

Evidence Tables

Evidence Table 1 – RCTs and CCTs reporting on Athletic Performance Enhancement with Ephedra

First Author Year	Design Study Quality Population (>75%) Comorbidities	Intervention Total Daily Dose Route of Administration Arm # Duration	Sample Size	Summary of Results
Bell DG & Jacobs I, 1999 #24	CCT Jadad Score: 1 Population: Male athletes Comorbidities: N/A	1 Placebo Placebo for 2 days	n Entered: 9 n Analyzed: 9	VO ₂ maximum during the treadmill runs, VO ₂ at standard running velocities, and the relationship between the heart rate and the VO ₂ were similar in both the Caffeine and Ephedrine (C+E, Arm 2) and the Placebo (Arm 1) groups. Run times of the performance test for subjects in the C+E group (Arm 2) was significantly faster ($p < 0.05$) than for subjects in the Placebo group (Arm 1).
		2 Ephedrine 75 mg orally for 2 days	n Entered: 9 n Analyzed: 9	
		Caffeine 375 mg orally for 2 days	n Entered: 9 n Analyzed: 9	
Bell DG, Jacobs I, et al. 1999 #25	CCT Jadad Score: 1 Population: Male Comorbidities: N/A	1 Control No dosage data reported	n Entered: 10 n Analyzed: 10	Individuals in the Caffeine and Ephedrine (C+E) group (Arm 3) experienced a significant VO ₂ increase of 7.5% compared to individuals in the Placebo group (Arm 2), but similar to individuals in the Control group (Arm 1). Tolerance times were similar for the C+E (Arm 3, 121.3 +/- 33.9 minutes) and Placebo (Arm 2, 120.0 +/- 28.4) groups, but significantly longer than the Control group (Arm 1, 106.6 +/- 24.0).
		2 Placebo Placebo for 1 day	n Entered: 10 n Analyzed: 10	
		3 Ephedrine 1 mg·kg ⁻¹ orally for 1 day	n Entered: 10 n Analyzed: 10	
		Caffeine 5 mg·kg ⁻¹ orally for 1 day	n Entered: 10 n Analyzed: 10	
Bell DG, Jacobs I, et al. 2000 #26	CCT Jadad Score: 3 Population: Male Comorbidities: N/A	1 Placebo Placebo for 1 day	n Entered: 12 n Analyzed: 12	VO ₂ maximum was similar among all groups. Endurance ride times to exhaustion for all Caffeine and Ephedrine groups with different dosages (Arm 2, 27.5 +/- 12.4 minutes; Arm 3, 27.6 +/- 10.9; and Arm 4, 28.2 +/- 9.3) were similar, and significantly greater than Placebo (Arm 1, 17.0 +/- 3.0) with an approximated 64% improvement.
		2 Ephedrine 0.8 mg·kg ⁻¹ orally for 1 day	n Entered: 12 n Analyzed: 12	
		Caffeine 5 mg·kg ⁻¹ orally for 1 day	n Entered: 12 n Analyzed: 12	
		Caffeine 1 mg·kg ⁻¹ orally for 1 day	n Entered: 12 n Analyzed: 12	
		Caffeine 4 mg·kg ⁻¹ orally for 1 day	n Entered: 12 n Analyzed: 12	
		4 Ephedrine 0.8 mg·kg ⁻¹ orally for 1 day	n Entered: N/A n Analyzed: N/A	
		Caffeine 4 mg·kg ⁻¹ orally for 1 day	n Entered: N/A n Analyzed: N/A	

N/A = not available or not applicable

Evidence Table 1 – RCTs and CCTs reporting on Athletic Performance Enhancement with Ephedra (continued)

First Author Year	Design Study Quality Population (>75%) Comorbidities	Intervention Total Daily Dose Route of Administration Arm # Duration	Sample Size n Entered: n Analyzed:	Summary of Results
Bell DG, Jacobs I, et al. 1998 #27	CCT Jadad Score: 4 Population: Male Comorbidities: N/A	1 Placebo Placebo for 1 day	n Entered: 12 n Analyzed: 8	VO ₂ maximum increased progressively during exercise in all trials (Arms 1, 2, 3, and 4, $p < 0.05$), but no significant difference was found among them. Time to exhaustion was significantly longer for the Caffeine and Ephedrine trial ((Arm 2) when compared to Placebo (Arm1) and Caffeine (Arm 3) trials ($p < 0.05$).
		2 Ephedrine 1 mg·kg ⁻¹ orally for 1 day	n Entered: 12 n Analyzed: 8	
		Caffeine 1 mg·kg ⁻¹ orally for 1 day	n Entered: 12 n Analyzed: 8	
		3 Caffeine 5 mg·kg ⁻¹ orally for 1 day	n Entered: 12 n Analyzed: 8	
Bell DG, Jacobs I, et al. 2001 #512	CCT Jadad Score: 1 Population: Military Comorbidities: N/A	4 Ephedrine 1 mg·kg ⁻¹ orally for 1 day	n Entered: 12 n Analyzed: 8	Accumulated VO ₂ was similar between all groups. The Ephedrine (Arm 3) and Caffeine plus Ephedrine (Arm 4) treatments increased power output significantly ($p < 0.05$) early in the Wingate test compared to the Placebo (Arm 1) and Caffeine (Arm 2) treatments. Caffeine-containing treatments (Arms 2 and 4) significantly improved times to exhaustion by 8% compared to non-caffeine treatments (Arms 1 and 3).
		1 Placebo Placebo for 1 day	n Entered: 24 n Analyzed: 24	
		2 Caffeine 5 mg·kg ⁻¹ orally for 1 day	n Entered: 24 n Analyzed: 24	
		3 Ephedrine 1 mg·kg ⁻¹ orally for 1 day	n Entered: 24 n Analyzed: 24	
Oksbjerg N, Meyer T, et al. 1986 #214	CCT Jadad Score: 1 Population: Male Comorbidities: N/A	4 Ephedrine 1 mg·kg ⁻¹ orally for 1 day	n Entered: 24 n Analyzed: 24	A thermogenic effect of 4.3 +/- 1.3 watt was established for the Ephedrine group (Arm 1), the effect in the Placebo group (Arm 2) was only 1.6 +/- 1.6. The thermogenic effect in the Ephedrine group (Arm 1) increased by 100% ($p < 0.05$) following aerobic training. Overall, aerobic training increased VO ₂ maximum by 7 % ($p < 0.05$).
		1 Ephedrine 40 mg orally for 1 day	n Entered: 6 n Analyzed: 6	
		2 Placebo No dosage data reported	n Entered: 6 n Analyzed: 6	
		3 Ephedrine 1 mg·kg ⁻¹ orally for 1 day	n Entered: 6 n Analyzed: 6	
Pasternak 1999CCT #511	CCT Jadad Score: 1 Population: Male athletes Comorbidities: N/A	1 Placebo Placebo for 1 day	n Entered: 13 n Analyzed: 13	For muscular endurance outcomes, mean number of leg and bench press repetitions only in the first set increased significantly ($p < 0.05$) for individuals in the Caffeine and Ephedrine (Arm 4) and the Ephedrine (Arm 3) groups compared to the Caffeine (Arm 2) and Placebo (Arm 1) groups. The mean number for all 3 sets of leg and bench repetitions was similar among all groups.
		2 Caffeine 4 mg·kg ⁻¹ orally for 1 day	n Entered: 13 n Analyzed: 13	
		3 Ephedrine 0.8 mg·kg ⁻¹ orally for 1 day	n Entered: 13 n Analyzed: 13	
		4 Caffeine 4 mg·kg ⁻¹ orally for 1 day Ephedrine 0.8 mg·kg ⁻¹ orally for 1 day	n Entered: 13 n Analyzed: 13
