MONDAY, SEPTEMBER 20, 2004

## EMPLOYER COSTS FOR EMPLOYEE COMPENSATION - NORTHEAST REGION MARCH 2004

Employer costs for employee compensation of private industry workers in the Northeast averaged $\$ 26.29$ per hour worked in March 2004, according to the U.S. Department of Labor's Bureau of Labor Statistics. Regional Commissioner Sheila Watkins reported that wages and salaries in the Northeast averaged $\$ 18.49$ per hour and accounted for 70 percent of total compensation costs. Benefit costs averaged $\$ 7.79$ per hour and represented 30 percent of total employer compensation costs. The total cost of hourly compensation for the nation was $\$ 23.29$. (See table 1.)

Beginning with this release, Employer Costs for Employee Compensation are based on new classifications of industry and occupation: the 2002 North American Industry Classification System (NAICS) and the 2000 Standard Occupational Classification (SOC). These systems replace the 1987 Standard Industrial Classification System (SIC) and the Occupational Classification System (OCS). Also effective with this release, estimates for employer costs will no longer be available by SIC and OCS. See Explanatory Notes for more details.

Chart 1. Average employer cost per hour worked, Northeast region, private industry, March 2004

This information will be made available to sensory impaired individuals upon request. Voice phone: (617) 565-2072, TDD (Telecommunications Device for the Deaf) Message Referral Phone: 1 800-877-8339.

Among the benefit categories, legally required benefits (Social Security, Medicare, workers' compensation, unemployment insurance) in the Northeast region averaged $\$ 2.19$ per hour worked ( 8.3 percent of total compensation). Other employer costs included insurance benefits (life, health, disability) at $\$ 1.87$ per hour worked (7.1 percent), paid leave benefits (vacation, holiday, sick, other) at $\$ 1.83$ (6.9 percent), and retirement and savings benefits at 94 cents ( 3.6 percent). (See chart 1.)

In the other three regions of the country, total hourly compensation costs averaged $\$ 24.54$ in the West, $\$ 23.26$ in the Midwest, and $\$ 20.80$ in the South. Employer costs for wages and salaries averaged $\$ 17.58$ in the West ( 71.6 percent of the total), $\$ 16.53$ in the Midwest ( 71.1 percent) and $\$ 15.08$ in the South ( 72.5 percent). Nationally, compensation costs averaged $\$ 23.29$ with wages and salaries averaging $\$ 16.64$ (71.5 percent of the total). (See chart 2.)

## Chart 2. Employer costs per hour worked for employee compensation, private industry, March 2004

Benefit costs in these three regions averaged $\$ 6.97$ (28.4 percent of the total) in the West, $\$ 6.73$ ( 28.9 percent) in the Midwest, and $\$ 5.72$ ( 27.5 percent) in the South. Nationwide, benefit costs averaged $\$ 6.65$ and accounted for 28.5 percent of the cost of total compensation.

## EXPLANATORY NOTES

Employer Costs for Employee Compensation (ECEC) measures the average cost per employee hour worked that employers pay for wages and salaries and benefits. Employer costs for employee compensation in this release cover occupations in private industry only. Excluded from private industry are the self-employed and farm and private household workers. Regional estimates are highlighted in the text of this release, but employer costs for the nine census divisions have been included in the tables.

Wages and salaries are defined as the hourly straight-time wage rate or, for workers not paid on an hourly basis, straight-time earnings divided by the corresponding hours. Straight-time wage and salary rates are total earnings before payroll deductions and include production bonuses, incentive earnings, commission payments, and cost-of-living adjustments. Not included in straight-time earnings are nonproduction bonuses such as lump-sum payments provided in lieu of wage increases, shift differentials, and premium pay for overtime and for work on weekends and holidays; these payments are included in the benefits component.

Benefits include: Paid leave-vacations, holidays, sick leave, and other leave; supplemental payovertime and premium pay for work in addition to the regular work schedule (such as weekends and holidays), shift differentials, and nonproduction bonuses (such as referral bonuses and lump-sum payments provided in lieu of wage increases); insurance benefits-life, health, short-term disability, and long-term disability; retirement and savings benefits-defined benefit and defined contribution plans; legally requiredbenefits-Social Security, Medicare, Federal and State unemployment insurance, and workers' compensation; and other benefits-severance pay and supplemental unemployment plans.

The cost levels for this quarter were collected from a probability sample of about 35,600 occupations within approximately 8,200 sample establishments in private industry. Data are collected for the pay period including the 12th day of the survey months of March, June, September, and December.

Beginning with the March 2004 estimates, the ECEC percent of total compensation estimates are calculated from dollar aggregates and then rounded to the published level of precision. This change in method will provide the most precise estimates of the percent of total compensation; however, estimates of the percentage of total compensation calculated from the published cost estimates may differ slightly from those calculated from the unpublished dollar aggregates.

Sample establishments are classified by industry categories based on the 2002 North American Industry Classification (NAICS) system, as defined by the U.S. Office of Management and Budget. Within a sample establishment, specific job categories are selected and classified into about 800 occupational classifications according to the 2000 Standard Occupational Classification (SOC) system. Individual occupations are combined to represent one of ten intermediate aggregations such as professional and related occupations, or one of five higher-level aggregations such as management, professional, and related occupations. For more detailed information on NAICS and SOC, including background and definitions, see the BLS websites: (www.bls.gov/bls/naics.htm and www.bls.gov/soc.)

Current employment weights are used to calculate cost levels. The March 2004 cost levels were calculated using the March 2004 employment counts from the Bureau of Labor Statistics Current Employment Statistics (CES) program, benchmarked to the 2003 universe of all private nonfarm establishments. For more information on the CES updating of employment estimates, see "BLS National Establishment Estimates Revised to Incorporate March 2003 Benchmarks" in the February 2004 issue of Employment and Earnings.

In most instances, private industry employment counts used in the ECEC were total employment estimates for 3-digit sub-sector industry groups, such as machinery manufacturing (NAICS 333) or gasoline stations (NAICS 447), as defined by the NAICS system. In a few cases, more detailed private industry employment counts were used. These include 4-digit educational establishments--elementary and secondary schools (6111), junior colleges (6112), and colleges and universities (6113)--as well as the 6 -digit aircraft manufacturing industry (336411). The employment data were apportioned based on the sampling weights assigned to the Employment Cost Index (ECI) sample. For more information on NAICS coding, see "Recent changes in the national Current Employment Statistics survey" in the June 2003 issue of the Monthly Labor Review.

The ECI, which measures the change in employer costs for employee compensation, is calculated with fixed 1990 employment counts to prevent employment shifts among occupations and industries from influencing the changes. Therefore, year-to-year changes in Employer Costs for Employee Compensation will differ from those in the ECI.

Historical ECEC data, using the industry categories based on the 1987 Standard Industrial Classification System and classifying jobs into occupational classifications according to the 1990 Census of Population, are available from several sources. Data and related articles are included in the bulletin, Employer Costs for Employee Compensation, 1986-99 (Bulletin 2508). An annual historical summary from March 1986 through March 2002 is also available on the Internet site (www.bls.gov/ncs/ect) or upon request. Data on a quarterly basis from June 2002 through December 2003 is also available. Information on how costs are calculated appears in "Measuring Trends in the Structure and Levels of Employer Costs for Employee Compensation," Compensation and Working Conditions, Summer 1997. An article on changes in employer compensation costs, "Tracking Changes in Benefit Costs," appears in Compensation and Working Conditions, Spring 1999.

## Relative Standard Errors

Because the ECEC is a sample survey, it is subject to sampling errors. Sampling errors are differences that occur between the results computed from a sample of observations and those computed from all observations in the population. The estimates derived from different samples selected using the same sample design may differ from one another. A measure of the variation among these differing estimates is the standard error. It can be used to measure the precision with which an estimate from a particular sample approximates the expected result of all possible samples. The chances are about 68 out of 100 that an estimate from the survey differs from a complete population figure by less than the standard error. The chances are about 90 out of 100 that this difference would be less than 1.6 times the standard error. All the statements of comparisons appearing in this publication are significant at a 1.6 standard error level or better, unless otherwise indicated. This means that for differences cited, the estimated difference is greater than 1.6 times the standard error of the difference.

The relative standard error (RSE) for all estimates will be available shortly after the release is issued. This information can be obtained directly from the BLS Internet site (www.bls.gov/ncs/ect), by email request ocltinfo@bls.gov, or by telephone (202) 691-6199.

For a more detailed explanation of relative standard errors, see "Measuring Trends in the Structure and Levels of Employer Costs for Employee Compensation," Compensation and Working Conditions, Summer 1997. For a detailed explanation of how to use standard error data to analyze differences in year-to-year changes, see "Analyzing Year-to-Year Changes in Employer Costs for Employee Compensation," Compensation and Working Conditions, Spring 1998. This article supplements an article from the Summer 1997 issue of Compensation and Working Conditions, "Explaining the Differential Growth Rates of the ECI and ECEC," which examined how differences in the construction of these measures contribute to differing trends.

Standard errors relate to differences that occur from sampling errors, but not from nonsampling errors. Nonsampling errors are not measured and include survey nonresponse and data collection and processing errors. Survey nonresponse occurs when sample members are unwilling or unable to participate in the survey. Data collection errors include inaccurate data by respondents and definitional difficulties. Processing errors include errors in recording, coding, and entering data. Although nonsampling errors are not measured, BLS quality assurance programs contain procedures for reducing such errors. These procedures include data collection reinterviews, observed interviews, computer data edits, and systematic reviews of reports on which data are recorded. Extensive field economist training also is conducted to maintain high data collection standards.

## Obtaining information

Articles, bulletins, and other information on employer costs and employee compensation may be obtained by contacting the Bureau's Mid-Atlantic information office in Philadelphia at (215) 597-3282 or the ECEC staff in Washington, D.C. at (202) 691-6199. A historical summary from 1986 through 2002 is also available on the Internet site (http://www.bls.gov/ncs/ect/home.htm) or upon request. Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 6915200; Federal Relay Service Number: 1-800-877-8339.

Historical data and related articles on the ECEC are included in the bulletin, Employer Costs for Employee Compensation, 1986-99 (Bulletin 2508). An historical summary from 1986 through 2002 is also available on the Internet site (http://www.bls.gov/ncs/ect/home.htm) or upon request. Information on how costs are calculated appears in "Measuring Trends in the Structure and Levels of Employer Costs for Employee Compensation," Compensation and Working Conditions, Summer 1997. An article on changes in employer compensation costs appears in "Tracking Changes in Benefit Costs," Compensation and Working Conditions, Spring 1999
