

## **Subpart H - Split Specimen Tests**

### **§ 40.181 What does the second laboratory do with the split specimen when it is tested to reconfirm a substituted test result?**

As the laboratory testing the split specimen, you must test the split specimen using the criteria of §40.93(b), just as you would do for a primary specimen. The result of the primary specimen is reconfirmed if the split specimen meets these criteria.
