

## Photographs

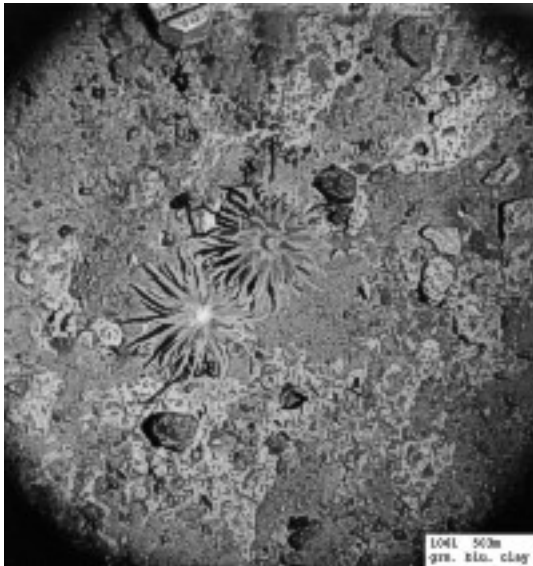

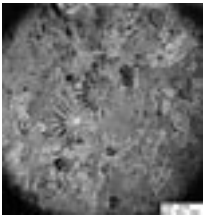

Photo of sea urchins

### Introduction:

USGS Woods Hole Science Center maintains several collections of photographs that depict ocean bottom characteristics and activities in the field. These photographs are various digital formats. Some have been published as Open File Reports, and some are available online.

### Available Indexes:

[Sea-Floor Photography from the Continental Margin Program](#): A Pictorial Survey of Benthic Character and Habitats Along the U.S. East Coast.

[Photographs of the Sea Floor in Western Massachusetts Bay](#): A collection of photographs documenting the sea floor characteristics as well as the type and distribution of sea life in Massachusetts Bay.

[Photographs of the Sea Floor Offshore of New York and New Jersey](#): A collection of photographs of the sea floor and sediment texture data collected as part of studies carried out by the U.S. Geological Survey (USGS) in the New York Bight.

[USGS Woods Hole Science Center Field Activities Collection](#): A collection of photographs taken during various field operations. This collection is indexed and can be searched using key words such as cruise number, a name, a ship name, or field gear.
