Spyware is an outright invasion of our privacy! If a person were to come into my home and threaten my property and me, I have the right to protect myself by lethal force. This insidious spyware campaign kills computers slowly but surely. I have the ability to remove it. However, my folks and in laws are not that computer literate. This causes me to spend the vast amount of my time just playing tech support! Something must be done to eliminate this breaking and entering of our personal property.

Please make it STOP!
