Subject: Spyware Workshop - Comment

Well its SPY-WARE. We buy the PC. We buy the internet. We have a right to our privacy. Just like we have the right to use the bathroom without people watching. We have the right to use OUR computer without other people monitoring it and "watching" us do what we do. It is completely unfair. We pay a lot of money to get from the computer to the internet. And so we are entitled to do what we want in private and not have things getting in the way of that or causing us problems. Like the spyware and ad-aware that interferes with our computer's performance. Its not fair at all. Everyone has a right to do their own thing without being disrupted or being watched in anyway. Sure they can make agreements about knowing that it contains spyware and ad-aware. But they STILL should not be able to do that. Its not fair to us at all. Because even though they say with their program no spyware or ad-aware is contained if you choose not to. There still is. Please put a stop to this. Its not right in any sense. My home,My privacy,My computer... I want justice. Thank you for hearing me.

Sincerely the voice of,  
Logan, and many others I am sure
