INTRODUCTION

Public Law 93-400 requires the Administrator for Federal Procurement Policy, OMB, to establish a system for collecting, developing, and disseminating procurement data which takes into account the needs of the Congress, the executive branch, and the private sector. The Department of Defense was designated as the executive agent of the Office of Federal Procurement Policy to establish and operate the Federal Procurement Data System (FPDS) including a Federal Procurement Data Center. In April 1980, this responsibility was transferred to the General Services Administration.

This Manual has been developed in conjunction with the FPDS Reporting Manual for those who are responsible for preparing, coding, editing, or machine processing FPDS Individual Contract Action Report (SF-279). Only one code number shall be reported. If more than one is applicable, report the code which describes the predominant product or service procured. Category codes, denoted by parentheses will not be used for data entry. Asterisks are not for data entry; use appropriate code indicated.

Section I provides the product and service codes that will be used in the FPDS. The Section is divided into three parts. Part A contains a list of codes for research, development, test, and evaluation work. Part B lists codes for all services other than research and development work including purchase of structures and facilities. Part C lists codes for supplies and equipment.

Section II presents the classification structure of the Supplies and Equipment Codes, showing all groups and classes listed in the arrangement of the Federal Supply Classification (FSC) Numbering System. Where appropriate, the main inclusions and exclusions, which limit the coverage of a particular class, are shown immediately following the title for the class.

All suggestions, inquiries, and requests for additional codes shall be referred to the Federal Procurement Data Center, General Services Administration, 7th and D Streets, SW, Room 5652, Washington, DC 20407, telephone (202) 401-1529.

SECTION I - PART A
RESEARCH AND DEVELOPMENT CODES

FEDERAL PROCUREMENT DATA SYSTEM

PRODUCT AND SERVICE CODES

SECTION 1, PART A - RESEARCH AND DEVELOPMENT

If the action is for research and development (R&D) work, report an R&D code from this part of Section 1. Do not assign an R&D code to supplies or housekeeping services purchased in support of research and development work; such supplies shall be coded in accordance with Section I, Part C and the services in accordance with Section 1, Part B.

The R&D code is composed of two alphabetic and two numeric digits. The first digit is always the letter "A" to identify R&D, the second digit is alphabetic "A to Z" to identify the major category, the third digit is numeric 1 to 9 to identify a subdivision of the major category, and the fourth digit will be 1 to 6, to identify the appropriate stage of R&D shown below.

Stages of R&D Codes (4th Position)

Code	Meaning
1	Basic Research
2	Applied Research and Exploratory Development
3	Advanced Development
4	Engineering Development
5	Operational Systems Development
6	Management and Support

Procurement personnel responsible for R&D actions shall obtain sufficient information from requisitioning personnel to permit accurate classification.

When completing this item, the precise R&D Service being purchased shall be coded.

Example: A contract for research on air pollution by aircraft shall be shown under "Environmental Protection R&D (AH2*)" for air pollution, and not under aircraft.

Test and evaluation effort shall be coded under the stage of R&D involved. For example, the testing of a developmental prototype would generally be coded under Code 3, Advanced Development.

DEFINITIONS OF STAGES OF R&D

The following terms and categories relating to "research and development" are for management of R&D and RDT&E programs. The term "research and development" normally encompasses the "first" five categories below. For example, construction of recreational facilities at an installation used exclusively or generally for research and development would not normally be procurement of "research and development" but it is sometimes included in the sixth category in order to classify obligations according to the ultimate purpose of the procurement.

- (1) Basic Research - includes all scientific effort and experimentation directed toward increasing knowledge and understanding in those fields of the physical, engineering, environmental, social, and life sciences related to long-term national needs. It provides fundamental knowledge ultimately required for the solution of social, economic, political, physical, or military problems. It forms a part of the base for subsequent applied research and exploratory and advanced development in the various disciplines, and new or improved functional capabilities.
- (2) Applied Research and Exploratory Development - includes all effort directed toward the solution of specific problems, short of major development projects. This type of effort may vary from fairly fundamental applied research to quite sophisticated bread-board hardware, study, programming, and planning efforts. It would thus include investigations and minor development effort. The dominant characteristic of this category of effort is that it be pointed toward specific problem areas with a view toward developing and evaluating the feasibility and practicability of proposed solutions and determining their parameters.
- (3) Advanced Development - includes all effort directed toward projects which have moved into e.g. the development of hardware for test. The prime result of this type of effort is proof of design concept and/or prototype.
- (4) Engineering Development - includes those projects in full-scale engineering development for Government use but which have not yet received approval for production or had production funds included in the budget submission for the current or subsequent fiscal year. Thus are characterized by major line item projects.
- (5) Operational Systems Development - includes those projects still in full-scale engineering development but which have received approval for production, or production funds have been included in the budget submission for the current or subsequent fiscal year.
- (6) Management and Support - includes all effort directed toward support installations or operations required for general research and development. Included would be construction of a general nature unrelated to specific programs, maintenance and

support of laboratories, operation and maintenance of test ranges, and maintenance of test aircraft, equipment, or ships. Costs of laboratory personnel, either in house or contractor, would be assigned to appropriate projects or program areas above.

SECTION I - PART C
SUPPLIES AND EQUIPMENT CODES

FEDERAL PROCUREMENT DATA SYSTEM

PRODUCT AND SERVICE CODES

PART C - SUPPLIES AND EQUIPMENT

All supplies and equipment procurement shall be coded in accordance with Part C. This Part lists supplies and equipment codes of the Federal Supply Classification (FSC) which were developed for use in classifying items of supply identified under the Federal Cataloging Program.

The FSC is a commodity classification designed to serve the functions of supply and is sufficiently comprehensive in scope to permit the classification of all items of personal property. In order to accomplish this, groups and classes have been established for the universe of commodities, with emphasis on the items known to be in the supply systems of the Federal Government.

The structure of the FSC, as presently established, consists of 78 groups, which are subdivided into 685 classes. Each class covers a relatively homogeneous area of commodities, in respect to their physical or performance characteristics, or in the respect that the items included therein are such as are usually requisitioned or issued together, or constitute a related grouping for supply management purpose.

should be classified in Group 60; electronic modules as defined under Class 5963; and electrical cable, cord and wire assemblies, harnesses and sets, related to FSG 58 equipment (see FSC 5995). In group 58, more than in any other group, it frequently happens that the same name is listed as an index entry in each of several classes. In addition, that name may also appear as an entry in groups other than 58. Each such entry refers to a distinctly different part or assembly, even though the different items have the same name. The listing of the same name in two or more classes indicates that, in one form, the part or assembly covered by the name is applicable to the equipment covered by one class, and in another form is applicable to the equipment covered by another class. For example, the item name CODER, AUDIO FREQUENCY is applicable to two distinctly different assemblies, one of which has an application in cryptologic equipment, covered by class 5810, and the other in radar equipment covered by class 5840. Consequently the name CODER, AUDIO FREQUENCY is an entry under each of the two classes. When an item identification bears a name which is indexed under more than one class of group 58, or in group 58 and in some other group, the item will be classified in the same class as its next higher assembly in the manner described in the Department of Defense, Federal Logistics Information System (FLIS) Procedures Manual, DoD 4100.39-M. Also excluded from this group are data transmission and communications equipment such as terminals, sensors, and other devices designed for use with a configuration of ADPE.

- 7010 ADPE System Configuration
NOTE: A group of general purpose analog, digital, or hybrid electronic or electromechanical devices that are interconnected to operate as a system. Frequently referred to as an ADP system, although the term "system" is not considered definitive.
Includes an assembly of devices consisting of a central processing unit (CPU) and the necessary input/output devices, accessorial devices, analog measurement devices, software and/or firmware required to perform the desired objectives. Also includes sub-assemblies and units in which input/output devices, CPUs, and/or accessorial devices or components are incorporated into a single assembly or unit. A specially designed device incorporated into a system shall not influence the classification of the base assembly or unit.
- 7020 ADP Central Processing Unit (CPU, Computer), Analog
NOTE: An analog is a representation in one form of a physical condition existing in another form (e.g., the level of mercury in a tube represents temperature in a thermometer; the angular position of a needle represents speed on a speedometer). This class includes only CPUs that accept as inputs the electrical equivalent of physical conditions such as flow, temperature, pressure, angular position or voltage and perform computations by manipulating these electrical equivalents to produce results for further use.

APPENDIX A

PROCEDURES FOR CHANGING PRODUCT AND SERVICE CODES

The following procedures shall be followed by agencies in obtaining approval for the use of new product or service codes in the Federal Procurement Data System (FPDS):

A. Adding, Deleting, or Revising Product Codes

1. The Federal Supply Classification Coding System is used to classify supplies and equipment in the FPDS. Any proposals for new codes or requests for changes to existing codes must be submitted as follows: (1) civilian agencies must send requests to the Federal Supply Service in the General Services Administration and (2) defense agencies must send requests to the Directorate of Cataloging, Defenses Logistics Service Center, Battle Creek, Michigan. All requests are reviewed for approval by the Defense Logistics Service Center. Further information on the Federal Supply Classification appears in Volume 3 of the Department of Defense, Defense Integrated Data System (DIDS) Procedural Manual, DOD 4100.39-M.

2. Submit a copy of DLSC approval notification to the Federal Procurement Data Center (FPDC). The FPDS Product and Service Code (PSC) File shall be updated immediately and the changes included in the next scheduled amendment to the Product and Service Code Manual.

B. Adding New Service Codes

1. Submit a written request to the Federal Procurement Data Center (FPDC) outlining the need for the new service code. The request shall include: (1) brief description of proposed new service code with a suggested short title description; (2) authority for new code, e.g. law, regulation, or some other agency requirement; (3) statement on expected contract obligations, extent of congressional interest (if any), or other reasons for separately reporting the information to the FPDS; and (4) statement that no redundancy exists with any present FPDS product or service code.

2. The FPDC shall review the request for completeness and forward a copy of the request with its recommendation to OFPP.

3. OFPP shall either approve or disapprove the request stating the rationale for a disapproval.

4. FPDC shall notify the requester in writing of the decision and forward a copy of the letter to OFPP.

5. If the request is approved, the FPDS PSC file shall be updated

immediately.

6. Periodically, FPDC shall issue amendments to the FPDS Product and Service Code Manual incorporating all approved new codes.

C. Revising or Deleting Existing Service Codes

1. Submit a written request to the FPDC with appropriate justification as set forth in Part B above.
2. The FPDC shall review the request for completeness including coordination with other agencies that use the code and forward a copy with its recommendation to OFPP.
3. Above procedures in Part B for items 3, 4, 5 and 6 apply (if applicable).

D. Other Circumstances

1. Should the FPDC detect any anomalies in the coding structure that could require a code to be deleted or changed, the Center must notify OFPP in writing stating the need for the change. Subsequent to agencies review and OFPP approval, the FPDS PSC file shall be updated immediately. The change will be included in the next scheduled amendment to the Product and Service Code Manual.

2. Periodically, FPDC shall review usage of PSC codes to determine if specific codes should be retained as active codes. OFPP shall notify agencies of intent to inactivate a code and allow 60 days for comments. If no comments are received, FPDC shall inactivate the code in the FPDS PSC file and include the change in the next scheduled amendment to the Product and Service Code Manual.
