To whom it may concern,

I would like to tell you my thoughts on spyware. I own a computer, something I worked hard to pay for and I take very good care of. I am sick and tierd of spyware and adware programs being secretly installed on it. This is MY property that I paid for. If I want something installed on it that should be my choice. I think spyware is an invasion of privacy. From what I understand spyware reports back to the company what kind of sites i visit and what things I am interested in for the ultimate purpose of trying to sell me something. If I want to buy something, I will look for it on the net or I will go to the store and purchase it. I think something should be done and people that are having problems with thier computers because of spyware should all get together and SUE these companies. I also think spyware is a big reason people get so aggrivated with computers and the internet. I have talked to serveral people that get lot's of pop-ups and they have damaged their comptuers, so now these people are terrified of surfing the net. I am sick of this and want something done about it.

Thank you,

Amber Spry
