

ENERGY STAR[®] Program Requirements for CFLs Partner Commitments

Eligible Organizations: Manufacturers of Compact Fluorescent Light Bulbs

Commitment

The following are the terms of the ENERGY STAR Partnership Agreement as it pertains to the manufacturing of ENERGY STAR qualified CFLs. The ENERGY STAR PARTNER must adhere to the following program requirements:

- comply with current <u>ENERGY STAR Eligibility Criteria</u>, defining the performance criteria that must be met for use of the ENERGY STAR certification mark on CFLs and specifying the testing criteria for CFLs. DOE may, at its discretion, conduct tests on products that are referred to as ENERGY STAR qualified. These products may be obtained on the open market, or voluntarily supplied by PARTNER at DOE's request;
- comply with current <u>ENERGY STAR Logo Use Guidelines</u>, describing how the ENERGY STAR labels and name may be used. PARTNER is responsible for adhering to these guidelines and for ensuring that its authorized representatives, such as advertising agencies, dealers, and distributors, are also in compliance;
- qualify at least one ENERGY STAR labeled CFL model within one year of activating the CFLs portion of the agreement. When PARTNER qualifies the product, it must meet the specification in effect at that time;
- provide clear and consistent labeling of ENERGY STAR qualified CFLs. The ENERGY STAR label must be clearly displayed on product packaging, on the PARTNER's Internet site where information about ENERGY STAR qualified models is displayed, and in product literature (i.e., user manuals, spec sheets, etc.). It is also recommended that the label appear on the on the top/front of the product;
- provide to DOE, on an annual basis, an updated list of ENERGY STAR qualifying CFL models. Once the PARTNER submits its first list of ENERGY STAR labeled CFL models, the PARTNER's company name will be listed as an ENERGY STAR PARTNER. PARTNER must provide annual updates in order to remain on the list of participating product manufacturers;
- for each qualifying CFL model, provide to DOE test data to certify that the lamps and lamp systems have met the required safety acceptance and performance tests. DOE will only add models to its Product List after reviewing and approving the product test results;
- provide to DOE, on an annual basis, unit shipment data or other market indicators to assist in determining the market penetration of ENERGY STAR. Specifically, PARTNER must submit the total number of ENERGY STAR qualified CFLs shipped (in units by model) or an equivalent measurement as agreed to in advance by DOE and PARTNER. PARTNER is also encouraged to provide ENERGY STAR qualified unit shipment data segmented by meaningful product characteristics (e.g. bulb type/style) total unit shipments for each model in its product line, and percent of total unit shipments that qualify as ENERGY STAR. The data for each calendar year should be submitted to DOE, preferably in electronic format, no later than the following March and may be provided directly from the PARTNER or through a third party. The data will be used by DOE only for program evaluation purposes and will be closely controlled. If requested under the Freedom of Information Act (FOIA), DOE will argue that the data is exempt. Any information used will be masked by DOE so as to protect the confidentiality of the PARTNER;
- notify DOE of a change in the designated responsible party or contacts for CFLs within 30 days.

Performance for Special Distinction

In order to receive additional recognition and/or support from DOE for its efforts within the Partnership, the ENERGY STAR PARTNER may consider the following voluntary measures and should keep DOE informed on the progress of these efforts:

- consider energy efficiency improvements in company facilities and pursue the ENERGY STAR label for buildings;
- purchase ENERGY STAR labeled products. Revise the company purchasing or procurement specifications to include ENERGY STAR. Provide procurement officials' contact information to DOE for periodic updates and coordination. Circulate general ENERGY STAR labeled product information to employees for use when purchasing products for their homes;
- ensure the power management feature is enabled on all ENERGY STAR qualified monitors in use in company facilities, particularly upon installation and after service is performed;
- provide general information about the ENERGY STAR program to employees whose jobs are relevant to the development, marketing, sales, and service of current ENERGY STAR labeled product models;
- feature the ENERGY STAR label(s) on PARTNER web site and in other promotional materials. If information concerning ENERGY STAR is provided on the PARTNER web site, DOE may provide links where appropriate to the PARTNER web site;
- provide a simple plan to DOE outlining specific measures PARTNER plans to undertake beyond the program requirements listed above. By doing so, DOE may be able to coordinate, communicate, and/or promote PARTNER's activities, provide a DOE representative, or include news about the event in the ENERGY STAR newsletter, on the ENERGY STAR web pages, etc. The plan may be as simple as providing a list of planned activities or planned milestones that PARTNER would like DOE to be aware of. For example, activities may include: (1) increase the availability of ENERGY STAR labeled products by converting the entire product line within two years to meet ENERGY STAR guidelines; (2) demonstrate the economic and environmental benefits of energy efficiency through special in-store displays twice a year; (3) provide information to users (via the web site and user's manual) about energy-saving features and operating characteristics of ENERGY STAR qualified products, and (4) build awareness of the ENERGY STAR Partnership and brand identity by collaborating with DOE on one print advertorial and one live press event;
- provide quarterly, written updates to DOE as to the efforts undertaken by PARTNER to increase availability of ENERGY STAR qualified products, and to promote awareness of ENERGY STAR and its message.

ENERGY STAR[®] Program Requirements for CFLs

ENERGY STAR[®] Eligibility Criteria Energy-Efficiency Specification

Below is the product specification for ENERGY STAR qualified Compact Fluorescent Light Bulbs (CFLs). A product must meet all of the identified criteria if it is to be labeled as ENERGY STAR by its manufacturer.

- 1) <u>Scope:</u> This ENERGY STAR CFLs specification covers the requirements for integral screw-based CFLs and lamp systems, comprising:
 - A. Single based compact fluorescent lamps with twin tube, triple tube, quad tube, square or multiple limb configurations and having integral electronic ballasts;
 - B. Circle and square lamps with a maximum diameter of 9 inches or a maximum side length of 8 inches and having electronic ballast adapters that are packaged with the lamp.
 - C. Single based compact fluorescent lamps with integral electronic ballasts and which have a translucent cover over the bare fluorescent tube. The cover may be globe, bullet, pear or other shape.
 - D. Single based compact fluorescent lamps with integral electronic ballasts and which have a reflector that may be open or enclosed. The lamp shall be primarily intended to replace wide beam incandescent reflector lamps.

The intent of this ENERGY STAR program is to move consumers from incandescent to energy efficient compact fluorescent lighting. ENERGY STAR qualified compact fluorescent lamps are primarily intended for residential applications.

2) Definitions:

- A. <u>Self-ballasted compact fluorescent lamp</u> A compact fluorescent lamp unit that incorporates, permanently enclosed, all elements that are necessary for the starting and stable operation of the lamp, and which does not include any replaceable or interchangeable parts.
- B. <u>Rated voltage</u> The voltage marked on the lamp.
- C. Rated wattage The wattage marked on the lamp.
- D. <u>Rated supply frequency</u> The frequency marked on the lamp.
- E. <u>Initial performance values</u> The photometric and electrical characteristics at the end of the 100-hour aging period. The lamp operating position shall be base-up when measuring the initial performance values unless otherwise specified by the manufacturer.
- F. Rated luminous flux Initial lumen rating declared by the manufacturer.
- G. <u>Lumen maintenance</u> The luminous flux at a given time in the life of the lamp and expressed as a percentage of the initial luminous flux. The mean lumens are the value at 40% of rated life.
- H. <u>Average rated lamp life</u> The length of time declared by the manufacturer during which 50% of any large number of lamps reach the end of their individual lives.
- I. <u>Lamp color</u> The color characteristics of a lamp as defined by the color appearance and the color rendition.
- J. <u>Color appearance</u> The actual color of the lamp is called the color appearance and is defined in terms of the spectral tri-stimulus values (color coordinates) according to the recommendations of the CIE Publication No. 13.3 1995. For color coordinates near the black body loci, the correlated color temperature (Kelvin) can be used to define color appearance.
- K. <u>Color rendition</u> The effect that the spectral characteristics of the light emitted by the lamp has on the color appearance of the objects illuminated by it is called color rendition. The color rendering index is defined in terms of a comparison of the spectral tri-stimulus values of the objects under test illumination and standard illumination according to the recommendations of CIE Publication No. 13.2
- L. <u>Starting time</u> The time needed after switching on for the lamp to start fully and remain lighted.
- M. Run-up time The time needed after switching on the supply for the lamp to reach 80% of its stabilized

ENERGY STAR Program Requirements for CFLs

luminous flux.

- N. <u>Starting temperature</u> The minimum and maximum temperatures at which the lamp will reliably start.
- O. <u>Power factor</u> The active power divided by the apparent power (i.e. product of the rms input voltage and rms input current of a ballast.
- <u>Reference Standards</u>: ENERGY STAR qualified compact fluorescent lamps and lamp systems shall comply with the relevant clauses of the following standards, unless the requirements of the ENERGY STAR specification are more restrictive:

ANSI C78.1 – 1991	Fluorescent Lamps – Rapid-Start Types
ANSI C78.4 – 1995	Fluorescent Lamps – Self-Supporting Single-Based Compact Types
ANSI C78.5 – 1997	Specifications for Performance of Self-Ballasted Compacted Fluorescent Lamps
ANSI C78.375 – 1997	Guide for Electrical Measurements of Fluorescent Lamps
ANSI/IEEE C62.41 – 1991	Surge Voltages in Low-Voltage AC Power Circuits, Recommended Practice for
CIE Publication No. 13.3 – 1995	Method of Measuring and Specifying Color Rendering of Light Sources
IESNA LM-9 – 1998	Electric & Photometric Measurement of Fluorescent Lamps
IESNA LM-40 – 1987	Approved Method for Life Performance Testing of Fluorescent Lamps
IESNA LM-65 – 1991	Life Testing of Single-ended Compact Fluorescent Lamps
IESNA LM-66 – 1991	Electrical and Photometric Measurements of Single-Compact Fluorescent
UL 1993 – 1993	Standard for Self-Ballasted Lamps and Lamp Adapters

ENERGY STAR qualified compact fluorescent lamps and lamp systems shall comply as applicable with the labeling requirements of the U.S. Federal Trade Commission and the EMI requirements of the U.S. Federal Communications Commission:

Performance Characteristics	ENERGY STAR Specification	
Lamp Efficacy (The performance and electrical requirements of compact fluorescent lamps are taken at the end of the 100 hour aging period in accordance with ANSI C78.5.)	Lumens per watt (Based upon initial lumen data)	
Scope (a) (b)		
Bare lamps:		
<15 watts	45	
≥15 watts	60	
Scope (c) Covered lamps (except for reflector type):		
≤ 14 watts		
15 - 19 watts	40	
20 - 24 watts	48	
≥ 25 watts	50	
Scope (d)	55	
Reflector type:		
≤19 watts		
	33	

≥ 20 watts	40	
	For multi-level or dimmable systems, measurement shall be at the highest setting.	
Burning Position	The lamp efficacy shall be the lesser of the lumens per watt measured in the base up and base down positions.	
Lumen Depreciation	Per ANSI C78.5, Clause 4.10, The lumen depreciation at 40% of rated life shall not be less than 80%.	
Starting Time	The time needed after switching on for the lamp to start fully and remain lighted, shall be an average of 1 second.	
Color Quality	Color Rendering Index > 80	
Starting Temperature	Lamp package must declare the minimum starting temperatures or geographical zone of use and any other conditions (e.g. use in enclosed luminaire) for reliable starting to meet the starting time requirements of ANSI C78.5, Clause 4.7	
Run-up Time	Per ANSI C78.5, clause 3.11 and 4.8, shall not exceed 3 minutes.	
Correlated Color Temperature	If a product has a color temperature that does not fall between 2700K and 3000K, the packaging should clearly describe the color of the product (cool or warm) and state the intended use for the product.	
Electrical Requirements	ENERGY STAR Specification	
Input voltage and frequency	120 volts, 60 Hz	
Power Factor	≥ 0.5	
Electromagnetic Interference	Compliance with FCC 47 CFR Part 18 requirements for consumer limits	
Operating Frequency	> 40 kHz	
Transient Protection	Per ANSI/IEEE C62.41, Category A, 7 strikes	
Base	Medium screw E26/24	
Compatibility with Controls	Lamp package shall clearly state any known incompatibility with photo controls, dimmers or timing devices.	

Durability	ENERGY STAR Specification	
Average Rated Lamp Life	6,000 hours, or greater as declared by the manufacturer	
Warranty (applicable to normal residential use)	Either 12 months from date of purchase, or an equivalent, such as an "800" number or address for consumer complaint resolution.	
Labeling	In English, or English with additional languages	

Performance Characteristic	Test Procedure	Test Procedure
	Compact Fluorescent (see note below)	Circle design
Lumen Output and Efficacy	IESNA – LM66	IESNA – LM9
Lumen Depreciation and Life	IESNA – LM65 & ANSI – C78.5	IESNA – LM40
Color Rendering Index	CIE Publication 13.3	
Transient Protection	ANSI/IEEE C62.41, Category A, 7 strikes	
Electromagnetic Interference	FCC 47 CFR Part 18 for consumer limits	

Note: Testing with a reference ballast shall not apply to integrally ballasted compact fluorescent lamps. These lamps shall be measured with their integral ballasts at 120 volts and 60 Hz.

- <u>Certification</u>: Manufacturers shall certify that ENERGY STAR qualified compact fluorescent lamps and lamp systems have met the required safety acceptance and performance tests.
- 5) Testing: Manufacturers shall certify that the compact fluorescent lamps and lamp systems sold using the ENERGY STAR label have met the ANSI/UL Standard 1993. ENERGY STAR qualified compact fluorescent lamps and lamp systems must be tested, listed, and labeled by an organization accredited by the National Voluntary Laboratory Accreditation Program (NVLAP) or the American Association for Laboratory Accreditation (A2LA) as having the capability for safety testing, listing, and labeling of those products. These organizations include Canadian Standards Association (CSA), Underwriters Laboratories (UL), Intertek Testing Services Performance Division (formerly ETL Testing Laboratories). Factory Mutual (FM), and others. Manufacturers shall certify that the compact fluorescent lamps and lamp systems meet the manufacturers' declared performance criteria, and the minimum performance criteria contained in this ENERGY STAR specification for the characteristics shown above (and within three percent of the minimum performance criteria contained in the specification for efficacy). The sample size required for compliance with the ENERGY STAR performance criteria is 10 units per individual model (5 units in the base up position, and 5 units in the base down position). For new models, and/or models not previously tested, listed, or labeled, and 18 month delay will be allowed in the submission of data to DOE for ENERGY STAR qualification that identifies the average rated lamp life and lumen depreciation. This specification shall be updated and revised to incorporate industry-accepted testing procedures for predicting lamp failure, average lifetime and other criteria as new industry standard test procedures become available. This specification will be reviewed with manufacturer and other interested parties' input no later than 1 year after the effective date to assess the need to revise accordingly.
