You probable think that Spy ware, Junk mail are just a slight inconvenience and feel there is no real harm. The fact is just the opposite, there is so much disruption freeze-ups even while operating your programs. I would like you to think how much many jobs would be lost and income lost, if even half the people would shut down their computers and discontinue their internet service providers. I think back to the days of the CB radios, they were in almost every car and looked to be here forever. Then came the nuisances of people abusing system and causing systems to be overloaded with junk talk. How many people now have CB'S and I feel junk mail and spy ware are sending computers down the same road. Please stop this invasion and remember that,

 I'm entitled to my right's, which are being abused.
