

State Personal Income

First Quarter of 2004

By G. Andrew Bernat, Jr.

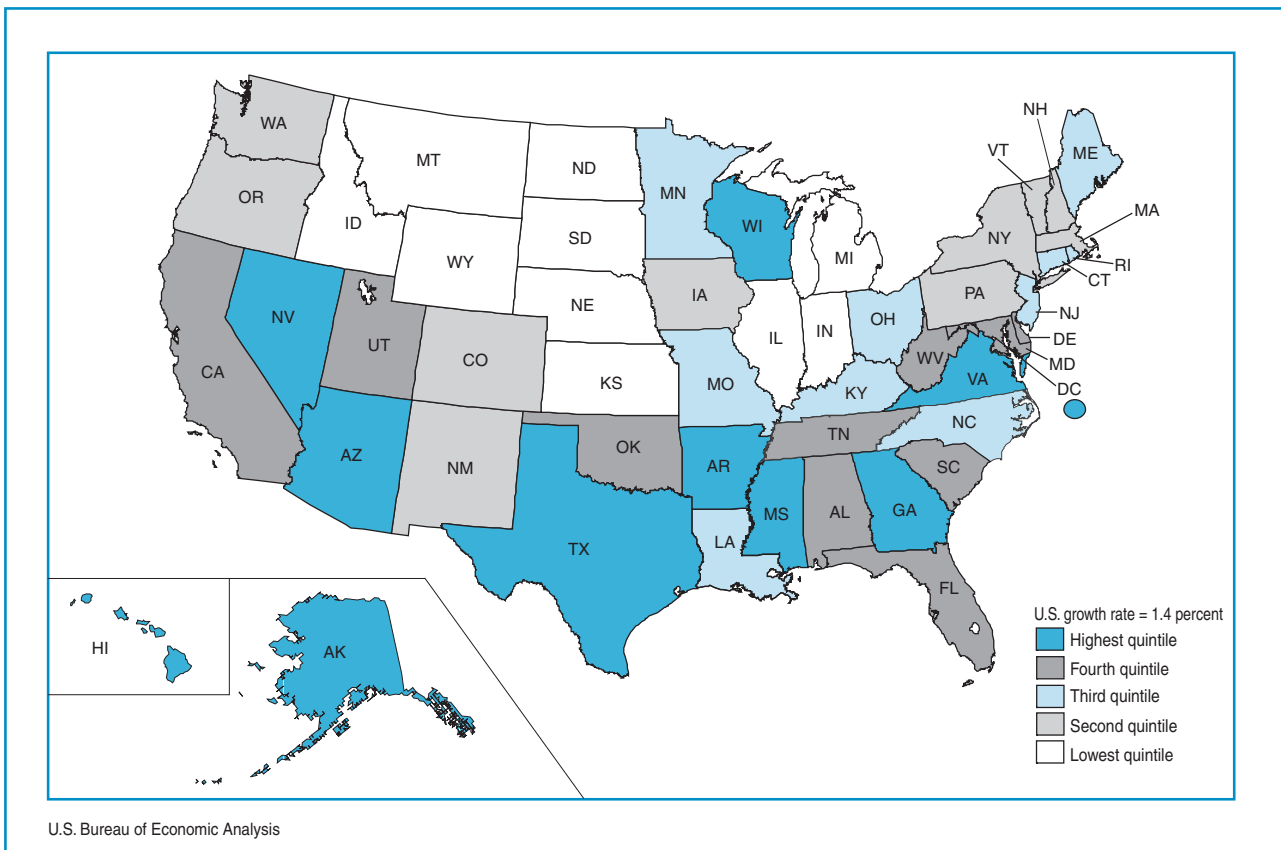

PERSONAL income for the Nation grew 1.4 percent in the first quarter of 2004, the same as in the fourth quarter of 2003, and up from 1.2 percent in the third quarter (table A). Personal income growth accelerated in 21 states and the District of Columbia. These states accounted for more than 57 percent of total personal income. For 7 of the 10 slowest growing states, the decline in farm earnings in the first quarter was the most important factor; four of these seven states are in the Plains region, and three are in the Rocky Mountain region (chart 1).

This article presents preliminary estimates of state personal income for the first quarter of 2004 and revised quarterly estimates for 2003. Detailed estimates

are presented in two tables at the end of the article.

The release of the quarterly estimates of state personal income that are presented in this article was accelerated by 4 weeks. This acceleration fulfilled a major goal in the strategic plan of the Bureau of Economic Analysis (BEA). The acceleration of the estimates was a result of efforts by the Bureau of Labor Statistics and state employment security agencies, in close collaboration with BEA, to speed up the delivery of wage and salary data from the state unemployment insurance programs. These accelerated estimates will provide analysts with more timely information that they can use to assess the growth in state economies and to project state Government revenues and budgets.

Chart 1. Personal Income: Percent Change in 2003:IV–2004:I

Personal income growth by component

Nationally, the faster growth in net earnings and in personal current transfer receipts offset the slower growth in property income (table B). Net earnings grew 1.5 percent in the first quarter, the fastest growth

since the third quarter of 2000. Net earnings increased in 46 states and the District of Columbia.

Transfer receipts grew 1.4 percent. Transfer receipts accelerated in 46 states and the District of Columbia in the first quarter. In contrast, in the fourth quarter of

^r Revised.

^p Preliminary.

1. Percent changes are expressed at quarterly rates.

Note. Estimates may not add to totals because of rounding.

2003, transfer receipts decelerated in every state and the District of Columbia. All transfer receipts except unemployment benefits increased 2.2 percent. In contrast, unemployment benefit payments, a small but volatile component of transfer receipts, decreased 18.0 percent after decreasing 5.2 percent in the fourth quarter of 2003; these payments decreased in all states except North Carolina.

Property income (dividends, interest, and rent) increased 0.8 percent in the first quarter after increasing 2.7 percent in the fourth quarter of 2003. Interest income receipts, which accounts for 60 percent of total property income, increased 0.1 percent. Rental income, the smallest of the three components of total property income, increased 2.6 percent, and dividends increased 1.8 percent.

1. Net earnings is earnings by place of work—the sum of wage and salary disbursements, supplements to wages and salaries, and proprietors' income—less contributions for government social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.
Note: Estimates may not add to totals because of rounding.

Earnings growth by industry

Nationally, earnings by industry grew 1.6 percent in the first quarter of 2004. Earnings in all industries except natural resources and mining grew (table C). Nationally, earnings in financial activities contributed 0.29 percentage point to earnings growth; earnings in financial activities was the largest contributor to earnings growth in 12 states (table D). Earnings in Govern-

ment contributed 0.25 percentage point and was the largest contributor to earnings growth in 19 states and the District of Columbia; military earnings grew 5.2 percent. Earnings in natural resources and mining, principally earnings in farming, decreased 6.0 percent in the first quarter after substantial growth throughout 2003. As a result, total earnings in South Dakota, North Dakota, Wyoming, and Nebraska decreased,

1. Earnings by place of work is the sum of wage and salary disbursements (payrolls), supplements to wages and salaries, and proprietors' income.
2. Data are suppressed to avoid disclosure of confidential information.

and growth in Kansas, Montana, and Idaho slowed. Farm earnings decreased in the first quarter of 2004 because total farm income in 2004 is expected to decrease.¹ Farm gross income is expected to decrease

1. The quarterly estimates of farm earnings are based on projections of crop and livestock production and Government payments for the entire year because most farm production occurs over more than one quarter.

even though the total cash receipts from crops and livestock are expected to rise because Government payments are projected to decline \$7 billion.

Earnings in durable-goods manufacturing increased for the third consecutive quarter, but growth slowed to 2.1 percent from 2.6 percent in the fourth quarter of 2003. Earnings increased in 43 states. Earnings in four

1. Earnings by place of work is the sum of wage and salary disbursements (payrolls), supplements to wages and salaries, and proprietors' income.

2. Data are suppressed to avoid disclosure of confidential information.

states decreased after increasing more than 5.0 percent in the fourth quarter of 2003. Earnings in nondurable-goods manufacturing increased for the second quarter in a row.

Farm earnings and personal income growth

Even though farm earnings accounts for less than 1.0 percent of total earnings in the Nation, the growth in farm earnings can substantially affect the rankings of states by their quarterly growth in state personal income. For example, in the first quarter of 2004, 7 of the 10 states in which farm earnings accounted for the largest shares of total earnings were among the states with the slowest growth in personal income. States in which farm earnings account for relatively large shares of total earnings are frequently among the states with the fastest or slowest growth in personal income. For example, since the first quarter of 2000, farm earnings accounted for the largest shares of total earnings in 9 of the 16 states that were ranked in the top or bottom quintile in more than half of the 17 quarters (table E). Farm earnings substantially affects the growth in personal income for two reasons. First, the growth in farm earnings is more variable than the growth in earnings in other industries, because a large share of farm earnings is accounted for by farm proprietors' income and because the value of farm production—the sum of cash receipts and Government payments—is highly variable.

- Proprietors' income tends to be more variable than wage and salary income, so the growth in industries in which proprietors' income accounts for a large share of earnings tends to be more variable than the growth in industries in which wage and salary income accounts for a large share of earnings. Farm proprietors' income accounted for 54 percent of total farm earnings over the past five quarters. (The next largest share of proprietors' income was 39 percent for the financial activities industry.)
- The value of farm production reflects the variable levels of production and prices. The production levels are affected by growing conditions, such as a drought or a flood, and the prices of both crops and livestock are affected by global supply and demand and by Government policies in the United States and in other countries.
- Government payments vary substantially. For example, these payments are projected to decrease \$7 billion in 2004, and this decrease partly reflects the timing of the payments. Farmers received some payments for the 2002 crops and the 2004 crops in 2003, so the 2003 payments increased, and the 2004 payments decreased. The payments also vary, depending on the commodity, and the payments for

some commodities account for a larger share of farm earnings in some states than in others.

Second, the share of total earnings that is accounted for by farm earnings substantially affects personal income growth. In the states in which farm earnings account for a small share of total earnings, the growth rate of farm earnings has little effect on the growth rate of personal income. For example, in California, Texas, North Carolina, Georgia, and Florida, the share of farm earnings was 1.1 percent or less of total earnings though these states accounted for 39.6 percent of total farm earnings for the Nation in the first quarter of 2004. In contrast, in the states in which farm earnings account for a larger share of total earnings, the growth rate of farm earnings substantially affects the growth rate of personal income. For example, in North Dakota, South Dakota, Idaho, Arkansas, and Nebraska,

1. The District of Columbia is not included because it is not included in rankings of states.

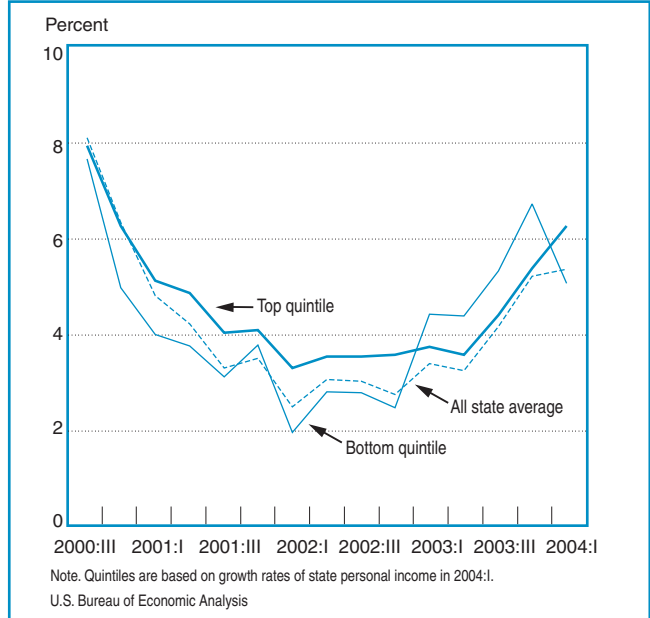

the share of farm earnings in each state was 3.0 percent or more of total earnings though these states accounted for 13.9 percent of total farm earnings in the Nation.

Year-to-year trends in quarterly state personal income growth

It is useful to look at the change in state personal income in the current quarter relative to the same quarter a year ago because quarter-to-quarter changes are subject to large swings. Chart 2 shows the year-to-year growth rates of quarterly state personal income from the third quarter of 2000 through the first quarter of 2004.

The year-to-year growth in personal income in the states in the bottom quintile was higher than the growth in the states in the top quintile throughout 2003, in which the quintiles are based on personal income growth from the fourth quarter of 2003 to the first quarter of 2004. The drop in the growth of the states in the bottom quintile in the first quarter of 2004 was due to the substantial decreases in farm earnings in many of these states.

Chart 2. Change in Personal Income From the Same Quarter a Year Earlier, 2000:III–2004:1

Tables 1 and 2 follow.

^p Preliminary.^r Revised.

D Not shown to avoid disclosure of confidential information, but the estimates for this item are included in the total.

1. The estimates of earnings for 2002–2004 are based on the 2002 North American Industry Classification System (NAICS).

2. Personal contributions for social insurance are included in earnings by type and industry, but they are excluded from personal income.

3. The adjustment for residence is the net inflow of the earnings of interarea commuters. For the United States, it consists of adjustments for border workers: Wage and salary disbursements to U.S. residents commuting to Canada less

wage and salary disbursements to Canadian and Mexican residents commuting into the United States.

4. Rental income of persons includes the capital consumption adjustment.

5. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment.

6. "Other" consists of the wage and salary disbursements of U.S. residents employed by international organizations and foreign embassies and consulates in the United States.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts (NIPAs) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.
