**Notice of Specific List for Categorization  
of Laboratory Test Systems, Assays, and  
Examinations by Complexity; Notice**

**DEPARTMENT OF HEALTH AND HUMAN SERVICES****Centers for Disease Control and Prevention****Notice of Specific List for Categorization of Laboratory Test Systems, Assays, and Examinations by Complexity**

**AGENCY:** Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

**ACTION:** Notice with comment period.

**SUMMARY:** Regulations at 42 CFR 493.15 and 493.17, implementing the Clinical Laboratory Improvement Amendments of 1988 (CLIA), Pub. L. 100-578 (codified at 42 U.S.C. 263a), require that the Secretary provide for the categorization of specific laboratory test systems, assays, and examinations by level of complexity. The criteria for such categorizations also are set forth in those regulations.

This Notice announces the addition of approximately 5,700 test systems, assays, and examinations that have been categorized with categorization notification to manufacturers between January 1, 1997 and September 3, 1999. These categorizations were effective on the issue date of the notification letter sent to the manufacturer. CDC invites comments on the tests initially categorized in this Notice and reserves the right to reevaluate and recategorize tests based on the comments received in response to this Notice.

CDC, The Food and Drug Administration (FDA) and the Health Care Financing Administration have agreed to the transfer of the test categorization responsibility to the FDA, and the transfer is in process. When the transfer is completed, manufacturers will be able to submit premarket applications for products and requests for complexity categorization of these products under CLIA to one agency. FDA is expected to assume test categorization responsibilities on or about January 31, 2000. Until FDA assumes responsibility for test categorization, CDC will continue to perform complexity determinations and categorization requests should be sent to the CDC.

**DATES:** Effective date: All categorizations in this Notice were effective on the date of the test categorization notification letter sent to the manufacturer. Written comments on the tests initially categorized in this Notice will be considered if they are received at the address indicated below, by no later than 5 p.m. on October 25,

1999. CDC reserves the right to reevaluate and recategorize tests based on the comments received in response to this Notice.

**ADDRESSES:** Comments on the categorization of tests in this Notice should be addressed to **CLIA Federal Register Notice**, Centers for Disease Control and Prevention, Public Health Practice Program Office, Mail Stop F-11, 4770 Buford Highway, NE, Atlanta, Georgia 30341-3724.

Requests for test complexity categorization should be submitted to: Attention: Test Categorization/CLIA, Centers for Disease Control and Prevention, Public Health Practice Program Office, Mail Stop F-11, 4770 Buford Highway, NE, Atlanta, Georgia 30341-3724.

Requests for waiver status should be submitted to: Attention: Request for Waiver Status/CLIA, Centers for Disease Control and Prevention, Public Health Practice Program Office, Mail Stop F-11, 4770 Buford Highway, NE, Atlanta, GA 30341-3724.

Due to staffing and resource limitations, we cannot accept facsimile (FAX) copies of comments. Nor can we accept comments by telephone.

**FOR FURTHER INFORMATION CONTACT:** Sharon Granade, (770) 488-8155.

**SUPPLEMENTARY INFORMATION:** All requests for test categorization should be submitted to CDC. Manufacturers are requested to submit the package insert and/or an Operator's Manual along with the 510(k) or Pre-Market Approval (PMA) number for the product, if applicable, to CDC when requesting categorization. Although some products may now be exempt from FDA's 510(k) review process, they continue to need evaluation for complexity categorization under CLIA. For products undergoing the 510(k) or PMA review process, CDC will not be able to issue the test categorization until the FDA has completed its review process and has notified CDC of the clearance date. Test categorizations are effective as of the date of notification by CDC to the applicant. Updates and revisions to the CLIA test categorization list are periodically published in the **Federal Register** with an opportunity for public comment. CDC also maintains an electronic list of categorized tests which is available via the Internet (<http://www.phppo.cdc.gov/DLS/clia/testcat.asp>).

**Effect of Waiver on Tests Already in Use**

For test systems in use prior to waiver approval, any modifications to the device or instructions that were

required for waiver approval must be incorporated into those existing test systems for use of such test systems to be considered waived. (Pending such modifications, the particular test system already in use by a laboratory will retain its prior test categorization.)

**Waived Tests Marketed Under Alternate Product Names**

Frequently, products which have been granted waived status are later repackaged and marketed under alternate product names. In these cases, it is the responsibility of the manufacturer to notify CDC and to send the package insert demonstrating the new labeling along with all sets of instructions that apply (e.g., if separate instructions for home use and for professional use exist, send a copy of both sets of instructions). Even though a test may be waived under one product name, it is not considered waived under an alternate name until it is reviewed by CDC and the manufacturer is notified of the waived status.

**Comments and Responses**

On April 11, 1997, a test list of approximately 1,300 additional test systems, assays, and examinations categorized by level of complexity was published in the **Federal Register** (62 FR 17832) with a 30 day comment period. CDC received no comment letters in regard to this Notice.

**Analyte Clarification**

A new analyte name, "D-Dimer" (Analyte code 1320), was created for the measurement of this specific fibrin degradation product. Test systems measuring D-Dimer, but previously categorized under the broader analyte name (1904) Fibrin(ogen) Split/Degradation Products (FSP/FDP), are now listed under the new analyte name. The analyte name Fibrin(ogen) Split/Degradation Products (FSP/FDP) will continue to be used for measurements not specific to a particular degradation product.

The analyte (5828) Streptococcus, group A (from throat only) was deleted and the test systems categorized for this analyte are now listed under the analyte (5810) Streptococcus, group A. The test system qualifier "Direct Antigen/Visual", associated with this analyte, was replaced with "Direct from throat swab."

For consistency with the listing of other autoantibodies, the analyte (6135) Thyroid Peroxidase Autoantibodies (TPO) was replaced with (0527) Anti-Thyroid Peroxidase (TPO) Antibodies.

The analyte (0708) "Blood gases with pH" was modified to accommodate the

technological advances that allow direct measurement of analytes that previously were calculated. The analyte code (0708) now refers to the analyte name "Blood gases" and the analytes for pH, pCO<sub>2</sub>, and pO<sub>2</sub> were assigned individual analyte codes: (4982) pH, (4983) pCO<sub>2</sub>, (4984) pO<sub>2</sub>. To avoid confusion, the analyte (0731) All Body Fluids (other than blood) pH was deleted, and the test system (04542) All Qualitative Dipstick Color Comparison pH Testing, categorized under the deleted analyte, was reassigned to the new analyte (4982) pH.

For clarity and consistency and to reflect current nomenclature, the following analyte names and codes were changed:

From (0735) B1 positive Lymphocytes to (3758) Lymphocytes, CD20;  
From (0736) B4 positive Lymphocytes to (3759) Lymphocytes, CD19;  
From (1111) CD3(IgG1)positive Lymphocytes, (1110) CD3 positive Lymphocytes, and (6149) T3 positive Lymphocytes to (3760) Lymphocytes, CD3;  
From (1116) CD4 positive Lymphocytes and (6150) T4 positive Lymphocytes to (3761) Lymphocytes, CD4;  
From (4033) MY4 positive Lymphocytes to (4040) Monocytes, CD14(MY4);  
From (4034) Mo2 positive Lymphocytes to (4041) Monocytes, CD14(Mo2);  
From (6145 and 6157) T1 positive Lymphocytes (duplication of codes) to (3762) Lymphocytes, CD5;  
From (6146) T11 positive Lymphocytes to (3763) Lymphocytes, CD2;  
From (6152) T8 positive Lymphocytes and (1118) CD8 positive Lymphocytes to (3764) Lymphocytes, CD8;  
From (1112) CD3(IgG1)/B4 positive Lymphocytes to (3765) Lymphocytes, CD3/CD19;

From (1113) CD3(IgG1)/T4 positive Lymphocytes and (1117) CD4/CD3 positive Lymphocytes to (3766) Lymphocytes, CD3/CD4;  
From (1114) CD3(IgG1)/T8 positive Lymphocytes and (1119) CD8/CD3 positive Lymphocytes to (3767) Lymphocytes, CD3/CD8;  
From (1120) CD3/CD19/CD45 positive Lymphocytes to (3768) Lymphocytes, CD3/CD19/CD45;  
From (1121) CD3/CD4/CD45 positive Lymphocytes to (3769) Lymphocytes, CD3/CD4/CD45;  
From (1115) CD3/HLA-DR positive Lymphocytes to (3770) Lymphocytes, CD3/HLA-DR;  
From (1122) CD3/T4/T8 positive Lymphocytes to (3771) Lymphocytes, CD3/CD4/CD8;  
From (6147) T11/B1 positive Lymphocytes to (3772) Lymphocytes, CD2/CD20;

From (6148) T11/B4 positive Lymphocytes to (3773) Lymphocytes, CD2/CD19;  
From (6151) T4/T8 positive Lymphocytes to (3774) Lymphocytes, CD4/CD8.

#### **Manufacturer Listing**

For data entry reasons, the manufacturer Reference Diagnostics, Inc. is now denoted in the Test Categorization list as RDI and the manufacturer International Technidyne Corp. is denoted as ITC.

#### **Correction**

Due to a data entry error, an incorrect categorization for the analyte (6404) Uric Acid on the test system (04036) Abbott Bichromatic ABA 200 was published as moderate complexity in the April 11, 1997 **Federal Register** (62 FR 17832). The correct categorization for Uric Acid on this instrument is high complexity.

Dated: September 16, 1999.

**Joseph R. Carter,**

*Associate Director for Management and Operations, Centers for Disease Control and Prevention.*

#### **List of Previously Unpublished Categorizations**

The test categorization scoring scheme was based on an assessment of the complexity of the operation of the test procedure and not on an evaluation of data documenting the procedure's performance over time. Therefore, the categorization of a test system, assay, or examination as moderate or high complexity should not be interpreted as an indication of the acceptability or unacceptability of the accuracy, precision, or overall performance of the procedure.
