

Table 1. Changes Made to Comorbidity Software for FY2004, Version 2.1

The following changes were made to the Comorbidity Software for fiscal year 2004. This year included not only ICD-9-CM updates for fiscal year 2004, but also ICD-9-CM and DRG adjustments based on recommendations from Stanford University, as well as some modifications to the software as described below. These changes are incorporated in the tool currently available: Comorbidity Software, Version 2.1.

Other Changes to Comorbidity Software, FY2004	
Comorbidity	Description of Change
Cardiac arrhythmias	This comorbidity was removed for FY2004, Version 2.0.
Coagulopathy	This comorbidity should be dropped when using the AHRQ Patient Safety Indicators.
Diabetes w/o chronic complications	In the previous version, this comorbidity was labeled as "Diabetes."
Diabetes w/ chronic	In the previous version, this comorbidity was labeled as "Diabetes, complicated."

complications	
Fluid and electrolyte disorders	This comorbidity should be dropped when using the AHRQ Patient Safety Indicators.
Removed duplicate Cardiac DRG format	There is now only one Cardiac DRG group format to be used by the software. Two formats were not necessary.
Hypertension Complicated	Version 2.1: This comorbidity was updated so that it now shares certain diagnosis codes with both Congestive Heart Failure and Renal Failure. Due to the limitations of SAS formats, temporary formats and variables were created to handle these overlapping diagnosis codes, and ultimately assign complicated hypertension.

Current as of August 2004.
