Subject: Spyware Workshop - Comment, P044509

Spyware is definitely a problem, however, let the industry deal with the matter. Due to the ever-changing nature of computers and software development, no law will be able to differentiate between malicious spyware and other programs. It will complicate software development as developers need to make sure their non-spyware software cannot be construed as software.

No new legislation is needed. It will simply add more bureaucracy (a Department of Installer Programs?) and complicate matters for software developers.
