DISCLAIMER

This book was prepared as a project of the Conference of Radiation Control Program Directors, Inc.

Neither the United States Government nor any agency thereof, nor any of their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product or process disclosed, or represents that its use would not infringe on privately owned rights. Reference herein to any specific commercial product, process, or service **by** trade name, trademark, manufacturer, or otherwise, does not necessarily constitute or imply its endorsement, recommendation, or favoring by the United States Government or any agency thereof or its contractors or subcontractors. The views and opinions of authors expressed herein do not necessarily state or reflect those of the United States Government or any agency thereof.

INTRODUCTION

This directory presents information that was collected during September and October 2000. The name and address of each agency involved with the transportation of radioactive materials are followed by the name, title and telephone number of the senior official and of the person to contact for information on radioactive materials. The column to the right contains brief descriptions of the agency's responsibility in transportation and its specific responsibility for radioactive materials, with citations of the statutes or other assignment of those responsibilities. That information is followed by the title or citation of transportation regulations promulgated by the agency, if any, and a brief description of their scope. The directory is organized by state, followed by federal offices.

In each state, the responsibility for transportation is typically distributed among:

1. the carrier regulatory agency, such as a public service commission, responsible for authorization of carriers and their rates,
2. the transportation department or highway commission, concerned with regulation of the vehicles,
3. the commodity regulatory agency, usually the radiation control agency of the state health department,
4. the safety agency, such as the state highway patrol,
5. the designated recipient for notification of high-level radioactive waste (HLRW) shipment per 10 CFR 71 & 73,
6. the emergency response planning commission,
7. the emergency management agency.

Numerous federal agencies exercise one or more of the above roles-according to whether the commodity is used in nuclear weapons, non-weapons applications, or 'dual use,' whether the material is owned by the Dept. of Energy or the Dept. of Defense, or other entity, whether the shipment is international or domestic, and whether or not a transited state has an agreement to assume authority from the cognizant federal agency.

The federal offices involved with planning response to incidents that involve nuclear fuel, weapons or other radioactive material are particularly numerous. Only those that are routinely involved with incidents in transportation of radioactive material other than weapons are listed in this directory.

Additional information on federal agencies involved with the transportation of radioactive material is available electronically at the Department of Transportation web site: <http://hazmat.dot.gov>

Additional contacts concerning the regulation of ionizing radiation and low-level radioactive waste disposal are contained in the *Directory of Personnel Responsible for Radiological Health Programs*, which is also published annually by the Conference of Radiation Control Program Directors, Inc., and is available through the CRCPD web site, www.crcpd.org.

Acronyms and Special Abbreviations Used

10 CFR	Nuclear Regulatory Commission Regulations
49 CFR	Department of Transportation Regulations
Hazmat	Hazardous Materials
HLRW	High-Level Radioactive Waste
HRCQ	Highway Route Controlled Quantity
M.O.U.	Memorandum of Understanding
MCSAP	Motor Carrier Safety Assistance Program
RADEF	Radiological Defense
Rad. Mat.	Radioactive material
RAP	Dept. of Energy Radiological Assistance Program
SARA	Superfund Amendments and Reauthorization Act
SERC	State Emergency Response Commission
TEP	Dept. of Energy Transportation Emergency Preparedness Program

Dept. of Transportation Act of 1966 established the DOT.
Present Hazmat law, 49 U.S.C. 5101-5127 resulted from
Congressional acts between 1974 and 1994. The regulations
for all hazardous materials, including radioactive, are
in 49 CFR 101-185 and cover responsibilities of shippers,
and carriers by all modes of transportation.

DOT has lead responsibilities for international transportation
and works closely with the U.S. Nuclear Regulatory
Commission and other agencies on domestic regulations and
emergency response.

The DOT modal administrations (FHWA, FRA, U.S. Coast Guard
and FAA) have additional authority related to conveyances
and **operations**. Enforcement of 49 CFR 101-185 is by regional
offices of the modal agencies except in states that have an
agreement with DOT to assume this authority and have
established applicable regulations to carriers.

39 CFR 124.2(d) and 125.2(d) Transportation of radioactive
material in the mails. (see Postal Service Publication **#52**)

Atomic Energy Act as amended assigns to NRC responsibility
for regulation of source, special nuclear and byproduct
radioactive materials, wastes and uranium mill tailings;
inspection and enforcement is by regional offices except in
states having agreement with NRC to assume this authority
Energy Reorganization Act of 1974

MOU with Dept. of Transportation 8 June 1979 assigns to
safety standards for packaging fissile material and greater
than Type A quantities of source and byproduct material
Regs: 10 CFR 71 Packaging and shipment of radioactive material
and transportation under certain conditions.

10 CFR 73 specifies protection requirements for spent nuclear fuel
in transit.

10 CFR 110 regulates export and import of nuclear equipment and
materials, including wastes

Exercises concerns for control of materials used in production of
nuclear weapons and of 'dual use' materials
Regs: (none regarding radioactive materials)

15 CFR 779 sets export controls on 'dual use' materials, **i.e.** used
in both nuclear reactors or weapons and in other commodities

19 CFR I-19 provides for inspection of articles in international
transport for compliance with all applicable regulations
