| 1994 (6).... | 8.2 | 4.4 | 3.8 | 3.7 | 7.4 | 4.1 | 3.6 | 3.3 |

1 The incidence rates represent the number of injuries and illnesses per 100 full-time workers and were
calculated as: $(N / E H) \times 200,000$, where

| $\mathbf{N}=$ | number of injuries and illnesses |
| ---: | :--- |
| $\mathbf{E H}=$ | total hours worked by all employees during |
|  | the calendar year |
| $200,000=$ | base for 100 equivalent full-time workers |
|  | (working 40 hours per week, 50 weeks |
|  | per year). |

2 Data for 1976-1987 are based on the Standard Industrial Classification Manual, 1972 Edition; and data for 1988-2001 are based on the Standard Industrial Classification Manual, 1987 Edition.

3 Total includes cases involving restricted work activity only in addition to days-away-from-work cases with or without restricted work activity.

4 Days-away-from-work cases include those which result in days away from work with or without restricted work activity.

5 To maintain historical comparability with the rest of the series, data for small nonfarm employers in low-risk industries who were not surveyed were imputed and included in the survey estimates.

6 Data exclude fatal work-related injuries and ilnesses.
NOTE: Because of rounding, components may not add to the totals. Data exclude farms with fewer than 11 employees.
