Cumulative # of regulated contaminants	83	89	90	91	91	
Contaminants regulated	nickel	bromate chloramine chlorine chlorine dioxide chlorite haloacetic acids (HAA5) <sup>2</sup> TTHMs	Cryptosporidium <i>Giardia</i> turbidity	gross alpha gross beta radium-226 <sup>1</sup> radium-228 <sup>1</sup> uranium	arsenic	

**Notes:**

- Radium-226 and radium-228 are counted as two contaminants although their standard is combined.
- Total THMs, haloacetic acids, and total coliforms are counted as one contaminant although both are combined standards: THMs (chloroform, bromodichloromethane, dibromochloromethane, bromoform); TC (total coliform bacteria including fecal coliforms and E.coli); HAA5 (monochloroacetic acid, dichloroacetic acid, trichloroacetic acid, bromoacetic acid, and dibromoacetic acid).
- Vinyl chloride is also known as chloroethylene & monochloroethylene.
- These nine contaminants have a treatment technique instead of a MCL.
- Aldicarb, aldicarb sulfone, and aldicarb sulfoxide are considered regulated contaminants although their MCLs are stayed.
- Dichloromethane is also known as methylene chloride.
