PART R - ACTUAL CROP PRODUCTION

Using these tables, calculate the total production and average yield per acre for each crop produced during the business cycle or year. Your total production and average yield per acre for each crop should then be transferred to pages 10 and 11 of your Five Year Inventory and Production Record (FSA-432-2). This information may be used in establishing and calculating your 5 year average production for each crop being grown.

Formula for Plant Population

$$\frac{43,560 \text{ sq. ft./Acre}}{\text{Row Width ft.} \times \text{Row Length ft.}} \times \text{No. of Plants} = \text{No. of Plants/Acre}$$

Example: 30 inch rows (2.5 feet), 15 plants in 10 feet of Row Length.

$$\frac{43,560 \text{ sq. ft./Acre}}{2.5 \text{ ft.} \times 10 \text{ ft.}} \times 15 \text{ Plants} = 26,136 \text{ Plants/Acre}$$

Several spots should be checked to increase accuracy.
