

State Injury Profile for Arizona

The CDC State Injury Profiles

Gathering and sharing reliable data about the broad range of public health problems is among the many ways the Centers for Disease Control and Prevention protect the safety and health of Americans.

Policy makers and health care workers need access to the best, most current data available so they can make informed decisions about where to allocate limited resources to prevent diseases and injuries. Yet, many people find statistics difficult to understand and interpret. This State Injury Profile offers an easier way to look at statistics. Through maps and graphs, the Profile clearly shows how this state compares with others in the nation and what injury problems are most pressing.

CDC's National Center for Injury Prevention and Control gathers data about a broad range of intentional and unintentional injuries or what many people call 'violence' and 'accidents.' Injuries affect everyone. Injury is the leading cause of death for all Americans ages one to 34, and injury remains one of the leading causes of death, no matter how long someone may live.

Maps and graphs in this State Injury Profile show this state's death rates from in falls, poisoning, drowning, suffocation, fires and burns, suicide, homicide, traumatic brain injury and injuries related to firearms. The graphics show how this state compares with others and with mortality rates in the United States as a whole. You will also find a table showing the Ten Leading Causes of Death for the United States and for this state. **New this year** is a county-by-county map showing locations with higher death rates for each type of injury.

In addition to injury data, you'll also find a list of all CDC-funded injury prevention and research programs in this state for 2001.

CDC-Funded Injury Control Projects

SAFER·HEALTHIER·PEOPLE™

CDC-Funded Injury Control Projects in ARIZONA

CDC's National Center for Injury Prevention and Control (NCIPC) funds six projects in Arizona to build the state's ability to keep its citizens safe. The Arizona Department of Health Services manages three of the agreements.

Core Injury Programs

State-Based Core Injury Surveillance and Program Development

Arizona is one of 23 states receiving CDC funding to establish a point of coordination for injury control efforts, assess injury data and surveillance resources within the state, and develop a state injury control plan. A core injury development program is a cooperative effort to develop or strengthen the capacity of state public health agencies to prevent and control injuries. These programs possess some combination of these features and tools:

- 1) injury prevention coordinator;
 - 2) up-to-date profile of injuries within the state from existing data sources;
 - 3) advisory structure to facilitate collaboration with public and private sector groups;
 - 4) relationships with organizations, agencies, and individuals interested or experienced in injury prevention or control; and
 - 5) a current plan for injury prevention and control based on the state's priorities
- (Arizona Department of Health Services)

Acute Care and Rehabilitation

Traumatic Brain Injury Surveillance

This program characterizes the risk factors, incidence, external causes, severity, and short-term outcomes of traumatic brain injury (TBI) through population-based surveillance of the condition. These data will be used to develop prevention programs that address both the specific causes of TBI and the populations at greatest risk. Data may also apply to improve access to health care and other services needed after injury. (Arizona Department of Health Services)

Unintentional Injury

Multifaceted Teen and Young Adult Bicycle Safety

Activities in three school-based programs are being identified and coordinated to lead to a comprehensive, behavioral theory-based intervention program. (Arizona Department of Health Services)

Low-Cost Remote Testing for Smoke Detectors

A project to develop and test low-cost smoke detectors for persons with disabilities, older adults, persons with balance disorders, and others who cannot safely reach smoke ceiling or near ceiling smoke detectors. Two popular smoke detector designs will be modified by

adding circuitry that allows users to operate the “test” and “hush” functions with hand-held remote-control devices. Researchers will explore several options for the remote-control device and will study manufacturing and pricing implications. (*Vortant Technologies, Sedona*)

Intentional Injury

Culturally Competent Demonstration Project for Early Intervention and Prevention of Intimate Partner Violence and Sexual Violence Among Racial and Ethnic Minorities

Arizona is among 10 states selected to address the problems of intimate partner and sexual violence and encourage healthy relationships among minority youth and parents. The project aims to implement culturally-sensitive programs to promote positive youth development. Teen leaders will teach younger children, and a parent curriculum will promote violence prevention. (*University of Arizona*)

Rape Prevention and Education

A nationwide grant program providing resources to states for rape prevention and education programs conducted by rape crisis centers, State sexual assault coalitions, and other public and private nonprofit entities for:

- 1) educational seminars;
- 2) operation of hotlines;
- 3) training programs for professionals;
- 4) preparation of informational material;
- 5) education and training programs for students and campus personnel designed to reduce the incidence of sexual assault at colleges and universities;
- 6) education and training to increase awareness about drugs to facilitate rapes or sexual assaults; and
- 7) other efforts to increase awareness about, or to help prevent, sexual assault, including efforts to increase awareness in underserved communities and awareness among individuals with disabilities.

(*Arizona Health Department*)
