Subject: Spyware Workshop - Comment, P044509

I have just spent the better part of three days trying to remove Cool Web Search and IGnet from a computer. The end result - removed (finally) but now my internet connection won't work. Spyware/adware is a huge problem. Any spy/adware that is really a trojan that takes advantage of security flaws in a system (as cool web search does from what I have read) should be treated as a malicious virus/worm/trojan no different than Sasser or loveletter or melissa and should be illegal! I fully believe the propagators of CW Search should be prosecuted to the fullest extent of the law!!!
