National Science Foundation

NATIONAL SCIENCE BOARD

NSB

National Science Board

WARREN M. WASHINGTON

(Chairman), Senior Scientist and Head, Climate Change Research Section, National Center for Atmospheric Research (NCAR)

DIANA S. NATALICIO

(Vice Chair), President, The University of Texas at El Paso

BARRY C. BARISH

Linde Professor of Physics and Director, LIGO Laboratory, California Institute of Technology

STEVEN C. BEERING

President Emeritus, Purdue University

RAY M. BOWEN

President Emeritus, Texas A&M University

DELORES M. ETTER

ONR Distinguished Chair in S&T, Electrical Engineering Department, U.S. Naval Academy

NINA V. FEDOROFF

Willaman Professor of Life Sciences, Director, Life Sciences Consortium and Director, Biotechnology Institute, The Pennsylvania State University

PAMELA A. FERGUSON

Professor and Former President, Grinnell College

KENNETH M. FORD

Director, Institute for the Interdisciplinary Study of Human and Machine Cognition, University of West Florida

DANIEL HASTINGS

Professor of Aeronautics & Astronautics and Co-Director, Technology and Policy Program, Massachusetts Institute of Technology

ELIZABETH HOFFMAN

President, University of Colorado System

ANITA K. JONES

University Professor, Department of Computer Science, University of Virginia

GEORGE M. LANGFORD

Professor, Department of Biological Science, Dartmouth College

JANE LUBCHENCO

Wayne and Gladys Valley Professor of Marine Biology and Distinguished Professor of Zoology, Oregon State University, Corvallis

JOSEPH A. MILLER, JR.

Senior Vice President and Chief Technology Officer, Corning, Inc.

DOUGLAS D. RANDALL

Professor of Biochemistry and Director, Interdisciplinary Plant Group, University of Missouri–Columbia

ROBERT C. RICHARDSON

Vice Provost for Research and Professor of Physics, Department of Physics, Cornell University

MICHAEL G. ROSSMANN

Hanley Distinguished Professor of Biological Sciences, Department of Biological Sciences, Purdue University

MAXINE SAVITZ

General Manager, Technology Partnerships, Honeywell (Retired)

LUIS SEQUEIRA

J.C. Walker Professor Emeritus, Departments of Bacteriology and Plant Pathology, University of Wisconsin, Madison

DANIEL SIMBERLOFF

Nancy Gore Hunger Professor of Environmental Science, Department of Ecology and Evolutionary Biology, University of Tennessee

JO ANNE VASQUEZ

Educational Science Consultant, Gilbert, Arizona

JOHN A. WHITE, JR.

Chancellor, University of Arkansas

MARK S. WRIGHTON

Chancellor, Washington University in St. Louis

RITA R. COLWELL

Member Ex Officio and Chair, Executive Committee, Director, National Science Foundation

MICHAEL P. CROSBY

Executive Officer

National Science Board Subcommittee on Science and Engineering Indicators

Robert C. Richardson, Chair

Maxine Savitz

Daniel Simberloff

John A. White, Jr.

George M Langford, Ex Officio, Chair, Committee on Education and Human Resources

Mary Poats, Executive Secretary (former)

Cathy Hines, Executive Secretary

Norman M. Bradburn, NSF Liaison

Science and Engineering Indicators 2004

Volume 2
Appendix Tables

Cover Image

Model of the potassium channel in the bacterium *Streptomyces lividans*.

Roderick MacKinnon's discovery of the details of this structure and his explanation for how membranes pass electrical charge through cell walls led to his 2003 Nobel Prize in Chemistry. The potassium ion is shown in red at the center of the channel in the symmetrical structure. The surrounding four identical subunits of the protein are conserved in all known potassium ion channels. MacKinnon's work was supported by the National Institutes of Health at the Cornell High Energy Synchrotron Source (CHESS), a facility developed around an accelerator funded by the National Science Foundation originally built for studies of high-energy physics. (Cover image reprinted with permission from *Science* volume 280, number 5360, issue of 3 April 1998, copyright 1998 AAAS.)

List of Appendix Tables

Chapter 1. Elementary and Secondary Education

1-1	Differences between male and female student average scale scores in mathematics and science, by age: Selected years, 1969–99	A1-1
1-2	Differences between white and black student and white and Hispanic student average scale scores in mathematics and science, by age: Selected years, 1969–99	A1-2
1-3	Average scale scores in mathematics and science, by parental education level: Selected years, 1978–99	A1-3
1-4	Students at or above basic and proficient levels in mathematics and science, grades 4, 8, and 12, by sex: 1996 and 2000	A1-4
1-5	Students at or above basic and proficient levels in mathematics and science, grades 4, 8, and 12, by race/ethnicity: 1996 and 2000	A1-5
1-6	Mathematics literacy scores of 15-year-olds, by country and percentile: 2000	A1-6
1-7	Science literacy scores of 15-year-olds, by country and percentile: 2000	A1-7
1-8	High school graduates who attended schools offering advanced mathematics courses (1990, 1994, and 1998), by school characteristics in 1998	A1-8
1-9	High school graduates who attended schools offering advanced science courses (1990, 1994, and 1998), by school characteristics in 1998	A1-9
1-10	High school graduates completing advanced mathematics courses (1990, 1994, and 1998), by student and school characteristics in 1998	A1-10
1-11	High school graduates completing advanced science courses (1990, 1994, and 1998), by student and school characteristics in 1998	A1-11
1-12	Public school teachers, by type of certification in main assignment field: 1999–2000	A1-12
1-13	Public high school students whose mathematics and science teachers majored or minored in various subject fields, by poverty level and minority enrollment in school: 1999–2000	A1-13
1-14	Public middle and high school mathematics and science teachers who entered profession between 1995–96 and 1999–2000 and participated in induction and mentoring activities in first year and those with either no or 10 weeks or more of practice teaching, by school level, poverty level, and minority enrollment in school: 1999–2000	A1-14
1-15	Public middle and high school school mathematics and science teachers who entered profession between 1995–96 and 1999–2000 and reported feeling well prepared in various aspects of teaching in first year, by participation in induction and mentoring activities: 1999–2000	A1-15
1-16	Public middle and high school mathematics and science teachers who thought various professional development programs they attended in past 12 months were useful, by time spent in such programs: 1999–2000	A1-16
1-17	Public middle and high school teachers who reported that various problems in their schools were moderate or serious, by school level, poverty level, and minority enrollment in school: 1999–2000	A1-17
1-18	Computer use by public high school teachers, by subject and minority enrollment in school: 1999–2000	A1-18
1-19	High school graduates enrolled in college the October after completing high school, by sex, race/ethnicity, and family income: 1973–2001	A1-19

Chapter 2. Higher Education in Science and Engineering

2-1	Institutions awarding S&E degrees, by field, degree level, and institution type: 2000	A2-1
2-2	Enrollment in higher education, by Carnegie institution type: 1967–2000	A2-2
2-3	S&E degrees awarded by degree level, institution type, and field: 2000.....	A2-3
2-4	U.S. population of 20–24-year-olds, by sex and race/ethnicity: Selected years, 1985–2020	A2-4
2-5	Enrollment in major types of institutions, by citizenship and race/ethnicity: 1992–98.....	A2-5
2-6	Freshmen intending S&E major, by sex, race/ethnicity, and field: Selected years, 1975–2002	A2-7
2-7	Freshmen intending to major in selected S&E fields, by sex and race/ethnicity: Selected years, 1971–2002.....	A2-11
2-8	Freshmen reporting need for remediation in mathematics or science, by sex and intended major: 1977 and 2002.....	A2-13
2-9	Employment and education status of S&E bachelor’s and master’s degree recipients, by degree level and undergraduate GPA: 1995 and 2001	A2-14
2-10	Undergraduate enrollment in engineering and engineering technology programs: Selected years, 1979–2002.....	A2-15
2-11	Engineering enrollment, by enrollment level and attendance: 1979–2002.....	A2-16
2-12	S&E graduate enrollment, by field, citizenship, and race/ethnicity: Selected years, 1983–2001	A2-17
2-13	S&E graduate enrollment, by field and sex: Selected years, 1975–2001.....	A2-20
2-14	Foreign graduate student enrollment in U.S. universities for top 10 places of origin, by year and field: 1987–99	A2-21
2-15	Full-time S&E graduate students, by source and mechanism of primary support: 1980–2001.....	A2-24
2-16	Full-time S&E graduate students, by field and mechanism of primary support: 2001	A2-26
2-17	Full-time S&E graduate students primarily supported by Federal Government, by field and mechanism of primary support: 2001	A2-27
2-18	Full-time S&E graduate students primarily supported by Federal Government, by agency: 1980–2001	A2-28
2-19	Primary mechanisms of support for S&E doctorate recipients, by citizenship, sex, and race/ethnicity: 2001	A2-29
2-20	Earned associate’s degrees, by field and sex: Selected years, 1985–2000.....	A2-30
2-21	Earned associate’s degrees, by field, race/ethnicity, and citizenship: Selected years, 1985–2000	A2-32
2-22	Earned bachelor’s degrees, by field and sex: Selected years, 1977–2000	A2-36
2-23	Earned bachelor’s degrees, by field, race/ethnicity, and citizenship: Selected years, 1977–2000.....	A2-38
2-24	Earned master’s degrees, by field and sex: Selected years, 1975–2000	A2-42
2-25	Earned master’s degrees, by field, race/ethnicity, and citizenship: Selected years, 1977–2000.....	A2-44
2-26	Earned doctoral degrees, by field, sex, and citizenship: Selected years, 1977–2001	A2-48
2-27	Earned doctoral degrees, by field, citizenship, and race/ethnicity: Selected years, 1977–2001	A2-52
2-28	Earned doctoral degrees, by field and citizenship: 1985–2001	A2-56
2-29	Time from bachelor’s to S&E doctoral degree, by doctoral degree field: 1973–2001	A2-58
2-30	Postdocs at U.S. universities, by field and citizenship status: 1977–2001.....	A2-59
2-31	Plans of foreign recipients of U.S. S&E doctorates to stay in United States, by field and place of origin: 1990–2001	A2-61
2-32	Trends in population of 20–24-year-olds, by selected countries and regions: 1980–2015	A2-65
2-33	First university degrees and ratio of first university degrees and S&E degrees to 24-year-old population in selected locations, by region: 2000 or most recent year	A2-66
2-34	S&E first university degrees in selected Western and Asian countries, by field: 1975–2001	A2-69

2-35	First university degrees and ratio of first university degrees and S&E degrees to 24-year-old population, by sex, in selected locations, by region: 2000 or most recent year	A2-71
2-36	Earned S&E doctoral degrees in selected regions and locations, by field: 2000 or most recent year	A2-74
2-37	Earned S&E doctoral degrees in selected regions and locations, by sex and field: 2000 or 2001	A2-76
2-38	S&E doctoral degrees in selected Western industrialized countries, by field: 1975–2001	A2-78
2-39	S&E doctoral degrees in selected Asian countries/economies, by field: 1975–2001	A2-80
2-40	Foreign S&E student enrollment in United Kingdom universities, by enrollment level, location of origin, and field: 1994, 1998, and 2001	A2-82
2-41	Foreign S&E student enrollment in French universities, by enrollment level and field: 1996 and 2002	A2-84
2-42	Foreign S&E student enrollment in Japanese universities, by enrollment level, location of origin, and field: 2001	A2-85
2-43	S&E student enrollment in Canadian universities, by enrollment level, top locations of origin, and field: 1985 and 1998	A2-86
2-44	Doctoral degrees earned by foreign students in selected industrialized countries, by field: 2001 or most recent year	A2-87

Chapter 3. Science and Engineering Labor Force

3-1	SESTAT degree field and occupational category	A3-1
3-2	College graduates in nonacademic S&E occupations: 1980, 1990, and 2000	A3-6
3-3	Growth of employment in S&E occupations: 1983–2002	A3-7
3-4	Total S&E jobs, by occupation: 2000 and projected 2010	A3-8
3-5	Employed individuals with S&E highest degrees whose jobs are closely or somewhat related to field of highest degree, by degree level and years since degree: 1999	A3-10
3-6	Employed individuals with S&E highest degrees whose jobs are closely related to field of highest degree, by degree level and years since degree: 1999	A3-13
3-7	Individuals with current or past S&E occupations, by highest degree, occupation, and employment status: 1999	A3-16
3-8	Unemployment rate for S&E and other occupations: 1983–2002	A3-20
3-9	Employed individuals in S&E occupations, by highest degree, occupation, and employment sector: 1999	A3-21
3-10	Workers with bachelor's or higher degrees: 1983–2002	A3-25
3-11	Employed individuals with S&E highest degree, by highest degree, field of highest degree, and employment sector: 1999	A3-26
3-12	Median annual salaries of U.S. individuals in S&E occupations, by occupation and highest degree: 1999	A3-30
3-13	Individuals in labor force in S&E occupations, by highest degree, occupation, sex, race/ethnicity, and age: 1999	A3-31
3-14	Individuals in S&E occupations, by highest degree, occupation, sex, race/ethnicity, and employment status: 1999	A3-37
3-15	Median annual salaries of U.S. individuals in S&E occupations, by highest degree, occupation, sex, race/ethnicity, and years since degree: 1999	A3-43
3-16	Employed U.S. scientists and engineers, by highest degree attained, occupation, sex, and race/ethnicity: 1999	A3-49
3-17	Employment status and salaries of 1997 and 1998 bachelor's and master's degree recipients, by degree field: 1999	A3-50

3-18	Individuals in labor force with S&E highest degrees, by highest degree, degree field, sex, race/ethnicity, and age: 1999	A3-51
3-19	Employed S&E degree holders over age 50, by selected fields: 1999	A3-57
3-20	Older S&E degree holders working full time, by highest degree: 1999	A3-58
3-21	Foreign-born U.S. residents with S&E highest degree, by place of birth: 1999	A3-59
3-22	Foreign-born U.S. residents with S&E doctorates, by place of birth: 1999	A3-60
3-23	Permanent visas to immigrants in S&E occupations: 1988–2001	A3-61
3-24	Nonimmigrant visas issued in selected classifications: FY 1998–2002	A3-62

Chapter 4. U.S. and International Research and Development: Funds and Technology Linkages

4-1	GDP and GDP implicit price deflators: 1953–2003	A4-1
4-2	PPP and market exchange rates, by selected country: 1981–2002	A4-2
4-3	U.S. R&D expenditures, by performing sector and source of funds: 1953–2002	A4-3
4-4	U.S. inflation-adjusted R&D expenditures, by performing sector and source of funds: 1953–2002	A4-5
4-5	U.S. R&D expenditures, by source of funds and performing sector: 1953–2002	A4-7
4-6	U.S. inflation-adjusted R&D expenditures, by source of funds and performing sector: 1953–2002	A4-9
4-7	U.S. basic research expenditures, by performing sector and source of funds: 1953–2002	A4-11
4-8	U.S. inflation-adjusted basic research expenditures, by performing sector and source of funds: 1953–2002	A4-13
4-9	U.S. basic research expenditures, by source of funds and performing sector: 1953–2002	A4-15
4-10	U.S. inflation-adjusted basic research expenditures, by source of funds and performing sector: 1953–2002	A4-17
4-11	U.S. applied research expenditures, by performing sector and source of funds: 1953–2002	A4-19
4-12	U.S. inflation-adjusted applied research expenditures, by performing sector and source of funds: 1953–2002	A4-21
4-13	U.S. applied research expenditures, by source of funds and performing sector: 1953–2002	A4-23
4-14	U.S. inflation-adjusted applied research expenditures, by source of funds and performing sector: 1953–2002	A4-25
4-15	U.S. development expenditures, by performing sector and source of funds: 1953–2002	A4-27
4-16	U.S. inflation-adjusted development expenditures, by performing sector and source of funds: 1953–2002	A4-29
4-17	U.S. development expenditures, by source of funds and performing sector: 1953–2002	A4-31
4-18	U.S. inflation-adjusted development expenditures, by source of funds and performing sector: 1953–2002	A4-33
4-19	Total (Federal plus company and other) funds for industrial R&D performance in United States, by industry and size of company: 1999–2001	A4-35
4-20	Company and other non-Federal funds for industrial R&D performance in United States, by industry and size of company: 1999–2001	A4-37
4-21	Federal funds for industrial R&D performance in United States, by industry and size of company: 1999–2001	A4-39
4-22	R&D investment of U.S. corporations, by major and detailed sector: 1994–2000	A4-41
4-23	R&D expenditure, by state, performing sector, and source of funds: 2000	A4-42
4-24	R&D expenditure, by state, performing sector, and source of funds: 1987–2000	A4-44
4-25	Total R&D and GSP, by state: 2000	A4-57
4-26	FFRDC R&D expenditures: FY 2001	A4-58

4-27	Trends in Federal and non-Federal R&D expenditure shares: 1953–2002	A4-60
4-28	Federal R&D budget authority, by budget function: FY 1980–2003	A4-61
4-29	Federal basic research budget authority, by budget function: FY 1996–2003	A4-63
4-30	Trends in R&D and Federal outlays: FY 1970, 1980, 1990, 2000, 2002, and 2004	A4-64
4-31	Discrepancy between Federal R&D support, as reported by performers and Federal agencies: 1980–2001	A4-65
4-32	Estimated Federal obligations for R&D and R&D plant, by selected agency, performer, and character of work: FY 2003	A4-66
4-33	Estimated Federal obligations for research, by agency and S&E field: FY 2003	A4-68
4-34	Federal obligations for total research, by detailed S&E field: FY 1982–2003	A4-69
4-35	Budgetary impact of the Federal research and experimentation tax credit: FY 1981–2000	A4-71
4-36	Company-funded R&D expenditures within companies and contract R&D expenditures in United States, selected historical data: 1993–2001	A4-72
4-37	Contract R&D expenditures in United States, by selected NAICS industry: 1999–2001	A4-73
4-38	Federal technology transfer indicators, by selected U.S. agencies: FY 1987–2001	A4-74
4-39	Small business innovation research award funding, by type of award and Federal agency: FY 1983–2001	A4-78
4-40	Small business technology transfer program award funding, by type of award and Federal agency: FY 1994–2001	A4-79
4-41	Advanced Technology Program projects, number of participants, and funding: FY 1990–2002	A4-80
4-42	International technology alliances, by regional ownership category, technology, and type (equity/nonequity): 1980–2001	A4-81
4-43	International R&D expenditures and R&D as percentage of GDP, by selected country and for all OECD countries: 1981–2001	A4-89
4-44	International nondefense R&D expenditures and nondefense R&D as percentage of GDP, by selected country: 1981–2001	A4-91
4-45	International R&D expenditures for selected countries, by performing sector and source of funds: 2000 or 2001	A4-92
4-46	Proportion of industry R&D expenditures financed by foreign sources, by selected country or region: 1981–2001	A4-94
4-47	Sources of total and industry R&D expenditures for OECD countries combined: 1981–2000	A4-95
4-48	Distribution of government R&D budget appropriations in selected countries, by socioeconomic objective: 2000 or 2001	A4-96
4-49	R&D expenditures by majority-owned affiliates of foreign companies in United States, by region/country of ultimate beneficial owner: 1980 and 1987–2000	A4-97
4-50	R&D performed by majority-owned affiliates of foreign companies in United States, by NAICS industry of affiliate: 1997–2000	A4-98
4-51	R&D performed abroad by majority-owned foreign affiliates of U.S. parent companies, by region/country: 1982, 1989, and 1994–2000	A4-99
4-52	R&D expenditures in United States by U.S. MNC-parent companies: 1994–2000	A4-100
4-53	R&D performed in United States by U.S. MNC-parent companies, by NAICS industry: 1999–2000	A4-101
4-54	Company and other non-Federal funds for industrial R&D performed abroad: 1985–2001	A4-103
4-55	Company and other non-Federal funds for industrial R&D performed abroad, by NAICS industry: 1999–2001	A4-104

Chapter 5. Academic Research and Development

5-1	Academic R&D expenditures directed to basic research, applied research, and development: 1970–2002.....	A5-1
5-2	Support for academic R&D, by sector: 1972–2001.....	A5-2
5-3	Sources of R&D funds at private and public institutions: 1981, 1991, and 2001.....	A5-4
5-4	Top 100 academic institutions in R&D expenditures, by source of funds: 2001.....	A5-5
5-5	Federal and non-Federal R&D expenditures at academic institutions, by field and source of funds: 2001.....	A5-7
5-6	Academic R&D funds provided by Federal Government, by field: Selected years, 1975–2001.....	A5-8
5-7	Expenditures for academic R&D, by field: Selected years, 1975–2001.....	A5-9
5-8	Federal obligations for academic R&D, by agency: 1970–2003.....	A5-12
5-9	Federal obligations for academic research, by agency: 1970–2003.....	A5-14
5-10	Federal agencies' academic research obligations, by field: FY 2001.....	A5-16
5-11	Federal academic research obligations provided by major agencies, by field: FY 2001.....	A5-17
5-12	Academic institutions receiving Federal R&D support, by selected Carnegie classification: 1972–2000.....	A5-18
5-13	Academic research space, by field: 1988–2001.....	A5-19
5-14	Current expenditures for research equipment at academic institutions, by field: Selected years, 1983–2001.....	A5-20
5-15	Federal share of current funding for research equipment at academic institutions, by field: Selected years, 1983–2001.....	A5-23
5-16	Expenditures of current funds for research equipment at academic institutions as percentage of total academic R&D expenditures, by field: Selected years, 1983–2001.....	A5-24
5-17	S&E doctorate holders employed in research universities and other academic institutions, by type of position and primary work activity: 1975–2001.....	A5-25
5-18	S&E doctorate holders employed in academia, by type of position, Carnegie institution type, and administrative control of institution: 1975–2001.....	A5-26
5-19	S&E doctorate holders employed in academia, by type of position and degree field: 1975–2001.....	A5-29
5-20	Recent S&E doctorate holders employed in academia, by years since doctorate, Carnegie institution type, type of position, and tenure status: 1975–2001.....	A5-31
5-21	Age distribution of S&E doctorate holders employed in academia, by type of position: 1975–2001.....	A5-33
5-22	Age distribution of S&E doctorate holders in full-time faculty positions at research universities and other academic institutions: 1975–2001.....	A5-34
5-23	S&E doctorate holders employed in academia, by type of position, sex, and degree field: 1975–2001.....	A5-35
5-24	S&E doctorate holders employed in academia, by type of position, degree field, and race/ethnicity: 1975–2001.....	A5-39
5-25	U.S. S&E doctorate holders employed at academic institutions, by type of position, degree field, and place of birth: 1975–2001.....	A5-45
5-26	S&E doctorate holders employed in academia, by degree field, type of position, and primary work activity: 1975–2001.....	A5-49
5-27	S&E doctorate holders employed in academia whose primary or secondary work activity was teaching or research, by type of position and degree field: 1975–2001.....	A5-51
5-28	Estimates of academic S&E doctoral researchers and graduate research assistants, by degree field: 1975–2001.....	A5-52
5-29	Estimates of total academic S&E doctoral employment, S&E doctoral researchers, and S&E graduate research assistants, by Carnegie institution type and work activity: 1975–2001.....	A5-53
5-30	Estimates of academic S&E doctoral researchers, by type of position and work activity: 1975–2001.....	A5-55

5-31	Estimates of academic S&E doctoral researchers and graduate research assistants, by degree field and work activity: 1975–2001	A5-56
5-32	Academic S&E doctorate holders with Federal support, by degree field, type of position, and work activity: 1975–2001	A5-59
5-33	S&E doctorate holders employed in academia with Federal support, by degree field, years since doctorate, and type of position: 1975–2001	A5-60
5-34	Broad and detailed fields for S&E article output data.....	A5-63
5-35	S&E articles, by region and country/economy: 1988–2001	A5-64
5-36	U.S. S&E articles, by field and sector: Selected years, 1988–2001	A5-67
5-37	Regional and country portfolio of S&E articles, by field: 1988	A5-69
5-38	Regional and country portfolio of S&E articles, by field: 2001	A5-72
5-39	Coauthorship of U.S. S&E articles, by field and sector: 1988.....	A5-75
5-40	Coauthorship of U.S. S&E articles, by field and sector: 2001	A5-77
5-41	Cross-sectoral coauthorship of U.S. S&E articles, by field and sector: 1988.....	A5-79
5-42	Cross-sectoral coauthorship of U.S. S&E articles, by field and sector: 2001	A5-81
5-43	Breadth of international coauthorship ties for selected countries/economies: 1994 and 2001	A5-83
5-44	U.S. international scientific collaboration with selected countries/economies: 1994 and 2001	A5-84
5-45	Intraregional scientific collaboration in Western Europe: 1994 and 2001	A5-86
5-46	Intraregional scientific collaboration in Asia: 1994 and 2001	A5-88
5-47	Intraregional scientific collaboration in Central and South America: 1994 and 2001	A5-89
5-48	Citation of S&E articles, by region and country/economy: 1992, 1996, and 2001	A5-90
5-49	Relative prominence of cited S&E literature, by country/region: 1992, 1996, and 2001	A5-92
5-50	Relative prominence of cited S&E literature, by selected field and country/economy: 1994 and 2001.....	A5-93
5-51	Citations of foreign S&E literature, by country/region: 1992, 1996, and 2001	A5-99
5-52	U.S. patent citations to S&E articles, by field and country/region: 1995-2002	A5-100
5-53	U.S. patent citations to S&E articles, by field and sector: 1995–2002	A5-101
5-54	U.S. patenting activity of U.S. universities and colleges: 1981–2001	A5-103

Chapter 6. Industry, Technology, and the Global Marketplace

6-1	World industry and trade data for selected countries or economies and industries: 1980–2001	A6-1
6-2	Service industry revenues for selected countries or economies: 1980–2001.....	A6-24
6-3	U.S. receipts and payments of royalties and fees associated with affiliated and unaffiliated foreign companies: 1987–2001	A6-28
6-4	U.S. receipts and payments of royalties and license fees generated from exchange and use of industrial processes with unaffiliated foreign companies, by region or country/economy: 1987–2001.....	A6-29
6-5	Leading indicators of technological competitiveness: 2002	A6-32
6-6	Leading indicators of technological competitiveness: 1999	A6-33
6-7	U.S. industrial R&D performance: 1987–2000	A6-34
6-8	Japan industrial R&D performance: 1987–2000	A6-35
6-9	European Union industrial R&D performance: 1992–99	A6-36
6-10	U.S. patents granted, by residence of inventor/type of ownership: Pre-1988 and 1988–2001	A6-37
6-11	U.S. patent applications, by residence of inventor: 1989–2001.....	A6-38

6-12	Patent classes most emphasized (top 50) by United Kingdom inventors patenting in United States: 1991 and 2001	A6-40
6-13	Patent classes most emphasized (top 50) by French inventors patenting in United States: 1991 and 2001	A6-41
6-14	Patents granted in selected countries, by inventor residence: Selected years, 1985–2000	A6-42
6-15	U.S. venture capital disbursements, by industry category: 1980–2002	A6-45
6-16	U.S. venture capital disbursements, by financing stage: 1980–2002	A6-47
6-17	U.S. venture capital seed-stage disbursements, by industry category: 1980–2002	A6-49
6-18	Development of products or processes as result of IT-based innovation in past 12 months, by industry and revenue size: 2001	A6-51
6-19	Expectation of developing products or processes as result of IT-based innovation in next 12 months, by industry, revenue size, and innovator: 2001	A6-52
6-20	Product or process developed as result of IT-based innovation that contributed most to revenue in past 12 months, by industry and revenue size: 2001	A6-53
6-21	Type of development expected as result of IT-based innovation in next 12 months, by industry and revenue size: 2001	A6-54

Chapter 7. Science and Technology: Public Attitudes and Understanding

7-1	Leading source for current news: 2001	A7-1
7-2	Leading source of information about science and technology: 2001	A7-2
7-3	Leading source of information about specific scientific issue: 2001	A7-3
7-4	Feeling informed about selected policy issues: 1979–2001	A7-4
7-5	Public assessment of astrology, by respondent characteristic: 1979–2001	A7-5
7-6	Public opinion on whether Federal Government should fund basic research, by respondent characteristic: 1985–2001	A7-6
7-7	Public assessment of Federal Government spending in selected policy areas: 1981–2002	A7-7
7-8	Public confidence in leadership of various institutions: 1973–2002	A7-8

Appendix table 1-1
**Differences between male and female student average scale scores in mathematics and science, by age:
 Selected years, 1969–99**

Field and year	Male minus female		
	Age 9	Age 13	Age 17

1994	2	5	11
1996	3	9	8
1999	3	6	10

NA not available

*Significantly different from 1999. Small differences between male and female scores are often not statistically significant. For example, the male/female differences were not statistically significant in 1999 for all three ages in mathematics and for 9-year-olds in science.

NOTES: Student performance on the long-term trend assessment is reported on a 0- to 500-point scale. Numbers represent the difference between male and female scores.

SOURCE: U.S. Department of Education, National Center for Education Statistics, *NAEP 1999 Trends in Academic Progress: Three Decades of Student Performance*, NCES 2000-469 (Washington, DC: U.S. Department of Education, 2000).

NA not available

^aSmall = fewer than 600 students enrolled, medium = 600–1,800, and large = more than 1,800.

^bMeasured by percentage of students eligible for free or reduced-priced lunches: very low = 5 percent or less, low = 6–25 percent, medium = 26–50 percent, and high = 51–100 percent.

NOTES: AP and IB courses were coded separately in 1998 and 2000 but not in prior years. AP/IB calculus courses are counted both in their specific column and in the “any calculus” column. Before 1998, AP and IB courses were coded with the general set of courses.

GPA grade point average

^aAll graduates studying S&E, including those employed in S&E and non-S&E and those unemployed. Definition is based on assumption that the field being studied in school is a better indicator of future career plans than current employment.

NOTES: In the 1995 survey, S&E degrees were earned in 1993 and 1994; in the 2001 survey, S&E degrees were earned in 1999 and 2000. Retention in S&E is measured through education and job codes rather than through graduates' own evaluations. Details may not add to totals because of rounding and because a few graduates who reported that their undergraduate courses were ungraded were excluded from GPA categories but included in total rows.

SOURCE: National Science Foundation, Division of Science Resources Statistics, National Survey of Recent College Graduates, 1995 and 2001, special tabulations, 2003.

NA not available

^aIncludes temporary residents only.

NOTES: Field-of-study data are collected biennially in fall of academic year. Student counts other than total foreign student enrollment are imputed from data reported by institutions. A large discrepancy exists between academic level figures reported by country and those provided by U.S. institutions for foreign students. Discrepancy results from differential response rates to nationality question and academic level question.

^aSelf-support includes any loans (including Federal loans) or support from personal or family financial contributions.

NOTES: S&E includes health fields (i.e., medical sciences and other life sciences). These fields are reported separately in the National Science Foundation, Division of Science Resources Statistics (NSF/SRS), Graduate Students and Postdoctorates in Science and Engineering, annual series.

SOURCE: NSF/SRS, WebCASPAR database system, <http://caspar.nsf.gov>.

^aIncludes fellowships, scholarships, and dissertation grants.

^bIncludes traineeship, internship, and residency.

^cIncludes employer reimbursement or assistance, foreign support, and other sources.

^dIncludes personal savings, other personal earnings in graduate school, other family earnings or savings, and loans.

^eIncludes naturalized citizens.

^fIncludes blacks, Hispanics, and American Indian/Alaskan Natives.

NOTES: S&E includes health fields (i.e., medical and other life sciences). Data are not comparable with data for earlier years because of change in number and definition of support modes used in survey questionnaire in 1998.

^aEngineering technologies are more focused on applied skills than on fundamental science and mathematics.

NOTES: Degree data by sex do not precisely match degree data by race/ethnicity in any field. Degree data by sex were collected by U.S. Department of Education (ED), National Center for Education Statistics (NCES), Integrated Postsecondary Education Data System (IPEDS). Data by race/ethnicity were collected biennially by NCES for ED, Office for Civil Rights, from 1977 to 1989 and annually thereafter (except for 1999). For full available data series, see National Science Foundation, Division of Science Resources Statistics (NSF/SRS), WebCASPAR database system.

SOURCES: ED, NCES, IPEDS, Completions Survey, and NSF/SRS, WebCASPAR database system, <http://caspar.nsf.gov>.

^aEngineering technologies are more focused on applied skills than on fundamental science and mathematics.^bIncludes temporary residents only.

NOTES: Degree data by sex do not precisely match degree data by race/ethnicity in any field. Degree data by sex were collected by U.S. Department of Education (ED), National Center for Education Statistics (NCES), Integrated Postsecondary Education Data System (IPEDS). Data by race/ethnicity were collected biennially by NCES for ED, Office for Civil Rights, from 1977 to 1989 and annually thereafter (except for 1999). For full available data series, see National Science Foundation, Division of Science Resources Statistics (NSF/SRS), WebCASPAR database system.

SOURCES: ED, NCES, and NSF/SRS, WebCASPAR database system, <http://caspar.nsf.gov>.

^aEngineering technologies are more focused on applied skills than on fundamental science and mathematics.

NOTES: Degree data by sex do not precisely match degree data by race/ethnicity in any field. Degree data by sex were collected by U.S. Department of Education (ED), National Center for Education Statistics (NCES), Integrated Postsecondary Education Data System (IPEDS). Data by race/ethnicity were collected biennially by NCES for ED, Office for Civil Rights, from 1977 to 1989 and annually thereafter (except for 1999). For full available data series, see National Science Foundation, Division of Science Resources Statistics (NSF/SRS), WebCASPAR database system.

SOURCES: ED, NCES, IPEDS, Completions Survey, and NSF/SRS, WebCASPAR database system, <http://caspar.nsf.gov>.

^aEngineering technologies are more focused on applied skills than on fundamental science and mathematics.

^bIncludes temporary residents only.

NOTES: Degree data by sex do not precisely match degree data by race/ethnicity in any field. Degree data by sex were collected by U.S. Department of Education (ED), National Center for Education Statistics (NCES), Integrated Postsecondary Education Data System (IPEDS). Data by race/ethnicity were collected biennially by NCES for ED, Office for Civil Rights, from 1977 to 1989 and annually thereafter (except for 1999). For full available data series, see National Science Foundation, Division of Science Resources Statistics (NSF/SRS), WebCASPAR database system.

SOURCES: ED, NCES, and NSF/SRS, WebCASPAR database system, <http://caspar.nsf.gov>.

NOTES: Degree data by sex do not precisely match degree data by race/ethnicity in any field. Degree data by sex were collected by U.S. Department of Education (ED), National Center for Education Statistics (NCES), Integrated Postsecondary Education Data System (IPEDS). Data by race/ethnicity were collected biennially by NCES for ED, Office for Civil Rights, from 1977 to 1989 and annually thereafter (except for 1999). For full available data series, see National Science Foundation, Division of Science Resources Statistics (NSF/SRS), WebCASPAR database system.

SOURCES: ED, NCES, IPEDS, Completions Survey, and NSF/SRS, WebCASPAR database system, <http://caspar.nsf.gov>.

Earned master's degrees, by field, race/ethnicity, and citizenship: Selected years, 1977-2000

^aEngineering technologies are more focused on applied skills than on fundamental science and mathematics.^bIncludes temporary residents only.

NOTES: Degree data by sex do not precisely match degree data by race/ethnicity in any field. Degree data by sex were collected by U.S. Department of Education (ED), National Center for Education Statistics (NCES), Integrated Postsecondary Education Data System (IPEDS). Data by race/ethnicity were collected biennially by NCES for ED, Office for Civil Rights, from 1977 to 1989 and annually thereafter (except for 1999). For full available data series, see National Science Foundation, Division of Science Resources Statistics (NSF/SRS), WebCASPAR database system.

SOURCES: ED, NCES, and NSF/SRS, WebCASPAR database system, <http://caspar.nsf.gov>.

^aNatural sciences include physical, biological, earth, atmospheric, and ocean sciences.

^bMedical/other life sciences are reported separately from S&E fields in National Science Foundation, Division of Science Resources Statistics (NSF/SRS), higher education publications.

NOTE: For detailed fields, see NSF/SRS, *Science and Engineering Doctorate Awards*, <http://www.nsf.gov/sbe/srs/nsf01325/htmstart.htm>.

na not applicable

*Natural sciences include physical, biological, earth, atmospheric, and ocean sciences.

NOTES: Data include foreign doctoral recipients who are either permanent or temporary residents. Recipients who plan to stay think they will locate in the United States; those with firm plans have a postdoctoral research appointment or academic, industrial, or other firm employment in the United States.

NA not available

NS&E natural sciences and engineering

^aIncludes physical, biological, earth, atmospheric, and ocean sciences.^bJapanese social science data also include business administration.^cNumber of degrees per 100 24-year-olds. For countries with both short and long degrees, the ratios are calculated with both short and long degrees as the numerator.^dIncludes only those locations for which relatively recent data are available.^eEngineering and agriculture degrees are long, more than 5 years.^fEngineering degrees are long.^gIncludes former colleges and polytechnics.

NOTES: NS&E degrees include natural, agricultural, and computer sciences; mathematics; and engineering. Data for first university degrees use the International Standard Classification of Education (ISCED 97), level 5A. First university degree programs in most countries are less than 5 years. However, in some countries, especially European, some level 5A degree programs are more than 5 years and noted as long. When a country has first university degrees that are less than 5 years and some more than 5 years, such as Germany, the duration is noted as short or long. An unspecified duration means less than 5 years.

NS&E natural sciences and engineering

^aIncludes physical, biological, earth, atmospheric, and ocean sciences.^bJapanese social science data also include business administration.^cNumber of degrees per 100 24-year-olds.^dIncludes former colleges and polytechnics.

NOTES: NS&E degrees include natural, agricultural, and computer sciences; mathematics; and engineering. Data for first university degrees use the International Standard Classification of Education (ISCED 97), level 5A. Long (more than 5 years) and short (less than 5 years) first university degrees are combined.

SOURCES: Organisation for Economic Co-operation and Development, Center for Education Research and Innovation, *Education at a Glance 2002*; United Nations Educational, Scientific, and Cultural Organization (UNESCO), UNESCO Institute for Statistics database, <http://www.unesco.org/statistics>; Japan—Government of Japan, Ministry of Education, Culture and Science, *Monbusho Survey of Education* (Tokyo) and special tabulations 2003; Taiwan—Ministry of Education, *Educational Statistics of the Republic of China: 2002* (Taipei, 2002); Germany—Federal Statistical Office, *Prüfungen an Hochschulen 2001* (Wiesbaden, 2002); United Kingdom—Higher Education Statistics Agency (Cheltenham, 2003), special tabulations; Russia—Center for Science Research and Statistics, special tabulations (2001); Mexico—National Association of Universities and Institutions of Higher Education, *Anuario Estadístico 2001: Población Escolar de Nivel Licenciatura en Universidades e Institutos Tecnológicos, 2002*; and United States—National Science Foundation, Division of Science Resources Statistics, WebCASPAR database system, <http://caspar.nsf.gov>.

NA not available

^aNatural sciences include physical, biological, earth, atmospheric, and ocean sciences.^bJapanese data for male/female breakouts are for the number who have completed doctoral degree course work in S&E fields; this number is very close to conferred degrees.

NOTES: Data for doctoral degrees use the International Standard Classification of Education (ISCED 97), level 6. Data from national sources are for 2001; data from international sources are for 2000.

SOURCES: Organisation for Economic Co-operation and Development, Center for Education Research and Innovation, *Education at a Glance 2002*; United Nations Educational, Scientific, and Cultural Organization (UNESCO), the UNESCO Institute for Statistics database, <http://www.unesco.org/statistics>. ^aNatural sciences include physical, biological, earth, atmospheric, and ocean sciences.^bJapanese data include thesis doctorates, called *ronbun hakase*, earned by employees in industry. In Japanese higher education data, mathematics is included in natural sciences; computer sciences are included in engineering.^cIndian 1998 data are estimated.

^aNatural sciences include physical, biological, earth, atmospheric, and ocean sciences.^bJapanese data are for university-based doctorates only, excluding *ronbun hakase* doctorates awarded for research within industry. Japanese data include mathematics in natural sciences and computer sciences in engineering.

NOTE: For each country, data are for doctoral degree recipients with foreign citizenship, including permanent and temporary residents.

Appendix table 3-1

(Page 1 of 5)

SESTAT degree field and occupational category

Field	Occupation
S&E	S&E
Mathematics/computer sciences	Mathematical/computer scientists
Computer and information sciences	Computer/information scientists
Computer sciences	Computer engineers—software
Computer systems analysis	Computer scientists, except systems analysts
Information services and systems	Computer systems analysts
Other	Information systems scientists/analysts
Mathematics	Other
Applied mathematics	Mathematical scientists
General mathematics	Mathematicians
Operations research	Operations research analysts, modeling
Statistics	Statisticians
Other	Other
	Postsecondary teachers
	Computer sciences
	Mathematics
Life/related sciences	Life scientists
Agricultural/food sciences	Agricultural/food scientists
Animal sciences	Biological scientists
Food sciences/technology	Biochemists/biophysicists
Plant sciences	Biological scientists
Other	Medical scientists, except practitioners
Biological sciences	Other
Biochemistry/biophysics	Environmental life scientists
Biology	Forestry/conservation
Botany	Postsecondary teachers
Cell/molecular biology	Agriculture
Ecology	Biological sciences
Genetics, plant and animal	Medical sciences
Microbiology	Other
Nutritional science	
Pharmacology, human and animal	
Physiology, human and animal	
Zoology	
Other	
Environmental life sciences	
Environmental science studies	
Forestry sciences	
Health/related sciences (included under life sciences for doctoral programs only)	
Audiology/speech pathology	
Health services administration	
Health/medical assistants	
Health/medical technologies	
Medical preparatory programs	
Medicine	
Nursing, 4 years or longer	
Pharmacy	
Physical therapy/other rehabilitation	
Public health, including environment	
Other	

Appendix table 3-1

(Page 2 of 5)

SESTAT degree field and occupational category

Field	Occupation
Physical/related sciences	Physical scientists
Chemistry, except biochemistry	Chemists, except biochemists
Earth science, geology, and oceanography	Earth scientists, geologists, and oceanographers
Atmospheric sciences/meteorology	Atmospheric and space scientists
Earth sciences	Geologists
Geology	Oceanographers
Other geological sciences	Physicists and astronomers
Oceanography	Astronomers
Physics and astronomy	Physicists
Physics	Other
Astronomy/astrophysics	Postsecondary teachers
Other	Chemistry
	Physics
	Earth, environmental, and marine science
Social/related sciences	Social scientists
Economics	Economists
Agricultural economics	Political/related scientists
Economics	Psychologists
Political/related sciences	Sociologists/anthropologists
International relations	Anthropologists
Political science/government	Sociologists
Public policy studies	Other
Psychology	Historians, science and technology
Clinical	Other
Counseling	Postsecondary teachers
Educational	Economics
Experimental	Political science
General	Psychology
Industrial/organizational	Sociology
Social	Other
Other	
Sociology/anthropology	
Anthropology/archaeology	
Area/ethnic studies	
Criminology	
Geography	
History of science	
Linguistics	
Philosophy of science	
Sociology	
Other	

Appendix table 3-1

(Page 3 of 5)

SESTAT degree field and occupational category

Field	Occupation
Engineering	Engineers
Aerospace/related	Aerospace/related
Aerospace, aeronautical, and astronautical	Architectural/civil
Architectural/civil	Civil
Architectural	Chemical
Civil	Electrical/related
Chemical	Computer—hardware
Electrical/related	Electrical/electronics
Computer and systems	Industrial
Electrical, electronics, and communications	Mechanical
Industrial	Other
Mechanical	Agricultural
Other	Bioengineers/biomedical
Agricultural	Environmental
Bioengineering/biomedical	Naval architects/marine
Engineering sciences, mechanics and physics	Materials/metallurgical
Environmental	Mining/geological
General	Nuclear
Geophysical	Petroleum
Materials, including ceramics and textiles	Sales
Metallurgical	Other
Mining and minerals	Postsecondary teachers
Naval architecture and marine	Engineering
Nuclear	
Petroleum	
Other	
Non-S&E	Non-S&E
Management/administration	Managers and administrators
Agricultural business/production	Top and mid-level managers, executives, and administrators
Accounting	Accountants, auditors, and other financial specialists
Business administration/management	Personnel, training, and labor relations specialists
Business, general	Other
Business and managerial economics	
Financial management	
Other	
Health/related (included in non-S&E for bachelor's and master's programs only)	Health-related occupations
Audiology/speech pathology	Health practitioners
Health services administration	Registered nurses, pharmacists, dietitians, and therapists
Health/medical assistance	Technologists/technicians
Health/medical technologies	Other
Medical preparatory programs	
Medicine nursing, 4 years or longer	
Pharmacy	
Physical therapy/rehabilitation	
Public health, including environment	
Other	

Appendix table 3-1

(Page 4 of 5)

SESTAT degree field and occupational category

Field	Occupation
Teaching/education	Teachers, except S&E postsecondary teachers
Education administration	Prekindergarten/kindergarten
Computer teacher education	Elementary school
Counselor education and guidance	Secondary:
Elementary teacher education	Computer, mathematics, or sciences
Mathematics teacher education	Social sciences
Physical education and coaching	Other
Preelementary teacher education	Special education
Science teacher education	Other precollegiate education
Secondary teacher education	Postsecondary teachers
Special education	Art, drama, and music
Social science teacher education	Business, commerce, and marketing
Other	Education
	English
	Foreign language
	History
	Home economics
	Law
	Physical education
	Social work
	Theology
	Trade/industrial
	Other health specialties
	Other
Social service/related disciplines	Social services/related occupations
Social work	Clergy/other religious workers
Other philosophy, religion, theology	Counselors, educational and vocational
	Social workers
Technology/technical disciplines	Technologists/technicians
Computer programming	Computer programmers
Data processing technology	Electrical, electronics, industrial, and mechanical engineering technicians
Electrical and electronics technologies	Drafting occupations
Industrial production technologies	Surveying and mapping engineering technicians
Mechanical engineering-related technologies	Other engineering technologists and technicians
Other engineering-related technologies	Surveyors
	Technologists and technicians
	Biological/life sciences
	Mathematical sciences
	Physical sciences
Sales/marketing	Sales/marketing
Business marketing/marketing management	Insurance, securities, real estate, and business services
Marketing research	Commodities, except retail
	Retail
	Other
Arts, humanities, and related disciplines	Art/humanities, and related occupations
English language, literature, and letters	Artists, editors, entertainers, public relations, and writers
Other foreign languages/literature	Historians, except science and technology
Liberal arts/general studies	
History	
Dramatic arts	
Fine arts	
Music	
Other visual/performing arts	

Appendix table 3-1

(Page 5 of 5)

SESTAT degree field and occupational category

Field	Occupation
Other	Other
Architecture/environmental design	Accounting clerks/bookkeepers
Other conservation, renewable natural resources	Secretaries, receptionists, and typists
Actuarial science	Other administrative
Communications	Architects
Journalism	Farmers, foresters, and fishermen
Other	Lawyers and judges
Criminal justice and protective services	Librarians, archivists, and curators
Home economics	Actuaries
Law, prelaw, and legal studies	Food preparation and service workers
Library science	Protective service workers
Parks, recreation, leisure, and fitness studies	Other service occupations, except health
Public administration	Construction trades, miners, and well drillers
Other public affairs	Mechanics and repairers
Other	Precision production
	Operators and related occupations
	Transportation and material movers
	Other

SESTAT Scientists and Engineers Statistical Data System

NOTES: Individual occupations included in SESTAT adhere to the Standard Occupational Classification (SOC), a U.S. Government standard classification scheme. SOC was developed through an interagency committee headed by the Office of Management and Budget. It is used by Federal agencies that collect employment and occupational data and was meant to provide comparability of data among different Federal statistics agencies. Major and minor S&E groupings of occupations as shown in this table were developed by the National Science Foundation.

SOURCE: National Science Foundation, Division of Science Resources Statistics, SESTAT, 1999.

Appendix table 3-2

College graduates in nonacademic S&E occupations: 1980, 1990, and 2000

Occupation	1980	1990	2000
All S&E occupations	1,413,000	2,459,000	3,664,000
Engineers	853,000	1,295,000	1,623,000
Life scientists	83,000	119,000	181,000
Mathematical/computer scientists	177,000	495,000	1,280,000
Physical scientists	143,000	219,000	259,000
Social scientists.....	158,000	332,000	318,000

SOURCES: U.S. Decennial Census Public Use Microdata Samples, 1980 and 1990; and National Bureau of Economic Research's Merged Outgoing Rotation Group Files from the Bureau of Labor Statistics' Current Population Survey.

Science & Engineering Indicators – 2004

Appendix table 3-3
Growth of employment in S&E occupations: 1983–2002

Year	Number employed	Percent of U.S. workforce
1983	2,925,000	2.6
1984	3,010,000	2.7
1985	3,128,000	2.7
1986	3,328,000	2.8
1987	3,355,000	2.8
1988	3,499,000	2.9
1989	3,593,000	2.9
1990	3,750,000	3.0
1991	3,924,000	3.1
1992	3,768,000	3.0
1993	3,963,000	3.1
1994	4,379,000	3.3
1995	4,384,000	3.3
1996	4,557,000	3.4
1997	4,775,000	3.5
1998	5,074,000	3.7
1999	5,294,000	3.8
2000	5,544,000	3.9
2001	5,581,000	3.9
2002	5,412,000	3.8

SOURCES: U.S. Decennial Census Public Use Microdata Samples, 1980 and 1990; and National Bureau of Economic Research's Merged Outgoing Rotation Group Files from the Bureau of Labor Statistics' Current Population Survey.

FFRDC federally funded research and development center

U&C universities and colleges

^aAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. Data for 1998 and later years are not directly comparable to data for 1997 and earlier years. For FY 1998, \$479 million in passthrough funds were reported. For FY 2002, \$865 million in passthrough funds are estimated.

^bBeginning in 2001, data for nonprofit FFRDCs are reported by FFRDCs. In prior years, data were collected from the Federal agencies supporting the FFRDCs.

^cExpenditures of industry FFRDCs for 1953–54 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–54.

^dIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

^eBecause of limitations in the survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofit support for their own R&D.

^fIncludes all R&D expenditures of FFRDCs administered by academic institutions.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures before 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Technical notes explaining methodological issues of measurement will be provided in National Science Foundation, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. This table incorporates the latest revisions to prior-year data. Do not use data published earlier.

SOURCES: National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

FFRDC federally funded research and development center

U&C universities and colleges

^aAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. Data for 1998 and later years are not directly comparable to data for 1997 and earlier years. For FY 1998, \$479 million in passthrough funds were reported. For FY 2002, \$865 million in passthrough funds are estimated.

^bBeginning in 2001, data for nonprofit FFRDCs are reported by FFRDCs. In prior years, data were collected from the Federal agencies supporting the FFRDCs.

^cExpenditures of industry FFRDCs for 1953–54 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–54.

^dIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

^eBecause of limitations in the survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofit support for their own R&D.

^fIncludes all R&D expenditures of FFRDCs administered by academic institutions.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures before 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Technical notes explaining methodological issues of measurement will be provided in National Science Foundation, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. This table incorporates the latest revisions to prior-year data. Do not use data published earlier.

SOURCES: National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

FFRDC federally funded research and development center

U&C universities and colleges

^aBecause of limitations in the survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofit support for their own R&D.

^bExpenditures of industry FFRDCs for 1953–54 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–63.

^cAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. Data for 1998 and later years are not directly comparable to data for 1997 and earlier years. For FY 1998, \$479 million in passthrough funds were reported. For FY 2002, \$865 million in passthrough funds are estimated.

^dIncludes all R&D expenditures of FFRDCs administered by academic institutions.

^eBeginning in 2001, data for nonprofit FFRDCs are reported by FFRDCs. In prior years, data were collected from the Federal agencies supporting the FFRDCs.

^fIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures before 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Technical notes explaining methodological issues of measurement will be provided in National Science Foundation, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. This table incorporates the latest revisions to prior-year data. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

FFRDC federally funded research and development center

U&C universities and colleges

^aBecause of limitations in the survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofit support for their own R&D.

^bExpenditures of industry FFRDCs for 1953–54 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–63.

^cAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. Data for 1998 and later years are not directly comparable to data for 1997 and earlier years. For FY 1998, \$479 million in passthrough funds were reported. For FY 2002, \$865 million in passthrough funds are estimated.

^dIncludes all R&D expenditures of FFRDCs administered by academic institutions.

^eBeginning in 2001, data for nonprofit FFRDCs are reported by FFRDCs. In prior years, data were collected from the Federal agencies supporting the FFRDCs.

^fIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and for Federal Government expenditures before 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Technical notes explaining methodological issues of measurement will be provided in National Science Foundation, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. This table incorporates the latest revisions to prior-year data. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

FFRDC federally funded research and development center

U&C universities and colleges

^aAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. The character-of-work estimation procedure for university and college R&D also was revised for 1998 and later years; hence, these data are not directly comparable with data for 1997 and earlier years.

^bExpenditures of industry FFRDCs for 1953–63 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–87.

^cIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

^dBecause of limitations in survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofits' support for their own R&D.

^eIncludes all R&D expenditures of FFRDCs administered by academic institutions.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures prior to 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Because of changes in estimation procedures, character-of-work data before 1998 for industry and for U&C are not comparable with data for later years.

Technical notes explaining methodological issues of measurement will be provided in NSF, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

FFRDC federally funded research and development center

U&C universities and colleges

^aAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. The character-of-work estimation procedure for university and college R&D also was revised for 1998 and later years; hence, these data are not directly comparable with data for 1997 and earlier years.

^bExpenditures of industry FFRDCs for 1953–63 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–87.

^cIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

^dBecause of limitations in survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofits' support for their own R&D.

^eIncludes all R&D expenditures of FFRDCs administered by academic institutions.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures prior to 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Because of changes in estimation procedures, character-of-work data before 1998 for industry and for U&C are not comparable with data for later years. Technical notes explaining methodological issues of measurement will be provided in NSF, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

FFRDC federally funded research and development center

U&C universities and colleges

^aBecause of limitations in survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofits' support for their own R&D.

^bExpenditures of industry FFRDCs for 1953–63 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–87.

^cAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. The character-of-work estimation procedure for university and college R&D also was revised for 1998 and later years; hence, these data are not directly comparable with data for 1997 and earlier years.

^dIncludes all R&D expenditures of FFRDCs administered by academic institutions.

^eIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures prior to 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Because of changes in estimation procedures, character-of-work data before 1998 for industry and for U&C are not comparable with data for later years. Technical notes explaining methodological issues of measurement will be provided in NSF, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

^bExpenditures of industry FFRDCs for 1953–63 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–87.

^cAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. The character-of-work estimation procedure for university and college R&D also was revised for 1998 and later years; hence, these data are not directly comparable with data for 1997 and earlier years.

^dIncludes all R&D expenditures of FFRDCs administered by academic institutions.

^eIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures prior to 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Because of changes in estimation procedures, character-of-work data before 1998 for industry and for U&C are not comparable with data for later years. Technical notes explaining methodological issues of measurement will be provided in NSF, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

FFRDC federally funded research and development center

U&C universities and colleges

^aAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. The character-of-work estimation procedure for university and college R&D also was revised for 1998 and later years; hence, these data are not directly comparable with data for 1997 and earlier years.

^bExpenditures of industry FFRDCs for 1953–63 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–87.

^cIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

^dBecause of limitations in survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofits' support for their own R&D.

^eIncludes all R&D expenditures of FFRDCs administered by academic institutions.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures prior to 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Because of changes in estimation procedures, character-of-work data before 1998 for industry and for U&C are not comparable with data for later years. Technical notes explaining methodological issues of measurement will be provided in NSF, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

FFRDC federally funded research and development center

U&C universities and colleges

^aAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. The character-of-work estimation procedure for university and college R&D also was revised for 1998 and later years; hence, these data are not directly comparable with data for 1997 and earlier years.

^bExpenditures of industry FFRDCs for 1953–63 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–87.

^cIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

^dBecause of limitations in survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofits' support for their own R&D.

^eIncludes all R&D expenditures of FFRDCs administered by academic institutions.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures prior to 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Because of changes in estimation procedures, character-of-work data before 1998 for industry and for U&C are not comparable with data for later years. Technical notes explaining methodological issues of measurement will be provided in NSF, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

Science & Engineering Indicators – 2004

FFRDC federally funded research and development center

U&C universities and colleges

^aBecause of limitations in survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofits' support for their own R&D.

^bExpenditures of industry FFRDCs for 1953–63 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–87.

^cAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. The character-of-work estimation procedure for university and college R&D also was revised for 1998 and later years; hence, these data are not directly comparable with data for 1997 and earlier years.

^dIncludes all R&D expenditures of FFRDCs administered by academic institutions.

^eIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures prior to 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Because of changes in estimation procedures, character-of-work data before 1998 for industry and for U&C are not comparable with data for later years. Technical notes explaining methodological issues of measurement will be provided in NSF, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

FFRDC federally funded research and development center

U&C universities and colleges

^aAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. The character-of-work estimation procedure for university and college R&D also was revised for 1998 and later years; hence, these data are not directly comparable with data for 1997 and earlier years.

^bExpenditures of industry FFRDCs for 1953–63 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–87.

^cIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

^dBecause of limitations in survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofits' support for their own R&D.

^eIncludes all R&D expenditures of FFRDCs administered by academic institutions.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures prior to 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Because of changes in estimation procedures, character-of-work data before 1998 for industry and for U&C are not comparable with data for later years. Technical notes explaining methodological issues of measurement will be provided in NSF, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

FFRDC federally funded research and development center

U&C universities and colleges

^aAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. The character-of-work estimation procedure for university and college R&D also was revised for 1998 and later years; hence, these data are not directly comparable with data for 1997 and earlier years.

^bExpenditures of industry FFRDCs for 1953–63 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–87.

^cIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

^dBecause of limitations in survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofits' support for their own R&D.

^eIncludes all R&D expenditures of FFRDCs administered by academic institutions.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures prior to 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Because of changes in estimation procedures, character-of-work data before 1998 for industry and for U&C are not comparable with data for later years. Technical notes explaining methodological issues of measurement will be provided in NSF, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

FFRDC federally funded research and development center

U&C universities and colleges

^aBecause of limitations in survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofits' support for their own R&D.

^bExpenditures of industry FFRDCs for 1953–63 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–87.

^cAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. The character-of-work estimation procedure for university and college R&D also was revised for 1998 and later years; hence, these data are not directly comparable with data for 1997 and earlier years.

^dIncludes all R&D expenditures of FFRDCs administered by academic institutions.

^eIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures prior to 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Because of changes in estimation procedures, character-of-work data before 1998 for industry and for U&C are not comparable with later years. Technical notes explaining methodological issues of measurement will be provided in NSF, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

FFRDC federally funded research and development center

U&C universities and colleges

^aBecause of limitations in survey information, data on non-Federal Government funding to other performers are not available and are consequently included in other sectors' support for their own R&D performance. For example, non-Federal Government support to nonprofits is included in nonprofits' support for their own R&D.

^bExpenditures of industry FFRDCs for 1953–63 were not separated from total Federal support to the industrial sector. Thus, the figure for Federal support to industry includes support to FFRDCs for those years. The same is true for expenditures of nonprofit FFRDCs, which are included in Federal support for nonprofit institutions in 1953–87.

^cAdjustments have been made to university R&D for 1998 and later years to eliminate double counting of funds passed through from one academic institution to another. The character-of-work estimation procedure for university and college R&D also was revised for 1998 and later years; hence, these data are not directly comparable with data for 1997 and earlier years.

^dIncludes all R&D expenditures of FFRDCs administered by academic institutions.

^eIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.

NOTES: Expenditure levels for academic and Federal Government performers are also in reference to calendar years. These levels are approximations based on FY data. For Federal Government expenditures starting in 1977, the calendar-year approximation is 75 percent of the amount reported in the same FY plus 25 percent of the amount reported in the subsequent FY. Academic expenditures in all years and Federal Government expenditures prior to 1977 are 50 and 50 percent, respectively, because those FYs (for most academic institutions and the Federal Government before 1977) began on July 1 instead of October 1. Because of changes in estimation procedures, character-of-work data before 1998 for industry and for U&C are not comparable with data for later years. Technical notes explaining methodological issues of measurement will be provided in NSF, *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (Arlington, VA, forthcoming). Data are based on annual reports by performers except for the nonprofit sector. Data are preliminary for 2001 and 2002. For trend comparisons, use only the historical data reported here. Do not use data published earlier.

SOURCES: Data were derived from National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources*, annual series.

— data not collected; D data have been withheld to avoid disclosing operations of individual companies; NAICS North American Industry Classification System; S imputation of more than 50 percent
na not applicable

^aSome statistics for 1999 have been revised since originally published.

^bBeginning with 2001, statistics for total and federally funded industrial R&D exclude data for federally funded research and development centers.

NOTES: R&D in this table is the industrial R&D performed within company facilities funded from all sources. Funds are the company's own; funds from outside organizations, such as other companies, research institutions, universities and colleges, nonprofit organizations, and state governments; and funds from the Federal Government. Excluded from this table are R&D not performed within the company (e.g., R&D contracted out to other organizations) and R&D not performed in the United States (e.g., R&D not performed on U.S. soil by foreign subsidiaries or other foreign organizations).

For 1999, 2000, and 2001, the frame from which statistical samples were selected was divided into two partitions based on total company employment. In the manufacturing sector, companies with 50 or more employees were included in the large company partition. In the nonmanufacturing sector, companies with 15 or more employees were included in the large company partition. Companies in the respective sectors with employment below these values but with at least 5 employees were included in the small company partition. The purpose of partitioning the sample in this way was to reduce variability in industry estimates largely attributed to random year-to-year selection of small companies by industry and high sampling weights that sometimes were assigned to them. Because of this, in prior reports detailed industry statistics were published from only the large company partition. Statistics from the small company partition were included in the manufacturing, nonmanufacturing, and all industries totals but were aggregated into "small manufacturing" and "small nonmanufacturing" classifications instead of being included in their respective industry classifications. For this chapter, this practice was evaluated and discontinued because it was determined that data for small companies are more useful if they are included in their respective industries even given sampling concerns described above. Consequently, the "small manufacturing" and "small nonmanufacturing" entries are no longer used. For 1999 and 2000, statistics previously published for firms in the small company classifications are not shown separately but are included in the manufacturing, nonmanufacturing, and all industries totals. For more information, see the technical notes in National Science Foundation, Division of Science Resources Statistics, Survey of Industrial Research and Development Methodology: 2001, <http://www.nsf.gov/sbe/srs/sird/start.htm>.

— data not collected; D data have been withheld to avoid disclosing operations of individual companies; NAICS North American Industry Classification System; S imputation of more than 50 percent
na not applicable

^aSome statistics for 1999 have been revised since originally published.

NOTES: R&D in this table is the industrial R&D performed within company facilities funded from all sources except the Federal Government. Funds predominantly are the company's own but also include funds from outside organizations, such as other companies, research institutions, universities and colleges, nonprofit organizations, and state governments. Excluded from this table are company-funded R&D not performed within the company (e.g., R&D contracted out to other organizations) and company-funded R&D not performed in the United States (e.g., R&D not performed on U.S. soil by foreign subsidiaries or other foreign organizations).

For 1999, 2000, and 2001, the frame from which statistical samples were selected was divided into two partitions based on total company employment. In the manufacturing sector, companies with 50 or more employees were included in the large company partition. In the nonmanufacturing sector, companies with 15 or more employees were included in the large company partition. Companies in the respective sectors with employment below these values but with at least 5 employees were included in the small company partition. The purpose of partitioning the sample in this way was to reduce variability in industry estimates largely attributed to random year-to-year selection of small companies by industry and high sampling weights that sometimes were assigned to them. Because of this, in prior reports detailed industry statistics were published from only the large company partition. Statistics from the small company partition were included in the manufacturing, nonmanufacturing, and all industries totals but were aggregated into "small manufacturing" and "small nonmanufacturing" classifications instead of being included in their respective industry classifications. For this report, this practice was evaluated and discontinued because it was determined that data for small companies are more useful if they are included in their respective industries even given sampling concerns described above. Consequently, the "small manufacturing" and "small nonmanufacturing" stublines are no longer used. For 1999 and 2000, statistics previously published for firms in the small company classifications are not shown separately in this table but are included in the manufacturing, nonmanufacturing, and all industries totals. For more information, see the technical notes in National Science Foundation, Division of Science Resources Statistics, Survey of Industrial Research and Development Methodology: 2001, <http://www.nsf.gov/sbe/srs/sird/start.htm>.

D data withheld to avoid disclosing operations of individual companies; FFRDC federally funded research and development center; NA not available; na not applicable; U&C universities and colleges

^aIncludes performance at industry FFRDCs.

^bIndustry sources of industry R&D expenditures include all nonfederal sources of industry R&D expenditures.

^cIncludes total R&D expenditures of FFRDCs administered by academic institutions.

^dOther sources of support for nonprofit institutions were unavailable by state. For 2000, total nonprofit performance is estimated at \$9,368 million. Industry provided an estimated \$1,103 million to the nonprofit sector, and nonprofit institutions provided an estimated \$3,886 million. These non-Federal support amounts are included in the all R&D column for U.S. total and other and unknown. For these two columns, the amounts under all R&D are greater than the sum of the components to the right, because those components do not include non-Federal support to nonprofit organizations.

NOTES: Industry R&D data by state refer to calendar years; other R&D data by state refer to fiscal years but may serve as approximations to calendar-year data. The "other and unknown" category is the difference between the national aggregates and the sum of the individual state data that are reported here. Therefore, part of the other and unknown totals reflects the difference between state totals reported on an FY basis and the U.S. totals that have been adjusted to calendar-year estimates. For industry, the other and unknown totals include the survey data that were not assigned to individual states plus the amounts that were reported for individual states but are suppressed here to protect confidentiality of surveyed companies.

FFRDC federally funded research and development center; U&C universities and colleges; NA not available; D data withheld to avoid disclosing operations of individual companies or because of imputations of more than 50 percent

^aIncludes performance at industry FFRDCs.^bIndustry sources of industry R&D expenditures include all non-Federal sources of industry R&D expenditures.^cIncludes total R&D expenditures of FFRDCs administered by academic institutions.^dOther sources of support for nonprofit institutions were unavailable by state. For 1987, Federal R&D support to "other nonprofit institutions" and "nonprofit FFRDCs" are combined in the "other nonprofit institutions" totals.

NOTE: Industry R&D data refer to calendar years; other R&D data refer to fiscal years but may serve as approximations to calendar-year data.

SOURCE: National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources: 2000 Data Update*, NSF 01–309 (Arlington, VA, 2001).

GSP: gross state product; NA: not available; na: not applicable

NOTES: U.S. R&D total attributable to states equals \$244,852. "Other and unknown" includes R&D performed in the 50 states or District of Columbia, but the specific location of such performance was not provided by survey respondents. It also includes R&D conducted by organizations in the United States, but actual performance does not take place in a particular state or the District of Columbia (e.g., research conducted on marine vessels and research in Puerto Rico). Finally, it includes a small accounting difference because the total for the United States is based on calendar-year data, whereas data by state pertain to the fiscal year for nonindustrial performance. The U.S. total attributable to states excludes the other and unknown component. When state R&D is taken as a percentage of U.S. R&D, the denominator is U.S. total attributable to states.

NOTES: Data for 1980–2001 are actual budget authority, data for 2002 are preliminary estimates, and data for 2003 are proposed based on FY 2003 budget. See appendix table 4-1 for FY gross domestic product implicit price deflators used to convert current dollars to constant 1996 dollars. Beginning in FY 1998, a number of Department of Energy programs were reclassified from energy to general science. In FY 2000, NASA reclassified the Space Station as an R&D plant; this explains part of the drop in space research and technology in that year.

Income security	0	0	0	0	0	0	0	0

NOTES: Data for 1996–2001 are actual budget authority, data for 2002 are preliminary estimates, and data for 2003 are proposed based on FY 2003 budget. See appendix table 4-1 for FY gross domestic product implicit price deflators used to convert current dollars to constant 1996 dollars. Beginning in FY 1998, several Department of Energy programs were reclassified from energy to general science. Beginning FY 1999, the increase in the Department of Veterans Affairs basic research total was a result of data reclassification.

2000	2,510	73,947	3.4	2,349

^aFigures in constant dollars were obtained using FY gross domestic product implicit price deflators (1996 = 100). See appendix table 4-1.

NOTES: Outlay equivalent estimates are comparable to taxable outlay figures reported in the budget. This allows for a comparison of resource cost of the tax credit with cost of direct Federal R&D expenditure support. Tax expenditure estimates are prepared by the U.S. Treasury Department, based on income tax law enacted as of December 31 of the year for which expenditures are reported.

NOTES: Data are company and other non-Federal funds for industrial R&D performance in the United States within the company and contracted to external organizations. Starting with the 1999 survey, estimates are based on North American Industry Classification System. In prior years, estimates were based on the Standard Industrial Classification System.

ATP Advanced Technology Program; SA single applicants; JV joint ventures

NOTES: For multiyear projects, total funding is attributed to the year the award was made. Participants include single applicants, joint venture leaders, and joint venture members; exclude subcontractors and informal collaborators.

NT non-Triad (country or region other than United States, Europe, or Japan)

^aIncludes biotechnology pharmaceuticals.

^bExcludes biotechnology; includes nonbiotechnological pharmaceuticals.

NOTES: Data are annual counts of new technology alliances formed by domestic and multinational corporations worldwide. Alliances may be classified in more than one technology. Total number of alliances at the top of the table is the sum of the following exclusive ownership categories: U.S.-only, U.S.-Europe, U.S.-Japan, U.S.-NT, Europe-only, Europe-Japan, Europe-NT, Japan-only, Japan-NT, and NT-only. The country assignment is based on the headquarters of the ultimate parent company of the alliance members, not on the location of the members. Data were revised from previous editions to include exclusively joint research or development agreements, contract R&D, equity joint ventures, and research corporations. Previous counts included cross holdings (where two companies take a minority interest in each other), mutual second sourcing, and cross-licensing agreements. This change, however, had little effect on overall trends. The data now provide detail on the structure of the alliances in terms of equity versus nonequity alliances.

OECD Organisation for Economic Co-operation and Development

^aData on Japanese R&D in 1996 and later years may not be consistent with data in earlier years because of changes in methodology.^bData for 1981–90 are for West Germany.^cConversions of foreign currencies to U.S. dollars are calculated with each country's GDP implicit price deflator and with OECD purchasing power parity exchange rates.^dConstant foreign currencies are based on deflation with each country's GDP implicit price deflator. Figures for Germany, France, and Italy are in euros.SOURCE: OECD, *Main Science and Technology Indicators* (Paris, 2002).

GDP gross domestic product

NA not available

^aData on Japanese R&D in 1996 and later years may not be consistent with data in earlier years because of changes in methodology.^bData for 1981–90 are for West Germany.^cNondefense R&D data are estimates. Nondefense R&D/GDP ratios are obtained directly from Organisation for Economic Co-operation and Development (OECD) reports or, for the following countries and years, are estimated by the National Science Foundation from OECD data: United States for all years; Japan for 1995 and later years; Germany for 1990 and earlier years; United Kingdom for 1981–84 and 1986–88; Italy for 1986 and earlier years; and Canada for 1990 and later years. Conversions of foreign currencies to U.S. dollars are calculated with OECD purchasing power parity exchange rates.

NOTE: The nondefense R&D/GDP ratio for the Russian Federation was 1.2 in 1990, 0.6 in 1995, and 0.9 in 2001.

SOURCES: OECD, *Main Science and Technology Indicators* (Paris, 2002); and National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources* (Arlington, VA, annual series).

GUF general university funds

NA not available separately

^aUnited States, Russian Federation, and Korea do not have a category equivalent to GUF.

NOTES: Conversions of foreign currencies to U.S. dollars are calculated with Organisation for Economic Co-operation and Development (OECD) purchasing power parity exchange rates. Percents may not sum to 100 because of rounding. U.S. data are based on budget authority. Because of GUF and slight differences in accounting practices, the distribution of government budgets among socioeconomic objectives may not completely reflect actual distribution of government-funded research in particular objectives. Japanese data are based on science and technology budget data, which include items other than R&D. Such items are a small proportion of the budget; therefore, data may still be used as an approximate indicator of relative government emphasis on R&D by objective.

D data withheld to avoid disclosing operations of individual companies

NOTES: Data are for majority-owned (more than 50 percent) nonbank U.S. affiliates of foreign parent companies. Data for 1980 and 1987–96 are for R&D funded by affiliates; 1997 to latest data are for R&D performed by affiliates. Manufacturing data exclude petroleum manufacturing before 1997. Estimates for 2000 are preliminary. Total R&D funded is based on R&D spending according to the funding source. Total R&D performed refers to R&D expenditures according to who conducts the R&D activity, whether for the performer itself or for others under contract, and excludes R&D expenditures conducted by others under contract. Ultimate beneficial owner (UBO) refers to the person proceeding up the U.S. affiliate's ownership chain beginning with and including the foreign parent that is not owned more than 50 percent by another person.

MNC multinational corporation

NOTES: A U.S. MNC-parent company is a company, resident in the United States, that owns or controls at least 10 percent of the voting securities, or equivalent, of a foreign business enterprise. Funded R&D is based on R&D funded by the MNC-parent company itself, regardless of the performer. R&D performed includes R&D performed by U.S. MNC-parent companies, regardless of funding source, whether for the performer itself or for others, including R&D performed for the Federal Government; excludes R&D conducted by others under contract. Estimates for 2000 are preliminary. Estimates for 1999 forward are based on the North American Industry Classification System, and data for manufacturing include the petroleum industry. In prior years, estimates were based on the Standard Industrial Classification System, and manufacturing data excluded the petroleum industry. Full methodology notes are available at the original source (see below).

2000	100.0	74.3	21.8	3.9
2001	100.0	74.0	22.1	3.9
2002	100.0	74.1	22.2	3.7

NOTES: Data for 2001 and 2002 are preliminary. Expenditure levels for academic R&D are also in reference to calendar years. These levels are approximations based on FY data. Because of changes in estimation procedures, the character of work data before FY 1998 is not comparable with that of later years. For details of methodological issues of measurement, see *The Methodology Underlying the Measurement of R&D Expenditures: 2002* (NSF/SRS, Arlington, VA, forthcoming). Data are based on annual reports by performers. See appendix tables 4-3, 4-7, 4-11, and 4-15.

SOURCE: National Science Foundation, Division of Science Resources Statistics, *National Patterns of R&D Resources* (Arlington, VA, annual series).

— less than \$1 million

*Although not officially classified as a federally funded research and development center, the Johns Hopkins University Applied Physics Laboratory functions as one and performs almost as much R&D as the university. It is included as a separate entry to provide a better measure of distribution of academic R&D dollars and ranking of individual institutions.

NOTE: Public and private refer to institutional control.

SOURCES: National Science Foundation, Division of Science Resources Statistics (NSF/SRS), *Academic Research and Development Expenditures: Fiscal Year 2001*, NSF 03-316 (Arlington, VA, 2003); and NSF/SRS, WebCASPAR database system, <http://caspar.nsf.gov>.

Other sciences	4	2	2	2	2	3	3	3
Engineering	16	17	18	21	22	23	25	26

NOTES: Total R&D space is current actual space reported at the time of the survey. Square footage refers to net assignable square feet (the sum of all areas on all floors of a building assigned to, or available to be assigned to, an occupant for specific use, such as instruction or research). Details may not add to totals because of rounding.

U&C universities and colleges

NOTES: See chapter 2, "Classification of Academic Institutions," for information on the institutional categories used by the Carnegie Foundation for the Advancement of Teaching. Full-time faculty includes full, associate, and assistant professors plus instructors. Other types of positions include full-time nonfaculty positions such as research associates, adjunct positions, lecturers, administrative positions, and part-time positions of all kinds. Details may not add to totals because of rounding.

U&C universities and colleges

NOTES: Employment at institutions without a Carnegie code or with unknown administrative control is included only in total. Freestanding schools of engineering and technology are included under comprehensive institutions. Senior faculty includes full and associate professors; junior faculty includes assistant professors and instructors; and full-time nonfaculty includes positions such as research associates, adjunct appointments, lecturers, and administrative positions. See chapter 2, "Classification of Academic Institutions," for information on the institutional categories used by the Carnegie Foundation for the Advancement of Teaching. Details may not add to totals because of rounding.

NA not available

NOTES: Faculty are defined by position: professors and associate professors are senior faculty; junior faculty are assistant professors or instructors; other full-time positions include nonfaculty positions such as research associates, adjunct appointments, lecturers, and administrative positions. Details may not add to totals because of rounding.

SOURCE: National Science Foundation, Division of Science Resources Statistics, Survey of Doctorate Recipients, unpublished tabulations.

NOTES: See chapter 2, "Classification of Academic Institutions," for information on the institutional categories used by the Carnegie Foundation for the Advancement of Teaching. Recent doctorate-holders are defined as having earned their doctorate within 3 years or within 4–7 years, respectively, preceding the survey year. Full-time faculty includes full, associate, and assistant professors plus instructors. Other types of positions include full-time nonfaculty appointments such as research associates, adjunct appointments, lecturers, administrative positions, and part-time appointments of all kinds. Details may not add to totals because of rounding.

NA not available

NOTES: Faculty is defined by position. Senior faculty includes full and associate professors; junior faculty members are either assistant professors or instructors. Other types of full-time positions include nonfaculty positions such as research associates, adjunct appointments, lecturers, and administrative positions. Details may not add to totals because of rounding.

NA not available

NOTES: Faculty positions include full, associate, and assistant professors and instructors. Other types of full-time positions include nonfaculty positions such as research associates, adjunct appointments, lecturers, and administrative positions. Underrepresented minorities are black, Hispanic, and American Indian/Alaskan Native respondents. Details may not add to totals because of rounding.

NA not available

NOTES: Numbers are rounded to nearest hundred. Percent foreign is based on actual rather than rounded numbers and is reported to the nearest whole number. Small number of unknowns through 1987 not shown. Senior faculty includes full and associate professors. Junior faculty includes assistant professors and instructors. Other types of full-time positions include nonfaculty positions such as research associates, adjunct appointments, lecturers, and administrative positions. Details may not add to totals because of rounding.

U&C universities and colleges

NOTES: Researchers are those reporting research as either primary or secondary work activity. Graduate research assistants are full-time graduate students with primary research assistantship support. Freestanding schools of engineering and technology are included under comprehensive institutions. Employment at institutions without a Carnegie code or with unknown administrative control is included under "All others." See chapter 2, "Classification of Academic Institutions," for information on the institutional categories used by the Carnegie Foundation for the Advancement of Teaching. Percents may not sum to 100 because of rounding.

SOURCES: National Science Foundation, Division of Science Resources Statistics (NSF/SRS), Survey of Doctorate Recipients; and NSF/SRS, Survey of Graduate Students and Postdoctorates in Science and Engineering, unpublished tabulations.

NOTES: Researchers are those reporting research as either primary or secondary work activity. Full-time faculty includes full, associate, and assistant professors plus instructors. Other types of positions include full-time nonfaculty positions such as research associates, adjunct positions, lecturers, administrative positions, and part-time positions of all kinds. Percents may not sum to 100 because of rounding.

— too few cases

NA not available

^aNot comparable to the other years and understates degree of Federal support by asking whether work performed during week of April 15 was supported by the Government. In other years, question pertains to work conducted over course of a year.

NOTES: Full-time faculty includes full, associate, and assistant professors plus instructors. Other types of full-time positions include nonfaculty appointments such as research associates, adjunct appointments, lecturers, and administrative positions.

SOURCE: National Science Foundation, Division of Science Resources Statistics, Survey of Doctorate Recipients, unpublished tabulations.

NA not available

^aNot comparable to the other years and understates degree of Federal support by asking whether work performed during the week of April 15 was supported by the Government. In other years, question pertains to work conducted over course of a year.

NOTES: Recent doctorate holders are defined as having earned their doctorate within 3 years or within 4–7 years, respectively, preceding the survey year. Full-time faculty includes full, associate, and assistant professors plus instructors. Other types of full-time positions include nonfaculty appointments such as research associates, adjunct appointments, lecturers, and administrative positions.

OECD Organisation for Economic Co-operation and Development

NOTES: Article counts are from a set of journals classified and covered by the Institute for Scientific Information's Science Citation and Social Sciences Citation Indexes. Article counts are based on fractional assignments; for example, an article with two authors from different countries is counted as one-half of an article for each country. Countries with article output of less than 0.01 percent of world output in 2001 are grouped in "All others." Germany's output includes articles from the former East Germany before 1992. China's output includes articles from the Hong Kong economy before 2000. Czech Republic's output includes articles from the former Czechoslovakia before 1996. Article output from the former U.S.S.R. is included. Details may not add to totals because of rounding.

OECD Organisation for Economic Co-operation and Development

NOTES: Article counts are from a set of journals classified and covered by the Institute of Scientific Information's Science Citation and Social Sciences Citation Indexes. Article counts are based on fractional assignments; for example, an article with two authors from different countries is counted as one-half of an article for each country. Countries with article output of less than 0.01 percent of world output in 2001 are grouped in "All others." Article and field data, however, are included for the former U.S.S.R. for 1988. Articles are assigned to fields based on journal field classifications developed by CHI Research, Inc.

SOURCES: Institute for Scientific Information, Science Citation Index and Social Sciences Citation Index; CHI Research, Inc.; and National Science Foundation, Division of Science Resources Statistics, special tabulations.

OECD Organisation for Economic Co-operation and Development

NOTES: Article counts are from a set of journals classified and covered by the Institute of Scientific Information's Science Citation and Social Sciences Citation Indexes. Article counts are based on fractional assignments; for example, an article with two authors from different countries is counted as one-half of an article for each country. Countries with article output of less than 0.01 percent of world output in 2001 are grouped in "All others." China's data include articles from the Hong Kong economy for 2001. Articles are assigned to fields based on journal field classifications developed by CHI Research, Inc.

SOURCES: Institute for Scientific Information, Science Citation Index and Social Sciences Citation Index; CHI Research, Inc.; and National Science Foundation, Division of Science Resources Statistics, special tabulations.

NOTES: Internationally coauthored articles are those with at least one coauthor from another country. Article counts are on a whole-count basis, where each coauthor's country, including the United States, is credited with a whole count. Countries whose share of world article output is less than 0.01 percent are excluded.

NOTES: Data are share of indicated country's articles internationally coauthored with other countries in the same region. Internationally coauthored articles are on a whole-count basis, where each coauthor's country is credited with a whole count. Because of the high degree of intra European collaboration, shares exceed 100 percent in some cases.

NOTES: Citation counts are based on a 3-year window with a 2-year lag. For example, citations for 1999 are references made in articles published in 1999 to articles published in 1995–97. Country/economy is determined by the cited article's institutional address. Percents may not sum to 100 because of rounding. German data for 1992 includes former East Germany. China data includes Hong Kong. Czech Republic data for 1992 and 1996 includes the former Czechoslovakia.

NOTES: Relative prominence of S&E literature is based on region's relative citation index. This index measures the frequency of citation of a country or region's S&E literature, adjusted for its world share of S&E articles. An index of 1.00 would indicate that the region's share of cited literature was equal to its world share of S&E literature. An index greater or less than 1.00 would indicate that the region was cited relatively more or less frequently than indicated by its share of world S&E literature. Country/region's citations of its own literature are not included in its relative citation index.

36 Slovakia.....	na	0.05

na not applicable

^aComputer sciences are included in engineering and technology.

NOTES: Relative prominence of S&E literature is measured on the basis of the relative citation index of the country. This index is the country's share of cited literature adjusted for its share of published literature. A country's citation of its own literature is excluded. An index of 1.00 would indicate that the country's share of cited literature is equal to the country's world share of S&E literature. An index greater (less) than 1.00 would indicate that the country is cited relatively more (less) than is indicated by the country's share of S&E literature. Countries with less than a 0.10 percent share of world publications in the cited field or that did not cite S&E literature over the period are excluded or are marked na. Countries ranked by descending order of relative citation index in 2001.

NOTES: Citations are references to U.S. S&E articles in journals indexed and tracked by the Institute for Scientific Information's Science Citation Index and Social Sciences Citation Index. Citation counts are based on a 3-year window with a 2-year lag. For example, citations for 1999 are references made in articles published in 1999 to articles published in 1995–97. Country/region is determined by the cited article's institutional address. Share of foreign citations do not add up to 100 percent because Canada and Mexico are not included.

NOTES: Citations are references to U.S. S&E articles in journals covered by the Institute for Scientific Information's Science Citation Index and Social Sciences Citation Index. Citation counts are based on a 6-year window with a 2-year lag. For example, citations for 2002 are references made in U.S. patents issued in 2002 to articles published in 1995–2000. 2002 patent data are preliminary and subject to change. Sector is determined by the cited article's institutional address. S&E field is determined by CHI's classification of the journal. Computer sciences are included in engineering and technology. Other includes the fields of earth and space sciences, mathematics, social sciences, psychology, health sciences, and professional field. Percents may not sum to 100 because of rounding.

NOTES: Data include institutions affiliated with academic institutions, such as university and alumni organizations, federally funded research and development centers, foundations, and university associations. Top 100 patenting institutions are determined by the sum of their patents from 1991 through 2001. Institutions are listed in declining order. Data for certain institutions are for the systemwide university and incorporate data from various campuses.

NOTES: Production = total gross output; import penetration = (imports/apparent consumption)100; apparent consumption, a measure of home-market demand, is calculated by taking production plus imports minus exports (corrected for implied service costs). Gross value added reported here is equal to gross output less the consumption of intermediate inputs and supplies. Conceptually, value added is the current income from ongoing current production that is available for distribution to factors of production. Seventy countries or economies are included in "all countries." High-technology sectors cover aerospace; computers and office machinery; communications equipment; pharmaceuticals; and medical, precision and optical instruments. Other European Union countries include Austria, Belgium, Denmark, Finland, Greece, Ireland, Netherlands, Portugal, Spain, and Sweden.

NOTES: Production equals total gross output. Seventy countries or economies are included in "all countries." High-technology sectors cover communications services, finance and insurance, business services, education, and health services. Other European Union countries include Austria, Belgium, Denmark, Finland, Greece, Ireland, Netherlands, Portugal, Spain, and Sweden.

^aComprises Albania, Azerbaijan, Belarus, Bulgaria, Czech Republic, Estonia, Georgia, Hungary, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Poland, Romania, Russia, Slovakia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan.^bAustria, Finland, and Sweden joined European Union in 1995. European Union countries not listed separately are Denmark, Greece, Ireland, and Portugal.^cData before 1990 are for the former West Germany only. Beginning in 1990, data include former East Germany.^dIncludes data before 1994.

NOTES: Industrial processes include patents and other proprietary inventions and technology. Affiliate refers to a business enterprise located in one country that is directly or indirectly owned or controlled by an entity in another country. Controlling interest must equal 10 percent or more of its voting stock or its equivalent.

Venezuela.....	37.2	46.0	19.5	20.3	123.0

NOTES: For score and indicator calculations, raw data were transformed into scales of 0–100 for each indicator component and then averaged to generate comparable indicators with a 0–100 range. For survey items, 100 represents the highest response category for each question; for statistical data, 100 typically represents the value attained by the country with the largest value among the 33 countries included in the study. In the indicator formulations cited below, each term carries equal weight.

National orientation (NO) provides evidence that a nation is taking directed action to achieve technological competitiveness. These actions could take place in the business, government, or cultural sector or any combination of the three.

Indicator formulation: $NO = [Q1 + (Q2 + Q3)/2 + Q4 + F1V2002]/4$.

Data used: Published data from the PRS Group, Political and Economic Forecast table, Political Risk Letter for 2002 rating each country's investment risk (F1V2002); and survey data assessing each country's national strategy to promote high-technology development (Q1), social influences favoring technological change (Q2 and Q3), and entrepreneurial spirit (Q4).

Socioeconomic infrastructure (SE) assesses the social and economic institutions that support and maintain the physical, human, organizational, and economic resources essential to the functioning of a modern, technology-based industrial nation.

Indicator formulation: $SE = (Q5 + Q10 + HMHS2000)/3$.

Data used: Published data on the percentage of students enrolled in secondary (net percentage) and tertiary (gross percentage) education (HMHS2000) from the Harbison-Myers Skills Index for 2000, *Gross and Net Enrollment Ratio at Secondary Level by Country and by Gender for the School Years 1998/1999 and 1999/2000*, Institute for Statistics, United Nations Educational, Scientific, and Cultural Organization (UNESCO), October 2002 and *Gross Enrollment Ratio at Tertiary Level by Country and Gender for the Academic Years 1998/1999 and 1999/2000*, Institute for Statistics, UNESCO, October 2002; and survey data assessing each country's efforts to attract foreign investment (Q10) and the mobility of capital (Q5).

Technological infrastructure (TI) assesses the institutions and resources that contribute to a nation's capacity to develop, produce, and market new technology.

Indicator formulation: $TI = [(Q7 + Q8)/2 + Q9 + Q11 + EDP2002 + S\&E2000]/5$.

Data used: Published data from *Science and Technology*, Personnel Engaged in R&D by Category of Personnel (new available data for 1996-2000), Institute for Statistics, UNESCO, November 2002, on the number of scientists and engineers involved in research in 2000 (S&E 2000), national purchases of electronic data-processing equipment (EDP2002) from Reed Electronics Research, *Yearbook of World Electronics Data 2002/2003*, Reed Business Information Ltd., England, 2002; and survey data assessing linkages of R&D to industry (Q9), output of indigenous academic S&E (Q7 and Q8), and the ability to make effective use of technological knowledge (Q11).

Productive capacity (PC) assesses the physical and human resources devoted to manufacturing products and the efficiency with which those resources are employed.

Indicator formulation: $PC = (Q6 + Q12 + Q13 + A262002)/4$.

Data used: Published data on electronics production (A262002) from Reed Electronics Research, *Yearbook of World Electronics Data 2002/2003*, Reed Business Information Ltd., England, 2002; and survey data assessing the supply and quality of skilled labor (Q6), capability of the indigenous management (Q13), and the existence of indigenous suppliers of components for technology-intensive products (Q12).

NOTES: For score and indicator calculations, raw data were transformed into scales of 0–100 for each indicator component and then averaged to generate comparable indicators with a 0–100 range. For survey items, 100 represents the highest response category for each question; for statistical data, 100 typically represents the value attained by the country with the largest value among the 30 countries included in the study. In the indicator formulations cited below, each term carries equal weight.

National orientation (NO) provides evidence that a nation is taking directed action to achieve technological competitiveness. These actions could take place in the business, government, or cultural sector or any combination of the three.

Indicator formulation: $NO = [Q1 + (Q2 + Q3)/2 + Q4 + F1V99]/4$.

Data used: Published data from the PRS Group, Political and Economic Forecast table, Political Risk Letter for 1999 rating each country's investment risk (F1V99); and survey data assessing each country's national strategy to promote high-technology development (Q1), social influences favoring technological change (Q2 and Q3), and entrepreneurial spirit (Q4).

Socioeconomic infrastructure (SE) assesses the social and economic institutions that support and maintain the physical, human, organizational, and economic resources essential to the functioning of a modern, technology-based industrial nation.

Indicator formulation: $SE = (Q5 + Q10 + HMHS99)/3$.

Data used: Published data on the percentage of students enrolled in secondary and tertiary education (HMHS99) from the Harbison-Myers Skills Index for 1999, table 2.10, *1999 World Development Indicators*, World Bank, 1999; and survey data assessing each country's efforts to attract foreign investment (Q10) and the mobility of capital (Q5).

Technological infrastructure (TI) assesses the institutions and resources that contribute to a nation's capacity to develop, produce, and market new technology.

Indicator formulation: $TI = [(Q7 + Q8)/2 + Q9 + Q11 + EDP99 + S\&E96]/5$.

Data used: Published data from *Statistical Yearbook 1998*, UNESCO, 1998, on the number of scientists and engineers involved in research in 1996 (S&E 96), national purchases of electronic data-processing equipment (EDP99) from Reed Electronics Research, *Yearbook of World Electronics Data 1999/2000*, Reed Business Information Ltd., England, 1999; and survey data assessing linkages of R&D to industry (Q9), output of indigenous academic S&E (Q7 and Q8), and the ability to make effective use of technological knowledge (Q11).

Productive capacity (PC) assesses the physical and human resources devoted to manufacturing products and the efficiency with which those resources are employed.

Indicator formulation: $PC = (Q6 + Q12 + Q13 + A2699)/4$.

Data used: Published data on electronics production (A2696) from Reed Electronics Research, *Yearbook of World Electronics Data 1999/2000*, Reed Business Information Ltd., England, 1999; and survey data assessing the supply and quality of skilled labor (Q6), capability of the indigenous management (Q13), and the existence of indigenous suppliers of components for technology-intensive products (Q12).

ISIC International Standard Industrial Classification; NA not available; NEC not elsewhere classified; PPP purchasing power parity

NOTES: Wood, paper, printing, and publishing (ISIC, R-3: 20...22) includes furniture (ISIC, R-3: 361). Pulp, paper, and paper products (ISIC, R-3: 21) includes publishing, printing, and reproduction of recorded media (ISIC, R-3: 22). Other transport NEC (ISIC, R-3: 3 for 1987–95). Total services (ISIC, R-3: 50...99) includes agriculture (ISIC, R-3: 1+2+5); mining (ISIC, R-3: 10...14); electricity, gas, and water (ISIC, R-3: 40+41), and construction (ISIC, R-3: 45). Industry-level data may not add to totals because of rounding and incomplete data.

Appendix table 6-12

Patent classes most emphasized (top 50) by United Kingdom inventors patenting in United States: 1991 and 2001

Title (partial)	Class	Patents granted to investors from:					
		All countries		United Kingdom		Active 5 index	
		1991	2001	1991	2001	1991	2001
All classes	TOT	76,726	143,268	2,519	3,832	1.000	1.000
Electrical audio signal processing systems and devices	381	151	229	3	25	0.624	4.358
Cleaning compositions for solid surfaces, auxiliary compositions therefor, or processes of preparing the compositions	510	245	562	25	46	3.206	3.267
Wells (shafts or deep borings in the earth, e.g., for oil and gas)	166	330	503	20	39	1.904	3.095
Fluid sprinkling, spraying, and diffusing	239	263	349	10	26	1.195	2.974
Compositions: coating or plastic	106	309	386	12	23	1.220	2.379
Drug, bioaffecting and body treating compositions (includes class 514)	424	3,321	6,570	250	385	2.365	2.339
Chemistry: analytical and immunological testing	436	197	368	4	18	0.638	1.953
Aeronautics	244	216	335	19	16	2.764	1.907
Boring or penetrating the earth	175	136	254	10	12	2.310	1.886
Seal for a joint or juncture	277	170	291	12	13	2.218	1.783
Winding, tensioning, or guiding	242	319	352	2	15	0.197	1.701
Organic compounds (includes classes 532–570)	532	2,788	3,160	101	130	1.138	1.642
Registers (e.g., cash registers, calculators, devices for counting movements of devices)	235	208	467	7	19	1.057	1.624
Rotary kinetic fluid motors or pumps	415	117	271	11	11	2.954	1.620
Chemistry: molecular biology and microbiology	435	860	3,650	29	146	1.059	1.597
Multiplex communications	370	339	1,898	9	74	0.834	1.556
Brakes	188	194	424	11	16	1.782	1.506
Receptacles	220	221	296	8	11	1.137	1.483
Electrolysis: processes, compositions used therein, and methods of preparing the compositions	205	243	405	11	15	1.422	1.478
Measuring and testing	073	897	1,364	39	50	1.366	1.463
Optical waveguides	385	603	1,239	40	45	2.084	1.450
Chemistry: natural resins or derivatives; peptides or proteins; lignins or reaction products thereof	530	264	553	6	20	0.714	1.444
Telecommunications	455	251	1,763	5	63	0.626	1.426
Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor	623	167	560	3	20	0.564	1.426
Multicellular living organisms and unmodified parts thereof and related processes	800	23	548	2	19	2.732	1.384
Fluid reaction surfaces (i.e., impellers)	416	88	202	6	7	2.142	1.383
Fluent material handling, with receiver or receiver coating means	141	123	260	3	9	0.766	1.382
Typewriting machines	400	290	232	4	8	0.433	1.377
Electric lamp and discharge devices: systems	315	392	552	16	19	1.282	1.374
Rotary expandable chamber devices	418	140	204	4	7	0.898	1.370
Special receptacle or package	206	341	438	11	15	1.014	1.367
Communications: electrical	340	446	1,041	13	35	0.916	1.342
Power plants	060	430	902	21	30	1.534	1.328
Telephonic communications	379	274	891	3	29	0.344	1.299
Multiple computer or process coordinating (electrical computers and digital processing systems)	709	80	1,395	5	45	1.964	1.288
Optics: measuring and testing	356	538	651	20	21	1.168	1.288
Static structures (e.g., buildings)	052	380	604	20	19	1.654	1.256
Coded data generation or conversion	341	281	609	9	19	1.006	1.245
Machine element or mechanism	074	364	522	12	16	1.036	1.224
Optics: systems (including communication) and elements	359	882	1,925	32	59	1.140	1.223
Dispensing (apparatus and process)	222	376	471	15	14	1.253	1.187
Electricity: magnetically operated switches, magnets, and electromagnets	335	155	203	3	6	0.608	1.180
Pipe joints or couplings	285	191	240	11	7	1.809	1.164
Data processing: measuring, calibrating, or testing	702	205	518	6	15	0.920	1.156
Food or edible material: processes, compositions, and products	426	556	692	14	20	0.791	1.154
Data processing: database and file management, data structures, or document processing	707	95	1,186	4	34	1.323	1.144
Internal-combustion engines	123	1,012	1,546	31	44	0.962	1.136
Surgery (includes class 600)	128	746	1,796	14	51	0.590	1.134
Pumps	417	341	577	14	16	1.290	1.107
Fluid-pressure and analogous brake systems	303	162	291	10	8	1.939	1.097
Chemistry of inorganic compounds	423	502	444	17	12	1.064	1.079

NOTES: Activity index is the percentage of patents in a class that are granted to inventors from one country divided by the percentage of all patents that have inventors from that country in that year. Listing is limited to Patent and Trademark Office classes that have received at least 200 patents from all countries in 2001.

Pipe joints or couplings	285	191	240	17	10	2.711	1.558
Compositions: coating or plastic	106	309	386	9	16	0.887	1.550
Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor	623	167	560	7	23	1.277	1.536
Fluid sprinkling, spraying, and diffusing	239	263	349	9	14	1.042	1.500
Optical waveguides	385	603	1,239	18	49	0.909	1.479
Electricity: circuit makers and breakers	200	220	253	7	10	0.969	1.478
Organic compounds (includes classes 532–570)	532	2,788	3,160	135	123	1.475	1.455
Metal deforming	072	311	397	8	15	0.784	1.413
Wells (shafts or deep borings in the earth, e.g., for oil and gas)	166	330	503	11	19	1.015	1.412
Electrolysis: processes, compositions used therein, and methods of preparing the compositions	205	243	405	9	15	1.128	1.385
Communications: directive radio wave systems and devices (e.g., radar, radio navigation)	342	252	464	22	17	2.659	1.370
Bearings	384	217	279	7	10	0.983	1.340
Heat exchange	165	297	363	9	13	0.923	1.339
Land vehicles: bodies and tops	296	253	618	1	22	0.120	1.331
Measuring and testing	073	897	1,364	35	48	1.188	1.316
Chemical apparatus and process disinfecting, deodorizing, preserving, or sterilizing	422	393	541	21	19	1.628	1.313
Metal treatment	148	297	435	12	15	1.231	1.289
Registers (e.g., cash registers, calculators, devices for counting movements of devices)	235	208	467	14	16	2.050	1.281
Special receptacle or package	206	341	438	14	15	1.251	1.280
Electricity: conductors and insulators	174	246	821	6	28	0.743	1.275
Illumination	362	307	623	8	21	0.794	1.260
Power plants	060	430	902	17	30	1.204	1.243
Electric power conversion systems	363	196	453	7	15	1.088	1.238
Data processing: measuring, calibrating, or testing	702	205	518	2	17	0.297	1.227
Chemistry: molecular biology and microbiology	435	860	3,650	22	118	0.779	1.209
Brushing, scrubbing, and general cleaning	015	200	318	6	10	0.914	1.176
Seal for a joint or juncture	277	170	291	6	9	1.075	1.156
Supports (e.g., for holding articles)	248	340	357	14	11	1.254	1.152
Data processing: design and analysis of circuit or semiconductor mask	716	33	390	0	12	0.000	1.150
Brakes	188	194	424	17	13	2.669	1.146
Compositions	252	479	462	11	14	0.699	1.133
Amplifiers	330	227	429	9	13	1.208	1.133

NOTES: Activity index is the percentage of patents in a class that are granted to inventors from one country divided by the percentage of all patents that have inventors from that country in that year. Listing is limited to Patent and Trademark Office classes that have received at least 200 patents from all countries in 2001.

SOURCE: U.S. Patent and Trademark Office, Information Products Division, Technology Assessment and Forecast Branch, special tabulations. (Washington, DC, 2002).

IT information technology

S suppressed for reasons of reliability due to receiving fewer than 20 responses

^aBreakdown by innovation excludes 32 cases, representing 1,100 companies, in which innovator status could not be determined. To be classified as an innovator, the company had to indicate that it had developed a product or process in the past 12 months or believed it would develop a product or process in the next 12 months as a result of IT-based innovation. The survey was conducted between July 2001 and April 2002.

NOTES: Responses are to the question: "Did your company develop any products or processes in the past 12 months that were the result of IT-based innovation?" Nonresponse consists of item nonresponse, don't know responses, and item refusal. IT is defined as the hardware and software that support the production or use of computer-based information systems, the infrastructure necessary to access such information systems, or data-processing services. Companies are classified as IT or non-IT based on their 4-digit standard industrial classification (SIC) number. IT manufacturing includes companies with SICs 3571–3579, 3651, 3661–3679, 3823–3826, and 3895. IT communication includes companies with SICs 4812–4822, 4832, 4833, and 4841–4899. IT computer-related services include companies with SICs 7371–7379. Non-IT manufacturing includes companies with SICs 2011–3569, 3581–3648, 3652, 3691–3694, 3699–3822, and 3827–3999. Non-IT transportation and public utilities include companies with SICs 4011–4231, 4412–4789, and 4911–4971. Non-IT finance, insurance, and real estate include companies with SICs 6011–6036, 6081–6153, 6159, and 6162–6799. Non-IT engineering and AAB services include companies with SICs 8711 and 8721.

High	33	6	16	—	35	9	—	1	1	—	431
Attentiveness to science and technology ^b											
Attentive public	37	7	8	—	44	3	0	—	1	—	195
Interested public.....	27	4	9	1	53	6	—	1	1	—	755
Residual public.....	29	2	6	—	55	6	0	2	1	—	624

— less than 0.5 percent responded.

^aLow = five or fewer high school and college science/math courses, middle = six to eight courses, high = nine or more courses.

^bAttentive = very interested in the issue, very well informed about it, and a regular reader of a daily newspaper or relevant national magazine. Interested = very interested but not well informed. Residual = all others. Classifications encompass new scientific discoveries, inventions, and technologies.

NOTES: Percents may not sum to 100 because of rounding. A few respondents did not provide information about highest level of education. Responses are to the following question: *We are interested in how people get information about events in the news. Thinking about the kind of issues we have been talking about, where do you get most of your information about current news events?*

— not asked

^aDoes not include banks and financial institutions.

NOTES: Percents represent respondents expressing a "great deal of confidence" when asked the following question: *As far as the people running these institutions are concerned, would you say that you have a great deal of confidence, only some confidence, or hardly any confidence at all in them?* The survey was not conducted in 1979 and 1981 and was conducted every other year from 1994 through 2002; the question was not asked in 1985.
