Department of Social & Behavioral Sciences
3333 California Street Suite 455
San Francisco, CA 94118

February 2000

This project was funded by the Health Care Financing Administration (HCFA) Contract No. 500-97-0002. The opinions expressed in the report are those of the authors and do not necessarily reflect the position of the Health Care Financing Administration.

The majority of the HCFA 372 Form data presented in this report were collected from states, with a portion of the data from HCFA. HCFA 372 reports are “accepted” when HCFA reviews have determined the reports to be complete, consistent with the services in the approved waiver, and shown to demonstrate cost-neutrality. Data collected by the researcher directly from the States for this project may or may not have undergone this review, and consequently, may not have been accepted by HCFA.

Where the actual HCFA 372 Forms were not available, estimates were derived by either the states or the researcher, UCSF.

Further, the data, obtained either directly from HCFA 372 Forms or through estimates, have not been validated by HCFA against actual claims data. Therefore, HCFA cannot attest to the accuracy of these data.

**1915(c) MEDICAID HOME AND COMMUNITY BASED WAIVER
PROGRAM DATA (HCFA FORM 372) FOR 1992-1997**

Data source

States are required to report on their 1915(c) waiver programs on an annual basis by filing HCFA Form 372. This form provides information on the number of participants, expenditures, and service types. The initial 372 reports are due six months after the end of the first year of the waiver. One year later (18 months after the end of each waiver year), states are required to submit "lag (final) reports" which include all revisions, adjustments, refunds, recoupments, cost settlements, disallowances, and other changes.

Methods

Under HCFA Contract 500-97-0002, these data were collected by Charlene Harrington, Valerie Wellin, Fannie Norwood, and Helen Carrillo in the Department of Social and Behavioral Sciences at the University of California, San Francisco (UCSF). Lists of state HCBS waivers were obtained from the HCFA waiver application lists.¹ The data collection built upon an initial effort in 1994 by the authors to collect Form 372 from HCFA and states for the year 1992. Between 1997 and 1999, all state Medicaid program contacts were called by telephone and sent faxes to collect HCBS waiver data for the 1993 through 1997 period, along with the remaining 1992 data that was not yet obtained. During 1992 through 1997, there was an average of 4 waivers per state for each year, making the data collection efforts to reconstruct historical files challenging. Generally, between 3-5 calls were made by UCSF study researchers to each state for each year in order to gather data for the 1992-1997 period. The HCBS waiver data presented here

¹ Salo, M. 1998. *Home and Community Based Waivers*. Washington, DC: National Association of State Medicaid Directors, American Public Welfare Association.

represent the best available reports for the 1915(c) waiver information and the most recent complete data set of actual participants and expenditures.

Once the HCFA Form 372 reports were obtained, the data were coded and entered into a SAS database. In a few states, some participant and expenditure data had to be estimated either by the state or by the researchers because data were not available. States were asked to estimate data when the Form 372s were unavailable. Where states did not provide estimates, missing data for participants and expenditures were imputed by UCSF based upon the trend line for each waiver.

Overall, both the initial and the lag reports were available for 59% of the waivers and 23% of the waivers were represented by the initial reports only. Thus, the investigators were able to use HCFA forms for over 80% of the waivers. The remaining 12% was estimated by UCSF and 6% by states. The numbers in the tables that have been estimated either by UCSF or the states are indicated with an asterisk.

Classification of waivers

The classification of waivers by target group was not straightforward since some states gave the waivers names that did not include the name of the target group. In order to classify the waiver by target group, we matched each waiver number with the name of the target group that the state reported to HCFA in their initial waiver request. Then, we categorized the target groups into eight categories: MR/DD; Aged; Disabled/Physical Disabled; Aged/Disabled; AIDS/ARC; Mental Health; TBI/Head Injury; and Children (Special Care). These categories are referenced as “Participant Category” in the tables.

Waiver service categories

Service categories to be reported are determined by each state. Since waivers may offer many different services and because states do not have common names for these services, coding the service data was a challenge. A list of 30 separate service codes was constructed by the investigators from a review of the 1992 data. The 30 service groups were collapsed into 6 categories for purposes of presentation in the paper. Each of the 30 service groups were classified and coded into one of the 6 categories that appeared to be most similar to these services. A miscellaneous or “Other” category was used for those that were not easy to categorize.

The 6 categories, displayed in Tables 6, 7, and 8, are: Case Management, Residential/Foster Care, Respite/HH/PC, Habilitation/Day Care, Nursing/Therapy and Other. In these tables, blanks either indicate that “service specific data” was not available (and thus, not estimated), or the particular service was not offered under the waiver. When expenditure data for specific services were unavailable, no effort was made to estimate the missing service data.

Findings

There are seven tables shown here. Table 1 shows the total participants in each 1915(c) home and community based waiver in the U.S. by state for each year from 1992 through 1997.

Table 2 shows the total 1915(c) waiver expenditures for each waiver in each state from 1992 through 1997.

Table 3 shows the 1915(c) waiver expenditures per participant in each waiver in each state from 1992 through 1997.

Table 4 shows the average participants per 1,000 population in each 1915(c) home and community based waiver in the U.S. by state for each year from 1992 through 1997.

Table 5 shows the average expenditures per capita in each 1915(c) home and community based waiver in the US by state for each year from 1992 through 1997.

Table 6 shows the total number of waiver participants in each waiver that used at least one of the six service categories in 1997. Participants are duplicated because they could have used more than one service.

Table 7 shows the total waiver expenditures in each waiver spent on at least one of the six service categories in 1997.

Table 8 shows the average waiver expenditures per participant in each waiver spent on at least one of the six service categories in 1997.

Summary

The 1915(c) home and community based service waiver program is growing in all states. There was a steady increase in waiver participants and expenditures between 1992 and 1997. Additional technical questions and inquiries should be directed to the Principal Investigator at UCSF, Charlene Harrington, Ph.D.
