Subject: Please Tread Carefully!

Dear Sir, Ma'am,

I am an average user. I can see adware and spyware not only follows and spies, but actually takes up space on a victim (users) computer, to do work for the spyware or adware company.

I predict what you will do is create a law to restrict adware and spyware use- but that only applies to those who are at all interested in conforming with the law you create. If the spirit of the law were any matter at all, there would not be this problem.

I am saying you will likely make (another) law that restricts those who do not need restricting, in an attempt to stop those who care nothing about the law anyway.

Also, Please Tread Carefully when restricting or legislating the software a person can put on their own computer to see who is using the owners computer (with internet access) to create legal cases, to use the unwitting computer owner, to do all dastardly things.

I wish to say more, but any more I say takes away from this note.

Until you have a League of Geeks (if you will) to help you create Law, please leave it alone. You Must Not let One or Three Experts dictate your direction. All too often the One Two or Three Experts will not be seeing the whole picture.

The Internet is in Very Bad Shape. See Next email for instructions on how to find this out for your own self, even if you are a legislator, and not a computer-sleuth, geek, or the bad kind or user. Very Simple Means Exist for gauging the "Current Condition Of the Internet!!" ((hint, buy computer, hook to internet, type "the" in google, and see how long it takes to crash the computer due to illegal type adaware and spyware and Trojans and Worms and so on.

Please take care!
