

To Whom it may concern, Dear Sir/Madam,

Having purchased 3 ink jet printers in the past (two from lexmark with the chips on the cartridge), the only recourse from printers with high replacement cost and seemingly low yield is to buy 3rd party products. I'm a father of 4 and work in middle management, so I don't have unlimited dollars to "blow" on products that are prone to the ink drying out inside the cartridges as they sit idle in the printer.

If companys like Lexmark want to cry foul that their chips are being pirated, then they need to provide the said components to the remanufactures at cost so they can "legally" provide alternate services to consumers like myself.

Thank you for your time and concideration,

Jeff Dolley
