

# Lula Lake Land Trust

Relationships depicting land use and ownership are made apparent by comparing land cover classifications and Lula Lake Land Trust (LLLT) properties. Land cover distribution was approximated for properties of LLLT through the use of 1988-1990 Landsat imagery. Land cover imagery was classified by the Georgia Department of Natural Resources. The University of Tennessee (UTC) Environmental Research and Mapping Facility (ERMF) further processed Landsat imagery to mask the full extent of LLLT properties.
