

Appendix I: Laterality Codes from the SEER Program Code Manual, Third Edition, January 1998

Code

- 0 Not a paired site
- 1 Right: origin of primary
- 2 Left: origin of primary
- 3 Only one side involved, right or left origin unspecified
- 4 Bilateral involvement, lateral origin unknown: stated to be single primary
 - Both ovaries involved simultaneously, single histology
 - Bilateral retinoblastomas
 - Bilateral Wilms tumors
- 9 Paired site, but no information concerning laterality; midline tumor

Laterality at diagnosis describes this primary site only.

Use code '3' if the laterality is not known but the tumor is confined to a single side of the paired organ.

Use code '9' when there is a midline tumor or when there is a paired site but the laterality is unknown because disease is extensive.

Example 1 Medical oncology referral states 'patient has a solitary 2 cm carcinoma in the upper pole of the kidney.'

Code laterality as '3,' because laterality is not specified but tumor is known not to be present in both sides of a paired site.

Example 2 Admitting history states that patient has a positive sputum cytology but is being treated with radiation to painful bony metastases.

Code laterality as '9,' because there is no information concerning laterality in the implied diagnosis of lung cancer and the case is metastatic.

Example 3 Patient has a melanoma just above the umbilicus excised as an outpatient.

Use laterality code '9,' midline.

Appendix II: Suggested Electronic Edits for SEER Summary Stage - 2000

1. For SEER Summary Stage 2000, codes 0,1,2,3,4,5,7, and 9 are valid with some exceptions. An edit should be performed which checks the SEER Summary Stage 2000 for each site and type against the valid SEER Summary Stage 2000 codes as documented in this book. Note: codes 6 and 8 are **always** invalid codes.
2. For every “death certificate only” case, SEER Summary Stage 2000 **must** be coded 9.

For cases other than ‘death certificate only’ and that pass edit #1 above:

3. For cases of “hematopoietic, reticuloendothelial, immunoproliferative and myeloproliferative neoplasms” SEER Summary Stage 2000 **must** be coded 1 or 7.
4. For cases of “hematopoietic, reticuloendothelial, immunoproliferative and myeloproliferative neoplasms” with SEER Summary Stage 2000 coded “1,” the histology (ICD-O-3) **must** be one of the following:
M-9731/3, 9734/3, 9750/3, 9751/3, 9752/3.
5. If primary site is C77.8 (multiple lymph node chains) and it is a lymphoma, SEER Summary Stage 2000 **must not** be coded 1.
6. If primary site is C50._ and histology (ICD-O-3) is M-8530, SEER Summary Stage 2000 **must not** be coded 0, 1, 3, or 5.
7. If behavior is coded 2 (in situ), SEER Summary Stage 2000 **must** be coded 0.
8. If histology (ICD-O-3) is in the range: M-8800 to M-9055, M-9110 to M-9136, M-9141 to M-9508, or M-9520 to M-9582, SEER Summary Stage 2000 must not be coded to 0.
9. If primary site is C75.1-C75.3 and not a lymphoma or hematopoietic, reticuloendothelial, immunoproliferative or myeloproliferative neoplasm, SEER Summary Stage 2000 **must not** be coded 3 or 4.
