## APPENDICES

## Appendix A: Detailed Tables

## Detailed Tables

Table POP1 Number of children under age 18 in the United States by age, selected years 1950-98 and projected 2000-2020 ..... 68
Table POP2 Persons in selected age groups as a percentage of the total U.S. population, and children under age 18 as a percentage of the dependent population, selected years 1950-98 and projected 2000-2020 ..... 68
Table POP3 Racial and ethnic composition: Percentage of U.S. children under age 18 by race and Hispanic origin, selected years 1980-98 and projected 2000-2020 ..... 69
Table POP4 Difficulty speaking English: Children ages 5 to 17 who speak a language other than English at home, and who are reported to have difficulty speaking English by race, Hispanic origin, and region, selected years 1979-95 ..... 70
Table POP5 Family structure: Percentage of children under age 18 by presence of parents in household, race, and Hispanic origin, selected years 1980-98 ..... 71
Table POP6.A Birth rates for unmarried women by age of mother, selected years 1980-97 ..... 72
Table POP6.B Percentage of all births that are to unmarried women in a given age group by age of mother, selected years 1980-97 ..... 72
Table ECON1.A Child poverty: Percentage of related children under age 18 living below selected poverty levels by age, family structure, race, and Hispanic origin, selected years 1980-97 ..... 73
Table ECON1.B Income distribution: Percentage of related children under age 18 by family income relative to the poverty line, selected years 1980-97 ..... 74
Table ECON2 Secure parental employment: Percentage of children under age 18 living with parents with at least one parent employed full time, all year by family structure, race, Hispanic origin, poverty status, and age, selected years 1980-97 ..... 75
Table ECON3 Housing problems among U.S. households with children under age 18, selected years 1978-95 ..... 77
Table ECON4.A Food security: Percentage of children under age 18 in households experiencing food insecurity by level of hunger and poverty status, 1995-97 ..... 78
Table ECON4.B Percentage of children ages 2 to 18 by age and diet quality as measured by the Healthy Eating Index, 1994-96 ..... 79
Table ECON4.C Percentage of children ages 2 to 18 by age, poverty status, and diet quality as measured by the Healthy Eating Index, three-year average 1994-96 ..... 79
Table ECON4.D Healthy Eating Index: Overall and component mean scores for children, three-year average 1994-96 ..... 80
Table ECON5.A Access to health care: Percentage of children under age 18 covered by health insurance by type of insurance, age, race, and Hispanic origin, 1987-97 ..... 81
Table ECON5.B Percentage of children under age 18 with no usual source of health care by age and type of health insurance, 1993-96 ..... 82
Table HEALTH1 General health status: Percentage of children under age 18 in very good or excellent health by age and poverty status, selected years 1984-96 ..... 83
Table HEALTH2 Activity limitation: Percentage of children under age 18 with any limitation in activity resulting from chronic conditions by age, gender, poverty status, race, and Hispanic origin, selected years 1984-96 ..... 84
Table HEALTH3 Percentage of low-birthweight births by detailed race and Hispanic origin, selected years 1980-97 ..... 85
Table HEALTH4 Infant mortality rates among selected groups by detailed race and Hispanic origin of mother, selected years 1983-97 ..... 86
Table HEALTH5 Child immunization: Percentage of children ages 19 to 35 months vaccinated for selected diseases by poverty status, race, and Hispanic origin, 1994-97 .....  87
Table HEALTH6 Child mortality rates by age, gender, race, and Hispanic origin, selected years 1980-97 ..... 88
Table HEALTH7.A Mortality rates among adolescents ages 15 to 19 by gender, race, and cause of death, selected years 1980-96 ..... 89
Table HEALTH7.B Injury mortality rates among adolescents ages 15 to 19 by gender, race, Hispanic origin, and cause of death, 1994-96 ..... 90
Table HEALTH8 Adolescent birth rates by age, race, and Hispanic origin, selected years 1980-97 ..... 91
Table BEH1 Cigarette smoking: Percentage of students who reported smoking cigarettes daily in the previous 30 days by grade, gender, race, and Hispanic origin, selected years 1980-98 ..... 92
Table BEH2 Alcohol use: Percentage of students who reported having five or more drinks in a row in the past two weeks by grade, gender, race, and Hispanic origin, selected years 1980-98 ..... 93
Table BEH3 Illicit drug use: Percentage of students who have used illicit drugs in the previous 30 days by grade, gender, race, and Hispanic origin, selected years 1980-98 .....  94
Table BEH4.A Youth victims of serious violent crime: Number and rate of victimization for youths ages 12 to 17 by age, race, and gender, selected years 1980-97 ..... 95
Table BEH4.B Serious violent juvenile crime rate: Number and rate of serious crimes involving youth ages 12 to 17, selected years 1980-97 ..... 96
Table ED1 Family reading: Percentage of children ages 3 to 5 who were read to every day in the last week by a family member by child and family characteristics, selected years 1993-96 ..... 97
Table ED2.A Early childhood education: Percentage of children ages 3 to 4 enrolled in preschool by race, Hispanic origin, and poverty status, selected years 1980-97 ..... 98
Table ED2.B Early childhood education: Percentage of children ages 3 to 4 enrolled in center-based programs by child and family characteristics, selected years 1991-96 ..... 99
Table ED3.A Mathematics achievement: Average scale scores of students ages 9,13 , and 17 by age and child and family characteristics, selected years 1982-96 ..... 100
Table ED3.B Reading achievement: Average scale scores of students ages 9, 13, and 17 by age and child and family characteristics, selected years 1980-96 ..... 101
Table ED4 High school completion: Percentage completing high school among 18- to 24 -year-olds by race, Hispanic origin, and method of completion, selected years 1980-97 ..... 102
Table ED5 Youth neither enrolled in school nor working: Percentage of youth ages 16 to 19 who are neither enrolled in school nor working by gender, race, Hispanic origin, and age, selected years 1985-98 ..... 103
Table ED6 Higher education: Percentage of high school graduates ages 25 to 29 attaining higher degrees by highest degree attained, race, and Hispanic origin, selected years 1980-98 ..... 104
Table SPECIAL1 Percentage of children ages 5 to 17 who have difficulty performing everyday activities by family socioeconomic status, 1994 ..... 105

## Table POP 1 Number of children under age 18 in the United States by age, selected years

 1950-98 and projected 2000-2020|  |  |  |  |  |  |  |  |  |  |  |  |  |  | Projected |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Age group | 1950 | 1960 | 1970 | 1980 | 1990 | 1991 | 1992 | 1993 | 1994 | 1995 | 1996 | 1997 | 1998 | 2000 | 2010 | 2020 |
| All children | 47.3 | 64.5 | 69.8 | 63.7 | 64.2 | 65.1 | 66.1 | 67.0 | 67.9 | 68.5 | 69.1 | 69.6 | 69.9 | 70.8 | 72.5 | 77.6 |

| Other, non-Hispanic ${ }^{\text {d }}$ | 44.1 | 53.4 | 58.3 | 45.5 |
| Region ${ }^{\text {e }}$ |  |  |  |  |
| Northeast | 10.5 | 13.5 | 16.2 | 15.1 |
| Midwest | 3.7 | 4.9 | 5.6 | 5.9 |
| South | 6.8 | 10.7 | 11.1 | 11.7 |
| West | 17.0 | 24.2 | 27.2 | 26.4 |
| Children who speak another language at home and have difficulty speaking English |  |  |  |  |
| Number (in millions) | 1.3 | 1.9 | 2.2 | 2.4 |
| Percent of children ages 5-17 | 2.8 | 4.4 | 4.9 | 5.1 |
| Race and Hispanic origin |  |  |  |  |
| White, non-Hispanic | 0.5 | 0.8 | 0.6 | 0.7 |
| Black, non-Hispanic | 0.3 | 0.5 | 1.3 | 0.9 |
| Hispanic ${ }^{\text {c }}$ | 28.7 | 27.4 | 29.9 | 31.0 |
| Other, non-Hispanic ${ }^{\text {d }}$ | 19.8 | 20.4 | 21.0 | 14.1 |
| Region ${ }^{\text {e }}$ |  |  |  |  |
| Northeast | 2.9 | 4.8 | 5.3 | 5.0 |
| Midwest | 1.1 | 1.3 | 1.6 | 2.3 |
| South | 2.2 | 3.8 | 3.5 | 3.4 |
| West | 6.5 | 8.8 | 10.4 | 11.4 |

${ }^{\text {a }}$ Respondents were asked if the children in the household spoke a language other than English at home and how well they could speak English. Categories used for reporting were "Very well," "Well," "Not well," and "Not at all." All those reported to speak English less than "Very well" were considered to have difficulty speaking English based on an evaluation of the English speaking ability of a sample of the children in the 1980s.
${ }^{\text {b }}$ Numbers in these years may reflect changes in Current Population Survey because of newly instituted computer-assisted interviewing techniques and/or because of the change in the population controls to the 1990 Census-based estimates, with adjustments.
${ }^{c}$ Persons of Hispanic origin may be of any race.
${ }^{\mathrm{d}}$ Most in this category are Asians/Pacific Islanders, but American Indian/Alaska Native children also are included.
${ }^{e}$ Regions: Northeast includes Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont. Midwest includes Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin. South includes Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia. West includes Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

NOTE: The data for racial and ethnic groups may differ slightly from those published in 1998 due to a change in programming. All nonresponses to the language questions are excluded from the tabulations.

SOURCE: U.S. Bureau of the Census, October (1992 and 1995) and November (1979 and 1989) Current Population Surveys. Tabulated by the National Center for Education Statistics.

${ }^{\text {a }}$ Numbers in these years may reflect changes in the Current Population Survey because of newly instituted computer-assisted interviewing techniques and/or because of the change in the population controls to the 1990 Census-based estimates, with adjustments.
${ }^{\mathrm{b}}$ Excludes families where parents are not living as a married couple.
${ }^{\mathrm{C}}$ Includes some families where both parents are present in the household, but living as unmarried partners.
${ }^{\mathrm{d}}$ Persons of Hispanic origin may be of any race.
NOTE: Family structure refers to the presence of biological, adoptive, and stepparents in the child's household. Thus, a child with a biological mother and stepfather living in the household is said to have two parents.

SOURCE: U.S. Bureau of the Census, Current Population Reports, Marital Status and Living Arrangements, annual reports. (Beginning in 1995, detailed tables are available on the Census Bureau web site.)

## Table POP6.A Birth rates for unmarried women by age of mother, selected years 1980-97

(Births per 1,000 unmarried women in specific age group)

| Age of mother | 1980 | 1985 | 1990 | 1991 | 1992 | 1993 | 1994 | 1995 | 1996 | 1997 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Total ages 15-44 | 29.4 | 32.8 | 43.8 | 45.2 | 45.2 | 45.3 | 46.9 | 45.1 | 44.8 | 44.0 |

## Age group

| Ages 15-17 | 20.6 | 22.4 | 29.6 | 30.9 | 30.4 | 30.6 | 32.0 | 30.5 | 29.0 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Ages 18-19 | 39.0 | 45.9 | 60.7 | 65.7 | 67.3 | 66.9 | 70.1 | 67.6 | 65.9 |
| Ages 20-24 | 40.9 | 46.5 | 65.1 | 68.0 | 68.5 | 69.2 | 72.2 | 70.3 | 70.7 |
| Ages 25-29 | 34.0 | 39.9 | 56.0 | 56.5 | 56.5 | 57.1 | 59.0 | 56.1 | 56.8 |
| Ages 30-34 | 21.1 | 25.2 | 37.6 | 38.1 | 37.9 | 38.5 | 40.1 | 39.6 | 41.1 |
| Ages 35-39 | 9.7 | 11.6 | 17.3 | 18.0 | 18.8 | 19.0 | 19.8 | 19.5 | 20.1 |
| Ages 40-44 | 2.6 | 2.5 | 3.6 | 3.8 | 4.1 | 4.4 | 4.7 | 4.7 | 4.8 |

NOTE: Nonmarital birth rates for 1989-1993 are somewhat understated because births to unmarried women were substantially underreported in Michigan and Texas; data since 1994 have been reported on a complete basis. Thus, the overall increase in nonmarital birth rates between 1980 and 1994 is accurately recorded here. However, the rates for 1989-1993 if computed on the basis of complete data would have been higher than the rates shown here, and the peak years for the rates would have occurred in the early 1990s rather than in 1994. Ventura, S.J., Martin, J.A., Curtin, S.C., and Mathews, T.J. (1996). Advance report of final natality statistics, 1994. Monthly Vital Statistics Report, 44 (11, Supplement). Hyattsville, MD: National Center for Health Statistics.

${ }^{\mathrm{b}}$ Persons of Hispanic origin may be of any race.
NOTE: Estimates refer to children who are related to the householder and who are under age 18 . The poverty level is based on money income and does not include noncash benefits, such as food stamps. Poverty thresholds reflect family size and composition and are adjusted each year using the annual average Consumer Price Index (CPI) level. The poverty threshold for a family of four was $\$ 16,400$ in 1997. The levels shown here are derived from the ratio of the family's income to the family's poverty threshold. Related children include biological children, adopted children, and stepchildren of the householder and all other children in the household related to the householder (or reference person) by blood, adoption, or marriage. For more detail, see U.S. Bureau of the Census, Series P-60, No. 201.

## Table ECON1.B Income distribution: Percentage of related children under age 18 by family

 income relative to the poverty line, selected years 1980-97|  |  |  |  |  |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Poverty level | 1980 | 1985 | 1990 | 1991 | 1992 | 1993 | 1994 | 1995 | 1996 | 1997 |
|  |  |  |  |  |  |  |  |  |  |  |
| Extreme poverty | 6.6 | 8.1 | 8.3 | 9.3 | 9.9 | 9.6 | 9.4 | 7.9 | 8.4 | 8.5 |
| Below poverty, |  |  |  |  |  |  |  |  |  |  |
| $\quad$ but above extreme poverty | 11.3 | 12.0 | 11.6 | 11.8 | 11.7 | 12.4 | 11.9 | 12.2 | 11.4 | 10.8 |
| Low income | 24.0 | 22.8 | 21.8 | 22.2 | 22.0 | 22.2 | 22.0 | 22.5 | 22.7 | 21.4 |
| Medium income | 41.4 | 37.7 | 37.0 | 35.7 | 34.9 | 33.4 | 33.7 | 34.5 | 34.0 | 34.4 |
| High income | 16.8 | 19.4 | 21.3 | 21.0 | 21.5 | 22.3 | 23.1 | 22.8 | 23.5 | 25.0 |
| $\quad$ Very high income | 4.3 | 6.1 | 7.4 | 7.0 | 7.3 | 8.4 | 9.1 | 8.9 | 9.2 | 10.1 |

NOTE: Estimates refer to children who are related to the householder and who are under age 18. The income classes are derived from the ratio of the family's income to the family's poverty threshold. Extreme poverty is less than 50 percent of the poverty threshold (i.e., $\$ 8,200$ for a family of four in 1997). Poverty is between 50 and 99 percent of the poverty threshold (i.e., between $\$ 8,200$ and $\$ 16,399$ for a family of four in 1997). Low income is between 100 and 199 percent of the poverty threshold (i.e., between $\$ 16,400$ and $\$ 32,799$ for a family of four in 1997). Medium income is between 200 and 399 percent of the poverty threshold (i.e., between $\$ 32,800$ and $\$ 65,599$ for a family of four in 1997). High income is 400 percent of the poverty threshold or more. Very high income is over 600 percent of the poverty threshold. (These income categories are similar to those used in the Economic Report of the President. (1998). A similar approach is used by Hernandez, D. (1993). America's Children, except that Hernandez uses the relationship to median income to define his categories. For either method, the income categories for the medium and high income are at similar levels of median family income.)

## The Measurement of Poverty

The measurement of poverty used in this report is the official poverty measure used by the Bureau of the Census. A child is living below poverty if the child lives in a family with before-tax cash income below a defined level of need, called the poverty line. The official poverty line in use today was devised in the early 1960 s based on the minimum cost of what was considered to be a nutritionally adequate diet. As originally defined, the poverty index signified the inability of families to afford the basic necessities of living, based on the budget and spending patterns of those Americans with an average standard of living. Since then the poverty line has been updated annually for inflation using the consumer price index for all urban consumers. The poverty line depends on the size of the family and the number of children in the family.
A 1995 report by the National Research Council ${ }^{1}$ recommended changing the definition of both the poverty thresholds and the resources that are used to measure poverty. Its recommendations included the following:

Defining income: On the one hand, the definition of family income should be expanded to include other important resources of purchasing power, such as the earned income tax credit, food stamps, and housing subsidies. On the other hand, some necessary expenditures that reduce a family's resources available for basic consumption needs should be subtracted from income, such as taxes, necessary child care and other work-related expenditures, child support payments, and out-of-pocket medical expenditures.

Setting a threshold: Poverty thresholds should be adjusted to provide a more accurate measure of family income requirements. First, the consumption bundle used to derive thresholds should be based on food, clothing, and shelter, not food consumption alone. Second, thresholds should reflect regional variations in housing costs. Third, thresholds should be adjusted for family size in a more consistent way than is currently done. Finally, thresholds should be updated to reflect changes in expenditure patterns over time.

A recent Census Bureau report ${ }^{2}$ used key elements of the National Research Council proposal to estimate alternative poverty rates from 1990 to 1997. These estimates produced increases in child poverty from 1990 to 1993 similar to, and decreases in poverty from 1993 to 1997 somewhat larger than, those under the official measure. These changes reflect the fact that the new measure more completely accounts for in-kind transfers, such as food stamps and housing benefits, and for work-related expenditures. As a result, the new measure tends to decrease the relative poverty rate of children who are more likely to live in families that receive in-kind transfers, and to increase the relative poverty rate of children living with employed low-income persons with higher work-related expenses.

${ }^{\text {a }}$ Inadequate housing refers to housing with "moderate or severe physical problems." The most common problems meeting the definition are lacking complete plumbing for exclusive use, having unvented room heaters as the primary heating equipment, and multiple upkeep problems such as water leakage, open cracks or holes, broken plaster, or signs of rats.
${ }^{\mathrm{b}}$ Very-low-income households are those with incomes at or below one-half the median income in a geographic area.
NOTE: Data are available for 1978, 1983, 1989, 1993, and 1995 (1978 data based on 1970 Census weights, 1983 and 1989 data on 1980 weights, 1993 and 1995 data on 1990 weights). Moderate or severe physical problems: See definition in Appendix A of the American Housing Survey summary volume: American Housing Survey for the United States in 1993, Current Housing Reports, H150/93, U.S. Bureau of the Census, 1995. Cost burden: expenditures on housing and utilities are greater than 30 percent of reported income. Severe problems: cost burden is greater than 50 percent of income or severe physical problems among those not reporting housing assistance. See Office of Policy Development and Research, HUD. (1998). Rental housing assistance—the crisis continues: The 1997 report to Congress on worst case housing needs. Washington, DC: Office of Policy Development and Research, Department of Housing and Urban Development.

## Table ECON4.A Food security: Percentage of children under age 18 in households experiencing food insecurity by level of hunger and poverty status, 1995-97

| Characteristic | 1995 | 1996 | 1997 |
| :---: | :---: | :---: | :---: |
| All children |  |  |  |
| Food insecure without hunger | 12.8 | 13.0 | 11.3 |
| Food insecure with moderate or severe hunger | 6.2 | 6.2 | 4.2 |
| Food insecure with moderate hunger | 5.2 | 5.2 | 3.5 |
| Food insecure with severe hunger | 1.0 | 1.0 | 0.7 |
| Below poverty |  |  |  |
| Food insecure without hunger | 26.6 | 28.7 | 26.8 |
| Food insecure with moderate or severe hunger | 15.7 | 17.4 | 11.1 |
| Food insecure with moderate hunger | 12.8 | 13.9 | 9.2 |
| Food insecure with severe hunger | 2.9 | 3.5 | 1.9 |
| At or above poverty |  |  |  |
| Food insecure without hunger | 7.9 | 8.5 | 6.7 |
| Food insecure with moderate or severe hunger | 3.0 | 3.1 | 2.1 |
| Food insecure with moderate hunger | 2.6 | 2.8 | 1.8 |
| Food insecure with severe hunger | 0.4 | 0.3 | 0.3 |

NOTE: The Food Security Scale. ECON4.A, the percentage of children under age 18 in households experiencing food insecurity with moderate to severe hunger, is based on the food security scale derived from data collected in the Food Security Supplement to the April 1995, September 1996, and April 1997 Current Population Survey. The food-security scale provides a near-continuous measure of the level of food insecurity and hunger experienced within each household. A categorical measure based on the scale classifies households according to four designated levels of household food security: food secure, food insecure without hunger, food insecure with moderate hunger, and food insecure with severe hunger. Food-secure households do not report a pattern of difficulty obtaining enough or acceptable quality food. Food-insecure households without hunger report having difficulty obtaining enough food, reduced quality of diets, anxiety about their food supply, and increasing resort to emergency food sources and other coping behaviors, but do not report indicators of hunger. Food-insecure households with moderate hunger report food insecurity and a pattern of indicators of hunger for one or more adults and, in some cases, for children. Food-insecure households with severe hunger report increasing difficulty obtaining food and decreased food intakes. For a detailed explanation of the USDA/DHHS Food Security Measurement scale, see Food and Nutrition Service. 1997. Household Food Security in the United States in 1995. Washington, DC: Food and Nutrition Service.

NOTE: Percent of children meeting the dietary recommendations for each component in parentheses.
The Healthy Eating Index examines the diet of American children ages 2 to 18. The Index consists of 10 components, each representing different aspects of a healthful diet.

Components 1-5 measure the degree to which a person's diet conforms to USDA's Food Guide Pyramid serving recommendations for the five major food groups: Grains (bread, cereal, rice, and pasta), vegetables, fruits, milk (milk, yogurt, and cheese), and meat/meat alternates (meat, poultry, fish, dry beans, eggs, and nuts). Component 6 measures total fat consumption as a percentage of total food energy (calorie) intake. Component 7 measures saturated fat consumption as a percentage of total food energy intake. Components 8 and 9 measure total cholesterol intake and total sodium intake, respectively. And component 10 measures the degree of variety in a person's diet.

Each component of the Index has a maximum score of 10 and a minimum score of zero. Intermediate scores are computed proportionately. High component scores indicate intakes close to recommended ranges or amounts. The maximum combined score for the 10 components is 100 . An HEI score above 80 implies a good diet, an HEI score between 51 and 80 implies a diet that needs improvement, and an HEI score less than 51 implies a poor diet.

NOTE: Excludes live births with unknown birthweight. Low-birthweight infants weigh less than 2,500 grams at birth, about 5.5 pounds.
Trend data for Hispanics and non-Hispanic whites and blacks are affected by expansion of the reporting area in which an item on Hispanic origin is included on the birth certificate as well as by immigration. These two factors affect numbers of events, composition of the Hispanic population, and maternal and infant health characteristics. The number of States in the reporting area increased from 22 in 1980 to 23 and the District of Columbia (DC) in 1983-87, 30 and DC in 1988, 47 and DC in 1989, 48 and DC in 1990, 49 and DC in 1991-92, and all 50 States and DC from 1993 forward.

- = not available.
** $=$ Number too small to calculate a reliable rate.
${ }^{\text {a }}$ Rates are infant (under 1 year of age) deaths per 1,000 live births in specified group.
${ }^{\mathrm{b}}$ Beginning with data for 1995, rates are on period basis. Earlier rates are on a cohort basis. Race-specific data for 1995 and 1996 are weighted to account for unmatched records.
${ }^{\text {c }}$ Data for 1997 are preliminary, unlinked, and unweighted.
${ }^{d}$ Persons of Hispanic origin may be of any race.
${ }^{e}$ Trend data for Hispanics are affected by expansion of the reporting area in which an item on Hispanic origin is included on the birth certificate as well as by immigration. These two factors affect numbers of events, composition of the Hispanic population, and maternal and infant health characteristics. The number of States in the reporting area increased from 22 in 1980 to 23 and the District of Columbia (DC) in 1983-87, 30 and DC in 1988, 47 and DC in 1989, 48 and DC in 1990, 49 and DC in 1991, and 50 and DC from 1995 forward.

NOTE: Rates for race groups from the National Linked Files of Live Births and Infant Deaths vary slightly from those obtained via unlinked infant death records using the National Vital Statistics System because the race reported on the death certificate sometimes does not match the race on the infant's birth certificate. Rates obtained from linked data (where race is obtained from the birth, rather than the death, certificate) are considered more reliable, but linked data are not available before 1983 and are also not available for 1992-94.

SOURCE: Centers for Disease Control and Prevention, National Center for Health Statistics, National Vital Statistics System, National Linked Files of Live Births and Infant Deaths. 1997 data are from the National Vital Statistics System.

${ }^{\text {a }}$ The 4:3:1:3 combined series consists of 4 doses of diphtheria and tetanus toxoids and pertussis vaccine (DTP), 3 doses of poliovirus vaccine, 1 dose of a measles-containing vaccine, and 3 doses of Haemophilus influenzae type b (Hib) vaccine.
${ }^{\mathrm{b}}$ The 4:3:1 combined series consists of 4 doses of diphtheria and tetanus toxoids and pertussis vaccine (DTP), 3 doses of poliovirus vaccine, and 1 dose of a measles-containing vaccine.
${ }^{c}$ Diphtheria and tetanus toxoids and pertussis vaccine.
${ }^{d}$ Respondents were asked about measles-containing or MMR (measles-mumps-rubella) vaccines.
${ }^{e}$ Haemophilus influenzae type b (Hib) vaccine.
${ }^{\mathrm{f}}$ The percentage of children 19 to 35 months of age who received 3 doses of Hepatitis B vaccine was artificially low in 1994, because universal infant vaccination with a 3-dose series was not recommended until November 1991.
g Persons of Hispanic origin may be of any race.

— = not available.
*Preliminary data.
${ }^{\mathrm{a}}$ Total includes American Indians/Alaska Natives. Death rates for American Indians/Alaska Natives are not shown separately, because the numbers of deaths were too small for the calculation of reliable rates.
${ }^{\mathrm{b}}$ Persons of Hispanic origin may be of any race.
${ }^{c}$ Trend data for Hispanics and non-Hispanic whites are affected by expansion of the reporting area in which an item on Hispanic origin is included on the death certificate as well as by immigration. These two factors affect numbers of events, composition of the Hispanic population, and health characteristics. Tabulations are restricted to a subset of the States with the item on the death certificate and that meet a minimal quality standard. The quality of reporting has improved substantially over time, so that the minimal quality standard was relaxed in 1992 to those areas reporting Hispanic origin on at least 80 percent of records. The number of States in the reporting area increased from 15 in 1984 to 17 and the District of Columbia (DC) in 1985; 18 and DC in 1986-87; 26 and DC in 1988; 44 and DC in 1989; 45, New York State (excluding New York City), and DC in 1990; 47, New York State (excluding New York City), and DC in 1991; 48 and DC in 1992; and 49 and DC in 1993-96. The population data in 1990 and 1991 do not exclude New York City. Data for 1997 are preliminary due to incomplete reporting for California.

- = not available
${ }^{a}$ Persons of Hispanic origin may be of any race. Trend data for Hispanics are affected by expansion of the reporting area in which an item on Hispanic origin is included on the birth certificate as well as by immigration. These two factors affect numbers of events, composition of the Hispanic population, and maternal and infant health characteristics. The number of States in the reporting area increased from 22 in 1980 to 23 and the District of Columbia (DC) in 1983-87, 30 and DC in 1988, 47 and DC in 1989, 48 and DC in 1990, 49 and DC in 1991-92, and 50 and DC in 1993. Rates in 1981-88 were not calculated for Hispanics and non-Hispanic whites because estimates for populations were not available. Recent declines in teenage birth rates parallel but outpace the reductions in birth rates for unmarried teenagers (POP6A). Birth rates for married teenagers have fallen sharply in the 1990s, but relatively few teenagers are married.

Number of victimizations of youth ages 12-17
$\begin{array}{llllllllllll}\text { Ages 12-17 } & 877,104 & 742,815 & 866,272 & 825,895 & 809,118 & 933,762 & 905,544 & 633,301 & 687,638 & 622,302\end{array}$
NOTE: Serious violent crimes include aggravated assault, rape, robbery (stealing by force or threat of violence), and homicide. Because of changes made in the victimization survey, data prior to 1992 are adjusted to make them comparable with data collected under the redesigned methodology. Victimization rates were calculated using population estimates from the Bureau of the Census Current Population Reports. Such population estimates normally differ somewhat from population estimates derived from the victimization survey data. The rates may therefore differ marginally from rates based upon the victimization survey derived population estimates.

## Table SPECIAL1 Percentage of children ages 5 to 17 who have difficulty performing everyday

 activities by family socioeconomic status, 1994| Characteristic | Total | Male | Female |
| :---: | :---: | :---: | :---: |
| Total: Difficulty with one or more activities ${ }^{\text {a }}$ | 12.3 | 15.7 | 8.7 |
| Type of difficulty |  |  |  |
| Learning | 10.6 | 13.6 | 7.4 |
| Communication | 5.5 | 7.2 | 3.8 |
| Mobility | 1.3 | 1.6 | 1.1 |
| Self-care | 0.9 | 1.2 | 0.7 |
| Percent with any difficulty |  |  |  |
| Parental education ${ }^{\text {b }}$ |  |  |  |
| Less than high school | 15.5 | 19.3 | 11.8 |
| Graduated high school | 14.2 | 18.2 | 9.9 |
| Some college | 10.3 | 13.3 | 7.2 |
| Family structure |  |  |  |
| Two parents | 10.4 | 13.6 | 7.2 |
| One parent | 18.1 | 21.5 | 12.7 |
| Poverty level |  |  |  |
| Below poverty | 18.1 | 22.6 | 13.3 |
| At or above poverty | 10.9 | 14.1 | 7.6 |

${ }^{\text {a }}$ Total percentage of children with difficulty performing everyday activities does not add to the sum of different categories (difficulty with learning, etc.) because some children fall into more than one category.
${ }^{\mathrm{b}}$ Parental education is defined as the highest education of an adult in the family.
NOTE: While this table presents four measures of children's ability, it does not include every area where a child may experience difficulty. For example, it does not include all visual or hearing impairments. The measures included here are defined as follows: Difficulty with mobility includes difficulty getting around the home and use of special equipment for a period of 12 months or more or having a physical delay. Difficulty with self-care is defined as having difficulty for 12 months or more with bathing, dressing, eating, or toileting. Difficulty with communication represents children who have had difficulty for 12 months or more communicating with persons, family or nonfamily, difficulty understanding others, or who have a problem or delay in speech development. Difficulty in learning includes having significant problems at school understanding materials, paying attention in class, controlling behavior, or having a problem or delay in mental development, a problem or delay in emotional development, or a reported learning disability. This measure reflects a reconceptualization of children's limitations and difficulties, by capturing more detailed dimensions.

## Data Source Descriptions

## American Housing Survey

This survey provides data necessary for evaluating progress made toward "a decent home and a suitable living environment for every American family," affirmed in the basic 1949 and 1968 legislation. The data come from a Census Bureau nationwide sample survey in odd-numbered years for national, regional, and metropolitan/non-metropolitan data, and from surveys in 47 metropolitan statistical areas over a multiyear cycle. These data detail the types, size, conditions, characteristics, housing costs and values, equipment, utilities, and dynamics of the housing inventory; they describe the demographic, financial, and mobility characteristics of the occupants; and give as well some information on neighborhood conditions.

## Continuing Survey of Food Intakes by Individuals

The Continuing Survey of Food Intakes by Individuals (CSFII) is designed to measure what Americans eat and drink. Uses of the survey include: monitoring the nutritional adequacy of American diets, measuring the impact of food fortification on nutrient intakes, developing dietary guidance and related programs, estimating exposure of population groups to food contaminants, evaluating the nutritional impact of food assistance programs, and assessing the need for agricultural products. The 1989-91 CSFII sample consisted of individuals residing in households and included oversampling of the low-income population. Individuals were asked to provide 3 consecutive days of dietary data. The 1994-96 CSFII also included individuals living in households and oversampling of the low-income population. In each of the 3 survey years, respondents were asked to provide, through inperson interviews, food intake data on 2 nonconsecutive days, with both days of intake collected by the 24 -hour recall method. Intake data were provided by 3,937 children under 18 years of age in 1989-91 and 5,354 children in 1994-96.

For more information on CSFII 1989-91, see: Tippett, K.S., Mickle, S.J., Goldman, J.D., et al. (1995). Food and nutrient intakes by individuals in the United States, 1 day, 1989-91. U.S. Department of Agriculture, Agricultural Research Service, NFS Rep. No. 91-2.

## Current Population Survey

Core Survey and Supplements. The Current Population Survey (CPS) is a nationwide sample survey of about 50,000 households conducted monthly for the Bureau of Labor Statistics by the Bureau of the Census. At present, there are 754 CPS sampling areas in the United States, with coverage in every State and the District of Columbia.

The CPS core survey is the primary source of information on the employment characteristics of the civilian noninstitutional population, 16 years old and older, including estimates of unemployment released every month by the Bureau of Labor Statistics.

In addition to the core survey, monthly CPS supplements provide additional demographic and social data. The March demographic supplement and the October school enrollment supplement provide information used to estimate the status and well-being of children. Every year, the October supplement to the CPS asks questions on school enrollment by grade and other school characteristics about each member of the household ages 3 and older. Data on years of school completed are derived from two questions on the March supplement to the CPS. The March and October supplements have been administered every year since 1947. The April food security supplement, introduced in 1995, is described in detail below.

In 1994, the questionnaire for the CPS was redesigned, and the computer-assisted personal interviewing (CAPI) method was implemented. In addition, the 1990 Census-based population controls, with adjustments for the estimated population undercount, were also introduced. For more information regarding the CPS, its sampling structure, and estimation methodology, see: Explanatory notes and estimates of error. Employment and Earnings, 44 (1), 225-242. U.S. Department of Labor, Bureau of Labor Statistics. A
more comprehensive description of the CPS that will incorporate the revisions and methodological changes introduced in 1994 is currently in preparation.

Food Security Supplement. The food security supplement is a survey instrument developed through a long and rigorous process. The content of the supplement is based on material reported in prior research on hunger and food insecurity. It was subjected to extensive testing by the Bureau of the Census. It reflects the consensus of nearly 100 experts at the 1994 Food Security and Measurement Conference convened jointly by the National Center for Health Statistics and the Food and Nutrition Service of the Department of Agriculture. The supplement was developed, tested, and refined further by the conferees, members of a Federal interagency working group, and survey methods specialists from the Census Bureau's Center for Survey Methods Research. The survey contains a systematic set of questions intended to identify levels of food insecurity on both a 12-month and a 30 -day basis. Data presented in this report are 12-month data from the April 1995, September 1996, and April 1997 Food Security Supplements.
Approximately 41,000 households completed the April 1997 CPS food security supplement survey. The respondents completing the supplement included households at all income levels, both above and below the Federal poverty threshold. Special final supplement sample weights were computed to adjust for the demographic characteristics of supplement non-interviews.

## Monitoring the Future

The Monitoring the Future (MTF) Study is a continuing series of surveys intended to assess the changing lifestyles, values, and preferences of American youth. Each year since 1975, high school seniors from a representative sample of public and private high schools have participated in this study. The 1998 survey is the eighth to include comparable samples of eighth- and tenth-graders in addition to seniors. The study is conducted by the University of Michigan's Institute for Social Research (ISR) under a grant funded by the National Institute on Drug Abuse. The survey design consists of a multistage random sample where the stages include the selection of geographic areas, selection of one or more schools in each selected area, and selection of a sample of students within each school. Data are collected in the spring of each year using questionnaires administered in the classroom by representatives from ISR. The 1998 survey included 15,780 high school seniors from 144 schools, 15,419 tenth-graders from 129 schools, and 18,667 eighth-graders from 149 schools (total of 49,866 students from 422 schools).

## National Assessment of Educational Progress

The National Assessment of Educational Progress (NAEP) is mandated by Congress to monitor continuously the knowledge, skills, and performance of the Nation's children and youth. NAEP assesses students ages 9,13 , and 17 and students at various grade levels in reading and mathematics at least every 2 years, in science and writing at least every 4 years, and in history or geography and other subjects at least every 6 years. A variation of matrix sampling is used so that the results from a large number of items could be generalized to an entire population. Approximately 2,600 students respond to each block of items. Performance data are reported by scaled proficiency items.

NAEP has been designed to produce a representative sample at the national level. In each of the 1990-96 assessments, investigators collected data from a national probability sample of more than 45,000 students per age/grade or a total of about 146,000 students in nearly 2,100 schools. Performance data are reported for the Nation and for various subgroups categorized by variables such as region, gender, race/ethnicity, parental education, type of school, and type and size of community.

Arnold Goldstein
National Center for Education Statistics
Phone: (202) 219-1741

## National Crime Victimization Survey

The National Crime Victimization Survey (NCVS) is the Nation's primary source of information on criminal victimization. Each year, researchers obtained data from a nationally representative sample of roughly 49,000 households comprising more than 100,000 persons 12 years of age and older on the frequency, characteristics, and consequences of criminal victimization in the United States. The survey fully reports the likelihood of victimization by rape, sexual assault, robbery, assault, theft, household burglary, and motor vehicle theft for the population as a whole, as well as for segments of the population such as adolescents over the age of 12 , women, the elderly, members of various racial groups, city dwellers, or other groups. Victims are also asked about whether they reported the incident to the police and, in the instances of personal violent crimes, they are asked about the characteristics of the perpetrator. The NCVS provides the largest national forum for victims to describe the impact of crime and the characteristics of
violent offenders. It has been ongoing since 1973 and was redesigned in 1992.

## National Health Interview Survey

The National Health Interview Survey (NHIS) is a continuing nationwide sample survey of the civilian non-institutionalized population in which data are collected by personal household interviews. Interviewers obtain information on personal and demographic characteristics, including race and ethnicity by self-reporting or as reported by an informant. Investigators also collect data about illnesses, injuries, impairments, chronic conditions, activity limitation caused by chronic conditions, utilization of health services, and other health topics. Each year the survey is reviewed and special topics are added or deleted. For most health topics, the survey collects data over an entire year. During 1994, a special survey supplement to the NHIS was collected, called the National Health Interview Survey on Disability (NHIS-D). The NHIS-D collected data on various impairments, chronic health conditions, health care utilization, and limitations in activities of daily living.

The NHIS sample includes an over-sample of black and Hispanic persons and is designed to allow the development of national estimates of health conditions, health service utilization, and problems of the U.S. civilian non-institutionalized population. The response rate for the ongoing part of the survey has been between 94 and 98 percent over the years. In 1996, interviewers collected information for the basic questionnaire on 63,402 persons, including 18,128 children.

Descriptions of the survey design, the methods used in estimation, and the general qualifications of the data are presented in:

- Massey, J.T., Moore, T.F., Parsons, V.L., and Tadros, W. (1989). Design and estimation for the National Health Interview Survey, 1985-1994. Vital and Health Statistics, 2 (110). Hyattsville, MD: National Center for Health Statistics.
- Benson, V. and Marano, M. (1998). Current estimates from the National Health Interview Survey, 1995. Vital and Health Statistics, 10 (199). Hyattsville, MD: National Center for Health Statistics.

## National Household Education Survey

The National Household Education Survey (NHES) conducted by the National Center for Education Statistics collects detailed information about education issues through a household-based survey using telephone interviews. The sample for the NHES is drawn from the non-institutionalized civilian population in households having a telephone in the 50 States and the District of Columbia. In each survey, between 54,000 and 64,000 households are screened to identify persons eligible for one of the topical components. Generally, each collection covers two topical components, and researchers conduct between 10,000 and 15,000 interviews for each component. The data are weighted to permit estimates of the entire population. In addition, the NHES design samples minorities at a higher rate in order to increase the reliability of estimates for these groups.

The 1991 NHES contained a component on early childhood program participation. Investigators screened approximately 60,000 households to identify a sample of about 14,000 children, 3 to 8 years old. They interviewed parents of the children in order to collect information about the children's educational activities and the role of the family in the children's learning. In 1993, NCES fielded a school readiness component in which parents of approximately 11,000 children age 3 through second grade were asked about their children's experiences in early childhood programs, developmental level, school adjustment and related problems, early primary school experiences, general health and nutrition status, home activities, and family characteristics, including family stability and economic risk factors. In 1995, NCES also fielded an early childhood program participation component, similar to that of 1991. It entailed screening approximately 44,000 households, and the interviewing of 14,000 parents of children from birth through third grade. In 1996, NCES fielded a parent and family involvement in education component, interviewing nearly 21,000 parents of children from age 3 through 12th grade.

## National Immunization Survey

The National Immunization Survey (NIS) is a continuing nationwide telephone sample survey among families with children 19 to 35 months of age. Estimates of vaccine-specific coverage are available for national, State, and 28 urban areas.

The NIS uses a two-stage sample design. First, a random-digit-dialing sample of telephone numbers is drawn. When households with age-eligible children are contacted, the interviewer collects information on the vaccinations received by all age-eligible children. The interviewer also collects information on the vaccination providers. In the second phase, all vaccination providers are contacted by mail. Providers' responses are combined with information obtained from the households to render estimates of vaccination coverage levels more accurately. Final estimates are adjusted for non-coverage of households without telephones.

## National Linked File of Live Births and Infant Deaths

The National Linked File of Live Births and Infant Deaths is a data file for research on infant mortality. Beginning with the 1995 data, this file is produced in two formats. The file is first released as a period data file and then later released as a cohort file. In the birth cohort format, it comprises linked vital records for infants born in a given year who died in that year or the next year before their first birthday. In the period format, the numerator consists of all infant deaths occurring in one year, with deaths linked to the corresponding birth certificates from that year or the previous year. The linked file includes all the variables on the national natality file, as well as medical information reported for the same infant on the death record and the age of the infant at death. The use of linked files avoids discrepancies in the reporting of race between the birth and infant death certificates. Although discrepancies are rare for white and black infants, they can be substantial for other races. National linked files are available starting with the birth cohort of 1983. No linked file was produced for

1992 through 1994 data years. Match completeness for each of the birth cohort files is about 98 percent.

For more information, see: Prager, K. (1994). Infant mortality by birthweight and other characteristics: United States, 1985 birth cohort. Vital and Health Statistics, 20 (24). Hyattsville, MD: National Center for Health Statistics. MacDorman, M.F. and Atkinson, J.O. Infant mortality statistics from the 1996 period linked birth/infant death data set. ## National Vital Statistics System

Through the National Vital Statistics System, the National Center for Health Statistics (NCHS) collects and publishes data on births, deaths, marriages, and divorces in the United States. NCHS obtains information on births and deaths from the registration offices of all States, New York City, and the District of Columbia.

Demographic information on birth certificates, such as race and ethnicity, is provided by the mother at the time of birth. Hospital records provide the base for information on prenatal care, while funeral directors provide demographic information on death certificates. Medical certification of cause of death is provided by a physician, medical examiner, or coroner.

Information on Hispanic origin. The number of States gathering information on births to parents of Hispanic origin has increased gradually since $1980-81$, when 22 States included this information on birth certificates. By 1993, the Hispanic origin of the mother was reported on birth certificates in all 50 States and the District of Columbia. Similarly, mortality data by Hispanic origin of decedent have become more complete over time. Based on data from the U.S. Bureau of the Census, 99.6 percent of the U.S. Hispanic population resides in areas that report deaths by Hispanic origin.

Preliminary data. A continuous receipt of statistical records by NCHS from the States' vital registration systems supplies preliminary data. Investigators weight individual records of births and deaths to independent counts of vital events registered in each State and reported to NCHS. These independent counts, aggregated for a 12-month period, serve as control
totals, and are the basis for the individual unit record weights in the preliminary file. For selected variables, unknown or not-stated values are imputed. The percent not stated is generally 1 percent or less, except for prenatal care, which is 2.2 percent.

For more information on national natality and mortality data, see: National Center for Health Statistics. Technical Appendix. Vital Statistics of the United States, I, (Natality) (1992), DHHS Publication No. (PHS) 96-1100, and II, (Mortality), Part A (1996), DHHS Publication No. (PHS) 96-1101. Washington, DC: Public Health Service. Mortality information is also available online at http:/ /www.cdc.gov/nchswww/ about/major/dvs/mortdata.htm

## Population Estimates

Decennial census data serve as benchmarks for deriving national population estimates, which are also based on data from the following agencies: Births and deaths (National Center for Health Statistics); immigrants (Immigration and Naturalization Service); Armed Forces (Department of Defense); net movement between Puerto Rico and the U.S. mainland (Puerto Rico Planning Board); and Federal employees abroad (Office of Personnel Management and Department of Defense). Similar data serve as the basis for State estimates, which are also derived from a variety of data series, including school statistics from State departments of education and parochial school systems. Current estimates are consistent with official decennial census figures and do not reflect estimated decennial census under-enumeration.

After decennial population censuses, intercensal population estimates for the preceding decade are prepared to replace postcensal estimates. Intercensal population estimates are more accurate than postcensal estimates, because they take into account the census of population at the beginning and end of the decade. Intercensal estimates have been repaired for the 1960s, 1970s, and 1980s to correct the "error of closure": the difference between the estimated population at the end of the decade and the census count for that date. The error of closure at the national level was quite small during the 1960s $(379,000)$. For the 1970 s, however, it amounted to almost 5 million. In the 1980s the error of closure dropped to 1.5 million.

For more information, see: U.S. Bureau of the Census. (1992). U.S. population estimates by age, sex, race, and Hispanic origin: 1980-1991. Current Population Reports, (1095, Series P-25). Washington, DC: U.S. Bureau of the Census.

## Population Projections

National population projections begin with recent population estimates by age, race, and Hispanic origin. These statistics are then projected forward to 2050, based on assumptions about fertility, mortality, and international migration. Low, middle, and high growth assumptions are made for each of these components. The current middle series assumptions are:

- Each race/ethnic group's fertility will remain constant at 1993-1994 levels.
■ Each race/ethnic group's mortality will continue to change as it did in the 1980s.
- Each race/ethnic group's net international migration generally will continue at the same levels as that of the past decade.

For more information, see: U.S. Bureau of the Census. (1996). Population projections of the United States by age, sex, race, and Hispanic origin, (1130, Series P25). Washington, DC: U.S. Bureau of the Census.

## Uniform Crime Reports

The FBI's Uniform Crime Reports (UCR) Program, which began in 1929, collects information on the following crimes reported to law enforcement authorities: homicide, forcible rape, robbery, aggravated assault, burglary, larceny-theft, motor vehicle theft, and arson. Arrests are reported for 21 additional crime categories.

The UCR data are compiled from monthly law enforcement reports or individual crime incident records transmitted directly to the FBI or to centralized state agencies that then report to the FBI. In 1997, law enforcement agencies active in the UCR Program represented approximately 254 million United States inhabitants- 95 percent of the total population. The UCR Program provides crime counts for the Nation as a whole, as well as for regions, States, counties, cities, and towns. This permits studies among neighboring jurisdictions and among those with similar populations and other common characteristics.

UCR findings for each calendar year are published in a preliminary release in the spring, followed by a detailed annual report, Crime in the United States, issued in the following calendar year. In addition to crime counts and trends, this report includes data on crimes cleared, persons arrested (age, sex, and race), law enforcement personnel (including the number of sworn officers killed or assaulted), and the characteristics of homicides (including age, sex, and race of victims and offenders, victim-offender relationships, weapons used, and circumstances surrounding the homicides). Other special reports are also available from the UCR Program.
