Conversation: personal comment about spyware and ad ware

Subject: personal comment about spyware and ad ware

You have allowed us privacy with our telephones and personal mail why not our computers ?
Especially when they are being destroyed?

As a disabled owner of a computer âi “ online is a huge source of company for me âi “ helping people with problems, helps me deal with mine.

WHY would you allow someone I do not know and do not want information from to steal information from me âi “ and cause the non function of my computer and the expense of having it repaired because of the ad ware and spyware being inserted into my operating system?

For some handicap people the computer is their only way to communicate with others in the outside world, and it should be criminal to mess up other peoples computers.

Thank you I hope I have expressed myself so you understand. MY and many others computers are not toys they are serious ways to keep in touch with other humans.

Thank you,

Judi Mitchell
