*Mon 5/17/2004*

*Morning.*

*Spyware and Adware need to be restricted. We, who are the victims, should not be subjected to unwanted junk on our computers. Legislation should be passed that prevents advertisers, or anyone else, from installing ANYTHING on our computers without our permission. There should be full disclosure when these programs are included "piggy-back" with other software.*

*Just fix the problem for us little people. We know there's a lot of bucks being spent padding politicians pockets, but maybe the little people will finally get together and vote out the bad/greedy politicians and vote in someone with a decent set of moral and ethical standards, who have our interests at heart.*

*That's my joke for the day.*
