HIGHLIGHTS OF ROCHESTER, NY NATIONAL COMPENSATION SURVEY MARCH 2003

Workers in the Rochester, New York metropolitan area averaged \$19.30 per hour during March 2003, according to a new survey released by the Bureau of Labor Statistics of the U.S. Department of Labor. Regional Commissioner Michael L. Dolfman reported that white-collar workers averaged \$22.24 per hour and accounted for 60 percent of the workers in the area. Blue-collar employees averaged \$16.08 per hour and represented 25 percent of the workforce, while the remainder worked in service occupations and earned \$13.13 per hour. (See table 1.)

The National Compensation Survey (NCS) presents straight-time earnings for all occupations in establishments with 50 or more workers in private industry and State and local governments. The survey excludes agricultural establishments, private households, the self-employed, and the Federal government. This NCS covered 145 firms representing 268,800 workers in the Rochester metropolitan area, which includes Genesee, Livingston, Monroe, Ontario, Orleans, and Wayne Counties in New York State. Three-fourths of those represented worked in private industry.

In the Rochester metropolitan area, average hourly wages were published for more than 45 detailed occupations. Among white-collar workers, elementary school teachers averaged \$36.06 per hour; computer systems analysts and scientists, \$31.93; clinical laboratory technologists and technicians, \$18.94; and secretaries, \$14.11. Blue-collar occupations included production inspectors, checkers and examiners earning \$17.64 per hour; truck drivers at \$13.94. In the service occupations, health aides, except nursing averaged \$15.63 per hour, while kitchen workers, food preparers averaged \$10.66.

Individual earnings within a broad occupational category may differ depending on the industry sector in which one works. For example, among white-collar workers, secretaries in State and local government, at \$17.83, earned more than their counterparts in private industry, at \$13.77 per hour. This was also the case for blue-collar workers employed as janitors and cleaners. They earned \$12.97 in State and local government, almost \$3.00 more than the \$10.03 private industry average. However, for some occupations, industry had little or no effect. Earnings for registered nurses reflected a more common labor market, averaging \$24.74 an hour in private industry while remaining within the same general pay range in State and local government, \$23.82.

Round-the-clock recorded messages for the **Consumer Price Index** and a variety of other **Bureau of Labor Statistics** data are available by dialing the **New York Information Office's** main telephone number: (212) 337-2400. For recorded messages, press '2.' Press '1' for 24-hour Fax-on-Demand service. The NCS also provides broad coverage of selected occupational characteristics. (See tables 2 and 3.) For example, full-time employees in the Rochester area averaged \$20.04 per hour, earning more than part-timers at \$10.39. Union workers averaged \$20.09 per hour, not very different from their nonunion counterparts at \$18.96. Private industry workers at establishments with 500 or more employees averaged \$20.52 per hour, eclipsing the \$14.79 average hourly wage of those in establishments employing 50-99 workers.

The NCS is part of a statistical program that integrates three previously separate surveys of wages and benefits into one comprehensive compensation program increasing the amount of data available. Data provided by the NCS may be used by businesses for establishing pay plans, making decisions concerning plant relocation, and in collective bargaining negotiations. Individuals may use such data to help choose potential careers. Average rates of pay are also available for levels of work within an occupation based on knowledge, skill, independent judgment, supervision received, and other factors required on the job.

Survey Availability

Complete survey results are contained in the Rochester, NY National Compensation Survey March 2003 (Bulletin number 3120-37). While supplies last, single copies of the bulletin are available from the New York Information Office by calling (212) 337-2400. In addition, data contained in the bulletin are available on the Internet in both text and PDF formats at http://www.bls.gov/ncs/ocs/compub.htm. Copies of this release can also be obtained from the Bureau's fax-on-demand service in New York by dialing (212) 337-2412 and requesting document 9610.

For personal assistance or further information on the National Compensation Survey, as well as other Bureau programs, contact the New York Information Office at (212) 337-2400 from 9:00 a.m. to 12:30 p.m. and 1:30 p.m. to 4:30 p.m.

Technical Note

Because the NCS is a sample survey, it is subject to sampling errors. Sampling errors occur because observations come only from a sample and not from an entire population. The sample used for this survey is one of a number of possible samples of the same size that could have been selected using the sample design. Estimates derived from the different samples would differ from each other. A measure of the variation among these differing estimates is the standard error. It can be used to measure the precision with which an estimate from a particular sample approximates the expected result of all possible samples. The chances are about 68 out of 100 that an estimate from the survey differs from a complete population figure by less than the standard error. The chances are about 90 out of 100 that this difference would be less than 1.6 times the standard error level or better. This means that for differences cited, the estimated difference is greater than 1.6 times the standard error of the difference.

Table 1. Mean hourly earnings,¹ all workers:² Selected occupations, private industry and State and local government, National Compensation Survey, Rochester, NY, March 2003 — Continued

¹ Earnings are the straight-time hourly wages or salaries paid to employees. They include incentive pay, cost-of-living adjustments, and hazard pay. Excluded are premium pay for overtime, vacations, holidays, nonproduction bonuses, and tips. The mean is computed by totaling the pay of all workers and dividing by the number of workers, weighted by hours. ² All workers include full-time and part-time workers. ³ A classification system including about 480 individual occupations is used to cover all workers in the civilian economy. See appendix B for more information.

 $^{4}\,$ The relative standard error (RSE) is the standard error expressed as a percent of the estimate. It can be used to calculate a "confidence interval" around a sample estimate. For more information about RSEs, see appendix A.

NOTE: Dashes indicate that no data were reported or that data did not meet publication criteria, and n.e.c. means "not elsewhere classified." Overall occupational groups may include data for categories not shown separately.

¹ Earnings are the straight-time hourly wages or salaries paid to employees. They include incentive pay, cost-of-living adjustments, and hazard pay. Excluded are premium pay for overtime, vacations, holidays, nonproduction bonuses, and tips. The mean is computed by totaling the pay of all workers and dividing by the number of workers, weighted by hours. ² A classification system including about 480 individual occupations is used to cover all workers in the civilian economy. See appendix B for more information.

³ Employees are classified as working either a full-time or a part-time schedule based on the definition used by each establishment. Therefore, a worker with a 35-hour-per-week schedule might be considered a full-time employee in one establishment, but classified as part-time in another firm, uthere a 40 hour work in the minimum full time are behavior. where a 40-hour week is the minimum full-time schedule.

⁴ Union workers are those whose wages are determined through

⁴ Union Workers are those whose wages are determined through collective bargaining. ⁵ Time workers' wages are based solely on an hourly rate or salary; incentive workers are those whose wages are at least partially based on productivity payments such as piece rates, commissions, and production

bonuses. $^{6}\,$ The relative standard error (RSE) is the standard error expressed as a percent of the estimate. It can be used to calculate a "confidence interval" around a sample estimate. For more information about RSEs, see appendix A.

NOTE: Dashes indicate that no data were reported or that data did not meet publication criteria.
