

**PETROLEUM EXCLUSION PRODUCTS NOT CONSIDERED
FOR THE 2003 PRIORITY LIST OF HAZARDOUS SUBSTANCES**

The following substances appear at three or more National Priorities List sites, but were not considered for inclusion in the 2003 Priority List of Hazardous Substances because of concern that their presence at these sites was the result of petroleum production, use, or disposal. Substances of petroleum origin are regulated by legislation other than CERCLA and therefore are excluded from becoming potential toxicological profile candidates under CERCLA. However, ATSDR has developed toxicological profiles on petroleum-based substances (including fuel oils, stoddard solvent, automotive gasoline, and jet fuels) through cooperative efforts with the U.S. Department of Defense. While careful consideration was made in determining which substances should be excluded, the classification was difficult in some instances. Placement of the following substances in this category is for the express purpose of composing the 2003 Priority List and does not constitute any manner of formal endorsement of such status by ATSDR.
