

Are you at risk for Hepatitis C?

You may be at risk and should be tested for hepatitis C if you:

- Ever injected illicit drugs, even if you experimented a few times many years ago
- Received clotting factor concentrates produced before 1987
- Were notified that you received blood from a donor who later tested positive for hepatitis C
- Received a transfusion of blood or blood components before July 1992
- Received an organ transplant before July 1992
- Were ever on long-term kidney dialysis
- Have evidence of liver disease
