Subpart F - Drug Testing Laboratories

§ 40.95 What criteria do laboratories use to establish that a specimen is adulterated?

- (a) As a laboratory, you must consider the primary specimen to be adulterated if you determine that—
 - (1) A substance that is not expected to be present in human urine is identified in the specimen;
- (2) A substance that is expected to be present in human urine is identified at a concentration so high that it is not consistent with human urine; or
- (3) The physical characteristics of the specimen are outside the normal expected range for human urine.
- (b) In making your determination under paragraph (a) of this section, you must apply the criteria in current HHS requirements or specimen validity guidance.
