

Dear ENERGY STAR Partner, Power Supply Manufacturer, or Other Interested Party:

As you may know, many organizations around the world are interested in encouraging the manufacture, use, and purchase of energy-efficient power supplies. Attached is a letter from the US Environmental Protection Agency (EPA), co-signed by other international organizations, indicating strong international support for one efficiency test procedure for single voltage external AC/DC power supplies. EPA and its international counterparts strongly encourage manufacturers and other industry representatives to comment on the latest draft of the test procedure, which addresses both active and standby mode efficiencies, by **Friday, January 16, 2004**. An English version of the test procedure and sample test report are attached for your review. A Chinese version will be made available shortly at www.energystar.gov/productdevelopment and www.efficientpowersupplies.org. Additional details follow in the attached letter.

Thank you and please feel free to contact me with any questions. Happy Holidays!

Best regards,

Andrew Fanara
