduled to be performed on all waste streams. Process Wastes Assessments will consist of Material Balances and Waste Minimization Opportunities. Many waste minimization opportunities have been discovered through process modification and waste segregation.

The Material Exchange Program promotes source reduction of waste-producing materials at the INEEL by providing a communication network to locate alternate users of excess materials.

Recycling Activities: Hazardous scrap materials are accumulated for recycling. Periodic shipments of lead, silver, electronic scrap, and batteries are sent to recyclers who have been audited for compliance with all environmental regulations.
