# Survey of State Criminal History Information Systems, 1999 

A Criminal Justice Information Policy Report

October 2000, NCJ 184793

# U.S. Department of Justice 

Bureau of Justice Statistics
Jan M. Chaiken, Ph.D.
Director

Acknowledgments. This report was prepared by SEARCH, The National Consortium for Justice Information and Statistics, Kenneth E. Bischoff, Chairman, and Gary R. Cooper, Executive Director. The project director and author of the report was Sheila J. Barton, Deputy Executive Director. Support for the project was provided by Jane L. Bassett, Publishing Specialist, Corporate Communications. The Federal project monitor was Carol G. Kaplan, Chief, Criminal History Improvement Programs, Bureau of Justice Statistics.

This report of work was performed under BJS Cooperative Agreement No. 95-RU-RX-K001, awarded to SEARCH, The National Consortium for Justice Information and Statistics, 7311 Greenhaven Drive, Suite 145, Sacramento, California 95831. Contents of this document do not necessarily reflect the views or policies of the Bureau of Justice Statistics or the U.S. Department of Justice.

## List of data tables

1. Overview of State criminal history record systems, December 31, 199915
2. Number of subjects (individual offenders) in State criminal history file, 1995, 1997 and 199917
3. Number of final dispositions reported to State criminal history repository, 1993, 1995, 1997, and 199919
4. Automation of master name index and criminal history file, 1989, 1993, 1997, and 199921
5. Data required to be submitted to State criminal history repository, 199923
6. Arrest records with fingerprints, 1989, 1993, 1995, and 199925
7. Notice to State criminal history repository of release of arrested persons without charging, 1989, 1993, 1997, and 199927
8. Completeness of prosecutor and court disposition reporting to State criminal history repository, 1989, 1993, 1997, and 199929
9. Policies/practices of State criminal history repository regarding modification of felony convictions, 199931
10. Fingerprinting of incarcerated offenders and linkage to records maintained by State criminal history repository, 199933
11. Probation and parole data in State criminal history repository, 1989, 1993, 1997, and 199935
12. Average number of days to process arrest data submitted to State criminal history repository and current status of backlog, 199937
13. Average number of days to process disposition data submitted to State criminal history repository and current status of backlog, 199939
14. Average number of days to process correctional admission data submitted to State criminal history repository and current status of backlog, 199941
15. Procedures employed by State criminal history repository to encourage complete arrest and disposition reporting, 199943
16. Methods used to link disposition information to arrest/charge information on criminal history record, 199945
17. Procedure followed when linkage cannot be made between court or correctional information in the criminal history database, 199947
18. Strategies employed by State criminal history repository to ensure accuracy of data in criminal history database, 199949
19. Audit activities of State criminal history repository, 1989, 1993, 1997, and 199951
20. Data quality audits of State criminal history repository, 199953
21. Criminal history records of Interstate Identification Index (III) participants maintained by the State criminal history repository and the Federal Bureau of Investigation, June 30, 1999 55
22. Estimated records with dispositions available through the Interstate Identification Index (III), June 301999 57
23. Fees charged by State criminal history repository for noncriminal justice purposes, 199959

## Foreword

SEARCH conducted five previous surveys in this series for the Bureau of Justice Statistics, covering 1989, 1992, 1993, 1995, and 1997. This year's report largely updates the information collected in previous years.<br>The National Instant Criminal Background Check System (NICS) mandated by the Brady Handgun Violence Prevention Act became operational November 30, 1998. This survey provides a summary of quantitative information at the end of 1999. The levels of coverage, completeness, accuracy, and accessibility of the State criminal history information systems directly affect the effectiveness and efficiency of the NICS.<br>The Bureau of Justice Statistics hopes that the information contained in this report will assist States as they continue to improve their systems and to remain vigilant in maintaining the goals they have already achieved.

Jan M. Chaiken, Ph.D.
Director

## Glossary of terms

## Automated Fingerprint Identification System

(AFIS): An automated system for searching fingerprint files and transmitting fingerprint images. AFIS computer equipment can scan fingerprint impressions (or utilize electronically transmitted fingerprint images) and automatically extract and digitize ridge details and other identifying characteristics in sufficient detail to enable the computer's searching and matching components to distinguish a single fingerprint from thousands or even millions of fingerprints previously scanned and stored in digital form in the computer's memory. The process eliminates the manual searching of fingerprint files and increases the speed and accuracy of ten-print processing (arrest fingerprint cards and noncriminal justice applicant fingerprint cards). AFIS equipment also can be used to identify individuals from "latent" (crime scene) fingerprints, even fragmentary prints of single fingers in some cases. Digital fingerprint images generated by AFIS equipment can be transmitted electronically to remote sites, eliminating the necessity of mailing fingerprint cards and providing remote access to AFIS fingerprint files.

Central Repository: The database (or the agency housing the database) that maintains criminal history records on all State offenders. Records include fingerprint files and files containing identification segments and notations of arrests and dispositions. The central repository is generally responsible for State-level identification of arrestees, and commonly serves as the central control terminal for contact with FBI record systems. Inquiries from local agencies for a national record check (for criminal justice or firearm check purposes) are routed to the FBI via the central repository. Although usually housed in the Department of Public Safety, the central repository may be maintained in some States by the State Police or some other State agency.

## Criminal History Record Information (CHRI) or Criminal History Record Information

System: A record (or the system maintaining such records) that includes individual identifiers and describes an individual's arrests and subsequent dispositions. Criminal history records do not include intelligence or investigative data or sociological data such as drug use history. CHRI systems usually include information on juveniles if they are tried as adults in criminal courts.

Most, however, do not include data describing involvement of an individual in the juvenile justice system. All data in CHRI systems are usually backed by fingerprints of the record subjects to provide positive identification. State legislation varies concerning disclosure of criminal history records for noncriminal justice purposes.

Data Quality: The extent to which criminal history records are complete, accurate and timely. In addition, accessibility sometimes is considered a data quality factor. The key concern in data quality is the completeness of records and the extent to which records include dispositions as well as arrest and charge information. Other concerns include the timeliness of data reporting to State and Federal repositories, the timeliness of data entry by the repositories, the readability of criminal history records and the ability to have access to the records when necessary.

Felony or Serious Misdemeanor: The category of offenses for which fingerprints and criminal history information are accepted by the FBI and entered in the Bureau's files, including the III system. Serious misdemeanor is defined to exclude certain minor offenses, such as drunkenness or minor traffic offenses.

Interstate Identification Index (III): An "indexpointer" system for the interstate exchange of criminal history records. Under III, the FBI maintains an identification index to persons arrested for felonies or serious misdemeanors under State or Federal law. The index includes identification information, (such as name, date of birth, race, and sex), FBI Numbers and State Identification Numbers (SID) from each State holding information about an individual. Search inquiries from criminal justice agencies nationwide are transmitted automatically via State telecommunications networks and the FBI's National Crime Information Center (NCIC) telecommunications lines. Searches are made on the basis of name and other identifiers. The process is entirely automated and takes approximately five seconds to complete. If a hit is made against the Index, record requests are made using the SID or FBI Number, and data are automatically retrieved from each repository holding records on the individual and forwarded to the requesting agency. As of September 30, 2000, 41 States participate in III. Responses are provided from FBI files when the State originating the record is not a participant in III.

Participation requires that the State maintain an automated criminal history record system capable of interfacing with the III system and capable of responding automatically to all interstate and Federal/State record requests.

Juvenile Justice Records: Official records of juvenile justice adjudications. Most adult criminal history record systems do not accept such records, which are frequently not supported by fingerprints and which usually are confidential under State law. Pursuant to an order dated July 15, 1992, the FBI now accepts, and will disseminate, juvenile records on the same basis as adult records. States, however, are not required to submit such records to the FBI

Master Name Index (MNI): A subject identification index maintained by criminal history record repositories that includes names and other identifiers for each person about whom a record is held in the systems. As of 1999, only one State did not have at least a partially automated MNI; almost all States (45) had fully automated MNIs. The automated name index is the key to rapidly identifying persons who have criminal records for such purposes as presale firearm checks, criminal investigations or bailsetting. MNIs may include "felony flags," which indicate whether record subjects have arrests or convictions for felony offenses.

National Crime Information Center (NCIC): An automated database of criminal justice and justicerelated records maintained by the FBI. The database includes the "hot files" of wanted and missing persons, stolen vehicles and identifiable stolen property, including firearms. Access to NCIC files is through central control terminal operators in each State that are connected to NCIC via dedicated telecommunications lines maintained by the FBI. Local agencies and officers on the beat can access the State control terminal via the State law enforcement network. Inquiries are based on name and other nonfingerprint identification. Most criminal history inquiries of the III system are made via the NCIC telecommunications system. NCIC data may be provided only for criminal justice and other specifically authorized purposes. For criminal history searches, this includes criminal justice employment, employment by Federally chartered or insured banking institutions or securities firms, and use by State and local governments for purposes of employment and licensing pursuant to a State statute approved by the U.S. Attorney General. Inquiries regarding presale firearm checks are included as criminal justice uses.

## National Crime Prevention and Privacy

Compact: An interstate and Federal/State compact which establishes formal procedures and governance structures for the use of the Interstate Identification Index (III). It is designed to facilitate the exchange of criminal history data among States for noncriminal justice purposes and to eliminate the need for the FBI to maintain duplicate data about State offenders. Under the compact, the operation of this system is overseen by a policymaking council comprised of Federal and State officials. The key concept underlying the compact is agreement among all signatory States that all criminal history information (except sealed records) will be provided in response to noncriminal justice requests from another State regardless of whether the information being requested would be permitted to be disseminated for a similar noncriminal justice purpose within the State holding the data. (That is, the law of the State that is inquiring about the data - rather than the law of the State that originated the data - governs its use.) In some cases, ratification of the compact will have the effect of amending existing State legislation governing interstate record dissemination, since most States do not currently authorize dissemination to all of the Federal agencies and out-of-State users authorized under the compact. At present, noncriminal justice inquiries are handled by the FBI from its files of voluntarily contributed State arrest and disposition records. This requires that the FBI maintain duplicates of State records and generally results in less complete records being provided, since FBI files of State records are not always complete due to reporting deficiencies. The compact was passed by Congress and signed into law by the President in October 1998. The compact became effective in April 1999, following ratification by two State legislatures, those being Montana on April 8, 1999 and Georgia on April 28, 1999. Since that time, six additional States have entered into the compact: Nevada (May 1999); Florida (June 1999); Colorado (March 2000); Iowa (April 2000); Connecticut (June 2000); and South Carolina (June 2000).

National Fingerprint File (NFF): A system and procedures designed as a component of the III system, which, when fully implemented, would establish a totally decentralized system for the interstate exchange of criminal history records. The NFF will contain fingerprints of Federal offenders and a single set of fingerprints on State offenders from each State in which an offender has been arrested for a felony or a serious misdemeanor. Under the NFF concept, States will forward only the firstarrest fingerprints of an individual to the FBI accompanied by other identification data such as name and date of birth.

Fingerprints for subsequent arrests would not be forwarded. Disposition data on the individual would also be retained at the State repository and would not be forwarded to the FBI. Upon receipt of the firstarrest fingerprint cards (or electronic images), the FBI will enter the individual's fingerprint impressions in the NFF and will enter the person's name and identifiers in the III, together with an FBI Number and a State Identification (SID) Number for each State maintaining a record on the individual. Charge and disposition information on State offenders will be maintained only at the State level, and State repositories will be required to respond to all authorized record requests concerning these individuals for both criminal justice and noncriminal justice purposes. States would have to release all data on record subjects for noncriminal justice inquiries regardless of whether the data could be released for similar purposes within the State. The NFF has been implemented in four States: Florida, New Jersey, North Carolina and Oregon.

Positive Identification: Identification of an individual using biometric characteristics that are unique and not subject to alteration. In present usage, the term refers to identification by fingerprints but may also include identification by retinal images, voiceprints or other techniques. Positive identification is to be distinguished from identification using name, sex, date of birth, or other personal identifiers as shown on a document subject to alteration or counterfeit such as a birth certificate, Social Security card or driver's license. Because individuals can have identical or similar names, ages, etc., identifications based on such characteristics are not reliable.

Note to Readers: This is a report of the results of the Survey of State Criminal History Information Systems. In some of the tables that follow, data from earlier data quality surveys are included. Caution should be used in drawing comparisons between the results of earlier surveys and the survey reported here. Since the last national data quality survey, the U.S. Justice Department has continued to implement assistance programs dedicated to improving criminal history records. As a result, some States are focusing new or additional resources on the condition of their records and in many cases, know more about their records today than in the past. A number of State repositories have suffered fiscal cutbacks and have had to shift priorities away from certain criminal history information management tasks. For these and other reasons, trend comparisons may not as accurately reflect the status of the Nation's criminal history records as the current data considered alone.

## Introduction

This report is based upon the results from a two-part survey conducted of the administrators of the State criminal history record repositories in January -September 1999. Fifty-three jurisdictions were surveyed, including the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, and the U.S. Virgin Islands. Responses were received to at least one part of the survey from 52 jurisdictions. Only Puerto Rico did not complete either part of the survey. Throughout this report, the 50 States will be referred to as "States"; the District of Columbia, Puerto Rico, and the Virgin Islands will be referred to as "territories," consistent with prior surveys; "Nation" refers collectively to both the States and territories.

In addition, the Federal Bureau of Investigation was the source for information relating to the number of criminal history records of the States participating in the Interstate Identification Index (III) system that are maintained by the State criminal history repositories and the number of records maintained by the FBI for the States, as of June 30, 1999. The number of dispositions available through III in each State also are reported.

## Major Findings

Level of automation of master name indexes and criminal history files

Overview of State criminal history record systems, December 31, 1999 (Table 1):

- Fifty States and the District of Columbia have automated at least some records in the criminal history record file.
- Twenty-one States (Arizona, Colorado, Florida, Georgia, Hawaii, Maryland, Michigan, Mississippi, Montana, Nebraska, Nevada, New Hampshire, New Jersey, North Carolina, Oregon, Rhode Island, Tennessee, Texas, Utah, Washington and Wyoming) have fully automated criminal history files and master name indexes.

Automation of master name index and criminal history file, 1999 (Table 4):

- Forty-five States have fully automated master name indexes. The Virgin Islands does not maintain a master name index.
- The Virgin Islands has no automated criminal history files.
- Of those States maintaining partially automated criminal history files, when an offender with a prior manual record is arrested, the prior manual record is subsequently automated in 22 States. In four States (California, Delaware, Minnesota and Pennsylvania) and the District of Columbia, only the new information is automated. In Maine, the new information is added to the manual file.

## Level of disposition reporting

Overview of State criminal history record systems,
December 31, 1999 (Table 1):

- Eighteen States (Alaska, California, Connecticut, Delaware, Georgia, Hawaii, Iowa, Maine, Massachusetts, Montana, New Hampshire, New Jersey, New York, North Carolina, South Carolina, South Dakota, Vermont and Virginia) and the District of Columbia representing approximately $38 \%$ of the Nation's population (based on 53 jurisdictions) and $41 \%$ of the Nation's criminal history records, report that $80 \%$ or more arrests within the past 5 years in the criminal history database have final dispositions recorded.
- A total of 23 States and the District of Columbia representing approximately $46 \%$ of the Nation's population and $47 \%$ of the Nation's criminal history records, report that $70 \%$ or more arrests within the past 5 years in the criminal history database have final dispositions recorded.
- A total of 32 States and the District of Columbia representing approximately $64 \%$ of the Nation's population and $66 \%$ of the Nation's criminal history records, report that $60 \%$ or more arrests within the past 5 years in the criminal history database have final dispositions recorded.
- When arrests older than 5 years are considered, 15 States, representing $25 \%$ of the Nation's criminal history records, report that $80 \%$ or more arrests in the entire criminal history database have final dispositions recorded. Twenty-three States, representing $43 \%$ of the Nation's criminal history records, report that $70 \%$ or more arrests in the entire criminal history database have final dispositions recorded. Thirty-two States, representing $66 \%$ of the Nation's criminal history records, report that 60\% or more arrests in the entire criminal history database have final dispositions recorded.

## Number of final dispositions reported to State criminal history repository, 1999 (Table 3):

Forty-eight States provided data on the number of final dispositions reported to their criminal history repositories indicating that over 7.6 million final dispositions were reported in 1999. The responding States represent approximately $96 \%$ of the Nation's population.

## Level of felony flagging

Overview of State criminal
history record systems,
December 31, 1999 (Table 1):

- Forty-two States currently flag some or all felony convictions in their criminal history databases.
- Eighteen States, the District of Columbia and the Virgin Islands, collect sufficient data to permit them to flag at least some previously unflagged felony convictions.

## Timeliness of trial court disposition data

Average number of days to process disposition data submitted to State criminal history repository, 1999 (Table 13):

- An average 30 days separates the final court dispositions and receipt of that information by the State criminal history repositories, ranging from 1 day or less in Colorado, Delaware, the District of Columbia and New Jersey to 110 days in Wisconsin. The majority of responding repositories receives the data in 30 days or less.
- An average 39 days separates the receipt of final trial court dispositions and entry of disposition data into the criminal history databases, ranging from less than 1 day in States where dispositions are entered either directly by the courts or by tape to 365 days in Ohio. Half of the responding jurisdictions enter the data in 10 days or less.
- Twenty-eight States and the Virgin Islands indicate having backlogs in entering disposition data into the criminal history database.

## Detailed findings

## Status of State criminal history files

Number of subjects (individual offenders) in State criminal history file, 1999 (Table 2):

- Over 59 million criminal history records were in the criminal history files of the State criminal history repositories on December 31, 1999. (An individual offender may have records in several States.)
- Eighty-nine percent of the criminal history records maintained by the State criminal history repositories are automated. Approximately 6.2 million records, or $11 \%$, are not automated.
- The Virgin Islands has no automated criminal history files.

Automation of master name index and criminal history file, 1999 (Table 4):

- All of the reporting States and the District of Columbia have automated at least some records in either the criminal history record file or the master name index.
- Of the responding jurisdictions, 45 States have fully automated master name indexes. Six jurisdictions do not have fully automated master name indexes. Of those six jurisdictions, three States and the District of Columbia have partially automated master name indexes. Maine's master name index is not automated, and the Virgin Islands does not maintain a master name index.
- Of those jurisdictions maintaining partially automated criminal history files, when an offender with a prior manual record is arrested, the record is automated in 22 States. In four States (California, Delaware, Minnesota and Pennsylvania) and the District of Columbia, only the new information is automated. In Maine, the information is added to the manual file.

Data required by State law to be submitted to State criminal history repository, 1999(Table 5):

- Thirty-five States require prosecutors to report to State criminal history repositories their decisions to decline prosecution in criminal cases. In Michigan, arrest fingerprints are submitted after the prosecutor's decision to charge a crime punishable by over 92 days.
- Forty-seven States require felony trial courts to report the dispositions of felony cases to the State criminal history repository.
- State prison admission on felony cases must be reported to the State criminal history repository in 36 States. State prison release information on felony cases must be reported to the State criminal history repository in 31 States.
- Admission data on felons housed in local correctional facilities must be reported to the State criminal history repository in 25 States. Release data on felons housed in local correctional facilities must be reported to the State criminal history repository in 17 States.
- The reporting of probation information is mandated in 26 States and the District of Columbia, while 28 States and the District of Columbia require the reporting of parole information.

## Arrest records with fingerprints, 1999 (Table 6):

- During 1999, over 8.8 million arrest fingerprint cards (or electronic substitutes) were submitted to the State criminal history repositories.
- Thirty-seven States, representing $72 \%$ of the Nation's population, have records that are $100 \%$ fingerprint-supported. A total of 42 States, or an additional 10 States, representing $92 \%$ of the Nation's population have records that are at least $90 \%$ fingerprint-supported. In 6 States and the District of Columbia, some of the arrests in the criminal history files, ranging from $35 \%$ to $85 \%$, are fingerprint-supported. In Massachusetts, there are no fingerprint-supported criminal history records.

## Completeness of data in State criminal history repository

Notice to State criminal history repository of release of arrested persons without charging, 1999 (Table 7):

- More than half of the States (31) and the District of Columbia require law enforcement agencies to notify the State criminal history repository when an arrested person is released without formal charging but after the fingerprints have been submitted to the repository.

## Disposition data

Completeness of prosecutor and court disposition reporting to State criminal history repository, 1999 (Table 8):

- Seventeen States (Connecticut, Georgia, Idaho, Iowa, Maine, Massachusetts, Minnesota, Nebraska, New Jersey, North Dakota, Oregon, Rhode Island, South Carolina, South Dakota, Utah, Vermont and Virginia) report that criminal history repositories receive final felony trial court dispositions for $80 \%$ or more of the cases.

Seven States (Connecticut, Maine, Massachusetts, Oregon, Rhode Island, South Carolina and Utah) estimate that they receive notice in $100 \%$ of the cases.
A. A total of 21 States, or four additional States (Arizona, Arkansas, Delaware and Hawaii) report that final felony trial court dispositions in $70 \%$ or more of the cases in their States are received by the State criminal history repositories.
B. A total of 23 jurisdictions, or 1 additional State (Oklahoma) and 1 additional territory (Virgin Islands), report that final felony trial court dispositions in $60 \%$ or more of the cases in their jurisdictions are received by the State criminal history repositories.

- Of the respondents indicating that there is either a legal requirement for prosecutors to notify the State criminal history record repository of declinations to prosecute or where the information is reported voluntarily, seven States and one territory (Delaware, District of Columbia, Illinois, Maine, Massachusetts, New Jersey, North Dakota and Utah) estimate that they receive notice in $80 \%$ or more of such cases. Three States (Delaware, Massachusetts and New Jersey) estimate that notice is received in $100 \%$ of the cases. All of the noted jurisdictions, except Massachusetts and the District of Columbia, report a legal requirement to notify the repository. (See Table 5.)
- Ten States were able to estimate the number of prosecutor declinations received. The numbers ranged from 100 in Mississippi to 213,000 in California.

Policies/practices of State criminal history repository regarding modification of felony convictions, 1999 (Table 9):

- Expungements: Twenty-one States, the District of Columbia and the Virgin Islands have statutes that provide for the expungement of felony convictions. In 10 States and the Virgin Islands, the record is destroyed by the State criminal history repository. In Minnesota, although State law does not provide for expungements, the State repository does receive orders issued pursuant to the inherent authority of the court, and records relating to such orders are destroyed. In eight States, the record is retained with the action noted on the record. Six States seal the record. In Virginia, although State law does not provide for the expungement of convictions, orders are received by the State repository, and the records are sealed.
- Setting aside of convictions: Forty-two jurisdictions have statutes that provide for setting aside felony convictions. In three States, the record is destroyed. In 35 jurisdictions (33 States, the District of Columbia and the Virgin Islands), the record is retained with the action noted. In Nevada, the record is sealed. Three States did not indicate how the records are treated by the State repository.
- Pardons: All of the reporting jurisdictions (49 States, the District of Columbia and the Virgin Islands) have statutes that provide for the granting of a pardon. In 43 States and the District of Columbia, the criminal history record is retained with the action noted. In four jurisdictions (South Dakota, Tennessee, Vermont and the Virgin Islands), the record is destroyed. In Massachusetts, the record is sealed. Two States did not indicate how pardons are treated by the State repository.
- Restoration of civil rights: Forty-one States and the District of Columbia have legal provisions for the restoration of a convicted felon's civil rights. In the majority of those jurisdictions (33 States and the District of Columbia), the record is retained with the action noted. In three States (South Dakota, Tennessee and Vermont), the record is destroyed. In Massachusetts, the record is sealed. Restoration of civil rights is not tracked in Alaska, and in Missouri, no action is taken. Two States that have laws providing for the restoration of civil rights did not indicate how the records are treated by the State repository.

## Correctional data

Fingerprinting of incarcerated offenders and linkage to records maintained by State criminal history repository, 1999 (Table 10):

- In 39 States, there is a legal requirement (State statute or State administrative regulation having the force of law) that the State prison system must fingerprint admitted prisoners and send the fingerprints to the State criminal history repository.
- In States where State correctional facilities are legally required to report information or the information is reported voluntarily, the majority of States (30) estimate that in at least $99 \%$ of the cases, admission information is reported to the State repository. Twenty-nine of those States estimate that $100 \%$ of the admissions are reported to the repository. Seven jurisdictions estimate a reporting rate of less than $99 \%$, ranging from $85 \%$ in Virginia to $0 \%$ in Kansas.
- For reporting from local jails where required by law or completed voluntarily, 11 States report that $95 \%$ or more of the admissions are reported to the State repositories. Three States report rates of less than 95\% ranging from $40 \%$ in North Dakota to less than 5\% in Pennsylvania.
- In 45 States, fingerprints received from State and local correctional facilities are processed by the State criminal history record repository to establish positive identification of incarcerated offenders and to ensure that correctional information is linked to the proper records.

Probation and parole data in State criminal history repository, 1999 (Table 11):

- Of the 16 States where reporting of probation data is legally required or voluntarily reported, 11 estimate that at least $90 \%$ of the cases in which probation is ordered are reported to the State criminal history repository. One additional State reports that in at least $75 \%$ of the cases, the State criminal
history repository receives probation information. Four States report that information is received in $60 \%$ or less of the cases.
- Sixteen States where reporting of parole data is legally required or voluntarily reported, estimate that parole information is reported in $90 \%$ of the cases. Three States report receiving parole information in less than $90 \%$ of the cases, ranging from $75 \%$ in Minnesota to $0 \%$ in Idaho. In Colorado, $100 \%$ of admission to parole information is received; release from parole is not reported.

## Timeliness of data in State criminal history repository

## —Arrests

Average number of days to process arrest information submitted to State criminal history repository, 1999 (Table 12):

- The average number of days between arrest and receipt of arrest data and fingerprints by the State criminal history repositories is 13 , ranging from 1 day or less in California, the District of Columbia, Florida, Hawaii, Illinois, Kentucky, Louisiana, New Jersey, New York, Pennsylvania, South Dakota and Virginia (most due to livescan) to up to 93 days in Mississippi. The majority (27) receive the data in 14 days or less.
- The average number of days between receipt of fingerprints by the State criminal history repository and entry into the master name index by the State criminal history repositories is 21, ranging from 0 in Delaware to up to as many as 150 days in Texas. The majority of jurisdictions (28) enter the data in 10 days or less.
- The average number of days between receipt of fingerprints and entry of arrest data into the criminal history databases is 26, ranging from less than one day in Delaware, the District of Columbia, Georgia, New Mexico, New York and Virginia to up to 180 days in Tennessee. The majority of reporting jurisdictions (24) enter the data in 14 days or less.
- Twenty-nine States indicate that they have, or had at the time of the survey, backlogs in entering arrest data into the criminal history database. The number of person-days to clear the backlogs range from 1-2 days in New Hampshire to 3,600 person-days to clear an estimated 84,000 unprocessed or partially processed fingerprint cards in Washington. Initial fingerprint classification is a more timeconsuming task than entry of disposition data into the database.

## —Disposition data

Average number of days to process disposition data submitted to State criminal history repository and current status of backlog, 1999 (Table 13):

- An average 30 days separates the final court dispositions and receipt of that information by the State criminal history repositories, ranging from 1 day or less in Colorado, Delaware, the District of Columbia and New Jersey to 110 days in Wisconsin. The majority of responding repositories receives the data in 30 days or less.
- An average 39 days separates the receipt of final trial court dispositions and entry of disposition data into the criminal history databases, ranging from less than 1 day in States where dispositions are entered either directly by the courts or by tape to 365 days in Ohio. Half of the responding jurisdictions enter the data in 10 days or less.
- Twenty-eight States and the Virgin Islands indicate having backlogs in entering disposition data into the criminal history database.

## —Admission to correctional facilities

Average number of days to process correctional admission data submitted to State criminal history repository, 1999 (Table 14):

- The average number of days between the admission of offenders to State correctional facilities and receipt of the information by the State criminal history repository is 15 , ranging from 1 day in Delaware, Florida, Illinois, New Jersey, New York, Ohio and Tennessee to 60 days in North Carolina.
- The average number of days between the admission of offenders to local jails and receipt of the information by the State criminal history repository is 17 , ranging from 1 day in New Jersey and South Dakota to 30 days in California, Idaho, Maryland, North Dakota and Wyoming.
- The average number of days between receipt of correctional admissions information by the State criminal history repository and entry into the criminal history databases is 53 , ranging from less than 1 day in Mississippi, New York and Virginia to approximately 365 days in Arkansas and Michigan. The majority of responding States (18) enter the information in 10 days or less.
- Eighteen States indicate that they have or had backlogs in entering the correctional information into the criminal history databases. The number of person-days to clear the backlogs range from 2 in North Carolina and Oklahoma to clear an estimated 500-600 unprocessed or partially processed custodysupervision forms in each to 780 person-days to clear an estimated 35,900 forms in California.

## Procedures to improve data quality

Procedures employed by State criminal history repository to encourage complete arrest and disposition reporting, 1999 (Table 15):

- The method most used to encourage complete arrest and disposition reporting is telephone calls conducted by 38 States and the District of Columbia and the Virgin Islands.
- Twenty-six States and the District of Columbia generate lists of arrests with missing dispositions as a means of monitoring disposition reporting.
- Thirty-one States and the District of Columbia report using field visits to encourage complete arrest and disposition reporting.
- Twenty-nine States generate form letters as a method of encouraging complete arrest and disposition reporting.
- Other jurisdictions report using such methods as training, audits and electronic contact as methods to encourage complete arrest and disposition reporting.

## Linking of arrests and dispositions

Methods used to link disposition information to arrest/charge information on criminal history record, 1999 (Table 16):

- Thirty-six States, the District of Columbia and the Virgin Islands utilize methods for linking disposition information and arrest/charge information which also permit the linking of dispositions to particular charges and/or specific counts.
- All responding jurisdictions report using at least one method for linking disposition information and arrest/charge information on criminal history records, and nearly every jurisdiction indicates multiple mechanisms to ensure linkage:
- Thirty-one States and the District of Columbia employ a unique tracking number for the individual subject.
- Thirty-nine States and the District of Columbia use a unique arrest event identifier.
- Twenty-one States and the District of Columbia utilize a unique charge identifier.
- Thirty-five States, the District of Columbia and the Virgin Islands use the arrest date; thirtyfive States, the District of Columbia and the Virgin Islands use the subject's name.
- Twenty-four States and the District of Columbia report using the reporting agency's case number.
- Individual jurisdictions also report using other methods, such as the originating agency (ORI) number, the booking number and unique combinations of numbers.

## Procedures followed when linkage cannot be made between court or correctional information and arrest information in the criminal history database, 1999 (Table 17):

- Forty-three jurisdictions report that they sometimes receive final court dispositions that cannot be linked to arrest information in the criminal history record database.

The jurisdictions vary in the percentage of court dispositions that cannot be linked to arrest cycles in the criminal history database from less than $1 \%$ in Nevada to $70 \%$ in Maine. Three States (Massachusetts, Vermont and Wyoming) report that all final court dispositions can be linked to the arrest cycle in the criminal history database.

- Twenty-seven jurisdictions report that they sometimes receive correctional information that cannot be linked to arrest information in the criminal history record database. The percentage of correctional dispositions that cannot be linked to arrest cycles in the criminal history database range from less than $1 \%$ in Nevada to $60 \%$ in Tennessee.
- The jurisdictions use a variety of procedures when a linkage cannot be established. Eight States create "dummy" arrest segments from court disposition records; four States create "dummy" court segments from custody records. Eight States enter court information into the database without any linkage to a prior arrest; and 16 States enter custody information into the database without any linkage to a prior court disposition. Twentyfive States do not enter the unlinked court information. Eight jurisdictions do not enter unlinked custody information. Fourteen States utilize other procedures, such as contacting or returning the information to the originating or contributing agency or using temporary or pending files until a match can be established.

## Other data quality procedures

Strategies employed by State criminal history repository to ensure accuracy of data in criminal history database, 1999 (Table 18):

- To prevent the entry and storage of inaccurate data and to detect and correct inaccurate entries in the criminal history database, a large majority of the jurisdictions, a total of 46 States, the District of Columbia and the Virgin Islands complete a manual review of incoming source documents or reports.
- Other methods used most frequently include computer edit and verification programs employed by 42 States and the District of Columbia.
- Manual double-checking before data entry is completed in 28 jurisdictions. Manual review of transcripts before dissemination is performed in 28 jurisdictions.
- Twenty-one States and the District of Columbia perform random sample comparisons of the State criminal history repository files with stored documents.
- Eighteen States generate error lists that are returned to the reporting agencies.
- Eleven States use various methods, such as audits and contacting contributing agencies for additional information.

## Audits

Audit activities of State criminal history repository, 1999 (Table 19):

- Forty-seven States and the District of Columbia maintain transaction logs to provide an audit trail of all inquiries, responses and record updates or modifications.
- More than half of the repositories, a total of 33 jurisdictions report that the State criminal history repository or some other agency performed random sample audits of user agencies to ensure accuracy and completeness of repository records and to ensure that the agencies comply with applicable laws and regulations.

Data quality audits of State criminal history repository, 1999 (Table 20):

- During the 5 years before the survey, an audit of the State criminal history repository's database (other than ongoing systematic sampling) was conducted in 22 States and the District of Columbia to determine the level of accuracy and completeness of the criminal history file.
- Of the jurisdictions where audits were performed, in 20 States and the District of Columbia, another agency conducted the audit; in 1 State, the repository conducted its own audit; and 1 State indicated that auditing was conducted by both an outside agency and the repository.
- Twenty-one jurisdictions in 1999 reported not having conducted an audit during the
previous 5 years, and 17 responded that they are not planning to audit in the coming 3 years. Four States gave no indication of plans for the next 3 years.
- In 17 of the jurisdictions where audits were conducted, changes were made as a result of the audit to improve data quality of the records.
- Twenty States and the District of Columbia had data quality audits planned or scheduled for the next 3 years.
- Forty-seven States and two territories had initiatives underway at the repository or contributing agencies to improve data quality. Initiatives included audit activities (28); automation changes (40); disposition or arrest reporting enhancements (43); felony flagging (21); fingerprint enhancements (33); agency interfaces (37); legislation (19); plan development (24); establishment of task forces/advisory groups (20); implementation or improvement of tracking numbers (21); and training (30).

## Criminal history records of

 Interstate Identification Index (III) participants maintained by the State criminal history repository and the Federal Bureau of Investigation, 1999 (Table 21):- As of June 30, 1999, over 21.3 million III records are indexed with the State's identification (SID) pointers. Approximately 12.3 million records are maintained by the FBI for the States.

Estimated records with dispositions available through the Interstate Identification Index (III), June 30, 1999 (Table 22):

- Over 21.5 million records with dispositions were available through III as of June 30, 1999. This number means that $64 \%$ of the total records in III had dispositions, as of June 30, 1999.

Fees charged by State criminal history repository for noncriminal justice purposes, 1999 (Table 23):

- Almost all of the responding States (46), the District of Columbia and the Virgin Islands currently charge fees for conducting criminal history record searches for noncriminal justice requesters. Mississippi and Vermont do not charge fees.
- Fees for fingerprint-supported searches range from $\$ 6$ in Arizona to up to $\$ 52$ in California. In some cases, California does not charge a fee for the search.
- Fees for name searches range from \$1 in Texas to $\$ 25$ in Alabama, Connecticut, Massachusetts and South Carolina. Nine States (California, Delaware, Georgia, Maryland, New York, Ohio, South Dakota, Tennessee and Wyoming) do not conduct names searches for noncriminal justice purposes.
-Fourteen States (California, Connecticut, Delaware, Indiana, Iowa, Michigan, Minnesota, New Hampshire, New Jersey, South Carolina, Tennessee, Virginia, Washington and Wyoming) and the Virgin Islands charge different fees for volunteer searches.

## Data Tables

## Explanatory Notes for Table 1

Percentages and numbers are results of estimates. Numbers have been rounded to the nearest 100. Percentages have been rounded to the nearest whole number. The "number of subjects (individual offenders)" in the State criminal history file for each year applies only to the criminal history file, including partially automated files and does not include release by police without charging, declinations to proceed by prosecutor, or final trial court dispositions.
... Not available.
*The flag is set:
** At both arrest and conviction.
$\dagger$ When conviction information is entered.
t† When arrest information is entered.
a For the five year period of 1994-98.
b Through 1997.
${ }^{C}$ 1992-97 felonies and misdemeanors.
${ }^{d}$ As of January 21, 2000.
${ }^{e}$ As of January 24, 2000.
${ }^{f}$ lowa law requires that all open arrests without dispositions must be expunged after four years; therefore the percent of arrests in the database with final dispositions is the same for the last five years and for the entire database.
${ }^{9}$ Response is for last four years.
${ }^{\mathrm{h}}$ Figure is for period of 1994-98 and does not include dispositions of "released without charging" or "decline to prosecute."
i Since 1993.
j At arraignment and conviction.
k Also when Department of Corrections entries are made.
${ }^{1}$ Automated files only.

## Explanatory Notes for Table 2

Except for Utah, for which corrected data was submitted, the data in the columns for 1995 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1995 (May 1997), Table 2. Except for Nebraska and Kentucky, for which corrected data were submitted, the data in the columns for 1997 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Systems, 1997 (April 1999), Table 2.

Percentages and numbers are results of estimates. Numbers have been rounded to the nearest 100. Percentages have been rounded to the nearest whole number. The "number of subjects (individual offenders)" in the State criminal history file for each year applies only to the criminal history file, including partially automated files and does not include the master name index.
... Not available.
a As of July 1, 1996.
$b$ The decrease in the total number of records is the result of a more accurate computer-generated number, as well as file maintenance, deletion of subjects over 80 years of age, and deletion of duplicate records.

C The recidivism rate for the District of Columbia is $70 \%$; therefore, as subjects with manual records are re-arrested, their files are partially automated and the manual file size decreases as the automated file size increases.
d As of January 21, 2000.
e The decrease in the total number of records is due to updating the file by the deletion of "wants," records of individuals presumed dead, records with multiple state identification numbers and incomplete records.
${ }^{\mathrm{f}}$ There is no change between 1995 and 1997 due to deleting files of deceased individuals.

9 Decrease is due to a re-evaluation of the criminal history system. The response for 1997 is based only on subjects for whom sufficient criminal history data is available to produce a rap sheet. This includes subjects for whom charge, disposition or supervision information is available. As a result of reviewing records on this basis, the number of subjects in the criminal history file has decreased from the responses of the previous years for which data were submitted.
h This number reflects a current backlog, which will be automated upon processing.
i Decrease between 1995 and 1997 is due to a major purge of manual records completed by the Office of Operations.
j Figure represents total as of July 1996.
${ }^{\mathrm{k}}$ Figure represents total as of August 7, 1996.

Table 2: Number of subjects (individual offenders) in State criminal history file, 1995, 1997 and 1999

| State | Number of subjects in manual and automated files |  | Number of subjects in manual and automated files, 1999 |  |  | Percent of automated files |  |  | Percent change in total files |  |

## Explanatory Notes for Table 3

The notes below expand on the data in Table 3. The explanatory information was provided by the respondent.

Note: Final dispositions include release by police without charging, declination to proceed by prosecutor, or final trial court disposition. Percentages and numbers reported are results of estimates. Numbers have been rounded to the nearest 100. Percentages have been rounded to the nearest whole number. Except for Connecticut, Oklahoma, Puerto Rico, South Carolina and Utah, for which corrected data were submitted, the data for 1993 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1993 (January 1995), Table 3. Except for Connecticut, for which corrected data were submitted, the data for 1995 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1995 (May 1997). Except for Connecticut, for which corrected data were submitted, the data for 1997 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of State Criminal History Information Systems, 1997 (April 1999).
... Not available.
a This figure includes 155 [200] releases by police without charging and 15,000 prosecutor declinations; final court dispositions are not reported to the repository.
b Figure represents the number received as of April 11, 1994.
c The number of dispositions reported to the repository is measured by the number of dispositions processed. In 1993, the repository was in the process of eliminating a backlog of submitted disposition reports. This backlog elimination project accounts for the significant decrease from 1993 to 1996.
d Kentucky no longer enters dispositions for the courts and prosecutors; they are entered by tape, so the repository does not have a count to include in the dispositions figure.
e The Bureau of Identification previously was unable to process incoming dispositions due to lack of personnel. In 1998, disposition reporting was given priority, and since that time, many agencies have increased disposition reporting.
${ }^{f}$ Police release and prosecutor declinations are reported on the arrest card.
g The figure represents 190,600 processed dispositions and 50,000 backlogged dispositions.
h Figure represents court dispositions. Although prosecutor declinations are reported, the number is unknown. The number of dispositions decreased from 1997 to 1999 because in 1997 the state repository was working on an NCHIP project to resolve missing dispositions. The count provided in 1997 includes the dispositions provided in this project during that year.
i Court dispositions only.
j Final charge dispositions entered in 1997.
k This was the result of a disposition backlog and an overtime project to assist in reducing the backlog.

I The decrease in dispositions is due to lack of staffing. The focus of the Nebraska criminal history repository has been on automating the arrests being received and filing the dispositions being received. This allows Nebraska to at least establish identity. The dispositions are not being automated until a request is made. Although the disposition ratio continues to decrease relative to the number of arrests being received, the dispositions are available for quick automation. Nebraska also is working on automating the dispositions from the courts, so that they may be attached electronically, allowing Nebraska to increase the disposition ratio.
m During 1997, the Las Vegas Metropolitan Police Department processed a backlog of dispositions, which were then passed on to the State repository for entry. This accounts for the larger number of dispositions received in 1997 than in 1999.
n In fiscal year 1997, in order to alleviate a backlog of current work, four additional temporary employees were hired to process delinquent dispositions; therefore, the number of dispositions in 1997 is greater than the number reported for 1999.

O In 1997, the State repository worked with the Seattle Municipal Court (King County) to obtain disposition reports by downloading the information from the court's database. The initial download was 65,000 disposition reports. As a result, the number of dispositions received during 1999 shows a decrease from the 1997 figure.

P Represents counts of 1999 arrest dispositions posted to the computerized criminal history. Previous years are counts of charge dispositions.
${ }^{q}$ During the latter part of 1998 and 1999, personnel turnover and increased civil card processing created a backlog that resulted in reduced disposition form collections.

Table 3: Number of final dispositions reported to State criminal history repository, 1993, 1995, 1997 and 1999

| State | Number of dispositions |  |  |  | Percent change |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Explanatory Notes for Table 4

The notes below expand on the data in Table 4. The information was provided by the respondent.

Note: Except for Arkansas and Puerto Rico, for which additional information has been submitted, the data in the columns for 1989 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems (March 1991), Table 4. The data for 1993 were taken from Bureau Justice Statistics, Criminal Justice Information Policy: Survey of State Criminal History Information Systems, 1993 (January 1995), Table 4. Except for South Carolina, for which corrected data were submitted, the data for 1997 were taken from Bureau Justice Statistics, Criminal Justice Information Policy: Survey of State Criminal History Information Systems, 1997 (April 1999), Table 4.

Y Yes
$\mathrm{N} \quad \mathrm{No}$
P Partial

* State is fully manual.
... Not available.
NA Not applicable.
${ }^{\text {a }}$ Only the new information is automated.
$\mathrm{b}_{\text {The new information is added to the manual file. }}$
${ }^{\mathrm{C}}$ Traffic and misdemeanor cases are not included in the master name index (MNI).
${ }^{\text {d }}$ All subjects with dates of birth 1920 or later are automated.
${ }^{\text {e }}$ Only new arrest information since July 1, 1993 is automated at this time due to lack of personnel.
${ }^{f}$ The manual file is not in the automated MNI.
$\mathrm{g}_{\text {Fingerprint-supported subjects are in an automated MNI; non- }}$ fingerprinted-supported records are completely manual.
${ }^{\mathrm{h}}$ Although the criminal history database that is utilized in Nebraska is fully automated, there are approximately 6,000 partially automated records that are in the process of being deleted.
i Only those subjects with dates of birth of 1940 or later are included in the automated MNI.
j The automated MNI contains all arrest subjects since 1972.
${ }^{\mathrm{k}}$ Subjects with dates of birth prior to 1940 are in the manual file. A conversion project is underway.

I The record is automated only upon a request for the record.
$\mathrm{m}_{\text {If }}$ a subject's prior fingerprint record was of poor quality, it would not have been automated; upon receipt of AFIS (Automated Fingerprint Identification System) quality fingerprints, the record will be automated.

${ }^{\text {a }}$ Reporting will be addressed in the developing Offender Based Tracking System (OBTS).
${ }^{\mathrm{b}}$ By statute, arrest fingerprints are submitted after the prosecutor's decision to charge with an offense punishable by over 92 days in jail. Prosecutor dispositions are reported on the arrest fingerprint card.
${ }^{\text {C }}$ This data is maintained by the State Department of Corrections and has been accessible via a link between the State criminal history repository and the Department of Corrections since 1995.

Table 5: Data required to be submitted to State criminal history repository, 1999

## Explanatory Notes for Table 6

The notes below expand on the data in Table 6. The explanatory information was provided by the respondent.

Note: Numbers and percentages reported are results of estimates. Numbers have been rounded to the nearest 100. Percentages have been rounded to the nearest whole number. The total number of arrest fingerprint cards submitted to State criminal history repositories in 1989 and in 1993 was calculated using the mid-point of the range where a range is indicated in the underlying data. Except as noted in the "Explanatory Notes for Table 6," arrest information is reported to all State criminal history repositories by arrest fingerprint cards only. Except for Louisiana, Maryland, Montana, Utah and Wisconsin, for which corrected data were submitted, the data in the columns for 1989 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of State Criminal History Information Systems (March 1991), Table 6. Except for Alabama, for which corrected data were submitted, the data in the columns for 1993 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of State Criminal History Information Systems, 1993 (January 1995), Table 6. The data in the columns for 1997 were taken from Criminal Justice Information Policy: Survey of State Criminal History Information Systems, 1997 (April 1999), Table 6.
... Not available.

NA Not applicable.
${ }^{\mathrm{a}}$ Figure is for fiscal year 1999.
${ }^{\mathrm{b}}$ Arrest information is reported by fingerprint cards, judgments and computers.
${ }^{\text {C }}$ Arrests are reported by terminal, and arrest information is entered from final dispositions that are not fingerprint-supported.
${ }^{d}$ Figure is for fiscal year 1997-98.
${ }^{\mathrm{e}}$ Arrest information is entered from final dispositions that are not fingerprint-supported.
${ }^{\mathrm{f}}$ Arrest information was reported by fingerprint cards and on uniform arrest reports that may not have included fingerprints.
${ }^{9}$ Some arrest information is entered from final dispositions that are not fingerprint-supported.
${ }^{\mathrm{h}}$ Arrests are reported by terminal; State law and/or policy does not require arrest information to be supported by fingerprints; and arrest information is entered from final dispositions and from criminal summonses that are not supported by fingerprints.
${ }^{\mathrm{i}}$ Figure is for fiscal year 1989.
${ }^{j}$ Arrest information was reported by a hard copy of the arrest report.
${ }^{\mathrm{k}}$ State law and/or policy does not require arrest information to be supported by fingerprints.
${ }^{I}$ Figure includes adult and juvenile records.
${ }^{m}$ Arrest information is reported by computers.
n The small percentage of arrests that are not supported by fingerprints are assigned State identification numbers with a "U" (unknown) prefix. This allows for easy identification of these exceptions. Unsupported arrests sometimes occur when an offender is hospitalized, or refuses, or for some other reason is unable to be fingerprinted.
${ }^{\circ}$ Arrest information was reported by fingerprint cards, terminal, final dispositions, FBI abstracts and other documents.
p Arrest information is entered from final dispositions and criminal summonses which are not fingerprint-supported; also cases handled in other ways, such as diversion agreements, are unsupported by fingerprints.
${ }^{9}$ Arrest information for older records was entered from final dispositions that were not fingerprint-supported.
${ }^{r}$ Arrest information is entered from criminal summonses that are not fingerprint-supported.
${ }^{\mathrm{S}}$ Arrest information is entered from final dispositions and criminal summonses that are not fingerprint-supported.
${ }^{\mathrm{t}}$ The increase in volume is due to live scan and fingerprints submitted for identification purposes only.
${ }^{\mathrm{u}}$ Figure includes felony and most misdemeanor arrest cards.
${ }^{\text {V }}$ Pre-1968 arrests are supported by FBI fingerprints.
${ }^{w}$ Arrest information was reported by fingerprint cards and court abstracts.
${ }^{x}$ New York law requires that fingerprints associated with sealed records must be purged.
y With few exceptions, most unsealed arrest events are supported by fingerprints.
${ }^{\mathrm{z}}$ Reported case dispositions that can be linked to a record but not an arrest event are not fingerprint-supported.
${ }^{\text {aa }}$ Arrests for "not sufficient funds" checks are entered with only an index fingerprint.
bb Figure is lower than figure for 1989 because the figure for 1993 does not include applicant cards, as did the figure for 1989.
${ }^{\text {CC }}$ Arrest information was reported on an arrest/custody form, which does not need to be accompanied by fingerprints.
${ }^{\text {dd }}$ Arrest information is entered from final dispositions and citations that are not supported by fingerprints. The State regulations requiring fingerprints also are not enforced.
ee In 1999, State law and/or policy did not require that arrest information be supported by fingerprints. Effective July 1, 2000, all felonies and most misdemeanors are required by law to be fingerprintsupported.
${ }^{\text {ff }}$ Arrest information is entered from arrest forms submitted to the Records Bureau by the Police Department. Fingerprints are taken and retained in the Forensic Bureau.

## Explanatory Notes for Table 7

The notes below expand on the data in Table 7. The explanatory information was provided by the respondent.

Note: Numbers are results of estimates. Except for Delaware, Florida, Louisiana, Pennsylvania, Puerto Rico, Utah, Vermont and Washington, for which corrected data were submitted, the data in the column for 1989 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems (March 1991), Table 7. Except for Louisiana, Pennsylvania and Texas, for which corrected data were submitted, the data in the column for 1993 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of State Criminal History Information Systems, 1993 (January 1995), Table 7. The data in the column for 1997 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of State Criminal History Information Systems, 1997 (April 1999), Table 7.
a Decision is reported by the prosecutor, not the police.
${ }^{\mathrm{b}}$ Both the fingerprinting and filing of charges are performed at the same unit.
${ }^{\text {C }}$ The law requires the total expungement of arrests that result in acquittals or dismissals. "No charges filed" are considered dismissals; therefore, no statistics are maintained.
d Police must release or charge an individual before sending fingerprints to the repository.
e Notification is accomplished by disposition forms.
${ }^{\dagger}$ Police departments report dispositions.
... Not available.
NA Not applicable.

## Explanatory Notes for Table 8

The notes below expand on the data in Table 8. The information was provided by the respondent.

Note: Percentages and numbers reported are results of estimates. Numbers have been rounded to the nearest 100. Percentages have been rounded to the nearest whole number. Except for Colorado, Delaware, Georgia, Puerto Rico, South Carolina and Utah, for which corrected were submitted, the data in the columns for 1989 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems (March 1991), Table 8. Except for South Carolina and Georgia, for which corrected data were submitted, the data in the columns for 1993 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1993 (January 1995), Table 8. The data in the columns for 1997 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1997 (April 1999), Table 8.
... Not available.

NA Not applicable.
a Based on audit sample of one jurisdiction.
b Estimate as of April 1994.
c Through current monitoring procedures, the number of delinquent prosecutor disposition cases existing on the system is 6,800 . However, it is unknown how many of these are actual decisions not to prosecute. This situation is compounded by the fact that the largest prosecutor in the State does not actively submit information on a timely basis to the repository.
d The percentage is based on the number of 1997 felony arrest charges that have a final disposition. It is not known how many of those missing final dispositions are still active cases; therefore, the percentage reflects the worst case scenario.
e The result for 1993 is based on the results of a baseline audit; previous response was an estimate.
${ }^{\mathrm{f}}$ Fifty-one percent of the 1993 arrests have dispositions.

9 Seventy-one percent of 1999 arrests have dispositions recorded.
h The decrease in dispositions resulted when a major contributor, the St. Louis Police Department, stopped reporting dispositions for the courts, and the courts subsequently did not begin reporting.
i Felony case dispositions entered in 1997.
j Currently, 45\% of 1999 arrests have final dispositions reported. When the current backlog is processed, the reporting level will increase.
k Percentage represents final dispositions for 1993 felony arrests received as of February 15, 1994.
${ }^{\text {I }}$ All actions, including prosecution actions, are reported as final dispositions to the Administrative Office of the Courts.
$m$ Figure reflects the percent of dispositions reported in 1987; more current figures were unavailable.
${ }^{\mathrm{n}}$ Dispositions of all cases are reported by the Administrative Office of the Pennsylvania Courts, with no separation between felony and other grades of offenses.
${ }^{0}$ Requirement for reporting prosecutor dispositions was relatively new.
$P$ Percentages are estimated based upon the number of arrests received at the State criminal history repository.
q Reporting is not required by law, but some dispositions are voluntarily submitted.
${ }^{r}$ Due to computer conversion and no report writing ability at this time.

Table 8: Completeness of prosecutor and court disposition reporting to State criminal history repository, 1989, 1993, 1997 and 1999

## Explanatory Notes for Table 9

The notes below expand on the data in Table 9. The information was provided by the respondent.
... Not available.
$\dagger 1$ Record is destroyed by State criminal history repository.
2 Record is retained with action noted.
3 Record is sealed.
4 No action is taken.
5 Other.
${ }^{\mathrm{a}}$ Restoration of civil rights is not tracked by the repository.
${ }^{\mathrm{b}}$ Record is destroyed only upon request of the subject.
${ }^{\text {c }}$ Although State law does not provide for destroying conviction data, the State repository does get orders issued pursuant to the inherent authority of the courts.
${ }^{d}$ In some cases, set-asides are suppressed from dissemination.
${ }^{e}$ Law provides for expungements in very limited cases.
${ }^{\dagger}$ Although State law does not provide for expungement of convictions, if expungement orders are received, the files are sealed.

Table 9: Policies/practices of State criminal history repository regarding modification of felony convictions, 1999

## Explanatory Notes for Table 10

The notes below expand on the data in Table 10. The explanatory information was provided by the respondent.

Note: The figures in the columns represent the estimated percent of fingerprint cards received from State prisons and local jails both in States where a legal requirement (State statute or regulation) exists to fingerprint incarcerated individuals and send the fingerprint to the repository and in States where the procedure is carried out voluntarily. The absence of a response indicated that the information is neither mandated by a State legal requirement nor is it voluntarily submitted. Percentages are rounded to the nearest whole number.
... Not available.
a In Connecticut, admitted prisoners are held only in State prisons.
b Information is transmitted automatically.
${ }^{\text {C }}$ Fingerprints are requested only when online data cannot be matched.
d Only to those offenders convicted of certain crimes, such as sexual and violent offenses.

Table 10: Fingerprinting of incarcerated offenders and linkage to records maintained by State criminal history repository, 1999

| State | Law requires fingerprinting of admitted prisoners and sending fingerprints to State repository |  | Percent of admitted prisoners for whom State repository receives fingerprints |  | State repository uses fingerprints to make positive identification and to link correctional data with proper records |

## Explanatory Notes for Table 11

The notes below expand on the data in Table 11. The explanatory information was provided by the respondent.

Note: The figures reported in this table are from States in which there is a legal requirement (State statute or regulation) that probation/parole information must be reported to the State criminal history repository or from States where the information is voluntarily reported. The absence of a response indicates that the State neither statutorily mandates that the information is reported nor is the information voluntarily reported. See Table 5 for States that have a legal requirement that probation/parole information must be reported to the repository. Percentages reported are the results of estimates. Percentages are rounded to the nearest whole number. Except for Arkansas, Georgia, Mississippi, North Carolina, Puerto Rico and South Carolina, for which corrected data were submitted, the data in the columns for 1989 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems (March 1991), Table 11. Except for Georgia, Indiana, Massachusetts and North Carolina, for which additional information was submitted, the data in the columns for 1993 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1993 (January 1995), Table 11. Except for Massachusetts and Washington, for which corrected data were submitted, the data in the columns for 1997 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of State Criminal History Information Systems, 1997 (April 1999), Table 11.
... Not available.
a Probation information is no longer added to the criminal history system. It is directly added to the supervised release file by local agencies. Currently 32 counties enter data into the supervised release file, and some do not enter all probation actions. Accordingly, the percentage of total probation actions cannot be determined.
${ }^{\mathrm{b}}$ The reporting of probation and parole data is being addressed in the developing Connecticut Offender Based Tracking system (OBTS).
${ }^{\text {c }}$ Response is based on the results of a baseline audit.
d Probation and parole data are maintained by the Department of Corrections (DOC). Its system is linked to the State criminal history repository by the DOC client number and the Michigan State identification (SID) number.
${ }^{e}$ The State repository receives information on admissions to, but not releases from, probation.
${ }^{f}$ The percentage was estimated due to being unable to determine all probation orders assigned in 1993.
g The percentage reflects the data reported directly to the State repository; however, there is a link to the parole and probation system maintained by the Department of Criminal Justice.
${ }^{\mathrm{h}}$ The probation and parole system is linked to the criminal history system.

Table 11: Probation and parole data in State criminal history repository, 1989, 1993, 1997 and 1999

## Explanatory Notes for Table 12

The notes below expand on the data in Table 12. The explanatory information was provided by the respondent.

Note: Numbers and percentages have been rounded to the nearest whole number. Numbers of unprocessed or partially processed fingerprint cards have been rounded to the nearest 100.
... Not available.

NA Not applicable.
a The average time for automated reporting is 4 hours. The average for manual reporting is 7 to 30 days.
$b$ The average time for entry of automated data is 1 day. The average time for manual data is 30 days.
${ }^{\text {c }}$ Arresting agencies' reporting is automated via the arraignment procedure and through the court.
d No backlog exists with respect to the processing of fingerprint cards; however, a backlog of 159,000 records exists in the resolution of pending criminal history records. The records are "pending" due to incomplete arrest data.
e Fingerprint cards average 39 days; livescan is received from 30 minutes to 24 hours.
 days.
g Booking agencies.
$h_{\text {Livescan }}$ is entered within 30 minutes; manual cards are entered within 3 days.
i The average time for Honolulu Police Department and Honolulu Sheriff's Department, from which $67 \%$ of the arrests originate, fingerprint cards is 3 to 5 days; arrest data is received from Honolulu Police Department and Honolulu Sheriff's Department in 1 to 4 days. For the remaining arrests throughout the State, the average time for receipt of fingerprint cards is 20 days; for arrest data, the average time is 7 to 14 days.
j Livescan is received the same day.
${ }^{\text {Livescan }}$ is received the same day; inked fingerprints are received between 3 and 10 days.
${ }^{\text {I }}$ Current backlog is related to AFIS and the new criminal history system.
${ }^{m}$ Automated cards are received within 1 day; manual cards are received within 10 days.
${ }^{\mathrm{n}}$ Automated data is entered within 1 day; manual data is entered within 2 days.
${ }^{0}$ Livescan data is entered immediately.
P Approximately 55 percent of the arrests in New York City are received in less than 1 day. Approximately 5 percent of the arrests throughout the rest of the State are received in less than 1 day.

9 Livescan information is received and entered within 1 day.
${ }^{r}$ Livescan is received and entered within 1 day; manual cards are entered within 150 days.
${ }^{s}$ Livescan is received and entered within 2 minutes; mail-in cards are received and entered within 2-3 days.
${ }^{\mathrm{t}}$ All current data is entered; the backlog consists of old records sent in by a single agency in a single batch.

## Explanatory Notes for Table 13

The notes below expand on the data in Table 13. The explanatory information was provided by the repositories.
... Not available.
NA Not applicable-no legal requirement mandates the reporting of the information to the State criminal history repository.
a Due to backlog.
${ }^{\mathrm{b}}$ The court disposition backlog reflects the number of delinquent court cases that are identified through ongoing delinquent monitoring programs; the repository does not receive court forms per se, for the purpose of ongoing data entry.
${ }^{c}$ All courts, with the exception of Jackson County and the St. Louis area, send disposition information to the Office of State Courts Administrator, which in turn provides the information to the State repository. It is then printed and entered into the system. A new system is currently being designed that will replace this method.
${ }^{d}$ Automated information is supplied through the State Office of Court Administration.
${ }^{\mathrm{e}}$ Town and village court dispositions are entered manually.
${ }^{f}$ All disposition information is reported to the Administrative Office of the Courts, which in turn sends tapes to the State criminal history repository.

9 Dispositions received electronically are applied within 1 day of receipt; manually reported dispositions are applied within 60 days.

Table 13: Average number of days to process disposition data submitted to State criminal history and current status of backlog, 1999

| State | Average number of days between occurrence of final felony court disposition and receipt of data | Average number of days between receipt of final felony court disposition and entry of data into criminal history database | Number of courts currently reporting by automated means | Percent of cases disposed of in State represented by courts reporting by automated means | Backlog of entering court data into criminal history database | Number of unprocessed or partially processed court disposition forms | Number of person-days needed to eliminate backlog |

## Explanatory Notes for Table 14

The notes below expand on the data in Table 14. The explanatory information was provided by the respondent.

Note: Numbers and percentages have been rounded to the nearest whole number. Numbers of unprocessed or partially processed custody-supervision reports have been rounded to the nearest 100.

* Admission information.
t Release information.
... Not available.

NA Not applicable-no legal requirement mandates the reporting of the information to the State criminal history repository.
a For current backlog of 21,900 for 1999 only.
${ }^{b}$ Figure represents $100 \%$ of only the status change actions reported by the California Youth Authority. Figure does not address Department of Corrections at this time.
${ }^{\text {C }}$ State prison system admissions are received monthly.
${ }^{\mathrm{d}}$ This information is automated.
${ }^{e}$ Livescan is received in 1 day; others are received within 5 days.
${ }^{f}$ Backlog is pre-1992 only. Since 1992, there is no backlog.
g The information is received immediately when entered online. If fingerprints are required, input time increases.
${ }^{\mathrm{h}}$ Commitments are received on the same day; correctional status reports are received within 3 days.
${ }^{i}$ Commitment cards are considered part of the felony backlog that exists.
${ }^{\mathrm{j}}$ All prison admissions are entered; backlog consists of prison release notifications.

Table 14: Average number of days to process correctional admission data submitted to State criminal history repository and current status of backlog, 1999

## Explanatory Notes for Table 15

The notes below expand on the data in Table 15. The explanatory information was provided by the respondent.

* Lists generated are used to provide notice to criminal justice agencies in order to obtain the missing dispositions.
${ }^{\mathrm{a}}$ Audits.
${ }^{\mathrm{b}}$ Training.
${ }^{c}$ Report listing arrests with no dispositions.
d Joint education effort with the State court clerks.
${ }^{\text {e }}$ Court Net.
${ }^{f}$ Electronic reporting from the court system.
${ }^{\mathrm{h}}$ Contact courts as incomplete records are discovered and adjust accordingly.
${ }^{i}$ Electronic mail, training, auditing, search of court's automated system to find missing dispositions.
${ }^{\mathrm{j}}$ Fax.
${ }^{\mathrm{k}}$ Quarterly newsletters, training sessions and seminars.
${ }^{\mathrm{I}}$ AFIS seminars.
${ }^{m}$ Conferences and workshops.
${ }^{\mathrm{n}}$ Computer access to court database.
${ }^{0}$ Lists are used to research and locate missing record or to notify courts of missing records.
g Newsletter and training seminars.

Table 15: Procedures employed by State criminal history repository to encourage complete arrest and disposition reporting, 1999

## Explanatory Notes for Table 16

The notes below expand on the data in Table 16. The explanatory information was provided by the respondent.

Note: State repositories were asked to list all methods that may be utilized to link disposition information. Matching of several items of information may be used to confirm that the appropriate link is being made. Also, if information of one type is missing, repositories may look to other types of information contained on the disposition report.

* Method(s) utilized by the State repository for linking disposition information and arrest/charge information also permit the linking of dispositions to particular charges and/or specific counts.
a Arrest agency and booking number.
b Criminal Justice Information System (CJIS) case number.
c Originating agency number (ORI), Florida Department of Law
Enforcement or FBI number, sex, race, date of birth.
e Probation control file (PCF) number.
${ }^{f}$ The record reflects an authorized criminal case providing whatever charges are filed for the case by the arresting agency, prosecutor and court.

9 Date of birth and reporting agency's ORI number.
${ }^{\mathrm{h}}$ State Identification (SID) number.
${ }^{\mathrm{i}}$ ORI number.
${ }^{\mathrm{j}}$ Not in all cases.
${ }^{\mathrm{k}}$ Warrant number arrest event identifier.
${ }^{\mathrm{I}}$ Thumbprints.
${ }^{m}$ Arrest offenses and process control number.
${ }^{d}$ Submission of fingerprints.

| State | Unique tracking number for individual subjects | Unique arrest event identifier | Unique charge identifier | Arrest date | Subject name | Name and reporting agency case number | Other |

## Explanatory Notes for Table 17

The notes below expand on the data in Table 17. The explanatory information was provided by the respondent.

Note: Numbers and percentages reported are results of estimates. Numbers have been rounded to the nearest 100. Percentages have been rounded to the nearest whole number.
... Not available.

* All data received can be linked.
${ }^{\text {a }}$ Court information is held in an automated format and periodically rerun for linkage to arrest.
${ }^{\mathrm{b}}$ The arrest segment also is created from correctional fingerprint data.
${ }^{\text {C }}$ Court data only is entered into a suspense file and is applied to the computerized criminal history system upon receipt of arrest.
${ }^{\mathrm{d}}$ The court disposition is placed in a pending file and does not show on the record.
${ }^{\mathrm{e}}$ If fingerprints are submitted, an entry is created that includes arrest information and disposition.
${ }^{\mathrm{f}}$ Information is returned to the contributor.
g A database of court information is maintained.
${ }^{\mathrm{h}}$ Unlinked court dispositions are not recorded on a criminal history record until fingerprints are processed; $45 \%$ of the unlinked dispositions were linked later through fingerprint processing.
${ }^{\mathrm{i}}$ Agencies can query a file of court data that is not linked to an arrest.
$\mathrm{j}_{\text {If supported by fingerprints. }}$
${ }^{\mathrm{k}}$ If no identification record exists.
${ }^{I}$ Information is entered into a non-fingerprint supported database.
${ }^{m}$ One last attempt is made to link the information by using the prison fingerprints in lieu of the arrest fingerprints.
${ }^{\mathrm{n}}$ Contact arresting agency to obtain fingerprint card with charges.
${ }^{0}$ Manually attempt to link court information; method is successful in about $10 \%$ of the cases.

P Department of Corrections admissions are $100 \%$ fingerprint-based.
9 Stored in a temporary database, manually researched, then posted to the system if possible.
${ }^{r}$ Court disposition contains a fingerprint.
s Fingerprint-based reporting only.

| State |  |  | Enter information without linkage to arrest/charge data |  | Enter no information without linkage |  |  | Estimated dispositions received which cannot be linked to arrest/charge information |  |  |  |

## Explanatory Notes for Table 18

The notes below expand on the data in Table 18. The explanatory information was provided by the respondent.
${ }^{\mathrm{a}}$ Specified data elements are 100 percent verified.
b Synchronize with FBI tapes, biennial audit of random sample records.
${ }^{\text {c }}$ State audit review program comparing arrest and court documents to state repository record.
${ }^{d}$ Yearly audits.
${ }^{\mathrm{e}}$ Local audits.
${ }^{\mathrm{f}}$ Many calls are made to the courts and arresting agencies to clear up inconsistencies and/or secure missing information.
$\qquad$
${ }^{9}$ Source agency is contacted by telephone for critical data missing or incomplete data.
${ }^{\mathrm{h}}$ Key data elements are verified.
${ }^{\text {i }}$ Synchronize with FBI tape.
${ }^{\mathrm{j}}$ All data entry is dual-entered.
${ }^{\mathrm{k}}$ Manual double-checking after data entry.
${ }^{I}$ Periodic audits by the Attorney General.

Table 18: Strategies employed by State criminal history repository to ensure accuracy of data in criminal history database, 1999

## Explanatory Notes for Table 19

The notes below expand on the data in Table 19. The explanatory information was provided by the respondent.

Note: Except for Wisconsin for which corrected data were submitted, the data in the columns for 1989 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems (March 1991), Table 18. Except for Wisconsin, for which corrected were submitted, the data in the columns for 1993 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems, 1993 (January 1995), Table 19. Except for Missouri, for which corrected data were submitted, the data in the columns for 1997 were taken from Bureau of Justice Statistics, Criminal Justice Information Policy: Survey of Criminal History Information Systems. 1997 (April 1999), Table 19.
... Not available.
${ }^{a}$ All inquiries are logged; updates are limited to the last transaction.
b Random sample audits were scheduled to begin in February 1994, resources permitting.
c The reviews for accuracy and completeness are self-administered. For example, the database review is part of the repository evaluation procedure.
d The expungement process was audited for 1990-92.
${ }^{\mathrm{e}}$ Expected completion date.
f Since June 30, 1992, the Georgia Crime Information Center (GCIC) auditors have had to reduce the scope of their audits to satisfy National Crime Information Center (NCIC) audit frequency requirements.
g The program is in the testing stage.
$h_{\text {Record transaction log only. }}$
${ }^{\text {i }}$ All court records are compared with arrest information, and any inconsistencies are resolved before entry on the rap sheet. If problems occur frequently with a particular department, a visit to provide training is recommended.
j A formal audit was not conducted; an agency was provided assistance on improving its procedures.
k In-house audits only.
${ }^{I}$ The State criminal history repository is currently working with the State courts on a disposition clean-up project that entails the courts' reviewing the repository database and obtaining missing dispositions. Meetings are conducted with all reporting agencies within a county, in conjunction with the State repository, to review agency responsibilities and data quality issues identified in the reviews by the courts.
m The audit program is under development.
n Very limited.
${ }^{\circ}$ Law enforcement agencies that have terminals are audited every 18 months.

P A one-time audit also was conducted for the years 1935-99.
9 Logs are maintained for inquiries and responses only.
${ }^{r}$ Field staff work with agencies on data quality.

| State | Transaction logs maintained to provide audit trail of inquiries, responses, record updates, modifications |  |  |  | Random sample audits of user agencies conducted to ensure data quality and compliance with laws |  |  |  | Date of last audit | Period of time covered by audit |

## Explanatory Notes for Table 20

The notes below expand on the data in Table 20. The explanatory information was provided by the respondent.
... Not available.

* 1 Audit/audit functions/procedures

2 Automation conversion/redesign enhancements
3 Disposition/arrest reporting procedures/enhancements
$4 \quad$ Felony flagging
5 Fingerprint card/system conversion/enhancements
6 Inter-agency/local agency interface
7 Legislation
8 Plan/strategy development
9 Task force/advisory group establishment
10 Tracking number implementation/improvements
11 Training seminars/policy and procedures manuals
12 Other
${ }^{\text {a }}$ Data standardization projects.
b The last complete audit of the State repository's criminal history record information system was conducted in August 1992 by another agency. Although no subsequent audit has been done, the repository continues to incorporate many of the audit recommendations.
${ }^{\mathrm{c}}$ There are no immediate plans for data quality audits of the State repository's records within the next three years. The State has experienced severe budgetary cutbacks that resulted in reductions in the data processing resources available in the Hawaii Criminal Justice Data Center. The data quality audit program undertaken in 1994-95 will no longer be retained.
d Missing disposition research.
${ }^{e}$ The level of completeness is monitored by the annual system reports.
${ }^{\text {f }}$ A new criminal history record system was developed and deployed in December 1999.
${ }^{9}$ Standard practices and interagency legislative initiatives.
${ }^{\mathrm{h}}$ Continuation of task force/advisory group.
${ }^{i}$ Felony flagging.
j Findings of the audit are pending publication.

## Explanatory Notes for Table 23

The notes below expand on the data in Table 23. The explanatory information was provided by the respondent.

NA Not applicable.
${ }^{a}$ No fees are charged if the request is from a governmental, noncriminal justice agency.
b The same fee schedule applies for volunteers, except volunteers for non-profit agencies that work with children are exempt from paying fees. In addition, there is a Public Access Authority facility available to the general public at the State criminal history repository, the main County Police Stations, and the Hilo District Court, through which conviction information may be viewed free of charge, or for a fee of $\$ 10$ if a hard-copy printout is provided.
${ }^{\text {C }}$ The fee for a livescan search is $\$ 12$; the fee for a cardscan fingerprint search is $\$ 14$.
d The fee for an automated name search is $\$ 7$; a mail-in name search is $\$ 12$.
e State law mandates that no fee may be charged for checks of school volunteers.
${ }^{f}$ If the results are returned by Internet, the fee is $\$ 10$; if by mail, the fee is $\$ 13$; if the results are returned by facsimile, the fee is $\$ 15$.

9 Non-profit agencies.
${ }^{h}$ Proposed change to Administrative Code.
${ }^{\text {i }}$ Current New York State law does not provide for fingerprint checks of volunteers.
${ }^{\mathrm{j}}$ There is no fee for non-profit organizations that have a mentor or tutoring program for either fingerprint-supported search or name search.
${ }^{k}$ The fee for a non-profit agency is $\$ 2$; for government agencies, $\$ 5$; and for all others, $\$ 13$.

## Methodology

This report is based upon the results from a two-part survey conducted of the administrators of the State criminal history record repositories in January - September 1999. A total of 53 jurisdictions were surveyed, including the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, and the U.S. Virgin Islands. Responses for at least one part of the survey were received from 53 jurisdictions. Puerto Rico did not submit a survey response to either part.

The survey instruments consisted of 43 questions, having several parts. The survey was designed to collect comprehensive data relating to State criminal history information systems. Fifteen topical areas are covered in this report, as follows:

- current quality and quantity of records in the criminal history databases;
- level of automation of master name indexes and criminal history records maintained by the State repositories;
- capacity of criminal history system to flag convicted felons in the database;
- level of fingerprint-supported arrest reporting to the State repositories and the processing and timeliness of the information that is entered into criminal history record databases;
- notice to the State repository of persons released without charging following submission of fingerprints to the State repository;
- level of prosecutor-reported information in criminal history databases;
- level and timeliness of disposition reporting by the courts to the State criminal history repositories;
- types and timeliness of information reported to the State criminal history repositories by State and local correctional facilities;
- level of probation/parole-related information in State criminal history databases;
- extent to which the records in State criminal history databases contain final disposition information;
- policies and practices of the State repository regarding modification of felony convictions;
- ability of the State repositories to link reported disposition data to arrest data in State criminal history record databases;
- level of audit activity in the States and the strategies employed the State repositories to ensure accuracy of the data in the criminal history record databases; and
- participation of the States in III and NFF; and
- fees charged by State criminal history repositories for conducting record searches for noncriminal justice requesters.

The Federal Bureau of Investigation also provided the source of information in two areas. The information includes the number of criminal history records of the States participating in the Interstate Identification Index (III) system that are maintained by the State criminal history repositories and the number of III records maintained by the FBI for the States. The number of III records containing dispositions also is taken from FBI data.

Following the receipt of the responses, all data were tabulated. Survey respondents were requested to respond to particular questions relating to the current data compared to data from earlier surveys. Respondents also were permitted a final review of the data after it was placed in the tables that appear in this report.

Numbers and percentages shown in the tables were rounded. In most cases, numbers were rounded to the nearest 100. Percentages were rounded to the nearest whole number.

In the analyses of the tables, averages and totals were calculated using the mid-point of the range where ranges appear in the underlying data. In instances where the result is .5 , when it followed an even number, the number was rounded down to the even number (e.g., 4.5 became 4 ); in instances where the .5 followed an odd number, the number was rounded up to the next even number (e.g., 1.5 became 2 ).

Data reported for 1989 was taken from Bureau of Justice Statistics, Survey of Criminal History
Information Systems (March 1991).
Data reported for 1993 was taken from Bureau of Justice Statistics, Survey of State Criminal History Information Systems, 1993 (January 1995). Data reported for 1995 was taken from Bureau of Justice
Statistics, Survey of Criminal
State History Information Systems, 1997
(April 1999).
